EXECUTIVE COMMITTEE:

Members: P.J. Bearman, Th. Bianquis, C.E. Bosworth, J.T.P. de Bruijn, A. Dias Farinha, E. van Donzel,

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicules, the dates of publication being:

1980: Fascs. 1-2, pp. 1-128
1981: Fascs. 3-4, pp. 129-256
1982: Fascs. 5-6, pp. 257-423
2003: Fascs. 7-8, pp. 425-572
2004: Fascs. 9-10, pp. 573-716
2004: Fascs. 11-12, pp. 717-844

ISBN 90 04 13974 5

PRINTED IN THE NETHERLANDS
AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have listed after each contributor's name the pages on which his or her signature appears. Academic affiliations are given for a retired scholar, the place of his/her last known academic appointment, when known.

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his or her name appears within square brackets after the name of the original author. The large number of deaths among the contributors to the Supplement volume had died, or moved, in the time it took to complete and publish this Supplement, but it is very possible that some contributors not noted as having passed away, are no longer living, and that an affiliation may be passe.

ADDENDA AND CORRIGENDA

VOLUME I

VOLUME IV
P. 1091b, KHASI, l. 38, for Ustâd Djawhar [q.v. read Ustâd Djawdhar [q.v.]

VOLUME VII
P. 560, MUNADIDJIM, Bâno ‘î-, note 7 to genealogical tree, for Ta’rîkh Bağdâdî, iv, 318, nr. 2122, read Ta’rîkh Bağdâdî, v, 215, nr. 2688

VOLUME IX

VOLUME X

VOLUME XI
P. 1b, VIDJAYANAGARA, l. 5 from bottom of first paragraph, for Konkar [q.v. in Suppl.] read Konkan [q.v. in Suppl.]

P. 126b, WÂLÎBA B. AL-HUBÂB, l. 3, for 2nd/9th century read 2nd/8th century.

P. 169b, WÂSÎT, add after l. 37: ‘During the struggle for ‘Irâk under al-Ma’mûn, there were, however, small issues of silver from Wâsit in the years 200 and 203, and occasional issues in copper in 147, 167, 177 and 187 or 9.

P. 174b, WÂSÎM, add to Bibl: A second general study is E. Littmann, Zur Entzifferung der thamudenischen Inschriften, Berlin 1904, 78-104, which argues that most of the brands originate from the South Semitic alphabet in its North Arabian form.

P. 227b, AL-YADÂLÎ, l. 14 from bottom, for (19 lines) read (19 folios)
opp P. 264, YÂKÎT AL-RUMÎ, map, for Oxus (Sayhun) read Oxus (Djayhun), and resituate Cairo on the right-side of the Nile.

P. 345-6, AL-YÂNÎNÎ, add the following table:

Genealogical tree of the family of Mûsâ al-Yâmînî, author of Dhâri ‘Irâq al-zamân

(Isa

‘Abd Allâh

Ahmad Abu l-Husayn

al-Hasan

Muhammad Taqî Abû ‘Abd Allâh

(573-658)

Mûsà Kûbî Abû l-Faṭîb

his mother is Zayn al-‘Arab b. Nâṣr Allâh (d. 693)

(641-726)

‘Abd Muhammad Taklî a daughter (wife of Aybak al-Kâdir Muhîfî Abû Muhammad (d. 747), Fâţîma (d. 739), Zaynab, Amat al-‘Azîz (d. 754) and Muhammad (667-737)

Mûsà (who lived in 732 in Damascus)
These negotiations finally resulted in the formation of a...
AL-'ABBĀS b. AHMAD b. TŪLŪN, eldest son of Ahmad b. Tulūn [q.v.]. When the latter set off for the conquest of Syria, he entrusted the government of Egypt to al-'Abbās, his designated heir, but al-'Abbās was very soon persuaded to take advantage of his father's absence to supplant him. Warned but al-'Abbās was very soon persuaded to take advantage of the vizier al-Wasitī, Ibn Tulun got ready to return to Egypt, and his son, after having emptied the treasury and got together considerable sums of money, went off with his partisans to Alexandria, and then to Barka. As soon as he got back, on 4 Ramadan 265/30 April 879, Ibn Tulūn tried to bring him back to reason, and, promising him pardon, sent to him a letter, whose text has been preserved by al-Kāliḳāshāndī (Ṣahḥ, vii, 5-10; reproduced also by Ṣafwat, Ḍaynawat rasūl al-ʿArab, iv, 366-79); but the rebel remained deaf to all these approaches and decided to invade Irīfkiya at the head of a force of 800 cavalry and 10,000 black infantry, swollen along the way by some local contingents.

Al-'Abbās then claimed that the caliph al-Mu'tamid had named him as governor of Irīfkiya and demanded of the Aghlabī al-Ṭahāmī II that he should yield place to him. The latter responded by sending against him a force of cavalry, which met up with him at Labda but did not venture an engagement. Al-'Abbās now sacked Labda, even though the governor there had decided to yield to him, and then went on to lay siege to Tripoli. The Bidāṭi leader Iyās b. Mansūr al-Nafūsī organised resistance, and with the help of reinforcements sent by al-Ṭahāmī II, succeeded in putting the rebel army to flight (middle of 267/winter 880-1). Al-'Abbās was compelled to return to Egypt, but was captured in the course of a battle outside the city of Alexandria with an army sent by Ibn Tulūn. He was brought to Fustat, led round on a mule (Yākūt, ʿUzzaḥ, vii, 183), condemned to execute himself, and his father before him, been their servants before his rise to sovereignty. For this reason, information gathered by ʿAbās about Sher Shah's early career from his Sarwānī relations contains important gaps, some of which are filled by Mushtakī's rambling account, available in the Wakfāt-i Mushtakī. Despite its defects, the Tuhfa-yi Akbar Shahī is regarded as the major source for Sher Shah's reign. It furnishes fairly detailed data about the early life of Sher Shah and provides clues to important facts about his statemanship. Later works, such as the Ta'nkh-i Sher Shahī of Nīma't Allah Harawi, Ta'nkh-i Shahī of Ahmad Yādgār and Ta'nkh-i Dāwdī of ʿAbd Allah, all compiled during the reign of the Emperor Dāhdāṅgrī, contain very little additional information with regard to Sher Shah.
ABBREVIATIONS, sigla and conventional signs are nowadays called in Arabic mukhtasarat “abridgements” or ramūq “symbols”, but there does not seem to have been any specific term for them in the classical period, even though from the very beginnings of Islamic copyists, scribes and specialists in all sorts of disciplines were led to use them. This is why it has been thought suitable to bring together here a list of the main abbreviations found in the mediaeval texts, together with some examples of those taken up by our contemporaries.

One should first of all recall that a certain number of the surūs of the Kur’ān begin by groups of letters (the fawāṣīḥ or burstātīt al-’ābāh, which remain curiously inexplicable despite the many interpretations thougth up by inventive minds; the reader will find a table of them in the article al-Kur’ān, where the signs indicating pronunciation to be found in various editions of the Holy Book are also considered.

It should also be noted that if the verb sammā, means notably “to pronounce the formula bi-smi lāh al-rakām al-salām,” the formula itself is called the hamūla [g.v.], whose form is obvious; cf. also the hamdala, the formula al-hamdu li-lāh “praise be to God”, etc.

It is precisely these pious or optative formulae which, because of their frequency, led copyists and scribes to adopt various abbreviations, of which the most frequent are: t = wala’ “may He be exalted”; s = ṣallū “peace be upon him [sc. upon a prophet]”; m = mukaddam “mukhtasar” or m = mu’ākhkhar “mukhtasar”; m = mal’ama “mukhtasar” and its literal sense; m = mukhtasar “mukhtasar” or m = musannif “author (of the work)”; m = Muharram, s = Shawwāl, n = Ramadan, d = Dhū ‘īd-ha’d “recto and verso”, etc.; m = masāḥa “publish”; m = maṣāḥat “publishing”. The list of abbreviations could be considerably prolonged, but our list will be limited to those given above; one should however add that magazines and periodicals often use these to such an extent that only the initiates can unravel them. G. Oman (see Bibliography) has mentioned, as characteristic: m.m. = “Marilyn Monroe”, and b.b. = “Brigitte Bardot”.

In technical works on grammar, theology, law, etc., the following may occur: d̄j = djam “plural”; d̄jī = djam-al-djam “double plural”; m = ma’annāth “feminine”, but also mata “text of the kūdīt, etc.”; ṣh = sharh “commentary” and sharik “commentator”; ṣīrīn or ṣīrī = haddathana “there related to us”; anā = anbana’ān or akhbusa “we” [he related to us (especially of a historical or other tradition); m or anā = (al-)ma’ṣur  or (al-)maṣūrah “the (well-known, the famed); aṣ = al-zāhir “the obvious, literal sense”; aṣ = al-zāhiraha “its literal sense”; h = tafwīl “change in the inānā”; s = maṣannif “mukhtasar work” or muṣannaf “author (of the work)”]; ṣal = al-maṣūnah “the author”; yk = yuḏ “it is said”; aṣ = aṣ’a “by no means, absolutely”; q = ysd “also, equally”; s = sull “question”; d̄j = djam “reply”; n = bayānuhu “its explanation”; h = ḥakīka “reality”, “in truth”; b = bāṭil “false”; (a)mḥ = (al-)muḥād “what is absurd, improbable”; mm = mma’nū “impossible, absurd”; f = ṣīrī “we do not admit”, recognize”; h, ḥ = (f)ḥa’sā ḥ “and then, consequently”; lā ṣīt fāl “without any doubt”; ḵ = ḵudh “thus”, ḥīm = al-malāḥ “the desired aim” or al-malāh “the absolute”.

Also found are: s = sū’a “hour”, d = dākhā “minute”, and the names of the months: m = Muharram, s = Safar, r = Rabī I, r = Rabī II, ḍj = Dhu’l-Mi‘ād, ḍj = Dhu’l-Hijjah, ḍj = Dhu’l-‘I‘lādā and d = Dhū ’l-‘I‘lādā.

It will be noted that these abbreviations are often formed by the first letter of the word; another letter may sometimes be chosen, without always there being a care to avoid confusion, so that it may well happen that the groups of letters have an ambivalence, which is not, however, very confusing.

At the present time, the proliferation of sigla, and the perennial desire to save time have multiplied the use of abbreviations, especially in the press and in commercial and financial documents, but also in scholarly works with an apparatus criticus, where one may find e.g. ḍj = ḍaʿū “text of the volume”, ṣa = sāf “page”, s = šarīn “line”; s = šarīn “line”; ṣ = šuʿd “leaf, folio”, a, and b or u in z = suqūd “recto and verso”, etc., the following may occur:

2. Abbreviations — Al-Miyanadji

Edition, etc.

An international abbreviation has yielded, as elsewhere, a genuine noun: al-Tūnī/sīkh “UNESCO”. Expressions denoting Unions or Federations are replaced by initials: g.s.m = al-ṣamī’īn yūsuf al-ʿarabiyah al-muttahida “the United Arab Republic”, a.m. = al-imārāt al-ʿarabiyah al-muttahida “the United Arab Emirates”, etc. Money and currencies, weights and measures are not outside this general tendency: l.l. = liṭr “Lebanese pound”; d = dīnār (and also dākhīr “doctor”); ḍj = ḍaʿū “text of the volume”; m = masāḥa “publish”; m = maṣāḥat “publishing”.

The list of abbreviations could be considerably prolonged, but our list will be limited to those given above; one should however add that magazines and periodicals often use these to such an extent that only the initiates can unravel them. G. Oman (see Bibliography) has mentioned, as characteristic: m.m. = “Marilyn Monroe”, and b.b. = “Brigitte Bardot”.

‘ABBAS SAWARNI — ABD ALLAH B. ABI BAKR AL-MIYANADJI

It is precisely these pious or optative formulæ which, because of their frequency, led copyists and scribes to adopt various abbreviations, of which the most frequent are: t = wala’ “may He be exalted”; s = ṣallū “peace be upon him [sc. upon a prophet]”; ṭ = ṭahāwi “reply”; s = suʿd “page”; s = šarīn “line”; s = šuʿd “leaf, folio”, a, and b or u in z = suqūd “recto and verso”, etc., the following may occur:

The history of India as told by

were Muhammad b. Hammāyūn and a certain Baraka.

His spiritual reputation soon gained him many disciples, and he spent all his time in oral and written teaching, sometimes going beyond the limits of his physical strength for this and having then to retire for two or three months for recuperation. His activities soon provoked the hostility of the orthodox theologians. Provoked by his teachings on the nature of sainthood and prophethood and on submission to the Sunnī shaykh, and objecting to his usage of Sunnī terminology which gave the impression that he himself laid claim to prophetic powers, they brought an accusation of heresy against him before the Salīḫū vizier in Trāk, who imprisoned him in Baghārd. It was there that he wrote his apologia, the Ṣawāqī qisqāhūr. Some months later he was set free and returned to Hamadhān, but shortly afterwards, at the time of the Salīḫū sultan Mahdī’s arrival (reigned 511- 511/1118-31), he was executed in a harrowing manner during the night of 6-7 Qumādād II 526/6-7 May 1131 at the age of 33. His premature death seems to have prevented al-Hamadhānī from founding a Sunnī monastery, setting up a Sunnī group and designating a successor; nevertheless, his numerous works, written in a fine style, have always found an enthusiastic readership.

His published works include Ṣawāqī qisqāhūr an al-aṣītī nīl ḥaddān al-ʿalāmān, an apologia in Arabic (ed. and Fr. tr. Mohammed ben Abū-ʾl-Jalāl, in Ja 1930), 1-76, 193-297; ed. Abī ʿUṣayrān, Muṣannafīt al-Ayn al- ʿAdūnī-ī Hamadhānī, Tehran 1341/1962; Eng. tr. A. J. Arberry, A Sufi martyr, the apologia of a Sunnī Shaykūh, London 1969; Ṣawāqī-ī Lānī-ī, on mystic love, in Persian, ed. Rahfrn Farmanish, Tehran 1338/1959. bibl. Ind., Calcutta 1864-9; Abī-ʾl-Fadl Muhammad b. ʿAbd al-ʿAzīz, called Makhdūm al-Ayn, son of Shaykūh Shams al-Dīn of Sulṭānpur (Pandjāb), a leading Indian theologian of the 10th/16th century. He studied under Mawlawān Ābū-ʾl-Kādir of Sirhind, and acquired renown as a scholar and for his command over Muslim jurisprudence, theology and history. He was held in high esteem by Humāyūn (q.v.), and Shīr Shāh (947-52/1549-50) gave him the title of Šāh al-Islām; under Ilām Shāh (952- 61/1545-54) he was the principal adviser of the king in religious affairs. Upon his return in 962/1555, Humāyūn again conferred on him the title of Shīkūh al-Islām, and under the next king Akbar (q.v.), he received the title of Makhdūm al-Mulk. In 987/1579 he went to the Hijāz and was received with much respect by the Mughals. Makhdūm al-Mulk, however, returned to India without performing the Pilgrimage, and is said to have issued a fatwā to the effect that the Hijāz was not obligatory on the people of India because the journey by sea could not be undertaken without the European passports bearing the pictures of Mary and Jesus and because the land route lay through Şīʿī Persia.

Makhdūm al-Mulk was one of the signatories of the Mahdīr of 987/1579 giving a high religious position to Akbar, but subsequently disowned it; he was in fact a very orthodox Sunni and drew much criticism from Abu ʿl-Fadl. He died in 990/1582 in disgrace.

ʿABD AL-ḤASAN B. ʿABD AL-RASĪL B. ʿABD AL-ḤASSĀN AL QASIMI (ca. 1291-1373/ca. 1890-1933), founder king (regn. 1319-73/1902-53) of the Kingdom of Suʿūdī Arabia. His father was Sārā b. Ahmad al-Sudayrī. At four, ʿAbd al-ʿAzīz was entrusted to a tutor and became a hāfiz at eleven. Simultaneously (1309/1891), at al-Mulayda the Āl Rashīdī of Hāʾil (q.v.) defeated and expelled the Suʿūdīs from Najd, so that ʿAbd al-ʿAzīz grew up subsequently in al-Kuwayt, his father’s exiled kingdom.

In 1319/1902, the young and hot-blooded retook al-Riyādī, expelled the Rashīdī governor, and proclaimed the restored Suʿūdī rule. Central Najd soon re-pledged loyalty to the Suʿūdīs, and al-Kaṣmī (q.v.) was gradually brought in. By 1330/1912, ʿAbd al-ʿAzīz had restored Suʿūdī rule throughout Najd.

In 1912, ʿAbd al-ʿAzīz inaugurated his most imaginative policy, that of settling Bedouin in Wahhābī- centred agricultural colonies whose members were known as al-Ikhwān ("the brothers") (q.v.). This movement simultaneously furthered Wahhābīism, provided a new military force, reduced tribalism, and increased agricultural production; it brought with it profound social change, and the movement at its height counted some 150 colonies, one with 10,000 people. Ikhwānīs played a leading role in subsequent conquests, but ultimately revolted, charging the king with religious laxity, so that the founder of the Ikhwān himself suppressed them (1348/1930).

On the eve of World War I, ʿAbd al-ʿAzīz expelled the Ottomans from eastern Arabia thus acquiring access to the sea. For ʿAbd al-ʿAzīz, this war constituted a period of watchful waiting, but with the war’s end, he resumed expansion. Djabal Shammar was occupied in 1340/1921 and its depend-encies the next year. In 1337/1919 ʿAbd al-ʿAzīz was given a high religious position by Humāyūn (q.v.). In 1338/1920 annexed upland ʿAsīr (q.v.). The end of his festering quarrel with the Ḥāḫīmīs began when the Ḥāḫīmī king, al-Ḥuṣayn, somewhat vaingloriously assumed the caliphate (1542/1924). The Ikhwān, allured, entered al-Tafīr, and Mecca opened its gates, despite the Ḥāḫīmīs’ descent from the Prophet and long tenure in al-Hijāz. By 1344/1926, ʿAbd al-ʿAzīz was proclaimed king of al-Hijāz. His realm, now quite independent, stretched solidly across the peninsula in the first such broad unification in Arabia for many centuries. In addition, responsibility for the holy places, well discharged, converted ʿAbd al-ʿAzīz from the leader of a minor sectarian polity into a central figure in Islamic and international eyes. His one remaining external dispute, with al-Yaman, was settled by a military victory followed by a treaty (1352/1934). In the same year, he unified his government as the Kingdom of Suʿūdī Arabia. ʿAbd al-ʿAzīz treated defeated enemies magnanimously and, especially in al-Yaman, wisely restrained
himself. Much of this period was also spent negotiating with Britain; demarcated borders gradually emerged. During World War II, he maintained formal neutrality, but tilted toward the Allies, subsequently joining the United Nations and the Arab League.

Internally, this commanding monarch ruled traditionally but with his own extra wisdom and strength. He oversaw the successful implantation of the high-technology, American-run petroleum industry into an ultra-traditional society, from a first commercial find in 1356/1937 to the point when, at his death, production approached 1 million barrels/day and gave an annual revenue of $200 million. Oil revenues financed dramatic developments: water supplies, airports, telephones and radios, roads, a selection of official correspondence to arise in the Arabian peninsula.

All in all, 'Abd al-'Azîz laid the bases for the modernising of his country and was one of the greatest leaders to arise in the Arabian peninsula.

'ABD AL-'AZÎZ B. YUSUF: 'Abd al-'Azîz b. Khâkîr b. Sa'id al-Hakkîr?, the private secretary and trusted adviser of the Bûyûd amîn 'Abd al-Dawla [q.v.] from the very beginning to the end of his reign, and then three times alternatively the vizier and in disgrace in regard to his sons Sâmîsîn al-Dawla and Bahâ' al-Dawla [q.v. below]. He is the author of a collection of official correspondence (inâkhat), largely preserved in ms. Petermann 406 (Ahlwardt 8625), which is however limited to the period of 'Abd al-Dawla's reign (some fragments lacking here are cited in al-Thâfîlîb, Natîm, i, 89-90) and which, without securing him a place equal to his contemporaries 'Abû Islâm al-Sûbî and Ibn 'Abdâd, merits the historian's consideration, above all for the narrative of events of the reign.

'ABD AL-LATIF CELEBI [see also LEWIT]

'ABD AL-NAFIS, DJAMAL, Egyptian commander
and statesman. His father, 'Abd al-Nasir Husayn,
came from the village of Bani Murr near Asyût in
Upper Egypt. He was a clerk in the post office and
in 1915 moved to Alexandria. In 1917 he married
the daughter of an Alexandrian coal merchant and
on January 15th 1918, his first son, Djamal, was born.
The father was transferred several times during his
son's early childhood and it was in Asyût that Djamal
began his primary education. At the age of seven he
was sent to Cairo to live with his uncle and to study
there instead of moving around with his father. He
also spent some time in the family village of Bani Murr
when he was able to observe the life of the Egyptian peasant—its poverty and its daily toil, its
dignity and solidarity. The village was a microcosm
of Egyptian rural society. 'Abd al-Nasir's family
belonged to the middle layer of small proprietors and
tenants, a class largely dominated by others yet from
which there was some outward movement into the
towns and cities through education and government
employment. This class gave 'Abd al-Nasir his roots in
the Egyptian countryside and also his escape into
another world.

In Cairo he went to al-Nalahshin school in Khân
al-Khâshî where he was able to experience at first
hand the life of the bustling crowded quarters of
Cairo, that other aspect of the poverty of Egypt.
During this period he was greatly affected by the
death of his mother and by his father's early re-mar-
riage. This experience turned him against his father
and strengthened his independence and perhaps also
his introspection. He was noted from then on for his
seriousness and thoughtfulness.

After an interval with his family in Alexandria
'Abd al-Nasir moved to Cairo where he spent five de-
vasive years, 1933-8. He went to al-Nalâha school and
began to mix study with militant activity, protesting
both against the British presence and the policies of the
Egyptian politicians. He was exposed to the politi-
currently the Thurayya National Party (al-Hizb al-Watanl) and especially Mawd al-Fatat,  the Fascist-type movement found by Ahmad Husayn.
He felt deepy and personally the problems of Egypt
and began to assume them inwardly himself, uncon-
siously following the example of those future leaders
who take upon themselves the burdens of their people,
and also searching for a future pattern for his
own life. He admired the Wafd centred around its
leader, Mu'âshâl Nahshâs; he occasionally marched with
Mawd al-Fatat. He wrote at the time: "[The Egyptian]
only needs a leader who will lead him to battle".

In November 1935, when the British opposed the
re-establishment of the Egyptian constitution, 'Abd al-
Nasir marched with students on to the streets of Cairo
and was wounded by a bullet fired by British troops.
He was identified as an agitator and asked to leave
his school. After a few months in 1936 as a law stu-
dent in Cairo University, his sense of disillusion with the
politicians who had "surrendered" to the British
by signing the 1936 Treaty, and with what he saw
as the indifference of his fellow-students, led him to
seek to join the army, in his opinion the best means
available for effecting change. He had passed through
his early personal crisis and took to the army as a
positive means of action.

In 1936 the Egyptian army had lifted its restric-
tions on the middle and lower classes entering the
officer corps. 'Abd al-Nasir was a member of the sec-
ond entry of such men, an officer cadet in 1937 at the
age of nineteen in the 'Abdus-saïyya Military
Academy. He was attracted to military life with its
discipline and study, and was quickly promoted. Of
his future companions in the revolution, he met 'Abd
al-Hakim 'Amir in the academy and Zakariyya Muhîy
al-Dîn and Anwar al-Sadât in his first posting to
upper Egypt. It is difficult to maintain that their plot-
ing began at once but, being of similar age and back-
ground, they were united in their disrespect and even
contempt for their senior officers, and this attitude
was confirmed when he again met 'Amir during their
assignment to the Sudan.

The German successes in Libya and Egypt in
1940-1 led some Egyptian officers to see in the Axis
their deliverers from British occupation. 'Abd al-Nasir
stayed aloof from making approaches to the Germans,
but his anger was aroused in February 1942 when
Sir Miles Lampson, the British High Commissioner,
with the support of British tanks imposed on King
Faruk's political erraticness and scandalous private
life. 'Abd al-Nasir was ashamed that the army had taken no counter-
action, but he at least felt that some officers had
been shaken out of their apathy. In 1943 he was
appointed an instructor at the Military Academy,
and during his time there was able to make contact
with a number of younger Egyptians who were also
like him fired by the aim of liberating their country.
The period 1945-52 bears, with hindsight, the signs
of the end of an era. Several factors combined to
ensure that change eventually became inevitable. King
Faruk's political erraticness and scandalous private
life debarred him as a serious political leader. The
Wafd had lost most of its credibility, and the more
extreme movements were left to clamour for a cen-
tral role. The Arab disaster in Palestine had a pro-
found effect on the minds of young Egyptian army
officers, and the British reluctance to evacuate troops
first from the towns and then from the Suez Canal Zone confirmed their suspicions about the survival of British imperialist aims. The period was one of feverment and tension, so that even a personality less politically sensitive than 'Abd al-Nasir could not have remained unaffected, and he was in a sense torn during this period between his position as staff officer and his interests in "revolutionary" movements. He was introduced to Marxism by Khalid Muhyl al-Din, a fellow officer and cousin of Zakariyya, to the Ikhwan al-Muslimun by al-Sadat, and to the left wing of the Wafd by Ahmad Abu 'l-Fath and others. At this time a group of officers began to meet regularly, comprising the above together with 'Amir, Tharwat 'Ukasha and one or two others. These so-called 'Abd al-Aziz" (Free Officers") did not yet coalesce as a movement, having no common ideology but a determination to transform Egypt; but the figure of Djamal 'Abd al-Nasir emerged here as a leader.

It was events outside Egypt which decisively placed the Free Officers on course outwards revolution. In May 1948 the Egyptian army advanced into Palestine in an attempt to destroy the new state of Israel. 'Abd al-Nasir was commanding officer of a unit, and was immediately dismayed by the inefficiency and lack of preparedness of the Egyptians who were fighting against greatly inferior numbers; in the fighting he was himself wounded in the chest. After the second United Nations armistice (during which the Haganah improved its positions), the battle for the Negev began in October. 'Abd al-Nasir and his unit were trapped at Falludja, but together with several other Free Officers they held out against the Israeli forces and were eventually able to counter-attack. In retrospect, 'Abd al-Nasir saw this episode as a symbol of their determination to pursue the real fight against all those forces which opposed Egypt. He had fought the Israelis and had even admired them in their successful bid to oust the British from Palestine (during one armistice he had had an opportunity to talk to an Israeli officer), and had himself become more widely known. One general also made his name for heroism in the Palestine war, Muhammad Naguib (Neguib). The army returned home bitter in defeat and determination to begin the "real" struggle. The Free Officers began to issue propaganda denouncing the King, the regime and the army, to infiltrate the government, and to co-operate with other organisations.

In October 1951 the Egyptian government abrogated the 1936 Treaty, and this action signalled the beginning of guerilla activity against the British troops remaining in the Canal Zone. The Free Officers played a certain part, issuing arms and training commandos, but it was largely students and members of the Ikhwan who bore the brunt of the fighting; 'Abd al-Nasir himself was biding his time conserving his energies.

Tension was also rising in Cairo. A particularly severe British retaliatory attack on the Ismailiya barracks in January 1952 led to Black Saturday, January 26th, when much foreign and Egyptian property in Cairo was burned and several lives lost. Students, Ikhwan and the mob rampaged in a fury of revenge, and the army and police intervened only late in the day. It is still not clear who instigated the riots and how large a part, if any, the Free Officers played; but the events had at least demonstrated the desperate fury of the country and the lack of any solution offered by the régime.

Fârûk and his entourage continued their improvising, seemingly careless of the country's plight. The Free Officers decided that a coup could no longer be postponed and began to make their final plans in July. The government had moved for the summer to Alexandria, and to army units favourable to the Free Officers were doused with water. On 20th July it became known that Fârûk was to appoint a new government, one of whose first actions would be to arrest some of the Officers. The latter advanced their plans; by the morning of 23rd July the key army and communications posts had been taken, with hardly a shot fired and only two lives lost. Although 'Abd al-Nasir had been the leader, General Muhammad Naguib, the older and better-known man, became the new Commander-in-Chief, while arguments raged over the future form of government—should there be cooperation with civilian politicians, and what was to be the fate of Fârûk?

'Ali Mâhir, an ex-premier, headed the new government. 'Abd al-Nasir stood out for the exile, rather than the execution, of Fârûk, and the ex-king sailed from Alexandria on 26th July. Naguib supervised the abdication while 'Abd al-Nasir remained in Cairo.

Muhammad Hasanas Haykal has divided the political life of 'Abd al-Nasir (known in Egypt as "The Lion") into three parts: 1952-6, the Lion free; 1956-67 the Lion chained; 1967-70 the Lion wounded. By this division, Haykal saw him free until the Suez invasion to concentrate on Egyptian affairs; after 1956 he became chained to Arab and world affairs and a prisoner of his own success and personality; after the Arab-Israeli war of 1967 he was gradually weighed down by the burdens of office. These divisions may be qualified and modified, however. During the whole of his political life he was attempting both to legitimise his rule and to give Egypt a lasting political and social system. Until 1956 he was largely concerned with Egyptian internal affairs, but Suez thrust him on to the world stage, and while chaining him, in Haykal's phrase, he was at the peak of his popularity and success, at least until the dissolution of the Syrian-Egyptian union in 1961. The period 1961-7 saw him more closely chained and less successful, until the disaster of 1967, by which he was mortally wounded.

The Free Officers had no definite political programme before or at the beginning of their régime. No one ideology motivated the seizure of power; they had rather vague ideas about national independence, modernisation, democratisation, social justice and equality. The first years of power entailed a more precise defining of these ideas and forced 'Abd al-Nasir to determine his role in the new system. He was the centre of the new ruling body, the Revolution Command Council (R.C.C.) (Maglis Kaydat al-Thawra), although Naguib was its president, replacing 'Ali Mâhir in September 1952, and 'Abd al-Nasir not yet publicly acknowledged.

The régime's first declared objective had been the expulsion of the British, and negotiations began immediately over the evacuation of the Canal Zone. Secondly, the direction of domestic policy was established by the agrarian reform law of September 1952 by which no one was allowed to hold more than 200 feddans of land. Thirdly, the régime set about eliminating opposition, i.e. the Ikhwan, who were reacted to by trying to foment opposition in the army, police and universities. In the early months of 1954 the Ikhwan waged what 'Abd al-Nasir termed a wasf against the régime, in an attempt to seize power themselves.

Within the Revolution Command Council, dis-
The older man had gained considerable popularity, were demonstrations in his favour, and the chaos of but was opposed by his colleagues, who accused him of the Egyptian Republic, and the younger officers. Sensions arose between General Nadjib, now President of the Egyptian Republic, and the younger officers. He now began to seek arms, first unsuccessfully from the British, France and Israel combined to attack Egypt, each for their own reasons, but united in fear and hatred of ‘Abd al-Násir, after attempts to organise forms of international supervision of the Canal had failed. On October 29th Israeli troops crossed into Sinai and the following day were reported to be within 20 miles of the Canal. The British and French ultimatum ordering both Egypt and Israel to withdraw to ten miles on either side of the Canal, was rejected by ‘Abd al-Násir, and two days later British planes raided Cairo. On November 5th British and French troops landed in Port Said. ‘Abd al-Násir convinced his followers of Egypt’s ability to resist, but he was in fact facing defeat, and was only saved by American and Soviet pressure on his attackers. All foreign troops were compelled to leave Egyptian territory, and he emerged as victor in defeat, more popular and powerful than before, and a world figure.

His very success bore within itself the seeds of danger. He had confronted Israel and the West, not only on behalf of Egypt but also of other parts of the Arab world. He was being drawn into the politics of Arabism, with its twin goals of unity and the destruction of Israel, reaction and colonialism. Egypt, the strongest Arab state with its powerful leader, was the natural centre of the Arab world. ‘Abd al-Násir had already shown his support for the Algerian national movement and thereby alienated France. The Voice of the Arabs radio broadcast continual anti-Western propaganda from Cairo. ‘Abd al-Násir had rejected President Eisenhower’s offer of American military support. At the same time Syria, the other centre of Arabism seemed to be slipping into a chaotic situation. Several factions, Ba’thists, Communists and rival nationalist groups, were competing for power. In January 1958 Syrian spokesmen informed ‘Abd al-Násir that only union with Egypt could save their country. He was not immediately convinced, despite his professed belief in Arab unity, and made strong conditions for the Syrians which they nevertheless readily accepted. At the end of January the United Arab Republic came into existence with ‘Abd al-Násir as president, welcomed with relief by the Syrians but not, it seemed, with any great enthusiasm by the Egyptian leader himself, nor by the Egyptian people, some of whom regretted the disappearance of the name of Egypt.
Syria and appeared determined to make the union a success, if only by imposing his own will on the Syrians. Such an attitude was bound to cause resentment, and socialist measures, the dismissal of army officers, purges of politicians and the arrogant behaviour of 'Abd al-Nāsir’s man in Syria, 'Abd al-Hamīd Sārāḏī, all contributed to increase feelings of bitterness. By early 1961 the union was falling apart and in September a group of Syrian officers unilaterally took Syria out of the U.A.R.

'Abd al-Nāsir was stunned, but, after a momentary determination to oppose the split by force, reluctantly withdrew Egyptian troops from Syria. To salvage his self-esteem and perhaps to keep the door open for further unions, he retained the title of U.A.R. for Egypt. His political life was complicated by another factor. The 'Irākīs had overthrown the monarchy in July 1958, had proclaimed their revolution and were disputing with him the leadership of the Arab world. Rivalry was intense, especially as 'Irāk claimed Soviet support and had refused to join the U.A.R. He had been dragged deep into inter-Arab disputes and saw his energies diverted into unprofitable avenues.

After the break-up of the U.A.R., 'Abd al-Nāsir felt isolated and to some extent withdrew into Egyptian affairs. In a speech of October 1961 he made some surprising admissions; “We fell victim to a dangerous illusion, to which we were led by an increasing confidence in ourselves and in others”. He had neglected the economic development and the political organisation of Egypt. He would summon a congress of popular forces which would chart a more socialist solution slowly. Despite his reliance on Russia, he had persecuted Communists, with an all-powerful police, and torturing Communists, and had no great enthusiasm for the destruction of the peasantry. The Congress of Popular Forces was founded to succeed the National Union of the regime. A new single party, the Arab Socialist Union, was founded in an attempt to strengthen the Union, 'Abd al-Nāsir even released imprisoned Marxists, some of whom in 1964 agreed to work within the organization.

'Abd al-Nāsir’s economic policies were obviously influenced by his relationship with the Soviet Union and Yugoslavia. He rejected Communism and was categorised by Soviet ideologists as a bourgeois nationalist, yet he was dependent on Russia for aid and Krushchev considered him an ally in the Middle East. Apart from arms, Russia had in 1960 agreed to finance the construction of Aswān Dam, which became both the symbol of Russo-Egyptian co-operation and of Egypt’s rebirth. The dam was built to transform Egypt’s economy and agriculture. It has not succeeded in all the ways intended, and in more ways than one it is 'Abd al-Nāsir’s monument.

Despite his intention to concentrate on internal affairs, 'Abd al-Nāsir’s reputation and Egypt’s position in the Arab world obliged him to continue to play a leading role. The most serious intervention was in the Yemen where in the autumn of 1962 an uprising had driven out the Imam. A republic was proclaimed which was immediately threatened by Saudi-backed royalist forces. 'Abd al-Nāsir sent an Egyptian army to support the revolution, an action he later regretted, for it was trapped for five years with a continuing drain of men and equipment, diverted away from a confrontation with Israel, the insoluble problem of his lifetime.

The Israelis had withdrawn from the Suez Canal after 1956, and United Nations troops had moved in between Israel and Egypt. The Arabs had made various plans for and propaganda about the destruction of Israel, but 'Abd al-Nāsir seemed determined not to let Egypt be engaged in war before the army was ready, or until Arab unity was achieved. However, he joined a pact with Syria in 1966 which trapped him into confrontation. Both Syria and Jordan clashed with Israel and he found himself shouldering their burdens and being ineffectually drawn into a conflict. He was now heard to talk of destroying Israel and of the impossibility of coexistence. 'Abd al-Hakīm Amīr and others convinced him that the army was strong and prepared, though after the war, 'Abd al-Nāsir claimed that he had not wanted to fight.

According to his version of the events leading to the war, in May he asked U Thant to withdraw the U.N. Emergency Force from the Israeli-Egyptian frontier, thus allowing the Egyptian army to face Israeli troops directly. The Russians had informed him that the Israelis were preparing to attack Syria, and by his moves in Sinai he intended to deter them; this information seems to have been either incorrect or at least exaggerated. 'Abd al-Nāsir claimed that the U.N. responded by insisting on withdrawing their troops both from the frontier and from Šahr al-Shaykh. The U.N. version is that Egyptian troops appeared at Šahr al-Shaykh and forced the U.N. to withdraw. Whichever version is correct, Egyptian troops were soon at the entrance to the Gulf of Akaba and blockading the Straits of Tīrān to Israeli shipping, and it was clear that Israel could not leave such a challenge unanswered. According to eyewitnesses in Cairo 'Abd al-Nāsir appeared at the time to be borne down by the inexorable, and he spoke of a moment of decision: either Israel must accept new discussions on the Palestine problem or war was inevitable.

'Amīr and Šahr al-Badrān, the Egyptian War Minister, urged him in vain to strike first. Israel settled...
the matter by a pre-emptive attack on June 5th which destroyed the Egyptian air force on the ground. By June 9th Egypt accepted a cease-fire, with Israeli troops once again on the Suez Canal. 'Abd al-Nāsir had led his country to a catastrophic defeat. He had no excuses. In television interviews he admitted his failures and announced his resignation. The reaction was immediate. All Egypt, it seemed, begged him to stay. Egypt and 'Abd al-Nāsir had together been defeated, and Egypt without him was unthinkable; the identification between leader and people appeared total. His resignation was rejected and the following day he resumed office.

His prestige was, however, diminished, a fifth of his country occupied, the Canal closed; he was confronted by a powerful enemy, and his armed forces were shattered. In the short period left of his life there was little he could do to restore the situation, yet as leader he was forced to try. Even the army was not prepared totally to support him. 'Amir was blamed for the defeat, arrested and allowed (or forced) to commit suicide, Badrān was imprisoned for life. Members of the secret police were arrested. In February 1968 the Air Force commanders were sentenced to imprisonment. Even so, the Egyptian people were not satisfied with 'Abd al-Nāsir's actions, and there was criticism of him, of the system and of the leniency of the sentences on the Air Force officers.

He responded by increasing the sentences and by urging the Arab Socialist Union to play a more creative and active role. This did not satisfy the people, and in late 1968 there were demonstrations in favour of more political freedom and even demands for his resignation. He had been called back by the people yet was unable to fulfill their expectations.

On the international scene, he was able to offer little that was constructive. At the Khartoum Arab summit in September 1967 he endorsed the Arab refusal to recognise or to negotiate with Israel, although he also seemed to accept the U.N. resolution 242 which entailed recognition of the sovereignty of all states in the Middle East. Soviet support in rebuilding his army at least gave him a position from which he could face Israel on a more equal footing. It led him to launch the war of attrition in 1969-70 during which the Israeli air force on several occasions attacked Egyptian territory. 'Abd al-Nāsir personally and on behalf of the Arabs could not bring himself to the point of negotiating a peace treaty with Israel, despite Soviet and American pressure. He made several moves which seemed to be leading towards negotiation, but he remained fettered by his position in the Arab world.

On 24 September 1970 King Husayn of Jordan and Yāsir 'Arāfat of the Palestine Liberation Organisation met in Cairo under 'Abd al-Nāsir's aegis to try to achieve reconciliation after Husayn's suppression of the attempted Palestinian take-over in Jordan, and this was his last achievement. On September 28th he died of a heart attack, having suffered from diabetes for ten years and later from arteriosclerosis of his right leg. Despite a previous heart attack in September 1969 he had continued to work until the very end. His funeral in Cairo was marked with astonishing scenes of grief, devotion and disbelief among the hundreds of thousands who surrounded his coffin. It was as though in a very real sense part of the soul of Egypt had died with him. It is also possible that the mass hysteria of that day contained within itself a grain of relief. 'Abd al-Nāsir had dominated Egyptian life for some fifteen years and perhaps by 1970 Nasserism had run its course. He had guided Egypt through a period of intense change and political adjustment. He had seen the end of French and British imperialism and had felt his way towards a new relationship both with the United States and the Soviet Union. He had led Egypt into a relationship with an Arab world conscious of its power and independence. He had had to face the problem of confronting Israel on behalf of that Arab world. As Haykal wrote, these historical conditions formed his destiny and laid on him a burden too great for any one man to bear, or in the words of another commentator, "being unable to solve Egypt's problems, [he] chose to incar- nate them".

'Abd al-Nāsir was thoroughly Egyptian, a Sa'ūdī who gave back to Egypt a sense of dignity. He remained a man of simple tastes and hard work who continued to live modestly in Cairo. His close friends were almost all political allies and he created with them an atmosphere of intrigue and conspiracy in government. He ruled Egypt through this elite, together with a network of interlocking security systems. He was cunning, mistrustful and a conspirator. He even distrusted the army, which he supervised with the mukhābat. He was a naturally passionate man, not averse to the use of violence and terror to subdue his opponents. He did not know how to create lasting institutions nor how to gather around him a strong governmental team.

He clearly inspired devotion both among his colleagues and among the masses in Egypt and elsewhere. His figure dominated Arab politics and gave rise to the formation of Nasserist parties in other countries. He was the symbol for many of Arab resistance to foreign influence and to internal reaction. He was the leader who, in Weber's terms, was able to lead the breakthrough in Egypt's history.

Bibliography: Much has been written about 'Abd al-Nāsir and Egypt under his régime. A survey of English and French studies written before 1967 can be found in D. Hopwood, Some Western views of the Egyptian revolution, in P.J. Vatikiotis, ed., Egypt since the revolution, London 1968; The most important works specifically on Ḫāmnāl 'Abd al-Nāsir appearing since that date are: J. Lacouture, Nasser, Paris 1971 (and Engl. tr., London 1973); R. Stephens, Nasser, London 1971; R.H. Dekmejian, Egypt under Nāṣir, a study in political dynamics, Albany, N.Y., 1972; A. Nutting, Nasser, London 1972; Egypt and Nasser. 3 vols. (Facts on File) New York 1973; M.H. Heikal, The Cairo documents, London 1973; Many works in Arabic have been published, especially since his death, both laudatory and critical, and these are too numerous to list here. One of the most revealing is by Haykal, 'Abd al-Nāsir wa Uṣūl, Beirut 1972. Essential is 'Abd al-Nāsir's own Falsafat al-thawra, Cairo 1956 (English tr., Washington D.C. 1956). Also of use are memoirs by his colleagues, Anwar al-Sādāt, Revolt on the Nile, New York 1957, and Mohammed Neguib, Egypt's destiny, London 1955. Many of his speeches were also published. (D. Hopwood)
His father had latterly become a strong advocate of vengeance for "Uthmân and a supporter of Mu’awiyah’s cause, and ’Abd al-Rahmân likewise became embroiled in the controversies of the day, including with the poet and supporter of the ‘Aldis, Kay’s b. ‘Amr al-Nâjîjî [q.v.]. ’Abd al-Rahmân himself apparently was of a distinctly provocative and irascible nature, much given to satirising his contemporaries, and he also clashed with the Umayyad poet-prince ’Abd al-Rahmân b. al-Hakam, brother of the future caliph Marwân (see Aghâni, xiii, 150-4, xiv, 123 f. = ed. Beirut, xiii, 279-86, xiv, 204 ff.), and then with the heir to the throne Yazîd b. Mu’awiyah over an alleged slight to the latter’s sister in the nabi J of one of ’Abd al-Rahmân’s poems (see Lammens, Études sur le règne du califat omeyyade Mélanise I’, in MPOB, ii (1907), 149-51); the moderation of Mu’awiyah protected him from retaliation, although the incident may possibly have sharpened the satires of Yazîd’s protégé [q.v.]. Amr al-Nâjîjî.

’Abd al-Rahmân was also a companion of his younger Anṣârî contemporary, the poet ’Abd Allâh b. Mu’awwad al-’Akhtal [q.v.]. Only fragments of his verses have survived; these are significant, however, as showing a Hidâjî lyrical tradition, to judge by the few citations possibly having to do with the Satires of Yazîd’s protégé [q.v.]. Abd al-Rahman was also a companion of his younger An§arf b. al-Nadîshâ’î (1907), 149-51); the moderation of Mu’awiyah protected him from retaliation, although the incident may possibly have sharpened the satires of Yazîd’s protégé [q.v.]. Amr al-Nadîshâ’î.

’Abd al-Wahhab Bukhârî, Shaykh, Sufi saint of Muslim India.

He was the son of Muhammad al-Husayn al-Bukhârî, the descendant of Sayyid Djalâl al-Dîn Bukhârî, who had come to Multân from Central Asia and then settled down in Uçhî at the instance of his fût, Shaykh Baha’ al-Dîn Zakariyya’î al-Suwârwardî of Multân. His descendants became distinguished Suwârwardî saints during the latter half of the 8th/14th century owing to the eminence of Multân as the religious centre. ’Abd al-Wahhab received his early religious instruction in Multân and then went to Multân for higher education. He is reported to have studied the religious sciences under Shaykh Ahmad Khâtûn of Ahmadâbâd (in Gujûrat). At an early age, he went to Arabia on pilgrimage and whilst there benefited from local scholars. On his return to India he settled down in Dîhilî, as most of the Suwârwardî saints of Uçhî and Multân had moved there. He there became the murid of Shaykh ’Abd al-Suwârwardî, the son of Shaykh Yusuf Multânî and son-in-law of Sultan Bahâlî Lodi. He also became an associate of Sultan Sikandar Lodi. After some time, he left on the pilgrimage to Arabia for a second time. This time he went from Gujûrat by ship, having on his previous trip travelled by land.

On his return to Agra, in the beginning of the 10th/16th century. The Sultan accorded him a grand reception. In the year, 915/1509, he was sent to the Central Indian fort of Narwar (in modern Madhya Pradesh) which had been just conquered and renamed by the Sultan Hîsârî Muhammad, so that he could serve the religious cause there. Acting as Shaykh al-Islâm, he supervised the construction of mosques and madrasas, and some mosque inscriptions contain his praise. In the same year, ’Abd al-Wahhab Bukhârî completed his commentary on the Qur’ân in which the meaning of every verse was explained from a Sûfi point of view. The work is not extant, and only a few extracts, quoted by Shaykh ’Abd al-Hâjî in his Abîr al-akhdhir, are known.

’Abd al-Wahhab Bukhârî’s association with the Sultan enhanced his influence and prestige in the ruling class, and as a result, a number of scholars and Sûfis got stipends and land-grants from the state for their maintenance on his recommendation. But his relations with Sultan Sikandar Lodi became strained towards the close of the latter’s reign. It is said that on his arrival in Agra from Narwar, the Shaykh advised the Sultan to grow a beard as it was not proper for a Muslim monarch to shave his beard. The Sultan tried to avoid discussion over the matter by giving evasive replies. Against the royal wishes, the Shaykh insisted on eliciting a promise from the sultan. However, the sultan got annoyed and became quiet. On the departure of the Shaykh, he expressed his resent-
ment, remarking that he had become presumptuous over royal favour to him and that he did not know that it was because of this that people kissed his feet. When the Shaykh came to know of the sultan’s remark through a courier, he left Agia in disgust and then spent the rest of his life in seclusion in Dihli. He died in 931/1525 and was buried in Dihli near the tomb of his grandfather, Shaykh 'Abd Allah.

'ABD AL-WAHHAB, HASAN HUSIN B. SALIH B. 'ABD AL-WAHHAB B. YUSUF AL-SUMADIHI AL-TUDJIBI, born in Tunis 21 July 1884 and died at Salammbio in the suburbs of Tunis November 1968, was a polygraph and scholar born into a family of dignitaries and high officials of the Tunisian state. His eponymous grandfather, 'Abd al-Wahhab, venerated, served in positions of administration and protocol in the entourage of the Bey while his father, Yusuf b. 'Abd al-Wahhab, a senior official and interpreter with various Tunisian delegations in Europe, occupied a number of administrative posts under the French Protectorate, including that of 'amil, governor, of Gabes and of Mahdia; passionately interested in history, he wrote a history of Morocco that has never been published.

In 1904, on the death of his father, Hasan Husni 'Abd al-Wahhab was obliged to interrupt his short-lived higher studies in Paris where he was following a course in Political Science, for an administrative career in Tunis which was to last from 1905 to 1920.

Governor of 'amil successively of Djabanyana in 1925, Mahdia in 1928 and Nabeul in 1935, he exerted himself particularly in the extension of education and the diffusion of culture in these regions through the establishment of primary schools in the Caidate of Djabanyana, through weekly lectures on the history of Tunis which he himself gave in Mahdia, and through the provision of books for the libraries of this town and of Nabeul.

Returning to the central administration in Tunis, in 1939 he was given responsibility, having been pensioned off, for the supervision of the Habous (properties held in mortmain). From May 1943 to July 1947, he was minister of the Pen (Chancellery and Internal Affairs) of the last Bey of Tunis Lamine or al-Amir I.

Following the independence of Tunisia, he directed, from 1957 to 1962, the Institute of Archaeology and Arts where he introduced young Tunisians to archaeological pursuits, founded five museums in different parts of the country, of which four were museums of Arab-Islamic art to which he donated the whole of his patrimony, and at the same time stimulated artistic and archaeological activity by the publication of articles and the writing of prefaces to books which he encouraged his young scholars to write.

His vocation as historian of Tunisia, put into effect from 1905 onward by the courses in the history of Tunisia which he gave at the Khuldsat ta'rikh, and in the history of Islam which he conducted at the Ecole Supérieure de Langue et Littérature Arabes from 1913 to 1924, was assisted by his transfer in 1920 to the General Archives of Tunisia, where he inaugurated a card-index system, then to the Supervision of Habous, and also by his work as governor in various parts of Tunisia, which enabled him to gain a better acquaintance with the country, its recent history, its hitherto ignored cultural patrimony, its people, their ethnicity and dialects. In 1933, he gave a series of lectures at the Institut des Études Islamiques at the University of Tunis.

A member from its foundation in 1932 of the Arabic Language Academy of Cairo, in which he took an active part in the work of the various commissions, distinguishing himself by “an open-minded approach striving to conciliate modern needs with the norms of Muslim civilisation”. He was also a member of the Academy of Damascus from its creation, of the Academy of Baghdad, a corresponding member of the French Académie des Inscriptions et Belles Lettres from 1939, of the Egyptian Institute, and of the Madrid Academy of History, and of the executive committee of the EI.

As official delegate of the Tunisian government, he participated, from 1963, in the work of the majority of the International Congresses of Orientalists as well as in a number of seminars, which enabled him to forge fruitful and lasting relationships with numerous orientalists and oriental scholars.

While the title of Doctor honoris causa of the Academy of Cairo in 1950, and of the Academy of Algiers—then French— in 1960, confirmed the scholar’s prestige, the Prize of the President of the Tunisian Republic crowned, on the very eve of the death of H.H. 'Abd al-Wahhab (7 November 1968), the achievements of a long and hard-working life.

His works comprise:

(b). In French: La domination musulmane en Sicile, Tunis 1905; Coup d'oeil général sur les apports ethniques étrangers en Tunisie, Tunis 1917; Le développement de la musique arabe en Orient, au Maghreb et en Espagne, Tunis 1918; Un témoignage de l'époque arabe de l'Espagne, in RT (1930), 215-18; Un tournant de l'histoire algérie, l'insurrection de Mâurs Tunbidi, seigneur de la Muhamma, in ibid. (1937), 343-52; Du nom arabe de la Byzance, in ibid. (1939), 199-201; Villes arabo-musulmanes, in Mélanges M. Marqas, Paris 1950, 1-15; Le règne d'un monarque au Moyen-Age (IVe-Xe s.), ed. and tr. of the K. Al-Ameal of al-Dawahir in collaboration with F. Dachraoui, in Études d'orientalisme dédiées à la mémoire d'E. Leprohon, Paris 1962, ii, 401-44.

(c). Editions of texts: Amd al-dîmam of Ibn al- khâtîb (section relative to Ifriqiya and to Sicily), in Centenaire de la nascita di M. Amari, Palermo 1910,

His works also include a number of articles in Arabic and in French, some of them still unpublished, the others appearing in the Encyclopaedia of Islam and in periodicals of Tunisia, Europe and the Orient (see al-Fikr [Dec. 1968], 96, with a list of his articles published by this journal, some of which, as well as some of the titles mentioned above, have been reproduced in Warakát, either because they are in a suitable context there or because their original edition has been exhausted.

Manuscripts or monographs, these works are for the most part dedicated to Arab history and civilization in Tunisia in a perspective which embraces literature and also linguistic and religious studies, without however neglecting the "exact sciences" and the arts. They prefigure the author's greatest work, the fruit of sixty years of patient research, his Kitáb al-Umir, the "work of his life", a prodigious work in several still unpublished volumes, a collection of biographical notes on Umr, years of patient research, his contribution, which goes beyond the Tunisian domain, and also linguistic and religious studies, without how-ever exhausts).
proached the prince for financial support (cf. Ta’rikh Baghdād, s. 355, lf. ff.). This may have initiated or at least strengthened those moderate Shi’i leanings for which Abū ’Abd Allāh became well-known afterwards. He used them, however, in order to win the favour of Banū Ṭāhillī, a number of whom were decisive after Muḥyī al-Dawla had succeeded in taking over Baghdād in 334/945. He found support with Muḥyī al-Dawla’s waṣīr al-Ḥasan b. Muḥammad al-Muhallabī (339-52/950-63; cf. Hamdāni, Ṭanbih al-Tārikh al-Tabarî, ed. Kan‘ān, 186, lf. 13 ff., and Abū Ḥayyān al-Tawḥīdī, al-Imtād wa l-mu‘āna, iii, 213, l. 10), who liked to surround himself with 13 lawyers. (cf. Ṭulullāh, Yattimāt al-adhā, ed. ’Abd al-Ḥamīd, ii, 336, ulf. ii.). Muḥyī al-Dawla himself did penitence during his last disease, in 356/967 (cf. Ḥamdāni, 192, apu. ff.). He gave private lessons in Baghdad, x, 355, 11. 4 ff.). This may have initiated or taken over into the Muṭazzī tabākdt-literature. This bad reputation is perhaps to be explained by a certain trend towards scepticism (isḥāqī’ al-adhl) for which at least one of them, Abū Ḥabīb Ḥabīr b. ’Abd al-Ḥamīd, was well known (cf. e.g., al-Ṭali‘ī, al-Murtada, ed. Muḥ. Tawḥīd Ḥusayn, Baghdād 1970, 155 ff., and which Abū Ḥayyān tries to impute to Abū ’Abd Allāh, too (cf. Ḥamīd, 212, lf. 5 ff., with reference to a conversation between Abū ’Abd Allāh and Abū Sulaymān al-Manṭikī). Abū ’Abd Allāh’s ideas have to be reconstructed mainly from the numerous quotations found in the works of Kāḍī Abū al-Ṭāhillī. The Kāḍī recognizes his indebtedness himself (cf. Muḥmūd, xxv, 257, l. 4), although frequently he did not share his teacher’s opinions. He dictated some of his books in the presence of Abū ’Abd Allāh, obviously when he lived in his house in Baghdād (cf. al-Ḥākim al-Djusamīf, Ṭanbih al-ṣanā‘ī’, 202, 11. 7 ff), most of his discourses his indebtness himself (cf. al-Ḥakim al-Djusamīf, xx, 210, 11. 12). Abū Ḥayyān al-Tawḥīdī remembered having seen him in 360/971, al-Khālid, al-Kullāb, 107, l. 5). He based himself mainly on Shī‘ traditions, the trustworthiness of which he tried to prove with rational speculations about their historicity. Moreover, he practiced what was called muqāzanat al-madhī, i.e. he weighed the virtues of Abū al-Ṭāhillī and Abū Bakr against each other. In this he seems to have taken up the arguments of al-Īṣāfī (died 249/864 [q.v.]), and he had to criticize Abū ’Ali al-Djubībā; he obviously avoided, however, open disagreement with Abū Ḥāgīm (cf. Muḥmūd, xxv, 216, l. 7 ff.; 223, l. 6 ff.; 241, l. 17 ff.; xxvii, 120, l. 13 ff.; 122, l. 3 ff.; 121, l. 7 ff.; 125, l. 4 ff.; 131, l. 3 ff.; 132, l. 19 ff.; 140, l. 3 ff.). He never made any concessions to ṭafṣīf; he drew Mu’īz al-Dawla’s attention to the fact that ‘Umar had accepted Islam very early and that ‘Abd al-Azīz al-Djubībā had given his daughter Umm Kulthūm in marriage to him (cf. Ḥamdāni, Takmila, 192, ult. ii.). He showed great interest in epistemology, probably because of the fact that Abū ’Abd Allāh’s Abī K’al’ al-Andāshī, a member of the royal family of Abī l-Khālid, still defended the ideas of al-Djubībī in his circle, among them certainly al-Djāhī’s famous apriorism (cf. Tawḥīdī, Aḥkām, 203; for al-Djāhī, van Ees, in Isd., xii (1966), 169 ff. and Ṭajīd in Sī, xxvi (1966) 19 ff.). He transmitted Djubībā’s K. Nākīl al-ma‘rīf, a critique of Djāhī’s K. al-Murāfī,
and added remarks to it, obviously in his own K. al-MA'rifat (cf. Führst, ed. Flügel, 175, ll. 4 ff.), which were taken over by the Kādī 'Abd al-Djalābīr in his Tā'īk Nakd al-ma'rifa (cf. Ḥākim al-Dżamātī, 367, ll. 10 ff.). The book is quoted in Mughm, xii, 121, ll. 19 ff.; the other renowned references (cf. Ḥākim al-Dżamātī, 367, ll. 12 ff.; 372, ll. 15 ff.; 532, ll. 11 ff.) may equally well go back to his K. al-Ulām which is explicitly mentioned in Mughm, xii, 235, l. 16.

In juridical hermeneutics, he departed from Abu l-Ḥasan al-Karḫī’s ideas. But he seems to have surpassed his teacher in many respects. Some of his views are quoted with the additional remark that he had them (‘an Abū l-Ḥasan; frequently, however, his name is mentioned alone. He impressed later generations with the precision of some of his definitions, but also with subtle speculations on ‘āmīn and ḥāfiẓ, on idmā‘, on ra‘lāf, on nāḥār, on ḥāfūd, on nāṣah (which, in contrast to many of his contemporaries, he also allowed concerning hadā‘ī, etc.). Numerous, although scattered, material in Mughm, xii, 235, l. 16 ff.; Fihrist, ed. ... masters, Abu ‘1-Kasim Dżurdjanī and Abu ‘1-Hasan Kharakanī (q.v.). Al-Ma‘ālam ad-wāli al-fikr (cf. the index), and in an as yet unidentified work on wāli al-fikr preserved in the Vatican library (Ms. Var. arab. 1100; cf. Levi Dellà Vida, Elenco dei manoscritti, 145 f., and Madelung, Qāsim ibn Ḥābrām, 179 f.). Abu ‘Abd Allāh’s own works in this domain, among them a K. al-Uṣūl and a K. Nakd al-futūd (cf. Faṣlī ad-tźā‘āl, 326, l. 20), seem to be lost. In the “ethical” chapters of wāli al-fikr, he circumscribed, like Kādī ‘Abd al-Djalābīr, the good only in a privative way (cf. ‘Abd al-Djalābīr, al-Muḥīṭ, ed. Azmī, 259, ll. 13 ff.); the affirmative definition was apparently reserved for evil, which received the greater share of attention. Evil is never chosen by man for the sake of itself, but only when he sees a need for it (cf. G. Hourani, Islamic rationalism, Oxford 1972, 95). Whereas Dżubbaṭ and Abu Ḥāǧīm believed that the state of mind of an agent determines the quality of evil (evil becoming neutral when performed during sleep or in the state of unconsciousness), Abu ‘Abd Allāh upheld a more differentiated position (cf. ibid., 41 f.). His ideas on ḥarām were formulated in his commentary on Karḫī’s Muḥāṣarāt, but also in some monographs where he treated the lawfulness of drinking nābiḍ, of performing one’s prayer in Persian (two typical Hanāfī tenets) and the muṣa‘a marriage (which he deemed unlawful, in accordance with Zaydī fiqh and in disagreement with Ima’mī opinion; cf. Führst, 206, pp. f.).

In theology proper, he followed the line of the Iṣaṣān school. Only a few personal traits can be recognised with sufficient certainty. In at least three treatises he attacked the doctrine of the eternity of the world, two of them focussing their polemics on special persons, Ibn al-Rawandī and al-Rāzī (cf. Führst, 175, ll. 3 ff.; 174, ult. f.; 175, l. 2). When he explained creation as an act of thinking (‘aṭb) in order to avoid all material connotations, he seems to have taken philosophical critique into consideration (cf. Kādī ‘Abd al-Djalābīr, Sharh al-wāli al-dżamātī 548, ll. 11 ff.; Muḥīṭ, 332, ll. 15 f.). He attacked al-Rāzī also for his book against Abu l-Kāsim al-Balḵī, probably about divine knowledge (cf. Führst, 175, ll. 1 f., and Abī Bakr Ḥarrāsīs opera philosophica, ed. P. Kraus, 167 f.). He did not accept the idea of ḥafṣ; we never know whether an event which we interpret as a special “grace” (lutf) for somebody is not the ruin of somebody else (cf. Mughm, xiii, 67, ll. 15 ff.; also 155, ll. 4 ff.; obviously both quotations from his K. al-Adhāb, together with xiv, 62, ll. 12 f.). He refused Ash’arī’s K. al-‘Uṣūl (cf. K. al-Nakd al-futūd, f. 5b; 31a; 5a; also al-Ḥākīm al-Dżamātī, 372, ll. 1 f., where nakd is to be read instead of bā’d); R. McCarthy, The theology of Ash’arī, Beirut 1953, 167, 211 f., 229).

Altogether, more than 20 titles of books can be traced.

Abu ‘Abd Allāh al-Bāšrī — Abu ‘Ali

Abu ‘Ali Al-Fadl b. Muhammad al-Mursīdī al-Fārmādī, one of the greatest Sūfī masters of the 5th/11th century, born in 402/1011-12 at Fārmād, a small town in the vicinity of Tūs in Khūrāsān, and the contemporary of the caliph al-Kādir and the Sūfī princes Toghrū‘i, Alp Arslān and Malik Shāh. He was highly respected by various political and religious dignitaries, including by the celebrated minister of the Sūfīs, Nizām al-Mulk, who sought his advice and his spiritual favour. He was also respected as an eloquent preacher, and appreciated for his breadth of knowledge and the beauty of his oratorical language. He approached Sūfism after profound studies in the religious sciences, and can therefore be classified as one of the scholarly mystics. When he came to Niğāhpūr, he became one of Abu l-Kāsim Kuğuyan’s circle of students, and it seems to have been the latter who turned him towards preaching and who stimulated him to study profoundly the religious sciences. In his Sūfī training, he was directed spiritually by two great masters, Abu l-Kāsim Džurdanjī and Abu l-Ḥasan Ḥārākānī (q.v.). The author of the Aṣār al-taṣāhhdīr relates in an
ancestral form the circumstances of al-Farmādi's adhe-

sion to Sūfīsm under Kūshayrī's direction first of all, and then under that of Dūrājīn, who encouraged him to preach from the pulpit and later gave him the hand of his daughter in marriage. None of al-
Farmādi's works remain, apart from a few brief poems in Arabic and a few sentences displaying his philos-

ophy and thought. However, his influence on cultural life and mysticism can be gauged from the fact that the Inām al-Ghazzālī [q.v.] was one of his pupils and cites traditions on his authority. He was accordingly considered as the greatest Sūfī luminary of his age, who lustre is seen in the fame of his great disciple. Al-Farmādi died in his native town in 477/1080.

**Aṭī AL-ḤARĪSĪ [see Aṭī-ḤARĪSĪ].**

**Aṭī AL-ṬUSAṬ [see Aṭī-ṬUSAṬ].**

Aṭī ʿAMAYTHAL, ʿAbd Allāh b. Khūlāyda b. ʿAlī b. Abl Bakr, the minor poet who could

be a man of the Banū Ḥashīm and who was originally from Ravy. He was in Khūrāsān in the service of Tāhir b. al Ḥusayn [q.v.] as a secretary and it was in this capacity that he came to reject a mission of the Kufi b. al-Maʾṣūmī to proselytise among the tribes of that region, one which was to become a stronghold of Ḥashīmī faith later on.

His main work is the K. al-Muḍjam (Maḍjam) fi taḥṣīl al-suʿāl wa-taḥlīl al-dāfīl (or wa-talḥīl al-muḥādal, a rather voluminous manual of Ibadī theology and polemics against contrary opinions [for its contents cf. ZMDG, cxvi (1976), 43 ff.]). His K. l-Isāʿāta seems to be lost. In it Ḥaṣānī he dealt with the law of inheritance; his K. al-

Farīd exists in a printed edition (cf. Schacht in Rev. Afs., c (1956), 387, no. 52). Among his historical works are a K. al-Siyār (for ms., cf. Schacht, op. cit., 141, and Lewicki, in RO, xi (1935), 165 n. 7; preserved?) and a Makhūsār tabākāt al-maḥāṣīlī (cf. Ennami, in JSS, xv (1971), 86, no. 17-1, and note by van Ess in ZMDG, cxvi (1976), 57). An epistle concerning the problem of al-suʿāl wa-taḥṣīl addressed to him by a certain ʿAbd al-Wahhāb b. Muḥammad b. Qāḥīb b. Namūr al-Anṣārī was incorporated by his contempo-

rary Abu Yaḥyā b. Yūsuf b. Bāzāhr al-Wardjānī (died 570/1174; cf. GAL, S I, 692) into his K. al-

Bibliography: (apart from the references men-

Aṭī AMQR AL-SHAYBĀNĪ, ʿISHĀK b. MIRĀN, one of the most important philologists of the Kūfān school in the 2nd/8th century, and the contemporary of the two great figures of the rival Bāṣra school, Abu ʿUbayda and al-ʿAṣmaʾī [q.v.]. He was born in ca. 100/719 at Ramādat al-Kūfā, and derived his nisba from the Banu Shaybān because he was their neighbour and client and because he also acted as tutor to the sons of certain members of the tribe. After having studied under the masters of the Kūfān school, such as al-Muṣafadāl al-Dabbī, he went out into the desert, where he lived for a considerable time amongst the Bedouins, collecting tribal poetry. Then he settled in Baghdaḏ, where he taught until his death at an advanced age, since he died in ca. 210/825, by then more than a centen-

arian, leaving behind him sons and grandsons who transmitted his works. Amongst his pupils were the main Kūfī grammarians, ʿAlī ʿAbd b. ʿAlī al-Siṣīkāt and Ibn Sallān [q.v.].

Al-Shaybānī was famed above all as a transmitter (raʾisiya) of old poetry. ʿAbū Ḥabīb al-Ḥasanī and Ibn Dābī recorded that he left for the desert armed with two inkholders and did not return until the ink had been exhausted. According
to his son 'Amr, he collected the poetry of over 80 tribes, which he wrote out and arranged with his own hands in separate collections and then placed in the mosque of Kufa. The collections have not come down to us, but they were abundantly used by later anthologists.

However, al-Shaybānī was equally known as a lexicographer especially interested in rare words (naaḍid) and in dialect words and phrases (ḥagāt). Only one of the many works in this sphere attributed to him by the biographers has survived, the K. al-Dīm, so-called because it was unfinished and did not go beyond the fourth letter of the alphabet, although the sources term it equally the K. al-Naḍid, K. al-Hurūf and K. al-Lughāt. According to F. Krenkow, who proposed to edit it after the unique manuscript preserved in the Escorial, this work is a dictionary of words peculiar to the speech of the many tribes from whom al-Shaybānī collected poetry. It is of great lexical richness, and is all the more important for the knowledge of the old dialects, since Krenkow found from a detailed perusal of the Līdān al-ʿĀrāb that later lexicographers did not use al-Shaybānī's work.

Finally, he is also said to have been a traditionist worthy of being relied upon, transmitting a large number of authentic hadīth; his most celebrated pupil here was the imām Ahmad b. Hanbal, whose son 'Abd Allāh transmitted al-Shaybānī's work called the K. Ḥārīt al-hadīth.

The post-Ibn al-Nadīm biographers attribute to Abū 'Amr al-Shaybānī several works which, according to the Fīrat, belong really to his son 'Amr.

**Abū l-ʿAnbas al-Saymari, Muhammad b. Isḥāq b. Irḥāsh b. ʿAbd al-Muʿtahfira b. Māzāda (213-75 829-88), a famous humorist of the Abu Sidād court, who was also a ḥākīm, astrologer, oneriman, poet and man of letters, and who wrote some forty works, both serious and jesting, even burlesque and obscene. Of Kufān origin, he was first of all the physician of the caliph al-Mutawakkil, and was also in the service of the caliphs al-Maʾṣūdī, Murūgh, vii, 202-4 = § 2885-8; Aḥhābīn, xvii, 173 = ed. Beirut, xxi, 537; al-Husrat, Djam al-qasīdātīn, 15-16; Yaḥyā, Udahā, xviii, 12-14; etc. Like his predecessors, he could also make up amusing stories, since we read that these were gathered together, with his poetry, in an independent volume, passages from which may be found in authors like Ibn 'Abd Rabbiḥī (led, Cairo 1962, iv, 148) and even Ibn al-Djawāt (Aḥhāb al-hamādī wa ʿl-mugḥafāṣān, Damascus 1345, 85, 111, 141, 143), and which attest the influence exercised by the inimitable Dijāzīzīn al-hadīth on the most serious of authors. In this respect, Abu 'l-ʿAnbas probably differed very little from other "humorous figures" who, as we know from the Fīrat, left behind collections of stories; but he was distinguished from them in the sense that he preferred to think that they were burlesque or scabrous. The K. Fadīl al-sulṭān ʿalā l-ḥaradīj "Superiority of the ladder over the staircase", for example, must have been purely humorous, but the K. Naṣīrād al-kawākibīdī "Remarkable stories about pimps", to mention only this one work, must certainly have descended to pornography. After all, there emerges from a conversation between Abu 'l-ʿAnbas and his crony Abu Ḥaṣan al-Madder (al-Sūlī, loc. cit.; Aḥhābīn, ed. Beirut, xxii, 377-8) that he had abandoned scholarship (ʿtim) for sukūf and rakūsī, i.e. obscenity and burlesque, it was because these last were much more profitable and lucrative. In the course of this dialogue, which took place in al-Mutawakkil's caliphate, Abu 'l-ʿAnbas declares that he has written over 30 works on sukūf and rakūsī; does this mean that the lists which we possess are very incomplete, that the works which appear to be serious in content are not serious at all, or that after al-Mutawakkil's death, this attitude came back again to topics less frivolous than certain titles would suggest? These titles which Abu 'l-ʿAnbas declares that he has written over 30 works on sukūf and rakūsī: does this mean that the lists which we possess are very incomplete, that the works which appear to be serious in content are not serious at all, or that after al-Mutawakkil's death, this attitude came back again to topics less frivolous than certain titles would suggest?

Some of these titles recall works of al-Djāhīz, to the extent that C.E. Bosworth (see Bibli.) has wondered whether Abu 'l-ʿAnbas might have plagiarised the former writer's work; the possibility of an influence here must be seriously considered, since one finds in the list a K. al-Aḥhar al-ṣāliḥ wa l-ṣaḥībīm and even a K. Dzalākātī "Book of Bores"; in order to know the truth here, it would be necessary to know what lay behind these titles.

The poetry of al-Saymārī has been referred to above; to judge by those poems available for reading, they were not all licentious and scatological, since they include the well-known line "How many sick persons have survived the physician and visitors, when all hope of cure had been given up".

The lists bring out the existence of at least one work which seems to be of a theological nature, the K. Taʿṣīl al-maʿṣīṣa, which alone cited—and doubtless deliberately—by Yaḥyā in his Muḥammad al-buldūn (s.v. Saymāra), whilst the same author enumerates some 40 titles in his Irḥād al-arīb. In fact, Abu 'l-ʿAnbas, called by Abu Ḥaṣan a muṣṭaḥalīm, perhaps even a Muṭaẓīzī, and because
of this he was dignified by being cited by Ibn Battu (H. Laoust, La profession de foi d'Ibn Battu, Damascus 1958, 170) amongst "the people of infidelity and error," who for him mean the Mu'tazila. On another level, one finds other titles which give the impression that Abu 'l-Anbas was equally interested in "scientific" topics. If his K. al-Radd 'ala 'l-mutafa'ah, directed against charlatans and homeopathic physicians, strictly against charlatans and homeopathic physicians, strictly K. al-Radd mentioned in the early lists and by (?) Abl Mikhd'll al-Saydaldm, Anbas a lasting £ K. al-Mawdlid, K. Ahkdm al-

figuring in the early lists: (H. Laoust, La profession de foi d'Ibn Batta, 1806 and testifies to the continuing successfulness of this he was dignified by being cited by Ibn Batta (H. Laoust, La profession de foi d'Ibn Batta, Leipzig 1900, 30; Kahhala, ix, 38; Ziriki, vi, 202; F. Bustani, DM, iv, 486-7; M.F. Ghazi, in Arabic, iv (1957), 168; Ch. Pellat, En certaines annuous bagdadiens: Abu 'l-Anbas al-Saymarj, in Studia or. in mem. C. Brockelmann, Halle 1968, 135-7; C.E. Bosworth, The medieval Islamic scientifical world, Leiden 1976, i, 30-2; Muhammed Baki 'Alwam, Abu 'l-Anbas Muhammad b. Ishak al-Saymarj, in al-

Abbâb, xxvi (1973-7), Arabic section, 35-50. (Ch. Pellat)

ABU 'L-ASAD AL-HIMMAJNI, NUBATA B. 'ABD ALLAH, minor poet of the "Abbasid period, originally from Dinawar. His talent was only moderate, and it was 'Allawayh/Alliya who rescued him from oblivion, since this singer, the poet's friend, introduced him to the great men of the age and, above all, set some of his verses to music, so that they enjoyed a great success. His career seems to have been quite a lengthy one. He is found, first of all, satirising as early as 153/770 two of al-Mansur's maqâlid, S'a'id and Ma'tar (al-Djahshiyar, Wazara, 124), and then frequent Abu Dulal al-'Idlî [see al-kâsim b. 'Isa], at whose court he was however eclipsed, it is said, by 'Ali b. Djabala [see al-akawa'ak]. After having previously sung the praises of the ruler of al-Karadj [q.v.], he launched at him a somewhat coarse diatribe and then turned to the former secretary of al-Mahdi, al-

Fayd, Abu Sâbî (on whom see Soudrel, Fizan, index), whose praises he now sang (al-Djahshiyarî, 164; Ibn al-Tikjkat, Fatâhir, ed. Dernoubou, 256, calls the poet Abu 'l-Aswad). But the chronology of these events is uncertain, and it is even probable that, contrary to what the Aghdni asserts, his relations with al-Fayd (who died in 175/789-90) were anterior to his stay with Abu Dulal. Amongst those whose patronage he sought, one even finds Ahmad b. Abu Du'd [q.v.], who gave him a modest gift and begged him to cease importuning him. It is, on the other hand, doubtful that he was able to make a claim upon 'Ali b. Yahyâ al-Munaqijdin (d. 275/888-9) and to address to him a lengthy anti-
Shi'â satir; but the intermediary whom he thanks for having secured for him satisfaction could well have been Hamdûn b. Ismâ'il [see ibn hamdûn].

To judge by the few extant fragments of his verse, Abu 'l-Asad had no connubumtion about composing scabrous epigrams in order to get his revenge on people for the neglect which he sometimes received where he had expected a reward. But he was also able to express very delicate feelings, as in his elegy on Ibrâhim al-Mawâslî (d. 188/804 [q.v.]), whose outspokenness was nevertheless criticised.

Bibliography: In addition to references given in the article, see Agbhiî, xiv, 124-35; Bustani, DM, iv, 171. (Ed.)

ABU 'ASIM AL-NABIL, AL-DAHSHAK B. MAKHRAH B. MUSLIM B. AL-DAHSHAK AL-SAYMARDNA AL-BASRI, tradi-
ditioner, born at Mecca in 122/740 but estab-
lished subsequently at Basra, where he transmitted from a host of scholars (notably al-Ashar'î) a large quantity of hadifts gathered by himself, and especially from several tâbre's or Successors. He was considered as trustworthy, and some of his hadîths were included in the great collections; his biographers assert that he never fabricated a single one, although he is said to have declared that pious men never lie so much as in regard to traditions from the Prophet (Goldziher, Mus. Stud., ii, 47, Eng. tr. 55). It is said that he was never seen with a book in his hand and that we was knowledgeable about fiqh. Despite such details as these, little is known of his life. Physically, he was remarkable for the size of his nose, and this
particularity is one of the explanations given for his name of al-Nabīl. It is also recorded that he owed this name to his habit of wearing fine clothes, or because he freed his own slave in order to release Shu’ba [q.v.] from his oath not to transmit hadīths for a month. A final explanation seems the most plausible: some scholars passed and all the population rushed out to see the spectacle, while he however stayed with his master Ibn Djuraydī [q.v. in Suppl.], who gave him the title of “noble”. He probably died on 14 Dhu ‘l-Hijjah 212/5 March 828 at Baṣra.

Bibliography: Dāhīb, Bayān, ii, 38; Ibn Sa’d, Tobakī, vii, 295; Fihrist, ed. Cairo, 1963; Ibn Hādjar, Tahāhīs, iv, 450-3; Ibn al-Imām, Shadhārānī, ii, 28; Ḥaqqī, DM, iv, 416. (O. PELLAT)

ABU LU’AZĀ’IM, MUHAMMAD MĀDI, an Egyptian and a political activist, was born in the town of Raḥīd on 27 Raḍjab 1286/2 November 1869 and grew up in the village of Maḥāllat Abū ‘Alī near Dāsūk in the present-day Gharbiya province. He studied at al-Aẓhar [q.v.] and at Dār al-‘Ulūm [q.v.]. He graduated in 1308/1890-1 and spent the subsequent twenty-five years as a teacher at various provincial government schools in Egypt and the Sudan as well as at Gordon College in Khartoum. After the launch of the Islamic establishment he taught Islamic Law from 1905 until August 1915, when he was forcibly repatriated to Egypt—following his decision to declare himself in support of British administrative reforms in the Sudan, and his public opposition to these—where his freedom and thus determined the outcome of the Caliphate Conference held in Cairo in May 1926 and brought activity in support of Ahmad Fu’ād’s candidacy to an end. Muhammad Mādi died on 28 Raḍjab 1356/4 October 1937 and was buried in his zāyfa [q.v.] in Cairo near the mosque of al-Sūltān al-Hānafi. Here, his shrine as well as the shrine of his son Ahmad (d. 1970), who succeeded him as head of the tarīqa, may be visited in a newly-built mosque (opened in January 1962), which houses the headquarters of the ‘Azamīya tarīqa. (O. PELLAT)

The most extensive biography is ‘Abd al-Mun'im Muhammad Shakrāf, Ibrāhīm Muhammad Mādi Abu ‘l-‘Azā’im, baṣīṣtu, ḍiḥādaban, ḍiḥārahu, Cairo 1972. It contains the text of various relevant documents, evaluates his poetry, clarifies his position with respect to the idea of al-insān al-kāmil [q.v.], sets forth his conception of taḥfid (based upon an unpublished treatise), and lists and summarises his works. To these must be added Min ḍiyāmisīl al-kalim, Cairo 1962, al-Wafgānydtīd (ed. ‘Abd Allāh Mādi Abu ‘l-‘Azā’im), Cairo n.d.; Diwan (ed. Muhammad al-Raḍī Mādi Abu ‘l-‘Azā’im), Cairo n.d. (mimeo); al-Tarīka al-Azamīya (ed. Ḥaqqī Mādi Abu ‘l-‘Azā’im), Cairo 1328/1910, (important for his affiliations with various tarīkas); and al-Shajī’ min marād al-tarīka, Cairo n.d., which caused the temporary imprisonment of Muhammad Mādi when it was interpreted as a concealed attack upon King Ahmad Fu’ād (cf. al-Wafgānydtīd, 8). The treatise Wādī’d ‘adhīr al-ḥakīm, Cairo n.d., should be excluded from Shakrāf’s enumeration—it was written by Muhammad’s brother, the journalist Aḥmad Mādi (d. 1893), who had founded the newspaper al-Mu‘ayyad together with ‘Alī Yūsuf [q.v.]. The treatise was published for the first time in Cairo in 1914, by Aḥmad’s brother Mahmūd. The authorship was falsely assigned to Muhammad Abu ‘l-‘Azā’im by his son and successor Ahmad in the subsequent editions published under his auspices. For additional biographical materials, see Muhammad ‘Abd al-Mun'im Khaṭṭāf, al-Wafgānydtīd al-rāhi bi l-‘tasawwuf il-Islāmī fi Miṣr, Cairo n.d., 170. For details about the history of the al-‘Azamīya tarīka and further references, see also F. de Jong, Two anonymous manuscripts relative to the Sūfī orders in Egypt, in Bibliotheca Orientalis, xxxii (1975), 186-90. For the ‘Azamīya in the Sudan, see J.S. Trimingham, Islam in the Sudan, London 1949, 239 f. On his naṣīḥīd, see J.W. McPherson, The moulids of Egypt, Cairo 1940, 140 ff. A small collection of letters written by Muhammad Mādi and transcripts thereof, which are in the possession of the ‘Azamī family, is preserved on microfilm at Leiden University Library. (F. DE JONG)
ABU BAKR IBN AL-‘ARABI — ABU BARAKISH

ABU BAKR IBN AL-‘ARABI [see IBN AL-‘ARABI].

ABU BAKR AL-‘ASAMM [see AL-‘ASAMM in Suppl.].

ABU BAKR AL-KHARA’ITTI [see AL-KHARA’ITTI].

ABU BAKR AL-ZUBAYDI [see AL-ZUBAYDI].

ABU L-BARAKAT [see AL-LANFI-ZULAYDI].

UMAR B. UL-‘ABBAS, MUHAMMAD, KUFAN grammarsian, jurispru-
dent. Kur‘an scholar and traditionist. He was born in Kufa in 426/1035, heard hadith in his home town and Baghdad, and stayed for some time, together with his father, in Damascus, Aleppo and Tabaristan. In Aleppo he read in 455/1063 the K. al’-Idhdh of Abu Ali al-Alawi. He then finished on 5 Ramadan 464/26 May 1072 the reading of the K. al-Qdmah al-kafi, an extensive collection of Kufan Zaydi hadith doctrine by the Sayyid Abu ‘Abd Allah Muhammad b. Abu ‘Alawi. He read it with the Sayyid Abid al-Djabahir b. al-Husayn b. Mu‘ayyad, who had heard it from the author, though he was also transmitted directly from Abu ‘Abd Allah al-Alawi with an idjaha. He taught and led the prayer in the mosque of Abu Ishak al-Safi. Of his works on grammar, a commentary on the K. al-Lumad of Ibn Djinini is extant in manuscript (see Brockelmann, S I, 192). A descendant of Zayd b. Ali, Abu l-Barakat generally adhered to Zaydi Shafi‘i belief, though he generally concealed them from his Sunnite students and gave legal fatwas according to Hanafi doctrine. Only to Shafi‘is did he transmit partisan Shafi‘i idjatdm and rendered fatwas according to Zaydi law. In agreement with the Zaydi creed in his time, he upheld the doc-
trine of human free will and the createness of the Kur‘an. He died on 7 Sha‘ban 539/2 February 1145 in Kufa.

dazarbad 1331/1915, iv, 280-2; Sdrim al-Din Ibr.imah b. al-Kasim, Tabakt al-zaydyya, ms. photocopy no. 290 Cairo, Dar al-Kutub, 314. (W. MADELUNG)

ABU BARAKISH (A) a name, no longer in use, given, according to locality, to two birds whose brilli-
ant plumage is characterised by iridescent colours or shows a colour-scheme varying in the course of the seasons. The quadrifoliar root B-R-K-SR probably derived from the trilleral B-R-K S, has, like R-K-SR, the sense of “to be variegated, multicoloured”, and the substantive bardkish indicates the result, synonymous with talawwun. The plural barakish has a superlative quality in expressions such as bidad bardkish “a land decked with flowers” and it is used as a forename; it was the name of the wife of Luk‘an [q.v.], and of a bitch that became proverbial for her ability to foresee and to bettie with her barking the return to camp of the horsemen of her tribe. As for the plural of the composite noun abu bardkish, it would theoretically be ahu bardkisht, but such forms are not found in literature.

(1) According to the uniform definition provided by Arab lexicographers, the true abu bardkish corre-

sponds to this description: “a small bird of the bushes with a greyish head, a scarlet breast and dark lower parts. Just like the porcupine, when excited it ruffles

up all its plumage, showing a whole range of glistening colours”. (al-Damir, Hayut al-hayawun, i, 162, and root B-R-K-SR in the Arabic dictionaries).

Though restrained and concise, this ornithological information is sufficient to identify the abu bardkisht as a ploceid bird, probably the weaver-bird (Ploceus cinnamomeus or Passer domesticus), a resident both of the Sudan and of the southern coasts of the Red Sea. In fact, this industrious and gregarious bird, smaller in size than the house sparrow and with plumage that is generally brownish and rather dull, abruptly changes its livery in the mating season and its feathers become soft, velvet, long and finely shaped; the colours are striking: the breast, the back, the upper and lower feather coverings the short tail (whence the expression found in some authors al-abdul‘adajiz are of the purest pink, while the crown of the head and the stomach have a sheen of glittering black. Nubia is the favourite territory of this bird, which was one of the first to be exported and which very soon came to be known to the Arabs. In the period of mating, the male courts thrice or four females, making a show of bringing them grains of millet, and throughout the period of nestbuilding he generally asserts his proprietary rights by fluttering and hovering beneath each nest and ruffling all his feathers which sparkle in the light, accompanying his performance with a loud rustling of wings (haa‘f). After the hatching of the young, the actor abandons his deceptive guise and returns to the gregarious life in large flocks whose greed causes sometimes considerable havoc in the cereal crops. The spec-
tacular variations in colour of the plumage of the Grenadier weaver-bird provided for a poet of the Ban‘ud Asad an image whereby to stigmatise the inconstancy of his enemies, and his proverbial lines (written in kumid metres) ka-abi bardkisht kulla lawl nin bawd-hu yatakhayyalu “like abu bardkisht whose col-
our resembles all colours”, have determined the way in which the bird is remembered (see Ibn Kutay-
ba, Adab al-kitab, Cairo 1355/1936, 204; al-Damiri, loc. cit., LA).

(2) For al-Kazzawini (Abid ibn al-makkahib, in the margin of al-Damiri, ii, 252) and for him alone, the abu bardkis is a wader with a pleasant-sounding cry, with red beak and feet, of a size close to that of the stork and the plumage fluctuating in colour, in reds, greens, yellows and blues. The livery of this attractive wading-
bird apparently provided Byzantine weavers with the inspiration for the creation of the precious dove-
colouredilet silk called abu kalamin [q.v.], a name which conversely was applied to the bird. Now, the only wader of the Mediterranean and oriental region perfectly fitting this description is the Porphyrion or Blue Tavie/Purple Gallinule (Porphyrio porphyrio), better known however under the grandiose name of “Sultan-fowl”. This marshland bird, half-a-metre in height, has feet and beak of a fine coral red and on its forehead a knob of the same colour; its rich blue plumage varies from indigo to turquoise with flashing tints of green, purple and bronze. When alarmed, the Sultan-fowl emits a brief, trumpet-like sound. Its Spanish name is “calamón”, a vestige of the Arabic kalamin, while the English has retained its ancient Greek name nap-
tupis arashed as furfuf/furuf, pl. furfuf. Syria and ‘Ira‘ik call it tufihun and sanhan. All these countries and Persia are also familiar with the “green-backed” sub-

species (Porphyrio perploites or madagascarensis), very closely related to the main species and bearing the
names dik sultani “sultan-cock”, dik al-ma3 “water-cock” and farkha sultaniyya “sultan-pullet”. The Sultan-fowl, easily domesticated, was highly thought of among the Persians, the Greeks and the Romans; it was bred in temples and placed under the protection of the gods.

In Egypt, it is not unusual to see it in rural areas co-existing peacefully with domestic poultry. Because of the splendour of its plumage, the Persians awarded it the title ghalmurdh “king-bird”, arabised in the forms ghalmurkh, ghalmurkh, ghalmirk, ghalmurk, ghalmurdh, ghalmurdh. In legends and stories of Persian origin, while the lion is the king of the animals, it is the Sultan-fowl that sits on the throne of the feathered race, and the peace-cock is only the vixier (see Ral’s fikhr al-Safs, Beirut 1957, ii, 249 ff.).

Abu Bardkish several times cites the Sultan-fowl (Hayawān, pāṣīm) as feeding on flies and small reptiles, which is accurate, the diet of this wader being both vegetable and carnivorous; having killed its prey with a violent blow of the beak, it holds it with one foot and tears it with the other, carrying off the morsels of flesh in its beak.

Thus the abhā barāikh of the poet of Asad was a weaver-bird, while al-Kazwīnī saw it as the Sultan-fowl, worshipped in antiquity, and one is inclined to think that it was on this authority that this naturalist, perhaps not knowing the Grenadier weaver-bird, identified the abhā barāikh with the abhā kalāmān/šāhmurk; but his decision was regarded as law by his successors, and it should be recognised as such.

(3) In the Hīdż, through a confusion on the part of the children of the nomads, attested by the philologist al-Ḫazārī, abhā barāikh was used in place of birkī, to denote the chaffinch (Fringilla coelebs), a finch well-known in all the Arabic-speaking countries and also called qwārīgh in the Maghrib, qwarīgh, birkī, zābh; this was simply an error ascribable to childish ignorance.

Finally, we may ignore the totally unfounded identification of the abḥā barāikh with the bullfinch (Pyrrhula pyrrhula) suggested by the encyclopedia al-Mausūl fi ‘ilm al-štābī (Beirut 1965, i, no. 154), this western bird being practically unknown in the Near East, in Arabia, in Egypt and the Maghrib.

(Ch. Pellat)
ABU DULAF AL-‘IDLLI — ABU ‘1-FARADJ b. MAS‘UD RUNI

ABU ‘1-FARADJ [see AL-KASIM b. ‘TS].

ABU ‘1-FADA‘IL [see HAMDANID].

ABU ‘1-FARADJ b. MAS‘UD RUNI, Persian poet of the Ghaznavid period, was born and raised at Lahore, according to ‘Awfi, the earliest and most trustworthy authority for his life. The name Runi has been retained by Incan writers of the 16th and 17th centuries to a place by the name of Rān in the vicinity of Lahore (cf. e.g. Bada‘unf, Montakhab al-tawārīkh, i, Calcutta 1864, 57; Forhang-i Dāhāngīrī and Būr bás-i kātī, s.v.). But already Bada‘unf had to admit that this place could not be found anywhere in that area. Others (e.g. Lutf‘-Allī Beg Adhar, Anāṣkhud, lith. Bombay 1299/1882, 122) have suggested an origin from Rānā, a village in the Dāhāngīrī Khwārāmān near Nāshāpūrī. This would mean that Abu ‘1-Faradj was descended from Khurāsānī settlers in the Panjāb who must have come there after the conquest of the region by the Ghaznavids in the early 5th/11th century. The mentioning of a Sūstān origin can be met with in some other sources probably goes back to a confusion with another Ghaznavid poet, Abu ‘1-Faradj Sīdżī.

The date of his birth is not known. Chronological indications that can be derived from his work make it likely that he started his career as a poet of the court of Lahore some time before Sayf al-Dīn Maḥmūd was installed there by his father Sultān Ibrāhīm as a viceroy (zālī, or mābād) of Ghaznavī Hindistān in 469/1076-7. Abu ‘1-Faradj appears to have retained his position at the court of Lahore also under the successor of Sayf al-Dīn the later Sultān Mas‘ūd III, who was in residence there from 490/1097-99 (cf. on events in India under these two viceroys, C.E. Bosworth, The later Ghaznavids, splendours and decay: the dynasty in Afghanistan and northern India 1040-1186, Edinburgh 1977, 65-8). As he addresses the latter in most of the poems he wrote for him by the title of mābād, it may be concluded that they belong to this period. The last poem by Abu ‘1-Faradj that can be dated with certainty is an ode he wrote at the occasion of the accession to the throne at Lahore of Mas‘ūd’s son Sīrāzād after his father had become Sultān of Ghazna.

The relationship between the poet and the central Ghaznavid court is not quite clear. He wrote several poems for Sultān Ibrāhīm and, according to ‘Awfi, placed a kasda addressed to the sultan at the beginning of his Diwān. There are also poems preserved which bear dedications to prominent officials of the central government, like the ‘arid-i lālagh Mansūr b. Sa‘īd Maymāndūr who patronised other poets of this period as well. But apart from that, there are no indications of a stay of Abu ‘1-Faradj at Ghazna for any long period of time. As Lahore was a base for incursions into Hindu territory, in which the Sultan and his retinue also participated from time to time, most of these poems may very well have been written while the patrons from Ghazna were staying at that city temporarily on their way to a campaign.

It seems, therefore, likely that the scene of Abu ‘1-Faradj’s career was mainly, if not entirely, the court of Lahore, where the young princes showed a greater interest in poetry than the Sultan himself, who has been depicted by historians as a stern and pious man. The only contemporary poet who as far as we know now was in personal contact with Abu ‘1-Faradj was Mas‘ūd-i Sa‘īdī Salmān [q.v.], another Iranian born in the Panjāb. But the former is to be distinguished from the Abu ‘1-Faradj whom Mas‘ūd held responsible for his banishment from the court.

The modern Iranian scholar Djalal al-Dīn Hamūrārī has connected one of the poet’s kasidas with the conquest of Kānawārī by Sultān Mas‘ūd III which he dated between 500 and 508 A.H. This would provide an approximate dating for the death of Abu ‘1-Faradj (cf. Diwān-i ‘Utbarin-i Mafkūrāt, ed. Hamūrārī, Tehran 1341/1962, 654 ff. and passim, and Bosworth, op. cit., 85).

The work of Abu ‘1-Faradj, as we know it now, consists mostly of kasidas, and further of some quatrains and mukātatāt, as well as a few ghazāls of a pre-classical type. The kasidas are comparatively short poems in which the emphasis is laid on the panegyric. The kasdas are comparatively short poems in which the emphasis is laid on the panegyric.

The perpetual war waged with the non-Muslim neighbours of Ghazna and his retinue also participated from time to time, according to the central government, like the Sultān of Ghazna, the relationship between the poet and the central government is often reflected in his poems. But the traces of this influence can be noticed in many ways, varying from direct quotations to a more general similarity of ideas, motifs and forms of expressions (cf. Diwān-i Anvar, ed. by M.T. Mudarris-i Raμawi, i, Tehran 1347/1968, 104-8).

The modern Iranian scholar Djalal al-Dīn Hamūrārī has connected one of the poet’s kasidas with the conquest of Kānawārī by Sultān Mas‘ūd III which he dated between 500 and 508 A.H. This would provide an approximate dating for the death of Abu ‘1-Faradj (cf. Diwān-i ‘Utbarin-i Mafkūrāt, ed. Hamūrārī, Tehran 1341/1962, 654 ff. and passim, and Bosworth, op. cit., 85).

The work of Abu ‘1-Faradj, as we know it now, consists mostly of kasidas, and further of some quatrains and mukātatāt, as well as a few ghazāls of a pre-classical type. The kasidas are comparatively short poems in which the emphasis is laid on the panegyric. The kasdas are comparatively short poems in which the emphasis is laid on the panegyric.

The perpetual war waged with the non-Muslim neighbours of Ghazna and his retinue also participated from time to time, according to the central government, like the Sultān of Ghazna, the relationship between the poet and the central government is often reflected in his poems. But the traces of this influence can be noticed in many ways, varying from direct quotations to a more general similarity of ideas, motifs and forms of expressions (cf. Diwān-i Anvar, ed. by M.T. Mudarris-i Raμawi, i, Tehran 1347/1968, 104-8).

The wide range of Abu ‘1-Faradj’s influence is further attested by the many quotations from his poems his kashida addressed to the sultan at the beginning of his Diwān. There are also poems preserved which bear dedications to prominent officials of the central government, like the ‘arid-i lālagh Mansūr b. Sa‘īd Maymāndūr who patronised other poets of this period as well. But apart from that, there are no indications of a stay of Abu ‘1-Faradj at Ghazna for any long period of time. As Lahore was a base for incursions into Hindu territory, in which the Sultan and his retinue also participated from time to time, most of these poems may very well have been written while the patrons from Ghazna were staying at that city temporarily on their way to a campaign.

It seems, therefore, likely that the scene of Abu ‘1-Faradj’s career was mainly, if not entirely, the court of Lahore, where the young princes showed a greater interest in poetry than the Sultan himself, who has been depicted by historians as a stern and pious man. The only contemporary poet who as far as we know now was in personal contact with Abu ‘1-Faradj was Mas‘ūd-i Sa‘īdī Salmān [q.v.], another Iranian born in the Panjāb. But the former is to be distinguished from the Abu ‘1-Faradj whom Mas‘ūd held responsible for his banishment from the court.
annex (damma) to Armaghān, vi (Tehran 1304/1925) with a biography and annotations to the text by Muhammad 'Alī Naṣīr. The recent edition by Mahmūd Mahdawī Dāngānī reproduces the text of its predecessor, adding variant readings from two ancient manuscripts, viz. a copy in the Chester Beatty Library (cf. A catalogue of the Persian manuscripts and miniatures, Dublin 1959, 4, no. 105) and a copy in the British Museum (cf. Ch. Rieu, Supplement to the catalogue of the Persian manuscripts, London 1895, 141, no. 211). Many manuscripts of the Dīwān, or of smaller collections of poems, still await to be examined (see e.g. A. Muntawī, Fihrist-i muskāhā-yi khāṭṭi-yi farsa, Tehran 1350/1971, 2214-6, nos. 21357-417; Ahmed Ateş, Istanbul katibhâverîlerinde Farsa manzum eserler, 1, Istanbul 1962, 212).

ABU 'L-HASAN AL-ÂHMAR, the usual name of a philologist of Bāṣra called 'Alī b. al-Husayn al-Musārak, who was taught by al-Kisā'ī [g.e.], whose eager pupil he was; after his master, he became tutor to the future caliphs al-Amīn and al-Ma‘mūn. The biographical sources record that al-Âhmār was originally a member of al-Rāshīd’s guard, so that, being very attracted to the study of philology, he was unable to attend al-Kisā’ī’s teaching sessions except when he was not on duty in the palace. When the master came to give lessons to the young princes, al-Âhmār rushed towards him, both when he was coming and when he came out took his stirrup and escorted him, whilst firing questions on grammar at him. When al-Kisā’ī was afflicted by leprous and unable to teach the princes any longer, he was afraid lest one of the great grammarians of the period, Sibawayh or al-Akhfash [g.e.] might take his place; so he recommended as his own successor al-Âhmār, who was in the end confirmed in the post. The biographical sources mention in this connection the custom whereby, after the first lesson, the new tutor received all the furnishings of the room in which he had been teaching; al-Âhmār, whose house was too small to take this, saw himself offered now both a house and two slaves, one of each sex. Each day, he went along to learn that morning’s lesson from al-Kisā’ī, who every month came to question his pupils in al-Rāshīd’s presence. In this way, al-Âhmār acquired a vast amount of knowledge. He is said to have known 40,000 shawāthīl verses and complete kāsidas, but he had no pupils and did not transmit al-Kisā’ī’s knowledge orally. This latter role devolved on his rival al-Farrā’ [g.e.], but he was the author of two works, the K. al-Taqīf and the K. Tafannun al-balagha. He died on the Pilgrimage road in 194/810.

Bibliography: Fikrist, 98; Khâṭīb Baghdādī, quickly expanded his power over large areas of the Yaman. The Imām was soon deserted by most of his followers and was forced to move from town to town. In Rabī’ I 444/July 1052 al-Sulayhī defeated and killed Abū Ḥāfīz b. Yahyā b. Abī Ḥāfīz and took possession of Saʿrā. Abu 'l-Fath now corresponded with Nadjd, for the sake of the allegiance of his ally, opposing him against al-Sulayhī. When he invaded the Balad 'Ans later in the year 444/1052-3, he was defeated and killed by al-Sulayhī, together with some seventy supporters, at Nadjd al-Dīn and was buried in Radman. His descendants were later known in the Yaman as the Banu 'l-Daylami.

His Kur’ān commentary al-Burhdīn is extant in manuscript (Fihrist kātib al-kājmān al-Musawwakhīyāt, Saʿrā n.d., 12; Dār al-kutub: Kimmat al-muḥdiy̱āt al-ārāhīyāt al-musawwakārī wa-bi-mūsawwakīlm min al-Qamāhrīyāt al-Ārāhīyāt al-Yamanīyāt, Cairo 1966, p.). A refutation of the Muṣarrifiyā [g.e. sect] is also ascribed to him.

the poets very well, and previous to his own activity, various of his paternal and maternal uncles had specialised in the collection and transmission of literary anecdotes. He was in contact with Abu Nuwás, whose protégé and rāzī he was, and through this connection he determined to follow the activities of the great contemporary poets, and especially, of the libertine poets. As well he was, and through this to follow the activities of the great contemporary poets, and especially, of the libertine poets. He was in contact with Abu Nuwás, and a kālim, Abu Hiflk, al-Buhturfi, al-Khuraymi, and also al-Dāhīz, Tha'lab, al-Mubahrrd, etc.

He himself put together a work called the A̱ḇghar Ā̱ḇ Abū Nuwās, which has come down to us, and a K. Sīnāt al-ṣan`arī and a K. A̱ḇghar al-ṣan`arī, of which no trace has survived but were certainly used in the 3rd and 4th centuries by several writers of adab works.

Abū Hiflk was also a poet, but only a few dozen of his verses have been preserved, sc. fragments of eulogies addressed to ‘Alī b. Yahyā al-Munadžjim and ‘Ubayd Allāh b. Yahyā b. Khājan; of satires addressed to Ahmad b. Abī Du`ād and al-Buhturfi, epigrammatic exchanges, not always in the best of taste, with Abī ‘Alī al-Baṣrī, Sa`īd b. Humayd, Abū ‘Alī al-Ya`ṣīn and Ya`qūb al-Tammūr, all these being his companions in nocturnal sessions; and a few love verses. It is surprising that nothing has come down to us from his wine poetry, which Ibn al-Mu’tazz says enjoyed a wide currency. Altogether, Abū Hiflk was a minor poet who has contributed, through his anecdotes, to our knowledge of the history and sociology of poetry in the 2nd/8th and 3rd/9th centuries.

Bibliography: A. Ahmad Farrāḍi has edited the A̱ḇghar Ā̱ḇ Abū Nuwās, Cairo 1373/1953 (an edition with numerous verses in the text censored) with a bibliographical note, to be completed by Bencheikh, Les voies d’une création, typescript thesis, the Sorbonne 1971, i, 116-7, and idem, Les sécristaires poètes et imamètres de cercles aux IIe et IIIe siècles de l’hégire, in JA (1975), 265-315. (J.E. Bencheikh)

ABU 1-ḤUSAYN AL-BAṢRĪ, MUHAMMAD B. ‘ALI B. AL-TAYYIB B. ḤUSAYN, Mu‘taṣīlī theologian. Little is known about his education and early career. He originated from Basra where he heard hadīth. As he studied kalām and usūl al-fīhī with Kādī ‘Abd al-Dāhībār [q.v.], he must have visited Rayy for some time. With the Christian Abī ‘Alī b. al-Samh, a student of Yahyā b. Ḍafī`, he studied philosophy and science, presumably in Baghdad. This is attested by a manuscript containing his redaction of the notes of Ibn al-Samh on the Physics of Aristotle. He may have also studied and practised medicine for some time if he is, as has been suggested, identical with the Abu 1-Ḥusayn al-BAṣrī mentioned by Ibn Abī Usaybān as a physician contemporary with Abu 1-Farāḍi b. al-Tayyib. Al-Dāhībār refers to him as al-kādī, but there is no other evidence that he ever held an official position. During the later part of his life he taught and wrote in Baghdad. As his two usūl al-fīkh works, the S̱̱hāḥ al-Umūm and the K. ʿAḻ-Umūm, were composed still before the death of his teacher ‘Abd al-Dāhībār in 1156/1744, he must have begun his teaching career in Baghdad before that date. 1st ed. in Bagdad on 5 Rabi‘ II 436/30 October 1044. The fact that the Ḥanāfī kādī Abū Allāh al-Saymārī led the funeral prayer for him indicates that he belonged to the Ḥanafī madhhīb, not to the Shāfi`ī as suggested by some sources.

Of his works on the usūl al-fīkh, his commentary (ṣahr) on ‘Abd al-Dāhībār’s K. al-Umūm appears to be lost. His K. ʿAḻ-Umūm, written later, has been edited together with his Š̱̱nāt al-umūm and K. al-琦̱̱rīd al-ṣahrī (ed. M. Hamidullah, Damascus 1965). This work became popular also among non-Mu‘tāṣīlī scholars and was copied and emended to form the basis of Fākh al-Dīn al-Rāzī’s K. al-Maḥbūl. None of his kalām works appears to be extant. The largest one, K. Tawāfīkh al-adīlīa, remained unfinished, as he had only reached the chapter on the visio beatifica before he died. On the K. Qīṣās al-adīlīa, Ibn Abī 1-Hāḍīd [q.v.] wrote a commentary. A short fragment on the question of the imāmate extant in manuscript (Vienna, Glaser 114) is probably an extract from his K. S̱̱nāt al-琦̱̱rīd al-khimmān. His theological doctrine can, however, be recovered from later references and especially from the extant parts of the K. al-Maḥbūl fi usūl al-dīn (ms. Sa`n`a`) of his student Mahmūd al-Malābīmī, who quotes the K. Tawāfīkh al-adīlīa extensively. Also lost are his refutations of two works of the Imām Shāfī`i al-Murtada, his contemporary in Baghdād: the K. al-琦̱̱rīd fi the imāmate and the K. al-Muḥfratī on the doctrine of the concealment (ṣ̱̱yāba) of the Twelfth Imlīm. In his doctrine, Abu 1-Ḥusayn al-BAṣrī was deeply influenced by the concepts of the philosophers and diverged from the Bahāshīma, the school of Abū Ḥāsim al-Dāhībār represented by his teacher ‘Abd al-Dāhībār. He was therefore shunned by the Bahāshīma, who accused him of rejecting his Mu`taṣīli shaykhīs in an unfair and injurious manner. This charge is repeated by al-Shahrastānī, who maintains that he was really a philosopher in his views (jol-ṣ̱̱fī al-maḏ̱hhīb) but the Mu`taṣīlī mu’tahallīmīn were not aware of this fact. Ibn al-Kīftī, too, suggests that he concealed his philosophical views under the forms of expression of the kalām theologians in order to guard himself from his contemporaries. Notable points on which he differed from the Bahāshīma were his rejection of their theory of modes (aḥādī) [q.v.], and their thesis that the non-existent (muḏ̱ḏ̱m) is a thing, his indictment about their theory of atomism, his admission of the miracles of saints (karmādī), and his reduction of the divine attributes of will, hearing and seeing to that of knowledge. Evidently also under the influence of the doctrine of the philosophers, he affirmed that the acts of man occur necessarily in accordance with their motive (dīrī) thus, as Fākh al-Dīn al-Rāzī pointed out, in effect undermining the Mu‘taṣīlī doctrine of human free will.

Abu 1-Ḥusayn’s school was continued by his students, the Khārazmīans Mahmūd b. Muhammad al-Malābīmī and Abī ‘Alī Muhammad b. Ahmad b. al-Walīd al-Kalīḍī (d. 478/1086) who, like his teacher, also studied logic and philosophy and taught in Baghdad. According to Ibn al-Murtada, Fākh al-Dīn al-Rāzī adopted many of his views on the “subtleties” (lāfī) of kalām, i.e. matters not touching fundamental dogma. His theological doctrine progressively exerted a strong influence among the Imāmīya and, to a lesser extent, among the Zaydiyya.

(W. MADELING)

**ABû HûZÂBA, AL-WALîD B. HUNAYFâ (b. Nahîk in Ta‘brî, ii, 393) AL-TAMMî, a minor poet of the 1/7th century. He was a Bedouin who settled at Baṣra and was a panegyrist, at the time of Zâyâd b. Abîthî (45-53/665-72) or shortly after, of ‘Abd Allâh b. Khâlid b. Asîd, governor of Fârs. His family urged him strongly to join the circle of Yazîd b. Mu‘awiyâ, before the departure of the Khalîfâ at the caliphal palace, he goes quite contrary to the impression that he exercised a deep influence on all the pupils who thronged his courses, and they give him as the heir of Malikî teaching at the open cenacle of al-Mutawakkî, contribution à l’étude des instances de legitimation litteraire, in *Mélanges Henri Lemaître = BEO, *xxix (1977).

(J.E. CENNEHIEU)

**ABû İMÎRÂN AL-FâSÎ, Mûsâ B. ‘ĪSÎ ABD ÂDAH-Haçaygâq (?), Mâlikî *fâkhî, probably born between 365/975 and 368/978 at Fâs into a Berber family whose *nisba is impossible to reconstruct. No doubt to complete his studies, but perhaps also because of other reasons hard to discern, he went to settle in al-Kâyrawân, where his master was in particular al-Kâbah (d. 403/1012 [g.]). He is known to have stayed in Cordova with Ibn ‘Abd al-Barr [g.] and to have profited by the chance to follow the lectures of various scholars there, which his biographers list, without however giving the date of this journey. Soon after the end of the century, he went to the East, possibly spending some years in Mecca, since he made the Pilgrimage several times, and deriving further instruction from the *fukahd of the Holy City. In 399/1008-9 he was in Baghdad, benefiting from the teaching of al-Muhâjî (d. 403/1013 [g.]), a Mâlikî like himself but an Ash‘arf in kalâm, and it was in the *Trâki capital that he had the revelation of a theological doctrine in whose subsequent diffusion in the West he was to take part (see H.R. Idris, *Essai sur la diffusion de l’as-Sâ‘i, in *Cahiers de Tunisie, ii (1953), 134-5). He returned to Mecca from Baghdad, and then in ca. 402/1011 returned via Egypt to al-Kâyrawân, which he never seems then to have left apart from a last journey to the East in ca. 425/1033-4 or 426/1034-5. He died on 13 Ramadan 430/8 March 1039 in his adopted home; al-Mu‘izz b. Bâdis [g.] was present at his funeral, together with a great crowd, and his tomb has henceforth been venerated as equal to that of a saint. His descendants still live in al-Kâyrawân.

His biographers stress the breadth and diversity of his education, and mention in detail the numerous teachers whose courses he followed, both at al-Kâyrawân and during his travels; and they make him in some way the heir of Mâlikî teaching at the beginning of the 4th/10th century. Nor do they omit to list all the pupils who thronged his courses, and they give the impression that he exercised a deep influence on intellectual activity in the juridical-religious domain. He was at the outset a specialist on the seven readings...
of the Kur'an, and then after his return from the East, turned to hadith and fiqh and, to some extent, kalām. He attracted a host of disciples not only from Irīkāya, but even from Spain, Sicily and Morocco, and several of these later made a name for themselves. Furthermore, he kept in touch with scholars in distant places, who consulted him on points of doctrine, and he even gave ijāzs at a distance. It would be tedious to enumerate here all the pupils of his by biographers but one should mention that they included Ibn Shāraf [q.v.], and a person homonymous with the name of the author of the `Umda, `Abd Allāh Ibn Rashīk (d. 419/1028), who was also a poet, and dedicated to him the greater part of his verse (see Ch. Bowyldh, Le vie éducative en Ifriqiya sous les `Umayyads, Tunis 1972, 67, 116).

Two other pupils of `Abd `Imrān’s ought to be mentioned also because they were associated with important historical events. At a date which, with Ibn Abī Zarʾ (Tūrās, 122-3) can be fixed at 427/1035-6 (whilst Ibn Khāldūn, Berbères, ii, 67, places the events in 440/1048-9, Ibn Idhārī, Bayūn, iii, 242, in 444/1052-3 and also Ibn al-`Azhīr, ix, 238-9, in 447/1056, which is unlikely), the Lamītūna chief Yahyā b. Ibrāhīm passed through al-Kayrawān whilst returning from the Pārīmām, attended `Abd `Imrān’s courses and, realising the depth of his compatriots’ ignorance, asked the great scholar to designate one of his followers to go and teach them. `Abd `Imrān then recommended to him one of his former pupils called Ugg’-ag (Wadīdżāqī in Arabic transcription), who had returned to his own land, and this latter scholar in turn designated `Abd Allāh b. Yāsīn (see al-Bakrī, Description de l’Afrique septentrionale, new ed. Paris 1965, 165-6/311-12; al-Huql al-mawshiyya, 9; A. Bel, Le religion musulmane en Berbérie, Paris 1938, 215; G. Marçais, La Berbérie musulmane et l’Orient au moyen âge, Paris 1946, 238; H. Terrasse, Histoire du Maroc, Casablanca 1949, i, 214; J. Bosch Vila, Los Almorávides, Tetuán 1956, 49; and see al-Mukābbīn). Now the anonymous author of the Ma’dhir al-Barāb (ed. E. Lévi-Provençal, Fragments historiques sur les Berbères au moyen âge, Rabat 1949, 69) states that these two men impelled the Almorāvides to expand out of the Sahara on the order (bi-amr) of `Abd ‘Imrān.

One would like to have exact details about this, but if the assertion is true, it shows the influence of the Kayrawānī fāsik, which was, at all events, a pronounced one. His pupils transmitted his oral teachings and doubtless also his works (cf. Ibn Khayr, Fohrasa, i, 440, which do not however seem to have been very numerous. Some of his hadiths have been preserved, in particular by al-Wanghārī in his Ḣiyārī but one should be careful, since the name “‘Abd ‘Imrān al-Ṭalī” was fairly widespread: see e.g. Brockelmann, S II, 961; a. al-Dalā’il wa l-‘addād is mentioned in the Miṣḥar, x, 105, and a manuscript of al-Ḥākim al-maṣārī‘ al-ḥakhām al-mustakhthafa min Kitāb al-Dalā’il wa l-‘addād li-‘Abd `Imrān al-Ṭalī has also been catalogued (1432-D. 1444) at Rabat). His K. al-Tajlīk ‘alā l-Mudawwana is one of the Khāṭ ‘Iyāḍ’s sources (Mudārik, i, 56), who cites him frequently. He is moreover said to have made a selection of hadiths which was especially important and covered a hundred leaves, and a Fohrasa is attributed to him; finally, a manuscript of his Naḍ’ir is mentioned as existing at Algier (Brockelmann, S I, 660-1). Some verses are also attributed to him. Bibliography: In addition to sources already cited, see: Western biographical sources: ‘Iyāḍ, Tarīḥ al-Mudawwana, ed. A. Bakrī, Beirut n.d., iv, 702-6 and index; Ibn Nāḍīr, Mī‘āltum al-ṭimān, Tunis 1930, ii, 199-200; Ibn Fārūj, Dībāj, Cairo 1329, 344-5; Tādhlī, al-Taṣawwuf wa l-taṣlīf al-tasawwuf, ed. to the poet's fame and have only an historical interest.

In New York, Abu Madi threw himself into journalism and took charge of editing al-Majalla al-ulâmiyya and then al-Futû. It is at this point that he became connected with the great names of mahjar literature who were to found al-Râbi’a al-kalamiyya; it was also there that he married the daughter of Nadjîb Divân, director of the Mi’ârî al-Gharî, of which he became chief editor 1918-29, i.e. until the time when he founded the monthly al-Sâmir, which he transformed into a daily in 1936 and directed till his death on 23 November 1957.

Abu Madi’s talent began to take shape in New York, with his poetic work partly spread by the periodicals to which he contributed and brought together in a new dîwan, al-Daudwîl (New York 1927; reprinted at Najaf three times between 1937 and 1949); with his fame thus assured, his poetic talent became more widely known in his last collection published during his lifetime, al-Khamâlîl (New York 1940; 2nd edn. Beirut 1948, with additions). Some further poems were collected together in 1960, after his death, as Thbr wa’râbîn.

Within the limits of this brief article, it is not possible to go into the details of Abu Madi’s poetic achievement, but the most striking feature for the reader is what might be called the philosophical tone of many of the poems, a succinct philosophy conveyed as a scepticism which is stressed many times. In this respect, the famous quatrains which appear in the Daudwîl and which have been thought worthy of separate publication under the title of al-Talâqim, are characteristic; musing on the origins of man, the poet replies to the questions put in each strophe by a šâhîd adîr “I do not know” (which has inspired the Sharh Muhammad Dîwân al-Dîwânî to compose a reply, in his Hall al-Talâqim [Beirut 1946], each strophe ends, somewhat presumptuously, with an adîr adîr “I myself know”). His social, political and nationalist themes, already animating his first dîwan, became more refined and precise, and the poet was moved to act as a moralist in a well-known piece, al-Tîn, which condemns human pride, commends humility and advocates equality (see a commentary in Dj. Rikâf, ed.]. Dîwân, Beirut, 1965, 180-4; Fr. tr. in Anthol. de la littérature arabe contemporaine, iii, La poésie, by L. Norin and E. Tarabiy, Paris 1967, 83-4). But the poet, in spite of his disquiet and his philosophical doubt, nevertheless had an optimistic and lively character which made him love life just as it is and made him proclaim his faith in the lasting value of art and literature. In his Khamâlîl, he championed the praises of Lebanon, which at bottom he knew very poorly, and expressed his nostalgia for his native country, which he did not see again till 1946.

In regard to poetic technique, one might have expected Abu Madi to utilise free verse (al-dâqîq al-hurr), but in fact he remained faithful to classical metres, although he became more refined already animating his first dîwan, al-Daudwîl, and took charge of editing Da’irat al-Madarîs in a new shape in 1936 and directed till his death on 23 November 1957.

Abu Madi’s talent began to take shape in New York, with his poetic work partly spread by the periodicals to which he contributed and brought together in a new dîwan, al-Daudwîl (New York 1927; reprinted at Najaf three times between 1937 and 1949); with his fame thus assured, his poetic talent became more widely known in his last collection published during his lifetime, al-Khamâlîl (New York 1940; 2nd edn. Beirut 1948, with additions). Some further poems were collected together in 1960, after his death, as Thbr wa’râbîn.

Within the limits of this brief article, it is not possible to go into the details of Abu Madi’s poetic achievement, but the most striking feature for the reader is what might be called the philosophical tone of many of the poems, a succinct philosophy conveyed as a scepticism which is stressed many times. In this respect, the famous quatrains which appear in the Daudwîl and which have been thought worthy of separate publication under the title of al-Talâqim, are characteristic; musing on the origins of man, the poet replies to the questions put in each strophe by a šâhîd adîr “I do not know” (which has inspired the Sharh Muhammad Dîwân al-Dîwânî to compose a reply, in his Hall al-Talâqim [Beirut 1946], each strophe ends, somewhat presumptuously, with an adîr adîr “I myself know”). His social, political and nationalist themes, already animating his first dîwan, became more refined and precise, and the poet was moved to act as a moralist in a well-known piece, al-Tîn, which condemns human pride, commends humility and advocates equality (see a commentary in Dj. Rikâf, ed.]. Dîwân, Beirut, 1965, 180-4; Fr. tr. in Anthol. de la littérature arabe contemporaine, iii, La poésie, by L. Norin and E. Tarabiy, Paris 1967, 83-4). But the poet, in spite of his disquiet and his philosophical doubt, nevertheless had an optimistic and lively character which made him love life just as it is and made him proclaim his faith in the lasting value of art and literature. In his Khamâlîl, he championed the praises of Lebanon, which at bottom he knew very poorly, and expressed his nostalgia for his native country, which he did not see again till 1946.

In regard to poetic technique, one might have expected Abu Madi to utilise free verse (al-dâqîq al-hurr), but in fact he remained faithful to classical metres, which he only abandoned in order to adopt a tropic pattern or, in his narrative poem of 79 verses al-Shârîr wa’l-salâm al-dîhî (1933), to be able to employ several metres and sometimes alter the rhyme.

Abu Madi’s successful poetical work, with its immediate accessibility to the reader, has tended to obscure his work as a journalist and the quality of his prose. It would undoubtedly be an exaggeration to maintain that all his contributions to the numerous mahjar periodicals, on which he collaborated, are poems in prose. However, the poet’s personality comes through constantly in his editorials and in his articles, admittedly those on literary topics, but also in those on political, economic and social questions, which he treats in an eminently poetic fashion, displaying his reflective attitude and allowing the same preoccupations as those of his verses to appear through.

Bibliography: Abu Madi has already been made the subject of some studies, amongst which are Fâri’d Salwât Nadjîf, Ilyä Abû Mâdi wa’l-harâka al-adabiyya fi ’l-mahjar, Baghdad 1945; Zuhayr Mîrzâ, ’Abû Mâdi, šâhîr al-mahjar al-‘akbar, Damascus 1954; ’Abd al-Latif Şiharâr, ’Abû Mâdi, Beirut 1961; Works on the literature of the mahjar naturally include material on Abu Madi’s work; on his prose, see in particular, ’Abd al-Karîm al-Aghtar, al-Nafis al-mahjarî, Beirut 1964, index; idem, Fünun al-nafis al-mahjarî, Beirut 1965, index; Amongst the numerous articles devoted to him, see Ilyäs Abû Shabaka, ’Abû Mâdi, in al-Mukhtatât, October 1932; Dâj. ’Abd al-Nâr, ’Abû Mâdi, in al-Addâb, 1953, idem, in Dâj. al-ma’dîrîy, v, 101-4 (with bibliography); G.D. Selim, The poetic vocabulary of Ilyâ Ab Mâdi (1889-1957); a computational study of 47,766 content words, Ph.D. thesis, Georgetown Univ. 1969 (unpublished); R.C. Ostle, Abu Madi and Arabic poetry in the inter-war period, in med. stud. in modern Arabic literature, Warminster 1975, 34-45; Salma Khadra Youssef, Trends and movements in modern Arabic poetry, Leiden 1977, i, 123-35. (Ed.)
that the sultan Muhammad al-Shaykh II had handed over the town of Larache (al-Ar’ish [q.v.] to the Spaniards, he shared in the popular indignation, fanned the general wave of xenophobia and skillfully utilized the occasion to launch an appeal for the holy war and to propound the downfall of the Saracens. With a few hundred followers inflamed by his words and promises, he managed to seize Sijilmassa from its legal governor and set up there the reign of justice. His prestige grew so great that he was recognized as the occasion to launch an appeal for the holy war of Dila. He further began negotiations with the distant tribes and even from the town of Tlemcen. Abu Mahalll marched on them with a numerous body of troops and soon appeared with them near the southern capital. Abu Mahalll came to the Sus, where he got into contact with another religious leader, Yahya b. Abd Allah b. Sa’d al-Hahr, Abu Mansur who had influenced the caliph to appoint Abu Mansur b. Yusuf was known for his good works and for the favours which he bestowed upon his contemporaries. Among his works was the reconstruction of the ‘Aṣhdī Hospital, al-Bimaristan al-Dawla al-Sa’diyya, which he also endowed with properties in order to provide for its needs in perpetuity. Among those who benefited from his largesse were the preachers, the leading ascetics who enjoyed a great following among the masses, the preachers, the leading Hākimis and their followers, the Sūfis’ functionaries, including al-sabab and the amīds, as well as the Bedouin and Turkish amīrs. This wide influence enjoyed by Abu Mansur did not please Nizām al-Mulk, and the rivalry between these two influential men can be seen in some of the events of the period. The founding of the Nizāmiyya madrasa in Baghdad (inaugurated in 459/1067) is an instance in point. Abu Isāk b. Shahrizār, for whom the madrasa was founded, having refused to assume the role of mediator between the caliph and sultan, was replaced in the latter’s sphere of interest. by Nizām al-Mulk appears to have been considered by Abu Mansur as interference in the latter’s sphere of interest. Abu Mansur regained his freedom, but he did not feel entirely safe until Toğrūl Beg had returned to Baghdad, wresting it from the hands of Basāṣīr, stripping the latter of all the wealth he had accumulated, and killing him. In the affair of the marriage of Toğrūl Beg with the caliph’s daughter, a marriage which scandalised the caliph, Abu Mansur, along with Abu ‘Abd Allah al-Damaghānī, played the role of mediator between the caliph and sultan. Abu Mansur b. Yusuf was known for his good works and for the favours which he bestowed upon his contemporaries. Among his works was the reconstruction of the ‘Aṣhdī Hospital, al-Bimaristan al-Dawla al-Sa’diyya, which he also endowed with properties in order to provide for its needs in perpetuity. Among those who benefited from his largesse were the preachers, the leading ascetics who enjoyed a great following among the masses, the preachers, the leading Hākimis and their followers, the Sūfis’ functionaries, including al-sabab and the amīds, as well as the Bedouin and Turkish amīrs. This wide influence enjoyed by Abu Mansur did not please Nizām al-Mulk, and the rivalry between these two influential men can be seen in some of the events of the period. The founding of the Nizāmiyya madrasa in Baghdad (inaugurated in 459/1067) is an instance in point. Abu Isāk b. Shahrizār, for whom the madrasa was founded, having refused to assume the role of mediator between the caliph and sultan, was replaced in the latter’s sphere of interest. by Nizām al-Mulk appears to have been considered by Abu Yusuf as interference in the latter’s sphere of interest.
The rivalry between these two powerful and influential men also expressed itself quite clearly in the ideological sphere. While Abu Mansur was the great support and consolation of the traditionalist 'ulamā in Baghdad, men belonging essentially to the Ḥanbalī movement, Nizām al-Mulk supported the rival Ṭazīlī movement. And whereas Nizām al-Mulk lent his support and bestowed his patronage upon men of the rationalist Muṭtazilī movement, Abu Mansur had reduced the Muṭtazilīs to silence in Baghdad. It was because of him that the great Muṭtazilī professor of the period in Baghdad, Abū 'Alī b. al-Walīd, could not publicly profess his teachings in that city. The riot which occurred in Baghdad in 460, led by the traditionalists against Ibn al-Walīd, was caused by the latter's reappearance in public to teach Muṭtazilīsm; Abū Mansur had disappeared from the scene at the beginning of that year. There is some evidence indicating that Abū Mansur's death was not a natural one, and that he had paid with his life for interfering with Nizām al-Mulk's plans. For instance, the contemporary Ibn al-Barnā', writing in his Diary about five months after the death of Abū Mansur, mentions a dream in which he saw Abū Mansur walking barefoot and, upon asking him the cause, replied saying that it was the way his forefathers went to plain of wrongdoing' (ḥadhā . . . ṭaṣāqilānālimī). Elsewhere in the Diary (ii, 26, 47), the following invocation is made: "May God have mercy on the blood of [Abū Mansur] Ibn Yusuf." The word blood, in this context, implies bloodshed, blood calling for revenge, or for justice. It is perhaps significant that the title al-Shaykh al-As'īr al-Majīd "the most eminent Shaykh", applied only to Abū Mansur during his lifetime, is found later applied not only to his two sons-in-law, Ibn Djarrād and Ibn Rīḍūn, but also to Nizām al-Mulk (E. Combe et al., Répertoire, vii, Nos. 2734, 2736, 2737).

The two sons-in-law of Abū Mansur, though they inherited from their father-in-law his title, presented no threat to Nizām al-Mulk. Ibn Rīḍūn succeeded to Abū Mansur's position of influence with the caliph; but far from following in the footsteps of his father-in-law in opposing Nizām al-Mulk, he became reconciled with him by effecting a marriage between his daughter and Nizām al-Mulk's son. On the other hand, Ibn Djarrād seems to have inherited the place of honour enjoyed by his father-in-law with the traditionalists, for whom he founded mosque-colleges (masajid) in Baghdad.

G. MAKDISI

Abū Mūsār B. Yūsuf — Abū Mismār

Abū Mūsār b. Yūsuf was an important figure in the early 11th century defending the independent state, based on the coastal plain of 'Aṣīr (q.v.) (Ṭihmat 'Aṣīr) and embracing most of the Tihmā region of Yemen, against the encroachments of the Wahhābi Aḥū Saʿūd of Najd, the Zaydi i'māns of San'ā and the Ottomans under Muḥammad al-As'īr. Born in or before 1170/1756-7, he was descended from the Aḥū Khayrāt sharīf who emigrated from Mecca to the al-Mīkhilāf al-Sulaymānī district of lowland 'Aṣīr early in the 11th/17th century. His death occurred in 1233, probably during Ramadān/July 1818 but possibly several months earlier.

While serving as the Zaydi i'mān's governor of 'Aṣīr in the mid-18th century, Sharīf 'Alī b. Hamīd, al-As'īr's grandson, had declared his family's independence, although the i'mān's authority was recognised. Hamīd assumed power in about 1215/1800-1, and shortly afterwards had to expel a troublesome Wahhābi agent of 'Abd al-'Azīz (d. 1218/1803), the chief of the Aḥū Saʿūd. But when in 1217/1802-3 Abū 'Alī al-'Arīsh was captured by Abū Nuṣrā (d. 1224/1809), the Wahhābi amīr of upland 'Aṣīr, Hamīd declared allegiance to 'Abd al-'Azīz. He undertook to pay certain taxes to the Wahhābi chief and send a son to al-Dirīyā as hostage, in return for which he was appointed 'Abd al-'Azīz's governor of lowland 'Aṣīr. Aided by Wahhābi reinforcements, Hamīd subsequently captured from the old Zaydi i'mān, al-Mūṣār b. illāh Sharīf 'Alī (1189/1224-1775/1809), and added to his own lands, the bulk of the Tihmā region of Yemen, including such centres as al-Luhayya, al-Ḥudayda, Bayt al-Fāqīh, Zabid and al-Ḥayāt, but not Mocha.

Hamīd's allegiance to the Wahhābs was only nominal; and early in 1224/1809 he conspired with Abū 'Alī b. Hamīd, the As'īr, to replace Wahhābi suzerainty with that of the Zaydi i'mān, on condition that he himself was allowed to retain the Tihmā lands already under his control. Although his forces were twice defeated by those of Abū Nuṣrā later that year, and despite occasional Wahhābi forays into the northern Tihmā thereafter, Sharīf Hamīd was able, with the aid of his competent vizier, Sharīf al-Hasān b. Khālid al-Ḥūzimā, to hold control of both his ancestral lands and the extensive Tihmā territories acquired with Wahhābi help. He flirted alternately with the i'mān in San'ā and the Wahhābi chief in al-Dirīyā just enough to forestall a serious military intervention by either.

Initially disposed to cooperating with Muḥammad al-'Arīsh against the Wahhābs (1229/1814), Hamīd cooled towards him, owing to a series of Wahhābi victories over the Ottomans and his fear of the Egyptian viceroy's designs upon his lands. In 1233/1818, just a few days before his death, Hamīd's forces nearly annihilated an Egyptian army. His son Ahmad ruler after him for about a year before submitting to Muḥammad al-'Arīsh's commander in the south and being sent to Egypt where shortly he died. Although Hamīd's lands were restored by the Ottoman sultan to the i'mān, the governorship of lowland 'Aṣīr was awarded to a nephew of Hamīd.

Bibliography: The basic source for the life of Sharīf Hamīd Abū Mūsār is his unpublished biography, Naft al-ʿād, by 'Abd al-Rahmān al-Bahkālī (a ms. of which is in the al-ʿAṣīr private collection at Diqāzān). This treat of the sharīf's life to 1225/1810-11, the remaining years being covered by al-Hasan b. Ahmad al-ʿĀṣir in a dārjal entitled Naẓḥat al-ṣarīf. Other ms. in which Sharīf Hamīd figures, sometimes prominently, are Lutf Allāh Dījār, Darun nūhāt al-būr, 'Āṣir, al-Dirāhī al-khawrūnī; al-Hasan b. 'Abd al-Rahmān al-Kabkabīnā, al-Mawdhib al-saniyya; and Bahr al-Dīn Muḥammad al-Kīsītā, al-ʿArīshī al-saniyya. Of these works, Naft al-ʿād, its dārjal and al-Dirāhī were consulted by Muḥammad b. Ahmad al-Īsā al-ʿĀṣirī in Part I of his Min tuʿrīgh, al-Mīkhil al-Sulaymānī, Riyadh 1958.

Other works providing useful information about Sharīf Hamīd's life are al-Shawkānī, al-Bahr al-
ABU 'l-MUTAHHAR AL-AZDĪ, an Arab writer who lived in the 5th/11th century, but since no known biographical source mentions him, his dates and the milieu within which he lived can only be inferred from his sole surviving work, the Ḥikayat Abī 'l-Kāsim (one should however add the information of al-Bakharzī d. 1075) that says that he knew in Isfahān a writer called Abū Mutahhar, very likely our author. He must have lived between Baghdād and Isfahān, as emerges from a munāzara between the two cities given in the Ḥikāya, before the Saljūq assumption of power in Irāk, which he never mentions. Concerning the rest of his work, he himself mentions an Ḥikāya badawīya, now lost, and al-Bakharzī a ṭarīq al-dhahab (assuming that the same person is involved).

The Ḥikayat Abī 'l-Kāsim al-Baghḍādi (ms. Brit. Mus. Add. 19,313; ed. A. Mez, Heidelberg 1907) has remained till now a unique work in classical Arabic literature, a conscious variation of the highly-appreciated makāma genre [q.v.] which al-Hamadānī had just launched and which al-Harīrī (who lived just one or two generations after our author) was to bring to perfection. The novelty of the Ḥikāya of Abū 'l-Mutahhar in relationship to the makāma of the above two authors is the displacement of the centre of interest from the purely linguistic and formal aspect to the representation of a character and an environment in a genuine mimēsis of reality (in this case, the bourgeois environment of Baghdād, with its bons vives and drinkers, amongst whom Abū 'l-Kāsim displays his bravura style and his vagabond's effrontery). This bravura style is also a linguistic one, and Abū 'l-Mutahhar attaches himself by this means to the makāmat writers; but whilst the latter remain merely that, and their heroes al-bakardār and al-Sarāḍīf offer us nothing more than a second-rate picture of a routine and stereotyped chiché figure of a rogue, al-Azdī's Abū 'l-Kāsim is wholly alive, and to be compared more with the characters in Petronius's Satyricon and the "picaros" of Spanish narrative literature. The text of the Ḥikāya raises a lot of philological problems for the language and sometimes the jargon used in it, but its literary importance is far from being limited to pure philology, the work of this 5th/11th century Irākī writer, himself almost unknown, remained an isolated effort of its time, but heralding fields of interest and artistic currents of the future.

Bibliography: Mez, in the introd. to his edition; the arts. Ḥikāya in EI and EI2 by Macdonald and Pellat respectively; F. Gabrieli, in RSO, xx (1942), 35-45. (F. GABRIELI)

ABŪ NUKHAYLA AL-HIMMĀNI AL-RADĪ, a poet of Basrā who owed his name to the fact that his mother gave birth to him by a palm tree (nukhba). He was given the kunya of Abū ʿl-Qarnayd and Abū ʿl-Imām and the name of Yaʿmar (or Hazm, or Habīb b. Hazm) b. Zaʿida b. Lakī, but it is possible that he forged a fictitious genealogy to attach himself to the Saʿd b. Zayd Manāt of Tamīm; in fact, al-Farazdak, angry at being released from jail at his intervention, calls him a dāʿī, and Ibn Al-Kalbī does not cite him in his Dīyāhara. It is said that he was ejected by his father, on account of his ingratitude, and spent some time in the desert, where he improved his knowledge of the Arabic of the Beduins and gained a certain fame. He then went to Syria and succeeded in attracting himself to Masmāʾ b. ʿAbd al-Malik [q.v.], despite a personal inhibition which led him at first to attribute to himself an urūjūz of Ruʾba [q.v.], and then afterwards addressed elegies to Hīyāh b. ʿAbd al-Malik and his successors, who showed their favour to him and gave him the largesse of which he was avidly hungry. He nevertheless had no scruples in going and presenting himself to Abū ʿl-ʿAbbās al-Saffāh and in reciting to him an urūjūz in dāl which he had previously dedicated to Hīyāh. His panegyrics of the first ʿAbbāsid, filled with attacks on his former patrons, gained him the title of "poet of the Banū Ḥashim", but his greed led in the end to his downfall. He wrote, and caused to be widely spread, a poem in which he urged al-Manṣūr to proclaim his own son Muhammad (al-Mahdī) as heir-presumptive instead of ʿIsā b. Mūsā, whom al-Saffāh had designated heir. The caliph generously rewarded him and followed his advice, but he instructed him to flee to Kūhūrān. However, one of ʿIsā's agents pursued him, slaughtered him, stripped the skin from his face and threw his corpse to the vultures. This took place at some time shortly after 136/754.

Abū Nukhayla wrote some kasidas, but above all he favoured ṣawājīs; he was involved in poetic contests with another famous ṣawājī, al-ʿAdīdājī [q.v.] and left behind a body of work considered good enough to be formed into a ḍawān. This poetry is not always easy to understand, because of the Beduinoisms which abound in it, but it has a verve which is sometimes fairly coarse and a humour which disarmed his opponents and made his audience laugh, these last being more or less inclined accordingly to open their purses and pockets. This was, indeed, the poet's sole object, and he seems to have been an invertebrate money-lender. Cutting epigrams are to be found side-by-side with poems on hunting themes, elaborate panegyrics and unexpected elegies, since, despite an innate sense of ingratitude, the poet knew occasionally how to display his thanks, and especially after the death of al-Mahdī, al-Mansūr instructed him to write at length and in a kindred spirit. The critics, and especially Ibn al-Muʿtazī, considered him to have been a born poet, and much appreciated his work, which was widely-distributed in the 3rd/9th century.

ABŪ RAKWA [see AL-WALID B. HĀSHIM].

ABŪ RASHĪD AL-ḤASĪBūRĪ, a theologian of the Muʿtazī tradition of Basra and disciple of ʿAbd al-Ḍabbar al-Hamānī...
dānī [g.z.]. Originally a follower of the Mu'tazilī school of Baghdad, Abū Rashīd frequented the lectures of Ibn al-Diūbār, whose doctrine he came to follow in its entirety, surrendering his former adherence to the teaching of al-Ka'bī, and the Bagdādisī. Subsequently, having given up his circle (hāka) at Diūbār, he took up permanent residence at Rayy where, after the death of Ibn al-Diūbār in 415/1025, he became the acknowledged leader of the Basran Mu'tazilī. The date of his death is unknown. Abū Rashīd's teaching insofar as it is revealed in the works, not currently known to have survived, are (3) Abu Rashīd's teaching insofar as it is revealed in the works, not currently known to have survived, are (3)

his clashes with Ibn Lankak (d. 360/970 [g.z.]), who faced in his lack of cleanliness a vein of attack easy to exploit, would have been enough to save him from oblivion, but Yākūt, Usbāṭah, six, 6, goes as far as to assert that Ibn Lankak was eclipsed by al-

Abū RAYYĀSH AL-KAYŚĪ, Ahmad b. Ibrāhīm al-Sayyārī, rāwi, philologist and poet, originally from Yamāma, who settled at Basra and was famous at the beginning of the 8th/9th century for his exceptional knowledge of the Arabic language, genealogies and ancient poetry. He was a former soldier who had become a civil servant, and had the job of levying dues on the ships coming to 'Abbādān. He was totally lacking in education and in tidiness, but his knowledge led to his faults being excused and overlooked. He had a powerful voice, and he spoke in the Bedouin fashion, expressing the ṣūb, at a time when this was normally neglected in the spoken language. He was said to pose as a Zaydī. He died in 339/950 (but in 349/960, according to al-Suyūṭī, who moreover calls him Ibrāhīm b. Ahmad).

He became the acknowledged leader of the Basran Mu'tazilī. The date of his death is unknown. Abū Rashīd's teaching insofar as it is revealed in the works, not currently known to have survived, are (3)

allegedly tried to murder his enemy (Aghdni, xx, 127); and if the report in Aghdni, xx, 125-7, of an apparent reconciliation is authentic, it must indicate Abū Sa'd's duplicity. Various pieces aimed against him have been gathered in Shi'r Dibīl, Nos. 68, 81, 96, 119, 223, 235; see also p. 298.

Abū Sa'd was exposed to attacks from Dibīl's cousin, the son of Abū 'U-Shīr (Aghdni, xx, 130-1; Shi'r Dibīl, 349), but he on his part made al-Ash's Di'bil, Shi'r Dibīl, 289, 313, 322, 338). As well as the epigrams aimed at his enemies, Abū Sa'd addressed praises to al-Ma'mūn and wrote several pieces glorifying Nizār; the Aghdni, xx, 128, even speaks of a dyfi al-Nizārayn. Dibīl's fame, since his works were spread far and wide, threw Abū Sa'd's work into the shade, although this last is by no means inferior quality. To believe al-Marzubanī, Muwadālah, 329, Abū Tammām would have given half of his own work for a hemistich from Abū Sa'd which he particularly appreciated. Abū Sa'd, who constituted himself as defender of the North Arabs and by that fact also the defender of Sunnism against the Shi'ī Dibīl, at a time of ethnic and religious conflicts, deserves to be no longer ignored by historians of Arabic literature; it happens fortunately that Raẓūk Farādī Raẓūk has just endeavoured to put together his Dīwān (Baghdad, 1971).

ABŪ SA'D AL-SIRA'I [see AL-SIRA'I].

ABŪ SAYYĀRA. Umayy a. b. 'Ālāz b. Khabīd al-‘Adwānī, a personage of the end of the Daḥilīyya, said have been the first to fix the dyā or pecuniary composition for murder on 100 camels and the last to lead the pilgrims, either at the departure for 'Arafat (gūdā) or from the Muzdalīfah to Minā (gūdā), since the sources disagree on this point, and the more careful authors merely use the expression daḥaf bi 'l-nās. This man, who probably owed his kunya to this function of his, a privilege of the Kaysī tribe of 'Ardwān (see Ibn al-Kalbī-Casdel, Tab. 92 and ii, 142), became proverbial because he is said to have exercised this office, always mounted on the same black ass (which was, however, according to al-Asma'ī and others, a she-ass, sometimes further described as one-eyed), for 40 years. As al-Dibīl amusingly points out (Hayawān, i, 139), no-one can doubt the longevity of this animal which, amongst all asses, lived the longest time; it gave rise to a proverb asabāb min 'āsr Abū Sayyārī “more sturdy than Abū Sayyārī’s ass” (al-Maydānī, Amthāl, i, 422-3; Abū ʻUbayd al-Bakrī, Fasl al-makāl fi σχέσεως K. al-‘Anghal, Beirut 1991/1971, 500-1); al-Dibīl provides a variant (Hayawān, ii, 257), asbāb min... “having greater endurance than...”.

Abū Sayyārī is compared, because of his humility, with 'Uzayr [q.v.] and with Christ, and his ass is cited by prominent people who preferred this humble form of mount.

ABŪ SHABAKA. Iyās (usual orthography, Elias Abou Chabakeh), Maronite poet, journalist and translator (1903-47). He was born in Providence, R.I., whilst his parents were travelling in the United States, but he spent all his life in Lebanon, dividing his time between his home in the village of Zūk Miljālīn (in Kirāwān), from which his family came, and the cafés and editorial offices of Beirut, to which he went each day.

His father held some estates in the region of Khartoum, but in 1914, when he went there, was murdered by bandits. Hence the young orphan had soon to interrupt his studies, especially as the French took over the school at 'Aynāfara, where he had been enrolled, was closed by the authorities during the First World War. He then resumed his studies, but never finished them, preferring to complete his education by plunging into reading the Bible and the French Romantics, which early inspired his first literary efforts. He was compelled to earn a living, hence taught for a while, but also contributed to several Lebanese newspapers, did translations, at the request of publishers, of a series of novels and dramas by French authors as varied as Lamartine, Henry Bordeaux, Voltaire, Edmond Rostand, Molière, the Abbé Prevost, Bernardin Saint-Pierre or Choukri Ghanem, and was even employed as a translator in the press and radio services of the French High Commission during the Second World War. He died of leukaemia on 27 January 1947.

The greater part of Abū Shabakā's original work is made up of a number of collections of poems. The first, al-Khīthār (1926) contains juvenilia which attest at the same time his great inexperience and a distinct poetic talent. This latter is clearly affirmed in Abīl 'l-Firdaws (1938), in which the poet has gathered together thirteen pieces written between 1928 and 1938. The basic source of his inspiration is love, its transports, its joys and its sufferings, and there can be clearly seen the influence of the French Romantics in this collection, which the native critics regard as one of the master-pieces of Lebanese poetry. Romantic feelings of nature inspire the next dīwān, al-Aḥdnī, a real hymn to nature as well as being at the same time a poetic description of the life of the Lebanese peasants. The poet reverts to the theme of love with Nīdār al-kabīr (1944) and Ḥa lābād (1945). In this very same year, 1945, there appeared Ghalwān, whose title is an anagram of the name Olga, the woman whom he had at last married after ten years of betrothal and who had naturally been his principal muse. Finally, in 1958 Abū Shabakā's friends put together in Min Sa'dī al-āliha a number of pieces of occasional verse already published in periodicals.

Abū Shabakā had a deeply religious mind, a tormented soul, and was an enthusiastic reader of the Romantics. He was undoubtedly one of the main representatives of a school which has, in Lebanon,
followed, with a certain amount of side-stepping, a tendency long dormant in the West. This romantic movement is now outmoded in the East itself, but Abū Shabaka’s work continues to attract young readers who appreciate pure poetry and have little taste for the politically-preoccupied productions of engaged poets, who tend moreover to break loose from classical metres. Abū Shabaka generally respects these last, although he may at times adopt a strophic form or vary the rhymes and metres, as in ‘Ijāba‘.

As well as his translations and a great number of articles which he left behind, Abū Shabaka wrote, as one might have expected, a Līmārin (1935) and a study of comparative literature, Rawdāth al-fikr wa-‘l-fikr bi-‘l-‘arb wa-Injād (1943). Lastly, a series of portraits of literary and political personalities, which appeared in al-Mu‘āfi, have been gathered together in one volume, al-Rasā’il (1951).

ABU SHADĪ, AHMAD ZARI (1892-1955), Egyptian physician, journalist, writer and poet, a man of an astonishing variety of diverse activities.

Born in Cairo on 9 February 1892, he had his primary and secondary education in his natal city, and then in 1912 went to study medicine in London, where he specialised in microbiology; at the same time, he became especially interested in apiculture and acquired quite an extensive knowledge of Anglo-Saxon culture and life which was to exert a deep influence on his literary production. On returning to Egypt in 1922, he was appointed to do research in microbiology, but also became at the same time busy with many other fields, and soon became secretary of several associations of beekeepers, agricultural industrialists, poultry rears, etc. Furthermore, he quickly took over at the same time the secretariatship of the Apollo group inspired by Ahmad Shāwǎikh and Khalil Murtān. It was he who created and directed the journal Apollo from 1932 to 1934, at a time when he had just founded three other journals of a totally different nature: Mamlakat al-nahl (1930), al-Dajjāl (1932) and al-Sinā‘āt al-zīr‘ayya (1932). All these responsibilities in no way kept Abū Shadī from giving talks and lectures, from writing articles on all the subjects which interested him, and above all, from throwing himself into a literary activity which gives the impression of a remarkable breadth. A man like himself, rather too restless, inevitably provoked jealousies and enmities in those circles which were not ready to accept his ideas, especially those on modern poetry. It was perhaps the reactions to his innovations which made him in 1946 decide to emigrate to the United States. He worked on the transmissions of The Voice of America from New York and then Washington, where he died on 12 April 1955.

It is extremely difficult, in this brief notice, to evaluate his role in the evolution of contemporary Arabic poetry and to enumerate and classify his expositions of his ideas and the totality of his literary work. The latter is largely composed of poetry and theatrical works, and is characterised at base by an inspiration which is primarily Egyptian, both Pharaonic and Arab. He embarked on almost every poetic genre, at times giving himself up to romanticism and at times to symbolism, and even went so far as to found in 1936 an ephemeral journal called Adābī “My literary work”.

With regard to form, Abū Shadī used the framework of the muwaṣṣah [q.v.] and other strophic structures, but he was above all the proponent of blank verse (al-ghīr al-mansūr) and of free verse (al-‘adl al-hurr), under the simultaneous influence of Anglo-Saxon poetry and of that of the mahdīr, and he tried to launch a literary movement in this sense.

In various commentaries which accompanied his collections, as also in his articles explaining his ideas and his work of criticism Mārazih al-adāb (Cairo 1926-8), he insisted on the primordial importance in poetry of metre; he freed himself from the fetters of rhyme, but respected up to a certain point classical metres at the same time mixing different metres in one and the same poem (on this question and on Abū Shadī’s influence, see S. Mūreq, Free verse (al-ghīr al-hurr) in modern Arabic literature: Abū Shādī and his school, 1926-46, in BSOAS, xxx/1 (1968), 28-51).

If he had enemies, he also made friends and admirers who busied themselves in collecting together his poetry into more or less coherent collections. Hence there appeared in this way Miṣrīyāt (1924); al-Shābīk al-kabīr (1926); Min al-samd wa–l-miṣrīyāt (1926); Min al-mamlūk (1927); and not forgetting either that he was a physician, he also wrote Min al-samā‘ (New York 1949). There must also be still further unpublished collections of poems written in America.

As well as his doṣūns published by Abū Shadī himself, the main ones of these are Watan al-Farīdana (1926); Adī‘a wa-zīlīl (1931); al-Shīrīkh (1933); Ayyāṣ‘ al-rāhī (1933), with an introduction by Khalīl Murtān and others; al-Sinā‘āt al-qādir (1934), poems of his youth; al-Tam‘ā (1934); Faw‘l al-‘adlīkh (1935); Khalīl al-dar (1935); ‘Aṣadat al-waf‘ (Alexandria 1942); and Min al-samā‘ (New York 1949). There must also be still further unpublished collections of poems written in America.

As for the doṣūns published by Abū Shadī himself, the main ones of these are Watan al-Farīdana (1926); Adī‘a wa-zīlīl (1931); al-Shīrīkh (1933); Ayyāṣ‘ al-rāhī (1933), with an introduction by Khalīl Murtān and others; al-Sinā‘āt al-qādir (1934), poems of his youth; al-Tam‘ā (1934); Faw‘l al-‘adlīkh (1935); Khalīl al-dar (1935); ‘Aṣadat al-waf‘ (Alexandria 1942); and Min al-samā‘ (New York 1949). There must also be still further unpublished collections of poems written in America.

As well as his doṣūns, Abū Shadī left behind some fifteen novels and theatrical pieces whose Pharaonic and Arab inspiration is comparable with that of his poetry and in which the use of blank verse is uncommon: Zhānab, sofābāt min qir al-qidrīn (1924); Majṣurūn Ragās‘ (1925); ‘Abdāl Bok (1926); al-‘Aḥṣa (1927, a symbolist opera); Elwān (1927, an Egyptian drama); Araidīr (1927, an opera); Akmān (1927, an opera); Nīṣīrīt, Maˇshākūt Ibni Tālūn, and al-Zībā‘ naḥlkhī Tadhur (1927); Bīst al-Salhā (1927, an opera); Ibtidāl Inwi‘ al-Kays; Ibni ‘Zaydān fi sīgūf; Bayrān wa-Tarīkh; and Māba (a love story).

It is not possible here to speak at length about Abū Shadī’s scientific works, but one should mention that he was at the same time the theoretician of free verse and the promoter of apiculture in Egypt, notably with his Tarbiyat al-nahl (1930). Not forgetting that he was a physician, he also wrote al-Tahār wa-‘l-mā‘mul (1928); and not forgetting either that he was a Muslim, he explained why he was a believer in his Līmā ‘an ma‘mūn (1937) and published in the year he died al-Islām al-hayy, all of which had not prevented him from praising freemasonry in
his Rūḥ al-māzānīya (1926). Finally, one should mention his verse translation of the quatrains of Umar Khayyam and Hāfiz (1931), as well as one of Shakespeare's The Tempest.

This brief survey can only give a partial idea of an exceptional personality, one who was discussed and admired but also adulated, and who merits particular interest.

**Bibliography:** In addition to S. Morch's article, the main monographs on him are Muhammad 'Abd al-Ghafūr, Abū Shāṭī fī l-māzānī, Cairo 1933; I.A. Edhem, Abbaszād, the poet, A critical study with specimens of his poetry, Leipzig 1936; and Muhammad 'Abd al-Fattāh Ibrāhīm, Ahmad Zākī Abū Shāṭī, al-īsān al-muntadīj, Cairo 1955; See also Būstānī, DM, iv, 357s (with bibliography); and N.K. Kotsarev, Poesie Iran, Moscow 1975, 31-4 (with bibliography), and index; Salma Khadra Jayyusi, Trends and movements in modern Arabic poetry, Leiden 1977, ii, 370-84.

(Ed.)

**ABŪ SHĀKŪR BALKHĪ** born possibly in 300/912-13, one of the most important Persian poets of the Sānānīd period. 'Afsī's Lūhāb al-ālāb attributes to him a maqāna'ī in the mātikārīr metre called the Aṣfīn-nāma, completed in 336/947-8 and probably dedicating the al-Abī Nāṣir b. Naṣr (351-4/939-54). Nothing is known about his life, but allusions in his verses suggest that he was a professional poet and had known setbacks in life. The only surviving parts of his work are short fragments and isolated verses quoted in dictionaries, anthologies and a few other works. These comprise some 60 lyrical distichs and some fragments of maqāna'ī in various metres, but above all, about 140 mātikārīr distichs which must belong to the Aṣfīn-nāma, to which one should perhaps add almost 175 distichs cited anonymously in the Tuhfat al-mu'ālāk of 'Abī l-Ḥāfīz Iṣlāma (7th/13th century), which seem to be extracts from the same work. This last was apparently a collection of anecdotes illustrating moral sentiments; maxims and moral sayings are prominent in the extant verses of Abū Shākūr, who was certainly the chief heir amongst the Persian poets of the 4th/10th century of the wisdom literature of pre-Islamic Iran. He must have enjoyed a great renown in his time; Manūchīr mentions him as one of the ancient masters, along with Rūḍākī and Shāhīd Balkhī.

**Bibliography:** There is an edition of the fragments with a French translation, together with a notice on the poet and a bibliography, in G. Lazard, Les premiers poètes persans, Tehran-Paris 1964, i, 94-126, ii, 78-127; see also J. Rypka, History of Iranian literature, Dordrecht 1968, index. (G. Lazard)

**ABŪ SHURA’Ā, AHMAD B.穆罕默德 B. شورا’Ā** a-KAYSHI al-bakrī, minor poet of Bāṣrā who, during the course of the 3rd/9th century, took part in the social and intellectual life of his native town, and hardly left it, it seems, except to make the Pilgrimage or to visit places very close at hand. For the rest, his life is poorly documented. It seems unlikely that he was able, as Ibn al-Mu'tazz assests (Tabākāt, 177-8), to praise al-Mahdī (158-69/775-85) during the latter's lifetime, to have reached an advanced age in al-Ma'ānī's time and to die in the caliphate of al-Mutawakkil (232-47/847-61). In the first place, the Aghānī speaks of his relations with Ibrāhīm b. al-Mu'tahhar (d. 279/892-3) [see Ibn al-Mu'tahhar] at Bāṣrā, where the latter, according to his own words, acted as governor (it is not impossible that he was governor there before 252/866, but he is only mentioned as tax-collector in Ahwāz in ca. 250/864). One item of information concerning Abū Shura’ā's meeting with Dībīl (d. 246/860 [q.v.]) in Ahwāz is of no help. Moreover, al-Dzhāhīj, so far as is known, cites him only once (Rūzūd, ed. Hārīn, iii, 314), repeating an epigrammatic verse aimed at al-Sidrī (cf. Aghānī, xxii, 455), whilst Abū Shura’ā's name would certainly figure more often if he had been older. Moreover, several other authors cite five fairly mediocre verses of his (see Pellat, Milieu, 166) which he is said to have composed on al-Dzhāhīj's death (255/868). Finally, his son Abū l-Fāyāyīd Sawwār, who was also a poet, went to Baghdad after 300/913, and it was he who indirectly furnished Abū l-Farajī with most of the information about his father. All these pieces of information lead one to think that Abū Shura’ā died after 255 at a certain age.

Although he was reputed to have written epitaphs and to have delivered eloquent discourses, he was mainly known as a versifier, and Abū Bakr al-Sūlī even designed to gather his works into a dīvān (Fūhris, 216). According to the Aghānī, his poetry was in the Bedouin tradition and fairly obscure, but the part of it now extant does not allow of a categorical judgement. As well as verses inspired by his ruinous generosity, he wrote mainly some fairly coarse epigrams, an attractive poem on Ibn al-Muṣṭafā's departure but above all, about 140 distichs which must reflect the idle way of life led in Bāṣrā at this time by the poets, always lying in wait for some reward or ready to heap ridicule on some patron who had disappointed them.

**Bibliography:** In addition to the references given above, see Aghānī, ed. Beirut, xxii, 170-9, 429-50; Marzufzānī, Muawwiyyah, 219; idem, Mu'ajjam, 431 ff; Khāžīf Baghādī, Taṣāqā, xii, 219-20; Mubarrad, Kāmil, 306; Sandīfī, Abī al-Dzhāhīj, 195; Būstānī, DM, iv, 398-9.

**ABŪ SINBIL,** an ancient village on the western side of the Nile between the first and second cataracts, in lat. 22° 22 north and long 31° 40 east. It lies ca. 175 miles south of Aswān. The French discoverers of the two huge rock-hewn temples built by Rameses II (1304-1257 B.C.) referred to it as Ipsumboul at the beginning of the 19th century. The name Abū Sinbil is a popular arabicisation ("father of an ear of corn") of the local Nabian designation, which is also known by various other variants in the spelling, e.g., Abū Simbil/Simbil/Sunbul/Sunbul.

Abū Sinbil later became known as Farīk in the Official Government Register, being one of the villages within the financial jurisdiction of the Ibrām (Pīromi, ca. 35 miles north of Abū Simbil) district until 1272/1855 when it became a separate administrative unit. In 1917 the name Farīk was dropped, and the village was given its former name, Abū Sinbil. Its irrigated land extends over several hundreds of acres.

Abū Sinbil became famous as the site of two rock temples which gave it its special artistic and religious significance. The temples, which represent some of the most spectacular examples of ancient Egyptian architecture, were unknown to the outside world until the discovery of the Smaller Temple by J.L. Bürkhardt in 1813, and its opening by the Italian engineer Giovanni Belzoni in 1817.

The Great Temple of Abū Sinbil is carved in the rock and stands 33 m. high and 38 m. wide. The facade shows four colossal seated figures of Rameses II, two on either side of the entrance to the temple, each measuring 20 m. high. Rameses II dedicated this temple to the sun gods Amon Re of Thebes and Re-Horakhti of Heliopolis.
Less than 50 yards away was constructed the Smaller Temple, which was dedicated to Queen Neferari, wife of Ramses II, in homage to the goddess Hathor. Its façade is decorated with six 35-foot statues of the Pharaoh and his wife.

The Abu Sinbil cliff had been buried by large sand drifts, which covered the Great Temple until its rediscovery byBurckhardt. But the Smaller Temple, which had not been buried, served the inhabitants of the nearby village Bilyânî (ca. 5 miles from Abû Sinbil) as a refuge from marauding Bedouin tribes from Nubia. Only modern Arab authors give particulars about the Abu Sinbil temples, based on French sources, and reports of the French archeological expedition which undertook the excavations at Abu Sinbil in the 19th century.

The original site was submerged by the Nile in 1966 as a result of the building of the Aswan High Dam. The two temples were salvaged from the rising waters of the Nile by sawing them into sections and re-erecting them on top of the rock face from which they were originally hewn.

**ABû TAGHLîB**

Abû Taghlîb Fadl Allah al-Qâdânrâj al-Hamdânî, U’dât al-Dawla, Hamdânî amîr of Mosul [see hâmdânîs] and son of the amîr al-Hasan Nâṣîr al-Dawla and a Kurdish mother, Fâtîma, born 328/940. He seems to have had a certain authority over his younger brothers, and when their father grew old, Abû Taghlîb seems to have obtained tacitly from them except for Abû 'l-Muzaffar Hamdânî, who was born of another mother, authority to depose their father and imprison him in the stronghold of Ardumahat in the Djâbab Dûnti to the north-east of Mosul. This operation was carried out with the complicity of Fâtîma in Dâmâdî I 356/beginning of May 967, and Nâṣîr al-Dawla died there on 12 Râbi‘ I 358/February 969. As this act of deposition had been carried out without Hamdânî’s assistance, the younger brother Hamdânî became cAbû Taghlîb’s protector, and entered into negotiations with the Hamdânî to conclude an agreement with him confirming this last in his possessions, including Diyar Mu‘tah and Diyar Bakr, and this was sealed by Abû Taghlîb’s marriage with one of Bakhtiyar’s daughters. It is probable that one of the reasons behind this agreement was the threat to both parties from Fâtîmid ambitions. Hence both of them gave help to the Fâtîmids’ enemy, the Karmatî chief Hasan al-A’âmîn, who received subsidies from them and was accordingly with their help briefly able to seize Damascus. Nevertheless, in the end Bakhtiyar yielded to Hamdânî’s solicitations. In 365/975 he marched against Mosul and took the city al-Âlî to the north of the town. Abû Taghlîb evacuated the town and made a diversion southwards as far as the gates of Baghdâd, provoking much excitement there. He then retired towards Mosul, and Bakhtiyar, though numerically stronger, entered into negotiations with Abû Taghlîb, who obtained an advantageous agreement. On returning to Baghdâd, and considering Abû Taghlîb’s position as over-advantageous, he launched another expedition against Mosul. Again, negotiations were begun; Abû Taghlîb agreed to pay tribute to the Bu’yid, and received from the caliph the lâkab of ‘Uddat al-Dawla “Support of the dynasty” in 974. His relations with Bakhtiyar remained friendly, and he gave support to the latter when the Bu’yid had to face a rebellion of his Turkish mercenary troops in Baghdâd itself.

The rebellion of the Turkish troops had led Bakhtiyar to appeal also to the head of the family, Rukn al-Dawla, who authorised ‘Abd al-Dawla, ruler of Fars, to march on Baghdâd, thus favouring the ambitions of the latter, who dreamed of securing Irâk. Abû Taghlîb, pressed by the Turks who had overthrown Bakhtiyar, had left Baghdâd. ‘Abd al-Dawla expelled the Turks, but now received the total submission of Bakhtiyar, whom he forced to abdicate, and also made an agreement with Abû Taghlîb, upon whom depended the supply of provisions for the city, the treaty previously made between Abû Taghlîb and Bakhtiyar was renewed and the Hamdânî excused from the payment of tribute. However, Rukn al-Dawla showed his opposition to ‘Abd al-Dawla’s treatment of Bakhtiyar and recalled ‘Abd al-Dawla; Bakhtiyar accordingly resumed power in Baghdâd. But when Rukn al-Dawla died in 366/977, ‘Abd al-Dawla, who had never renounced his ambitions in Irâk, returned to Baghdâd in November 977.

Abû Taghlîb’s position now appeared firm. But Hamdânî, who had always remained in Bakhtiyar’s entourage, persuaded the latter to attack Mosul, and Bakhtiyar advanced as far as Târîf. Abû Taghlîb acted skilfully. He promised to aid Bakhtiyar in recovering Baghdâd and getting free of ‘Abd al-Dawla, provided he would surrender to him Hamdânî, and he marched on Baghdâd in concert with Bakhtiyar. But ‘Abd al-Dawla defeated them near Sâmarrâ and captured Bakhtiyar, whilst Abû Taghlîb fled. ‘Abd al-Dawla took the throne of Baghdâd, but continued to persecute Abû Taghlîb, who fled to the Djabal Djudf to the north-east of Mosul. This operation was carried out with the complicity of Fâtîma in Dâmâdî I 356/beginning of May 967, and Nâṣîr al-Dawla died there on 12 Râbi‘ I 358/February 969. As this act of deposition had been carried out without Hamdânî’s assistance, the younger brother Hamdânî became cAbû Taghlîb’s protector, and entered into negotiations with the Hamdânî to conclude an agreement with him confirming this last in his possessions, including Diyar Mu‘tah and Diyar Bakr, and this was sealed by Abû Taghlîb’s marriage with one of Bakhtiyar’s daughters. It is probable that one of the reasons behind this agreement was the threat to both parties from Fâtîmid ambitions. Hence both of them gave help to the Fâtîmids’ enemy, the Karmatî chief Hasan al-A’âmîn, who received subsidies from them and was accordingly with their help briefly able to seize Damascus. Nevertheless, in the end Bakhtiyar yielded to Hamdânî’s solicitations. In 365/975 he marched against Mosul and took the city al-Âlî to the north of the town. Abû Taghlîb evacuated the town and made a diversion southwards as far as the gates of Baghdâd, provoking much excitement there. He then retired towards Mosul, and Bakhtiyar, though numerically stronger, entered into negotiations with Abû Taghlîb, who obtained an advantageous agreement. On returning to Baghdâd, and considering Abû Taghlîb’s position as over-advantageous, he launched another expedition against Mosul. Again, negotiations were begun; Abû Taghlîb agreed to pay tribute to the Bu’yid, and received from the caliph the lâkab of ‘Uddat al-Dawla “Support of the dynasty” in 974. His relations with Bakhtiyar remained friendly, and he gave support to the latter when the Bu’yid had to face a rebellion of his Turkish mercenary troops in Baghdâd itself.

The rebellion of the Turkish troops had led Bakhtiyar to appeal also to the head of the family, Rukn al-Dawla, who authorised ‘Abd al-Dawla, ruler of Fars, to march on Baghdâd, thus favouring the ambitions of the latter, who dreamed of securing Irâk. Abû Taghlîb, pressed by the Turks who had overthrown Bakhtiyar, had left Baghdâd. ‘Abd al-Dawla expelled the Turks, but now received the total submission of Bakhtiyar, whom he forced to abdicate, and also made an agreement with Abû Taghlîb, upon whom depended the supply of provisions for the city, the treaty previously made between Abû Taghlîb and Bakhtiyar was renewed and the Hamdânî excused from the payment of tribute. However, Rukn al-Dawla showed his opposition to ‘Abd al-Dawla’s treatment of Bakhtiyar and recalled ‘Abd al-Dawla; Bakhtiyar accordingly resumed power in Baghdâd. But when Rukn al-Dawla died in 366/977, ‘Abd al-Dawla, who had never renounced his ambitions in Irâk, returned to Baghdâd in November 977. Abû Taghlîb’s position now appeared firm. But Hamdânî, who had always remained in Bakhtiyar’s entourage, persuaded the latter to attack Mosul, and Bakhtiyar advanced as far as Târîf. Abû Taghlîb acted skilfully. He promised to aid Bakhtiyar in recovering Baghdâd and getting free of ‘Abd al-Dawla, provided he would surrender to him Hamdânî, and he marched on Baghdâd in concert with Bakhtiyar. But ‘Abd al-Dawla defeated them near Sâmarrâ and captured Bakhtiyar, whilst Abû Taghlîb fled. ‘Abd
al-Dawla entered Mosul itself in June 978 and refused to negotiate in any way with Abu Taghlib. The latter fled to Nisibin and thence to Mayyāfarkīn, pursued by the Būyād troops. Deciding not to go to Bithis, where his sister Djamlla had taken refuge, he entered the Kurdiš mountain region of the Tigris affluent of the Khāber al-Hasaniyya, perhaps with the hope of shutting himself up in the Hamdānī stronghold of Ardamaught. But in the end he decided to make for the region of the Tigris sources and the great loop of the Euphrates, where was the Byzantine rebel Skērōs, with whom he had been in contact and to whom he had promised help against the imperial troops. He was pursued by ʿAdud al-Dawla’s forces, and had an engagement with them at the beginning of 388/August 978 in the mountain region near Ḥisān Ziyād (Ḵᵛāpur), territory held by Skērōs. He was victorious in this, and stayed for some time at Ḥisān Ziyād. He hoped for a victory by Skērōs over the imperial army and help from the latter to reconquer Mosul, but Skērōs was subsequently beaten. Abu Taghlib arrived at Amid in Diyar Bahr, having learnt that Mayyāfarkīn, held by his supporters, had been captured by the Būyād; he now fled with Djamlla to Kaḵa, abandoning Diyar Bahr and Diyar Rādiʿa to ʿAdud al-Dawla.

The Būyād emir rejected attempts by Abu Taghlib to negotiate with him, and he was unable to count on any help from his cousin Abu ʿl-Mawṣiʿi Saʿd al-Dawla in Aleppo, who had just recognised the suzerainty of ʿAdud al-Dawla. He now further abandoned Diyar Muḍar, which had till then remained under his control, and decided to make for Fāṭimid territory and go to Damascus, not however, to go to Egypt itself. Abandoned by various of his brothers, exposed to the hostility of both the Fāṭimid troops and those of the rebel master of Damascus, Kāsūm, he attempted, with the support of one of the Arab tribes of Syria, the ʿUkayl, to capture Ramla in Palestine from the Tāyyī Mufarridī b. Daḏgal b. al-Jarrāḥ. But he clashed with Fāṭimid troops, and in ʿAṣd 389/June of August 979 he and his allies were defeated and he was handed over to Mufarridī, who, instead of delivering him to the Fāṭimid commander, killed him with his own hand. It seems that Abu Taghlib was killed at the instigation of ʿAdud al-Dawla, whom Mufarridī had recognised as suzerain in 371 (see Mawardīn, p. 207, 209; ʿAskārī, Karāmāt, 306; Marsubānī, Maswaqkhāb, 75, 78, 244; idem, Muṭṭād, 149-50; Baghdādī, Kāzīzān, ed. Bīlāk, iii, 426; Ibn Ḥadājr, Iṣbāḥ, No. 2011; Yākūt, Bādīn, i, 154; Maṭṭādī, Amālī, ed. 1907, i, 185; Wāḥīsh, Maṭṭāgī, i, 193-4; Zirīkī, iii, 322-3; Blachère, HLA, 318).

Such was the end, at the age of 40, of the last Hamdānī of Mosul, of Nāṣir al-Dawla’s son, and of the Hamdānī amirate of Mosul, where new powers were now installed but where memories of the Hamdānīs long remained in the minds of the local population.

Bibliography: See for this, M. Canard, Histoire de la dynastie des Hamdānides de Dja^ira et de Syrie, 1, Algiers 1950, where the vicissitudes of Abu Taghlib’s career are set forth in ch. vi, 541-72.

(M. Canard)

ABU ‘L-TAMAHĀN AL-KAYNĪ, HANZALA B. AL-SARKĪ, Muḥammād Arab poet, considered to be one of those endowed with an unduly long life (al-Siǧiṣṭānī, K. al-Muṭamāmūr, ed. Gohāzīr, in At-tillāt, ed. Peibloge, 207, asserts that he lived 200 years). During the Ḍayḥiyya he led the life of a brigand or sāḥib [q.v.] and of a libertine (especially, at Mecca, in the company of al-Zubayr b. ʿAbd al-Muttalib), and he does not seem to have altered his ways in any measure after his conversion to Islam.

He is said to have been killed at Adnāḏāyān [q.v.] in 1/634, but F. Bustānī (DM, iv, 408-9) believes that he died ca. 30/651, whilst the Aḥḡānī asserts that he spent his last years among the Banū Sḥamk of Fazzara, with whom he had sought refuge from the efforts of the authorities to arrest him for a crime committed by him. This source (ed. Beirut, xiii, 3-13) also recounts adventures of his whose authenticity raises serious doubts. It tells how Abu ʿl-Tamahān managed to set free Kaysabā b. Kuhłām (on whom see Ibn al-Kalbī- Caskel, Tab. 240 and ii, 164), who had been captured during the course of the pilgrimage; and it dilates on his own capture during a battle between two groups of the Tayyiʿ (Bāḏjīlā and al-Ghawth) and his ransoming by Būdjabi b. Awws al-Ṭāʿī, who set him free and received encores in it. It is difficult to get an idea of Abu ʿl-Tamahān’s poetic work, since although this was collected together into a Dīwān by al-Sukkārī (Fekrist, 224), only fragments of these have been preserved, and this only thanks to their fame, which led to several of them being set to music. The authenticity of the most-oft cited verse (metre tawālī, rhyme ḥūsh) should nevertheless be regarded with caution; it appears in Dājhīz (Ḥayyānī, iii, 93) in a fragment attributed to Lākī ʿAbd al-Quraʿān and given immediately after an inscription of Abu ʿl-Tamahān, of which it forms part in the other sources. Ibn Ḫūṭayba (ʿUyūn, iv, 24; ʿṢāḥīb, 692) expressly attributes it to Lākī.

Finally, the existence of at least three poets bearing this same karnā (see al-ʿĀmīdī, Muṭṭāfīf, 149-50) should be noted for the need of the greatest prudence.

Bibliography: In addition to references given in the text, see Dājhīz, Bayān, i, 187, iii, 235, 237; idem, Ḥayyānī, iv, 473; Ibn Ṭuṭayba, ʿṢāḥīb, 348-9; Būḥṭārī, Hamāda, ii, 294; Abu ʿl-Tamānī, Hamāda, ii, 77-8; Ibn Durayd, Iṣbāḥī, 317; Nebāʾ, ed. Bevan, 670; Khudajīdī, Maṭṣiydī, Baghdad 1954, 207, 209; ʿAskārī, Sinātār, 360; Marsūbānī, Maswaqkhāb, 75, 78, 244; idem, Muṭṭād, 149-50; Baghdādī, Kāzīzān, ed. Bīlāk, iii, 426; Ibn Ḥadājr, Iṣbāḥ, No. 2011; Yākūt, Bādīn, i, 154; Muṭṭādī, Amālī, ed. 1907, i, 185; Wāḥīsh, Maṭṭāgī, i, 193-4; Zirīkī, iii, 322-3; Blachère, HLA, 318.

ABU ‘L-TAYYIB AL-LUGHAWĪ, ʿAbd al-Wahhāb b. ʿAlī al-Ḥaraqī, grammarian of the 4th/10th century, interested above all in lexigraphy (ilm al-ṭalqāh), whence his surname. He came originally from ʿAskār Mukram in Khūṣṭānīz, but left his natal town for Baghdād, where he studied under Abu ʿAmr al-Zaḥīb and Abu Bakr al-Sūlī. Then he moved to Aleppo, whose ruler, Sayf al-Dawla, was attracting scholars from all disciplines. It was thus in Aleppo that Abu ʿl-Tayyib found himself competing with the grammarian Ibn Khalawayh [q.v.], who had followed the same masters at Baghdād as himself and who had become tutor to Sayf al-Dawla’s son. Abu ʿl-Tayyib was killed in the massacre by the Byzantines when Aleppo was captured in 351/962. His most famous pupil was Ibn al-Kabīrī, to whom Abu ʿl-ʿAlī al-Muṣārī presented his Risālat al-ṣaḥīfān, giving there information on Abu ʿl-Tayyib’s works, many of which, he stated, perished in the sack of Aleppo. His extant works include the following: K. al-Muṭahāb, ed. M. Abu ʿl-Faḍl Bīrāhīm, Cairo 1955; K. Shajīf al-salīr, ed. M. Abu ʿl-Dawwār, Cairo 1957; K. Ḏabīlāt and K. al-Muṭāmāmūr, ed. Tanūkhī, Damascus 1966; K. al-Īṣāb, ed. Tanūkhī, Damascus 1961; and K. al- Ḍabīlāt, still unpublished. In regard to the K. al-Furūq, cited by al-Sīyūṣī in his Māḏārir, i, 447, this seems to have been lost.

ABU ‘ZARIYYA AL-FARRA [see AL-FARRA].

ABU ZAYD AL-KURASHI, MUHAMMAD B. ABI ‘KHAJJÀT, adîb of the end of the 3rd/9th or of the beginning of the 4th/10th century, and known only as the author of the Dhamarat ashâr al-‘Arab [ed. Bulûk 1308/1890]. No personal details about the author can be derived from this collection, and the only relevant data are two inâdas, one (p. 13) going back to al-Haythâm b. ‘Adî (d. ca. 206/821 [q.v.]) through two intermediaries, and the other (p. 14) going back to Ibn al-Arâbî (d. 231/846 [q.v.]) through one intermediary; these inâdas would thus allow us to date the Dhamara to the end of the 3rd century. The mention (p. 165) of the Sâhib of al-Djâwâhîr (d. ca. 398/1107-8 [q.v.]) is probably a reader’s note incorporated in the text by a copyist. Another problem is raised by the references to a certain Mufaddal, falsely identified (p. 1) with the Mufaddal al-Djabbî (d. ca. 170/786 [q.v.]), because this cannot be a case here of the author of the Mufaddâlîyya, and instead of the Mufaddâlîyya, Brockelmann surmised that Abu Zayd al-Kurashi and the Mufaddal might be two pseudonyms referring to Abu Zayd al-Ansârî (d. 215/831 [q.v.]) and to the Kufân anthologist, but this hypothesis hardly seems tenable. A.J. Arberry, for his part (The seen odes, London 1957, 23) prudently suggests, but without insisting upon this, an identification of Abu Zayd with ‘Umar b. Shâbâs (d. 262/875-6 [q.v.]).

After an introduction containing observations on the value of poetry for the philological point of view and on Muhammad’s interest in it, a comparison between the language of the Kur’ân and that of the poets, a judgment on the merits of these last and some fragments attributed to Adam, Satan, the angels, the djinn, etc., the Dhamara comprises 49 kâdas written by 49 poets of the Dhamara and the beginnings of Islam. These poems are divided into 7 groups, each of which should comprise 7 poets, but ‘Antara, mentioned in the introduction as one of the 7 of the second group, figures in the end (in the printed edn., though not in all the ms.) amongst the authors of the mu’âllakât, so that this particular group comprises 8 poems and the following one 6 only. Abu Zayd chose the following terminology: mu’âllakât, mu’djamunârân, mu’takatat, mu’âllakabât/
Abū Zayd al-Kurashi — Abyad

Abū Zayd al-Sirāfī [see also abārār al-ṣīn wa-l-'īnḍīn in Suppl.].

Abū Zayd al-Sirāfī, the kumā by which the Shāfīʿī scholar and jurist 'Abd al-Rahīm, called Ibn al-Kaʿīr, was best known. Abu Zayd, the son of a prominent Shāfīʿī jurist of Kurdish origin, was born in Cairo on 3 Dhu l-Hijja 762/14 May 1361. His mother was the daughter of a Mamlūk officer. For a time his father was the kādi of Medina. Abu Zayd's study in Cairo, Damascus, Mecca and Medina, and completed his education at an early age. He began his career as a mudarris, teaching bāṭil and jurisprudence in various madrasas in Cairo. Appointed deputy Shāfīʿī kādi of Cairo, probably in 792/1390, he held this and other judicial positions outside the capital for twenty years, before he returned to resume his original function as mudarris. In 822/1419, he was summoned by Sultan Ṭāṭār to assume the position of Shāfīʿī grand kādi of Cairo—the foremost judicial office in the Mamlūk empire. The strict and honest manner in which he discharged his functions as chief magistrate won him the enmity of powerful Mamlūk amīrs, who pressured Ṭāṭār's successor, Barsbāy, into dismissing him from the office in 825/1421, after a tenure of barely fourteen months. Abu Zayd died on 27 Shaban 826/5 August 1423, a few months after his dismissal.

At a time when corruption in the judiciary was rampant, and when prominent jurists were spending large fortunes to secure high judicial appointments, Abū Zayd stands out as a jurist and kādi of unusual integrity. A scholar of great prominence, he was also renowned for his personal modesty; upon his appointment as grand kādi, he proceeded to exercise his functions in his ordinary clothes, and considerable efforts had to be exerted before he was persuaded to don the customary ornamental robes for the dignity of the office. His contemporaries were unanimous in the praise of his character, learning and command of the Arabic language. He left a number of works on bāṭil and jurisprudence, which were mostly commentaries on earlier works; he also wrote on other subjects and left a compilation of obituaries for the jurists and scholars of his time.

Ivyeva, Tapyra i odin god Arabskogo teatra, Moscow 1977, 164-8, 171, 177, 200, 209, 228, 262.

(AL-ABYARI. Shakhri 'Abb al-Hadi Na'ga b. Ridwak b. Na'ga b. Muhammad, a leading Egyptian author and grammarian who was born in 1236/1821 in Abýarb in the Gharbiyya province of Lower Egypt. He was brought up in Abýarb where he received his early education from his father and in one of the kuttab of the town. He studied at al-Azhar and later became a teacher there. Ismå'il Paşa entrusted him with the instruction of his children, and Tawfiq Paşa appointed him maim and mufti of his entourage, a post which he held until his death on 10 Dhu 'l-Ka'da 1305/28 July 1888. He belonged to the Shafi'i madhhab.

Al-Abåyåri is credited with the authorship of more than 40 books on various subjects, including grammar, Islamic mysticism, fikih and hadith. He corresponded with a number of leading scholars, including ‘Ibråhim al-Abåb and ‘Abd al-Yazid al-Yazidi. The collection of his correspondence with ‘Ibråhim al-Abåb in Beirut and with others on literary and linguistic topics, al-Wasq'il al-adabyya fi 'l-rastu'il al-adabyya, was published in Cairo in 1301/1883. A dispute on certain linguistic points between Ahmåd Fars al-Shidyak and Sulaymån al-Harråf al-Tanîmi led to an adjudication of the questions at issue by al-Abåyåri, which judgement appeared in print in Cairo in 1279/1862 under the title Al-Na'ga al-thåkîb. A number of his works remains unpublished.

ACCESS TO THE THRONE [see BAY,

AL-ADARRÅK, the name of a family of Berber "physicians", whose ancestor, Abû 'Abb al-Allåh Muhammad (d. 1070/1657-60) left the Sus and settled at Fas; he must have used completely empirical methods, but nevertheless obtained significant results. Ibn Shåkrån [q.v. in Suppl.] was the pupil of a certain Ahmad b. Muhammad Abåråk, who was probably the son of the above-mentioned person, but the best-known member of the family was this Ahmad's son, Abu Muhammad 'Abb al-Wahåb b. Ahmad (b. ca. 1077/1666, d. 28 Safar 1159/22 March 1746), who was attached to Mawkåy Iså'mîl (1082-1139/1672-1727). 'Abb al-Wahåb had also received a traditional education and had a certain talent as a versifier. In actuality, apart from a few poems of an ethicophilosophic nature, a kasåda in praise of the saints buried at Mekånås (Munåmûna fiti madîh al-sallîhî Mîknåsat al-zaytûn), his biographers mainly mention some pieces having a certain connection with medicine: these comprise first of all a commentary on the Na'ga of al-Äntåkî and two urduquås, one complementing that of Ibn Sinå, the other on the subject of smallpox (these works apparently lost); then a kasåda of 31 verses on the fine qualities of mint (na'na), which exists in ms. (Rabat D 158 and D 1131); partial tr. in Renaud, Médécine, 101-3; Lakhdår, 189; and finally, an urduqåya of 179 verses on syphilis (hiyevå), based largely on al-Äntåkî's Na'ga and on the msåba of Ibn Shåkrån on sararpurrella (fi 'l-ushåba al-hindyâya), text published and tr. by Renaud and Colin, Mal fran, Arabic text 25-32, 81-94. Another Adarråk called Ahmad is also cited as a physician to ‘Abî Muhammad b. 'Abb al-Allåh (1171-1204/1575-90).

AL-'ADAWFI, Muhammad Hasåan-Mahîdåf, Azhåri scholar and administrator, one-time shaqhî of the Ahmådi mosque in Tantå, born on 5 Ramadan 1277/1718 March 1861 in the village of Banå 'Adå, near Manfalåt in the Upper Egyptian province of Asyût.

After the completion of his studies at al-Azhar [q.v.] in 1305/1887-8, when he was granted the degree of ‘alim [see ‘ULAMA'], and a short period of teaching at that institution, he was appointed Director of the Azhår Library which was established and organised at his initiative. His commitment to the cause of reform in al-Azhar gave his further career its content and significance when, in the various high administrative offices he held within this institution—the most notable of which were the offices of musåd al-Äzhar and of the Religious Institutes attached to it, mu'tayit al-awal and shaqål al-Azhar—as well as in the period in which he held the office of shaqål of the Ahmådi mosque in Tantå, he was able to give inspiration and direction to the reformist efforts (cf. Ahmåd Shaikh, Mu'håkkårdåf niyf kám, Cairo 1936, ii/2, 137 f., 140, 182, 233). He continued to do so after his resignation from all his administrative functions following a dispute with the Egyptian Sultan Huseyn Kâmil in 1915 (see 'Abb al-Mu'tå'il al-Sa'lådåf, Tå'tåkåh al-islah fi 'l-Azhar wa-safahdt min al-Äzhar båd al-islah, Cairo n.d., 142 ff).

From the latter year onwards, he committed himself solely to private teaching and to the writing of a variety of books and tracts, of which some forty were published, largely pertaining to legal issues and to tasanwef [q.v.]. He was an active member of the Sharåkwåyya branch of the Khålåwîyya [q.v.] and among the principal disciples of its founder Ahmåd b. Sharåkwål al-Kåfåfî (1834-98). He died in Muharram 1355/April 1936.

(Ed.)
Although his mother-tongue was Pashto, Adib Pishwar was regarded as a master of the Persian language, his wide reading and powerful memory enabling him to clothe his ideas in a high literary style. Nevertheless, although he took no active part in public affairs, he had, indeed, written in many works which show that he was well-acquainted with world events; he commented freely on such matters as the Russo-Japanese War, India's fight for freedom, pan-Islam, and the Great War. His early tragic experience had given him a lasting hatred of British imperialism, from which no doubt his support for the Kaiser in part stemmed. At heart he was a fervent nationalist and patriot. At the same time he placed no reliance on patrons, and was never known to have composed a panegyric. He may be regarded as the first of the new generation of poets who abandoned the classical themes and wrote about subjects closer to the lives of ordinary people.

(L.P. ELWELL-SUTTON)

ADIVAR, 'ABBAD AL-HAKEM 'ADNAN, modern Turkish author, scholar and politician (1882-1955). He was born in Gelibolu (Gallipoli), while his father Ahmed Baha, who came from a prominent ulama family of Istanbul, was killed there. He studied medicine at the University of Istanbul and while a student, contributed to various newspapers and was in trouble with the Hamidian police. Upon graduation he fled to Europe, spent a year in Paris and Zurich and settled in Berlin where he became an assistant in the Faculty of Medicine. After the restoration of the Constitution in July 1908, he returned to Turkey, taught at the University of Istanbul and was Dean of the Faculty of Medicine (1909-11). As a prominent member of the powerful Committee of Union and Progress (CUP), he contributed substantially to re-organising the Red Crescent and the Department of Health. In 1917 he married, by proxy, the prominent writer Khadide Edib [q.v.]. Elected a deputy in the post-Armistice Ottoman Parliament, Dr. Adnan (as he was known until 1940 when he took the family name Advar) left Istanbul secretly with his wife in order to avoid certain arrest and deportation by the British, and joined the Nationalist government in Ankara (April 1920), where he served as Minister of Health and of the Interior and as Deputy Speaker of Parliament. Later he joined dissident generals and former members of the CUP, with whom he founded the Progressive Republican Party (Teşvikperiler Dönmhriyeti Fiqhâsi [q.v.]), which represented the main opposition to Mustafa Kemal Pasha [q.v.]. In the summer of 1926, a Unionist conspiracy to assassinate Mustafa Kemal was discovered and several people were arrested. Dr. Adnan was tried in his
absence as he had been in Europe for some months. Although he was acquitted, he and his wife did not return to Turkey until 1939. They lived in England and later in France where he worked as lecturer at the École de Langues Orientales Vivantes in Paris, together with Jean Deny (1929-39). When Hasan 'Ali Yücel (Yücel), the reforming Minister of Education (1938-46) decided that a Turkish edition of the *Encyclopaedia of Islam* should be published, he appointed Adnan Adivar as chief editor (1940); the latter organised the secretariat of the *İslâm Ansiklopedisi* and successfully launched and directed it as an independent deputy (1950-4). He died in Istanbul on 1 July 1955.

Adnan Adivar’s main work is his book on the history of science in Turkey, prepared during his exile in France: *La science chez les Turcs ottomans* (Paris 1939), which he revised and enlarged in the second edition in Turkish, *Osmanlı Türklerinde Himayet Sabiti* (Istanbul 1943), where for the first time all the extensive data on the subject are put systematically together. Apart from an essay on Faust (Faust, *tahlil tecribesi*, Istanbul 1939) and an essay on *Faust* (Faust, *tahlil tecribesi*, Istanbul 1950), and other writings. A list which is, to a certain extent, representative for the 4th/10th century, is to be found in Ibn Kayyala, *Yunus al-akbar*, iii, Cairo 1348/1930, 296-9, under the heading *masāliḥ al-talām*, where *masāliḥ* must have the plain meaning of “spices, food-flavourings”. In Arabic the meaning of *afwāţ* is not sharply marked off from *itīr*, *tif* “scents”, and *‘aţbar* (plur. *‘aţār, ‘aţār*, “drugs” [see *‘Aţţār*]. The lexicographers call *al-afwāţ* whatever is added to spices, and *al-tanţābîl* what is added to food (see Lane, iv, 470). Specific monographs on *al-afwāţ* do not seem to be known. These substances are treated in their appropriate places in works on botany, pharmacognosics, medicine, knowledge of commodities, encyclopaedias and other writings. A list which is, to a certain extent, representative for the 4th/10th century, is to be found in *al-Mas‘udi*, *Marā‘ī*, i, 367, containing 25 main kinds of spices: 1. *sunbâl* spikenard, 2. *karanflu* cloves, 3. *sandal* sandalwood, 4. *gāwāţ hāwā‘* nutmeg, 5. *ward* rose, 6. *sulquâ‘* cassia, 7. *zanūm* (meaning doubtful, cf. Meyerhofer’s edition of *Maimonides*, *Shārī‘ aswād* al-*‘aţār*, no. 137), 8. *kifja*, *cinnamon*, 9. *karnawa* (a kind of sonchus?, cf. Ibn al-Baytar, *al-Ishdrā‘ ildīkh*, [al-afdwih pl. *afdwih*, *afwāţ* pl. *afwāţ*, *afwāţ* pl. *afwāţ*), in this inventory.

**ʻADÎMAN** [al-ʻAdîman], the smallest of the seven shaykhdoms of Trucial ‘Uman, which now comprise the United Arab Emirates (al-Imām al-‘Arabiyah al-Muttahida [q.v.]. The shaykhdom proper measures about 100 square miles in extent, and there are two small enclaves, Masfut and Manama, in the interior. The total population is around 5,000. The leading tribal elements are the Karātūs, Hamfrat and Al Bu Khurayban branch of the Al Bu Khurayban section, ed. B. Lewin, Wiesbaden 1974, 200 f., no. 757. An unsystematic list of food spices, among which are included the most common like salt (mîlî), is to be found in Ibn Kayyala. *Yunus al-akbar*, iii, Cairo 1348/1930, 296-9, under the heading *masāliḥ al-talām*, where *masāliḥ* must have the plain meaning of “spices, food-flavourings”. In Arabic the meaning of *afwāţ* is not sharply marked off from *itīr*, *tif* “scents”, and *‘aţbar* (plur. *‘aţār, ‘aţār*, “drugs” [see *‘Aţţār*]. The lexicographers call *al-afwāţ* whatever is added to spices, and *al-tanţābîl* what is added to food (see Lane, iv, 470). Specific monographs on *al-afwāţ* do not seem to be known. These substances are treated in their appropriate places in works on botany, pharmacognosics, medicine, knowledge of commodities, encyclopaedias and other writings. Ibn al-Baytar, *al-Ishdrā‘ ildīkh*, [al-afdwih pl. *afdwih*, *afwāţ* pl. *afwāţ*, *afwāţ* pl. *afwāţ*).
Scattered or unsystematically-arranged material for the knowledge of spices is to be found, as can be expected, in the encyclopaedias of the Arabic and Persian literature. Preliminary statements already appear in al-Khārazmī’s Muhādh al-ulūm (ed. van Vloten, Leiden 1895) under medicaments (169-42), spikenard (43 f.), cloves (45-8), costus (49-51), etc. All this is mixed up with detailed statements about other materials which can be counted among spices only with reservations or in no way at all. As in mediaeval Europe, ground spices were often adulterated, especially in times of distress. Here we only recall the original work ‘Djawbari (ca. 615/1218), Kāṭb al-Muḥaddith fī hadāl al-āsār wa-nabāk al-āsār, which allegedly informs traders about deceitful devices in commerce and trade; it was printed several times in the Orient and urgently deserves a critical edition (now in preparation by S. Wild). The section on adulterations of spices and perfumes was translated into German by E. Wiedemann (op. cit., i, 1970, 679-82).

Since there is hardly any spice which was not at the same time used as medicament, it is no wonder that the most comprehensive material on spices is to be found in the pharmacopoeias. These are essentially based on the Materia medica (Ṣān ʿībūt) of Dioscorides [see PFLANZENREICH]. This work, translated into Arabic at an early period, lived on in the Islamic world in ever-new compilations, expanded by a great number of drugs which the Arabs had come to know in the course of their conquests. The material is to be found on the one hand in pharmacognostic and pharmaceutical monographs, the development of which came to a certain conclusion with Ibn al-Baytār’s great compilation, and on the other hand in the pharmacological sections of compendia on general medicine [see MAYERHOFF]. It should, however, be remembered that in these works spices are entered and described as medicines in the first place, not as condiments.

Together with cambric textiles, spices were considered as the most fashionable luxury; both products are often mentioned together as the most lucrative ones (Mez, Renaissance, 152 ff.). In Egypt, where for a long time corn had offered the best chances for investment, spices and drugs took its place after the Crusades. In the later Middle Ages, the spice trade, and the pepper trade in particular, was mainly in the hands of Egyptians and Venetians. A good survey on the spice trade under the Ayūbid and Mamlūks is to be found in G. Wiet, Les marchands d’espices sous les sultans mamelouks, in Cahiers d’histoire égyptienne, série vii (1955), 81-147, with a rich bibliography. However, the author does not deal with particular spices, but with their general trade. Under the protection of the sultans this trade was carried out by imported agents of merchants, who forwarded the spices from India and South-East Asia to Europe by way of Egypt through the Red Sea or by way of Syria through the Persian Gulf. About these trading companies and their monopoly we have some detailed information, especially about the wealthy Kārimī [q.v.], who controlled the spice trade between the Yemen and Egypt. The “spice-wars” with the European ports in the Mediterranean, started by the Ayūbīds and continued by the Mamlūks and the Ottoman Turks, were waged on both sides with great ruthlessness. Internal policy was carried out just as rigorously, especially by the Mamlūks. In 1299 Barsbay founded a state monopoly of pepper and three years later he forced the wholesale merchants to buy from him for 80 dinārs a hini the pepper which they had sold to him earlier for 50 dinārs. Even so, Kānsawh al-Ghawrī not only maintained this monopoloy system, but imposed additional heavy taxes on the merchants. Hopes of cutting out Egyptian middlemen were the decisive inducement for the Spanish and the Portuguese to search for a direct sea-route to India; but after the conquest of the Moluccas in 1607, the Dutch snatched the monopoly of the spice trade away from the Portuguese.

(A. Dietrich)

Afdal al-Dīn Turka, more frequently referred to as Khādja Afdal-Ṣadr, was a famous theologian in the reign of the Timūrid Shāhrukh Mirza [q.v.], and a member of an originally turco-phone family of Isfahān. It should, however, be remembered that in these works spices are entered and described as medicines in the first place, not as condiments. Together with cambric textiles, spices were considered as the most fashionable luxury; both products are often mentioned together as the most lucrative ones (Mez, Renaissance, 152 ff.). In Egypt, where for a long time corn had offered the best chances for investment, spices and drugs took its place after the Crusades. In the later Middle Ages, the spice trade, and the pepper trade in particular, was mainly in the hands of Egyptians and Venetians. AL-‘AFFÎ, ‘Âbd al-Wâhâb b. ‘Âbd al-Sâlâm b. Ahmad b. Hûgazî, an Egyptian mystic belonging to the Shâdhîliyya [q.v.] order, after whom one of his branches is named al-‘Affîyya. He was born in Minyât ‘Affî in the present-day Minûfîyya province in the last quarter of the 17th century. After a period of study at al-Azhâr under a number of notable scholars like the Mâlikî muftî Sâlim b. Ahmad al-Nafrawî, and Ahmad b. Muṣṭafâ al-Sikandarânî al-Sâbbâgh, he taught the Shâdhî of Islam in the madrasa al-aghâ’irîyya and confined himself to an ascetic way of life based upon the precepts of the Shâdhîliyya order. He had been initiated into this tarîkâ [q.v.] by the son of the founder of the Moroccan Tâsâ’îyya [q.v.], the Waqasî hâfiz, Mawdûd all-Mâlikî al-Tâwârîshî (d. 1715), from whom he also received the khîlâfâ [q.v.]. In addition he held an idîfâzat khîlîfî of the Khalwâtîyya order issued to him by Muṣṭafî Kânîl al-Dîn al-Bâkî [q.v.].

His contacts with the Mâlikî annîr who used to come and visit him in his house in Kasr al-Shawk and the generous way in which he gave away to his circle of adepts to increase and spread it into the rural areas.

When he died on 12 Safar 1172/15 October 1758, he was buried close to the mosque of Kâyît Bây in a grave which was swept away by a torrent in the year 1178/1764-5. After this event his body was re-interred at a much higher site in the same area where a domed shrine was constructed over his tomb, as reported by Abd al-Rahmân Abu ‘l-Dhâhil [q.v.].

Two branches of the al-‘Affîyya tarîka were active in Egypt in 1958 (cf. Muhammad Mâhomîd ‘Alîn, al-Ta‘awwuf al-lûmî, râzîlawâhu wa-mubhâdulahu, mädîrîgî wa-tâhidîru, Cairo 1958, 72, 74).

ÂFLÎMUN, FULÂYNÎN, IFLÎMUN, the Greek reticorician and sophist Antonius Polemon (ca. 144 A.D.) of Laodicea (near modern Denizli in Asia Minor) is known for his two works on physiognomy, which have been preserved, apart from one single Greek quotation, in an Arabic translation only. The translator is not known. Polemon’s book (K. Afîmîn fi ‘îfrasîn) presents the characteristics of physiognomy, in contrast to the branch of physiognomy which aims at medical morphology [see FRîSAM]. It was believed that characterological physiognomy provided an insight into someone’s character by means of a skilful interpretation of his physical appearance (ad-idîfâzat bi ‘l-bik’d al-mubârak’d). Polemon’s book is divided into 70 chapters. Ch. 1 treats the characteristics of the human eye, and ch. 2 the characteristics of animals from which, by analogy, conclusions can be drawn about human nature; these constitute about half of the book. Then

on various grounds for wearing yellow headgear in imitation of al-Zubayr b. ‘Awâmî [q.v.], who, according to one tradition, wore a yellow turban on the day of the battle of Badr. In defence of headgear of this colour, a small treatise was published by the order, written by ‘Irâtîm al-Sâdîjînî under the title al-A‘mân al-akhbâr fi ‘îsâm al-man ana karb lihs al-‘Affîyya [q.v.].

The annotations caused his circle of adepts to increase and they mirror Shadhili teaching as translated into the tarikâ’s liturgy and was adopted by Ahmad Zarrûk. The latter’s wa‘zîfâ [q.v.], Risdlat al-Ummahdt became standard reading at a later period, towards the end of the 19th century.

Followers of the ‘Affîyya order have been criticised
follow chs. 3-30 on the different parts of the body, chs. 31-5 on the different nations of the world, chs. 36-40 on the colour of the parts of the body, chs. 41-8 on the growth of hair on the parts of the body, chs. 49-50 on the movements of the body, chs. 51-66 on several outstanding character types, and chs. 67-70 on several other topics connected with foretelling someone's destiny. The book appears to be authentic, as can be seen from the many Greek examples; thus mention is made of Oedipus (ed. Hoffmann, 111, 7), Cypere (ibid. 119, 14), Lydia and Phrygia (ibid. 139, 13), Egypt, Macedonia, Phoenicia, Cilicia and Scythia (ibid. 237, 14-239, 2). The eyes of the Roman Emperor, Hadrian of whom Polemon was a favourite, are described (ibid. 149, 4). Polemon's opponent, Favorinus, is only too well recognisable in the anonymous and malicious description on p. 161, 8 ff. Allusion to the attempt on the Emperor's life is made on p. 141, 1 ff.

Polemon does not give a theoretical introduction to his method. He used materials from the Physiogonomicon of Ps. Aristotle and gave his book a lively tone by including anecdotes about contemporary and avoiding a monotonously scientific treatment of his subject (Siegemann, 1345-7). Polemon's name is mentioned by al-Dajih (d. 253/868 [q.v.]); in his Hayawan, ed. 'A.M. Hārūn, Cairo 1938, iii, 146, 269-75, 284), with extensive quotations on the physiognomy of the dove (fīrāsāt al-hamūm), none of which however can be found in the Arabic physiognomicon as it exists now. Ibn al-Nadīm (d. 377/987 [q.v.]) mentions Polemon's book and, without naming its author, a Fīrāsāt al-hamūm (Fīrāsī, ed. Fliegel, 314). Mention of Polemon is also made by Ibn Hazm (413/1022 [q.v.]) in his Ta'akk al-hamūmnā (ed. D.K. Petrof, Leiden 1914, 30). The quotation by Ibn Hazm is only a faint echo of Polemon, ed. Hoffmann, 169, 1-4. An anecdote about Polemon and Hippocrates (a crude anachronism) in Ps. Aristotolō, Sur an-urūr (cf. ed. Foerster, ii, 187-90) found its way into Ibn al-Kīfī (d. 646/1248 [q.v.]), Tārīkh al-Hukmāna, ed. Lippert, Leipzig 1903, 91 l. 1-92 l. 2 and into Ibn Abi Usayba's (d. 668/1270 [q.v.]), Usūn al-anbā', ed. Müller, Königsberg 1884, i, 27-8.

Polemon's book was widely used and epitomised. An Arabised short version is the edition of M.R. al-Tabbakh, Aleppo 1929. The characteristics of the several nations of the Hellenistic world (ed. Hoffmann, 237-9, ed. al-Tabbakh, 46) are applied to peoples of the Islamic world. Another short version is MS Göttingen 85 (3) (see bibliography), which lacks the specific Greek characteristics but is less adapted to Islamic taste than the Aleppo version. An evaluation of the texts written under the name of Polemon has not been undertaken so far. Polemon's book was probably a primary source of al-Dimashqī (d. 727/1327 [q.v.]), K. al-Siydsā fī 'ilm al-fīrāsā (cf. Brockelmann, S II, 161) and Ibn al-Kdīnī (d. 749/1348 [q.v.]), Asād al-ayyāsā fī 'ilm al-fīrāsā (MS Paris, BN, Arab. 2762). Fīrāsā was, and still is, a popular science with its uses both in court life, human relationships and the slave trade. The exact impact, directly or indirectly, of Polemon's work on the numerous tracts on physiognomy of later times, cannot now easily be discerned.

Bibliography: On Polemon in general see the art. Polemon (by W. Stegmann) in Pauly-Wissowa, xx/i/2, cols. 1320-57, and F. Sezgin, GAS, iii, 552-3. On Polemon's position in the Arabic fīrāsā tradition, see T. Fahdi, La doxinaion arabe, Strasbourg 1966, 384-6, and Y. Mourad, La physiognomie arabe. . ., Paris 1939, 44-6, with the literature cited there. Polemon's book was edited by G. Hoffmann, in R. Foerster, Scriptores physiognomici Graeci et Latini, Leipzig 1893, i, 93-294 (= MS Leiden Or. 198 [1]). The only Greek quotation of Polemon preserved is given in ibid., i, p. LXXVI. A Polemonic treatise is mentioned in ibid., ii, p. 147-60 (= MS Gotha Arab. 85 [3]); Other MSS. of treatises under the name of Polemon are mentioned by Fahd, op. cit. 384-6; Ullmann, Medicīn, 96; Foerster, Script. phys., i, p. LXXXVII (identical with Hadjdjr Khaīfa, ed. Fliegel, vii, 297, and (?) with MS Nuruosmanieh, Defier, no. 2388); and M.R. al-Tabbakh in his edn., intro. p. 2. The Greek physiognomicon ascribed to Polemon in Adiutae variæ Historiæ Libri XIII, Rome 1545, ff. 79-81 is not authentic, as has been demonstrated by R. Foerster, in De Polemonis Physiognomici dissertatione, Kiel 1886, 10 ff.

AJRāF (al-Mansūra), an 8th/14th century Marinid royal camp-town (whence its name), commanding Ceuta from the heights west of the peninsula on which this old Moroccan (now Spanish) seaport is situated. Its site lies in an area of modern suburban development: in the north-east the line of its west wall stops short of the Ceuta-Punta Blanca road (of which a stone wall remains), and its towers has survived. Construction techniques suggest Andalusian influence. Ajrāf owed its existence to that of Ceuta, which, from around 1250, had acquired growing economic and strategic importance and become the great entre-îet of the western Mediterranean, boasting an economy thriving on commerce and privateering. Militarily, it was ideally suited to assist Islam in its struggle to maintain its increasingly precarious foot-hold in Spain: it had ships, harbours and a seafaring population equipped for war by land and sea; in good weather its ships could rapidly cross to Algeciras; its fortifications were formidable and, on its landward side, impregnable. However, because it could easily withstand assault and siege from the mainland, it had long enjoyed a profitable measure of independence and, at times under the 'Azaifs [q.v.], escaped Marinid control altogether. Accordingly, when in 728/1327-8 the total collapse of 'Azaifid authority was followed by internal dissension, the Marinid sultan Abū Sa'id decided to assert his authority there once and for all. Among measures to achieve this end were decisions to demolish Ceuta's Outer Suburb (al-rahad al-hamūmī) wall, the most formidable barrier to access from the west, and to impart solidity and permanence to what had doubtless been the site of many an earlier siege camp. Like a similar foundation built by a dynastic predecessor outside Tiemcen, it was given the name al-Mansūra. Abū Sa'id is credited with the construction of a palace there with adjacent mosque as well as other buildings. Most of the wall and fortifications, however, seem to have been the work of Abu l-Hasan (931-52/1331-51). In the 9th/15th century Ajrāf was regarded as a suburb of Ceuta. Much of the place was still standing in the 10th century.

АГАИ, поэтическое имя МУСАРИД РИДА МИРАБ б. ЭР НИЯЗ БЕК, КНЯЗЬ, поэт и переводчик, был родом из Кхива. В 1281/1864, он родился в Кхиве, в княжеской семье.

Благоприятствовало это в поэзии, особенно под его дядей, которого он называл своими словами "мирольдами" (см. "мировые строки""). Его мать была имяной известна своими переводами, а его отец был известен своими историческими работами, но также, как и многие другие высокие чины, он также был предан своим военным наклонностям, что было отмечено в его стихах.

В 1281/1864, он получил звание поэта и переводчика. В 1282/1865, он стал законным наследником своего отца, и с этого времени он полностью посвятил себя литературной работе, и продолжил свою работу, которая была завершена после его смерти в 1300/1882.

В его литературном наследии находится "Изречение осторожно" (1282/1864-65). В работе "Изречение осторожно" были отмечены предыдущие работы поэта и переводчика, как "Ал-хорасани" (1267-71/1850-56) и "Одиссея" (1272-81/1856-64).

В целом, его литературные работы являются совершенно уникальными в своем роде, и были продолжены в работах его наследников, как "Ал-хорасани" (1267-71/1850-56) и "Одиссея" (1272-81/1856-64).

Agha Hashar Kashmiri — Ahmad Al-Hiba

best-known Urdu dramatist. His actual name was Agha Muhammad Shakhir Hashar his ta'khallus, while his nisba alludes to the country of origin of his father. The latter came from Kashmir, and settled in Benares as a merchant. Here Agha Hashar was born and educated, until in 1892 he ran away from home and made for Bombay. He founded his father's wrath for his misuse of money entrusted to him; and his appetite for the new Urdu drama form, which was flourishing in Bombay, had been whetted by the visit of a theatrical company to Benares. He worked as playwright for various companies in Bombay, and subsequently in several provincial capitals such as Hyderabad and Madras, writing over thirty plays. Many of them were extremely successful, and earned him a fine reputation, and also considerable wealth, which, however, he quickly dissipated. He later worked in films. He died and was buried in Lahore.

When he entered the field, the main lines of the Urdu dramatic form were already established. Agha Hashar, by his technical brilliance and command of language raised it to its highest point. The form was hardly challenged until after the 1939-45 War. Common elements in the form were: use of poetry and rhymed prose, often rhetorical to the point of bombast, prose being reserved for comedy or social drama; the development of subsidiary plots alongside the main one, as in Shakespeare; and historical or heroic themes, based on either Islamic and Indian stories or Shakespeare and other English dramatists, whose plays were freely adapted, with changes in locations and names of characters. Social themes were also employed. Violence and death were common on stage, as in Schrab-v-Hustain (1929), publ. Lahore 1959; yet adaptations of Shakespeare's tragedies might be given happy endings—thus Safid Khubus (1907, publ. Lahore 1954), based on King Lear.

Bibliography: For accounts of earlier Urdu drama, see Muhammad Sadiq, History of Urdu literature, London 1964, 393-9; Ram Babu Sakena, History of Urdu literature, Allahabad 1927, 346-7; J.A. Haywood, Urdu drama—origins and early development, in Iran and Islam—in memory of Vladimir Minorsky, ed. C.E. Bosworth, Edinburgh 1971, 293-312; Accounts of Agha Hashar and his dramatic art are to be found in Wakkar 'Azim, Agha Hashar awr un drdme (1907, publ. Lahore 1954), based on King Lear.

Ahmad Al-Hiba, a religious leader of southern Morocco, and ephemeral pretender to the Sharifian throne, known above all as al-Hiba. He was born in Ramadam 1293 or 1294/September-October 1876 or 1877, the fourth son of the famous Shaykh Ma'al-Aynayn [g.e.]. He was brought up and educated in his father's bosom, and his natural talents and temperament gave his teachers high literary hopes of him.

When his father died at Tiznit in Shawwal 1326/November 1910, he succeeded him at the head of the maldin of the order and was then at the peak of his responsibilities. However, when there was announced the signing of the Protectorate Treaty between France and sultan Mawlay al-Hafiz [g.e.], followed by the rumor of the latter's death and of the murder of the "ulama" of Fès by the French, he proclaimed himself sultan, organised his own mukhallat [g.e.] and launched throughout the Sûs, and then through all Morocco, appeals for resistance. Soon the tribes of
the South (except for the ports) rallied to him, and before official letters announcing the accession of Mawlay Yusuf [q.v.] could arrive, he appointed fresh officials with high responsibilities in the regions which had rejected his rule. He then used the way via Tiznit and followed the road to Marrakesh in an imperial procession. When he arrived before the southern capital, he met with hostility from the high political leaders, but was received with joy by the people of the Haouz [q.v.]. The new sultan entered Marrakesh on Sunday, 5 Ramaḍān 1330/18 August 1912, occupied the kasaba and installed himself in the palace of the ‘Alawīs. He had to face grave troubles immediately. Profiting by the great unrest which had seized people’s hearts and minds, the ‘asfār troops, the floating population of the city and the hungry hordes which had followed the new amīr from Taroudannt, launched themselves into sacking the shops and imposing all sorts of exactions on the populace.

Al-Hlba had secured the handing-over to himself of the few French residents, including the vice-consul of France, who had attempted to flee the city. In an endeavour to save their lives, Gen. Lyautey’s troops got the order to go by forced marches to Marrakesh. Al-Hlba withdrew first of all to base, whence he endeavoured to save their lives, Gen. Lyautey’s troops got the order to go by forced marches to Marrakesh. Al-Hlba withdrew first of all to base, whence he endeavoured to save their lives, Gen. Lyautey’s troops got the order to go by forced marches to Marrakesh.
larity among the Shi`a is also reflected by the fact that the leader of the Zand rebellion [see 'Ali b. Muhammad al-Zand] for some time claimed to be his grandson.

W. MEDELSING

AHMAD B. MUHAMMAD OR MAHMUD, called Mu'in al-Fukara, Transoxianian author of an important work on the religious leaders and saints of Bukhara, the Kitab-i Mulzimda or Kitab-i Mazari-i Bukhara, in which the cities of the cemetery and their occupants are described. Since the last date mentioned in the book is 814/1411-12, the author must have lived in the reigns of Timur and Shah-Rukh [see AL-MURID]. From the number of extant manuscripts, the work was obviously popular in Central Asia.

AHMAD B. ISA — AHMAD-I RUMI
The instruction of the convenant's residents takes a more practical turn in al-Dakā'ik fi 'l-tarīkh, a lengthy maqāṣid in 12 chapters on the relation between murādīd and murādīd. Although Ahmad describes himself as a "follower of Mawāłānā", from his exposition of Sūfī practices he can be seen to be acting as the standard-bearer of the Sufi orders. Rather, Ahmad's works indicate that Sūfī life in the 8th/14th century did not have to be organised along the formal lines of the later great orders.

One instance of lyrical poetry (a ghazal) occurs in a Maqāṣid manuscript in Edinburgh (Hukk, Ethé, Robertson, Descriptive catalogue, no. 281).

**AḤMADĪ, AḤMAD,** a town about 30 years old some 20 km. south of Kuwait City. During the early days of exploration for oil in Kuwait, the Kuwait Oil Company (KOC), then owned in equal shares by the Anglo-Iranian Oil Company (later renamed British Petroleum) and by the Gulf Oil Corporation of the United States, established its base camp at Maqwa (al-Maqwa) not far north-west of the ridge known as Dhaib (dhaibāt al-Maqwa) seven miles south of Kuwait City. One of the few fairly high places in the state in 1356/1938 KOC discovered oil south of the ridge at Burgan (Būrkan), destined to become one of the largest oil fields in the world. The involvement of Britain and later the United States in the Second World War delayed the first export of oil until 1365/1946. KOC gradually moved its field headquarters to the desert area of the ridge, which was renamed Ahmadi (in Arabic al-Ahmadi) in honour of Shaykh Ahmad al-Dakhil, Al-Shaibani, then the Head of KOC. Oil from Burgan and other fields, including one called Ahmadi, is brought to a tank farm on the ridge, whence it flows by gravity to the nearby coast for shipment from the terminal of Mina al-Āhmadi. The company built at Ahmadi a planned community with many amenities designed especially for the comfort and pleasure of the expatriate staff (British, Americans, etc.). With the passage of time, Kuwaiti's in increasing numbers received the training necessary to qualify them for higher positions in the company. The government also inaugurated and expanded in stages its participation in the ownership of KOC, culminating in a complete takeover in 1394/1975, with the original owners being retained to lend a hand in the operations. The town and the indigenous parts of the state have thus moved towards full integration.

Ahmadi town is also the seat of the Ahmadi Governorate (mašfīq). As Kuwait endeavours to diversify its economy in order to escape undue dependence on the export of oil and natural gas, emphasis is placed on industrialisation. The largest industrial area in the state is now Shuaiba (al-Shu'ayba) on the coast of the Governorate south of Mina al-Ahmadi, with huge plants for generating electricity, distilling sea water, and manufacturing petrochemicals.

**Bibliography:** In addition to the general bibliography for Kuwait, see al-Arabi, Kuwait, Shawwal 1393 and Rabī' II 1396; *Maqāṣid dināsit al-Muhammadi*, Kuwait, Radiqāb 1396; *The Kuwaiti Diet*, Kuwait, Jan.-Feb. 1976; (G. Rustz) *al-AHMADī* [see Abu 'l-Ḥasan al-Ahmār, in Suppl.].

**AHMED, FAKHĪ, or AHMED FAKHĪ,** early Anatolian Turkish poet whose identity and date are controversial. He is accepted to be the author of the poetry, a paraphrase in modern Turkish and evaluation of the poem, see Fahir Iz, *Eski türk edebiyatında zanaz*, ii, Istanbul 1967, Introduction.

**Bibliography:** A. Bombaci, *Storia della letteratura turca*, Milan 1969, 270. (FAHIR IZ)

**AḤNĀR, KHĀDĪJA** 'Ubayd Allāh b. MAḤMŪD NAṢĪR AL-DĪN (806/1404-90), a shaykhs of the Nakshbandī order under whose auspices it became firmly rooted in Central Asia and spread also to other regions of the Islamic world; furthermore, the effective ruler of much of Transoxania for four decades. He was born in Ramādān 806/March 1404 in the village of Bāghistān near Tashkent into a family already renowned for its religious and scholarly interests. It was his maternal uncle, Ibrāhīm Shāhī, who first assumed the task of educating him and who sent him to pursue his studies in Samarkand. Because of illness and lack of inclination on his part, Ahrār soon abandoned his studies in Samarkand, and according to his own admission never mastered "more than two pages of Arabic grammar." Throughout his life, indeed, he manifested a certain disdain for formal religious learning, assigning more importance to the enactment of the *ṣaḥif* and the practise of Sūfī. At the age of 24, Ahrār went to Herat, and it was evidently there that his active interest in Sūfism was awakened. He associated with numerous shaykhs of the city without, however, offering his formal allegiance to any of them. The master to whom he gave his devotion was instead Yā'qūb Carhī (d. 851/1447), one of the principal successors of Bahā' al-Dīn Nakshband, eponymous founder of the Nakshbandī order, who had left Bukhārā after the death of his master to settle first in Badakhshān and then in the remote province of Cagāhniyān. Ahrār had already had some dealings in Samarkand with another Nakshbandī shaykhs, Khādīja Ḥasan 'Attār, son-in-law of Bahā' al-Dīn Nakshband, but 'Attār had seen little sign in him of spiritual talent, and advised him instead to learn the martial arts. Returning from Cagāhniyān to Tashkent in about 855/1451, Ahrār established himself as chief Shaykh of the city.

Ahrār's rise to political prominence came in 855/1451, when he extended to the Timūrid prince Abu Sa'id assistance that proved decisive in enabling him to capture the Timūrid capital of Samarkand.
According to the account found in the biographies of Ahrar, Abū Saʿīd, defeated in battle by a rival prince, ʿAbd Allāh Mīrẓā, fled northward to Tashkent, and in the course of his flight dreamed of the celebrated saint, ʿAlamād Yasawī [r.v.]. Yasawī introduced him to a luminous figure who would aid him in his struggle. Describing the figure he had dreamed of to the people of Tashkent, Abū Saʿīd was told that it was none other than Khūṭbaʿidd ʿUbayd Allāh Ahrār. Ahrār was at the time absent from Tashkent, and it was at the small town of Parkent (Fārāḵ) outside the city that Abū Saʿīd went to meet him. Ahrār consented to aid him, on condition that he use his rule to enforce the ʿShāfīʿī law and to alleviate the lot of the people. In the ensuing battle, ʿAbd Allāh Mīrẓā was defeated, and Abū Saʿīd entered Samarqand, soon to be followed by Ahrār. Abū Saʿīd's battle against ʿAbd Allāh Mīrẓā had been won, in reality, by his Uzbek auxiliaries, commanded by Abū l-ʿKhawāṣir Khaṭīb; it is said that they had intervened at the request of Ahrār, but this is uncertain. In any event, Abū Saʿīd felt himself to be in the debt of Ahrār and even, according to the chronicler ʿAbd al-Razzāk Samarqandī, "regarded himself as being under his orders". Ahrār's domination of Samarqand became complete in 861/1457 when Abū Saʿīd transferred his capital to Herat. It survives the death of that prince in 874/1469, this death occurring in the course of a disastrous campaign undertaken with Ahrār's advice; Abū Saʿīd's son, ʿĀlī Ahmad, proved even more devoted to Ahrār than his father had been.

There are a number of episodes, apart from the conquest of Samarqand in 855/1451, that may be mentioned as particularly illustrative of Ahrār's political influence; his organization of the defense of Samarqand against an army from Khurasan in 856/1457 when Abū Saʿīd transferred his capital to Herat. The origins of the Naqshbandī order are unusually copious. A complete bibliography of the order is given in Hamid Algar, ʿAbd al-Awwal Nishapuri, since whose time the Naqshbandī order has maintained an uninterrupted presence among the Turks (see Kim Suhr, Molla Ilahi ve kendisinden sonraki Nakshbandiye muhit, in Türk Dili ve Edebiyatı Dergisi, iii [October 1948], 129-51).

Ahrār died in Rabīʿ al-Awwal 895/February 1490, and a decade later Timurid rule in Transoxania came to an end. Muhammad Shaybānī, the Uzbek conqueror of Transoxania, showed himself hostile to the sons of Ahrār, confiscating much of the property they had inherited from their father, and putting to death Khūṭbaʿidd ʿUbayd Allāh Mīrẓā, Abū Saʿīd's son. However, Muhammad Shaybānī's nephew, ʿUbayd Allāh Khaṭīb, restored the major part of their lands and took pride in the coincidence of his name with that of the great Ahrār. In general, the posthumous repute and influence of the khūṭbaʿī were great, and the various branches of the Naqshbandī order that descended from him played a major role in the history of Central Asia down to the Russian conquest.

[ms. Institut Vostokovedeniya, Uzbek University 1970; and O.D. Cekovic, Socineniya, Beg i ego vremya, Moscow 1955]; and Minorsky, in see, for example, ms. Institut Vostokovedeniya, Tajik Academy of Sciences, Dushanbe 548. The branches of the Nakshbandiya descending from Kh‘adjda Ahrar are enumerated in Kamal al-Din al-Hariri, Tibyan wasa’il al-hak‘ak, ms. Istanbul, Ibrahim Efendi fl. 34a-14b. Scholarly writing on Ahrar has been done up to the present almost entirely in Russian: mention may be made of the pages devoted to Ahrar in V.V. Bartold’s Ulug Beg eg v time, reprinted in Smel’chenko, Moscow 1964, ii (2), 121-4, 205-17, Eng. tr. V. and T. Minorsky, in Four studies on the history of Central Asia, ii, Leiden 1958, 117-18, 166-77, and a number of more recent studies concentrating on the socio-economic aspects of Ahrar’s activity: R.N. Nabiev, 1; stories politico-ekonomiceskoi zhizni Mucenannikha XV v. [zameki o Khodzha-Akhrare], in Velikiy Uzbeksikii Put—Shormik Statii, Tagkhten 1948, 25-49; Z.A. Kurbave, K istorii van邪lshyn vladenii Khodzha Akhbara i ego potomkov, doctoral thesis, Tagkhten University 1970; and O.D. Čeković, Samarkandskae Dokumenty XV-XVI vv., Moscow 1974. (HAMID ČEKOVIĆ)

AHRUN (AHRON) B. AYAN AL-KAS, "the priest," presbyter and physician, who lived in Alexandria probably in the 7th century and belonged, with Paulus of Aigina, to the last great medical scholars produced by the Alexandrian School. A satirical verse of Abd al-Malik b. Abd al-Malik b. Bishr. Minorsky, governor of Bayra, is advised to have the offensive smell of his breath and nose cured by Ahrun before presenting himself to the amir (Djahiz, Hayawun, i, Cairo 1949-50, 247, 14 = 249, B = 250, 2; Ibn Kutayba, ‘Uyun, Cairo 1930, iv, 62; Agha‘ni, Cairo 1928, ii, 424), possibly offers a terminus post quem for the period in which Ahrun lived. Abd al-Malik b. Bishr was governor under Yazid II in 102/720-1 (Tabari, ii, 1433, 1430).

Ahrun (probably = ‘Arif aw) allegedly composed a medical compendium (Pov‘ekxat, 'Uxvax) consisting of 30 books, which was translated into Syriac by a certain Giosios (The Chronography of Gregory Abu ‘l-Faraj... Bar Hebraeus, tr. Budge, Oxford 1932, 57; see also M. Meyerhoff in, i (1916), 220 ff). Mâasîdjuwayh is said to have translated the work afterwards into Arabic under the title al-kannâsh and to have added two more books. The information on this procedure is, however, defective and inconsistent (see Frisvold, 257; Ibn Djalouli, Tabakht, ed. F. Sayyid, 61; Kifti, Hukumatu‘, ed. Lippert, 80; Ibn Abi Usaybi‘a, ‘Uyun al-amad, i, 109; Sâ‘id, Tabakht, ed. Cheikho, 88; Barhebraeus, Duwâl, ed. Sâhâbî, 157). The data are the more uncertain because it is not known when Mâasîdjuwayh was living. According to Ibn Djalouli, he is said to have translated Ahrun’s work under the caliph Marwan (645-684 or 5) or ‘Umar b. ‘Abd al-Azîz b. Marwan (99-101/717-20); according to others he belongs to the 2nd/8th or 3rd/9th century.

In any case, the kunnâsh must have been highly appreciated (kunnâsh fâdal alfâl al-kunnâsh al-kadîma, Kifti, Hukumatu‘, 324), although it was very badly arranged and difficult to consult even for specialists, according to the judgement of Abû Sahl Bishr b. Ya‘qûb al-Sidjâzi (4th/10th century). For example, the twenty kinds of headaches (suda) are said to have been brought together in one place, while their causes, symptoms and treatments are discussed separately in many places. The subject-matter could thus only be mastered by lengthy readings (see Dietrich, Medicinalia arabica, Göttingen 1966, Arabic text, 6 ff.). Al-Mâdjuwi (Tákb al-Malaki, i, Bâlak 1294, 4 ff) remarks that the work is bad and without value, especially for those who had not read Hunayn b. Ishâk’s translation—which thus also did exist.

The kunnâsh has not preserved in complete manuscript, but it has survived in many quotations, especially in al-Kâfî’s Hâdiq. They have been brought together by Ulmann, Die Medizin im Islam, 88 f., and by Sezgin, Gâsis, iii, 167 f. They can certainly be enlarged through systematic research, see e.g. Maimonides, Sharh asma‘ al-‘âdhr, ed. Meyerhoff, Cairo 1940, no. 247; Ibn al-Khatîb, Tákb an al-mahân li-mam habb, ed. Maria C. Vazquez de Benito, Salamanca 1972, 89, 132, 135, 140. A judgment on the work will only be permitted after all the quotations attainable have been collated systematically with the greatest possible completeness. Râzi more than once quotes an abstract from the kunnâsh under the title al-Fasî‘î. It could not be verified whether the al-Adwîya al-kadîla, mentioned by S. Munadjîdî in RIMA, v (1959), 278, is indeed a work of Ahrun, but Munadjîdî considers the attribution as doubtful.

Bibliography: given in the article. See further, Ulmann and Sezgin, and for the older literature, L. Leclerc, Histoire de la médecine arabe, i, 1876, 77-81. (A. DIETRICH)

‘ÂISHA KANDISHA, a female spirit, diversely referred to as a ginniya (a female ginni [q.v.]), an afîta [see frîft] or a qâha [see qah], by the peoples of northern Morocco. Westermann classifies hers as one of the “individual spirits” whose characteristics are more explicitly elaborated than those of the run-of-the-mill ginni. Although there is some difference of belief in her attributes, ‘Âîshâ Kandîsha is said generally to appear as either a wondrous beauty or an old, wrinkled hag with elongated nipples, pendulous breasts, and long finger nails. In both manifestations she has a hooved foot of a camel, a goat, or an ass. She it thought to be jealous, arbitrary, whimsical, and quick-tempered—ever-ready to strangle or strike those who have offended her. Her victims, at least in the area around
Mikhâsh, must undergo the rituals of the Hamâdîshâ [q.v. in Suppl.], her special devotees, to be rid of the symptoms of her attack: paralysis, sudden deafness, blindness, or mutism. In her beautiful manifestation, she is an insatiable temptress. Once a man has succumbed to her—he is said to be married to her without his absolute power and must follow her every command. His only redress is to plunge a steel knife into the earth before giving into her.

'Âïsha Kandîshâ is said to be married to a far less elaborated djinni, Hammû Kiyû, and to live in the earth or under a river. Along the Moroccan littoral she is thought to live in the sea. The Hamâdîshâ claims that her favourite home is a grotto under a giant fig tree, near the sanctuary of Sîdî 'Ali b. Hamadût, one of the saints whom they venerate, on the Djesel Zaratn. This grotto is visited by 'Âïsha Kandîshâ's followers, especially by women who are anxious for children or for relief from menstrual cramps and other gynaecological complaints. Such women smear henna on their ailing body and make a promise [âr [q.v. in Suppl.]] to sacrifice a chicken or goat if they are relieved of their complaint. During the mawson, or annual pilgrimage [see mawsim], to Sîdî 'Ali's sanctuary, the grotto is the scene of wild, trance-like dances in which some of 'Âïsha Kandîshâ's female followers grovel in the mud in imitation of pigs. 'Âïsha Kandîshâ is said to like henna and to fear iron and steel. Her favourite colours are red and black. She has a preference for black benzoin and certain Hamâdîshâ melodies.

'Âïsha Kandîshâ is often indigenously confused with similar female spirits. She is, of course, identifiable with other female spirits in North Africa and the Middle East. Westerners have related her worship to that of Astarte. The Hamâdîshâ claims that she was brought north from the Sudan by one of their saints, while in Istanbul, Akh Kân was living in poor circumstances; his mother and his brother had deprived him of the wealth to which he was due by inheritance. He had therefore to live on a modest income earned through teaching, as well through contributing to the Persian newspapers, such as the âdâb of Istanbul and Maâkâm Kân's Kanûn published in London. He was one of the outspoken opponents of the 1890 Persian Tobacco Concession and other concessions granted by the Shâh, and his sharp criticism of Nasir al-Dîn made the latter so angry that "...while kicking the ground and chewing his lips, the Shâh said: 'Anyone who establishes correspondence with Akh Kân, I will demolish his house over his head!" (Yahyâ Davlatahâîî, Tâlîqâ'î mu'âjâ' yâ hâdîjîl iâyâjîl i, Tehrân 1957, 125).

In addition to his press campaigns, Akh Kân joined the Pan-Islamic group headed by another critic of the Shâh, Sayyid Djaâmal al-Dîn Asadîbâdî ("Afghanî"), and he also corresponded with the Persian ʿulâmâ' of Irâk. Because of these anti-Shâh activities, the Iranian government urged the Turkish authorities to extradite Akh Kân and his close associates to Iran. This development coincided with the 1893-4 Armenian unrest in Turkey, and Akh Kân was accused of cooperation with the rebels. An arrangement was therefore made that Turkey should exchange Akh Kân and his friends for the rebellious Armenians who had fled to Iran. In the meantime (1314/1896), Nasir al-Dîn Shâh was assassinated by a disciple of Aghânî, Mirzâ Riḍâ Kirmânî; this incident expedited the process of Akh Kân's extradition. Finally, in Safar 1314/July 1896 Akh Kân, together with two friends, Riţî and Hasan Kân Khabâr al-Mulîk, were beheaded in Tabrîz while Muhammad 'Alî Mirzâ, the later Shah, was watching the scene.

Akh Kân has been recognised as a distinguished forerunner of modernist thinking in Iran, of greater intellectual calibre than other contemporaries such as Mâltâm Kân, Aḥkâmūd-Zâdā, and Mustâshâr al-Dawlah Tabrîzî; for one thing, his linguistic ability provided him with a broader access to European sources on social, political, and philosophical thought. Despite his Pan-Islamic activity, he was anti-religious and quite hostile to many traditional practices.

As a modern school of thought, Bábîm attracted Akh Kân and for a while he became one of its adherents. Later, however, he turned against Bábîm, and considered all religious sects to be useless (Firdûs Adamîyât, Āndîqâhâ'î Mirzâ Akh Kân Kirmânî, Tehran 1967, 66). In his thinking, he was influenced by European thinkers such as Voltaire, Spencer, Rousseau, Montesquieu, and Guizot. Akh Kân's works, many of them unpublished and incomplete, include detailed accounts of materialism, anarchism, nihilism, nationalism, and the philosophy of religion. He had modernist interpretations of history and suggested a new methodology for Persian historiography; in regard to the arts, and particularly literature, he believed that they should be responsible to and representative of society. In his treatment of society, he proclaimed that "Wealth consists essentially of (1) material objects such as metals and mines, and (2) the labourers' wages. The true criterion for wealth is physical as well as intellectual labour alone ... not silver and gold, which are the means of exchange alone" (ibid., 237-8).

Bibliography: Akh Kân Kirmânî, Hamd bîhâgt, Tehran 1960; idem, Ḥâftu d u du millat, Berlin 1924; idem, Nâmâ-yi 'îbat, in Rastâlîgîz, i
Prosperity of the Muslims in general and the Iranians in particular. Rather, he has often been referred to as a grain hoarder, a venal, power-hungry religious leader, a usurper of other people's property, and an intimidating judge.

Aka Nadjafi, a member of a very powerful religious-radical alliance in Iran, was widely recognized as a religious leader in Isfahan: people were murdered, on the accusations of Babiism being heretical; the Babi religion was ascribed to him and were published at his own expense, but it is believed that they were not in reality written by himself (Mahdi Bamedd, Sharh-i hâli-i rigâd-i Iran, ii, Tehran 1968, 327). Since he was a wealthy landowner, he naturally had much in common with the feudal governor of Isfahan, Zill al-Sultan; they often worked together, although at times this co-operation was replaced by hostility, conspiracy, and struggle.

Aka Nadjafi has been held responsible for two major disorders in Isfahan and Yazd, in which many people were murdered, on the accusations of Babiism and irreligiosity: once in 1890 and another time in 1902, both of which resulted in Aka Nadjafi's banishment to Tehran. He, along with many other people, was imprisoned and tortured to compel his cooperation against the Tobacco Concession of 1890 being given to a British company; he also favoured the Persian Constitutional Revolution of 1906. In both cases Aka Nadjafi appears less as a genuine lover of freedom than as an opportunist who hoped to increase his prestige, wealth, and influence in the light of those national movements. To preserve his power and wealth, Aka Nadjafi declared as unbelievers, and even at times had murdered, those who opposed him or who were critical of him (Mahdi Malik-Zade, Ta'rikh-i inkildb-i masjirutiyyat-i Iran, i, Tehran 1949, 166). Moreover, by 1911, Aka Nadjafi and his sons had made a volte-face and wished "to place their extensive landed property under foreign protection" (Cd. 5656. Persia, I, 1889, GUI, p. 30). Aka Nadjafi was a wealthy landowner, he naturally had much in common with the feudal governor of Isfahan, Zill al-Sultan; they often worked together, although at times this co-operation was replaced by hostility, conspiracy, and struggle.

AKÁ NADJAFI — AKHBÁR AL-SIN WA L-HIND

AKAGUNDÜZ, Turkish writer and novelist (1886-1958) whose original name was Husayn 5awîn. He started his career in Salonica in close relationship with his friend 5omer Seyf al-Dîn, as a poet, short story writer and playwright. But he is primarily known as a novelist. Apart from his collection of verse Bâgûnî ("Débâcle"), 1913 and his plays Muḥârem 5âdîl ("Respectable assassin", 1914) and Mu‘în ad-dîlîn ("Blue thunderbolt", 1934), he is the author of several volumes of short stories and more than sixty novels, the most famous of which are Dikmen 5âlzâ ("The star of Dikmen", 1926); Bi singû arasûndî ("Between two hayonets", 1929); 5ewî bi ("The stepmother", 1933) and 5âfîn àsî ("The girl of the plateau", 1940). Akagunduz’s unsophisticated novels and short stories, written in an unpolished style with no claim to literary value, which were immensely popular in the 20s and early 30s, treat, with a certain element of realism, mainly of sentimental or tragic themes among ordinary people.

开阔 (A), a legal term denoting "immovable property", such as houses, shops and land, as opposed to mâl munâmî ("movable property"). As such, 5akîr is identical with "reality" or "real property". All property which is 5akîr is non-fungible (kimî), but the two terms are not coextensive, since animals, furniture, etc. are kimî, although they do not constitute 5akîr. The owner of 5akîr is deemed also to be the owner of anything on it, over it or under it, to any height or depth, so that ownership of land includes ownership of minerals beneath it and buildings and plants on it. Like personality, reality may be held in joint ownership in Islamic law, without the shares being allocated (ilmatî). As regards ownership of the fore- shore and new land formed by natural processes, this is vested in the state in modern Islamic countries.

Bibliography: Mustâfa Ahmad al-Zarqâ, al-Fikr al-islimî fî 5awîwî al-dînî, Damascus 1968, and bibliography there cited; for examples of how items of 5akîr are described and defined in legal documents, see R.Y. Elijj and M.J.L. Young, Some Arabic legal documents of the Ottoman period, Leiden 1976. 

AKBAR B. ARAZGÎZ, Mughal prince. His mother dying when he was an infant, he was very affectionately brought up by Arazgîz [g.]. In 1590/1670 he was deputed to lead an army against the Rajputs, and after initially taking a vigorous part in the operations, he was won over to their side by the rebels. His own reasons for his defection are given in a letter to Arazgîz in 1592/1681, where he criticises his father’s hostility to the Rajputs. However, his attempt at a surprise attack on his father at Adârâq failed, and he had to flee, first to 5âm-bhahdji, then to Shahzâda Muhammad Akbar in the Emperor Arazgîz, Royal Asiatic Society London, MS. No. 173; 5âdâb-i 5amûnî, numerous mss.; see V.J.A. Flynn, 5âdâb-i 5amûnî, an English translation . . ., Australian National Univ., Canberra Ph.D. thesis 1974, unpublished. 

AKHBÁR AL-SIN WA L-HIND, the title by which are now designated two narratives concerning China and India which have, for various reasons, attracted the attention of Arabists.

Ms. 2281 of the B. N. contains amongst other things: I. fols. 2a-23b, an untitled and anonymous text which constitutes the basis of the work; and II. fols. 24a-56a, a sequel to the preceding, of which the author is named as Abî 5azâl al-5ârâfî. In 1718, the Abbê Renaudot published in Paris, under the title Anciennes relations des Indes et de la Chine, de deux voyageurs mahométains qui y allèrent dans le neu- vième siècle, traduites d’arabe, avec des remarques sur les principaux endroits de ces relations, a version of I and II, which was in its turn translated into English and Italian; since he had supplied no precise information regarding the origin of the text, Renaudot was accused of committing a hoax, but the original (the actual ms. 2281, to which was added, as no. 2282, the copy made by the translator himself) was sub- sequently found in the Bibliothèque Royale and printed through the good offices of Langles; it was, however, M. Reinaud who put it into circulation a few years later, accompanied by a new annotated transla- tion and an introduction, under the title Relations des voyages faits par les Arabes et les Persans dans l’Inde et Chine dans le XIX siècle de l’ère chrétienne (Paris 1845, 2 vols.). In 1922 G. Ferrand produced a new transla- tion, Voyage du marchand arabe Salâyman en Inde et en Chine, rédigé en 851, suivi de remarques par Abî
Akhbār al-Sīn wa 'l-Hind — AKHBĀRIYYA

Zayd Hasan (vers 916), as vol. vii of the Classiques de l'Orient. Finally, in 1948, J. Sauvaget published in Paris the text, a translation of and a lavish commentary on no. I, as Aḥbār aṣ-Ṣīn wa 'l-Hind, Relation de Chine et de l'Inde rédigé en 851.

Independently of the reactions provoked by Renaudot’s version (see Sauvaget, p. xvi), the anonymity of the first of these narratives has given rise to discussions and hypotheses. Quatremère (in JA (1839), 22-5), thought rather unwisely to attribute it to al-Mas‘ūdī (q.v.). Reinaud, on the basis of the name of Sulaymān al-Ṭādīrī which is quoted in the text (§ 12 of the Sauvaget edition), thought that last was the author; G. Ferrand, adopting this point of view, entitled his work Voyage du marchand arabe Sulaymān, and V. Minorsky (Hudud al-‘lam, index) is seen to follow him deliberately in speaking only of “Sulaymān the Merchant”. It is true that these authors can claim support from an important authority, since Ibn al-Fākhī refers (Buldān, 11); tr. H. Masse, 14) to Sulaymān al-Ṭādīrī in a context other than the narrative in which his name appeared. However, H. Yule (Cathay and the way thither, London, 1866, pp. cii-ccii) and after him P. Pelliot (in Toung-Foo, xx (1912), 116) have drawn attention to the fact that this Sulaymān was apparently only an informant, among others who remained anonymous.

As for the general title, it may be deduced from a remark figuring at the beginning of the “sequel” written by Aḥū Zayd, who says that his own contribution is al-kiyāb al-dhātī min ʿākhbār al-Sīn wa 'l-Hind; even if these words are more a general indication of the contents of the work, later authors have considered them as a title, notably al-Birūnī who, in his Nabaḍl fi ʿākhbār al-Sīn (ed. Krenken, in MMIA, xiii (1935), 388); claims to borrow from a fact of the kīyāb Aḥbār al-Sīn, and there is no reason not to adopt this solution.

The anonymous narrative is called al-Kiyāb at-awwal by Aḥū Zayd, who gives the precise date of 237/851. On the other hand, that of the kīyāb al-dhātī is not so precisely known; but we possess some information on the author of this “sequel”, thanks to al-Mas‘ūdī, who incidentally comments on an error in commenting him, probably inadvertently. Aḥū Zayd Muḥammad b. Yāzīd al-Ṣīrāfī, although he himself says that his surname is al-Ḥasan. The author of the Murājīq declares (§ 321 = § 351) that he met Aḥū Zayd at Baṣra, where he was resident in 303/915-16, and that he received information from him; in reality, Aḥū Zayd must have supplied him with the text of the two narratives which were put to extensive use in the Murājīq, often distorted by al-Mas‘ūdī’s zeal for elegance.

Texts I and II are quite dissimilar; both are clearly recollections of journeys in exotic lands, but if the first is characterised by the quality of the observations of the author or of the merchants who gave him the information and probably constitutes the most ancient account of China, the second, later by about 70 years, seems less reliable. While the first narrative, without pretension of any sort, is in general exact and spontaneous, that of Aḥū Zayd, which had itself been moreover commissioned, is more laboured, gives much space to sailors’ stories and to marvels, and betrays the tendency, resisted however by al-Ḍihaḍī, to introduce fables into this form of ṣabīḥ.

Other authors than al-Mas‘ūdī have exploited, directly or indirectly, admitting it or not, the Aḥbār al-Sīn wa 'l-Hind (see Sauvaget, pp. xxiii–xxix), and it is astonishing that only one ms. of it has survived. It is, however, not impossible that parts of it were detached and passed into the oral domain, which would explain why at a fairly early date the texts ceased to be copied, although these texts were originally written for a literate public.

(C. Pellat)

AKHBĀRIYYA, in Iḥtīnā ʿAḥṣārī Shīʿī, means those who rely primarily on the traditions, ʿaḥbār, of the Imāms as a source of religious knowledge, in contrast to the ʿUṣūliyya (q.v.), who admit a larger share of speculative reason in the principles (uṣūl) of theology and religious law. Opposing traditionalist and rationalist currents were apparent in the Iḥtīnā ʿAḥṣārī Shīʿī from its beginnings in the 2nd/8th century. In the Buwayhid age, the three leading scholars, al-Muḥīṭ (d. 413/1022), al-Murtūz (d. 436/1044) and the Shāhīkh al-Ṭūsī (d. 460/1067), in confrontation with the traditionalist school of Kūm, promoted the rationalist ʿUṣūlī doctrine on a firm basis by elaborating a distinctive Iḥtīnā ʿAḥṣārī methodology of jurisprudence (uṣūl al-ʿfiḥ). ʿAḥṣāriyya and ʿUṣūliyya are first mentioned as antagonistic factions by ʿAbd al-Ḍihaṭ al-Kazwīnī, an Iḥtīnā ʿAḥṣārī scholar of Rayy writing ca. 565/1170, who characterises the former as narrowly traditionalist and literalist, the latter as basing the fundamentals of religion on reason and rational investigation.

Aḥbābīrī opposition to the predominant ʿUṣūli trend remained latent during the following centuries, until Mullā Muḥammad ʿAfnī b. Muḥammad Ṣahrī al-Astārabādī (d. 1033/1624), encouraged by his teacher Mīrzā Muḥammad b. ʿAlī al-Astārabādī (d. 1028/1619), articulated the Aḥbābīrī position in his K. al-Faʻīdī al-madānīyya and thus became the founder of the later Aḥbābīrī school. He proposed to restore the early Aḥbābīrī doctrine which had remained undisputed until the time of al-Kušānī (d. 320/929) and vigorously criticised the innovations of the three famous scholars of the Buwayhid age and, even more so, of the Allāma al-Ḥillī (d. 726/1325), the Shāhīd al-ʿUwāl Muḥammad b. Ṣaḥīḥ al-ʿAfnī (d. 966/1558) in the uṣūl al-ʿfiḥ and theology. The basic theses which he affirmed against the ʿUṣūli position included the doctrine that the ʿaḥbār of the Imāms take precedence over the apparent meaning of the ʿUṣūli ʿaḥbār, the fundamental criteria of the Prophet and reason, since the Imāms are their divinely appointed interpreters. The apparent meaning of the ʿaḥbār which were accepted as sound (ṣahīḥ) by the early Iḥtīnā ʿAḥṣārī community provide “certain authority” (ṣaḥīḥ, da‘īf), weak, which the Allāma al-Ḥillī, in imitation of Sunnī practice, introduced with regard to the reliability of the transmitters, are irrelevant. Also, consensus (ijma‘), which has been handled too laxly by the majaḥīdīn, is valid only if the inclusion of the Imāms is absolutely certain and thus does not provide a source of the law separate from the ʿaḥbār. ʿUṣūlīs, leading to mere zann, and takhlīl, i.e. following the opinions of a majaḥīd,
The Akhbari school flourished during the following two centuries. Muhammad Amin al-Astarabadi's teaching was expressly endorsed by the elder al-Imams, teaching was expressly endorsed by the elder al-Imams, also staunchly supported Akhbari views. al-Astarabadi's verbal attacks on the Usulf were resumed by al-Ghita[a.q.v.], was eventually exiled to and splitting the ranks of Akhbari doctrine was forcefully restated by Muhammad Bakir al-Mazini (d. 1108/1696-7), having been promoted to the rank of 1,500/1,000, and was made faceless of the Doab. In 1092/1681 he was appointed as sibhiyot of Dihli, and he held this post till his death in 1108/1696-7, having been promoted to the rank of 4,000/1,000.

A work called the Wafakat-i 'alamgiri or zu'farana-nama-i 'alamgiri is ascribed to him. This contains a very interesting, but on occasions a highly-coloured, account of the war of succession and the opening years of Awrangzib's reign. It does not always present a very flattering picture of Awrangzib, and contains much information not found in the official history, the 'alamgiri-nama. 'Aki Khan was devoted to literary pursuits and was interested in poetry, leaving behind a Diwan and a number of mathnavi poems.

Al-Askari, Abbas Mahmud, one of the most influential figures in the development of Egyptian culture in the first half of the 20th century, literary, journalist, educator, polemicist, was born in Aswan in 1889. He did not complete his secondary education but moved to Cairo at the age of fourteen. While taking a series of minor posts in the civil service, he began to make up for his lack of formal education by reading widely. He was particularly interested in literature, philosophy and the natural sciences, and among his greatest contributions was to pass on to a younger generation of Egyptians a synthesis of his views on these and other subjects. His writings on aesthetics and poetic theory show a strong influence of English writers such as Hazlitt, Coleridge, Macaulay, Mill and Darwin, and he was also acquainted with the ideas of Lessing, Schopenhauer and Nietzsche among German philosophers. It was early in the 1910s that al-'Akkad met Ibrahim al-Mazini, and the two men formed a firm friendship based both on a love of poetry (especially that of the English Romantics found in such works as Palgrave's The Golden Treasury) and on a distaste for the conventions of the neo-classical school of Egyptian poets personified by Ahmad Shawki and Hajiz Ibrahim. Al-'Akkad wrote the Introduction to al-Mazini's first collection of poetry (1913) and published two collections of his own during this decade, yakzat al-sabab (1916) and Wahaj ad-zahira (1917). The same views on poetry were also shared by a third writer, 'Abd al-Ra'man

Al-Akbariyya — Al-'Akkad

are forbidden. Every believer must rather follow the akhbar of the Imams, for whose proper understanding no more than a knowledge of Arabic and the specific terminology of the Imams is needed. If an apparent conflict between two traditions cannot be resolved by the methods prescribed by the Imams, tawqaf, abolition of dual actions, is needed. If an appar-

...
Shukri, the best poet of the group. These three are often referred to as the “Dīwān School”, but that is somewhat of a misnomer in that al-‘Akkād and al-Mazīn alone were the authors of al-Dīwān, a blistering piece of criticism in which al-Mazīn accused Ḥāthīr ibn ‘Aṣwān of madness and confusion while al-‘Akkād attacked Shawkī’s occasional poetry in the most bitter terms. The three men seemed to share a common view of the nature and role of poetry, but it was al-‘Akkād who provided much of the critical impetus for which the group is primarily remembered.

At the conclusion of the First World War, al-‘Akkād became closely associated with Sa‘d Zahīlā, the leader of the Wafād, and began to write articles for the party’s newspaper, al-Balīq. Many of these articles on literature, aesthetics, religion and history were later collected into book form under such titles as Ma‘āqīlāt fī t‘ādīb uwa r‘umān wa Muḥālātāt fī t‘anfūb uwa r‘bayāt. During the regime of Ismā‘īl Siḍkī in the early 1930s when the constitution was revoked, al-‘Akkād’s fervent convictions led him to undertake the considerable risk of publishing a work criticising the ruling authorities, al-Hukm al-malik fī t‘ārīkh al-sīrāt, for which he was imprisoned for nine months. This decade also saw the appearance of three more volumes of his poetry, al-Mandur, Haydūt al-‘anwān, and ‘Abī sabīl, the novel, Sūrī, and a series of biographies on famous figures from the early history of Islam. These latter works seem to form part of a trend in the 1930s whereby Egyptian intellectuals (including Tāhā Husayn and Muḥammad Husayn Haykal) turned their attentions to religious biographical themes.

In 1938, al-‘Akkād abandoned the Wafād Party and joined the breakaway Sa‘diṣt group led by Ahmad Māhir and al-Nikrā. However, the self-reliance and outspokenness which had served his purpose as a young man seem to have turned progressively to scepticism, arrogance and extreme conservatism. He left the Sa‘diṣt group and became essentially a one-man party. In the literary sphere, he not only vigorously opposed the new free verse poetry which began to emerge following the Second World War, but also changed his mind about the possibilities of blank verse in Arabic, something which he had encouraged Shukri to experiment with in the earlier part of their careers. He joined a number of other conservative critics in opposing “committed” literature; in fact, as David Semah notes (Four Egyptian literary critics, Leiden 1974, 25) he seemed unwilling to accept any kind of criticism of his own views or to tolerate the idea that some of his earlier theories had been superseded.

Al-‘Akkād’s contributions to creative literature tend to be of interest for historical reasons than for their intrinsic literary merit. He composed a large number of personal poems as well as some occasional ones, and translated a number of works from English (see Mustafā Badawi, A critical introduction to modern Arabic poetry, Cambridge 1975, 109 ff.). In his novel, Sūrī, the psychological insights into the relationship of the two lovers may have been on a new level of sophistication when compared with previous works in this genre, but the element of doubt and questioning which pervades the work (six of the chapters have questions as their title) reduces it to an almost abstract analytical plane. Several commentators have also pointed out that the attitude to women found in this work is more than a little autobiographical (Ahmad Haykal, al-Adab al-kaṣāṣs wa l-masraḥ, Cairo 1971, 16; Hilary Kilpatrick, The modern Egyptian novel, London 1974, 32; ’Abd al-Hāfiṣ Diyāb, al-Ma‘rāf fī ḥayāt al-‘Akkād, Cairo 1969, 100 ff.).

The views of al-‘Akkād on aesthetics and poetic theory propounded so forcibly in many of his works are also clearly visible in his writings on other poets, both ancient and modern. While he wrote numerous articles on ancient authors during the 1920s (such as on Imru ‘l-Kays, Abū Nuwās, Bāshār b. Burd and al-Mutanabbi), it is his study of Ibn al-Rūmī published in book form in 1931, Ibn al-Rūmī, ḥayātuh min ghirhi, which is widely regarded as his best literary study and especially as the one which permits al-‘Akkād to use his own theories on psychology, race and poetics in an analysis of this somewhat neglected poet. Al-‘Akkād’s introduction of such objective criteria, often based on non-literary information, into the analysis of literature led to new insights into the Arabic poetic tradition of ancient times. However, it also tended to place more emphasis on the writer than the work of literature, and it was left to the next generation (and especially Muḥammad Mandūr) to restore importance to the work itself in literary analysis, while fusing into the critical process the best elements of the theories which al-‘Akkād had developed.

In 1960, he was awarded the State Appreciation Prize for his contribution to Egyptian literature. Shawkī Dayf’s work, Mi‘ṣr ‘l-‘Akkād (Ibra Series no. 259, Cairo 1964) shows a picture of the aged bachelor browsing in the natural science section of his library (opp. p. 65). He died in 1964.

**AKKRĀR** (A.), pl. akara (abstract ikrā), literally “tiler, cultivator of the ground”, a word of Aramaic origin (see Fränkel, Die aramäischen Fremdwörter im Arabischen, 128-9), borrowed into Arabic, apparently in the post-Islamic period (it does not appear in the Kur‘ān), and applied to the peasantry of Aramaean stock in Syria and ‘Irāq; accordingly, the term had in Arabic eyes, like the name Nabat, a pejorative sense (see Lā‘i, v. 85-6). Some of these peasants were sharecroppers who cultivated lands of wealthy landlords for one-sixth or one-seventh share of the produce and on mukāsama [q.v.] terms of contract (cf. Abī Yūsuf, al-kaṣāṣṣ, Bāṣāt 1884, 52; Ibn Hawkal, Sūrāt al-’arḍ, ed. Kramers, 218). Following the Arab conquest of the Fertile Crescent, the akara paid the lowest amount of poll-tax (ṣī‘aṭ) at the rate of 12 dirhams per head per annum (Bā‘lūdī–Nasirī–Futūḥī, 27).

Social and economic conditions deteriorated for the akara during the ‘Abbāsid period. One finds them as itinerant farm labourers moving from village to village in search of work and working on estates
of land for the highest bidder among landlords (Sābī, Wazarā', ed. Amidroz, 259). They also worked on lands owned by Christian monasteries (Šabūshi, al-Dīyārāt, 214-15). In a typical story we read of a certain akkār who was employed by a rich man of Bayra as a domestic servant, possibly out of farming. His work included husking rice, grinding it in a mill turned by an ox, and making bread for his master (Djahiz, 259). Cairo 1963, 129).

It has evidently recorded in the story of the akkār and his employer the tale of the toiling labourers and the hard task-master of this epoch. Djahiz also mentions a certain māqāhīyīk al-akara (elder of the akara), which may be indicative of some form of organised social group of the akara headed by a revered šaikh (cf. Howān, v, 32). The rural population of the Sawād of Irāk, at least, seems to have continued to be Aramaic-speaking into the 3rd/9th century and perhaps until later; cf. the anecdote of al-Muṭaṣim and the old Nābātī peasant of the Sawād in Masūdī, Murādī, vii, 113-4 = § 2796.

Bibliography: In addition to references given in the article, see also Tanuki, al-Furājī b’d al-ğdārān, Cairo 1903, i, 125-6; Thā'lībī, Hamūr al-dīlī, Cairo 1909, 195; al-Sābī, Al-hisāb, ed. D. G. Kühn, Leipzig 1829; Dioscorides, De materia medica, ed. D. G. Kühn, Leipzig 1829; Dioscorides, Codex Biblioteca Nacional MS 4981, f. 7a); in Ibn Djuldjul’s Supplement to Dioscorides (MS Hyde 34, f. 198b) nabīl is mentioned as a poisonous plant whose antidote is butān abruṣ (Amaranthus tricolor L.). Cf. F. J. Simonet, Glosario de voces ibéricas y latinas usadas entre los mozárabes, Madrid 1888, 395.

The Arabic version of these sections (Cod. Dionysii MS Hyde 34) gives as synonyms for (i) nabīl and shaḥīk al-nimr (f. 12a). A marginal note, however, refers to a far more poisonous plant (probably Aconitum ferox Wall.) as shaḥīk al-nimr, which is administered. Ibn Sma distin-

guishes clearly between biṣh and the plant known as khanīk al-dīlīb etc., the latter being described separately (I, 424, 460).

(b) India: Bāg, although sometimes considered a synonym for akkānīn, refers to a far more poisonous plant (probably Aconitum ferox Wall.) and is described as the most deadly of plant poisons by such writers as Thābit b. Kurra (Pisistrē, ch. xxv, 143 (298)), Djabīr b. Ḥayyān (Gifte, 56 = f. 46a-b, 104 = f. 95b, 185 = f. 179a), Ibn Wahshiyya (Poisons, 84-5, 108), Ibn Sīnā (Kânîn, I, 276, III, 223), al-Bīrūnī (Saydina, Arabic 81, Eng. 53). Most agree that there is little if any hope of recovery, even if the Great Tyrāk is administered. Ibn Sīnā distin-
guishes clearly between biṣh and the plant known as khanīk al-dīlīb etc., the latter being described separately (I, 424, 460).

(c) Possible identifications: Although (A) Akkānīn is often equated with an Aconitum sp. (e.g. Ghilīl L.68, Nos. 1752-7, Issa 5, 3, ed. W. Schmucker, Die pflanzliche und mineralische Materia Medica in dem Failiar der Hikma des Tabari, Bonn 1969, 126, No. 157, where biṣh = oxītovs), a modern botanist thinks it likely that the oxītovs of Dioscorides was (i) a Dornicum sp., (ii) a Daphne sp., possibly D. staphis-
gagia or D. mezereum. In the case of (B) biṣh, this did not have to be identified in the growing state, but it was known to the Arabs as a deadly poison from India (Issa 4:19).

ALİ AHMAD

SAYYID Djalāl, Iranian prose writer and ideologist (1923-69). His career as a writer: his birth in a Tehrani family in 1945, and, for a brief period, active participation in national politics. Among biographical data, three events of Buzurg 'Alawi's work, it lacks the ironic, slightly nostalgic tone of irony is seldom absent; yet it is still a personal piety throughout his life, Al-i Ahmad is an effort to create "socialist-realist" literature. With its very explicit commitment, in some ways reminiscent of Buzurg 'Alawi's work, it lacks the ironic, observing distance common to Al-i Ahmad's remaining work, and was afterwards considered a failure by the author himself. 'Zan-i ziyādī was written after the breakaway from the Tuda, and contains the story Khudādād-khān, a sarcastic description of the ambitions, hypocrisy and luxuries of a leading party executive. The ideological importance of this collection further lies in the introduction which the author added to the second edition (1963), Rīsālā-ı Fāna'īs bi-kātābīn. A "testament" according to the writer, it calls for literary honesty and commitment. In a less personal rivalry within this "Third Force" movement. He left the forum of organised politics, never to return. Among the literary documents of this political career, the short stories collected in A. Issa, Dictionnaire des noms des plantes en latin, français, anglais et arabe, Paris 1950; E. Ghalib, Naturreichen, Berlin 1950; A. Siggel, Wiesbaden 1958 (with facsimile text); Ibn Sinā, al-Kānānī fi 'l-tibb, 3 vols., repr. Baghdād n.d. [^ 1970?]; Ibn Wahşiyya (translation): M. Levey, Medieval Arabic toxicology: the Book on Poisons of Ibn Wahşiyya and its relation to early Indian and Greek texts, Philadelphia 1966; al-Birūnī, K. al-Saydanā ḏī 'l-tibb, ed. and tr. H.M. Said, Karachi 1975; M. Meyerhof, The article on aconite from al-Biruni's kitab as-Saydāna, in IC, xix/4 (1945); P. Johnstone, Acone et son antidote en Arabique, in Journal for the History of Arabic Science, i/1 (1977); A. Issa, Dictionnaire des sciences de la nature, Beirut 1965.

recapture the "majesty" (izama) and "authenticity" (asdlat) which he could no longer find in the capital, Ankara (1954), Tatlinsihâ-i Balâkî-i Zâlîh (1958) and Dârâ-yi Khârg (1960) have appeared as separate volumes; comparable studies of Khatûzân, Yezid and the outskirts of the Kafr have been included in his collected essays.

Bibliography: 1. Works by Ali Ahmad, in addition to those mentioned in the text: Sarguzâsht-i kandu-hâ (1333 sh.), Bâhshar wa 'anabâbâ', Bâhshar-i amîr, Sârankhâr-i Amîkâr and Guldâstâh va fahu. The first one is available through M.A. Sipânsîl's anthology Bâz-â farîn-yi dehâyât (Tehran 1352 sh.). The other ones have been collected in the posthumously-edited and only narrowly distributed Pandj dâsîn (1350 sh.), which also contains a short autobiographical sketch dated Day 1347 sh.: Matbulam garh-i ahwâlât. The majority of Ali Ahmad's numerous essays and travel reports were first published in periodicals and afterwards reprinted in the collections Haft makâla (1334 sh.), Sîh makâla-î dîger (1337 sh.), Arzâbîr-yi gunâhîkhâ (1344 sh.) and Kûrânuma-i sîh-sâla (1348 sh.). These collections, however, are far from exhaustive, and a substantial number of articles remains scattered over the various magazines, for the later period notably Andîsha va hunar, Arîsh and Dâlîn-i now. Certain other writings were completed by the author before his death, but have not yet been deemed suitable for publication. These include a novel (Nâbî-î gunâhî) and diaries of his travels to Europe, the United States and the Soviet Union. Of the latter, two fragments have appeared in Hunar va sinimâ, Nos. 1 (18 Âfghr 1345) and 2 (25 Âfghr 1345). Translations prepared by Ali Ahmad were almost without exception done from or via French; well-known among these are his rendering of works by André Gide, Albert Camus, Eugène Ionesco and Dostoievski. Translations made from Ali Ahmad's writings include The old school principal, a monography on the poet Nûma-yi Bahadîr, in Cumhurîyetten sonra hikâyê ve roman, 2 vols, Istanbul 1959 and 1965, a comprehensive study on Turkish short story writers and novelists of the 1920-50 period, with copious examples of their works; Omer Seyfetin, Istanbul, 1968; a monograph in the form of biographical novel of this pioneer of the modern Turkish short story; and his posthumous 100 âülü Türk eveti, 2 vols, Istanbul 1974, an anthology from 100 famous works from Turkish literature, with introduction and comments. The second volume of this work covering the last hundred years (1870-1970) is particularly valuable as it is based mainly on his own research. Unfortunately, many of his articles published in various journals and reviews have not yet been collected into book form. Alangu translated from the German) several authors, and particularly from the Israeli author Samuel Agnon.

'Ali b. Hânzâla b. Abî Sâlim al-Mahfûzî al-Wâdiîî l-Hâmândî, succeeded 'Ali b. Muhammad b. al-Walîl [q.v.] as the sixth dâ'î mut'âl of the Musta'îbî 'Uzayyîbî Isâmîlîs in Yaman in 612/1215. As the country was passing through a critical period of internal strife after its occupation by the Ayyûbids, the dâ'î pursued a policy of non-interference in politics. He maintained good relations both with the Ayyûbid rulers of Şan'â' and the Yâmid sulûân of Banû Hâzm in Dhammar which enabled him to carry out his activities without much difficulties. He died on 12 or 22 Rabî' I 626/8 or 16 February 1229.

Both his compositions, Sâng al-hâshâk-kî and Risâlât Dâyâl al-balan wa-miyyât al-sultan, concerning al-muhâd wa l-muqâdî, are considered important works on fahu-kî [q.v.]. The former, edited by 'Abhâs al-Azzaîâwî (Damascus 1953), is a nûfuz poem, whereas the latter is an elaborate treatment of the subject and exists in manuscript.

'Ali b. MuhammAd b. Dja'far b. Ibrahim b. al-Walid al-Anf al-Kurashi, the mentor of 'Ali b. Hātim al-Hāmidī [q.v.], whom he succeeded as the fifth dā‘ī muḥall of the Musta‘iliyya in Yaman in 605/1209, came from a prominent al-Walid family of Kuraysh. His great-grandfather Ibrahim b. Ali Salama was a merchant and died there on 22 Sha‘bān 612/21 December 1215 at the age of ninety. He headed a distinguished family of dā‘īs for approximately three centuries the headship of the dā‘īwān was held by his descendants.

In sum, al-Iyadī seems to have been a great poet, such as Ibn Sharaf (‘Umda, i, 111) shows us the Andalusian Ibn Hānūm [q.v.] on his arrival in al-Kairawān involved in hostilities with the poets already established there, but making specific mention only of al-Iyadī. However, despite the high esteem in which later critics held him, such as Ibn Shara‘f (Questions de critique littéraire, ed. Ch. Pellat, Algiers 1953, 9), no poem of his has come down to us in complete form; is this attributable to later Sunni ostracism of the poet after the sudden change to the Zirid regime, or a change in his literary tastes? Whatever the reason may be, out of the 105 verses which the present writer has been able to gather together (Hašqiyya, 1973, 97), only two fragments are Shī‘ī in inspiration. These however are preserved by pro-Fātimid authors, these being firstly a rather poignant and moving relation of the end of Abī Yazzīd, “the man on the donkey” (Sirat Ustādh Dhaqāqár, Cairo, 48, tr. M. Canard, 69) and secondly a eulogy in honour of al-Maṣūr (Dawdādir, Kanz al-dawār, vi, 117). The remainder is made up of well-turned, descriptive fragments, which abound richly in images, hence admired and gathered together for this reason by the anthropologists; thus out of these last, al-Ḥuṣrī (Zahr, 189, 314, 1003) reproduces a description of the Fātimid fleet, armed with the fearsome Greek Fire, a picture of a galloping horse and a tableau of the splendid of the Lake Palace, Dār al-Bahr, at Maṣṣūriyya.

In sum, al-Iyadī seems to have been a great poet, quite apart from his Fātimid allegiance, but our knowledge of his poetry—apart from his talent—remains till now only fragmentary.

Al-Fâsî, Muhammad, Moroccan statesman and writer (1907-74). Born at Fas, he was educated at the university of al-Karawiyin [q.v.]. From the age of 18 onwards, he took part in the diffusion movement throughout Morocco of the progressive movement of the Sahafiyya [q.v.], and his militant attitude in favour of local nationalism, which was reinforced by his oratorical powers, soon led the government to confine him to a house, under guard, at Taza. He was freed in 1931 and returned to Fas, where he began to lecture at the Karawiyin; these lectures were however boycotted by certain religious leaders who feared that his unrestrained political attitudes might well cause difficulties for the Moroccan authorities in their relations with the French Protectorate. Al-Fâsî then took part in the delegation of the most influential Moroccans to the congress of the French protectorate at Fes in 1934, when the document called Matalib al-sha'b al-maghribi (“Demands for reform of the Moroccan people”) was published. The first catechism of the nationalist movement, consisting of a complete programme for the reform and renovation of the land, especially in the politico-social sphere, was presented to the sovereign. The tergiversations and delays of the spokesmen engaged in this exacerbated the more ardent of patriots, and led the Islâl al-’umal al-watani li-tahklk al-Himdyâ fi Marrâdkush min al-wad’ha “Moroccan bloc for national action” which had until 1934 worked in the background, to intensify its activities. Disorders broke out in 1936 in Fas, Sale and Casablanca, and the leaders of the bloc, including ’Allal al- Fâsî, were arrested. After their freeing almost immediately, the bloc decided to disband itself, and two parties were then formed, al- Haraka al-kawmiyya al-maghribi and the Isâl al-watani li-tahklk al-matlâb, which merged in 1943 to form the single party of the Istiklal, led from 1946 onwards by al- Fâsî. In the following year he fled to Cairo, where he organised the Moroccans in residence in Egypt, including the French and Spanish Protectorates from a centre in the Maktab al-Maghrib al-arabî, founded in the Egyptian capital. He returned to Morocco in 1956, the year when his country gained its independence, and was nominated Professor of Islamic Law at Rabat and Fas and then Minister of State entrusted with Islamic affairs and a Deputy. ’Allal al-Fâsî’s work as a publicist, as well as a politician, continued to be most intense. At the beginning of 1957 he founded the newspaper Le Sahara marocain in order to promote the inclusion of Mauretania in Morocco, and in 1962, the monthly review al-Bayyina, which was at the same time Pan-Arab and Pan-Islamic and also concerned with culture and social progress. In all his work, he dealt with topics and problems of the Maghrib’s history and politics, above all in regard to the modern and contemporary periods, with the exception of his Ma’âd li al-sha’b al-’islamiyya wa-mukarramah (Casablanca, n.d.), in which the author gathered together his lectures on law at the Faculty. Two books are devoted to an historico-juridical analysis of the French and Spanish Protectorates over Morocco: al-Himdyâ fi Murrâdkush min al-wad’ha.
places himself in the forefront of the ideology of Arabisation without at the same time renouncing its own way for Arabism to face up to the exigencies of modern life and to become part of European civilisation without at the same time renouncing its own way for Arabism to face up to the heart of western thought. This basic model when it is a question of penetrating political beliefs.

(Cairo 1952), of which last revealing the passionate character of the writer's thought, but at times he goes beyond “Abduh’s own

radio talks (as in Nida’ al-Rahina, Rabat 1959)—these last revealing the passionate character of the writer's political beliefs. Al-Nakd al-dhāti (Cairo 1952), of which there even exists a Chinese translation, is a self-criticism of the Arab world (particularly in regard to Morocco), in which the author analyses with a careful dialectic the recent past, and above all the present, in order to discern exactly the most effective way for Arabism to face up to the exigencies of modern life and to become part of European civilisation without at the same time renouncing its own particular genius and identity. In this, ‘Allāl al-Fāṣī places himself in the forefront of the 'Abd al-Wahhabian, Islamic fundamentalism with its roots in Muhammad ‘Abduh’s thought, but at times he goes beyond this basic model when it is a question of penetrating more clearly to the heart of western thought.

Bibliography: There is information on ‘Allāl al-Fāṣī in all the numerous works (mainly in French) on Morocco. There is a good source of documentation on his political activity in Oumāne Moderno, esp. xvi (1937), 595, xix (1939), 429-30, and xxii (1952), 1-31 passim. See also Anouar Abdel-Malek, Anthologie de la littérature arabe contemporaine. ii, Les essais, Paris 1965, 190-6; and A. Laroui, L’idéologie arabe contemporaine, Paris 1967, passim.

‘ALLAWYH AL-'AŚAR, ABU ’L-ḤASAN ALI B. ‘ABBĀD ALLĀH B. ṢAYF, court musician in early Abbāsid times, died in or shortly after 235/850. He was of Soghdian origin, mawla (al-tish) of the Umayyads and mawla (al-khanda) of the Abbasids. Ibrāhīm and Ishaq al-Mawṣilī taught him the “classical” hijādī music, but he preferred the “romantic” style of Ibrāhīm b. al-Mahdī and introduced “Persian melodies” (mugham firdisyā) into Arab music. As a court musician, he started in the third class (tabāka) under Hārūn al-Rashīd and continued to serve the Abbasids. He was of Soghdian origin, mawla (al-tish) of the Umayyads and mawla (al-khanda) of the Abbasids. Ibrāhīm and Ishaq al-Mawṣilī taught him the “classical” hijādī music, but he preferred the “romantic” style of Ibrāhīm b. al-Mahdī and introduced “Persian melodies” (mugham firdisyā) into Arab music. As a court musician, he started in the third class (tabāka) under Hārūn al-Rashīd and continued to serve the Abbasids. He was of Soghdian origin, mawla (al-tish) of the Umayyads and mawla (al-khanda) of the Abbasids.

Some of his plays are loose and unimportant, and are only a pretext for describing and reporting the conversations of his pet characters, who are Hamidian pashas, local beauties or toughs, snobs and simple people. Alus is the last representative of the popular entertainment narrative school inaugurated by Ahmad Midhat and continued by Husayn Rahmi, Ahmed Râsim and O.Dj. Kaygili. Perhaps he is more akin to the latter in that he is more entertaining and simplistic without high claims to any moral or philosophical conclusions. In spite of his often unpolished, even sloppy, style and his weakness for the farcical, his work has a great documentary value for the spoken language, way of life, customs and folklore of the period.

(FAHIR İZ)

‘AM’ĀK, SHERAB AL-DIN BUKHARA, one of the leading Persian poets at the court of the Ilk-Khans (Kara-Khānids) [q.v.] of Transoxiana. Late sources ascribe to him the tazaqq Abu l-Najîb (e.g. Taki al-Din Kāshānî). It is not certain whether ‘Am’āk is a personal name or a lakab used as a pen-name. It cannot be connected with any existing Arabic, Persian or Turkish word. Dh. Şafî has
'AM'AK — AMÂN ALLĀH

suggested a corruption of an original 'a'lak (“magpie”) which occurs as the name of the poet in a manuscript of the Diwan of Sûzanî. S. Naflî conjectured a possible Soghdian origin. The forms “Arîk and “Amîk, which can be found in some manuscripts of the Baharîstân of Dîmânî, are certain to be due to Soghdian influence. "Amîk was born in Bûkhârâ, probably before the middle of the 5th/11th century. If any of the dates given for his death by later biographers viz. 542 (e.g. Dâvânshâh and Ridî-ku’llî Khân Hidâyat), 543 (Tâfîq al-Dîn Khân Hidâyat) or 551 (Sa’dîk b. Sâlîh Ištâfânî in Shâhîd-i Sa’dîk) he would have lived to become a centenarian.

The earliest datable poems that are attributed to 'Amâk are in kasîdas written for the Ilek-Khân Nasr b. Ibrâhîm (460-72/1066-80). The poet must have lived at least till 524/1132. This reputation is correct, he would have lived to his 100th year. The kasîdas of his poetry seem to be dedicated to a dominating position at the court of Samarkand. The story about his rivalry with Rashîdî, told in the Cahîr makâla, pictures him as an amir al-shu’ârd, who was put on the throne of Samarkand by Sandjar in 526/1132. At the time of his father’s murder on 206 ff.; Yu.N. Marr and K.I. Caykin, Ieskâs, 3-127 and 206 ff.; Yu.N. Marr and K.I. Çaykîn, Pis’sma o persian language literature, Tiflis 1976, 119-25. Bibliographical references to 'Amâk are to be found in Nîzâmî Arûdi, Cahîr makâla, Tehran 1955-56, matn 44, 73, 74, cf. torîkât 138 ff., 232 f. and 615, as well as in the tadkhîla works mentioned above. J.T.P. de Bruijn

AMÂN ALLĀH, Amîr of Afghanistan and the successor and third son of Habîb Allâh p.a., was born on 2 June 1892 in Paghman and educated at the Military Academy. Intelligent, energetic and hard-working, he was attracted to the nationalist and Islamic modernist ideas of Mahmûd Tarzi (1866-1935), the editor of Sinâq al-akhbâr, and in 1914 married Tarzi’s daughter, Soraya (Thurayya) (d. 21 April 1968). At the time of his father’s murder on 20 February 1919, Amân Allâh, as Governor of Kabul, controlled the capital with its garrison, arsenals and treasury. Supported by the army, the younger nationalists and the Bârzâkî faction, he resisted the claims of his uncle, Naṣr Allâh, and his eldest brother, Inayat Allâh, and was recognised as amîr on 28 February. Amân Allâh promptly asserted Afghanistan’s in-
dependence from British control of her foreign relations. Possibly hoping to promote his goal by the threat of war, he despatched forces to the frontier, but hostilities commenced on 3 May and endured until an armistice at the beginning of June (the Third Afghan War). Uninvited audiences were cliqued at Kābul (8 August 1919); Britain recognised, by implication, Afghanistan’s independence, although the Durand Line remained the frontier. After further negotiations at Mussoorie (April-July 1920) and in Kābul, a treaty of good neighbourhood was signed by Britain and Afghanistan on 22 November 1921. In the meantime Amān Allāh had obtained international recognition through treaties with the USSR (28 February 1921) and Turkey (1 March 1921). Relations were also established with Italy, France, and Iran. In the early years of his reign Amān Allāh espoused a Pan-Islamic policy involving support for Indian Muslims, friendship with Turkey and Iran and the creation of a Central Asian federation under Afghan leadership including Buhārā and Khiwā, but the reassertion of Soviet control over Turkistān put an end to this project.

Amān Allāh’s internal policy was one of rapid modernisation. His reforms came in two main bursts. In the period 1921-4 he reformed the structure of Afghan government, introducing the first budget (1922), constitution (1923), and administrative code (1923). He introduced legal reforms including a family code (1921) and a penal code (1924-5). The legal reforms were partly the work of ex-Ottoman advisors and influenced by Islamic modernism, being derived largely from the Shārī'a but replacing ‘ulamā’ control by that of the state. Education was central to his reforms and he established new secondary schools and sent Afghan students abroad. His support of female education gave rise to bitter criticism from traditional groups. Amān Allāh made some effort to promote economic development by fostering communications (aircraft, radio and telegraph introduced, and railway surveys begun), reforming the currency (the rupee replaced by the afghān), reorganising the customs, and helping light industry. The principal economic success of his reign, however, owed nothing to his efforts; this was the development of the Karakul and carpet industries, following Uzbek immigration into the northern provinces. There was also some agricultural development. Amān Allāh’s reforms were financed largely from domestic resources and lack of money imposed constraints which were especially marked in his military reforms. With the aid of foreign instructors (mainly Turks) Amān Allāh sought to develop a non-tribal national militia based on conscription for short periods, and at the same time to reduce military spending. The result was strong tribal opposition to conscription, and a disaffected, discontented and inefficient army. Hostility to centralisation, conscription and certain social reforms lay behind the Khōšt [q.v.] rebellion in 1924, which was suppressed only after a protracted struggle. For a time Amān Allāh was obliged to abate his reforming zeal.

In December 1927 Amān Allāh departed for a tour of Europe, returning to Kābul on 1 July 1928. His object, he explained, was to discover the secrets of progress; his conclusion was that these were the discarding of outworn ideas and customs. He summoned a national assembly (Lojja) (28 August 5 September) and dressed the delegates in European clothes to hear his new ideas. At the last moment he was persuaded to omit his most far-reaching proposals, but his announced changes in the constitution, new social reforms, and increased taxes were sufficiently disturbing to his hearers. Unabashed, Amān Allāh repeated his proposals in a further series of five three-hour speeches delivered between 30 September and 4 October to an invited audience, which was treated to the spectacle of Queen Soraya dramatically unveiling herself.

Enraged by the social reforms, by their diminution of their own authority, and by new proposals by Amān Allāh to examine them in their proficiency to teach and to expel those trained at Drehband, the ‘ulamā’, under the leadership of the Hazzāt family of Shor Bazar, denounced Amān Allāh as an infidel. The Amir arrested the leaders, but in November found himself confronted by two tribal risings supported by ‘ulamā’, one in the vicinity of Djalālbād, involving the Shinwārs and other tribes, and the second in the Kūhistān, led by a Tādjīk bandit known as Bāčča-yi Ṣasāk. His inadequate forces divided, Amān Allāh was unable to resist the attack on Kābul from the Kūhistān, and his belated withdrawal of nearly all his reforms did not pacify the rebels. On 14 January 1929 Amān Allāh abdicated in favour of ‘Ināyat Allāh and fled to Kandahār. ‘Ināyat Allāh also abdicated on 18 January and the Bāčča became ruler of Kābul with the title of Ṣaḥīḥ Allāh, under which Amān Allāh rescinded his abdication on 24 January and sought help from Britain (which remained neutral), from the USSR (which briefly sent troops to northern Afghanistan), and from Afgān tribes. Although Amān Allāh received help from the Hazāras and some other tribes, he failed to command the support of the Durrāns and the majority of the Ghāzayhs, and was forced to turn back his advance on Kābul at Ghazna. On 23 May he left Afghanistan for India and on 22 June sailed from Bombay to exile in Rome. He died in Switzerland on 26 April 1960 and was brought home and buried at Djalālbād.

(M.E. YAPP)

AMĪD TŪLĀKĪ SŪNĀMĪ, KHAWBA ‘AMĪD AL-DĪN FAKHR AL-MUlk, poet of Muslim India. He was born in Sūnām, an important town (now in the district of Patiala in the Indian part of the Pandžāb) that had emerged as a centre of culture and learning in the 7th/13th century. ‘Amīd called himself Tūlākī along with Sūnāmī because his father was said to have migrated from Tūlāk in Khrūsān to India. In the art of poetry, he was the disciple of a famous master, Shāhīd Māhmar. He started his career as a poet in Mūlān, which had become the capital of a short-lived kingdom under Malīk ‘Īzā al-Dīn Kjān-i Ayāz and his son, Tādj al-Dīn Abī Bakr (who died in 638/1241). Two of his entertainments preserved in mediaeval anthologies are in praise of Sultan Tādj al-Dīn. On the death of patron, he moved from Mūlān to Dihlī, and during the reign of Sultan Balbān he was appointed musta‘īn of the district of Mūlān and Uţē, placed under the charge
of Prince Muhammad, who was later known as Khān-i Shahīd.

Āmīd’s divān is not extant, but the poems contained in mediaeval anthologies and other literary works give us an idea of his greatness and excellency in the art of poetry, showing that he was one of the distinguished poets of the Dihli Sultanate during the 7th/13th century, contributing to the growth of Indo-Persian literature. It emerges from his poems that he was interested in the philosophy of Ḩikrāt or illuminative wisdom as propounded and advocated by Shams al-Dīn Suhrawardī (d. 587/1191).

Like most of his contemporaries, Āmīd was basically a poet of the ḍhidd, and his known poems largely comprise panegyrics on rulers, princes and noblemen. Among his poems, there are also one ṭangī band, two ḡazals and one ḡazl (humorous poem); their characteristic features are simplicity, spontaneity, freshness of thought and beauty of diction. His ḥabūsīyat (poems written in prison and depicting the prisoner’s life [see RASIBYVA BELOW]) shed light on the actual conditions in mediaeval jails. It should also be stressed that his ḡazals, like those of Shams al-Dīn of Hānūs, paved the way for the ḡazal’s subsequent popularity as an independent branch of poetry.

I.H. SUNDAGU

AMĪN AL-HUSAYNĪ — AMĪN AL-HUSAYNĪ

He was born in Jerusalem in 1893, the son of Tahir al-Husaynī. The Husaynīs were a leading family in Jerusalem who claimed Sharīʿi lineage although this was disputed by others, as on two occasions the line went to Cairo and entered al-Azhar, but stayed less than a year and left without graduating and without the title of mufti. He immediately went to make the ʿihādī, from which he returned to Jerusalem. His religious education was incomplete and did not qualify him for the office of mufti. Further education was received in the Ottoman army in which he served during the First World War. He undertook his basic training in the School of Officials, the Mülkiyya, in Istanbul and at the Military Academy. His war years were spent chiefly in an office in Iznik. By virtue of this training he was permitted to wear the tahrīfi, the symbol of an Ottoman official but not of a religious dignitary.

On the conclusion of the war, Āmīn returned to Jerusalem which was to be the base of his activities for the next nineteen years. He worked as teacher, translator and civil servant, but he soon turned to journalism and direct political activity. He was an intensely political man, possessed of great energy and organising ability and from the first inspired by two deeply-held ideas, Arab nationalism and a hatred of the Zionist attempt to change the character of Palestine. For him, Palestine was an Islamic Arab country belonging to the wider Arab world and he believed that any alteration of its basic Arab character would isolate it and its inhabitants from their Arab neighbours. He was convinced that the Palestinians had the right to determine the future form of government of their country, a right possessed by neither the British government nor the Zionist organisation. He also believed that European Jews settling in Palestine would spread customs and usages alien to the traditional Islamic way of life. If change was to come in Palestine, it should be organic and internal and not imposed from outside. He devoted the rest of his life to a vain attempt to stem this tide of change.

Opposition to Zionism amongst the Arabs of Syria and Palestine grew in intensity once Jerusalem and Damascus had fallen to the Allied forces. The opposition was led by a group of young Palestinians, foremost amongst whom were Āmīn al-Husaynī and Arif al-ʿArīf. Verbal opposition in speeches and newspapers led to street demonstrations in September 1919. Editorial and sermons called for the shedding of Jewish blood if protests went unheeded. Āmīn began to organise small groups of ṣalāt al-tawārīkh whose task was to strike against the Jews and the British. When in March 1920 the Syrian National Congress voted for Syrian independence, Palestine Arabs took to the streets in the belief that their country was included in the new state. Ārīf’s newspaper Sāraya al-Duḥā yy wrote that the time had come to strike against the Jews and the British. When in March 1920 the Syrian National Congress voted for Syrian independence, Palestine Arabs took to the streets in the belief that their country was included in the new state. Ārīf’s newspaper Sāraya al-Duḥāyy published the line: ‘The end of the Arab era! The end of European domination!’ She led to a bloody conflict with the British army. She was the first of a series of charges laid against Āmīn and Аріф, whose囡al-tawārīkh tried to retaliate. British intelligence forestalled these attempts and the two had to flee to Transjordan after having been accused of provoking the riots. This was the first of a series of charges laid against Āmīn during his lifetime. His precise role in the provocation can never be ascertained, but it is certain that he approved of all actions taken to discomfit the Jewish population and that he was not averse to the shedding of blood. The concepts of ʿihādī and of the fiddʿī were in Islamic history associated with the possibility of death in the pursuit of a goal. All Muslims could
The British assumed responsibility for these, to run their own religious affairs. The government in the country and the government was loathe to go against the wishes of the people. Samuel eventually decided that Amin was his man and in May he was appointed Grand Mufti (al-mufti al-akbar), a title given by the British to enhance the status of the office. Amin's appointment as head of the Muslim community in Palestine did not solve the problem of the Muslim religious organisation of the country. In Ottoman times, the shari'a courts had come under the general jurisdiction of the Shari'a al-Islam and the wakfs had been administered by the Ministry of Ateka'. The British assumed responsibility for these, but the Muslims soon demanded that they be allowed to run their own religious affairs. The government concurred and the Supreme Muslim Shari'a Council (al-Muftis al-Shari'a al-Islami al-Fida') was elected by leading Muslims. Haggag Amin was chosen as Feida' al-Ulama' and President of the Council, as he later maintained, for life. He had thus, as a young man, consolidated his position as leader of the Palestinian Arabs both in their religious and their secular affairs. In March 1921 he wrote a Memorandum to the British Colonial Secretary, Winston Churchill, in which he outlined Palestinian resistance to Zionism and the ideas which were the foundation of his future policy—the complete prohibition of Jewish immigration, the abolition of the Jewish National Home and the establishment of an Arab government of Palestine.

The period 1921-9 was used by the Mufti to build up his following. As President of the Supreme Muslim Council, he controlled the wakf revenues, which were not used exclusively for charitable purposes. Preachers were paid to disseminate political propaganda and those who did not support his policies were dismissed. Financial assistance was given to Arab schools to instruct their pupils in the Arab nationalist spirit. Demonstrations and boycotts were encouraged. Money was also used to enhance the status of Jerusalem and its mosques in the Islamic world. To Amin, the area of the Haram was the very centre and symbol of his aspirations to preserve Jerusalem and Palestine as Arab and Islamic. In 1928 a screen was set up by the Western Wall of the sanctuary to separate male and female Jewish worshippers. This move was taken as a reason for protest and seen by Muslims as a Jewish encroachment on the Haram. The Mufti felt the threat deeply, and encouraged propaganda to the effect that the Jews were planning to take over the Muslim holy places. A year later feelings between the two communities became so exacerbated that the Arabs attacked and committed atrocities amongst the Jews. 133 were killed by the Arabs and 116 Arabs killed by police action. The subsequent British government report did not accuse the Mufti directly of provoking the attacks, but blamed him for not doing enough to forestall them and for having played upon public feeling. The agitation had been conducted in the name of a religion of which, in Palestine, he was head. The British still saw him as a force for moderation, whereas it is clear that he was committed to an uncompromisingly anti-Zionist policy and that he would do everything in his power to frustrate the establishment of a Jewish National Home.

In 1931 he convened a Pan-Islamic Conference in Jerusalem which he attempted to use as a platform to further his anti-Zionist policy, although his position was challenged by other Palestinian leaders. He later travelled to other Muslim countries to gain political support and to raise funds. In 1935 he helped to found the Palestine Arab Party, a Husayni organisation under the presidency of Djamal, the Mufti's cousin. The Party's policy was that of Amin himself, and it attempted to prohibit the further sale of Arab land to Jewish settlers.

The year 1936 was a time of rising tension in Palestine, culminating in the Arab revolt. The increase in Jewish immigration caused by the rise of Nazism led the Arabs to fear the future takeover of their country by the Zionists. In April an Arab Higher Committee of Christians and Muslims was formed under the leadership of Amin. It immediately supported a general strike, to be called off when the British government suspended Jewish immigration. Murderous attacks on Jews began to occur, but the brunt of the Arab effort was quickly turned against the British and those Arabs considered disloyal. The strike and the unrest continued until October. The British Commission appointed to investigate the disturbances apportioned a large share of the blame for them to the Mufti. The Arab Higher Committee under his chairmanship had clearly instigated illegal acts and had not condemned sabotage and terrorism. The Mufti had seen and encouraged the revolt as a movement of the people, largely peasants, who had risen to defend their country and their rights.

The British still clung to their hope of using Amin as a moderating influence, but after the assassination of a government officer in September 1937, stricter regulations were introduced. The Arab Higher Committee was declared illegal and Amin was removed from his post as president of the Supreme Muslim Council. Six members of the former were arrested and deported (although Djamal al-Husayni escaped) and the Mufti, fearing arrest himself, fled to Lebanon. From there he fought a propaganda war against the British, while his followers contributed to the continuing unrest in Palestine or set about eliminating members of rival clans. He was not allowed to attend the London Conference on the future of Palestine in February 1939, although a four-man delegation of members of the disbanded Higher Committee was present.

In October 1939 the Mufti made another move, this time to Irak. As German successes multiplied in the Second World War, he began to make approaches to the Nazis in the hope that at the end of the war he would be on the winning side. He sent his private secretary to Berlin in September 1940 to ask for German commitments to the Arabs—recognition of the complete independence of the Arab countries, the abrogation of the mandates,
and the right of the Arabs to solve the Jewish question in Palestine "in the national and racial interest on the German-Italian model". These latter words were the Nazi Secretary of State's report of his conversation with Amín's secretary, and it is not clear exactly whether he knew in Bagdád, in September 1940 of the "model" on which the Nazis were solving the Jewish problem and how he would apply it in Palestine. However, his letter was noted in Berlin and he was able to build on it later. His pro-German feelings led him to support Raqqád 'Áli al-Gayláni, the anti-British 'Iráki politician who had become Prime Minister in March 1940. They both sought promises of material support from the Axis, and in April 1941 al-Gayláni and his supporters carried out a shortlived pro-German coup. Promised German support was too little and too late, and a small British force was able to unseat him. Amín had issued a fátuq urging all Muslims to support the coup and to fight the British, and when it failed he had once again to flee, via Iran to Italy.

He was warmly welcomed by Mussolini who hoped to use him for his own purposes. The Mufti was more interested in negotiating with the senior partner of the Axis in Berlin, and he arrived there in November 1941. Al-Gayláni arrived later the same month and the two disputed for the position of spokesman for the Arab cause. Amín claimed that he was the leader of the Arab national movement. He was the first to be received on November 29th by Hitler to whom he repeated his request for the formal recognition by Germany of the independence of the Arab countries. The Führer was non-committal. Nevertheless the Mufti assured him of the friendship and co-operation of the Arabs.

The period that the Mufti spent in Nazi Germany, November 1941 to May 1945 is the most controversial in his life. He had fled to Germany to escape the British and because he believed that the Axis would win the war. As a strict Muslim he could have had little sympathy with National Socialism as such, but his chief aim in life was ridding Palestine of the Jews coincided hideously with the Nazi final solution of the Jewish "problem". He therefore used all available anti-British and anti-Jewish sources in the naive hope that he would be recognised by the Axis as the ruler of an independent Arab state. He never obtained written pledges from the Germans (although the Italians were more forthcoming), and he was used to the limit by Nazi propaganda. The Germans provided staff and finance for Das Arabische Buro from which the Gischnagli was able to send propaganda, both printed and broadcast, to the Middle East. He issued calls to the Arabs to rise against the British and the Jews and to destroy them both. "Only when Britain and her Allies are destroyed will the Jewish questions, our greatest danger be definitely resolved" (broadcast of 11th November 1942).

He also helped to organise fifth columns in the Middle East and to establish Muslim and Arab units to fight in the German armies.

The greatest suspicions surround his attitude to, his knowledge of, and his possible encouragement of the Nazi extermination policy. Calls to Palestinians to rise and kill the Jewish settlers had been frequent since the Balfour Declaration; they had been the headlines of newspapers and the slogans of demonstrations, but they became much more sinister when proclaimed in Nazi Germany. The evidence produced to condemn him is difficult to substantiate. He is said to have been befriended by Eichmann, one of the chief executives of Hitler's policy. During his trial in Jerusalem in 1961, Eichmann denied having known the Mufti well, having met him only once during an official reception. The evidence for the friendship came from Dieter Wisliceny, one of Eichmann's aides, who met him before the Nuremberg Trials had begun, to prepare an alibi for himself at the expense of Eichmann. Wisliceny went much further and accused the Mufti of being an "initiator" of the extermination policy. Other evidence of the Mufti's alleged role came from Rudolf Kastner (a Jewish leader in Hungary), who reported that Wisliceny had told him that "According to my opinion, the Grand Mufti . . . played a role in the decision . . . to exterminate the European Jews". I heard say that, accompanied by Eichmann, he has visited incognito the gas chamber at Auschwitz". These reports coming only from Wisliceny must be questioned until substantiated from other sources.

It has been established that Amín actively tried to prevent the emigration of Jews to Palestine from Nazi-occupied countries. With his aims in mind it is understandable that he would try to prevent an expansion of the Jewish population in Palestine. By his protests he might have influenced German actions, although Hitler had long ago formulated a policy of extermination which could not be contradicted. Eichmann had once offered the lives of a million Hungarian Jews for 10,000 trucks, but Hitler had insisted on extermination. All the Jews in Hungary had been condemned to death, and the voice of the Mufti was insignificant.

A further piece of evidence which has been adduced to condemn him is a broadcast he made in September 1944 in which he referred to the eleven million Jews of the world, when it is said that before the Second World War it was well known that the world Jewish population was seventeen million. Thus, it is alleged, the Mufti knew that precisely six million Jews had been murdered. In September 1944 the holocaust had not been completed, as Eichmann continued his activities at least into October 1944. Moreover, Eichmann is said to have spoken of 5 million victims. The Mufti's figure does not prove that he, alone with the top Nazi leaders, knew the full horror, but neither does it disprove that he knew at least in general terms of German atrocities. At a press conference in 1961 he denied that he knew Eichmann and that he had visited the camps. By his presence in Germany, by his propaganda and other activities, by his protests against Jewish emigration, he gave moral authority to Nazi policy. He was, however, never brought to trial as a war criminal, for the technical reason that he was not, from the British point of view, an enemy national. Amín had chosen the wrong side in the war but as a Palestinian Arab nationalist he had had little choice. If the Nazis won they would adopt an anti-Jewish policy in Palestine, if the British, then they would continue to support the establishment of a Jewish National Home.

When the outcome of the war was clear he escaped again, first to Paris, 1945-6, and then back to the Middle East, to Egypt. During the war Palestinian politics had been rather muted, but in 1944 the Husaynís had decided to re-establish the Palestinian Arab Party and soon called for the return to the exiled Husaynís politicians. Amín began to try to regain his former position and influence. He had become the symbol of Arab opposition to Zionism, and the Arab League, in an effort to end political quarrels amongst the Palestinians, ordered the dis-
solution of the Arab Higher Committee and the Higher Front (the anti-Husayni body) and the formation of the Arab Higher Executive with the Mufti as its chairman. He was not allowed by the British to return to Palestine and had to direct the resistance from outside. He continued to follow an uncompromising line, boycotting the United Nations Special Committee on Palestine, refusing to contemplate any partition plans, and urging total opposition to the Zionists. As violence on both sides increased, the Higher Executive at the end of 1947 began to organise and direct military resistance. An Arab Liberation Army, owing partial allegiance to the Mufti, was created which later attempted to co-operate with other Arab armies.

Inter-Arab rivalry hindered co-operation, and after the proclamation of the State of Israel a split grew over Transjordan's ambitions in the West Bank of the Jordan. Egypt supported the Mufti and allowed him to settle in Gaza, where he announced in September 1948 the formation of a Palestine government. A self-constituted Assembly elected him its president and several Arab governments recognised the Gaza regime. However, the rump of Palestine was under Transjordanian control and its final annexation in April 1950 was recognised by the Arab League. Henceforward the Mufti lost any last base of power and spent the rest of his life vainly trying to rally support for an effort to destroy Israel. Amir 'Abd Allah of Transjordan appointed his own mufti and president of the Muslim Supreme Council.

In July 1951 'Abd Allah was assassinated and Amin was thought to be implicated although this was never conclusively proved. In 1951 he chaired a World Muslim Conference which he used as a platform to publicise his policy. He attended the Bandung Afro-Asian Conference in a minor capacity, having to accept the predominance of President 'Abd al-Nasir [q.v. in Suppl.]. In fact, the latter's lack of regard for him caused him to move to Beirut in 1959. He had more freedom of action in Lebanon, but no more authority. He tried various alliances, with President Kásim of Iraq, with the Sa'idis, with Jordan, all to no avail. In the shifting sands of inter-Arab politics, Amin was now of little account. He moved about, to Damascus, to al-Riyadh and back to Beirut. In the Palestine movement, first Ahmad Shukry and then the Palestine Liberation Organisation took over precedence.

Al-Hajj Amin died in Beirut on 7th July 1961. To the end, he proclaimed his unwavering belief that his country had been illegally given away by foreigners to other foreigners, both of whom had scant regard for its Arab and Islamic character. He spent his adult life trying to prevent a change in the character of Palestine. Through his intransigence, his desire to dominate his rivals and his inability to distinguish between his personal aspirations and his political goals, he ended by losing everything for himself and almost everything for the Palestinian Arabs.

**Bibliography.** Two works deal specifically with the Mufti, M. Pearlman, Muff of Jerusalem, London 1947, written in an attempt to have him tried as a war criminal, and J.B. Schechman, The Mufti and the Führer, New York and London 1965, a fairer work but taking too much for granted from Pearlman. Otherwise, references have to be sought in the many histories of the Palestine problem, and in works dealing with German relations with the Middle East and with Nazi policy towards the Jews. (D. Horwood)
introduce certain modernising measures into his own country. He took steps, for instance, to secularise Iranian legal systems, introduce certain modernising measures into his own country. He took steps, for instance, to secularise Iranian legal systems, and so on. He did not, however, pay much attention to the limitation of the monarchic absolute power by establishing a law-making body in Iran; on this problem, he had reportedly said, "I had the intention of establishing constitutionalism (koushtafires), but my big obstacles were the Russians" (Firidun Adamiyyat, Mahkâlet-i târîk, Tehran 1973, 88-9).

In 1858 to 1859, as a Grand Vizier, the Amir created many domestic and foreign enemies for himself because, on the one hand, he limited bribery, injustice, and abuses of power committed by government officials and high dignitaries at court, including the Shâh's mother, Mahdî 'Ulyân, and on the other hand he opposed the Anglo-Russian interventions in Iranian affairs. This hostility at court, together with the Anglo-Russian intervention, finally brought about the Amir's execution in Kâdîgan some two months after his dismissal from the Grand Vizierate, and the succession to that position of Akâ Nûrî, a protege of the British.

ABDUL-HADI HAIRI

AMIR NIZAM, HASAN 'ALI KHAN GARRIŠI (1296/ 1317/1829-99) was born into a distinguished Kuchâr family of the Garrîs district in western Iran. His ancestors and relatives held important positions at the courts of the Timurids, the Safawids, the Afshârs, the Zandîs, and finally the Kâdîjârs. After studying Persian, Arabic, history and calligraphy, he began his government service at the age of seventeen and, as a commander of the Garrîs regiment, he helped Muhammad Shâh Kâdîjâr's army to lay siege to the city of Harât in 1253/1837. After that, the Amir Nizam (a title which he received from Nâšir al-Dîn Shâh in 1302/1884) continued his administrative, political, military, and diplomatic duties with little interruption for approximately 62 years. His military missions include his victorious participation in the 1265/1848 expedition to Mashhad, and that of 1273/1856 to Harât. He was also one of those military commanders who ended the Bâbî movement in Zanjân in 1267/1850 and that of the Nâthâkhanî Shûfs led by Shâhâb 'Ubayd Allâh in Kûrdistan in 1287/1869; the former successor gained the Amir Nizam the title of " sideways-camp" to Nâšir al-Dîn Shâh and the latter the governorship of five western regions in Iran.

In the sphere of civil offices the Amir Nizam served, among other things, as Director of the Office of Royal Effects and Treasuries (1273-5/1856-8), as a member of the Grand Consultative Assembly (1283-4/1866-71), as Minister of Public Works (1289-98/1872-81), and as Governor of Kûrdistan, Kûrmân-Bahîrîstân, and other provinces at various times.

As Nâšir al-Dîn Shâh's special political envoy, the Amir Nizam went to Europe and met the heads of state in London, Paris, Berlin, Brussels, and a few other European capitals in 1275/1858. It was on this trip that he was accompanied by 42 students seeking further education in Europe. Later, from 1276/1859 to 1283/1866, he was appointed Minister Pleintentament in Paris.

The Amir Nizam is known to have refused to cooperate with the Shâh in putting into effect the Tobacco Regie Concession of 1890 which had caused widespread unrest in Adhârâbâd. For this reason, he resigned from his position as vizier to the Shâh's heir-apparent in that province (Muhammad Hasan Khân Fûmidâl al-Sâlânjâ, Râz-nâmâ-yi Khâni, Tehran 1971, 763-70 and passim. Curzon held that "the Amir-i Nizám was reputed to be a strong Russophile" (Persia and the Persian question, i, repr. London 1966, 413, 431). Besides, the Fûmidâl al-Sâlânjâ reported that the Russians were insisting in sending the Amir Nizam back to his previous position in Adhârâbâd (Râz-nâmâ, 773). We also know that the Amir Nizam was popular with the Russians to the extent that he received the insignia of the order of the "White Eagle" from the Russian Emperor (Amir Nizâm, Munghâ'ât, Tehran 1908, 14). It would accordingly probably be safe to assume that, in his opposition to the Tobacco Concession, the Amir Nizam was not inspired by a desire to protect national interests, but was, rather, protecting the interests of the Russians, the latter power being a firm opponent to the Constitutional Movement.

The Amir Nizam had continued contacts with the West through his diplomatic missions abroad. He was one of the distinguished companions of Nâšir al-Dîn Shâh during the latter's trip of 1290/1873 to Europe (Nâšir al-Dîn Shâh, Safâr-nâmâ, Tehran 1964, 12); a trip in which "Our principal goal", said the Shâh, "... is to learn about the basis of reform, development, and the means of interests and progress. We would like to see in person, and choose those things which are instrumental for the welfare and progress of the people in other countries" (Abdul-Hadi Hairi, Shi'îsm and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics, Leiden 1977, 15). In addition, the Amir Nizam was closely associated with intellectual such as Malkâm Khân and Yusuf Khân Mustâshâr al-Dawlâ Tabârî, two men who were widely known as apostles of modernist ideas (idem., The idea of constitutionalism in Persian literature prior to the 1906 Revolution, in Akten des vii. Kongresses für Arabistik und Islamwissenschaft. Göttingen, 15. bis 22. August 1974, Göttingen 1976, 189-207). He even reportedly signed an oath, together with a number of Persian modernist thinkers, to work towards "... the progress of our beloved people and country" (Firidûn Adamiyyât, Amâdrî-far-yi tarâkki va bakhtimât-i khânî: 'asr-i Sipahsâlâr, Tehran 1972, 249 ff.).

Despite all these facts, however, the Amir Nizam seems in practice to have followed very much the traditional ways characteristic of despotic regimes. Thus it is reported that he used to burn in furnaces bakers who were believed to have overcharged their customers, and mutilated Kurds when he was sent to suppress their uprisings. At one time, his hostility towards modernisation went so far as to have 'Ali Kûrf Safevâr bastinadoed and his Tabârî newspaper
The Amir Nizam's reputation as a learned man, a stylistically distinguished prose writer, an excellent calligrapher, and a tough bureaucrat made him so highly respected in the royal court that at one time, in 1316/1898, even Muzaffar al-Din Shah preferred to side with the Amir Nizam in the latter's conflicts with the royal heir-apparent, Muhammad 'Ali Mirza (Mahdi Kulf Hidayat, khatirat va khatorat, Tehran 1965, 98-9). Among foreign observers, Carzon called him "a man of very strong will and determination" (Persia, i, 431). Dr. J.B. Feuvrier admired him as a "vieillard d'une intelligence superieur, d'une grande experience et d'une sagesse consommee" (Trois am a la cour de Perse, Paris, n.d., 86).

Some of his epistolary works can also be found in 'Abbás Ikbál, Amir Nizám Garrúsí, in Yádád, iii/6-7 (1947), 8-33, and in some other references given in the Bibliography below.

**AMIR NIZÁM — AL-'AMIRÍ**

**A'BÁT-HÁDI HÁIRI**

**AL-'AMIRÍ, 'ÁBU L-'HÁSÁN MUHAMMAD B. YÚSUF,** philosopher who lived mainly in Persia, born early in the 4th/10th century in Khúrášán, where he studied with the well-known geographer and philosopher Abú Zayd al-Bálkhi [see AL-BÁLQJ]. From about 355/966 he spent some years in 882/1479 taking the patronage there of the Búyíd vizier 'Ábu l-Fadl b. al-'Amid, and of his son and successor 'Abú l-Fáth [see IBN AL-ÁMIRÍ]. Al-'Amirí also visited Baghdad at least twice, in 360/970-1 and again in 364/974-5. There he met many of the leading intellectuals of the day, but according to al-Tawhidi he was very coldly received, being regarded as an uncouth provincial. By 370/980 he had returned to Khúrášán, where he dedicated a treatise to the Sámanid vizier 'Abú l-Husayn al-Udáb (d. ca. 372/982), and composed another in Bakhárár in 375/985-6. Al-'Amirí died in Níshápúr on 27 Shawwál 381/6 January 992.

In his K. al-Amad 'ala l'-abád (MS Istanbul Serví 179, edition by E.K. Rowson forthcoming), written only six years before his death, al-'Amirí gives a list of his works, comprising seventeen titles, of which four are known to be extant: K. al-Husayn wa l-muhtáár (MS. Cairo, al-Muyassa press) containing interesting and useful information about 19th century Iran. Some of his epistolary works can also be found in 'Abbás Ikbál, Amir Nizám Garrúsí, in Yádád, iii/6-7 (1947), 8-33, and in some other references given in the Bibliography below.

**Bibliography:**

AMIR, MIRZA MUHAMMAD SADIK ADIB AL-MAMLIK, Persian poet and journalist, was born in Kazarun near Sultanabadi (mod. Arak) in 1860. On his father’s side he was directly descended from Mirza Abu ‘l-Kasim K’a’inma’ākh Parhaññ, statesman and writer of the early 19th century, while his mother was a member of the same family. After his father’s death in 1874 the family was in serious financial difficulties, until in 1890 Mirza Sadik took service with Amir-Szīnām Gurrāst, whom he accompanied to Tabriz, K’a’inma’ākh and Tehran. During this period he acquired the titles Amir al-Shu’arā’ (whence his taqālīs Amirī) and later Adib al-Mamilik. In 1894 he was in charge of the Government Translation Bureau in Tehran. Two years later he returned to Tabriz, and after taking theological qualifications became Vice-Principal of the Lukanma‘yya College of Science and medicine. For a time he published Adab, a literary and scientific journal; and in 1900 he left Tabriz by way of the Caucasus and Khwāya to Mashhad, and in 1903 to Tehran, in both of which cities he resumed publication of his journal. 1904 saw him in Baku, where he edited a Persian supplement to the Turkish periodical Ifrāgh. After the Constitutional Revolution of 1906 he became editor of Maqālis, the record of the National Assembly debates, and later of the official periodicals Rā’īyāt-i Amīrī and Iqbal, in between he started his own journal, Frāk-i ‘Aṣam. In 1911 he entered the judicial service at Tabriz, K’a’inma’ākh and Tehran, Sāvūsqulugh, Sultanabadi and Yazd. He died in Tehran in 1917.

Amiri had a wide range of interests from geography, mathematics and lexicography to history, literature and astrology. He was well-versed in Persian and Arabic, in both of which he composed poems, and was familiar with a number of other languages. However, he was no ivory tower poet; his poems, following the new trend to re-unite literature and daily life, reflect the turbulent politics of his time, in which he was generally on the side of the Constitutionists. His later writings are marked by social satire and revolutionary fervour.

villages in maintenance grant in the pargana of Nindru (now in the district of Bidjnore).

During the Mughal period, Amroha also produced famous Sufis and scholars, such as Shaykh Ibān Čigīr during the reign of Akbar. Mir Sayyid Muhammad, the famous Mir 'Adi (Chief justice) and Mawlānā Allāhāddād (d. 990/1582), a leading scholar, also belonged to Amrohā. Mašāhi Amrohāṭī, the famous Urdu poet of the 18th and 19th centuries, was also born and educated there. Wīkār al-Mulk, an associate of Sir Sayyid Ahmad Khan and one of the founder members of the Aligarh Movement, also hailed from Amrohā. It is now a tahsīl headquarters in the district of Murādabād in Uttar Pradesh.

AL-ʾÂMULĪ [See Haydar-ʾi ʾĂmulī, in Suppl.].

**ANDJUMAN-I KHUDDĀM-I KĀBA,** a religious society founded by Indian Muslims in their period of great pan-Islamic fervour just before World War One. The Andjuman was started by Mawlānā ‘Abd al-ʾBārī (q.v. above) and Muṣḥir Ḥusayn Kidwāt (q.v.) of Lucknow who hoped to be able to defend Mecca and Medina by raising ten million rupees to build dreadnoughts and airships and to maintain armed forces. Such an ambitious programme proved impracticable, and the final constitution of the organisation published early in 1332/1914 declared that to defend the Holy Places it would: (a) preach the aims and objects of the Andjuman to Muslims generally; invite them to join it; and induce them to render sincere service to the holy places; (b) spread Islamic ethics in the neighbourhood of the holy places; invite the attention of the inhabitants of those places to a knowledge of the religion; promote intercourse and unity among them; and persuade them to the allegiance and assistance of the guardian of the holy places; (c) promote relations between Muslims and the holy places and extend and facilitate means of communication with the holy places.

The leaders of the Andjuman came in large part from young western-educated Muslims of pan-Islamic predilections, for instance, Muḥammad and Shaḵwat ʿAlī (q.q.), Dr. M.A. Anṣārī and Muṣḥir Ḥusayn Kidwāt, and ʿulāma who were in some way connected with the Farangī Mahall family (q.q.) below of Lucknow, for instance, ‘Abd al-ʾBārī, Shīr ʿAmīd Ahmad Aṣghar of Kaţwā and ʿAbd al-Maḏjid Kādīr of Bahāḍīn. The ʿulāma of Deoband, landlords, and men closely associated with government, were conspicuous by their absence. Nevertheless, many, including women, joined the Andjuman. By Shawaรว in 1332/September 1914 the Andjuman had over 17,000 members, a central organisation in Dihī and branches throughout India; moreover, it had grown faster and spread more widely than any other Indo-Muslim organisation.

The achievements of the Andjuman, however, were limited. One problem was that the Government of India, suspicious of the alliance between young western-educated politicians and ʿulāma, refused to support it. The Andjuman’s work was restricted to the Ḥajj, and here Shaḵwat ʿAlī strove to improve the conditions of Indian pilgrims and attempted to break the European monopoly of the pilgrimage trade by setting up, with Turkish aid, a wholly Muslim shipping company. But the outbreak of World War One and the closing of the Ḥajj route put an end to this work, and the organisation, without an obvious function, fell apart amidst squabbles between the ʿulāma and the young politicians. In 1334/1916 ʿAbd al-ʾBārī moved its central office to Lucknow and the organisation was last talked of in 1336/1918 when he tried to restart it as a vehicle for a campaign to release Muslims who had been interned during the War.

The importance of the Andjuman lies more in what it portended than in what it achieved. In working to protect the Holy Places, the leading pan-Islamic politicians of the day, Shaḵwat and Muḥammad ʿAlī, met ʿAbd al-ʾBārī and became markāds of this very important piety. More generally, young western-educated politicians came to appreciate the widespread influence in Indo-Muslim society of ʿulāma like those of the Farangi Mahall family. These same people were to come together again after World War One to organise a much greater effort for a pan-Islamic cause, the ʿAlīfāt movement (q.v.).

**ANĪS,** Mir Bābā ʿAlī (1217-91/1803-74), Urdu poet, was born in Faydābād (Fyzabad) (q.v.) to a family which had produced five generations of poets. Some of these, including his father Ḥabīb, wrote the characteristically Indian type of marthiya which thrived at public recitals in Lucknow, capital of the Shīrī Nawāb of Oudh. This type, which may have originated in the Deccan, was devoted to the martyrdom of al-Husayn b. ʿAlī at Karbala (61/680). Anīs moved to Lucknow as a young man, and devoted his life to writing poetry, especially marthiya. He became the leading exponent of this form, thousands attended his readings in Lucknow, and in other Indian cities which he occasionally visited later in life. Some critics thought his contemporary and rival Dābir superior, but this view is now discounted.

By the time Anīs began writing, the main lines of the Indian marthiya had already been foreshadowed, if not fully established; and he used it to the full. Formerly in quatrains, it was now almost always in masadda form. Starting as a short emotional and devotional lament, it was lengthened to over a hundred verses of varied content. Alongside the incidents involving al-Husayn and his followers at Karbala, Anīs includes description of nature, such as landscape, the desert, and storms; character sketches of the protagonists; the horse, the sword; warlike accoutrements; and a philosophising which gave universality to a superficially restricted theme. The language employs all the devices of rhetoric (balāghiyya), yet there is an inherent simplicity and sincerity which contrasted strongly with the Urdu ghazal [see ghazal, iv] then in vogue. It consequently won the approval of forward-looking critics and poets such as Hālī and Aẓād, and occupies an important place in Urdu literary history. It says much for Anīs’s artistry that he managed to sustain interest in an output estimated at 250,000 verses; but it is...
hardly surprising that the form ceased to be widely cultivated after the end of the 19th century.

_Bibliography:_ Critical accounts of Anis and his mašhūrī may be found in Muhammad Sadiq, _History of Urdu literature, _London 1964, 153-63; Abū `l-Laylī Shāhīdī, _Lahorī kā dokhtāin-i ābār_ (Lahore 1955), which also contains examples from previous and subsequent mathnawī poets. Ram Babu Saksena's _History of Urdu literature, _Allahabad 1927, in a general chapter on "Elegy and elegy writers" (123 ff.), contains a genealogical table of Anis’s family (p. 136), showing the poets in the family before and after him.

Among critical studies of Anis are Amir Ahmad, _Yādār-i Anis, _Lucknow 1924, and Ḍafā’ī Ahl Khān, _Ahn i maṭarqa nī gārī_ (Lucknow 1951). Shibli Nu’mān’s _Mawṣūla-yi Ānis-o-Dābur_ is still the standard comparison of the two poets, though heavily weighted in Anis’s favour. There are numerous editions of Anis’s poetry, none complete. One of the fullest is Marāthī Anis, ed. Nātīb Husayn Nakwī Amroṭā, 4 vols., Karatschī 1959. The three-volume edition of Nawāb Haydar Ḍāng, Badārīn 1935, is less full, but has an introduction by Ṣayyīm al-Dīn Huṣayn Nīṭāmī Badārīnī (J. A. Haywood).

Anṣārī, Ṣayyid Murtādā, despite his being rather unknown in the West, is considered to have been a Shi’ī muqtaḥad whose widely-recognised religious leadership in the Shi’ī world has not yet been surpassed. He was born into a noted but financially poor clerical family of Dizful, in the south of Iran, in 1236/1820, when Ansari, together with hundreds of other Iranian people, fled from Karbalā’ due to the pressures imposed by the Ottoman governor at Baghdad, Dāwūd Pasha, after the growth of the Perso-Ottoman hostility at that time (S.H. Longrigg, _Four centuries of modern Iraq, _Oxford 1925, 242-9; Sir Percy Sykes, _A history of Persia, _ii. repr. London 1963, 316 ff.). Anṣārī then returned to Dizful.

_In ca. 1237/1821, Anṣārī again went to Karbalā‘, and attended the circle of the famous muqtaḥad Molla Muhammad Sarhī al-Ulūma, (d. 1245/1829). In ca. 1238/1829 he proceeded to Nadjaf and continued his studies under Ṣayyid Musa Kāshīf al-Ghīṭā, (d. 1241/1825), and after a year or so he again returned to his home town, Dizful. Heading for Maḥhad in 1240/1824 with the intention of attending the circles for religious learning in different Iranian cities, Anṣārī joined the teaching circle of Ṣayyid Ahmad Bākīr Shafī‘ī (d. 1270/1853) in Isfahān (Anṣārī’s biography written by Muhammad Rūdāl al-Radawī al-Khānāsārī (sic), in Anṣārī, _Ḳitāb al-Maṭāṣiq al-Mukābī_, Tehran 1908, 1), each for no more than a month._

When Anṣārī met Mulla Ahmad Naraḵī (d. 1245/1829) in Kāshān, he decided to remain there because he found Naraḵī’s circle most congenial for learning. Naraḵī also found Anṣārī exceptionally knowledgeable, saying that within his experience he had never met any established muqtaḥad as learned as Anṣārī, who was then ca. thirty years of age (Murtādā al-Anṣārī, _Zendgānī va saddehīyāt-i Shāhīk-i Anṣārī kudāsā sirah, _Ahwāz (sic) 1960, 69).

In 1245/1828, Anṣārī left Kāshān for Maḥhad, and after a few months living there he went to Tehran. In 1246/1830, he returned to Dizful, where he was widely recognised as a religious authority, despite the presence of other important ‘ulamā’ in that town. It is said that Anṣārī suddenly left Dizful secretly sometime because he, as a religious-legal judge, was put under pressure to bring in a one-sided verdict in a legal case. He then arrived in Nadjaf in ca. 1249/1833 and joined the teaching circle of Shaykh ‘Ali Kāshīf al-Ghīτā (d. 1254/1838) and, according to some sources, that of Shaykh Muhammad Ḥasan Sāhīb al-Dīwānī (d. 1266/1849), but each for only a few months, and soon organised his own teaching-circle independently.

Anṣārī’s life as a distinguished religious scholar entered a new phase in 1266/1849 after he had received an overwhelming recognition from all the Shi’ī communities which formed a population then estimated at 40 million across the Muslim world, so that the institution of muqtaḥad-i taklīd [q.v.] reached its highest point. “The Twelve Shi’ī population of Iran,” wrote one of Anṣārī’s contemporaries, Muhammad Ḥasan Pātimād al-Saltana, “and the numerous Shi’ī groups who live in India, in Russia, in some of the Ottoman provinces, and in several other cities of Afghanistan, Turkistan, and elsewhere used to send to Anṣārī their endowment funds, alms taxes, one-fifth of their annual savings ... and other similar payments, which amounted to 200,000 tāmāns [ca. $30,000.00] annually” (al-Ma’tāṣiq wa t-ʿāghār, Tehran 1888, 136-7).

Despite his vast income and his overwhelming leadership, Anṣārī, according to a number of eye-witness accounts, nevertheless denied his family a comfortable life and himself lived an ascetic life, as was evident from his appearance (cf. inter alia, Muhammad Hīrz al-Dīn, _Maṭāṣiq al-razgāi, _ii, Nadjaf 1964, 399-404). Instead, he gave the money to the poor and needy, to the students of religious schools, and at times to those Muslims who, on their way to visit the shrine of Imām Rīḍa in Maḥhad, were taken captive by the Turkomans. When Anṣārī died in 1281/1864 his wealth and belongings were worth only seventeen tāmāns (less than three dollars), for an equal amount of which he was in debt. One of his followers therefore took charge of the funeral expenses.

Aḥṣārī’s piety, and above all his scholarly qualifications, deserved of course such recognition, but other factors also were certainly instrumental in establishing his leadership: the then great muqtaḥad-i taklīd, Sāḥīb al-Dīwānī, shortly before his death declared Aḥṣārī to be the legitimate sole muqtaḥad-i taklīd of the Shi’a. This endorsement was compounded with the earlier death of other distinguished religious authorities such as Shaykh Muhammad Ḥasan Sāḥīb al-Fuṣūl (d. 1261/1845). In addition, this development was preceded by the gradual decline of Isfahān as religious centre, a process which had begun its course since the fall of the Saʿādawī dynasty and was accelerated by the death of such religious authorities of Isfahān as Shafī‘ī and Ḥārīm
Karbaš (d. 1262/1845). Consequently, Nadjaf began then to enjoy an unprecedented attention from the Shī'ite of Iran, and most of this attention was certainly focused on the person of Ansārī. Ansārī not only established a new era in the history of the Shī'ī leadership but was also an important figure in the field of Shī'ī jurisprudence, being considered to have opened up a more productive way of practising usūlī hadā in general and for dealing with the problem of private ownership in particular. Ansārī's system in jurisprudence laid great importance on the maqādīr-i tūkilī's being the most learned man of his time; he said that 'a'la (reason) and 'ugī (social conventions and common practices) are to be taken as criteria and bases for introducing new laws. His name is also mentioned as an authority with original views on such usūl subjects as the principles of istihāb, bana'a, and zaman, each of which were the subject of an independent study done by Ansārī (for a concise definition of the above terms, cf. ‘Abd al-Qādir Ṣadīqī, Farhang-i al-‘ulūm-i nakhī va adabī, Tehran 1965, 51-3, 359).

Ansārī's school of thought has been clearly dominant in Shī'ī scholarly circles since the middle of the 19th century, and his views have been discussed and adopted by most of the Shī'ī ulama. A descendant of Ansārī's brother has listed the names of 144 musnāhīs who have written commentaries on Ansārī's various books (Ansārī, Zendgānī, 354-87). Ansārī's influence on the later 'ulama' can also be found in the bio-bibliographical dictionaries compiled on the Shī'ī authorities (cf. Bihār). The influence of Ansārī's ideas is further seen in the laws made for various Shī'ī communities, because many of those who were involved in the process of law-making were either Ansārī's disciples or were indirectly under the influence of his thought. The Persian civil law which was substantially based on the Shī'ī jurisprudence may be mentioned as an example; and the man who "translated into Russian the Islamic law according to which the Muslims of Caucasus were being tried in the legal courts" was Mirzā Kāẓīm Bīy, a disciple of Ansārī (Maḥfūz Ḥāfīzī Muḥtahār, ‘ulamā‘-i taklīds, Tehran 1974). Ansārī's circle of teaching was attended by numerous pupils, many of whom became great maqādīr-i tūkilīs of their times, e.g., Husayn Kūshkārī (d. 1291/ 1874), Muhammad Irwānī (d. 1306/1888), Ḥabīb Allāh Rašīfī (d. 1312/1894), Maḥmūd Ḥasan Shāhriāzī (d. 1312/1894), and Maḥmūd Kāẓīm Khurāsānī (d. 1329/1911). There are also reports that Sayyid Dāmil al-Dīn Asadābādī "Afghānī" was also a pupil of Ansārī (Asghar Mahdawī and Iradj Afshar, Khvāṭī, Tehran 1974, 187, nor has Lutf Allah Khan been correctly quoted in influence in the interest of his followers. Persian or otherwise, in their political and other struggles. Theoretically, however, he believed that the 'ulama' were not only the custodians of religions, but are also unquestionably responsible for judicial and political affairs also (Hārī, Shī‘īs and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics, Leiden 1977, 60). Ansārī's lack of interest in social and political issues has been criticised by contemporary modernist thinkers. Fath ‘Alī Aḥkāmī-Zāda, for instance, said: "God has not given Ansārī enough insight to understand why Iran is in the state of collapse and why the Iranians are suffering abasement" (Aḥkāmī-Zāda, Baku 1963, 121), and Aḵā Kān Kirmānī [q.v. above] believed that Ansārī contributed to the people's ignorance and perplexity (Firdūdī Aḏānīyat, ‘Aḏānīyat-i Mirzā Aḵā Kān Kirmānī, Tehran 1967, 66).

On the other hand, his aloofness from politics was warmly welcomed by the political authorities, who seem to have taken it as a sign of his asceticism. Thus we come across the reports that the governor of 'Irāq referred to him as the Greatest 'Ālam (i.e., one who distinguishes truth from falsehood) and that the British Ambassador allegedly said: "Ansārī is either Jesus himself or his special deputy on earth" (Hānī Kān Shāykh ‘Arūsfī Ansārī, Tārīḵ-i Ḥudūd va Ray va hana-yi ḥudūd, Tehran 1943, 76 ANSĀRĪ
inside the front cover). The cult formed around him led some people to say that Ansari had met with the Twelth Imam.

Ansari has also been praised in Babi literature as “...a man renowned for his tolerance, his wisdom, his understanding of his people and nobility of character”; the leader of the Baha’is, Mirza Husayn ‘Ali Nari known as Bahá’í Allah [g.v.], included Ansari among “those doctors who have indeed drunk of the cup of renunciation”; ‘Abbas Efendi (‘Abd al-Bahá) also referred to Ansarf as “the illustrious and erudite doctor, the noble and celebrated scholar, the seal of seekers after truth” (Shoghi Effendi, God Passes By, Wilmette, Illinois 1944, 143).

Under Bábí auspices he was also referred to Ansarf as “the illustrious and erudite doctor, the noble and celebrated scholar, the seal of seekers after truth” (Shoghi Effendi, God Passes By, Wilmette, Illinois 1944, 143).

Abd al-Baha was known as Baha 3

Ansar is thus praised because he did not share the condemnation of other Shí‘i ‘ulamá’ of the Bábí faith and rituals. He did not attend the meeting convened by the Shí‘i ‘ulamá’ in Kazimayn in 1863 for determining on the banishment of Bahá’í. He did not attend the meeting convened by the Shaykh al-Muhamm 5

Anthropoid [see Kirby]
European store of medicines, but, according to Meyerhof, it is still well-known in the Orient, especially in the drugmarket in Cairo.

According to Dioscorides, the yellowish bitter resin was above all useful for causing new flesh wounds (tēhē, "flesh") to coalesce ("glue") scar over. Already al-Kindī used it as component of a good number of recipes (ʿabrāb_khīn, see Bibli, below), among others for leprosy. The most detailed description is given by Ibn al-Baytār on the basis of Greek and Arabic sources as well as his own observations. The resin consumes the festering flesh of putrescent abscesses, assists the ripening of tumours, carries away mucus and yellow gall, and is a remedy for inflammations of the eye, for agglutinating eyelids and for excessive secretion of the eye. Taken internally, the resin is a strong purgative, but causes also the hair to fall out. The best Sarcocolla consists of crushed, white seeds, mixed with walnut oil. Measured out in different ways, it can be mingled with other drugs (sapagenum, myrobalanum, aloes, bdellium, etc.). When taken neat, the resin can be lethal; therefore, its use should be more than 2½ dirhām. Ibn al-Baytār, however, maintains that he saw in Egypt women partaking, immediately after a bath, of up to 3½ ounces of anzārūt, together with the pulp of the yellow melon, hoping to increase thus their corpulence.

(A. Dietrich)

APÆ [see ʾmaʿ.]
licit, he will be forever marked by dishonour. Thus we return to the primitive sense of the word 'âr, which is not however used in the Orient in the same way as in Morocco. J. Chelhod (op. laut., iii), who has drawn attention to the use of this word to designate a spouse ('ârî = my wife), links it to 'cure "nudity, modesty, etc."', but the two words do not belong to the same root and, what is more, 'ed "honour" is also used in the same sense (for Mousl, see A. Jaussen, Coutumes des Arabes au pays de Mousli', Paris 1948, 45, n. 3). In this case, 'âr would seem rather to imply the idea that dishonour would affect the husband who did not protect his wife; one dare not go so far as to attribute to this term the sense of "protection", but there is found here a notion firmly rooted in the Arab mentality, the notion of honour upon which B. Fares has founded his entire thesis.

The Moroccan 'âr thus implies a transfer of responsibility and of obligation, for the supplicateur, to accord his protection to the supplicant, in default of which dishonour falls on the former, who is obliged to give satisfaction to the latter. This transfer can operate in a number of ways, with variable consequences. The most simple consists in saying 'âr 'âlî "the 'âr on you" and making a material contact with the person to whom the appeal is made, for example touching the edge of his turban, or leaving one's hand upon him or his mount. More serious is the case of a man guilty of a crime or a misdeed and pursued by his enemies: the pursuit must cease as soon as the suppliant has touched the ropes or the pole of the tent of the supplicateur or has penetrated his home: the result is still more spectacular when the latter is an interested party of vengeance on the guilty party; a douar can even impose it on another whose cooperation it is seeking, by simulating an assault on the tribe, a mosque, or the tomb of a saint enjoying a right of asylum rarely violated. This institution gives rise to judicial work over a prescribed period. If the head of the family to whom appeal has been made, the latter is obliged to grant the request presented in this manner from the instant that he sets foot in the pool of blood or simply perceives it; here the efficacy of the procedure is due to the blood [see DAM, in the Supplement], which possesses magic power. Finally, to appeal for the aid of another tribe, to address a request to the authorities or to give force to a submission to central government, recourse would made to the t'argïha which consisted in hamstringing a horse, a camel or a bull and placing it in the possession of a suppllicant.

Other procedures are still employed (see E. Wimmerarch, op. laut., 87-107) which may be passed over without comment except to recall that the persons solicited are not permitted to refuse and that they are bound, whatever their inner inclination, to protect the suppllicant, and whatever the circumstances, to provide him with hospitality: a private house, and in more serious cases where the 'âr has been imposed on the tribe, a mosque, or the tomb of a saint enjoying a right of asylum rarely violated. There was quoted at the beginning of this article an example of 'âr exercised with regard to a Tunisian saint. The Moroccans also use it towards their saints (see below), to whom they offer sacrifices to obtain their intercession; they also employ other procedures (heaps of stones, votary offerings, etc.) which doubtless rely more on sympathetic magic than on 'âr in the true sense of the word. In the same way, they assure themselves of the neutrality of djinnim by imitations which could be interpreted as offerings and therefore unrelated to 'âr.

The latter is imposed, so it is understood, to obtain all sorts of things, from the most banal to the most important; to obtain pardon for an offence; to assure oneself of an intervention, to protect oneself from an enemy, to bring about a change of mind on the part of a father who has refused to give his daughter in marriage to a suitor, to oblige the parents of a murdered man to accept the diya and not to insist on vengeance on the guilty party; a douar can even impose it on another whose cooperation it is seeking, for example in the harvest.

Women can also have recourse to the 'âr, under the same conditions as men or using procedures of their own. In certain Berber tribes of Morocco, a woman who wishes to leave her husband may take refuge in an alien tent or house, kiss a beam or handle the mechanism of a mill; from that moment, the owner of the property must marry her and compensate the abandoned husband, or... take flight. A fugitive who has succeeded in sucking a woman's nipple obtains her protection and that of her husband, and cases are known of adoption by sucking (see G. Marcy, in Râfr., laxis (1936), 957-73) or even by simulated sucking [see for instance AL-KAHINA].

As regards adoption, which does not exist in Islamic law, a particular aspect of 'âr in certain Berber tribes is an institution concerning an individual called, with nuances, amazzal, amzyad, ambaz, amhars, aourl, etc. It occurs in the case of a stranger to the group who, usually after committing some offence in his own clan (also sometimes one refused by a father whose daughter he has asked for in marriage), has imposed the 'âr and obtained the protection of another group which makes henceforward the beneficiary of his work. He becomes amazzal when his protector has given to him in marriage his own daughter or another woman over whom he holds the right of djâhr [q.v. in Suppl.]; the marriage-price must be paid in work over a prescribed period. If the head of the family so decides, the amazzal may be adopted and may enjoy all the rights of a legitimate son, even though he is the daughter's husband. In certain parishes, a distinction is drawn between the amhars, a term designating the stranger adopted by a man, and the amazzal in the true sense of the word; in this last case, a widow who is the head of a family may adopt a stranger whom she makes her concubine and whom she has the right to reject or to marry legally when the pre-arranged marriage-price has been paid in full. This institution gives rise to judicial arrangements, the details of which cannot be discussed here (see G. Marcy, Zâminer, index; G. Surdon, Institutions et coutumes des Berbères du Maghreb, Tangier-Fez 1938, 244-50).

In spite of the absence, in Berber speech, of an original term to designate 'âr, it is quite certain that this custom presents a number of autochthonous features which justify a treatment distinct from that of the ancient djewâr and its aspects which define within strict limits the protection accorded by oriental Bedouin to strangers to their tribe. However, orthodox opinion is particularly worried by the practice of throwing one's cloak or turban on the tomb of a saint, or furthermore, of slaughtering an animal there as a form of 'âr, and the fukahâ make the comment that the deceased would not be able alone to fulfil the request. They object in other
ways besides to the use of the word ‘ār, and only permit these rites when their object is to obtain the baraka of the saint or when an animal is sacrificed for the distribution of its meat to the guardians of the sanctuary (see al-Kattānī, Salwat al-anfās, i, 54-6).

ARAGHŪN, Arabic name corresponding to the Spanish Aragon. In fact, this word has both a geographical and a political sense. It is a geographical term, it refers to a river, dominated by the fortress of Shantaramiyya, the first of the defensive system of Navarre (al-Himyarī, Razī, no. 105). This watercourse rises on the southern slope of the Pyrenees, near Canfranc; after passing the town of Jaca, the Sierra de la Peña diverts it towards the west, watering Berdun, Tiermas, Sangiésa, Aïbar, Caparroso and Villafranca before joining the Arga and flowing into the Ebro in Navarre.

This Wādi Araghūn would seem to constitute the natural path of incursion into the Christian kingdom of Navarre. Having followed the river as far as Sanguesa, the Muslim forces followed the course of its tributary the Irati, in the direction of Pamplona. This is to be inferred from Bayānī, ii, 148, “Muhammad b. ‘Abd al-Malīk al-Tawfīl marched in 298/911 towards Aragon with the object of capturing Pamplona and linking up there with ‘Abd Allāh b. Muhammad b. Lābīs.” This is precisely the route used in the famous campaign of ‘Abd al-Rahmān III in 312/924. The forces of the caliph, coming from Tudela, attacked the stronghold of Karkastal/Carcastillo on the river Aragon, Markwī/Marcuella, Sangiésa, Rocaforte, Aïbar, Caparroso and Villafranca before joining the Arga and flowing into the Ebro in Navarre.

If Rāzī it was also a mountain range (Crónica monov., ed. Catalan, Madrid 1975, 48-9) “E en su término (de Huesca) ha... otro (castillo) que ha nombre Tola, yaze cerca de la sierra de Aragon. E Aragon es muy nombrada sierra entre las Españas. E en ella yazen dos castillos muy buenos, el uno ha nombre Sen e el otro Ben; y yaze en dos peñas que son encima de la sierra de Aragon, e corre por entre ellos un río de Flumen... E de las sierras... e logares nombrados en fortaleza, son en aquella tierra que se yauta con monte Aragon que ha nombre Monte Negro, e non lo podra pasar omne a cavallo, que ande bien, en menos de tres días.” Al-Udghīrī (Māʾṣūlīkh., v, 56) states that the town and district of Huesca “lies in the vicinity of the Lqabl Araghūn, renowned among the Christians.”

If it is accepted that this valley was the route employed by the various Muslim expeditions, not only towards the Christian centre of Jaca but also, and especially, towards Navarre, it must be assumed that it was organised as a “frontier” for the defence of Pamplona. This defensive function would create a centre for resistance and for counter-attacks. The “reconquest” of the valley of the Ebro would have been an enterprise of Aragon rather than Navarre, just as Castille had absorbed the old kingdom of Leon. The Christian advance at the expense of al-Andalus would henceforward be the product of these two “frontier” forces, Raghūla [p.e.] and Araghūn. In fact, these two kingdoms were therefore share between themselves their frontier conquests. This gave rise to various formal treaties: Tudellein (1151), Cazorla (1179) and Almizra (1244) (Roque Chabas, División de la conquista de España nueva entre Aragón y Castilla, in Congreso Hist. Aragón, Barcelona 1909), in which were fixed the respective zones of the legal expansion of Aragon and Castille. The former, having achieved by 1238 its own particular “reconquest”, turned its attention to the sea. It was then that there took shape the broad outlines of its policy towards Africa (Ch. E. Dufourcq, L’Estagne catalane et le Maghrīb aux XIII e XIV siècles, Paris 1965), the Mediterranean (Corsica, Sardinia, Sicily, and the kingdoms of Naples—in competition with the Angevin dynasty), annexation of part of the Byzantine empire (the duchies of Athens and of Neopatria), of the island of Cyprus, and commercial relations with Mamlūk Egypt (A. Masta de Ros, La Coronada de Aragón y los estados del Norte de África, Barcelona 1951; A. López de San, Los consulados en Alejandría y Damasco en el reinado de Pedro IV el Ceremonioso, Saragossa 1956; F. Giunta, Aragonesi e Catalani nel Mediterraneo, Palermo 1959; L. Nicolau d’Olwer, L’expansio de Catalunya a la Mediterrània Oriental, Barcelona 1926). After the union of the kingdoms of Aragon and Castille in 1474, Spain inherited this interventionist line to the Mediterranean: attempts at invasion of Algiers in 1519 and 1541 (directed against the piracy of the Barbarossa brothers [see ARÔI et CHAYK AL-DIN BARBARASSA]), conquest of the island of Djerba (1529), the capture of La Golotta at Tunis (1535). (E.G. Ontiveros, La política norteafricana de Carlos I, Madrid 1950) and the battle of Lepanto [see AYNÀBAKH] in 1571.

But Araghūn above all has a political sense. According to al-Himyarī (Razī, no. 8), “it is the name of the territory of Ghuribī s. Shandju, comprising cantons (bildān), staging posts (munnūzīl), and districts (wādīl).” According to Makhkārī (Nafī, ed. Beirut, i, 137), “The fifth region, bordered by Aragón and Saragossa and their environs, towards the territory of Aragon, to the south of which lies Barcelona.” As a political concept, its borders were constantly changing. Just as al-Andalus did not cease to contract in the course of the centuries, Araghūn constantly expanded. So its history is founded on the recession of the Muslim thagr al-d̄īl [p.e.], sc. of the Upper March. Its growth took place at the expense of the neighbouring Hispanic-Arab states; the marks of this “reconquest” are the taking of Graus (1083), Monzón (1089), Alquézar (1091), Almenara (1093), Huesca (1096), Barbastro (1100), Balaguer (1105), Ejea and Tauste (1106), Taraüte (1107), Morella and Bèlhèt (1117), Saragossa (1118), Tarazona and Tudela (1119), Calataüd and Daroca (1120), Alcañiz (1124), Tortosa (1148), Lèrida, Fraga and Mequinenza (1149), Tened (ca. 1157), Valderrober (1169), Caspe (1171), Majorca (1229), Morella (1293), Burriana (1233), Peñíscola (1234), Ibiza (1235), Valencia (1238) and Minorca (1287). The expansion
of Castile was fundamentally local, while that of Aragon took place in a wider context. Alfonso I was in a sense a crusader. The author of the *Halul* mentions that he chose, assem-bled and equipped 4,000 horsemen of Aragon, whom they selected on their squire. They agreed and swore by the Gospel that not one of them would desert his companion. First of all, a psychological offensive took place (articles by D.M. Dunlop, A. Cutler and A. Turki, in *Al-Andalus*, 1952, 1963 and 1966; Chalmets in RUM, xx, 1972), followed by the Council of Toulouse in 1118 which proclaimed the expedition against Muslim Spain. There was also participation by numerous French troops, creating a greater “mass movement” and a change of tactics. Technical innovations (catapults and mobile siege-towers built by an expert, a veteran of the sieges of Nice, Antioch, and especially Jerusalem, Gaston de Bearn) made possible the capture of strongholds hitherto impregnable. The great campaigns of James I the Conqueror (the Balearic islands in 1229 and Valencia in 1238) were also to be considered as a crusade (R.I. Burns, *The Crusader kingdom of Valencia*. Cambridge, Mass. 1967). The royal house of Aragon was considered as the vanguard of the Christian kingdoms towards the conquered Muslims. The treaties of capitulation seem all to have been inspired by the need to retain labourers and peasants (hence this was a policy different from “repopulation”). The first example was to be that of the conquest of Valencia by the Cid in 1094. Those, subsequently, of Saragossa, Tudela and Tortosa, as well as the later ones signed by James I, also correspond to this scheme (R.M. Menendez Pidal, *La Espafia del Cid*, Madrid 1956, 483-95; R.I. Burns, *Islam under the Crusaders*, Princeton 1973, 118-38, 173-83). These circumstances explain the importance of the Mudéjars (q.v.), and Macho Ortega, *Condición social de los mudéjares aragoneses (s. XV)* in Mem. Fac. Fac. Zaragoza, i (1923), 137-319, and L. Piles, *La situación social de los moros de realengo en la Valencia del s. XV*, Madrid 1949, and later of the Moriscos (q.v., and T. Halperin Donghi, *El problema morisco en Aragón al comienzo del reinado de Felipe II*, Valencia 1969) in these regions where they were almost always vassals of local lords and bore the name of “exarcado” (Burk. E. Hinomousa, *Mezquitas y exarcos . . .*, in *Obra*, Madrid 1948, 245-56). It is the permanence of this modus vivendi which explains the fact that the vast majority of aljamia (q.v.) literature comes from this region.

For the Arab historians, Aragón means not only a region but also all the territories of the political entity embodied in the Kingdom of Aragon. In this context are included Catalonia, the Balearic Islands and Valencia. Al-Marrakushr (Mu`cib, 50-1, 235, 267) defines its extent in 621/1224 thus: “The Banu Hid possessed the towns of this region (al-Andalus), Tortosa and its environs, Saragossa and its environs, Fraga, Lerida and Calatayud all under the rule of the prince of Barcelona, and constitute the country known as Aragón. The latter has the borders of the kingdom of Aragon, to the French border. Neighbouring
Yakzan al-Kalbī and al-Husayn b. Yahya al-Ansan, Aragonese (with whom they had family ties) of the Banū Kasīt, Musa b. Musa rnuwallad, name of al-Hakam I, but the representative of the Tudjibid Banū Salama in the region of Huesca, oust-and politically very unstable. We find there the Aragonese, the Catalans, the Navarrese and the tenant, the mawla Badr. The Yemenis Sulayman b. in the 10th century the Banū Shabrit b. al-Tawfl and'of Sancho (ai-salage, there was annual tribute of 700 and the status of vass- dinars. In fact, it seems that, in about 228/843 enclaves by the emirate of Cordova. Thanks to an there was legal recognition of the North-Pyrenean Christians. In fact, it seems that, in about 228/843 there was legal recognition of the North-Pyrenean enclaves by the emirate of Cordova. Thanks to an annual tribute of 700 and the status of vassalage, there was ēfūł [g.v. of the territories of Inigo and of Sancho (al-Ughri, 30).

ARAT, REŞİD RâMEŢI, up to 1934 G.R. RAGHANTI, modern Turkish Reşîd Râmeţî ARAT, Turkish scholar and philologist (1900-64); Born at Eski Uğurım, to the south-west of Kazan, he was the son of Abd al-Reşîd 'İsmet Allah, of a family of mudârinûn who emigrated from Kazan and set up a "hereditary" madrasa there. He attended vari- ous schools in his home town, and later in Kızılûr (Petropavlovsk) and in Harbin in Manchuria where he finished high school (1921). He joined cultural associations of the Kazan Tatars in Harbin and contributed to various papers. In December 1922 he left for Germany and he enrolled in Berlin University, where he was trained in Turkish philology by Willy Bang. He obtained his Ph. D. in 1927 with a thesis on Die Hülfervorlagen und Hulpwörterbücher im Altotischen which was published in Ural-alttische Jahrbücher, viii/1-4 (1927), 1-66. He then joined the teaching staff of the Department of Oriental languages at the University. In the same year he mar- ried Dr. Rabi'a, also from the Kazan area, whom he met in Harbin. In 1928 he was made a research assistant in the Prussian Academy. In 1933, following the university reform in Turkey, he was offered the chair of Turkish philology in the University of Istanbul where he taught until his death. He was the director of the Institute of Turcology (1940-50) founded by Fu'âd Koprulu in 1924 and a visiting professor in the SOAS London (1949-51). He died in Istanbul on 29 November 1964. R. R. Arat, who contributed greatly in intro- ducing the historic and comparative approach to studies of Turkish language and dialects, was a scholar who preferred to limit his efforts to a given area and to deepen it rather than spread over many problems and disparate fields. He remained strictly interested in linguistic and philological problems and text criticism. He is the author of the following major works: Zur Heilige der Ughuren, 2 vols, Berlin 1930-2; Die Legende von Oguz Qeğhan (with W. Bang), Berlin 1932; Türkische Turfan Texte, vi, Berlin 1936; Un sevit de Mehmed II, le Conquérant, in Annali RISON, xx (1940); Bâburî, Vékayî, 2 vols, Ankara 1943-6; Kütâbıli Hili (critical edition), Istanbul 1947; Alt kütbıli 'b-hukuıyık (critical edition and modern Turkish paraphrase), Istanbul 1951; Yavuz Haci Hısırli, Kütlibili hili (Modern Turkish paraphrase), Ankara 1959; Türk tıekerći inatını, in FM, x, (1953), 139-139 (a summary of former attempts to classify Turkish dialects, together with a new proposal; under the influence of his own dialect, Arat insisted on using the term sevit (accent) instead of lâqab (dialect) of standard Turkish); Eski türk süt (Pre-Islamic and early Islamic Turkish verse, texts, modern Turkish paraphrase and notes), Istanbul 1965; ibid. 1969; J. Lacarra, Historia del reino de Navarra, Pamplona 1972; idem, La conquista de Zaragoza por Alfonso I, in Andalus, xii, (1947), 65-96; idem, La reconquista y reposición del valle del Ebro, in Est. E. M. C. Aragón, iii (1946), 39-83; idem, La reposición de Zaragoza por Alfonso el Batallador, in Est. Ha. Social, Esp Madrid 1949, 205-23; idem, Obras de lideranto de Andaruz, Saragossa 1965; E. Lévi-Provençal, Hist. Esp. mus., index; J. Mallas, El texto de hizbaddar musulmanes referentes a la Cataluna carolingia, in Quaderns d'Estudis, xiv (1922); M. (FAHIR İZ)

ARBA'ÜN HADITH', a genre of literary and religious works centred round 40 hadīths of the Prophet.

This type of work has arisen, from one aspect, from the hadith which says "The member of my community who learns 40 hadīths connected with the pre- dictions of the faith will be raised to life by God among the authorities on the law and the scholars", and from another aspect, from certain secondary factors: the desire to be covered by the Prophet's grace, the hope of escaping the tortures of hell-fire, the inten- tion of major others to see the great ones, etc.

Works in this category of arba'ūn hadīth' may be written in prose, verse or a mixture of the two. The contents may also differ: some writers and compil- ers are content to gather together the hadīths, others add to them explanations, whilst yet others adorn and complete these texts by means of accounts, āyît and homiletic material. The elements of works

SRAGHON. The Kaya's relieved al-Sumayl while 'Abd al-Rahmān I attempted a crossing to Spain (bkhabīr, 62-79). Later the amīr sent there his trusted lieu- tenant, the nāṣirī Bâdîr. The Yemenīs Sufaymān b. Yakâin al-Kalbī and al-Ḥusayn b. Yâlâyî al-Anṣârî, by promising Saragossa to Charlemagne, encouraged him to undertake his ill-fated expedition of 778. This Upper March was always an extremely volatile zone and politically very unstable. We find there the Tudjibid Banū Salama in the region of Huesca, oust-
in this general category are selected according to dif-
fering principles: *abdulhadi kadriyya*, of divine inspira-
tion [see HADITH KUDSI]; *mathas of the Prophet*; *hadiths*
chosen from amongst those texts easy for learning by
heart; etc. *Arba’un* hadiths, *khutbas* hadiths, *tadris* [see HADITH KUDSI]; *statements of the Prophet*;
and his Companions (or even his children and grand-
children), sects and mysticism, knowledge and the
scholar, politics and law, the holy war, social and
moral life, etc.

The genre is called *cihil hadith* by the Persians and *kirk hadith* by the Turks. It developed first of
all in Arabic and developed extensively. Amongst
the oldest collections are those of Abu Bakr al-
Adjurri (d. 330/942) and of Ibn Wad’ân (d. 494/1101). But the most celebrated is that put
together by Muhîyî ’l-Dîn Abû Zakariyya Yahyâ al-
Nawawî (631/1235-77), the number of numerous
comments in Arabic and translations into other
Islamic languages. The first *cihil hadith* collections
in Persian which have come down to us were written
in the 6th-7th/12th-13th centuries, sc. the *Tâbîb al-
’Ali. However, the most famous and most widely
reprinted collection is that composed in quattrain
verses, the *Târgayûn-yi Arba’un hadith* of ’Abî
al-Rahmân Djamî (817-98/1414-92). The works of
Nawawî and Djamî were translated into Turkish
and published on many occasions.

It should further be noted that the Turks not only
accepted the genre quite in its general aspect, but also
composed didactic works full of teaching points.
The oldest of these in Turkish known to us is the
*Nahhâl al-furadîs* of Mahmûd b. ’Ali (8th/14th cen-
tury), followed in the next one by Kemîl Umâmî
(transliteration after 815/1412) and also ’Ali Shîr Newâ’î (845-
906/1441-1501), and then in the 10th/16th century
by Fudhîl (3885-963/1480-1556), Usîlî (d. 975/1568,
Newît [942/1007-1035-99], *Arif Celebi Nafta*î (transliteration 979/1571) and Muṣafî ’Ali (translation
1005/1597). This work of translation was further
pursued with enthusiasm in succeeding centuries, the
most important works being those of Mehmed Tiynûn
(1011/1603). Ismâ’îl Rusukhi (d. 1040/1631), Yusuf
Nabî (1052-1124/1642-1712), ’Othmân-zâde Ti’bbî
(1120/1712), Munif (1145/1733), ’Omer Dîyâ’î al-Dîn
(publ. 1326/1908) and Ahmed Na’îm (publ.
1343/1925).

*Arif Celebi, dervish mystic, grandson of*
Mawlânâ Dîjàl al-Dîn Rûmî and the third *khâjîfî* of
the Mawlawîya order, was born at Konya on 8 Dhu
‘l-Ka’dâ 707/6 July 1272 as a son to Sulûn Walâd and
Fâtimâ Khâtûn, the daughter of the goldsmith
Sâlûh al-Dîn. His actual name was Dîjàl al-Dîn
Farâ’înî, Mawlânâ, who named him thus after his two
grandfathers, maye him also the by-name *Arif*
*Arif*, from which the commonly-used Turkish form
Ulû *Arif* has been derived.

An extensive biography with many hagiographic traits
is contained in the eighth chapter of the *Munâkh al-
ârifîn* by Allâkî [q.v.]. Being one of *Arif’s* pupils, Allâkî
was an eyewitness to a great part of his life and accom-
panied him on a number of his travels. *Arif* frequently
wandered through Anatolia, but he made journeys to
’Irâq and Persia as well. On one occasion, Sulûn Walâd
sent him to the court of the Il-Khan at Sultânîyâ to
remonstrate against the pro-Sâfî policy adopted by
Oldjeytî. In 712/1312, *Arif* succeeded his father as
the head of the Mawlawîya. His death occurred at
Konya on 23 Dhu ‘l-Hijjâ 719/5 November 1320.
His tomb is still extant in the Mawlawî târîb.

The anecdotes related by Allâkî depict *Arif* as a
colourful personality. Through his conduct, he
expressed the antimasonic tendencies inherent in
the Mawlawî tradition from its origin. He acted like a
real dervish and indulged in long and exhaustive *samâî*
sessions which often gave rise to scandal.

Unlike his ancestors, *Arif* was neither prominent
as a scholar nor as a writer. The only works known
to us are collections of his *ghazals* and his quatrains
which were all written in Persian. The rareness of
these poems both in separate manuscripts and in col-
clections of Mawlawî poetry suggests that they were
not very highly appreciated in the literary tradition
of the order. A manuscript in the Leiden University
Library contains a collection of *Arif’s* *ghazals* and
*rubâ’îs* under the heading of *Arâr al-Afâ’în* (Or. 1676
B/8, ff. 89a-130a).

*Arif, Mîrzâ* Aqî ’l-‘Asr, Persian revo-
lutionary poet and satirist, was born in Kâzîmîn
ca. 1880, and after studying Persian, Arabic, callig-
raphy and music, became a rovelgâfân, an occu-
pation that he abandoned after his father’s death.
At 17 he married a young girl against her parents’ wishes, and two years later was obliged to divorce her; he never married again. Leaving for Tehran, he took service at the court of Muhammad al-Din Shāh, where his singing attracted the attention of the sovereign and leading courtiers. Court life, however, did not appeal to him, and he returned to Kazvin, where he remained until the 1906 Constitutional Revolution, of which he was one of the leading spirits. His outspoken and reckless verses, usually sung at public concerts, made him many enemies, including even his former friend the poet ʿIraqī Mīrzā. In 1915 he joined the muḥādjarat to Kermānšāh, whence he went to Istanbul, returning to Persia in 1919. During the next few years he gave his support successively to Col. Muhammad Tākī Khamān, the dissident gendarmerie officer in Khurasan, Sayyid Dīvān, and Rīdā Khamān. In 1924 he campaigned in favour of the establishment of a republic, but after the accession of Rīdā Khamān to the throne he was unable to continue his public concerts, and retired on a small government pension to Hamadān, where he died in poverty in 1934. His Dīwān was published in Berlin in 1924 together with an autobiography on the lines of Rousseau’s confessions. ʿArīf was a man of dervish-like disposition, and had no natural or material wealth or respect for authority and position. His poetry is full of social satire, attacks on corruption, and nostalgia for Persia’s great past, all couched in popular language free from classical artificialities.

ʿAРИF, MĪRZĀ – ARNA'B

Grammatically this noun is feminine and denotes the hare with the general meaning of a leporid, either as a collective noun, or specifically the doe hare (see Ch. Pellar, Sur quelques noms d’animaux en arabe classique, in GLECS, viii, 95-9). In all the Arabic dialects the term maintains this meaning, but in Maghribi two plural forms are found, rawūdīn and arnāīn. Today its archaic synonym kwâd (fem. kwâda) seems to have been forgotten. Arabic lexicographers give it the root r-w-b (see Lit. according to the rules of triliteralism, but its etymology should perhaps be sought in Sumerian or Akkadian, from which a number of animal and bird names in Arabic are derived (like ḥīyā, ḡurāb, iwwāz, ḫarṣī, etc.). Semantic equivalents to arnb are khāngā, in Persian, tāsan, Turkish, avtul (pl. tvatul, vtatul), in Berber of the Maghrib, merewel (pl. merewel, fem. merewelt, pl. merewelitn) from the verb tvatul, “to flee”, in Tamaḥak, while ḥawšāb (pl. ḥawšān, fem. ḥawšānit, pl. ḥawšānit) is little used.

Among the order of lagomorphs and the family of leporids, the genus lepus is represented in Islamic lands predominantly by the lepus capensis or Cape hare. Its breeding ground stretches from Africa (Cape of Good Hope) to China (Shantung, bordering on the Yellow Sea of Asia). In the Mediterranean zone it is found with the plains species, l. granatensis (Spain), l. solstitialis (Morocco), l. mediterraneus and l. karayici (Algeria), l. tanetae (Tunisia) and l. rutschchild (Egypt); in Western Morocco the smaller l. atlanticus is also found. In the hills are found l. marocanus and l. pediunculatus (Morocco) and l. sefranus (Algeria). The characteristic desert hare, l. arabicus, is found on the borders of the Sahara, together with l. palidus, l. harti and l. barcaus, from Morocco to the Sinai Peninsula. A systematic study of the hares of the Arabian Peninsula has yet to be made. The species l. campacrus is represented in the Near East in several isolated places as well as l. syriacus (Lebanon) and l. iudeae (Palestine).

Literary authorities differ about the gender of the noun ʿarnāb; some see it as masculine with an associated feminine ʿarnāba (see al-Ībāh fi fīl al-ībāh, Cairo 1929, 391), but country people, both sedentary and nomadic, knew from very early times how to distinguish the sex and age of hares by a specific terminology which is unambiguous. The male, or buck, was called ḥarâs (pl. ḥarāz, ḥarâz) or ḥawshāb or ḥawšāb (Maghribī ʿarâbī). The female, or doe, was named ḥirzā (Ṣaʿdī, ʿulāmā); while suckling she was called ḥamārīn. The levet was called ḫarnīk (pl. ḫarnānak) or the ṣawāla, and the weanling ṣulba (Maghribī ḫirbāḥ, ḫirbāh; Tamaḥak...
The hare is certainly one of the most highly-prized game animals in Muslim countries, as elsewhere. Where to catch it, man has employed all kinds of ingenuity; he has caught it with nets (khibāla, pl. ‘abiyāla), snares (ṣurak, pl. aṣurāk) and traps (maghāri, pl. maghāriq; mughawwāl, pl. mughawwāyla; bukna, pl. bukna), and he has hunted (ṣurada) with the help of trained beasts (ṣurāt) like the gazacond (salātī salātī, pl. ṣurāta) which always hunts by sight, and pointers or other hounds (ṣurāk, pl. ṣurāk, Maghribī harts, pl. ṣurātā, which hunt by scent). The Persians like hawks, falcons (ṣurādīr) and trained dogs (ṣurātā) are also used. He has used various weapons to attack the hare like the thrown cudgel (ḥirāka, zarīla/zarūdiya), which the young shepherds of the plains of the Maghrib can wield so skilfully, as well as the sling (mikdāqa, mikdāla), the bow, then the cross-bow and eventually firearms. As well as man, the hare is surrounded by a number of natural enemies, carnivores and rapacious predators; it is especially threatened by the tawny eagle (aydīna ẓafīna) which is appropriately called ‘alāb al-arnab or šak al-arnab. Hare flesh has no fat or tendons, owing to the fact that it is the asexual eunuch of the animal. It is instinctively attracted to certain aromatic and sweet plants, and the Bedouin expression ʾanab al-khulī, "the hare of the sweet plants" summarises the appreciation of the gourmet and the glutton (Hayaqān, iv, 134). The gastronomic authority Abu l-Wadāʾī al-UkJī, a man of the desert and one of the informants of al-Djāhīz, gave pride of place to the hare in the metaphor: "If the ʿumra红枣xūrd (dabī ḥq.; q.), had been a chicken, the hare would be a francolın (dardāj)" (Hayaqān, vi, 353). Oriental cookery books esteem hare highly in their chapters on meats (see M. Rodinson, Recherches sur les documents arabes relatifs à la cuisine, in REI [1949], 107). To serve jugged hare (ʿanabī) or roast saddle of hare (ʿanīj; maghār) to a guest was a mark of honour, especially if one kept the kidneys for him; these were regarded as the finest morsel, as can be seen from the picturesque maxim al-im ʿaṣkā-ka min kākū fat ʿanab "feed your brother with hare's kidneys," which meant using the tenderest words to console a friend in difficulty.

Al-Djāhīz draws attention to the double benefit which the hare provides. Apart from its highly desirable flesh, its fine warm pelt also has a commercial value in the fur trade [see ĠAR] and the textile industry. An anonymous satirical line of verse (Hayaqān, vi, 360) alludes to the trade in these terms: "When gentle folk move (among them), it is to see them touching hare skins with their hands wide open". The sentence expresses the scorn which has always attached to rabbit skin dealers. Rabbit skin is not distinguished from hare skin in the making of fabrics called ʿawānāb/munānab and certain felts. The fur is also used to line gloves and slippers and to trim winter bonnets. It is not misconceivable that they were also used as counterfeit furs, which would normally be more highly priced, but the secrets of dyeing and other treatments were known only to the tricksters. The colour of the fur can vary from light brown almost to blonde according to the hare's habitat, and certain beige materials are called marnābhīnā "hare coloured"; conversely, in popular French the hare is known as "capuchin" because of the brown habit worn by the monks of that order. The hare's tail is black on top and immaculately white underneath; it is conspicuous even from a distance because the tuft is always erect. The Saharans have a name (abbāt nac₀wāq) "the one with the flower" which is used for the hare as well as for the fox.

As Islam expanded westwards to Spain and north-eastwards to the Indus, Arabs were introduced to a second leporid, the rabbit (Oryctolagus cuniculus), both wild and domestic. Since there was no specific term for rabbit in the Ġaruṣīya, ʿanab was used. At first they regarded the wild rabbit simply as a small hare, and it was sometimes called "levert" (ghānīk). The duality of the term ʿanab in the East to cover hare and rabbit is a source of constant confusion, but one of the first to find difficulty with it was Ibn al-Mukaffa. When he was translating the fables of Bidpay from Pahlavi, he encountered the typically Indian episode of the elephants who were looking for water and trampled over a rabbit warren (and li ʿl-ʿanāb), crushing the inhabitants in their burrows (ḏiẓir, pl. ʿadhār, ʿadḥāna, ʿadḥara), but the
clever rabbit Fayruz (= Felix) became their spokesman and drove away the elephants by a trick (see Ibn Sa'id, i, 22). For Tunisia, Ibn Sa'id (in al-Makhz, Anecdota, i, 22) notes that the wild rabbits (arzab / arzid) are raised there from Spain in the 7th/15th century; the wild rabbit is to be found only on some coastal islets, and it is common in Algeria (cuniculus algirus) and in northern Morocco. According to Kur'anic law, the flesh of a hare which has had its throat cut ritually may be consumed; the doctors of law agree unanimously about this, for the hare is a product of hunting and the animal is herbivorous and not carnivorous. It is true that the same hadiths suggest that the Prophet Muhammad abstained from eating hare, but no-one accepts this as a formal prohibition [but see see YA’AYAN concerning the Rāfīḍīs]. This permission extended ipso facto also to the rabbit when the animal was introduced to Muslims. In al-Andalus, the rabbit was highly prized and the only restriction imposed on it was that it should not be sold around the Great Mosque. Instead, a place was chosen by the muhtasib and there they had to be offered for sale properly equipped by the owner to protect him from evil eyes (see AYN). Every man who went into a strange village would equip himself with one to protect him from evil eyes [see AYN]. Since Sasanid times in Iran, hares and rabbits have held a position of not negligible importance in the field of Muslim art. They figure either as a decorative motif incorporated into a hunting scene or are themselves the main theme of inspiration. Besides the mass of Persian miniatures, probably the most typical representations of leporids are in illustrations of the incident mentioned above, where the sly Fayruz harangues the king of the elephants; it is found in Syrian manuscripts of the 8th/14th century of Kalila wa-Dimna and in Provencal romance literature, for example in the fable of the wily rabbit from Provence (op. cit., i, 23). It is found in illustrations of leporids. Perhaps after all, Arab empirical medicine was not just pure fancy. Dried and powdered hare’s blood had recognised healing qualities for sores and wounds and helped to extract foreign bodies like splinters and thorns; it was also used to treat arrow wounds. In surgery, leporid hair was used instead of cotton wool as an absorbent tampon and as a cap for ruptured veins and arteries.

Since Sāsanid times in Iran, hares and rabbits have held a position of not negligible importance in the field of Muslim art. They figure either as a decorative motif incorporated into a hunting scene or are themselves the main theme of inspiration. constellation is called “Arneb” (α Leporis, mag. 2.7; see A. Benhamouda, *Les noms arabes des étoiles*, in AIEO, Algiers [1951], 179-80).

**ARMOURED [see silanda]**

**ÄS.** Arabic for the myrtle, *Myrtus communis* L. (Myrtaceae), the well-known fragrant, evergreen shrub, growing to over a man’s height. The term, derived from Akkadian *šuwa* came into Arabic through Aramaic *šā₂*; the Greek term μυρων (μύρωτος) exists also as *marwa* (and variants). Much material has been collected by I. Löw (*Die Flora der Juden*, ii, 257-74), among which are many, more or less locally-defined species. Occasionally, myrtle is mentioned in the *hadith* (Darîm, see Wensinck, *Die Flora der Juden*, ii, 253), by the Arab botanists and in the verses quoted by them (Dinawarî, K. al-Nahhâf, ed. B. Lewin, Uppsala-Wiesbaden 1953, 23 f.; Asma’î, K. al-Nahhâf, ed. al-Ghanaym, Cairo 1992/1972, 32), but the plant was mainly used as medicine. Like Dioscorides, the Arabs knew the black garden-myrtle (al-dāri al-hādpî or al-aṣūr) and the white field-myrtle (al-dāri al-barî al-ḥadyî), the leaves, blossoms and berries of which occasioned positive therapeutic results. The scent of the myrtle mitigates headaches and invigorates the heart. The extract is suitable for hipphathâ, which cure ulcers of the fundament and uterius; as a beverage it calms down the spitting of blood and cures coughs and diarrhoea. Dried and pulverized leaves of the myrtle remove putrescent boils and facilitate the growing of new flesh. Râźf, otherwise critical and not given to superstition, curiously enough declares in his *Mukhâṣṣas*, more particularly of Ibn Hishâm, more particularly of Ibn Hishâm, more particularly of Ibn Hishâm, that some of his traditions go beyond the serious framework accepted by Muslim theological good sense, as the fact that Ibn Musâ was under no obligation to masters recognised as such by the majority of the Egyptians who are known to us from this period, in particular with ‘Abd Allâh b. Lahî’ (97-174/715-90) and al-Layth b. Sa’d (94-175/713-91), a great master and one of the richest men in Egypt who, on whose behalf it is common believe, following his flight from the persecution of the Umayyad family to which he himself belonged (A. DIETRICH), exercised the most profound influence on him, although the texts that are available to us show very few signs of this influence expressee values. Opinion is divided among Arab-Islamic writers as to the value of Asad’s activity as a traditionalist; while al-Bukhârî calls attention to the reputation of his *hadîth*, al-Nasâḥ refutes this statement to some extent in declaring that he is “worth of belief, but he would have done better not to write” *(Dhahabî, Hâfiz; Ibn Hâджâr, Tahâdhî)*. Since then, the tendency has been to attack him vociferously, pointing out the exaggerated side of his traditions, as is indicated by Ibn Khâlid’s resume on this subject (Mukhtârât, 564-6). This distrust, like that shown towards the work of Ibn Iṣâk and many authors of the early period of Islam, is explained, not so much by the fact that some of his traditions go beyond the serious framework accepted by Muslim theological good sense, as the fact that Ibn Musâ was under no obligation to masters recognised as such by the major schools of *hadîth*. On this basis, the author’s fate was no better than that of his master Ibn Lahî’, whose material has been taken into consideration and propagated by other means, and especially under other names (R.G. Khouyry, *Asad*, 29). Asad’s known primarily as transmitter of the *kitâb al-Tawjîh* of Ibn Hâджâr, more particularly of the part that is associated with Ibn Munâbbih (Abbott, *Studies*, i, 12; R.G. Khouyry, *Wâhî b. Munâbbih*, p. 296, esp. 292). Asad’s interest in the Yemeni heritage is no doubt explained by the in

ARNAB – ASAD b. MÜSÄ b. IBRÂHİM 87
fluence of the policies of Muʿawiyah on all his descend-
dants, but also by the author's wish to borrow mate-
rial for his own writings from a ǧāṣy as famous as Wāḥb. As a transmitter, he is also encountered in
a number of historical and ascetic books, like the
Fihrist of Ibn ABD al-Hakam (see Bibliography), where
there is a large number of traditions linked with his
name; these are, like the majority of those attrib-
uted to his Egyptian masters, of an ascetic and pious
nature. Other works are further attributed to him: Muṣnad Asad b. Mūsā (Ibn Ǧhayr, Fihrist, 141-2; Ibn
al-Farādī), the four versions mentioned by the isābāt
of Ibn Ǧhayr were the work of one Nāṣr b. Marzūk.
Not one of them seems to have appeared in book
form. Then there is a treatise entitled Risālat Asad
b. Mūsā ilā Asad b. al-Farādī [112-213/759-828] fi
laṣām al-sunnah wa l-tabāhā dar min al-bidā (Ibn Ǧhayr,
299) (see R. Sayyid, who seems to have discovered
a manuscript of it). Ibn Ǧhayr (270) also mentions
Fāḍlīl al-taḥābīn, a book that he attributes to Saʿdīn,
son of Asad, which Ibn Ḥajjār had seen in two
volumes and which apparently contained, according
to the last-named, a great deal of information afford-
ed by the father (Asad) and his circle (Ibn Ḥajjār,
ibid.). Finally, there is the Kitāb al-ʿiḥād wa l-ībāda
wa l-ḥaqqīn min al-bidā (Ibn Ǧhayr, 339) (see R. Sayyid, who
seems to have discovered a manuscript of it). Ibn Ǧhayr
comprised several books (kutub) corresponding to the
three parts of the title which he supplies.
Unfortunately, only two copies of the Kitāb al-ʿiḥād are
available to us, one of them preserved in Berlin
(Sprenger, 495) the other in Damascus (Zahiriyya,
madj., 100/1). The first was edited by Leszynsky
who, in the guise of an introduction, devoted a
study to the traditions of the book and compared
them with their parallels in Judaism and Christianity,
adding to it all the “certificates of reading” in both
nature. Other works are further attributed to him:
Kitdb al-ʿṣūl (Sprenger, 495) the other in Damascus (Zahiriyya,
ma[dj.], 100/1). The first was edited by Leszynsky
who, in the guise of an introduction, devoted a
study to the traditions of the book and compared

will nevertheless be condemned to eternal punishment; for this al-Asamm did not base himself, like his Mu'tazil colleagues, on Qur'anic evidence (which refers to unbelievers), but on the unanimous judgment of the community (ibid., 278, 11. 3 ff.; Ibn Hazm, Fisal, iv, 45, 11. 10 ff.). He based himself on a peculiar exegesis of sūra III, 104 (cf. Ibn Hazm, Fisal, iv, 171, 11. 10 ff.). He wrote about the createdness of the Kūr'ān at a moment when other Mu'tazils (cf. Ḥṣḏ'arī, 272, 11. 4 ff.) had not yet entirely corresponded to those of other Mu'tazils (cf. Ḥṣḏ'arī, 272, 11. 2 ff.); he based himself peculiarly on a non-existent exegesis of sūra III, 99 (cf. Fīhrīs, ed. Badawi, 170, 11. 5 ff.).

Theological doctrine most strongly connected with Asamm's name was his denial of the accidents (dā`īd), which he put in opposition to Dirār b. 'Amr (q.v. and may have brought him into a certain connection with Ḥṣḏ'arī b. al-Hakam (q.v.; cf. Tawḥīdī, Ḥadīth, ii, 825, ult. ff.). He seems to have proceeded from a sensualistic basis: only bodies are visible; qualities appearing on them cannot subsist by themselves and can therefore not be ascribed a separate existence (ibid., also Ḥṣḏ'arī, Maksālit, 335, 11. 12 ff.). In comparison with Dirār's ideas, this was perhaps not so much a difference in substance but in explanation and in the conceptual apparatus. Like Dirār, he was led to deny a separate existence of the soul (cf. Ḥṣḏ'arī, Maksālit, 335, 11. 1 ff.; and 331, 11. 6 ff.; Ibn Ḥazm, Fisal, iv, 70, 1. 4 and 74, 4. 1 ff.). Dirār thought also like him he seems to have rejected the idea of kūmān (q.v.; cf. Ḥṣḏ'arī, 328, 11. 14 ff.). In any case, he was not an atomist; this is why he was attacked for his doctrine by Abu ʾl-Hudhayf, who tried to show that juridical obligations are normally not concerned with man as a whole, but with one of his accidents (e.g. his prostration in prayer, or his being lifted in case of adultery; cf. Fīhrīs, 262, qpa. ff.). Ḥṣḏ'arī b. Fīহdā, a disciple of Abu ʾl-Hudhayf, seems to have been mainly shocked by the ensuing denial of movement (which, understood in a very broad sense, was considered as the only accident by al-Nazẓām; cf. the title of Fīheritance's book in Fīheritance, ed. Fīheritance, 69, 1. 1). Many opponents and, influenced by their polemics, the later heresiographers, tended to understand Asamm's denial of the accidental character of qualities as a denial of qualities as such (cf. Ḥṣḏ'arī, 343, 11. 12 ff.; Baghdādī, Fīheritance, 96, 11. 8 1/116, 11. 7 ff.; u.l.; Ḥṣḏ'arī, 7, 11. 14 ff., etc.). He consequently also regarded the Kūr'ān as a body, and may have derived its createdness from this; God is the only essence which is not a body. Under this aspect, the doctrine seems to have been taken over by Ḥṣḏ'arī b. Muhāshīr (q.v.; cf. Ḥṣḏ'arī, 588, 11. 4 ff.).

In addition to these ideas, al-Asamm is frequently mentioned for his unusual views concerning political theory. Government (inmām) was according to him not an obligatory attribute of human society; the ideal community is the community of the righteous which can do without a ruler (cf. Baghdādī, Uṣūl al-dīn, 272, 1. 10 and 271, 11. 14 ff.; many later sources like Māwardī, al-Abkām al-sulātīyya, ed. Enger, 3, 1. 7; Ghazzālī, Fadā`īt b. Bānīsyya, ed. Badawi, 170, 11. 5 ff.; Rāzī, al-Muḥāṣṣal, 176, 11. 9 ff.; etc.). Government is therefore not prescribed by reason nor by revelation, but is a mere practical measure against human iniquity. Theoretically speaking, universal knowledge of the Kūr'ān should be sufficient in order to keep a society in order (cf. Pāzīdī, Uṣūl al-dīn, ed. Lims, 186, 11. 11 ff.); but the reality being imperfect, the Muslims always decided to choose somebody as their inmām. This can only be done by consensus (cf. Ḥṣḏ'arī, 460, 11. 6 ff.; Baghdādī, Fīheritance, 150, 11. 4/164, 11. 1 ff.; etc.), and once somebody has been agreed upon, the election is irreversible, even if a more appropriate (affal) candidate presents himself afterwards (cf. al-Naṣīḥ, Uṣūl al-nihāl, ed. van Ess, § 99). Armed resistance against a ruler is only allowed if this person has seized power by violating the proper form of election (cf. Baghdādī, al-Muṣāma, probably in correspondence with the policy pursued by al-Mahdi (156-69/775-785), and may have derived its createdness from this; God is the only essence which is not a body. Under this aspect, the doctrine seems to have been taken over by Ḥṣḏ'arī, 11. 5 ff.; u.l.)

Applied to the historical reality of the past, this meant that al-Asamm accepted Abū Bakr and 'Umar as the most appropriate candidates in the moment of their election. After 'Umar's death, the affal was 'Abd al-Rahmān b. 'Awf, who demonstrated his virtue by renouncing the caliphate for himself; 'Uthmān was only second in rank after him (cf. Naṣīḥ, Uṣūl al-nihāl, § 100). In contrast to him, 'Ali was not elected by a ḥishā, i.e. by consensus; his government was therefore unrighteous (ibid., § 101). This does not mean that all his measurements were unlawful per se; in the case of his war against Ṭaḥla and Zubayr and of his establishing the arbitration at Siffin, an impartial assessment would have to proceed from his intentions and those of his opponents, whether he acted out of mere despotism or in order to put things right again. But as these intentions are no longer known, we have to suspend judgment. It is clear, however, that Ṭaḥla and Zubayr had a certain superiority over 'Ali (perhaps because they sought revenge for Ṭaḥmān and that Abū Mūsā al-Asammī was right when he deposed 'Ali in order to give his community a single ruler (cf. al-Muḥāṣṣal, K. al-Dīnāl, Najāh 1382/1963, 26, 11. 16 ff., tr. M. Rouhani, La victoire de Bassora, Paris 1974, 17, and, and, shorter, Ḥṣḏ'arī, 457, 11. 13 ff.; ibid., 453, 11. 13 ff.). Muḥāṣṣal was right in his resistance against 'Ali, because he had been legally appointed governor of Syria by 'Umar and confirmed in his office by 'Uthmān; he would have only been obliged to hand over Syria to a ruler who had been elected by consensus (cf. Naṣīḥ, § 102).

Thus far Asamm's theory could be learnt from his books, mainly his K. al-Inmām (cf. Ḥṣḏ'arī, title no. 7) which, for understandable reasons, encountered opposition especially from the Ṣḥi`tis and from the theologians sympathetic to them: from Ḥṣḏīr b. al-Muṣāmār (cf. Ḥṣḏ'arī, ed. Fīheritance, 162, 1. 21), probably from the early Shi`ī Fadl b. Shāhānī (died 260/874; cf. Ḥṣḏīrī, 150, 11. 10 ff.) and even much later from the ʿabādī al-Muḥīd (died 413/1022), who also seems to quote from the original in his K. al-Dīnāl, 26, 11. 16 ff. Al-Naṣīḥ also preserves, however, an oral tradition from Asamm's closest adherents saying
that there may be several rulers at once in the Muslim community, provided that they are legally elected and co-ordinate their efforts in righteousness. He based this theory on the fact that the Prophet appointed governors for different regions and that, after his death, his prerogative had been transferred to the people. At a certain point in their history, the three regions in the Middle East, who may decide according to their own wishes (cf. §§ 103 ff). As to the origin of these ideas, Goldziher suggested the influence of the Pseudo-Aristotelian Piπoμαλαίηος which may have been translated thus early (1916), vii, 276 and Cheikho's edition of the text in Mahnig, x (1907).

For his own time, al-Asamm deemed it necessary to issue laws (cf. §§ 103 ff; cf. § 103 f.). Thus to the people and the ruler (cf. §§ 103 ff; cf. § 103 f.). As to the origin of these ideas, Goldziher suggested the influence of the Pseudo-Aristotelian Piπομαλαίηος which may have been translated thus early (1916), vii, 276 and Cheikho's edition of the text in Mahnig, x (1907), 311 f.; for an analysis of the text itself S. M. Stern, Aristotle on the World State, Oxford 1968, passim. M. Grignaschi in BEO, xix (1965-6), vii and M. Manzalaoui in Orients, xxiii-xxiv (1974), 207. But it seems easier to assume that they were stimulated by discussions in the Islamic world. For his own time, al-Asamm deemed it necessary to issue laws (cf. §§ 103 ff; cf. § 103 f.).

Al-Asamm's high appreciation of the consensus led him to a kind of theory that the "ilm (knowledge) is sufficient in number not to agree on a lie, are able to issue laws (cf. Ash'arf 467, l. 6 f.) for their shade is not a matter of mere probability; every true judgment is based upon an irrefutable proof. Among the different opinions, therefore, only one is right (cf. Abu 'l-Husayn al-Basn, p. 41). But he was quoted exclusively by the ancients," a phrase occurring nine times in the text itself S. M. Stern, Haddad, 37, 1. 4 and 222, 11. 3 f.; Nabhakht, Fadl al-Tizařl, 316, 1. 3).

A rational trend appears also to have permeated al-Asamm's Tafsīr. He develops the muḥkamāt as those verses, the veracity of which cannot be denied by any opponent as, e.g., all statements about the past; the muṭḥabbat are verses which tell something about the future and which reveal their truth only after reflection as, e.g., statements about the Last Judgment (cf. Ash'arf, 225, l. 3 ff; Baghhādī, Usūl al-dīn, 222, l. 4 ff; Rāzī, Mafātīḥ al-ghayb, Cairo n.d., vii, 182, l. 5 ff). There are thus no verses which remain permanently obscure to human reason. Al-Asamm seems to have concentrated on the meaning of entire passages (maḏā'ī); he did not deal with philological problems. The verse containing the problematic word abū (aūl LX, 31) is counted by him among the muṭḥabbat. Naẓārī critιcised this view and noted that his Muḥkama, which did not distinguish itself from non-Mu'tazīli commentators like Kalbī or Muqātīl b. Sulaymān (cf. Dżahīz, Haywān, i, 343, l. 5 ff; translated by Goldziher, Richtungen der Konkursausscheidung, 111 f.). But he was quoted exclusively by Dżubbařī in his lost Tafsīr (although perhaps only for one passage; cf. Fadl al-Tizařl, 316, l. 1 f.) and later on by Mūṣīrī in his Tawālīl al-ulum (cf. i, 59, l. 4 ff; 95, l. 8 ff; 103, l. 1 ff), by Ahmad b. Muhammād al-Thālabī al-Nīhābīrī (died 427/1035) in his Kāfī wa l-bayān (cf. GĀS, i, 615), by Ḥikīm al-Ǧuṣṣāmī (died 944/1101) in his voluminous Tafsīr, and by Fakhr al-Dīn al-Rāzī in his Mafātīḥ al-ghayb (cf. iii, 230, ult. ff; iv, 160, l. 13 ff etc). Dżahīz uses the word sometimes (cf. Haywān, iv, 73, l. -4 ff; also 205, l. 6 ff), and Tābārī may have known it, although he does not mention al-Asamm by name. But it was interesting mainly to theologically-minded commentators and accessible only in the East. Whether the ms. Khīr Ālī 53/8 really contains the text (cf. GĀL, S, ii, 984 no. 7) has still to be checked.

This Brunān Muṭₜazīī should not be confounded with another Muṭₜazīī by the name of Abū Bakr al-Asamm who lived in Egypt and who initiated the muḥna there at the instigation of Ibn Abī Duwād. He was called Naṣr b. Abī Laydh and was at least one generation younger than Abū al-Rahmān b. Kays. (cf. Kādī ‘Iyād, Tarīḫ al-mudawir, Beirut 1387/1967, i, 518, l. -3 ff; 527, l. 6 ff; 564, l. ff etc.; cf. the index).

ASṬĪR AL-AWWALĪN "stories of the ancients," a phrase occurring nine times in the Kur'ān (VI, 25/25, VIII, 31/31, XVI, 24/26, XXIII, 83/85, XXV, 5/6, XXVII, 68/70, XLVI, 17/16, LXVIII, 15/15, and LXVIII, 13/13; see also E/.
Jeffery, Baroda 1938, point with the opponent of the Prophet, al-Nadr b. Kommentar, Stuttgart 1971, 137). The commentators and in their opinion silly, things could already be of the former (generations) when similar, asdfir against the doctrine of the Resurrection, by referring IV, 980b, s.v. KHALK) and there "put exclusively in al-Harith. Travelling as a merchant to Fars or al-
bara, although attribution and date are was declared a plurale tantum, or else entirely hypo-
thetical singular forms were reconstructed (Lane, and, more generally, the derivation of the word. It containing knowledge and wisdom which it was not blame-
confused statements." It was explained as reflecting This is philologically possible and would represent a kind of The fact that, with the exception of XXV, 5/6, all occurrences are at the ends of verses suggests a meaning expression that had been long in use. The appear-
ance of asdīr in a verse by the nakhlījam poet 'Abd Allah b. al-Zihārī, although attribution and date are uncertain, seems to support the assumption of its cur-
tency in Mecca in pre-Islamic times (e.g., Horovitz, Koranische Untersuchungen, Berlin-Leipzig 1926, 70; A. Jeffery, The foreign vocabulary of the Qur'an, Baroda 1938, 56 f.; P. Minganti, in RSO, xxxviii, (1965), 326 f., 351). With its general meaning hardly in doubt, most of the discussion has concerned the grammatical form and, more generally, the derivation of the word. It was declared a praele quantum, or else entirely hypo-
thetical singular forms were reconstructed (Lane, 1350). Its widely accepted derivation from s-t-r led to means such as "writings, written (accounts, stories)." It was glossing "lying stories," or asdīr "rhymed prose pieces," or, frequently, turrahdt "obscure and confused statements." It was explained as reflecting s-t-r 'ālā in the sense of "making up embellished sto-
ries for" (Ibn al-Athīr, al-Nihāya, s. r.d.). Later Muslims (as, strangely, also a modern scholar, D. Künstlinger, in OLZ, xxxix (1936), 482), imbued with respect for the cultural achievements of the "ancients," would ask themselves why the phrase should have been used in a negative sense when "the ancients wrote things contain-
ing knowledge and wisdom which it was not blame-
worthy to state", and give the answer that use of it was meant to criticise the Qur'an as unrevealed or as difficult and obscure (Ibn al-Dhawī, ʿādī al-mustnīr, Damascus 1384-8, ii, 20, to VI, 25).

Orientalists, beginning, it seems, with Golius, have suggested a derivation from Greek histori, see, e.g., the references in T. Noldeke and F. Schwally, Geschichte des Qanān, i, 16; Horovitz; Jeffery; R. Köberl, in Orientalia, N.S., xiv (1945), 274-6; F. Rosenthal, A History of Muslim historiography, Leiden 1968, 28 f.; Paret, op. cit.). This is philologically possible and would make good sense. However, neither this etymology nor another connecting the word with Syriac ḥa-r-t "stupidities" (Künstlinger) can be supported by proof, nor is there any compelling evidence for a South Arabian origin. For the time being, its connection with Arabic ʿādārī to write" (possibly supported also by Kurān, XXV, 5/6) appears to have the best claim to being correct.

Bibliography: given in the article.

(F. Rosenthal)

'ÂSHIK WEYSEL, modern Turkish 'Âshik Weysel (1894-1973), Turkish folk poet and the last great representative of the tradition of Sâz şâfîleri [see KARAĐAGHAÝAN]. He was born in Sivrihâl, a village near Shahrkîsâh of Sivas province, the son of a farmer, Kara Ahmed, whose family name of Şatîrogulu Weyssel rarely used. Loss of sight in both his eyes at the age of seven followed smallpox. At ten he began to chant poetry accompanied by his instrument the sîz [q.v.]. An 'âshik of his own village and other wander-
ing folk poets whom he came across and who dis-
covered his talent, taught him poetry and music and encouraged him to continue. In 1931, in a traditional gathering of folk poets at Sivas, he was hailed as a prominent 'âshik. In 1953 he joined, as a volunteer, the 10th Anniversary celebrations of the Turkish Republic in Ankara, to which he went wandering on foot during several months, accompanied by a friend. He went all over Anatolia reciting his poems and playing his sîz. He performed many times on Ankara and Istanbul radios. For a short while (1942-4) he taught folk songs in the Village Institutes [see KÖY INSTITUTLARI]. He died in his village on 21 March 1973. 'Âshik Weyssel was married and had six chil-
dren. Differing from many contemporary folk poets who joined the "social protest" literature of most modern writers, 'Âshik Weyssel preferred to follow the classical tradition of folk poetry in the line of KARAĐAGHAÝAN. 'Emrâh, Rahkefat and others and he sang of love, friendship, nostalgia, separation, life's mutability and death. He is the author of Depeşter (1944) and Safizman select (1950). His collected works have been edited by Umit Yaşar Oğuzcan as Depeşterleri (1970).

ASHRAF AL-DIN GILANI, Persian journalist and poet, was born in Râsht in 1871. He completed his early studies in Kâzîn, and from 1883 to 1888 was a theological student in Naqîf. Returning to Rasht, he earned his living as a letter-writer until the Revolution of 1906, when he began the publication of Nasım-i Şîmâl (a name that he also sometimes used as his subgüllesi). This weekly journal was suppressed after the counter-
revolution of Muhammad 'Ali Shâh in 1908, but the following years Ashraf accompanied the Constitutionalists forces on their successful occupa-
tion of Tehran, where he resumed publication of his journal. Although he admired Rıdâ Khan, he abandoned public life after the latter's accession to the throne in 1925, and devoted him-self to literary pursuits. Apart from his poems, which mostly first appeared in Nasım-i Şîmâl, he wrote a novel in verse and prose and works on history and phil-
osophy. He died in poverty and ill-health in 1934.

Though Ashraf's poetic talent was not up to the level of some of his contemporaries, he was an influen-
tial innovator in the use of colloquial vocabulary and style. He was an ardent supporter of constitu-
tionalism and social reform, including the emancipation of women, and a fervent patriot who often cited the example of Persia's great past. Nasım-i Şîmâl was regarded as one of the best literary journals of its day.

Bibliography: Ashraf's poems were collected in Bâghi-i Bâhith, Tehran 1919, and Djilik-i davâm-i Nasını-
î Şîmâl, Bombay 1927; Biographical details in: E.G. Browne, Pers and poetry of modern Persia, Cambridge, 1914, 182-200; M. Ishaque, Iliânân-ı İran dar 'ar-
i hâdit, i, Calcutta 1933, 146-70; ibid., Modern Persian poetry, Calcutta 1943, passim; Sayyid Muhammad Bâkî
Burka'i, Sukkawawar-i na'mi-yi mu'asir, ii, Tehran 1951, 250-5; Muhammad 'Sadir Hāshimi, Tirki-i āqar'ud wa ma'allalī-ti Irān, iv, Tehran 1953, 295-9; Bozorg Alavi, Geschichte und Entwicklung der modernen persischen Literatur, Berlin 1964, 51-5.

ASHUTRKA, Astorga, the ancient town of Astorga, the Asturica Augusta of the Roman period, capital of the Conventus Asturum, already by then a focal point for communications (J.M. Roldán, Iter ab Emerita Asturicam. El camino de la Plata, Salamanca 1971), and later a halting-point on the “route of the herds” (R. Aiken, Rutas de trasluminación en la Meseta castellana, in Estudios geográficos, xxvi (1947), 192-3) and on the “road to St. James” (G.C. Dubler, Los caminos a Compostela in la obra de Idrisí, in An., xiv (1949), 114; N. Benavides Moro, Otro camino a Santiago por tierra leonesa, in Tierras de León, v (1964). Al-Udhrf compares it with Saragossa (F. de la Granja, La Marca Superior en la obra de al-Udhrf, in Estudios Edad Media Corona Aragón (1967), 456). Astorga was another urbs magnifica, although Theodoric destroyed it in 456 (A. Quintana, Astorga en en tempo de los suevos, in Archivos Leoneses (1966)). Al-Idrisí says that Astorga was “a small town, surrounded by a green countryside” (E. Saavedra, L’emeritense y el norte de la España de Idrisí, Madrid 1881, 67, 80; H. Mu’nis, Ta’rīkh al-джغرfiyya wa t’-джгрф бfi fi ’l-Andalus, Madrid 1967, 265). Astorga was captured by Tarik b. Ziyâd in 95/714. In 718 there was formed to the north of it the kingdom of the Asturias, which nevertheless did not include all the territory of the Conventus Asturum (G. Fabre, Le tissu urbain dans le N.O. de la peninsule, (G. Fabre, Le tissu urbain dans le N.O. de la peninsule (1966). Al-Idrfsf says that in 729/1331 that Astorga was re-established there (A. Quintana, Astorga 1909. There exists an outstanding monograph by M. Rodríguez Diaz, Historia de la muy noble y benemérita ciudad de Astorga, Astorga 1909.

ASHMA’ BINT ‘UMAYS B. MA’D-AL-KHĀṭAMIYYA, a contemporary of the Prophet (d. 39/660-61). Her mother and half-brother ‘Asaf b. Zubayr, called al-‘Adżuf al-Qurāshīyya, was famous through the illustriousness of her sons-in-law, amongst whom were included the Prophet, al-‘Abbās b. ‘Abd al-Muttalib and Hamza b. ‘Abd al-Mu’talib (Ibn Ḥabīb, Muḥabbār, 91, 109), as well as of Asma’’s husbands. In fact, the latter probably married in the first place Rabī’a b. Ruyāh al-Hillâlî, by whom she had three sons, Mālik, ‘Abd Allâh and Abî Ḥusayyâ; but all the sources agree that she was successively the wife of (1) Dja’far b. Abl Talib, by whom she had three further sons, ‘Abd Allâh, ‘Awn and Muhammad, with whom she emigrated to Abyssinia, where she saw for the first time biers, introducing them subsequently into usage in Arabia; the continuance of Dja’far’s line was assumed by Muhammad; (2) Abû Bakr, by whom she had Muhammad; and (3) ‘A’li b. Abî Ṭālib, by whom she further had Yalayâ. Despite all these marriages, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considered to be one of the famous mutazawwiajat, she was not considere

ASHRAF AL-DIN GIILANI — ASMA’
Abd al-Salam al-Asmar, 16th century revivalist of the ‘Arusiyya order, was born on 12 Rabii' I 880/16 July 1475 in the coastal oasis of Zliten (Zalftan, Zliten; obsolete forms, Zalften, Yazlftan, Yazlltm, Izbitan) in Tripolitania. He belonged to the Fayturiyya (Faytatiya tribe, whose lubab, the nickname al-Asmar was given to him by his mother who had been ordered to do so in a dream. He received his early mystical training (zalftan, yazlftan, yazlltm, izlltan) in Tripolitania. Coastal oasis of Zliten (Zalftan, Zliten; obsolete forms, zalften, yazlftan) to whose circle of disciples he belonged for seven years. According to the canonised history of the order, he received additional instruction from eight other shaykhs before he started to manifest himself as the revivalist of ‘Arusiyya, whose coming had been predicted by the founder of this tarika Almad 1. ‘Arsu (d. 868/1463). His proselytising efforts involved him in tribal rivalries and led to accusations of sorcery and heresy being brought against him. On various occasions he was expelled from villages and from tribal territories, where he must have aroused the hostility of the population because of his denunciation of the prevailing marriage customs (cf. WK, 113; see Bibliography), mourning rites (cf. WK, 117), and of the relatively free social intermingling of the sexes in tribal society (see e.g. WK, 127). He was expelled from the town of Tripoli, where he had settled in the early 16th century, and where he had become an increasingly popular religious leader, by the local ruler, who may well have considered ‘Abd al-Salam’s proselytising activities as part of a Hafsid (q.v.) plot aimed at his overthrow and the re-establishment of the dynasty’s power in the area. The actual revival of the tarika had not started until after he again took up residence in Zliten, where he estab-lished a zawiya (q.v.) in the territory of one of the local tribes, the Baraamaha, who had come to accept his claims to sainthood. Here he died in Ramadhan 981/January 1574.

‘Abd al-Salam al-Asmar gave a new direction to the original ‘Arusiyya of which he amended the ritual and to which he added his own body of teachings. He obliged his adherents to wear white clothes (‘Abd al-Salam 100 ff.), forbade smoking (WK, 70), and introduced the playing of the hadra (daff) during the hadra (q.v.), claiming that he had received an authorisation to this effect from heaven (al-Mulaydjl, 257 ff; see bibliography). In addition, he prohibited self-mutilating ritual during the hadra (WK, 201) and stressed the importance of attending these occasions by proclaiming that attendance was half the word (q.v.) and that absence consequently meant abandoning the word (WK, 170; Rawdat, 307), which he came to consist of a number of awd northern compositions by ‘Abd al-Salam himself, in addition to the original ‘Arsi word (WK, 393 ff). He claimed that the ‘Arusiyya were the original Shadhiliyya (q.v.), which was the tarika practised by the most intimate companions of the Prophet (Rawdat, 104), and that its outstanding nature was testified to by the fact that in a miraculous act, the angels had written the names of the prophets mentioned in the al-salia (q.v.) on the back of multifas (q.v.) (WK, 267). Moreover, he taught that anybody who had received the hadra and on other ceremoni-als occasions) would be protected by God in this world and in the next (WK, 217), and that his adherents would be assisted by him, wherever they were, by means of his miraculous omnipresence (WK, 262; this belief is also expressed in the introductory lines to every kasida composed by him, viz. al-asmar fi al-waqf 7 daww, kasidh fi ‘asfat al-tilli ...). Members of the order were moreover required to direct their lives in accordance with a number of ethical precepts and admonitions elaborated by ‘Abd al-Salam in a set of rules known as al-Wasijiyah al-kubra, which is very similar to the Sufi tract on adab (q.v.) of earlier eras. To abandon the tarika was considered as equal to apostasy and would, as was taught, not be considered as such only by those belonging to the order, but by God himself (WK, 260). ‘Abd al-Salam exhorted his adherents to adopt al-Sanuri’s ‘adilce in matters of tawhid (WK, 3), but urged them at the same time to pay tribute to Ibn al-‘Arabi as the greatest wal (q.v.) of all times—except for the Prophets and the companions of the Prophet Muhammad—and stressed him as the pillar of the tarika (WK, 245).

The period in which ‘Abd al-Salam lived, largely coincided with the turbulent era in which the Hafsids, the Spaniards, local tribal chiefs, the Knights of Saint John and the Ottomans were involved in the struggle for control of Tripolitania. This caused conditions of life to become increasingly unsettled, and must have made it possible for an exclusivist mystical salvationist movement, like the one into which the original ‘Arusiyya had been elaborated by ‘Abd al-Salam, to flourish and spread the way it did.

Throughout the collections of sayings and texts attributed to ‘Abd al-Salam al-Asmar, the tarika is referred to as al-‘Arusiyya. It does not seem to have been referred to as al-Salamiyya until in the 19th century in Tunisia (cf. Muhammad Muhammad Maqhta, al-Anwar al-kudsiyya fi ‘l-kasidh an baktka al-tarika al-Salamiyya al-Shadhiliyya, Cairo 1365, 9), where the order had obtained a substantial membership, in particular in the southern parts (cf. Mustafa Kreien, La Tunisie pré-coloniale, Tunis 1973, ii, 129).

 Nowadays, the names ‘Arusiyya and Salamiyya are used more or less synonymously throughout North Africa, except for Egypt where the names refer to two distinct branches, which emerged there in the 19th century. Active lodges of the tarika of ‘Abd al-Salam may be found in Tunisia (see al-Sadiq al-Rizki, al-Aghani al-Tunisiyya, Tunis 1967, 129 ff), in Egypt, where it has a wide-spread membership (see Ibrahim Muhammad al-Fahlam, Ibn ‘Aras wa ‘l-tarika al-Arusiyya, in al-Funi al-Adabiyya, iv (Cairo 1970, no. 15, 71), and in Libya (see DjamI Hilal, Diniyatisation fi ‘l-wakfi al-Libi, Tripoli 1969, 141 ff; ‘Abd al-Djalal al-‘Tahir, al-Masjima al-Libi, lindi diniyatiyyiya wa-anthubhaitiydiyyiya, Sayda/Beirut 1969, 325 ff; and al-Muslim, xx (Cairo 1969), no. i, 23). The shrine of ‘Abd al-Salam at Zliten has significance, as a centre of pilgrimage; religious education is provided at the establishment attached to it known as al-mudhak al-asmari (cf. Mulaydjl, 23).

Bibliography: al-Wasijiyah al-kubra (abbreviated in the article as WK, with reference to the paragraph in which it is sub-head), also known as Nashid al-numadat li 7dariyyat al-mashuhadat bi li ‘l-Arsu, was pub-lished in Cairo n.d., in Tripoli (cf. O. Depont and X. Coppolani, Les confréries religieuses musulmanes, Algiers 1897, 339-49, 351), and in Ishak Ibrahim al-Mulaydjl, Fi hamiyya hayyi Sidi ‘Abd al-Salam al-Asmar, Tripoli 1969, 422-529. This book contains also ‘Abd al-Salam’s
A sample of al-Asmar's poetry, reflecting his ideas, may also be found in al-Rizki's book referred to in the article and in "Abd al-Salam al-Asmar, Safinan al-buhur, Cairo 1969. For a defence of playing the bandari (daff) in this tarika, see Muhammad Mushin al-Mas'ud, Rastat al-kaawul al-mur'af ft akhdam al-darb bi 'l-daff, contained in Mas'udina al-Anwar al-badiyya (see the article). 'ATABAT (a. "thresholds"); more fully, 'atabat-i 'alif or 'atabat-i ma'afa'deen ("the lofty or sacred thresholds"), the sixth historical cities of the 'Irâk—Nadjaf, Karbala', Kazîmayn and Samarra (q.v.)—comprising the tombs of six of the Imamîs as well as a number of secondary shrines and places of visitation.

Nadjaf, 10 km. to the west of Kîfâ, is the alleged site of burial of 'Ali b. Abî Tâlib (d. 41/661) (another shrine dedicated to 'Ali is that at Mazâr-i-Sharîf in Northern Afghanistan; see Khâja Sayf al-Din Khudjandî, Karonân-i Balâk, Mazâr-i Sharîf, n.d., 18 ff.). His tomb is said to have been kept secret throughout the Umayyad period and was marked with a dome for the first time in the late 3rd/9th century by Abu 'l-Haydja, the Hamâdîn ruler of Mosul; this early structure was repaired and expanded by 'Abd al-Dawla the Buwayhid in 369/979-80 (Ibn al-Athîr, viii, 518). Karbala', 100 km. to the south-west of Baghdad, is the site of the martyrdom and burial in 61/680 of Husayn b. 'Ali, became very early a centre of Shi‘i pilgrimage; according to Shi‘i tradition, the first pilgrim was Dâjîr b. 'Abd Allah, who visited the site forty days after the death of Husayn. Endowments were settled on the shrine (known as Mas'udâ al-Hârîr, "shrine of the garden pool") by Um'm Mûsá, mother of the 'Abbâsîd caliph al-Mahdi (Tabârî, iii, 752), but it was temporarily destroyed in 236/850 by an 'Abbâsîd less favourable to the Shî‘a, al-Mutawakkil: he caused the site to be flooded (Tabârî, iii, 1407). By the time that Ibn Hâwîl visited Karbala' in 366/977, the shrine had evidently been restored (ed. J.H. Kramers, i, 166), and it was expanded, like that at Nadjaf, by 'Abd al-Dawla in the late 4th/10th century (Ibn al-Athîr, x, 103).

From the Buwayhid period onward, Nadjaf and Karbala', the two most important of the 'atabât, have in fact had a common destiny, each receiving patronage and pilgrimage from the successive conquerors and rulers of 'Irâk. Thus Malîk Shâh the Saldjuk visited both Nadjaf and Karbala' in 479/1086-7 and bestowed gifts on the shrines (Ibn al-Athîr, x, 103). Spared by the Mongol invaders, the two shrines prospered under Il Khânid rule. 'Ala' al-Dîn Djawwâni Shâh al-Dîwan had a hospice erected at Nadjaf in 666/1267 to accommodate pilgrims, and also began the construction of a canal linking the city with the Euphrates ("Abbâs al-'Azzawi, Tarîkh-i 'Irâk hayy ilhâmî, Baghdad 1354/1935, i, 263, 310). In 703/1303, Ghâzî Khân visited both shrines: in Nadjaf he built a lodging for the sayyids resident there (dâr al-sayyid), together with a further hostel for pilgrims, as well as improving the canal constructed by Djawwâni Shâh; this was the last time that Ottoman rule of 'Irâk was threatened, this new occupation terminated by Murâd IV in 1048/1638, led to a further enriching and expansion of the shrines at both Nadjaf and Karbala'. Again in the years 1156-9/1743-6, parts of 'Irâk, including Nadjaf and Karbala', were temporarily removed from Ottoman sovereignty, this time by Nâdir Shâh; he is variously reported to have had the main dome at Karbala' gilded, and to have plundered the treasury at the shrine. This was the last time that Ottoman rule of 'Irâk was threatened from Iran, but throughout the 13th/19th century royal Iranian patronage of both Nadjaf and Karbala' continued, and it is this that accounts for the largely Iranian appearance of the shrines in the present age. 'Abî Muhammad Khân, the first Qâjâr monarch, had the dome at Karbala' regilded and, in 1376/1757-8, had it preserved and restored. Shah Shustârî had the shrine at Nadjaf plundered in 1226/1811, and Nâdir al-Dîn Shâh himself visited the 'atabât in 1287/1870 and commissioned
various work in Nadjaf, Karbala and Kāzīmān (Algar, op. cit., 48, 104, 167). Gifts and endowments were also sent to the ‘atabāt by the rulers of various Shi‘ī principalities in India, especially Oudh (J.N. Hollister, The Shi‘a of India, London 1953, 107, 112, 162-3).

Kāzīmān (also known as Kāzīmiyya), the third of the ‘atabāt, formerly a city on the right bank of the Tigris but now virtually a suburb of Baghdad, is the site of the tombs of the seventh and ninth Imāms, Mūsā al-Kāzīm (d. 186/802) and Muhammad al-Takl (or al-Djawād) (d. 219/834). It occupies a geographically central place among the ‘atabāt, being situated between Sāmarrā to the north and Nadjaf and Karbala to the south, and has always received a steady flow of pilgrims. Unlike Nadjaf and Karbala, it did not escape the Mongol invasion unscathed, and was extensively damaged by fire during conquest of Baghdad in 656/1258. Most of the existing structures in Kāzīmān date from the time of Shāh Ismā‘īl, who was particularly lavish with his patronage in Kāzīmān because of his claim to descent from the seventh Imām. The work begun under his auspices was completed by Sultan Sulaymān in 941/1534 and restored and expanded by several later Abbasid monarchs in the 19th century. The major courtyard (sahn) at Kāzīmān was built in 1298/1880 by Farḥād Mīrzā, a Kādgār prince. Also buried in Kāzīmān are two early Shi‘ī scholars, Shārfī al-Radī (d. 406/1015) and Shārfī al-Murtadā (d. 436/1044); two sons of Mūsā al-Kāzīm, Ismā‘īl and Ibrāhīm; Tāhir b. Zayn al-Abīdin, a son of the fourth Imām, Khālid bint al-Hasan; and Fāṭima bint al-Ḥusayn (L. Massingham, Les saints musulmans enterrés à Bagdad, in Opera miura, ed. Y. Moubareac, Beirut, 1970, 100-1).

Sāmarrā, the fourth of the ‘atabāt, contains the tombs of the tenth and eleventh Imāms, ‘A‘īf al-Najjār (d. 254/868) and Ḥasan al-Aškārī (d. 260/873), as well as the cistern (ṣardab) where the twelfth Imām, Muhammad al-Mahdī, entered the state of occultation (ghayba) in 260/873 and where too he is destined to reappear at the beginning of his renewed manifestation at the end of time.

The ‘atabāt play a role of great importance in the life of Shi‘ī Islam, functioning almost as a secondary kibla. They are above all places of pilgrimage, the site of rituals and feasts. The soil of Karbala has fulfilled a similar function in recent years, following the exile there in 1963 of Ayat Allāh Khuṣaynī. The Shi‘ī ‘ulamā residing in the ‘atabāt have also exerted influence on the 20th century history of Iran; they played, for example, a directive role in attempting to thwart the imposition of a British mandate on the country (‘Abd Allah Fahd al-NafTsi, Dīwān al-Shī‘a fī tātawwur al-Irāk al-siyāṣī al-hadīth, Beirut 1973, 80 ff.).

Finally, mention may be made of the fact that the ‘atabāt are of interest not only to the ‘Ithnā ‘Ashāfī Shi‘a, but also to the adherents of various branches of Ismā‘īlism; although they hardly ever make the ‘umrah, they frequently perform pilgrimage to Nadjaf and Karbala (Hollister, op. cit., 289, 291) and it is probable that a number of Nizārī Imāms of the post-Mongol period are buried in Nadjaf (W. Ivanow, Tombs of some Persian Ismā‘īlī Imams, in JBRBS, xiv (1938), 49-52). The Bektashi, who in many ways may be considered a crypto-Shi‘ī sect, also used to maintain tekkes in Nadjaf, Karbala and Kāzīmān (al-‘Azzawi, op. cit., iv, 152-3; Murat Sertoğlu, Bektash, Istanbul 1969, 319).

According to his own temperament and personal taste, it is unanimously accepted that it is his sharp flair as a critic which discovered and launched many young talents on to the literary scene (e.g. Orhan Veli Kanik, F.H. Dağlarca, etc.). Restless, impatient, aggressive by temperament and equipped with a piercing mind and armed with “methodical doubt”, Ataç waged an unrelenting war against fanaticism, intolerance, sentimentality, “poetical” artificiality, clichés and ready-made thoughts and formulate. He was a conscious extremist in language reform and believed that only the “self-sacrifice” of some extremists would nullify the harm caused by the ultra-conservatives. Ataç studied 15th century prose works, particularly Mergânem Ahmed’s masterly translation of Ay kültüs’s Kibbůz-nama [see KAY KAYUS B. ISKANDAR] and used them as the model for a new style. He experimented successfully with a new syntax which included inversion (devrik tâmi), which naturally exists in spoken Turkish and which was frequently used in early Turkish writings before the syntax of the written Turkish was “frozen”. Ataç coined a number of neologisms, some of which survived and were incorporated into the language (for a list of Ataç’s neologisms, see Ataçın sözçikleri, ed. Türk Dil Kurumu, Ankara 1963). Ataç left several thousand essays and articles, some of which (mostly his post-1940 writings) have been published in book form in 10 volumes: Günterin getiriği (1946), Karalama defleri (1952), Sözden söz (1952), Ateşken (1954), Djejenis (1954), Söz, arasında (1957), Okuruma mektuplar (1958), Günce (1960), Prospero ile Caliban (1961), Süveyşler, 2 vols. (1964). Ataç’s diaries covering the years 1953-7 have been published in two volumes as Günce, Ankara 1972. Ataç also made perfect examples of literary translation in Turkish. He translated more than 50 literary works from ancient Greek, Latin and Russian authors (via French), and in particular, directly from French, the most famous of which being his translation of Stendhal’s Le rouge et le noir rendered as Kirmizi ve siyah (1941), second edition as Kizli i kara (1946).

ATALÎK, Türkic title which existed in Central Asia in the post-Mongol period, with the same original meaning as the title atabeg [see ATABA]. In the ulus of Düzî (the Golden Horde) and its immediate successors, as in the khanates of Kazan and Khiva, the title atalik would also be used, as in the Caghatayid state in Mogholistan, the atalik was, in the first place, a guardian and tutor of a young prince and, in this capacity, an actual governor of his appanage. The sovereign himself (khan or sultan) also had an atalik who was his close counsellor and confident, often playing the role of the first minister. The ataliks were nominated from among the Turkic tribal nobility, the senior begs (amirs). It seems that, according to Türkic nomadic custom, a ruler should always have an atalik; it was a kind of control over his conduct exercised by the tribal aristocracy. Timurid and Şahşâhâned sources often also use, instead of the term atalik and in the same meaning, the term ata, or ata (most probably,
which created a special relationship a'ka, a contracted form from Tawdnkh-i guzida-i nusrat-between the two sides (see Up together with the princes of the ruling dynasty, dmilddsh); these persons were brought kokdltdsh (atalik) was entrusted often to a added to proper names and titles). The post of atalik was gradually transformed. In
the government. He could be at the same time governor of a province: atalik Yalangtush Biv, who was häkim of Samarkand in the first half of the 17th century and became famous by his building activity, was a semi-independent ruler. There was also, besides him, an atalik of the khan's heir residing in Balkh with the same functions in his respective region. In the reign of 'Ubayd Allah Khan (1114-23/1702-11), the kosh-begi became the head of the civil administration in Bukhara, he being an official of mean origin—probably as an attempt of the khan at cutting down the influence of the Uzbek aristocracy. But the importance of the atalik did not diminish; already earlier, at the end of the 17th century, the atalik in Balkh became independent ruler of this province, and in the middle of the 18th century Muhammad Rahim Atalik of the Mangit (q.v.) tribe founded a new ruling dynasty in Bukhara, having killed the last khan of the Ashtar-khanids. Muhammad Rahim was proclaimed khan in 1710/1756; his uncle and successor Daniyl Biv (1172-99/1758-85) preferred to remain atalik, entrusting puppet khans of Cingizid origin, but his son Shāh Murād eliminated these khans and proclaimed himself amir, which lasted also in Bukhara later the title of the Mangit rulers par excellence. In the administrative manual Mağmal al-arkām compiled under Shāh Murād in 1212/1798, the post of atalik is defined as that of senior amir, who was charged specifically with oversight of the irrigation of the Zarafshan valley from Samarkand to Karakul, and, at the same time, was the mīrāb of the main city canal of Bukhara, Rūd-i Shahr, as well as dārgāha of the rabab of Bukhara (see facsimile in Pismenny pamyatniki Vostoka 1968, Moscow 1970, 50-1; cf. A.A. Semenov, in Sovetskoye vostokovedenzya, v [1948], 144-7). But already in the first half of the 19th century, the atalik became a purely honorary rank (the highest in the hierarchy of 15 ranks in Bukhara) given very rarely, the 1820 a semi-independent governor of Hīsār, father-in-law of the amir, had this rank (see G. Meyendorff, Voyage d'Orenburg à Boukhara, fait en 1820, Paris 1826, 259; cf. V. L. Vygatkin, in Izvestiya Sredneaziatskogo otdela Russkogo geografi-českogo obščestva, xvii [1928], 20); in 1840 the atalik was also a father-in-law of the amir, a ruler of Shahrisabz (see N. Khanilov, Opyanye Bakhorskogo khanstva, St. Petersburg 1843, 185). Under the last two amirs, only the governor of Hīsār (who had also the title kosh-begi) was given the rank of atalik.
In the Khanate of Khiva, atalik was originally also a guardian and counsellor of the khan and of princes (sulţān) who ruled in their appanages. Abu l-Ghāzi (q.v.) in his Shadr-zan-i Turk (ed. Desmarest, text, 252, tr. 269) says about an atalik (in the middle of the 16th century) that he was “the mouth, tongue and will” (agdhiz, tili wa ikhtiyār) of his sulţān. Russian sources of the 17th century compare the ataliks in Khiva with the Russian boyars (see Material po istorii Uzbeckoy, Tadzhikskoy i Turkmenskoy SSR, Moscow-Lehrang 1931, 266). According to Mu'īn (q.v.) (Firdaws al-ikbal, MS. of the Leningrad Branch of the Institute of Oriental Studies, C-571, f. 65b), Abu l-Ghāzi Kāhān, reorganising the administration of the khanate, established posts of four ataliks, who were members of the khan's council of 34 'amāldāris. Later they were called “the great atalik” (ubqār atalik, cf. idem., ff. 112a, 118b); they represented four tribal groups (tupi) into which all Khāzāridian Uzbeks were divided: Yughār and Nāyman, Kungrat and Kiyat, Mangit and Kungrat and Kipcak. One of the “great ataliks” was the atalik of the khan (see ibid., ff. 69b, 101b). In the first half of the 18th century, the atalik of the khan was a most powerful figure in Khiva, but from the 1740s onwards he was pushed somewhat into the background by another dignitary, the ināk (q.v.). It is not clear whether in the time of Abu l-Ghāzi there existed only the four ataliks mentioned by Mu'īn; but in the middle of the 18th century there was quite a number of them. In 1740 a letter to the inhabitants of Khiva sent by the Khiwan dignitaries from the camp of Nādir Shāh was signed by eleven ataliks (see Geograficheskii ezhevystvya, 1850, 546-7). Apparently, already at that time, as in the 19th century, the title atalik was given also to the chiefs of the Uzbek tribes; such an atalik was senior biy in his tribe, and his title was usually hereditary, though it had to be confirmed by the khan. In the 19th century this title was granted also, as a purely honorary distinction, to some Turkmen tribal chiefs (see Yu. Bregel', in Problemi vostokovedenzya, 1960, No. 1, 171; cf. idem., Khorezmskoye tarkmeni v XIX veke, Moscow 1961, 129). In 1859 this title was introduced also for the chiefs of the Karakalpak tribes (see Yu. Bregel', Dokumenti arkhiva khivinskikh khanov po istorii i ètnografii karakalpokov, Moscow 1967, 58). The number of “great ataliks” increased before 1873 from four to eight (see A.L. Khun's papers in the Archives of the Leningrad Branch of the Institute of Oriental Studies, file 1/13, 105-6). As distinct from the other tribal chiefs, they were considered among the amārā-yi āzām. The atalik of the khan, who in the 19th century always belonged to the khan's tribe, the Kungrat (q.v.), and was mostly a relative of the khan, was considered as the senior amir in the khanate; in the first half of the 19th century he still exercised some influence as the khan's counsellor, but later this post lost its importance. Less is known about the role of ataliks in the Khanate of Khokand (q.v.). The rulers of Khokh and the founders of the Ming dynasty of this khanate, Shāhrūshik Biv (early 18th century) received the title atalik from the khan of Bukhara (see V.P. Nalivkin, Historie du khanat de Khoekh, Paris 1889,
were full of emotional, patriotic and anti-reactionary later articles in the same paper during the Balkan War. Apparently, the atalık in the Khanate of Khokand, as well as in Bukhara at the time, was considered rather an honorary rank than an official post.

In Eastern Turkestan under the Čaghatayids in the 16th and 17th centuries, the title atalık preserved its original meaning. The governors of provinces (princes of the ruling house), the khan’s heir and the khan himself had their atalık, who were always senior Turkic bei. The atalık of the khan was at the same time the governor (hükûm) of Yarkand, and that of the heir the governor of Aksu or Khotan (see Şah Mahmûd Ğurăs, Ta’rikh, ed. by O.F. Akimughiñ, Moscow 1976, text 30, 52, 64 et passim). The ruler of the last independent Muslim state in Eastern Turkestan, Ya’kûb Bek [q.v.], styled himself Atalık Ghażl; apparently he received the title of atalık on being sent from Khotkand to Kâşghâr as a counsellor and guardian of Buzurg Khâdja.

(Yu. Bregel)

ATAY, FaÈhli Rıfkı, Turkish writer, journalist and politician (1894-1971). He was born in Istanbul, the son of Khalîl Hîlîm, an uncompromising traditionalist and imâm of a mosque at Dîbâlî on the Golden Horn. He was educated at Merîdan high school, where his teacher, the poet Dîjelî Sâhir, encouraged him to publish his early poems, and at the Faculty of Letters. His elder brother, a progressive officer, provided him with all the advanced literature from Nâîmik Kemal to Tewfîk Fikret [q.v.]. FaÈhil Rıfkı began his career as a journalist in 1912 in Husayn Djâhid’s [q.v.] Tâmis, the organ of the Committee of Union and Progress (CUP), where he wrote once a week his personal essays and articles published until his death in Istanbul on 20 March 1971.

Essentially a journalist and always concerned with the “topical”, Atay had literary talents far beyond those of a routine journalist. He excelled in the essay, sketches, travel notes and autobiographical writing. An anti-traditionalist and a dedicated Kemalist, he devoted all his writing career to defend and support the reforms achieved by the Republican régime. He fought relentlessly and uncompromisingly for the survival of a modern, progressive and secular Turkey. No matter what he wrote about, the lesson which he drew remained the same: No going back.

A great master of modern Turkish prose, he used, like R.Kh. Karay and ‘Omer Seyf el-Dîn [q.v.], the spoken Turkish of ordinary people and wrote in a concise, but vivid, colourful and very personal style, carefully avoiding all artificialities of the earlier generations of writers. Except for certain doubts towards the end of his life, Atay was a great supporter of the language reform movement, revived by government support in the 1930s, and his handling of the reformed language became the model for young writers until the appearance of Nûr Allâh Ataç [q.v. above], the linguistic and literary “guru” of the generations between the 1940s and late 50s. It is perhaps because of this fascinating style that his readers are seldom worried about the lack of depth in some of his writings, which brilliantly observe, describe and report, but do this without such sophistication. Atay is the author of more than thirty works, but the great bulk of his writings, his travel notes, his daily and semi-official reports in newspapers and periodicals have not yet been published in book form. His major works are: (1) Ateç we günêsh (1918) and Zevintâdî (1932), the two published in one volume as Zevintâdî (1970), impressions of the First World War in Palestine and Syria which are powerful sketches of the end of the Ottoman Empire; Denizyan (1931), Teyr Rusya (1931), Têrîm kiyîlînî (1934), Tûna kiyîlînî (1934), Hind (1944) are evocative travel notes on respectively Brazil, Soviet Russia, England, the Balkans and India; Gujar dîvaddîrm (1970), selections from travel notes; Çakaya (in two vols., 1961, revised one volume edition, 1969) is the most important and comprehensive of Atay’s many books on Atatürk and his achievements. It has powerful sketches of Atatürk and interesting character-studies of the many people of his time. The second edition has been substantially altered in places and anti-Inönü passages have been bor-removed by Y.K. Karaosmanoğlu’s political memoirs (Politîkada 45 ml, 1968) and introduced here to discredit the former Commander of the Western Front during the War of Liberation, both writers having broken with İsmet Inönü, for political reasons, towards the end of their lives; Başyoren inkeâfîsî (1954), a monograph on ‘All Su‘âvî (1839-78), the controversial writer and revolutionary.
ATHĀTH (a.), furniture. The Arabic language lacks terms adequate to express the concept of furniture. Taking into account the mutual overlapping of the notions of “furniture”, “table-ware”, “carpets”, "household objects" and "utensils", Arabic frequently has recourse to approximative terms and to broader categories (combinations of two expressions, for example /farṣ = carpets, bedding and furniture; /āla = crockery and household objects; /farṣ and /āla may be used in combination; /adīd = utensils etc.; /alāk = literally, belongings, various household objects and (especially in modern Arabic) furniture; /farṣ and /alāk may be used in combination; /matā = personal property, domestic items, etc.).

In the mediaeval Muslim home, life was conducted relatively close to the ground. Meals were served to the diners in a kind of “serving-dish” with or without legs (the receptacle being separable from its support or not, as the case might be) which was laid on a carpet on the floor. The diners did not have individual plates but served themselves directly from the dish placed on a low table (ḥunūs, mlūda, dāghak, /fāṭūr, mudawwara, muhaqal, mīšamsāt, simāt), the majority of these terms indicating a very small round table; some, like /simāt, a low oblong table) each of them sitting on a “seat” adapted to the appropriate height (a cushion /wīṣāda, misfaka, tuk’a, mīṣurata, murnuk, and even /mikkadā which was originally a pillow), a pair of cushions super-imposed, a couch folded in two, the carpet itself, etc.). The table was removed from the room as soon as the meal was completed.

It is understandable that such scenes should have misled western travellers and even some orientalists who described the interior of the Muslim household as being “empty”, “uninhabitable”, etc., without considering that the dimensions of furniture are frequently adapted to the way of life, to the manner of sitting, and to taste. However it would be incorrect to suppose that all mediaeval Arabic furniture was low. Carpenters and other craftsmen constructed trestles and benches of a fair height for various purposes outside the private house; they also made chairs with legs of wood or metal [see /kurš] and throne-like seats (sart, takht), but such seating arrangements were not used at meal-times. A high stool was somewhat exceptional in the Middle Ages and it focussed attention on the person seated there (a prince, the head of the family, sometimes an ordinary individual) in relation to the others present.

The hierarchy of heights in sitting (on a throne, on a high stool, on a cushion, on a single ordinary cushion, on the carpet itself, on the ground, this last position indicating humiliation, humility or mourning) only reflects the categories and class-distinctions of etiquette. Another aspect of the stratification of classes is reflected in the range of materials and qualities: beds with legs, a sign of luxury, beds without frames, and lower down the scale the mortaka, a good-quality mattress stuffed with down, simple mattresses laid on the ground and serving as a bed at night, simple mattresses, mats and carpets for sleeping on, piles of rugs and scraps of clothing for the same purpose (only the poorest slept on the ground); cushions and pillows stuffed and covered with choice materials, silk for example, and at the other end of the scale, rags or simply a stone serving as pillow for a poor man.

The very high “western style” thrones such as those appearing in Umayyad iconography, seem to have been copied from Byzantine models and do not reflect the true conditions in the court (see V. Strika, in AIUON xiv/2 (1964), 729-59; but cf. O. Grabar, in Studies in memory of Gaston Wiet, Jerusalem 1977, especially 53-6, who puts into perspective the remarkable development of etiquette already taking place in the Umayyad court). According to mediaeval texts, another kind of throne, a long sofa for reclining, was quite widely known in the courts of the Umayyads, of the ‘Abbasids and of local princes (such as the ‘Ikhshīdids). The sovereign could invite a friend to sit beside him, on the same sart (hence quite a long seat); he could alternatively recline on it. The overlapping of the concepts mattress-seat-throne-bed (for example, from the Persian; /takhît can mean any of the following: board, seat, throne, sofa, bed, calculating tablet, chest or box) did not prevent the evolution of ceremonial and the differentiation of functions (a seat or a throne for public or solemn audience, or for private audience, feasts etc.) from establishing or re-establishing the real status (of Persian manufacture, for example) and long and more elaborate thrones. Towards the end of the 3rd/9th and the beginning of the 4th/10th centuries, the use of the bed with frame (for reclining and sleeping) became fashionable in high society and among the bourgeoisie. The belief of certain orientalists that the bed did not exist in the mediaeval Muslim world is only partially correct: unsprung mattresses were more common (even in documents from the Cairo Geniza, many mattresses are to be found serving as relatively inexpensive beds; among the dowries of young brides there is mention of a very small number of beds with frames, extremely expensive, and between these two categories is the /martaba, which would correspond in function with the divan-bed of the present day).

To return to the subject of tables: mlūda, ḥunūs and /ṣufrāt are synonymous: they refer to the small eastern “table”, the first two to a solid “table” (the attempts on the part of mediaeval philologists to differentiate between them were quite arbitrary) while the third (and sometimes also /naf, as well as mlūda, exclusively in the context of the Kurān and its commentaries and in certain passages in the literature of ḥadīth) was applied to a skin stretched out on the ground and serving, not only among the early Bedouins, but also in circles of sedentary Arabic civilisation, various functions in the home and in the country (in dialect, /ṣufrāt is an ordinary table and /ṣufrāt is a waiter in a restaurant or a cafe). This is one of the characteristic cases which raises the question whether the continuity of sedentary habits (from the Persians, Byzantines, from the ancient Syrian and Egyptian stocks, etc.) was an exclusive characteristic of daily life in the mediaeval Muslim world, in the sense that it is reflected in the use of furniture, and if there was not here a minimal contribution on the part of the Bedouin element, betrayed in the spread of ancestral customs through the disappearance of the high furniture of the Byzantine metropolis in favour of the low furniture which existed in Iranian civilisation and in certain local Aramaico-Syrian and ‘Irākī centres, as is revealed by the mediaeval lexicographers and commentators (jufṣāwān and /fāḏār, for example). Nevertheless, specimens of wooden furniture from
the Middle Ages are available to us and we have ceramic objects designed to imitate them (supports sometimes containing cavities to accommodate jugs, resembling the supports-plus-shelves attested by the texts; some of these still exist today: nīfā' or karšā-
plus-shynge, in various Muslim lands living far apart from one another); iconography also shows a certain standardisation, in spite of regional styles, of way of life and of taste throughout the whole of the Muslim world (household objects, such as tables, being exported from one country to another).

The mediaeval Muslims made use of a whole range of chests, cases and boxes (sundlik, tahkt, kamfara, mukadimah, sūfah), as well as recesses and racks (nīfā'), but they had no cupboards as such.

The Mongols introduced the use of a higher type of square table, but the essential nature of the "ori-
tental style" way of life has been preserved up to the very threshold of the modern age (Turkish and Persian
mirfa or texts; some of these still exist today: the British Museum, when an important statue of
ported from one country to another).

ATHĀR, modern KAL'AT SHARPAN, a large ancient mound on the west bank of the River Tigris in the vilayet of Mawṣil, about 250 km. north of Baghdād and about 100 km. south of Mawṣil, in 35° 30' N and 45° 15' E. It is strategically placed on a spur of the Djabal Hamrīn and is identified with Ashur, one of the capital cities of ancient Assyria. In the middle of the 3rd millennium, it was occupied by migratory tribes coming either from the west or the south, and was venerated as the religious and sometimes political centre of Assyria until it was captured by the Babylonians in 614 B.C. This battle devastated the city and it was not reoccupied as a city again. Ashur is the name not only of the place but also of the local deity, and it occurs in Akka-
dian, Aramaic and Greek sources. The site was known by the Turks under the name Toprak Kâl'ê, "Earth Citadel". The meaning of the element ġakāt in the Arabic name is not known, but it is probably to be explained as an independent proper name. It is not mentioned by Arab geographers; the earliest reference to it is in the 18th century, and it is the name used by later Western travellers.

The site was described by C.J. Rich, who visited it in March 1821, and it was subsequently investiga-
ted by J. Ross (1836), W. Ainsworth with E.L. Mitford, A.H. Layard and H. Rassam (1840), and again by Layard and Rassam (1847) on behalf of the British Museum, when an important statue of Shalmanesar III (858-825 B.C.) was found. In 1849, after excavations by J. Talbot, J. Oppert, E. Hincks and H.C. Rawlinson, an inscribed historical prism recording the history of the reign of Tiglath Pileser III (744-727 B.C.) was found, and two duplicate copies of this inscription were discovered by Rassam in 1853 in further British Museum excavations under the general supervision of Rawlinson. Several inscrip-
tions from the reign of Adad Nīrari III (810-783 B.C.) were discovered by G. Smith in 1873. The most rigorous excavation of the site was conducted between 1903-15 by the Deutsche Orient Gesellschaft, first by R. Koldewey and then by W. Andrae and others, which followed the presentation of the site to Kaiser Wilhelm II by Sultan 'Abd al-Hamīd II.

To the north and east the site is naturally protected by the river and the escarpment, and the only necessary fortifications were buttressed walls. Sen-
ackerib (704-681 B.C.) records the building of a semicircular sallyport tower of rusticated masonry which is probably the earliest of its kind. To the south and west it was more heavily fortified. After an early period of dependency upon the south during the Third Dynasty of Ur (2112-2004 B.C.), it begins a separate history. Evidence about life in Ashur for the earliest period comes from the documents of an Assyrian group of traders working in Anatolia at the ancient city of Kanēs, modern Kūltepe, in Turkey, but the earliest palace is that of Shamshi Adad I (1813-1781 B.C.), and spacious private houses with family vaults beneath the floors have been found in the north-western area. Much of the histo-
ry of this period has to be reconstructed from an archive of the period of Ashurbanīpāl Adad which was discovered at Mari (modern Tell Harīrī) in eastern Syria. He controlled Ashur after it had been subject to Naram Sin of Eshunna (modern Tell Asmar). Although he did not use Ashur as his capital city, preferring Shubat Enil (modern Chagar Bazār), he did build there a temple to Enil, the local god of Nippur (modern Nīfār), and the one who traditionally named the king and entrusted to him the symbols of royal power.

During the period of Cassite domination in Mesoopotamia, Puzur Ashur III (ca. 1490 B.C.), made a treaty with Burnaburias I of Babylon, and in Ashur he records rebuilding part of the Ishtar temple and a section of the southern city wall. Building opera-
tions of this kind are often recorded on clay cones which were inserted between the courses of the new brickwork. Ashur Nadin Akhe II (1402-1393 B.C.) secured Egyptian support for his country and received gifts of gold from the Pharaoh of Egypt.

Official lists of the Assyrian kings have been found and these are an essential source for establishing a framework of the classical history of the site. They often contain more than fifty names and record the length of each reign. Other lists record the names of the temples there, but only a few of the 34 mentioned have actually been identified. The archi-
tectural features of these early buildings are similar to those of Old Babylonian buildings, but the length-
ening of the sanctuary on its main axis and the posi-
tioning of an altar in a deep recess are distinctly Assyrian features.

The traditional founder of the Assyrian empire was Ashur Ubalîl (1365-1330). At the beginning of his reign he was subject to Tushratta of Mitanni, but in 1350, with the help of Supililliumas, the Hittite king, he was able to attack and annexe the Mitanni areas in northeast Mesopotamia. Ashur Ubalîl called himself *šarru nube*, the great king, equal in status to the Pharaoh, and was a severe threat to the Babylonians. Two of his letters to Akkāten have been preserved in the famous archive from Tell al-Amarna, Egypt (see Knudtzon [1915], nos. 15-16). He called his country *mat Ašur*, the Land of Ashur, while the older name of Subartu was used by the Babylonians, possibly in a deprecatory'sense. Even so, Assyrian royal inscriptions
are composed in the Babylonian dialect of Akkadian because, presumably, such language had a traditional air of refinement. His son Enil Nnirani (1293-1280 B.C.) fought against Babylon, and Arik Din Il (1319-1308 B.C.) harassed the Akkadian, the Semitic tribes to the west. Addad Nnirani I (1307-1275 B.C.), by his battles with the Gutians and the Mitanni, was eventually able to unite Mesopotamia into an empire, but the territory he gained was later eroded because of the rise of the Hittites and the unsatisfactory defenses against the tribes to the east.

Shalmaneser I (1274-1245 B.C.) records building a new royal city in the north at Kalkhu (modern Kalkhu), which was later assimilated into Assyrian versions of religious texts. Despite these alternative capitals, Ashur was still used as a political centre from time to time, yet it gradually became primarily a religious centre. By the 10th century B.C. it was overshadowed by Kalkhu and Nineveh, and the later kings chose these northern sites as capitals from which to administer their empire.

The city was attacked and devastated by the Babylonian ruler Nabopolassar (625-605 B.C.) in 614 B.C. two years before he destroyed Nineveh and brought the Assyrian empire to an end. Afterwards, there is only scanty documentation from which to reconstruct the history of this important site. Under the Babylonians, it was probably only sparsely inhabited, for Cyrus the Great, when he conquered Babylon in 539 B.C., claims: "To the sacred cities on the other side of the Tigris as far as Ashur . . ., the sanctuaries of which have been ruined for a long time, I returned the images which used to live therein and established for them permanent sanctuaries" (from the Cyrus Cylinder, the basic historical source for the Persian conquest of Babylon). The name occurs again in the Old Persian text of the Behistun Inscription but the only other inscriptional evidence comes from Aramaic documents from the site; these used to be dated to the Parthian period, and taken as evidence that the names of the old Assyrian gods survived in the community until the 3rd century A.D., but they are now said to come from the 7th century B.C. As a geographical name Athur (sometimes written Akur); it is, however, defined by them not as modern Kalat Sharqat but as an earlier name for Mawsil, and also as the name of the province which was later called al-Djazira (q.v.). The ruin associated with the name is described as near to al-Salmiyya, 4 km. N.W. of Nineveh. They also make the observation that al-Djazira, which practically coincides in area with Assyria, is a name derived from Athur. Although it is clear that a ruin was still known at this site, the name Athur has been transferred erroneously to the ruin near al-Salmiyya; this transposition was influenced by the fact that there were two famous capitals of Assyria in the north and is similar to the case of Baghdad, which travellers of the Middle Ages until Pietro della Valle (1616-17) considered to be the site of ancient Babylon. According to Layard (1853), 165, the hill in the corner of the ruins of Nineveh was still called "Tell Athur".

It is surprising that there appears to be no mention of the name Sharqat before the 10th century, yet the chiefcopy of pottery and inscribed bricks discovered after a careful search amongst the rubbish which had accumulated around the base of the great mound, served to prove that it owed its construction to the people who had founded the city of which Nineveh is the remains (loc. cit.). But later, during the river trip from Mawsil to Baghdad, he was told of a connection between the two names, based on the ancient site on the Tigris about fifty miles below its junction with the Zab”. He did not identify it with Ashur; all he could say was, “A few fragments of pottery and inscribed bricks discovered after a careful search amongst the rubbish which had accumulated around the base of the great mound, served to prove that it owed its construction to the people who had founded the city of which Nineveh is the remains” (loc. cit.).

The official reports of the excavations are given by W. Andrae, with others as indicated, in the following volumes of Mitteilungen der Deutschen Orient Gesellschaft, xx (1903, R. Kolodzey); xxii, xxiii, xxiv (1904); xxvi-xxix (1905); xxxi, xxxii, xxxiii, xxxiv (with J. Jordan) (1908); xl, xli (1909, with J. Jordan); xlii-xliii (1910); xlv, xlvii (1911); xlviii-xl (1912, with J. Jordan); li (1913, with P. Maresch); lv (1914,
with H. Luhrs and H. Lucke; ibi (1921); ibii (1924); bxxi (1932; H. J. Lenzen); bxxii (1933) and bxxvi (1938). A series of monographs by Andrae and others have been published in the following volumes of *Wissenschaftliche Veröffentlichungen der Deutschen Orient-Gesellschaft* (x (1909); xxii (1913); xxiv (1913); xxviii (1922); bxi (with H. J. Lenzen, 1933); bxxii (1933); bxxv (1924); lii (1924).

In the same series, editions of the cuneiform texts discovered at the site have been published as follows: xvi (1911) and xxxvii (1922) by E. Ebeling; xxxvi (1920) by Schroeder; biv (1954) and bxxi (1955) by C. Preusser; bxv (1954) and bxxii (1955) by A. Haller; bxxi (1956) by F. Wetzell and others. The Aramaic ostraca and tablets were published originally by M.M. Litzbarsky, also in the same series, xxxviii (1921), but the more recent edition by H. Donner and W. Rollig, *Kanaanäische und aramäische Inschriften*, 2nd ed., Wiesbaden 1969, Texts 233 and 234-6, should now be used.

The Arab geographers referring to the site are as follows: Ibn Rustah, 104, tr. Wiet, 115, equating Aššur with Mawsil; and Yākūt, i, 119, 16; 346, 5; 428, 2; 772, 12-13; 231, 9, which coincides with the Ilkım Aššūr/Aššur, “the region of Ashur”, mentioned only by al-Mukaddasi, 20, 3 (see also 27, 10, and 28, 7). For [Djazfar] Aṭīṣ as an older name for the Dżazira, see also Le Strange, *The lands of the Eastern Caliphate*, 86.

**Aṭīṣ, Khajwa Ḥaydar ‘Allī (d. 1263/1847), Urdu poet, was born in Faizabad (Fayyābd [q.v.] probably around 1191/1778, according to A.L. Siddikī (see *Bibli.,* below). His ancestors are said to have originated in Baghdad, whence they came to Dihlī. His father moved from there to Fayyābd and died during the poet’s youth. As a result, Aṭīṣ’s formal education was curtailed, though he supplemented it by avid reading. In early manhood, he led the life of a fop and a roué, and carried a sword. But his aptitude for poetry was noticed, and he was taken to Lucknow. There he was trained by the poet Ṣayḥkh Ḥulāmā Ḥamādānī Ṣuhḥāt, and was soon recognised as a leading ghazal poet, along with his chief rival, Ṣayḥkh Imām Bakhsh Nāṣīkh. Such poetical rivalries were a familiar feature of Lucknow cultural and social life, but—as we see in the case of Aṭīṣ—they did not always involve personal animosity. Indeed, he ceased to write poetry after the death of his rival.

Modern critics regard Aṭīṣ as the greatest poet of the two. Urdu ghazal, as he found it, tended to be rich in vocabulary and ornate in style, with similes, metaphors, and other rhetorical devices which were at times far-fetched and exaggerated. Ideas were largely stereotyped, with much concentration on the physical features of the beloved such as tresses (zul) and face (nakhsh) as in Persian models. Aṭīṣ seems to have been an independent-minded eccentric in his private life, and this is reflected in his poetry to some extent. He would not write poetry for patronage, though he accepted a small pension from the King of Oudh (Awadh [q.v.]). He spurred wealth, living like a dervish in a broken-down house. He was humble to the poor but haughty to the wealthy. In his verse, for a man of a great innovator, but neither was he a slavish imitator of time-honoured poetical techniques. Thus while he did not radically change the form and style of ghazal, he frequently appears less artificial than his predecessors and contemporaries, writing in a more natural language nearer to everyday speech as used by the educated of Lucknow; perhaps his lack of formal education encouraged this tendency. He was criticised for using non-literary turns of phrase, and misspelling Arabic words—the latter perhaps deliberately, in the interests of rules of prosody, or to reflect actual pronunciation of these words in Urdu. In short, we at times sense spontaneity and even sincerity in his verse, and his literary language became accepted as a model. His poetic output of over 8,000 verses is practically entirely composed of ghazals.

For further bibliographical material, see Khādja al-Rahmān Aṭy’ī and Murtūdā Ḥusayn Fāḍil, art. Aṭīṣ, in *Urdu Encyclopedia of Islam*, Lahore 1962 ff., i, 10-14. (J.A. Haywood)

**Awraba**, a Berber tribe of Morocco. Ibn Khaldūn, *Tārīkh*, Fr. tr. de Slane, i, 286, provides all the information which we have on the early history of this tribe, which formed part of the sedentary Berānīs [q.v.]. The first appearance of these people appears to have been Christians. At the time of the Muslim conquest, they held the premier place among the North African Berber tribes because of their forcefulness and the bravery of their warriors. Ibn Khaldūn also gives us the names of the tribe’s main branches and those
of the most outstanding chiefs whom they had before the Arabs' arrival. The celebrated Kusayla [g.e.], who was probably a Christian, is said to have been their amir, as of all the Barānī. He rebelled, and was defeated and killed in 62/682, and it was after his death that the Awraba (or Awriba?) no longer directed the resistance of the Muslims against the invader.

The tribe makes its real appearance in the history of Morocco by making Shi‘ī doctrines triumphant there, even though these were contrary to the Khārijī ones embraced by the Berbers in the preceding century. It was indeed under the protection of the Awraba chief, Abū Laylā Išāk b. Muhammad b. 'Abd al-Hamīd, that the 'A'id fugitive Idrīs 1 [g.e.] established himself in 172/788 at Wālīf, the ancient Roman town (the present Volūhâ), situated in the little mountain massif of Zahrūn, north of Meknès.

These mountain folk called themselves descendants of the Awraba of the Aurès, driven out of the central Maghrib after Kusayla's death, as also were those elements of the Awraba to be found in the regions of the Zāb [g.e.] and the Ouarsenis [g.e.].

Like several of the northern Moroccan tribes, the Awraba professed Mu'tazilī doctrines; they were accordingly favourable to the 'Alīds and regarded the nomination of an imām as a necessary obligation for the community. This is why Abū Laylā could without difficulty have himself proclaimed sovereign imām of his own tribe and of the neighbouring tribes (4 Ramadan 172/5 February 789) a few months after Idrīs's arrival in the Zahrūn. The Awraba then successfully took part in Idrīs I's work of Islamisation. Idrīs II showed his gratitude badly towards his father's benefactor, since he had him executed 20 years later, on the accusation of having relations with the Agilabid ruler of al-Kayrawān, who recognised the authority of the hated 'Abbāsids, but this action was doubtless also from reasons of local politics.

At Idrīs Ii's death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn. At Idns IPs death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn. At Idle's death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn. At Idns IPs death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn. At Idle's death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn. At Idle's death (213/828) and after the disastrous division of Morocco between his sons, troubles broke out within the principalities thereby established. The Awraba and the Berber coalition put an end to the Zarhūn.

Awraba — Ayatullah

[See G. Deverdun]

A'Yâs, a component group of the Meccan clan of Umayya or 'Abd Shams, the term being a plural of the founder's name, a son of Umayya b. 'Abd Shams b. 'Abd Manâh b. Kusayy called al-'Iṣ or Abū l-'Iṣ or al-'Asīt or Abū l-'Asīt or 'Uways, these being given in the genealogical works as separate individuals, but doubtless in fact one person (on the two orthographies al-'Aṣ and al-'Aṣî, the former explicable as an apocopated ḥḏĮẓ form, see K. Volland, Volkstracht und Schriftsprache im alten Arabien, Strassburg 1906, 139-40). The group formed a branch of the clan parallel to that of Ḥarb b. Umayya, from whom descended Abū Sufyān, Mu‘awīya [g.e.] and the Sufyānīs. Amongst the sons of al-‘Aṣ, etc., were ‘Alīn, father of the caliph ‘Uthmān [g.e.]; al-Hakam, father of the caliph Marwān I [g.e.] and progenitor of the subsequent Marwānīs; Sa‘īd [g.e.], governor of Kufa under ‘Uthmān and of Medina under Mu‘awīya b. Abī Sufyān, and al-Mughīra, whose son Mu‘awāya was the Muhammad b. al-Mutjalīb and the father of ‘Abd al-Malik b. Marwān’s mother ‘Āṣīgā.

Because of the strenuous hostility shown to the Prophet by al-‘Aṣ the he was killed, a pagan, at Badr) and his son Mu‘awīya, and because of al-Hakam’s ambiguous role in the first years of Islam (as the “accursed one” banished by the Prophet, the family was often regarded by later Islamic sources with especial rancour; Sa‘īd b. al-‘Aṣ, however, found some contemporary favour with the Ḥāshimī clan and the supporters of ‘Ali, see Lammens, Mo‘awīya F., in MFoB, i (1906), 27-8.

[See C.E. Bosworth]

AYATULLAH (Ayat Allah, current orthography Ayatollah), a title with an hierarchical significance used by the Imāmī, Twelver Shi‘īs, and meaning literally “Miraculous sign [g.e.] of God”. In order to understand its sense and its implications, one has to consider the recent evolution of certain institutions worked out by the Imāmī ‘ulamā’.

Since the dominating attitude of Imāmīsm has been dictated by the doctrine that all political power—even if exercised by a Shi‘ī—is illegitimate during the occultation of the Hidden Imām, it has only been comparatively late, from the 12th/18th century onwards, that political theories have taken shape and an hierarchy within the top ranks of the muṣjīhidīs [g.e.] has been formed. After their long disputes against the Aḥkāmīs [see AKBARĪYYA in Suppl.] and Shī‘īs, the Shī‘īs [g.e.] in the course of the 19th century elaborated the theory according to which at every given moment there could only be one unique manṣūr-i taḥlīl [g.e.] “source of imitation” (see Algar [1905], 3-11, 34-6, 162-5, etc.; Binder, 124 ff.). This title of manṣūr-i taḥlīl [g.e.] was subsequently applied retrospectively to numerous muṣjīhidīs (for lists of the naḫb-i ‘ulamā’ of the Hidden Imām going back to Muhammad Kūlny, d. 397/990, see Bagley [1972], 31; Fisher, 34-5; Hārī, 62-3. During the 1960s, several discussions took place
concerning the manner of selection and the functions of the marja‘-i taklīf, at the very time when the Aytullah Burūjirdī (d. 1961), recognised as the sole marja‘-i taklīf by the mass of ‘Imām Shī‘īs, disappeared (Algar [1972], 242; for some reserves about this recognition, see Binder, 132). Drawn up by religious leaders and laymen, a collective work called Bahāt dar bās-yi marja‘-īyyat va ‘īrāhāniyyat, dealing in particular with ‘Imāmī institutions and on links with the political authority, appeared at Teheran in December 1962 (a brief analysis by Lambton, 121-33). After the disappearance of Burūjirdī—whose attitude to politics had been one of quietism—the institution of the marja‘-ī tāklīf seems to have spread out widely (in 1976, there were six marja‘-ī taklīfs of first rank, including the Aytullah Khumaynī; Fisher, 32). However, from 1963 onwards, a certain consensus seems to have grown up around the Aytullah Khumaynī, the main religious opponent of the Pahlavī régime (Algar [1972], 243); but it also seems that the consensus over the marja‘-īyyat-i kuł of the Aytullah Muhīn Khākm Tābatabā’ī of Nadjd (d. 1970) was at least partially realised in ca. 1966 (Bagley [1970], 78, n. 7; this āyatullāh enjoyed the favour of the Shah; see Algar [1972], 242-3).

In the time of protest against the Tobacco Concession (1891-2), the marja‘-i taklīf—who at that period resided in the holy places of ‘Īrāk, the ‘Atābāt [q.v. in Suppl.—]—often took the lead in the fight of opposition against Kādgār autocracy and to foreign domination. This association of the muqtaṭ̄ahids with political opposition seems to have been clearer with the grant of the title āyatullāh. In practice, this takāb seems first of all to have designated the two great leaders of the constitutional revolution, the sāyṣīd ʿAbd Allāh Bihbahanī and Mūḥammad Tābatabā’ī (Lughat-nāma-yi Dihkhudā, s.v. Āyatullāh). It has since been used to numerous great muqtaṭ̄ahids (sometimes retrospectively), independently, it appears, of their political attitudes. It tends to replace in current usage (but not in the actual hierarchy) certain titles such as that of muqtaṭ̄ah al-Islām which nowadays can mean any and every dīkhund (this latter term tending, despite its pejorative character, to supplant that of muṣla‘ī).

As with that of marja‘-i taklīf, attribution of the title is above all a question of opinion. In effect, above the title of muqtaṭ̄ah the level of respect accorded and the religious chief’s charisma depend on the consensus of the mass of faithful. The āyatullāh is placed at the top of the hierarchy, amongst the elite of the great muqtaṭ̄ahids. At the summit of all is to be found the āyatullāh al-‘uzmā (the “greatest miraculous sign of God”), the supreme marja‘-i taklīf or muqtaṭ̄ahid. This rank seems to have been first of all accorded to Burūjirdī (Binder, 132). There seems also to be at Kum a limited sort of college which makes decisions about the title (ibid., 134). This clearly reinforces the position of Kum, which has become the “symbolic capital” of Iran since the Āyatullāh Khumaynī’s return (the title ‘Imām sometimes applied to him seems to be taken from ‘Īrākī usage).

Although they are sometimes of modest origin, the great majority of āyatullāhs are now sāyṣīds (where-as the great ‘īlamā of the past were not always from this class). Marriages and alliances traditionally reinforce the strength of religious leadership (see Fischer, genealogical tables, 33-4). Whether he be marja‘-i taklīf or not, the āyatullāh exercises a double role of manager within his sphere of activity. On the administrative level, he controls the levying of various religious taxes, the direction of pious gifts and property in mortmain (waqf [q.v.], controlled by the state under the Pahlavī régime), the distribution of various grants and alms, the administration of centres of learning, etc.; on the intellectual and spiritual level, he is responsible for education. His influence on the social level is limited by his faithful followers: the students and those who bring their financial support to him (Fisher, 41).

The role and influence of the Iranian āyatullāhs are now very diverse. Their prerogatives have increased through the progressive installation of an Islamic Republic since the events of winter 1978-9. But, despite the abolition of the monarchy, they are inevitably subject to all the hazards of political power and to the pressures of antagonistic forces (secularism, communism, the growth of nationalisms, religious particularisms, etc.). There is at least one āyatullāh in each province and several in each main centre of religious teaching (haorda-yi ‘ilmī). Thus there are 14 traditional mādāras at Kum directed by āyatullāhs, of whom some have attained the rank of marja‘-i taklīf (Fisher, table, 23).

ʿAYN AL-KUḌĀT AL-HAMADHĀNĪ, ʿABD ALLĀH b. ĀBI BĀRĪ AL-MĪVĀNĀDI, Shāfl jurist and Sufi martyr, born at Hamadhān in 492/1098. Born of a line of scholars, he studied Arabic grammar, theology, philosophy and law, and as an already precocious scholar, began writing his books at the age of 14. Also, at the approach of puberty, he became a convert to Sunnism. In 517/1123, at the age of 25, he seems to have met Ahmad al-Ghazālī, brother of the great theologian Muhammad al-Ghazālī, who initiated him into Sufi meditation and dancing, thus completing his spiritual conversion. Other masters of his were Muhammad b. Hamūṭiya and a certain Baraka.

His spiritual reputation soon gained him many disciples, and he spent all his time in oral and written teaching, sometimes going beyond the limits of his physical strength for this and having then to recuperate for two or three months for recuperation. His activities soon provoked the hostility of the orthodox theologians. Provoked by his teachings on the nature of sainthood and prophethood and on submission to the Sūfī shaikh, and objecting to his
usage of Sufi terminology which gave the impression that he himself laid claim to prophetic powers, they brought an accusation of heresy against him before the Seljuk vizier in Trak, who imprisoned him in Baghdad. It was there that he wrote his apologue, Pers. ms. 'L-res. Some months later he was set free and returned to Hamadhān, but shortly afterwards, at the time of the Seljuk sultan Mahmūd's arrival (reigned 511-25/1118-31), he was executed in a barbarous manner during the night of 6-7 Dūmādā II 526/6-7 May 1131 at the age of 33. His premature death seems to have prevented Hamadhān from founding a Sufi monastery, setting up a Sufi group and designating a successor; nev- ertheless, his numerous works, written in a fine style, have always found an audience.

His actual name and early career are not known. Contemporary writers mention him by his honorific title, 'Ayn al-Mulḵ, with the nisba Multānī because he hailed from Multān; the 9th/15th century chronicler Yābūyā Sīrāhī calls him 'Ayn al-Mulḵ-Shāhīb signifying that his father's name was Shāhīb. However, 'Ayn al-Mulḵ Multānī started his career in the reign of Sultan 'Alāʾ al-Dīn Khādğī (655-715/1259-1316), and soon attained to an important position in the official hierarchy, showing excellence in both penmanship and military generalship. Amir Khursaw showered praises on him in his works, depicting him as a learned statesman in peace time and a veteran general on the battlefield. Divā'-e Dīm Barānī speaks of him as one who was wise in counsel, widely travelled, ripe in experience and much distinguished for his sagacity and successful tackling of complicated problems.

His first important assignment was his posting in Mālāvā as the mākthā or governor of Dīlī and Urdādāyān in 704/1305. In Mālāvā, he not only consolidated the sultan's rule, but also subdued the recalcitrant zamindārs of Central India. In 716/1316, he held the territory of Dīlī; in modern Maharashtra, when he was recalled to Dīlī by Malik Nābir, after Sultan 'Alāʾ al-Dīn had died. On route he received another order from Dīlī directing him to proceed to Gudjarāt, where rebels had captured the province. In compliance to Malik Nābir's order, 'Ayn al-Mulḵ turned aside, but had to halt in Čīrāt as many fellow-nobles in the royal army refused to march after Malik Nābir had been killed and the policy of the new ruler, Sultan Kubl ā al-Dīn Muhbārāt Shāh, was not known. After a few days, the new Sultan sent him and other nobles famīns ordering them all to go to Gudjarāt and establish peace and order there.

On arrival, 'Ayn al-Mulḵ tried to solve the problem diplomatically. He wrote to the leaders of the rebellion that the murder of their leader Alp Khan had already been avenged, as the culprit (Malik Nābir) was now dead, and for this reason they should not persist in rebellion. He also warned them of the serious consequences if they did not submit to the central authority. In response to his letter, many rebels joined his camp. Only Haydar and Zīrāftr fought against the royal army and they were easily routed. Having settled the affairs of Gudjarāt, he then returned to Dīlī.

In 718/1318, he was sent to Deogīrī when Malik Yak Lakhī, the local mākṭa, rose in rebellion. This time he was appointed as wazīr, with Malik Tādj al- Dīn, son of Khādīja 'Atīa as Muhbīf and Mūdīr al-Dīn Aburdā as military commandant. In 720/1320, he was present in Dīlī when Sultan Kubl ā al-Dīn Muhbārāt Shāh was killed by the allies of Khursaw Khān. Though 'Ayn al-Mulḵ was not in alliance with Khursaw Khān, the latter provided him with the title of Alam Khān in order to win him over to his side. Soon afterwards, Ghāżī Malik, the mākṭa of Depālpūr, organised a movement against Khursaw Khān aiming at revenge for the murder of Kubl ā al-Dīn Muhbārāt Shāh, persuading all the important nobles, including 'Ayn al-Mulḵ, to help him against the regicide. 'Ayn al-Mulḵ, afraid of Khursaw Khān's agents, showed Malik Ghāżī's letter to the usurper, and thus assured him of his own loyalty. Ghāżī Malik, anxious to win him over, again wrote a letter to this time. 'Ayn al-Mulḵ expressed his sympathy with Ghāżī Malik's undertaking and promised not to participate in the battle against any partner because he was in Dīlī, surrounded by the allies of Khursaw, and could not take up arms against him. On achieving the throne, Ghāżī Malik, who assumed the title of Sultan Ghīyāth al-Alm, and apparently retained 'Ayn al-Mulḵ Multānī in his service.

According to 'Isāmī, 'Ayn al-Mulḵ joined Ulugh Khān (later Sultan Muhammad b. Tughlūk) on the Warangal expedition of 722/1322. Since the siege of Warangal became prolonged and Ulugh Khān insisted on capturing the citadel, the officers got tired and many of them mutinied, although 'Ayn al-Mulḵ remained loyal. This was the last expedition that he had joined, for we do not hear of him afterwards.

Certain mediaeval as well as modern scholars have confused 'Ayn al-Mulḵ Multānī with 'Ayn al-Mulḵ Māhārū, who is the author of the famous work, Inḍāl-e Māhārū. Māhārū was a noble of Muhammad b. Tughlūk's and Fīrūz Shāh's entourage. 'Isāmī distinguishes 'Ayn al-Mulḵ Multānī from Māhārū by calling the latter 'Ayn al-Dīn. Divā'-e Dīlī Barānī differentiates between them by making different statements about their qualities, stating that 'Ayn al- Mulḵ Multānī could not only wield the sword successfully but was also adept in diplomacy and penmanship, while Māhārū had no experience of military generalship, since he belonged to the class of scribes and clerks. Shams al-Dīn Sirājī 'Affī presents Māhārū as the creature of Muhammad b. Tughlūk. Further, most of the letters and documents contained in the Inḍāl-e Māhārū were drafted in Fīrūz Shāh's reign, and only a few belong to the time of Muhammad b. Tughlūk; there is no letter written by Māhārū during
Abu 'l-Kalām Āzād continued and extended the work begun by Shibli with the object of encouraging the 'ulāmā' to participate in the most modern developments of civilisation. As a theologian experienced in the disciplines of the most traditional religious thought, he provoked the 'ulāmā' into an increasingly sharp awareness of the vital experience, in the course of which each article must be disencumbered of all artificial comment in the fort of Ahmadnagar between 9 August 1942 and 15 June 1945. Finally, the work which he held until his death in 1958.

Abu 'l-Kalām Āzād revived the pan-Islamic proposals of the great reformist Djamāl al-Dīn al-Afghānī and exhorted the Muslims of India not to remain passive observers of the upheavals which were transforming the world, but to associate themselves with the struggle whose primary object was to free them from the foreign yoke, so that they could subsequently participate actively in the complex and fruitful changes which, in the modern era, contributed to the prosperous life of nations. But was there not in this attitude a contradiction between pan-Islamism, ideally asserted, and nationalism as constantly practised in a context where, in the event, India, once independent, could not be other than a nation dominated by the Hindu community?

In the more strictly theological sphere, Abu 'l-Kalām Āzād expressed his opposition to Sir Sayyid Ahmad Khān (1817-1890 [g.v.]) and of the movement which the latter launched in founding the university of Aligarh, Abu 'l-Kalām Āzād was professor of religious philosophy at Aligarh University until 1958. AZAD — AZADI

AZÂD, MUHAMMAD HUSAYN (1830-1910), Urdu writer, was a leading exponent of "new" Urdu prose, and a pioneer of the reaction against the Persian tradition in Urdu poetry, with its emphasis on ghalâz and its preoccupation with ornate, stylized language.

Born in Dihli, he was the son of one of the first leading journalists of north India. He was educated at Delhi College, and acquired a mastery of both Arabic and Persian. By 1854, he was a friend of his father's newspaper, the Dihli Urdu Akbâr. A love of poetry was fostered in him by the poet Dhwâk (1789-1854), who was a friend of his father's. However, the Indian Mutiny of 1857 and its aftermath completely changed his life, and its effect probably never left him. His father was executed for treason by the British authorities, and he himself fled and became a wanderer. In 1864 he arrived in Lahore, where he was to reside for the remainder of his life. He obtained a minor post in the Punjab Ministry of Public Instruction. He twice visited Persia, and in 1865 he accompanied an Indian Government secret mission to Bûlghârâ, aimed at investigating Russian penetration of that region.

In his early years in Lahore, he quickly won the confidence of local British dignitaries, including Colonel Holroyd, Director of Public Instruction. He wrote several educational works, including a Persian course in English of Samuel Johnson, Addison and their contemporaries. After 1870, he turned mainly to Persian language and literature, dates from 1872, but was not published until 1907. However, his fame rests chiefly on his long critical account of Urdu poetry, Abî-i-hayât (1881). His last major work, Darbâr-i-akkårî (1898), is a dazzling account of the court of the Mughal emperor Akbar [q.v.], but, despite its rich style, it is often described as a failure. Azâd's prose is imaginative and colourful, far removed from the straightforward style of Sir Sayyid Ahmed Khân and Hâfi. Muhammad Sadiq (History of Urdu literature, 300) says that it "recalls old patterns in its syntactical peculiarities and word-arrangement", and adds, perhaps with a little exaggeration, that its syntax seems Persian. Azâd was not directly involved in the Aligarh Movement, but was highly respected by its leaders. Hâfi wrote complimentary reviews of Nasîr-i-khayâl and Abî-i-hayât.

The last twenty years of Azâd's life were marred by periods of mental illness bordering on insanity. Personal tragedies, and overwork—including his edition of Dhwâk's Dwaânc—have been blamed for this. He died in Lahore in 1910.

Bibliography: In addition to information given above, some of the many reprints of Azâd's works may be mentioned; thus for Abî-i-hayât, Lahore 1950, Faizabad 1966. As for Darbâr-i-akkårî, Muhammad Ibrâhîm, editor of the Lahore edition of 1910, claims in his preface that his text is more complete and more in keeping with Azâd's intentions than the original (1898) edition of Mir Mumtâz 'Alî. There is aLucknow edition n.d., but ca. 1905. For Nasyr-i-khayâl, there is a Karachi edition of 1961. Abû-Sâîd Bâkîr has edited selected articles by Azâd (Maqâlât Mawûlânâ M.H. Azâd, Lahore 1966), Kîsâr-i-Hind was reprinted in Lahore (1961) and Karachi (1962). Selected letters have been published: Maktûbât-i-Azâd, Lahore 1907, and Maktûbât-i-Âzâd, Lahore 1966. The collected poetry was published as Nâzîm-i-Âzâd, Lahore 1910.

Among critical biographies, Muhammad Sadiq's Muhammad Husayn Azâd—his life and work, Lahore 1963, is of prime importance. The same author's shorter account in his History of Urdu literature, London 1964, 288-302, includes a conveniently brief analysis of Azâd's prose style (297-301), with extracts. In Urdu, there is Dâhân Bânû Begum's Muhammad Husayn Azâd, Hyderabad Deccan, 1940. Among detailed studies of Abî-i-hayât, mention must be made of Ridâwall Mas'mîd Hasan's Abî-i-hayât kâ tankid mutâlîa, Lucknow 1953. Hâfi's reviews of Nasîr-i-khayâl and Abî-i-hayât, originally published in the Aligarh University Gazette, are available in Khâliq-i-mâzar-i-Hâfi, Lahore 1968, ii, 176-83 and 184-94. (J.A. Haywood)

AZâDî (f.), freedom, synonymous with Arabic barsiya [q.v.]. Deriving from the Avestan word azâta and the Pahlavi word âzât (noble), the word
azadi has as long a history as Persian literature itself. It was employed by Persian writers and poets such as Firdawsi, Farrukhi, Sistani, Gurgani, Rumli, Khakani, Nasiri Khurasan, and Zahiri Faryab in a variety of meanings including, for instance, choice, separation, happiness, relaxation, thanksgiving, praise, deliverance, non-slavery, and so on (see Dihkhudad, att. Azadi, Lughat-nama, 6/1, B6-7). In modern times, the idea of social and political liberty has also been expressed by the term azadi (and sometimes by the term ibhayar), the latter sense of which will be dealt with below in reference to the Iranian world.

From its very nature, the modern connotation of azadi has been associated with the process of Western impact on Persian culture and therefore its history. Considering the fact that the activities of the British East India Company (from 1600) coincided with the mass migration of Persian writers and poets to India, plus the information brought to India by travellers such as Ptsam al-Din, who recorded his impression of Europe in 1767, it would be logical to conclude that the Persian emigrants to India were among the first eastern people to have been exposed to European new ideas. It seems, however, that no noticeable Western influence can be observed in the Persian writings of the 17th century. The earliest favourable, but brief, account known to us of Europe is that of Muhammad 'Ali Hazin (d. 1766), who wrote in 1732 that some of the European countries enjoyed laws, a better way of life, and more stable systems of government, and regretted not to have taken a trip to Europe, as was suggested to him by an English captain (Hazin, Ta'rikh-i Hazin, Tehran, 1953, 92-3, 110-1).

One of the earliest, and relatively detailed, accounts in the Persian language of European social and political institutions belongs to a Shushtar-born emigre of India, 'Abd al-Latif Musawi Dzjarziri, who learnt about the new ideas which had developed among the newly-born middle class of Europe and had been imported to India. Writing in 1801, 'Abd al-Latif dealt with modern topics such as freemasonry, equality, liberty and the function of the administration of justice in England. He also made reference to the British system of mixed government, i.e. the division of power among the king, the lords, and the subjects (vadi). It is on the contrary, called England with admiration and even with envy, based on the opinion of the author that the latter was being considered as the propertied men who were entitled to elect and be elected. For more detailed descriptions of modern ideas, including that of azadi, one may look into the eyewitness accounts, the most widely quoted of which are those of Mirza Abu Talib (Ishafan, son of another emigre to India, and Mirza Salihi Shariat of Iran. Both Abu Talib, who travelled and lived in Europe from 1798 till 1803, and Mirza Salihi, who studied in England from 1815 till 1819, wrote in detail about the type of liberty which then existed in England. Some differences, however, may be observed in their accounts: Abu Talib seems more critical of the British system; he found, for instance, freedom of the press somewhat harmful, and refused to accept membership of freemasonry (cf. his Hazin-i Talibi, Tehran 1974, 152, 195-6). Mirza Salihi, on the contrary, called England with admiration velayati azadi (land of freedom), and joined freemasonry with great interest (Szafar-nama-yi Mirza Salihi Shariat, Tehran 1968, 189, 207, 374). As a matter of fact, most, if not all, of the Persians who went to Europe throughout the 19th century became freemasons, and learnt there to propagate the type of freedom which was understood by the masons and included in their famous slogan of libert, egalite, fraternite (Ism'i R'ain, Farangiyyeh va Faramsi'at dar Iran, i-iii, Tehran 1968; Mahmud Kaitari, Farangsi'i dan Iran, Tehran 1968).

In Europe, such ideas as liberty, equality, laissez-faire and so on, were developed in the course of the struggles between the old feudal system and the newly-born capitalism, so that for the "Third Estate", liberty meant freedom from the yoke of feudalism and the freedom for private enterprise. Accordingly, this concept of liberty expressed could have had little meaning for the Persian audiences who were still experiencing their own type of "feudalism" at that time, and it must have appeared as an entertaining fiction.

One of the consequences of the development of capitalism in the West was the latter's need, among other things, of raw materials, cheap labour and profitable investments in other parts of the world. At the turn of the 19th century, Iran appeared to the then great powers, i.e. England, France and Russia, as important both strategically and economically. Since Iran found itself too weak to survive Western encroachments, the Persian government saw it as indispensable to take certain measures for strengthening of the country through modernisation, so that students such as Mirza Salihi were dispatched to Europe to acquire modern sciences. Although the internal and external forces supporting the old regime of Iran were still strong, the process of modernisation did not come to a standstill. In addition to sending students abroad, there were several diplomatic missions to Europe during the reigns both of Fath 'Ali Shah (1797-1834) and Muhammad Shah (1834-48). Missions such as those of Mirza Abu 'l-Hasan Il' (England, 1814), Khurasan Mirza (Russia, 1829), and Ajudanbafi (Austria, France, and England, 1834) helped the Iranian ruling circles to obtain more information about the European ideas and institutions. A number of memoirs, such as Khurasan Mirza's, do indicate a misunderstanding by some of the Iranian diplomats of the idea of liberty. However, there appeared also intelligent accounts of parliamentary systems in European countries.

In the outset of Naqir al-Din Shah's reign (1848-96), a wide range of modernising measures were initiated by the Amir Kabir. In 1858 Mirza Dzjar Kahan Musavi al-Dawla formed his government, modelled roughly on European cabinet systems. Believing in Dzjar Kahan's progressive thought, Mirza Malkam, another modernist, wrote to him a long letter urging him to reform the system of government and to separate the powers. He declared the opinions of the Iranian people to be free, azadi. Shortly after the appearance of Malikam's letter, an anonymous author touched upon the necessity for free elections and freedom of the press (MS. Maglis library, Tehran No. 3185/4147, Dzjar-i Tanjim, in Magasih-yi agha-i Mirza Malikam Kahan, Tehran 1948, 24-6). In the same year (1858), when an Italian nationalist, Orsini, attempted the life of Napoleon III, Farrukh Kahan Amrin al-Dawla was on a diplomatic mission to Paris. He wrote not only of the French parliament, but also described with admiration the remarks made in a letter to the Emperor by Orsini on patriotism, liberty, and the freedom of Italy, for whose sake he had taken that action; Farrukh included a Persian translation of that letter in his memoirs (Husayn b. 'Abd Allah Sarabi, Makzan al-vos'ayf: Shohri ma'ani-yi va mas'afari-yi Farrukh Kahan Amrin al-Dawla, Tehran 1965, 354-86).
In 1866 an anonymous author wrote a treatise on social and political affairs, and paid special attention to the ideas of freedom and equality and their applicability to Islamic teachings. He classified “commodable freedom” (khârîj-i mamduh) into six types which included freedom of property, assembly and press, and the prohibition (Ms. Magdî Libray 137; for an account of this exceptionally interesting work, see Abdol Hossein Haeri, Fihrist-i kâkhibgâna-yi Ma'mûl-i shârs-yi millî, xxi, Tehran 1974, 135-8).

The last few decades of the 19th century witnessed a number of important changes from within and from without; constitutional movements took place in many European and some Asian countries; more efforts were made by powerful and industrially advanced nations to colonise other countries; and Anglo-Russian rivalries in Iran were intensified. These developments, together with other factors, exposed Iran to new ideas and predisposed towards the establishment of a new order involving a degree of political freedom for the subjects. The modernising measures undertaken by Mirzâ Husayn Khan Sipahsâlîr (d. 1881), and the appearance of newspapers such as Irmâ, Wâsâyâ-yi 'adâlîya, Watan, Nijâmî, Ilhâm, and Mîrîshî in the 1870s, and the emergence of writers and social critics such as Mirzâ Fath 'Ali Âghûnd-zâdâ (d. 1878), Yûsuf Khân Mustâshâr al-Dawla Tabrîzî (d. 1895) and Malkâm Khân (d. 1908), may be studied against the background of those developments. The critics fought earnestly for the establishment of a free enterprise system and the destruction of the old system of election, freedom of speech, etc. Some of the modernists like Malkâm and Sipahsâlîr went as far as not only to advocate foreign investment in Iran, but also played an active role in encouraging it. They seem to have understood the concept of liberty as defined in Europe. Âghûnd-zâdâ, for instance, pronounced the view that no reconciliation is possible between liberty and Islam. He also saw freedom as preserved through freemasonry activities (Farîdîn Adâmîyyat, Âstâd-dîd-yi Mirzâ Fath 'Ali Âghûnd-zâdâ, Tehran 1970, 146-9). Out of expediency, however, most of the writers gave their definition of liberty some Islamic colouring; they likened, for instance, freedom of speech with the Islamic concept of al-umr bi 'l-mâlîf wa 'l-ahây 'an al-mu'âshir (Abdul-Hadi Hairî, The idea of constitutionalism in Persian literature prior to the 1906 Revolution, in Akten des VII. Kongresses für Arabistik und Islamwissenschaft, Göttingen, 1974, Göttingen 1976, 189-207).

At the same time, there appeared two more groups of intellectuals who also wrote about freedom. Writers such as Mumtâhîn al-Dawla (d. 1921), an experienced diplomat, and Mirzâ Husayn Khân Farâhânî, who visited Russia, Turkey, and the Hidjâz from 1884-5, found âdâlî to be quite harmful. In 1870, while sitting at the place reserved for the diplomatic corps in the British parliament, Mumtâhîn al-Dawla witnessed a serious attack waged by one of the members on the Queen and the institution of monarchy in Britain. At this point, Mumtâhîn envied the British members of parliament their freedom of speech, but did not believe that the Persians could learn the same privilege in the near future; according-ly, he flatly discredited the Iranians' struggles for freedom during the Constitutional Revolution of 1906-11 (Mahdî Khân Mumtâhîn al-Dawla Shâkîshî, Khârîjî-yi Mumtâhîn al-Dawla, Tehran 1974, 188-9, 210-11). To Farâhânî, freedom appeared to be a destructive element in history; he held that no system could survive unless it was based on one-man rule (Sifar-nâmâ-yi Mirzâ Husayn Khân Farâhânî, Tehran 1963, 139-46).

A third group of intellectuals, which also included some men from the first group, emerged in reaction to the introduction of foreign rivalries, the spread of governmental corruption and tyranny, and above all the concessions made to foreigners. The works of Hâdjîyâ Sayî'î (d. 1925), Zayn al-'Ābîdîn Marâghâ'î (d. 1911), Mirzâ 'Abîl-ar-Rahîm Tabrîzî Talîbîv (d. 1911), Mirzâ Âkâ Khân Kirmânî (d. 1896), and some of the writings of Malkâm and Âfghânî (d. 1896), are the best representative expressions of the people's response to the existing political and economic situation in Iran. To Âfghânî, freedom meant the replacement of the existing tyrannical regime by a benevolent government. Other writers especially Talîbîv, however, attached more meanings to the idea of freedom. The latter defined it in full details as involving the franchise and freedom of the press, assembly, and opinion. All of the men in this group opposed the existing “feudally” based social system and advocated a free enterprise system not dependent on foreign concessions, foreign goods, or foreign interventions. It was during the same period that a number of reformist intellectuals, headed by Ahmad Ğânî (d. 1897), also began to emerge in Bûkhârân. Dânîg̲h's most important political and philosophical work Nâvâdir al-wâlîkârî (written 1875-82), was devoted to the necessity of social reforms and freedom of the people from the tyranny of the then Bûkhârân Ğamîr. His disciples such as Shâhîn, Sawdâ, Ğârî, and many others followed his steps (Jîrî Becka, Tajiki literature from the 18th century to the present, in J. Rybka et alii, History of Iranian literature, Dordrecht 1968, 495-605). In a later period we also see revolutionary pieces of poetry such as “Surâ'î-Î âzâdî” by 'Ayînî and “Bi šâra'î-Î inâlîâbî-Î Bûkhdârî” by ‘Akkâbâshî (Ṣâdîr al-Îdn ‘Ayînî, Nâmâna-yi abâb-i yâdîgârâ-yi Tajîk 300-1200 hâgîrî, Moscow 1926).

This period also coincided with some measures of modernisation in Afghanistan. To the Afghans, because of the Anglo-Russian rivalries throughout the 19th century, political âdâlî simply came to mean the independence of their country from foreign encroachments, in connection with which a number of short-lived periodical papers such as Khâbîl (1867) and Shâms al-nâhâr (1875) came into being. The Afghans' approach to the idea of freedom was best represented in their first important weekly paper, Sinâdî al-akbârî-Î Âfghânîya (1911), where problems of modernisation and national independence were dealt with in a highly sophisticated manner. Its chief editor, Mahmûd Ğârîz, argued that "genuine national development and progress were possible only when a society enjoyed complete independence, sovereignty, and freedom" (Vartan Gregorian, The emergence of modern Afghanistan, Stanford 1969, 178). This type of argument about liberty was pursued by later papers such as Ânâdî-Î Âfghânî, Ilhâdî-yi maqârî and many others (Sâdîr Qassîm Rîshîh, Journalism in Afghanistan, in Afghanistan, ii (1948), 72-7).

In the course of the Persian Constitutional Revolution of 1905-11, the idea of freedom was approached by the factions involved in the Revolution in three different ways. One of the groups, influenced principally by Islamic teachings, was in favour of freedom, but a type of freedom consonant with Islam. Mirzâ Muhammadd Husayn Nâînî (d. 1936), for instance, defined freedom as an opposite to slavery,
but like Montesquieu (De l'esprit des lois, i, 1, iii, ch. viii) held that living under despotism was itself equal to slavery; therefore, freedom may be achieved only by the replacement of the existing tyrannical regime of Iran (Haiiri, Shi'ism and constitutionalism in Iran [see Bibl.], 173-80, 216-19). The second group, to which the last-mentioned party belongs, derived a better insight into European ideas, together with a close association with the Russian revolutionaries, so that they interpreted freedom in a more western sense. In their approach both groups emphasised particularly the downfall of despotic rule in Persia and the ending of foreign intervention as being integral parts of freedom. The third group, i.e. the supporters of the old regime, under the leadership of Shaykh Fadl Allâh Nûrî (d. 1909), opposed any principles of democracy, and especially the concepts of liberty and equality, which appeared to the Shaykh as detrimental to Islam (Abdul-Hadi Haiiri, Shaykh Fadl Allâh Nûrî's Refutation of the Idea of Constitutionalism, to appear in Middle East Studies). The latter group even organised many mob demonstrations in which the people chanted: "We want no liberty; we want the Prophet's religion".

The Anglo-Russian agreements of 1907 and 1915, and the Anglo-Persian treaty of 1919, led to a number of nationalist movements, such as those led by Kutây Khan [g.g.], Khayyabâñî [g.g.], and Muhammad Ta'â Khan Pîsûn. After the 1917 Russian Revolution, the Soviets withdrew the claims of the Tsars against Iran, so that freedom meant exclusively the abolition of the 1919 treaty and the freedom of Iran from any foreign intervention which could limit its independence. The newly-established Communist Party of Iran (1920), which co-operated with some of these movements, added a socialist colouring to the idea of freedom by propagating the idea of freedom of the peasants from the landowners through dividing up the latter's lands among the former.

Towards the end of the Kâdîr dynasty, a number of poets and writers, such as Mirzâ 'Îljî, Muhammad Farrukhî Yazdî, Muhammad Ta'â Khan and Abu l-Kâsîm Lûhût, wrote very critically about the freedom of the Persian people both from inter- national tyranny and from external influences; some of them met an untoward fate. Under Rida Shâh's reign (1925-41) the term azâdî was used only in rare cases; for instance, the newspaper Itîlîyat used azâdî in the sense of the freedom from the Kâdîr dynasty or from the movements and rebellions which had existed in Iran. In 1932 Rida Shâh outlawed the Communist Party, but the activities of some of the communists led by Dr. Ta'â Khan (d. 1939) continued. In their literature, e.g. in Dângâ, social and political concepts, including liberty, were defined from the socialist point of view. Some other intellectuals such as the woman poet, Parwûn Itisâmî (d. 1941), wrote about freedom in a symbolic and subtle way, but their general message was the freedom from the existing situation.

The period following Rida Shâh's abdication (1941-53) witnessed a campaign for the nationalisation of the Anglo-Persian Oil Company. The new Communist party, now calling itself hîch-i tâdûrî-ye Iran [founded in September 1941] held freedom to be the nationalisation of the oil. However, it also saw freedom in the establishment of better relations with the Soviet Union so that Iran might evolve a Communist government. To the nationalists, on the other hand, freedom depended not only on the nationalisation of the oil but also on the extinguishing of Russian and all other foreign influences in Iran. These ideological conflicts culminated under Dr. Muhammad Musaddik's 28-month rule, a period referred to by his supporters as dawra-yi azâdî ("the epoch of freedom"), during which for the first time popular involvement in politics was allowed to a certain extent and the activities of opposing political parties plus the campaigns of the press belonging to different political wings were somewhat tolerated. This period came to an end in August 1953 when Musaddik's government was overthrown by the army.

Abu 'l-'Abbās was born on 17 Ramaḍān 557/5 August 1162 and died on 1 Ramaḍān 633/July 1236. From all accounts he was a man of profound piety, and, throughout his adult life, he taught ḥadīth and fiqh in the Great Mosque of Cuet, a monastery of the Prophet’s nativity (muḥālīd, mulūd) he initiated that in later times inspired his son Abu 'l-Kasim to adopt the custom of celebrating the muḥālīd and putting an end to the idea of celebrating the Prophet's nativity (muḥālīd, mulūd) which was the purpose of which was to promote his idea of celebrating the muḥālīd and putting an end to the idea of celebrating the Prophet's nativity (muḥālīd, mulūd).

Abu 'l-'Abbās was also the author of a completed work. Abu 'l-'Abbās was also the author of a completed work, which was the purpose of which was to promote his idea of celebrating the muḥālīd and putting an end to the idea of celebrating the Prophet's nativity (muḥālīd, mulūd) which was the purpose of which was to promote his idea of celebrating the muḥālīd and putting an end to the idea of celebrating the Prophet's nativity (muḥālīd, mulūd).
This was the signal for action. As the most widely respected notable, Abu 'l-Kāsim al-'Azafī was approached by Ceuta's kā'id al-bahr, Abu 'l-Abbas Ḥağıbîn al-Randâlî, and persuaded to consent to the overthrow of the regime and, in the event of success, to assume leadership of the community. The plan, as executed by al-Randâlî, but not quite as envisaged by Abu 'l-Kāsim, resulted in the decapitation of Shakkâf and Ibn Abī Khâlid. Ibn Shâhid was deported, and the 'Azafî, after assuming control, declared Ceuta's allegiance to the Almohad Caliph al-Murtada (reg. 646-65/1248-66), who duly appointed a governor. The Almohad governor's stay was short: after only a few months in Ceuta, Abu 'l-Kāsim expelled him and sent the caliph a letter of explanation what he accepted.

What arrangement followed is unclear. We are only told that in 654/1256-7 the 'Azafids became absolute ruler of Ceuta, which he took over and administered with great application and total devotion to the interests of its inhabitants. What is certain is that, despite his de facto autonomy, he remained loyal to the tottering throne of al-Murtada and even defended his interests when the occasion demanded.

Considering that Abu 'l-Kāsim was, in his day, a king, it is not surprising that the precise form of his authority on life and rule is so sparse that most of what can be said of him must be deduced from his ascertainable policies. Born between 606/1209-10 and 607/1210-11, he was around forty when he came to power and seems to have had a maturity of judgment to match his years and such as to mitigate against rash ventures. His primary aim was to create and maintain a strong and prosperous Ceuta at a time when it was fast becoming not only a prime military objective for Castile, but also a target for ambitious Marinids seeking control of Morocco. He therefore set about strengthening Ceuta's defences and evidently profited from a truce with Castile against handsomely some tribute over two consecutive two-year periods (7 1251-5). At the same time he aimed at stabilising, conserving and developing Ceuta's already extensive trans-Mediterranean trade, notably with Barcelona, Genoa and Marseille. Within about ten years, Ceuta seems to have gained real naval and economic strength. In 599/1261 her first real test came when the prospect of a Nasrid Ceuta lured Ibn al-Ahmar of Granada, whose territory was 'Azafid ships that formed the backbone of the Marinid fleet which utterly routed the Castilians. But gradually the certain rewards of peaceful trade, notably with the Crown of Aragon and potentially dangerous to Islam. In practice he sacrificed little: a yearly "gift" to the Marmid emir, who bore him a personal grudge, was a yearly tribute, which he paid to Fez and then, in 1304, to rebel against the sultan Abū Ya' ḥâb, who, without Aragonese naval assistance, was powerless to impose his will. But 'Azafid independence was short-lived: in May 1305 Nasrid forces were enabled by a disaffected garnison commander to seize Ceuta. All members of the 'Azafid family were taken to Granada, where they remained, royally treated by Muhammad III until his deposition in March 1309.

The Second Daula. In July 1309 Nasrid Ceuta, following an internal rising, capitulated to the Marinid Abu 'l-Rabî', who then allowed the 'Azafids to return from Spain and settle in Fez. There Yahyâ, a son of Abū 'l-Kāsim, met and found favour with Abū Sa'id 'Uṭmân, the very prince who was to gain the throne on Abu 'l-Rabî's death (November 1310). In 710/1310-11 Yahyâ was made governor of Ceuta and returned with the family to his native city. His brothers Abū Zayd 'Abd al-Rahmān and Abu 'l-Hasan 'Ali were appointed, respectively, kā'id al-bahr and superintendant of the naval shipyard. However, the temporary success of the sultan's rebel son Abū 'Ali resulted in their recall to Fez late in 1314, and during their stay there the ageing Abū 'l-Rabî died. In 713/1313-14 Yahyâ returned to Ceuta as Abū Sa'id's governor, leaving his son Muhammad as a guarantee of his continuing allegiance to Fez, but accompanied by the rest of the family. Soon after, Abū Hātim died and was survived by at least one son, Ibrâhîm.

Once back in Ceuta, Yahyâ soon put himself at the head of a council of notables (gārî) and, with the aid of a Marinid pretender, succeeded both in retrieving his son and in proclaiming and maintaining Ceuta's autonomy. In 719/1319, however, he chose to effect a reconciliation with Abū Sa'id and to remit taxes in exchange for recognition as Marinid governor. His motive in so doing was probably growing apprehension at the popularity, in Ceuta, of an ambitious Husaynid gārî who bore him a personal grudge and was, at the same time, respected by Abū Sa'id. When Yahyâ died at some date in or after 722/1322-3, he was succeeded by his apparently ineffectual son, Abu 'l-Kāsim Muḥammad, who governed under the tutelage of his cousin Muḥammad b. 'Ali, admiral of the fleet (kā'id al-asafīl). Details of the situation that in due course culminated in the 'Azafids' downfall are unclear; we know only that their authority collapsed, that Abū Sa'id marched on Ceuta in 728/1327-8, and that disaffected notables surrendered the 'Azafids to him. The reasons for the 'Azafids' downfall are complex, but, as their enemy, the Husaynid gārî Abū 'l-Abbas Ahmad,
soon emerged as president of Ceuta's şirâ, it is hard not to see in him one major cause of their undoing.

Circumstantial evidence suggests that the 'Azafids were employed—under surveillance—in the administration. The choice of a Suufi as kadi and indeed Muhammad b. All reappears as admiral of Abu 'Hasan's fleet which in 1340 almost annihilated the Castilian fleet off Algeciras. Ten years later he was still admiral of the fleet when he fell in action fighting the 'Abd al-Wârids [q.v.] in the Chelîf plain.

J.D. LATHAM

'AZAMIYYA [jarîqû] [see arc 'l-'AZAM]M.

'AL-azzi, nâsha formed from the tribal name of Azz, and borne by a family of Malikî kâtîd of Baghñid, who will be treated under Ibn Dâhilân, the name of their ancestor.

'AL-azzi, ISMÁ'îL b. ISMÁ'îL b. HâMMâd b. ZAYD, ARB ISMÁ'îL AL-KâDI (199-282/814-95), Malikî jâkîth, originally from Bayra, who in 246/860 suc-ceeded Sawâr b. 'Abd Allah as kâtîd of Baghñid East. After having been removed from office in 255- 6/869-70, he was restored to office, transferred to Baghñid West in 258/871-2 and then given charge of both halves of the city from 262/876 till his death he was then supreme kâtîd without having the official title, although currently described as kâtîd 'l-kâdî. He was also sent as an envoy to the Saffârîd who had invaded the province of Ahwáz in 262/875-6.

This kâtîd was equally a specialist in the Kurân, hadîth, fikh and kalâm and knowledgeable about gram- mar and odâb. He was very opposed to all innova-tion, refuting al-Shâfi'î and Abu Hanîfa and spreading the hadîth, fikh, marî and 'ulamd and then left it after getting an authorisation to make the Pilgrimage to Mecca. See al-Badîsi, al-Maksad, and 'ulamd of Bougie. In 674/1274, under the Mannîds, one of the natural uncles of sultan Ya'kîb rebelled against him and entrenched himself in the Azrû mountain; the ruler besieged him there, reduced him to sub-mission and pardoned him. In 1074/1663-4 Mawlay al-Shârîf came to encamp at Azrû. The 'ulamâ' and gnûqîf of Fâs came to him there and proclaimed him ruler; but the prince prudently remained at Azrû for that summer. In 1093/1684 Mawlay Ismâmî journeyed in force into the Fazaz mountains in order to subjugate the Ayt Idrâsen tribe who had been committing all sorts of depredations in the plain of the Sâ'îs. On his approach, the tribe fled towards the upper part of the valley of the Wâdî Muluya, and the sultan profited by their absence to build at Azrû a kasaba garrisoned by 1,000 cavalrymen. Pushed back into the highlands, and cut off from their agricultural lands, the Ayt Idrâsen, and deprived the sultan of all his prestige; he never recovered, and died soon after.

The 'kasaba of Mawlay Ismâmî is more or less in ruins today, but the modern town is developing rap-idly, and is famous for its woolen carpets woven by a prosperous workers' co-operative. Thanks to the beauty of its location and to the magnificent cedar forests in the vicinity, Azrû has also become a flourishing tourist centre.

One should be careful not to confuse the above Azrû—as do the authors and interpolators of the Kitâb and the Dâhilân—with the place of the same name which dominates Tafarît, in the country of the Banû Tâzin in northern Morocco; it was here that, under the Marinîds, Talha b. Yâhîya took refuge and then left it after getting an authorisation to make the Pilgrimage to Mecca. See al-Bâdîsi, al-Maâdîn, al-Musnads, K. al-Shuf
Fr. tr. G.S. Colin, *Vie des saints du Rif*, in *AM*, xxvi (1926), 209 n. 4.

(G. Deverdun)

Bâ ḤMÂD, Moroccan grand vizier whose real name was Ahmad b. Musâ b. Ahmad al-Bukhârî. His grandfather was a black slave belonging to the sultan Mâwlây Sulaymân (1206-38/1792-1823), whose bâbîqîh he had become (see *Tâhâjîn* in Suppl.). His father likewise became bâbîqîh to Sayyîd Muhammad b. 'Abd al-Râhîmân (1276-90/1859-73), and then became grand vizier during the reign of Mâwlây al-Hasân (1290-1311/1873-94); he enjoyed a miserable reputation, but his immense fortune allowed him to connect his name with the Bâhiyya palace in Marrâkûsh, whose building he undertook to Mâwlây Ismaîl b. al-Hasân, he favoured the practices of the Hindu Sadhus and Rîshîs than by those of Lâllâ Ded, who took nothing except water, dying at the age of 63 in 842/1438. He is the patron saint of the Valley, and is greatly revered by its people. His sayings and mystical verses, like those of Lâllâ Ded, are sung and recited all over Kâghmîr. His tomb in Crâr, 20 miles south-west of Srinagar, attracts thousands of people, both Muslims and Hindus, every year.

The tendency to asceticism became more pronounced among the followers of Nûr al-Dîn Râshî, called Râshî after him. They did not marry; they abstained from meat and subsisted on dry bread and wild fruits; and they lived away from human habitations, leading a life of piety, self-denial and simplicity. They moved from place to place, planting shady and fruit-bearing trees for the benefit of the people. According to Abu ʿl-Fadl, the Râshîs “were looked upon as the most respectable class in the Valley.” But in recent years, owing to their worldliness and greed, respect for them has declined, except among the very ignorant.

Bâbînîdî (Babûnâk), from Persian bâbînî, is the common camomile, primarily *Anthemis nobilis* L. (Compositae), also called Roman camomile, but also *Matricaria chamomilla* L. (Compositae) and other varieties. The nomenclature is rather confused; it can indeed hardly be expected that the various kinds of the camomile were kept apart with precision. The term is derived from *thamum* ("apple of the earth") and was known to the Arabs partly in a transcribed form (*thâmûn*, and variants), partly as borrowed translation (ṭuffîḥ al-ard). The relatively closest determination is perhaps offered by an anonymous pharmacobotanist of Spanish-Arabic origin (very probably Abu ʿAbd al-Nabâtî b. al-Rûmîyya, 561-637/1166-1240): “There are three kinds of bâbûnîdî, the stalks, leaves and general form of which are similar to each other. The distinction between them is to be found in the colour of the blossom-leaves which enclose the yellow, situated in the middle of the blossom, for the blossoms of these three kinds are yellow in the middle. In the white kind they are enclosed by small leaves which are white inside and outside, in the purple-coloured kind by small leaves which are blue inside and outside, and in the yellow kind by small leaves which are yellow inside and outside. The distinction between the white and the chrysanthemum (al-ukhuwdîn) lies in the scent, for the chrysanthemum assumes [extraneous] scents, and all these kinds have a pleasant scent” (Nurusunmayie 3389, fols. 108b, 23-109a, 4). In general, bâbûnîdî corresponds to the ṣâlimîc of Dioscorides (*Materia medica*, ed. M. Wellmann, ii, Berlin 1906, 145-7 = lib. iii, 137), and appears therefore also transcribed as *aṭâmîn* (and variants). Ubkânîn just mentioned, which is uncommonly often equated with bâbûnîdî, is otherwise used by the Arabs to render the *neptûnîv* (hârînâyân, and variants) of Dioscorides (*op. cit.*, lib. iii, 130), by which we should probably understand the medical *Matricaria chamomilla*, still in use today. Ibn al-Baytrî, on the other hand, says that the "white" kind of camomile described by Dioscorides and called ubkânîn by the Arabs, has been replaced by bâbûnîdî (*Dâmî*), i, 73, 11-13 = Leclerc no. 220, at the beginning.

The blossoms of the camomile, which contain an
oil that checks inflammations, were used as a medicine for loosening spasms and for stimulating the peristaltic motion; infusions made from the blossoms ("camomile tea") were utilized externally for baths, compresses and rinses at inflammations of skin and mucous membranes, in both antiquity and in Islam in a manner similar to present practice.

(B. R. GRIMSHAW)

BADGIR [P.], literally "wind-catcher", the term used in Persia for the towers containing ventilation shafts and projecting high above the roofs of domestic houses. They are also erected over water-storage cisterns and over the mouths of mineshafts in order to create ventilation through the tunnels below. In domestic houses, cooler air is forced down either to rooms at ground level or to cellars (the zir-i zamun), and it provides an early form of air conditioning. The towers are usually substantial, square-sectioned structures with rows of apertures in all four walls, and are divided internally by thin mud-brick or timber and mud-brick partitions and baffles; but not enough of the surviving badgírs (which are mainly situated on the central plateau of Persia, e.g. around Yazd, or in the south near the Gulf coasts), and are now often falling into disrepair with the advent of modern methods for cooling air and water; have been examined scientifically and ascertain exactly how the difference in air pressure required to create a downdraft is achieved. See H. E. Wulff, The traditional crafts of Persia, Cambridge, Mass. 1966, 15, 106, and E. Beazley, Some vernacular buildings of the Iranian plateau, in Iran, Jnl. of the British Inst. of Persian Studies, xv (1977), 100-1 (both with illustrations).

M. Polo mentions the badgírs of Hormuz in the Persian Gulf coast as the only things which make life bearable there in summer, and other travellers, such as Pietro della Valle and Figueroa, have left good descriptions of them (see H. Yule, The book of Ser Marco Polo the Venetian, London 1871, ii, 383-4).

The wind-shaft or wind-catcher was equally known in the mediaeval Arab world and has continued in use to the present day. Indeed, it seems that such contrivances were known in the buildings of the Ancient Near East, such as those of Pharaonic Egypt and Babylon. In mediaeval Arabic, the device was known by the term bádham or bádhand, derived from the alternative Persian term to badgír, bádhand (see illustration i, 47). Bada'hand was the early 'Abbásid palace of Ukhaydir in 'Irák [see ARCHITECTURE, i, 3. The 'Abbásid caliphate] we find square-sectioned ventilation shafts in the walls, and the word bádghír appears in 'Irák as bádghír. It seems probable that 'Irák formed the intermediate stage of the contrivance's spread westwards, in its new phase of life during Islamic times, to Syria and Egypt. The bádhand was already a feature of the landscape in early Fatimid times, for the astronomer Ibn Yúnus (d. 399/1008-9) [q.v.] discusses the correct orientation of what was normally a single aperture at the top of the shaft, since the prevailing cooler wind in Egypt is from the north or north-west. 'Abd al-Latíf al-Bádhádd (d. 629/1231-2) [q.v.] states that the large and ornate wind-shafts of his time cost up to 500 dinars to construct. The earliest surviving example from Cairo seems to be the shaft in the kiblah wall of the mosque of Sa'id ibn al-Murzik (558/1163) at al-alf, in the Jewish quarter of the Muslim architecture of Egypt, Oxford 1952-9, i, 284-5. The bádhand is mentioned in the Thousand and one nights, and the litterateur 'Ala′ al-Dín al-Ghazalí (d. 815/1412-3) [q.v.] devotes a chapter of his anthol. to the bádhanj, in Jnl. of Arabic Literature, viii (1978), 1-19. In modern Egypt, the usual term for the contrivance became mašlaf ["wind catcher"], noted by Lane in his Manners and customs of the modern Egyptians, ch. xxiv, and still in use (see S. Spiro, An Arabic-English dictionary of the colloquial Arabic of Egypt, Cairo 1895, 544: "ventilator, air-shaft, wind-sail"); in the houses, the air-shaft usually led down to the public rooms of the kā′na or mandara, or else to another chamber used for sleeping (see A. Lezine, La protection contre la chaleur dans l'architecture musulmane d'Égypte, in BEO, xxiv (1971), 12-15).

Bibliography: In addition to references given in the text, see A. Badayev, Architectural protection against heat in the Orient, in JNES, xvii (1958), 125, 127-8 and Figs. 4, 6, 8; and see also KHAYSH.

(C.E. BOSWORTH)

BADHMÁN, BADHMÁN, Persian governor in the Yemen towards the end of the Prophet Muhammad's lifetime. A Persian presence had been established in the Yemen ca. 570 A.D. when there had taken place a Yemeni national reaction under the Himyarí prince Abí Murra Sayf b. Dhlí Yázan [see SAYF b. DHLÍ YAZAN] against the Ethiopian-buckled governor Maatr b. Abraha. The Persian Emperors Khusrav Anushírwán had sent troops to support Sayf b. Dhlí Yázan, and eventually, a Persian garrison, with a military governor at its head, was set up in Sa'nšt. It was the progeny of these Persian officials and soldiers, who intermarried with the local Arab population, who became known as the Abíní [q.v.].

The Arab sources recount the story of the Persian occupation of the Yemen and give the names of the succession of Persian governors, beginning with Wahriz and his descendants and closing effectively with Badhám, who seems himself to have been unconnected with Wahriz's family (see al-Tabarí, i, 945-51; al-Dinawarí, al-Šhíhrí al-tiwaíl, Cairo.
Yemen, under ḍab, called al-Aswād or Western scholars have, however, been suspicious of political suzerainty is uncertain. The sources record Abnāʾ Abnāl, Annali, ii/1, 358, 369). Ibn al-Athlr, ii, 304; Caetani, *Islam* (ibid., 222/837, together with that of other Abnāʾ leaders such as Frīzū Dūlamī and the Abnāʾī scholars Wahb b. Munabbih [q.v.]—al-Tabarl, i, 1763; Ibn al-Athlr, ii, 304; Caetani, Annali, ii/1, 358, 369). Western scholars have, however, been suspicious of this story of the conversion of Badḥām and the Abnāʾ, and Caetani described it as “a pious fiction of the Muslim traditionists, in order to give a flavour of orthodoxy to Badḥām's nominal submission to Islam. The first Mulki war in the Yemen, under 'Aḥyāla b. Ka'b, called al-Awsad or Dhu' l-Khāmīr [see al-Awsad], now supervised. Badḥām died at this point; his son Shahr succeeded temporarily to some of his power in the Yemen in 11/632-3 (al-Ṭabarī, i, 1864), but was killed by al-Awsad. Muslim political authority was probably not imposed in the Yemen by Abu Bakr's generals till 12/633-4. In any case, these events marked the end of any degree of Persian control in the Yemen, though the Abnāʾ continued as a distinct social group well into the early Islamic period (cf. al-Samānī, Anab, fac. ff. 17b-18a, ed. Hydersabad, i, 100-2).

**BADHĀM, BADHĀN BADIYĀ**

Badḥām were still strong a century or more later, with Khurrāmī sympathisers in the area expecting the return of a Mahdi (Abū-Dulaf Muḥarrar ibn Mahālab's travels in Iran (circa A.D. 950), ed. and tr. Minorsky, Cairo 1955, § 15, tr. 35-6, comm. 75). A later source mentioning al-Badḥān al-Abnāʾi, Beirut 1380/1960, 511, repeats Abū Dulaf's information; and Yākūṭ's entry, Badḥān, i, 529, is laconic and uninformative.

**Bibliography:** Given in the article.

(C.E. Bosworth)

**BADHL AL-KUBRĀ, songstress and tāṣeṣyt in early Abbadid times, died before 227/842, probably in 224/839. She was born as a mulatto (mawṣūlaṣṣa ṣafī) in Medina and brought up in Baṣra. Daʿf, a son of the caliph al-Ḥaḍī, acquired her and, after 193/809, she became a favoured gāʿīya of al-ʿAbīn and gave birth to a son of his. Being a pupil of Ibn Dāǧmī, Fulaḥy and Ibrāhīm al-Mawsīlī she preserved the “classical” hijāʿī style of Arab music, preferring verses by hijāʿī poets also for her own compositions. She was a good songstress and lutenist (ḏarīʿa), and was famous for having a repertoire of about 30,000 songs. For ‘Ali b. Ḥiṣāmī she compiled a Kūlī fi ṭagālānī which contained 12,000 song texts (without musical indications), and this became one of the sources of Abu ʿl-Farāḍī al-Ṭabāhání (22 quotations). ‘Ali b. Ḥiṣāmī rewarded her with 10,000 dinārs, and when she died, she left a fortune, which was inherited by the descendants of ‘Abī Ḍabī b. al-ʿĀthīn. Among her pupils were Dānnārīt and Mūṣayyam al-Ḥishmīyya.

**BADĪʾI [see MARRĀKŪṢI]**

**BADIYA [A.** meant, in the Umayyad period, a residence in the countryside (whence the verb tabāddūt), an estate in the environs of a settlement or a rural landed property in the Syro-Jordanian steppeland.

For Musīl, the bādīʿa was the successor to the summer encampment called by the old Syrian Bedouin name of al-tāṣeṣyt. At the opening of the 20th century, the sense was restricted by archaeologists to the desert castles. They went so far as to construct theories about the attraction of the Bedouin Way of life for the Umayyads and about the conservatory role of the desert in upholding certain very persistent traditions stronger than those of the nascent Islam. Since the Umayyads were of urban Meccan origin, it is hardly necessary to look for an atavistic Bedouinism in order to explain their preferences for the bādīʿāyān.

The new masters of Syria replaced, in the towns as in the countryside, the old landholders, whose territories, abandoned at the time of the Islamic conquest, were part of the plunder distributed to the great men. It was said that they sought outside Damascus, their official capital, purer air, the freshness of summer nights, protection against epidemics and vast, open spaces for hunting; in fact, the Umayyads had a keen sense of the value of the land and the possibilities of financial return from fertile agricultural properties.

The agricultural development of Syria goes back well into Roman times. Exploitation of the soil developed in regions where the water supply was difficult, necessitating an elaborate system of irri-
gation and water conservation which could only be undertaken with state aid or the injection of private capital and which was not to survive the down-fall of the Umayyads. One very often finds an adaptation of earlier Romano-Byzantine or Qassānīd installations as at Kārgatayn, the Byzantine Nazala, at Kūṣayfī, Ptolemy's Aitera, at the Roman station of Usays or at the classical and Byzantine centre of Bayt Rās [q.v.]. Alternatively, there were new buildings erected, as at the Taqṣ al-Ḥayrī [q.v.] or at Taqṣ al-Ḥallābāt. These were not "desert palaces" so much as "palace-towns", to be considered as essentially Umayyad and constructed on the plan of the small forts inherited from the "centre of the times", which had themselves been replaced by the rural foundations of the Qassānīd. There is virtually no Umayyad construction which does not utilise classical structures or earlier foundations. No residence is to be found in the deep desert, and they are all built in a zone within the "times" which had been cultivated and populated since Hellenistic times and had been protected against any possible occupation by Bedouins who might damage the crops. After harvest, the sheep-raising tribes were allowed to pasture their flocks on the cultivated lands, which then benefited from their dung.

The bādiya are generally to be found where there is a water supply, either on a line of transhumance, thus permitting contacts with the Bedouin tribes, or else near some great artery of communication like the routes from Damascus and Baṣra towards Taymā'a, the road from Damascus to Kaḥriṣiyā [q.v.], and the route which runs along the cultivable margin of the Ifamud from Ruṣāla of al-Nu'mān as far as Taymā'a, passing through Tadmur or Palmyra, Bakhrā [q.v.], Dīlīk [q.v.], Dhālīs [q.v. below] and Kūṣayfī [see Būrka below]. Their construction along the communication routes permits one to attribute a function of khaṣān [q.v.] or caravanserais to them, in particular for certain constructions in the Wadī 'Arabā listed by J. Sauvaget.

The Umayyads liked to stay to the south of Damascus, on the Qassānīd sites of Diṣbāiya and Dīlīk [q.v.], and often spent the winter in the Jordan valley at al-Sinnabra or in the palaces built at Kūṣayfī or Kharībat al-Maḏgar [q.v.]. Their movements around were often dictated by the need to visit agriculturally productive centres. They had a special liking for the region of the Bakkā [q.v.], where their residences among the mild oases are numerous around Mḥattā [q.v.], an unfinished work of the caliph al-Walīd II [q.v.], which marks the end of the architectural evolution of the bādiya.

Bādiya can be a synonym of kasr [q.v.], when it is a question of a residence erected within a four-sided enclosure with dimensions recalling those of Roman small forts. The walls are provided with round towers, unknown in Roman and Byzantine fortifications. There is a central courtyard within on to which open rooms grouped in separate units and forming bays and backed by blind external walls which keep the environment cool and increase the building's defensive potential. The disposition of internal arrangements is on the axes, and opposite the entrance gate flanked by monumental towers is an audience chamber usually basilical in plan with apse at the end of greater or lesser importance. On the floors above are lodging suites of rooms divided according to the same plan as those on the ground floor. These last are decorated with marble slabs, stucco work, frescoes and mosaics. In the immediate vicinity of the princely residence there may well be a mosque and a bath. As at Djabal Saws. Certain bādiya were used as centres for hunting (muṣayyad), like Abā'ir or Kūṣayfī 'Amra. A good picture of the architectural activities of the Umayyads in the bādiya is given by Abu 'l-Faraj al-Iṣfahānī in his K. al-

[N. ELISSÉEFF]

BADR-I ČAČI, fully BADR AL-DIN MUHAMMAD ČAČI, poet of the 8th/14th century Dīhlī Sultanate. A native of Čač (Ṣayḥ, Taṣkaṇ), he migrated to India and rose to favour at the court of Sultan Muhammad b. Tūghlāk [q.v.], who conferred on him the style of Faḫr al-Żamān. His khaṣān, which contain references to a number of contemporary events, with the dates often expressed in chronograms, constitute an important source for a period which is notoriously obscure and controversial. It is all the more unfortunate, therefore, that his Shīhānāma, an epic chronicle of Muhammad’s reign completed in 745/1344-5, has not survived: it was still extant in the late 19th/16th century, when the Mogul historian Bediʿūnī (Mtaṣḥah al-tawdīnkh, ed. M. Ahmad Ḥāʾī, Calcutta 1894-9, 3 vols., Bibl. Indica, i, 241) describes it as a "treasure".

BADR AL-MUFADDAL, Abu ‘l-Naqī, commander-in-chief of the armies of the caliph al-Muṭaffid (279-89/892-902). He was the son of one of al-Muṭawakkil’s nāwawīl, whose name cannot be established with certainty (Khurr or Khayr?), and was first in service as an equerry to al-Muwaffak, gaining from him the style of Fakhr al-ʿAmr. He migrated to India and rose to favour at the court of Sultan Muhammad b. Tūghlāk [q.v.], who conferred on him the style of Faḫr al-Żamān. His khaṣān, which contain references to a number of contemporary events, with the dates often expressed in chronograms, constitute an important source for a period which is notoriously obscure and controversial. It is all the more unfortunate, therefore, that his Shīhānāma, an epic chronicle of Muhammad’s reign completed in 745/1344-5, has not survived: it was still extant in the late 19th/16th century, when the Mogul historian Bediʿūnī (Mtaṣḥah al-tawdīnkh, ed. P. JACKSON

BADR AL-MUṬADDĪDĪ. Abu ‘l-Naqī, commander-in-chief of the armies of the caliph al-Muṭaddīdī (279-89/892-902). He was the son of one of al-Muṭawakkil’s nāwawīl, whose name cannot be established with certainty (Khurr or Khayr?), and was first in service as an equerry to al-Muwaffak, gaining from that time the favour of the future caliph al-Muṭaddīdī, who, whilst still regent after al-Muwaffak’s death (Ṣaḥāf 278/June 891), made him chief of police in Baghdād and then, after his accession, commander of all the forces. Badr led several expeditions into various regions (Badr al-Dīhlī, Irāk, etc.) in order to re-establish the military situation, which had been rendered insecure by the Karāmīta [q.v.]. At the same time, he played a political role of prime importance, for he became all-powerful, with a complete domination over the caliph, exercising a veto over everything. He gave
one of his daughters in marriage to al-Mu'tadid's son, the future al-Muktadir, increasing his influence still further. He had the right to be addressed by his kunya, the poets, and Abū Bakra al-Sūrī in particular, did not fail to include him in their eulogies of the caliph. It was because of his exceptional position that he acquired the name of “al-Mu'tadid,” distinguishing him moreover from several homonyms.

In 288/901 he pleaded in favour of al-Kāsim b. Ubayd Allāh [see SULAYMĀN b. WĀHIB] who was made vizier thanks to his intervention, but who failed to take part in his machinations against the sons of the caliph. It was because of his exceptional position that he acquired the name of “al-Mu'tadid,” distinguishing him moreover from several homonyms.

In 288/901 he pleaded in favour of al-Kāsim b. Ubayd Allāh [see SULAYMĀN b. WĀHIB], who was made vizier thanks to his intervention, but who failed to show him much gratitude for it. In fact, Badr refused to take part in his machinations against the sons of al-Mu'tadid, so that al-Kāsim, fearing denunciation, took care immediately on the accession of al-Muktāfī (289-935/1402-48) to blacken Badr's name in the eyes of the new caliph and probably to profit also by the hostility towards Badr of certain other commanders. Badr fled to Wāṣiṭ, but was invited to return to Baghdād under a guarantee of amān; in the course of his trip up the Tigris, he was attacked on the heights of al-Madāʾīn by al-Kāsim's agents, who cut off his head whilst he was at prayer and sent it to al-Muktāfī (6 Ramdān 289/14 August 902). His body was left on the spot and was later carried away by his family for burial at Mecca. This murder was denounced by the poets and imputed to the caliph, who might have hoped to find more tractable; this proved in fact the case, and the new caliph agreed subsequently in 393/994 to become betrothed to Bahā al-Dawla's own daughter, though she died before the marriage could take place. The amīr also secured from the caliph at this time a fresh grant of titles; and it is from this year that the ancient Iranian title šahānshāh, used unofficially by his father, appears on his coins (cf. W. Madelung, The assumption of the title šahānshāh by the Buyids and “The reign of the Daylam (Dawlat al-Daylam)”, in JNES, xxviii [1969], 174-5). Bahā al-Dawla now had to face the ambitions of Fakhr al-Dawla (who, urged on by his vizier the Sābīb Ismā'īl b. 'Abbād [see IBN 'ABBĀD], had on Aţūd al-Dawla's death himself assumed the title of šahānshāh and the implied headship of the Buyid family), and northern Irāq against various local Arab and Kurdish chiefs. Šamsām al-Dawla, after his escape, took advantage of unrest in Irāq and of Bahā al-Dawla's preoccupation with internal strife in Baghdād—the divisions of the Sunnī and Shi'ī populations and of the Turkish and Daylam elements in the Buyid army—and seized Ahwāz and Baṣra. Bahā al-Dawla secured the alliance of the ruler of the Baṭṭaḵa, Muḥādhdhib al-Dawla 'Alī b. Naṣr, and of the Kurdish prince Badr b. Ḵaṣānīya [see ḴAṢĀNĪYAH]. Even so, his vizier and general Abū 'Alī b. Ismā'īl al-Muwaṭṭāk could make little headway against Šamsām al-Dawla's skilful commander Abū 'Alī al-Ḫasan b. Ustādī-Harmūz. After several oscillations in the fortunes of war, Šamsām al-Dawla was in 388/998 assassinated near Isfahān by Abū Naṣr Ṣāḥī-Frūz, a son of Aţūd al-Dawla's cousin and former rival Izz al-Dawla Baktīyār, Abū 'Alī b. Ustādī-Harmūz now came over to Bahā al-Dawla's side with the remnant of Šamsām al-Dawla's Daylamī troops. Once Abū Naṣr Ṣāḥī-Frūz had been killed in Kirmān, Bahā al-Dawla was sole master of the southern provinces of Persia, Fars and Kirmān, and of their dependency Ummān. Two years later, his implacable enemy Fakhr al-Dawla died, and his successor in Ray and Hamadān, the young and inexperienced Madjīd al-Dawla Rustam and Šams al-Dawla Abū Tāhir respectively, acknowledged Bahā al-Dawla's supreme overlordship, as coins minted at Ray from 400/1009-10 and at Hamadān from 401/1010-11 attest.

Bahā al-Dawla now moved his capital from Irāq to Šīrāz, captured from the temporary control of the sons of Izz al-Dawla, and never returned to it in Baghdād. The move eastwards showed that he regarded southern Persia as the heartland of the Buyid dominions, and except for the brief occupation in 399-1/1000-1 of Kirmān by the Saffārīd Tāhir b. Ḵalaf, the Persian lands remained generally peaceful. But the relinquishing of Baghdād as capital meant a distinct relaxation...
of control in Ḣirāq, which was henceforth entrusted to governors (for much of this period, until his death in 401/1010-11, to the ‘Āmil al-Dhiyūyah Abū ‘All b. Uṣūl-Ḥurmuz) at a time when powerful ene-
cies were rearing their heads there. Bahā’ al-Dawla’s departure for ‘Irāq allowed the caliph al-Kadr to enjoy more freedom of action and tentatively to assert his authority, especially over the protection of Sunni interests against Shi‘i policies of the Buyūd amīr [see al-Kādir Bīlāh for details]. Above all, the confused situation in Ḣirāq after ‘Abd al-Dawla’s death and the squabbling of his sons in Fars over control of the empire had allowed local Arab potentates in Ḣirāq to extend their power at Buyūd expense, so that direct Buyūd authority was to be for much of Bahā’ al-Dawla’s reign confined to Baghdād and Wāsīt and their immediate vicinities. In northern Ḣirāq there were the ‘Ukaylids [q.v.] of Mawsīl; Bahā’ al-Dawla’s sent against the amīr Abū ‘1-Dhawwad al-Dawla. In 396/1006 a coalition of Badr b. ‘Alī b. Wasil’s Kurds and Ibn Wasil’s forces were able to besiege Baghdād, but the capital was saved by Ibn Wāsīl’s being captured and then executed (397/1006). An attempt was made to conciliate the Arab amīrs of Ḣirāq, so that the ‘Ukaylīd, Khwāzī b. al-Mukallad was in 397/1006-7 awarded the rule of Mawsīl; Bahā’ al-Dawla sent against the Khafadja and man-
ed the ‘Ukaylīds, drove off the Khafadja and man-
ed thus from the “al-Karkhi” frequently found in western sources, the latter dedicating to the governor for Bahā’ al-Dawla in Baghdād and distant pres-
tation of outstanding poets in his circle at Shālīz (al-Tarā‘ībi in his Tatmatt al-Tatima, ed. Eghbal, i, 16-
18, 26-30, mentions only two poets of note, Abū ‘Abd Allāh al-Husayn al-Mughallīs and Abū Sa‘īd al-
Hamadhanī), there is reason to suppose that Bahā’ al-Dawla continued the tradition of patronage of Arabic learning established by ‘Abd al-Dawla before him. Certainly, Samsām al-Dawla had as his vizier for two years Abū ‘Abd Allāh al-Husayn b. Ahmad, Ibn Sa‘īd [q.v.], whose circle of scholars is known to us through the works of Abū Ḥayyān al-
Tawḥīdī, and Ṣalār al-Dawla was the patron of the distinguished astronomer Abū Sa‘īd al-Kūfī [q.v.]. Abū Nasr Ṣalāʾīr b. Ardašīr (d. 416/1025 [see Sā‘ūr b. Ardašīr in EI]), who served Bahā’ al-Dawla as vizier on several brief occasions during the first part of his amīrīme, seems to have been a scholar of outstanding calibre, considered by Ṣalārī as worthy of a separate section in his anthology because of the quality of the poetry dedicated to him by such figures as Abū ‘1-Farajī al-Babḡaḥī, Ibn Lu’lu’ and Abū ‘1-Allāh al-Ma‘arrī (Ṭattimat al-dahr, ed. Damascus, ii, 290-7, ed. Cairo 1575-1956-8, iii, 119-36; whilst the governor for Bahā’ al-Dawla in Baghdād and subsequently for his successor Sulṭān al-Dawla Ḥafṣ b. Ṣa‘īd b. ‘Abd al-Mulk was the patron of the poet Muṣājr al-Da‘lamī [q.v.]; and of the mathematician of Baghdād Abū Bakr Muhammad al-Karaḍjī [q.v.; the nisba to be corrected thus from the “al-Karštī” frequently found in western sources], the latter dedicating to the govern-
or his treatise on algebra al-Kišāb al-Fāgīrī fi ț-ţabar wa 1-makāhāla.

Bibliography: Miskawayh’s chronicle stops short of Bahā’ al-Dawla’s reign, but much detailed histori-
tical material is to be found in the Dā’īr wa ‘l-Shidīrī of ‘Alī b. Rūhīwarrī (up to 389/999) and in the surviving fragment of Hīlāl al-Sā‘īdī’s Tawḥīdī covering 389-93/999-1003 (both sources forming vol. iii of Margoliouth and Amedroz’s Eclipse of the ‘Abbasid caliphate, tr. vol. vi, the latter source being utilised by H.F. Amedroz for his study Three years of Buwaihid rule in Baghdad, A.H. 389-393, in JRAÉ [1901], 501-36, 749-86). These specifically Buwaihid sources can be filled out and supplemented by the general chronicles of Ibn al-Aṯīr, ix, Ibn al-
Djawātī, vii, and Sibṭ Ibn al-Dawāzī, the latter two especially important for events in Baghdād and ‘Irāq.

2 Of secondary literature, there are connected accounts of Bahā’ al-Dawla’s amīrīme and of the cultural life of the period in Maḥzūlāh Kabīr, The Buwaihid dynasty of Baghdad (334/946-447/1055), Calcutta 1964, 77-91, 179 ff; in H. Busse, Chalīf und Grosskönig, die Buwaihiden im Iran (945-1055), Beirut-
Wiesbaden 1969, 67 ff. and index; and in idem, ch. ‘Irāq under the Buwaihids, in Camb. hist. of Iran, iv, ed. R.N. Frye, Cambridge 1975, 289-96. The extensive bibliography in Busse’s book expands and brings up-to-date that of the article BUWAYHIDS [q.v.].

C.E. Bosworth

BAHIYYA I. The navy of the Arabs up to 1250. Although Near Eastern writers in mediaeval
times did not address themselves specifically to the subject of bahriyya, references to seafaring activities made by Arab, Byzantine, southern and western European chroniclers, geographers and travellers, as well as pertinent details found in the Arabic papyri and the Geniza documents, provide a considerable body of information concerning the rise and fall of the Arab navy.

The naval requirements of the Arabs were dictated by the necessity of defending their Mediterranean territories—stretching from Cilicia and Syria in the East to the Spanish Levante seaboard in the West—and of protecting their shipping, as well as by their offensive operations against Christian enemies in the Mediterranean. Until the appearance of aggressive Italian fleets and the coming of the Crusaders, Muslim sea power, along with that of the Byzantines, constituted the dominant factor in mediaeval Mediterranean naval history.

The organisation and command structure of the bahriyya were affected by the policy and strategy of the caliphate. In the beginning of the 2nd/8th century, the naval organisation involved several naval districts and distinct, self-controlled fleets. The naval districts, with their strategic ports (thughr, pl. thughār [q.v.]) and warships, remained under the jurisdiction of commanders appointed by the caliph and responsible for the supervision of the construction and equipment of the ships; for their safety in the winter bases; for the selection of the entire naval personnel; for gathering and analysing naval intelligence; and for giving operational orders. With the decline of the caliphal, the organisational, logistic, and operational responsibility for the bahriyya rested with those dynamic regimes whose power was based on the coastal provinces, whether they enjoyed a sovereign status, as was the case of the Fatimids, or that of local dynasties, like the Aghlabids, the Ṭūnūnids, the Ikhshīdīds and the Ayyūbīds [q.v.].

An essential feature of the bahriyya were the dār al-jinʿa (sing. dār al-jinʿa [q.v.]). These naval installations served not only as operational bases, but also as shipyards, naval arsenals and as the manpower centres supplying sailors and combat personnel. The number and activity of these installations depended on the degree of concern for naval matters of individual regimes. The latter ensured the operations of the installations by raising taxes specifically earmarked for naval expenditure; by procuring raw materials needed for the construction and fitting of warships; and by conscripting the necessary manpower. The Muslim naval inventory involved a great diversity of combat and support vessels. In fact “the Muslim navy not only had a variety of names for a single type, but a single name for a variety of types” (A.M. Fahmy, *Muslim naval organization, 137*).

A fleet (al-nutil [q.v.]) was commanded by the nāʿī (al-nutil [commander of the fleet]) selected among the top naval officers (al-karmadīd); but the care of weapons and direction of naval action were discharged by the chief sailor (kāʿī al-naʿāṭīfā); The crews of the warships were made up of sailors (nāṭī, pl. naʿāṭī); oarsmen (kadhīḥatā); craftsmen and workmen (dhawu ṭ-sināʾa wa ʿṭ-mubāh); as well as of the fighting men, such as the naphtha throwers (al-nafūṣītān) and the marines. The actual fighting involved both the bombardment with combustible projectiles, and the sub-sea operations, boarding and hand-to-hand combat of the marines. The latter were employed also for landing raids.

The early history of the bahriyya was highlighted by the raids against Cyprus in 28/649 and 33/655; by the victory over a Byzantine armada in the Battle of the Masts (Dhār al-Šawār [q.v. in Suppl.] in 34/655; and by the two sieges of Constantinople in 54-59/765-9 and 98-9/717-18), during which the Muslim fleets attempted to blockade maritime access to the imperial capital, and supported logistically the Arab land forces. In that period Muslim squadrons sailed Sicily in 32-3/652 and 46/666-7, temporarily occupied Rhodes in 52/672 or 53/673 and Arwād (Cyzicus) in 54/673, and raided Crete in 55/674. In the first half of the 3rd/9th century, the position of the bahriyya was enhanced by the reassertion of Muslim influence over Cyprus [see KURRUS] and the conquest of Crete [see KILTIN]; both these strategic islands facilitated offensive operations against Byzantine possessions. Regular Muslim fleets were stationed at Alexandria, Rosetta, Damietta, Ṭāqūq, Tyre, Sidon and Ṭarsūs. In the Western Mediterranean, the navy of the Aghlabids engaged in relentless attacks against Sicily [see SIKILLIYYA] and the southern and western shores of Italy from the naval base of Tunis.

The pursuit of ambitious political goals in Egypt and Syria by Ahmad b. Ṭūlūn (254-70/868-84) entailed both an expansion of naval installations, especially those of ‘Akkā, and the strengthening of naval squadrons. His example was emulated by Muhammad b. Ṭugghūd al-Ikhshīd (323-34/935-46); but neither the fleet of the Ṭūnūnids nor that of the Ikhshīdīds proved to be very effective. The former was annihilated in 293/905 by a small ‘Abbāsid fleet, the latter was unable to support Crete and Cyprus against the resurgent Byzantine navy. On the other hand, in 291/902 the Muslim bahriyya achieved a great success when Aghlabid naval forces conquered Sicily.

Following the Byzantine re-conquest of Crete (350/961) and Cyprus (352/963), the difficult task of upholding the prestige of the bahriyya was taken over by the Fāṭimids. Having inherited strong naval traditions from the Aghlabids, the Fāṭimids undertook a major expansion of the fleet. Their powerful naval squadrons proved instrumental in contesting supremacy in the western Mediterranean. Malta, Sardinia, Corsica, the Balearic and other islands were attacked. In 324-5/935 a Fāṭimid fleet harried the southern coast of France, took Genoa, and coasted along Calabria, carrying off slaves and other booty. In 344/955 another Fāṭimid fleet raided the coasts of Umarrad Spain. In 358/969 a powerful Fāṭimid armada participated in the conquest of Egypt. Concerned with the offensive operations of the Byzantines, as well as with the need for preserving the unity of their realm, which stretched from North Africa to Syria, the Fāṭimids attached great importance to the status of their navy. They founded a “Department of the Holy War or of Maritime Constructions” (*Diwan al-Qabd aw Diwan al-ʿAmrī*). Ships were built in Alexandria, Damietta, at the island of Rawda, in Mīr, and in the new dockyards of al-Maṣṣ, which alone is credited with producing 600 vessels. Availability of the services of the Syrian thughr, such as Ṭyr and Tripoli, extended the operational capacity of the Fāṭimid fleet in the eastern Mediterranean.

In the 5th/11th century the power of the bahriyya began to decline. The North African provinces slipped away from the Fāṭimids. The fleets of the Italian mercantile republics asserted their preponderance in the western Mediterranean and began
to raid with virtual impunity the Algerian and Tunisian shores. The dynamic Normans conquered Sicily and Southern Italy, and then began preparations for expansionist moves in Eastern Mediterranean. In the first half of the 6th/12th century, the victory of the Crusaders at 292/1875 marked the decisive end to Fatimid naval forces, and resulted in the loss of all Islamic coastal towns with the exception of Askalan. After the surrender of that fortress in 548/1153, the coast of Egypt became an easy target for Norman, Italian and Byzantine squadrons. An attempt to challenge the Christian naval power was made by Salah al-Din (567-89/1171-93), the supplanter of the Fatimids. He increased the salaries of the sailors, re-forced Egyptian naval bases, and created a special office of the fleet (dībān al-ustūl), to which several branches of Egyptian revenue contributed. In 574-5/1179 his fleet counted 80 vessels, of which 60 were galleys and 20 transports. Although the revived naval power achieved some success during Salah al-Din’s struggle against the Crusaders (including an effective counter-attack in Dhu ‘l-Hijja 578/February 1183 against a daring Frankish penetration of the lighthouse immune Red Sea waters), it proved impotent to prevent the movement of Christian fleets bringing new hosts of European warriors eager to fight against the Muslim conquerors of Jerusalem. The Third Crusade (585-7/1189-91) did not recover the Holy City, but it delivered a mortal blow to the Egyptian navy, whose squadrons tried suicidally to support the garrison of Akkā blocked by a tremendous concentration of European fleets. According to al-Makrizi (766-806/1364-1422), "After the death of Salah al-Din the affairs of the fleet were given little attention. Service in the navy was considered to be a disgrace to such an extent that to call at an Egyptian ‘You sailor!’ was treated as an insult. What a change from the days when the names of the sailors were invoked in the prayers of the people, and from the times when these very sailors had been called the called soldiers of God, waging the Holy War against the foes of Allah!"

(A.S. Ehrenkreutz)

II, III [See Vol. I, 945 ff.]

BAKHIT AL-MUTTI AL-HANAFI, MUHAMMAD, mufti of Egypt from 1914 until 1921. He was born in the village of al-Muṭṭa‘a in the province of Asyut on 10 Muharram 1327/24 September 1854. After completion of his studies at al-Azhār in 1275/1859, he remained attached to that institution as a teacher until 1297/1880, when he was appointed kādi of al-Kalā‘īyya province. This was the beginning of his career in the judiciary, in which he served as provincial judge in various resorts, as kādi of Alexandria, as kādi of Cairo, and in a number of other high positions such as the office of Inspector and the office of mufti in the Ministry of Justice, prior to his appointment as mufti of Egypt on 21 December 1914. In the course of his career he was involved, either directly or indirectly, in notable events of the day, such as the intrigues against reform in al-Azhār, as sponsored by Muhammad ‘Abduh (cf. Ahmad Shafik, Mudhakkārtī fi nisf qarn, Cairo 1936, ii, part 2, 35), the complications surrounding the marriage of ‘Alī Yūsuf (ibid., 61), and the events of 1921, preceding Egyptian independence (cf. Shafik, iii, 275 ff.). He was a member of al-Rābi‘a al-Shārīkhīyya [q.v.], but resigned from this association in 1925 in protest to the efforts of some of its members to intervene in the affairs of the intended trial of ‘Alī al-Rāzik (cf. Ahmad Shafik, ‘Ammāl bi mdhdakkarūtī, Cairo 1941, 183 ff.). The latter’s Islam wa-nṣūl al-bahrūn was severely criticised by Muhammad Bakhīt in his Ḥakīkat al-Islām wa-nṣūl al-bahrūn, Cairo 1344/1925-6. This book, as well as publications with suggestive titles such as al-Murahhīfīyya ‘l-‘ilmīyya ‘l-muṣarrūt ‘an ‘l-muṭṣarrūt al-bahrūn (al-bahrūn ‘alā ‘l-‘ālī ‘l-tarmīṣ), Cairo 1944/1925-6; Ḥṣādir ‘al-kārin ‘a‘l-wa’s ‘alā ‘l-salāt, ilā ‘l-ta‘lāk ughā tam ‘alāmar ghar khar, Cairo 1348/1929-30; Haddīt ‘Alā‘ al-‘ālī ‘alā ‘l-bahrūn, Cairo 1954, 189 ff.; and al-Ḥāṣi ‘alā ‘l-bahrūn ‘l-fakhrīs ‘l-fa‘ṣīlīs, Cairo 1945, 189 ff., contributed to the emphasis placed on the role of women, and the campaign for abolition of the ṣawq aḥlī. Other publications such as his Thānī al-bahrūn al-isldmiyya, Cairo 1923, 3; and Thānī al-bahrūn al-isldmiyya, Cairo 1925, 3, show his concern with problems surrounding the marriage of Ali Yusuf (cf. Ahmad Shafik, ‘Ammāl bi-mdhdakkarūtī, Cairo 1941, 183 ff.). The latter’s Islam wa-nṣūl al-bahrūn was severely criticised by Muhammad Bakhīt in his Ḥakīkat al-Islām wa-nṣūl al-bahrūn, Cairo 1344/1925-6. This book, as well as publications with suggestive titles such as al-Murahhīfīyya ‘l-‘ilmīyya ‘l-muṣarrūt ‘an ‘l-muṭṣarrūt al-bahrūn (al-bahrūn ‘alā ‘l-‘ālī ‘l-tarmīṣ), Cairo 1944/1925-6; Ḥṣādir ‘al-kārin ‘a‘l-wa’s ‘alā ‘l-salāt, ilā ‘l-ta‘lāk ughā tam ‘alāmar ghar khar, Cairo 1348/1929-30; Haddīt ‘Alā‘ al-‘ālī ‘alā ‘l-bahrūn, Cairo 1954, 189 ff.; and al-Ḥāṣi ‘alā ‘l-bahrūn ‘l-fakhrīs ‘l-fa‘ṣīlīs, Cairo 1945, 189 ff., show his concern with problems arising out of the confrontation of Islam with the results of Western science and technology. Muhammad Bakhīt died on 20 Radjab 1354/18 October 1935.

F. de Jong}

BAKĪ BULLĀH, KHĀRAṢA, Sūfi saint of Muslim India, born in Kābul in 971/1563-4. His father, Kādi ‘Abd al-Salam Khalīdi Samarkandī, was a scholarly Sūfi, and his mother a descendant of Shaykh ‘Ubayd Allah Ahrār (d. 896/1491), the distinguished saint of the Nakshbandī order. [see AHRĀR, KHĀRAṢA, above]. He completed his early
education and then studied the religious sciences under the guidance of Mawlānā Sādīk Ḥalwā’ī, who had stayed in Kābul at the persuasion of Mīrzā Ḥakīm in 978/1570-1 on his way back from the Hidjaz to Samarkhind. After some time, he accompanied Ḥalwā’ī to Transoxiana, and there he outshone other students of his in Islamic theology. As he was inclined towards piety and Sufism, he visited exercises, to the point that his health was adversely affected. Hence he turned to India and the famous Sufis and developed a desire for spiritual perfection.

In 978/1570-1 on his way back from the Hidjaz, ʻAbd al-Dulāf, the brother of Ma‘dīl b. ‘Īsā, interceded on his behalf for the prince to pardon Ibn al-ʻAttār’s indiscretions, which led to similar eulogies on Ma‘dīl and an elegy on his death. Ibn al-ʻAttār also mourned the death of Mālik b. ‘Alī al-ʻKhūzā‘ī, at whose side he had fought in campaigns against the ʻKhāridjīs of the district of Ḥulwān. He is also found in Kirmān, where he received a regular stipend, and at the side of Mālik b. Tawq [see AL-RAHBA], to whom he dedicated some panegyrics. However, the chronology of all these events is far from certain, and it is most unlikely that he could have praised the latter person (who died in 260/874), at least if he himself died in 192/808, which an allusion to his loss in the Dīwān of Abu ʻl-ʻAttābiyya (ed. Beitrü 1964, 105, rhyme ʻātī, metre san’sī) seems to support.

The critics recognised that he handled with talent the various poetical genres, though at the same time criticising him for certain exaggerations on occasion. His eulogies and elegies remain within the Bedouin tradition, but several poems in which he hymns a Ḍiyā‘a called Durrā have a more modernist form; it was because these were set to music that Bakr b. al-ʻAttār merited a notice in the Aḥṣā‘ī. Out of his total poetic production, which ran to a hundred or so leaves (Ferāīa, 292), Ahmad b. Abī Tāhir Tayfūr made a selection (Hikāyāt šīr Bakr b. al-ʻAttār) which Yakūt cites (Udbā‘, ii, 92).

**BAKRI, MUHAMMAD TAWFIK B. AL-BAKRI,** Egyptian religious dignitary. He was born in Cairo on 27 Djamāda II 1287/24 August 1870, and was appointed ḥakīm al-ʻaqrāfī [q.v.], ʻānīkh maṣīḥiyyāt al-turk al-ṣūfīyya (head of the tarbīāh [q.v.]), and head of al-Bakriyya [q.v.] in January 1892 in succession to his deceased brother Abū al-Bakr, obtaining life-membership of the maṣīḥiyya al-ṣūfīyya (Legislative Council) and of the ʻajamīyya al-ṣīmāmīyya (General Assembly) in that very same year. During the period in which he held the office of ʻānīkh maṣīḥiyyāt al-turk al-ṣūfīyya, various regulations for the Shī‘ī orders in Egypt were introduced. These regulations, which were in force until 1976, allowed him to re-establish the authority over the orders to which the head of al-Bakriyya had been legally entitled since 1812, and
January 1895 by the Khedive Abbas Hilmi, who must have aimed at curbing al-Bakri’s aspirations to political significance, as was suggested by Mahir Mustafa in his effort to achieve freedom from British tutelage, relating to the Egyptian nationalists in his efforts aimed at the deposition of the khedive and put, and gives further references. An autobiographical work was published by Muhammad Tawfiq al-Bakri, Cairo 1967, referred to in this article. It contains amongst others a lengthy discussion of his publishing activities and of his literary output, and puts further references. An autobiography is to be found in his Bayt al-Sidid, Cairo 1923/1905, 11 ff. For a discussion of the nature and of the impact of the regulations introduced under his auspices and of his political activities, see F. de Jong, Al-Muhammed al-Bakriyya and the transformation of their authority in 19th century Egypt, in A. Dietrich (ed.), Akten des vii. Kongresses für Arabistik und Islamwissenschaft, Götttingen 1976, 224 ff.; and idem: The urban institutions in 19th century Egypt, Leiden 1978, where additional references may be found. (F. DE JONG) BALANCE [see MITJEKT AL-BERKSEH, MIZAN].

Abu ‘l-Fath Uthman b. Isā b. Mансūr b. Muhammad, Tā’ī al-Dīn, grammarian, poet and adīb, originally from the town of Balad on the Tigris, which also had the name of Balat (see Yākūt, i, 721), whence his nāma of al-Balatī, sometimes given in short as Balatī. From 1905 Abu ‘l-Fath went first of all to teach in Syria, and then, when Saladin assumed power in Egypt (567/1171), he migrated to Cairo where the new sultan allotted to him a fixed stipend and appointed him to teach grammar and the Kur’an in one of the mosques of the town. He remained there till his death on 19 Safar 599/7 November 1202; his corpse was not discovered till three days after his death because the people of Cairo were preoccupied with the famine then raging and were unconcerned with each other.

Thanks to ‘Imād al-Dīn al-‘Isāhānī (519/1125-1201 [A.H.]), who knew him personally, and to a şarī‘ī called Abu Dī‘ār al-Ibrāhīm (apparently not to be confused with the famous geographer) who had been his pupil and who was in contact with Yākūt (d. 626/1129), we possess a very detailed physical description of this scholar and information on his habits. He was tall, corpulent, with a lofty forehead, a long beard and a ruddy complexion; he was very susceptible to cold, always wrapped himself up, took a thousand precautions when he went to the hammān and hardly went outside in winter. He had the reputation of being extremely learned in all the literary fields, but his personal conduct left something to be desired; he apparently sought the company of dissolute persons and sometimes got drunk.

The examples which have been preserved from his poetry show that it was of traditional type, and some poems show a special aptitude for verbal pyrotechnics in the vein of his time (all through one kasida, a differing word in each verse which could be read equally well in the three grammatical cases; a rhyme in -ānī which exhausts the lexicon’s possibilities; a schema ma‘ṣulara arbitrarily constructed; etc.). Nevertheless, he also wrote a long poem in
praise of al-Kaḍi al-Faḍlī [q.v.], in which Saladin's secretary is placed above al-Džāhīz, Ibn 'Abbād and Ibn al-'Azmī, as well as a muwashshahā whose khāridjī is not however in accordance with the rules, since it is in literary Arabic.

Al-Balāṭī is, in addition to his poetry, the author of various works: a Kāf al-Arḍūl al-kabīr, a K. al-Arḍūl al-sagḥīr, a K. al-Faṭḥūl al-muṣsidījī, a K. al-Naṣīrījī, a K. ʿAkbārī al-Mutanabbi, a K. al-Mustaṣďījī al-muṣsidījī min faʿalat al-adīfījī, a K. ʿIjm aḍḥākī al-ḥuttaṭī, a K. al-Ṭaṣḥīh wa ʿl-tawbrīh and a K. Taṭīl al-ḥudūṭī.

(Ch. Pellat)

BALBAN, GHĪYĀTH AL-DĪN ULUGH KHĀN, the most prominent of the slave Sultans of Dihlī, was originally a Turkish slave of the Ilbarl clan. A member of the famous corps of Forty Slaves or Chiḥlūgdlī raised by Sultan Iltutmīsh, Balbān rose, by dint of sheer merit and ability, to be the minister and deputy (naʿdī-ī-mamālīk) of the ascetic king Nasir al-Dīn Iltutmīsh, and a master of the ascetic kind of the Mongol Bihām Shāhī (644-664/1246-65), to whom he had given his daughter in marriage. As ʿImād al-Dīn Bughra Khan, to whom he had designated his heir, was killed early in 665/1266 in a fierce engagement with the Mongols. This bereavement eventually brought about his own death a year later in 686/1287; this sounded the death-knell of the Slave-King dynasty, for the Khālidīs took over the reins of the Dihlī sultanate only three years later.

SIDĪ BALLĀ, ABū MUḤAMMAḍ ʿARḍ ALLĀH IBN ʿAZZOZ AL-KURĀSHĪ AL-SHADHĪL AL-MARRĀKUSHĪ, a cobbler of Marrakesh to whom thaumaturgic gifts were attributed and who died in an odour of sanctity in 1204/1789. His tomb, situated in his own residence at Bāb Ayyān, has been continuously visited because of its reputation of curing the sick. Although he had not received a very advanced education, Ibn ʿAzīzān nevertheless succeeded in leaving behind an abundant body of works, dealing mainly with mysticism and the occult sciences, but also with medicine. However, his works display hardly any originality, and none of them has interested a publisher despite the success in Morocco of his Ḥīdāhā al-kurjūs wa-nafy al-zalumātī fī ʿilm al-tibb wa ʿl-tabbātī wa ʿl-hikmā, a popular collection of therapeutic formulae (see L. Leclerc, La chirurgie d'Aboulcasis, Paris 1861, ii, 307-8; H.P.J. Renaud, in D'Abulcasis, ii, 390, a popular collection of ther- aućuies, of which at least one manuscript is karya 8 km. W.N.W. of Ceuta, beneath the Spanish Romance of Leo Africanus Vignones, in Marmol Valdevitones, Portuguese Bulhões, Spanish Bullones, site of a once- important karya 8 km. W.N.W. of Ceuta, beneath Sierra Bullones (Djabal Musa). Its name is from the Spanish Romance fanyol ar vineyards", not Bū or Bent Vānūs-

(Ed.)

BALYŪNAS, also B.NYŪNS.H (in Leo Africanus Vignones, in Marmol Valdevitones, Portuguese Bulhões, Spanish Bullones, site of a once-important karya 8 km. W.N.W. of Ceuta, beneath Sierra Bullones (Djabal Musā), its name is from the Spanish Romance fanyol-ar vineyards", not Bū or Bent Vānūs-ah, etc. Surrounded on land by mountains. Bālyūnas lies in a small valley dropping sharply in a bay set in a narrow part
of the Straits of Gibraltar. Béard thought it the home of the Homeric Calypso's cave. Its Roman precursor has been named as Exilissa.

In Islam the area's history may well have begun with Musa b. Nuṣayr [q.v.], who is said to have crossed the Algeciras to Algeciras in 93/712 from what became a desertion. In 1418 Balyunash was briefly the estate directly to Ceuta as indeed it is today. Ruins still rich source of fresh food and above all flowing water, a resort for princes and the rich, who had fortified villas there, the latter was certainly a rich source of fresh food and above all flowing water, which, in Marinid times at least, must have been fed directly to Ceuta as indeed it is today. Ruins still to be seen there bear marks of Andalusian architectural and artistic influence.

and was interred outside Bāb Gīsā (al-Dījās) on the left, or Karawīyīn, bank of the Wādī Fās.

Mainly because of its non-Arabic origin, "Bardalla" is vocalised differently in the Arabic sources, and, in some, one encounters corrupt forms such as Bin Dalla. Understandably, we find inconsistencies in European spellings (Bordolla, Bordala, Berdella, etc.). This last form most nearly represents the pronunciation of the family name as found in 20th century European spellings (Bordola, Bordala, Berdella, etc.). Understandably, we find inconsistencies in European spellings (Bordola, Bordala, Berdella, etc.). Understandably, we find inconsistencies in European spellings (Bordola, Bordala, Berdella, etc.).

After the establishment of the Ilkhānid Mongol kingdom in Persia and Irāk in ca. 656/1258, many Sayyidī families migrated to India and obtained grants of villages in the area extending from the Pandājīb to Bihār. Some of them were endowed with qualities of leadership and not only exercised effective control over their own villages, but rallied the support of the neighbouring village leaders, generally Hindus. The authenticity of their claims to be Sayyids was always suspect, but their chivalry and heroic achievements made them indispensable to the Dīlīh sultāns. The ancestor of the Bārā Sayyids, Abu 'l-Farah, left his original home in Wāsīt [q.v.], in Irāk, with his twelve sons at the end of the 7th/13th or in the 8th/14th century, and migrated to India, where he obtained four villages in Sirhind [q.v.]. By the 10th/16th century some of Abu 'l-Fara's descendants had taken over the Bārā village in Muzaffarnagar. In the reign of Akhbar, the Bārā Sayyids occupied a place of distinction, and nine of them held mansūbs [q.v.] ranging from 2,000 to 250, the total family mansūb being 8,550, a very high position in the Mughal hierarchy. Naturally, with the Bārā villages as a nucleus, the Sayyids owned extensive dīgārs [q.v.] in the region. Their pride in their Indian birth greatly appealed to the local Hindu leaders, who helped them to raise the strong contingents they needed for the Mughal imperial wars. Occupying a distinguished place in the vanguard, like many Rājāpūt warriors, they preferred to fight as footsoldiers.

By the reign of Awrangzib, although ostensibly they maintained their traditional loyalty, they were impelled by ambition to join in the scramble for political power. For example, Sayyid Hassan 'Alī (afterwards 'Abd Allah Kūṭ al-Mulk) and his younger brother Husayn 'Alī, known as the Sayyid brothers, by helping Farrūqī-Sayyid [q.v.] succeed to the throne in 1124/1712, obtained for themselves the highest civil and military positions in the government of their puppet emperor. They abolished the dīgār and tried to conciliate the Rājāpūts; but by giving too much administrative power to their favourite, Lāla Ratan Čand, a Vaishya, they dislocated the entire administrative machinery. Finally, in 9 Dhūlqada 1131/29 April 1719, they deposed and strangled Farrukh-Siyar. They then raised four puppet rulers to the throne, one after the other. However, early in the reign of the fourth puppet emperor, Nashir al-Dīn Muhammad Šāh [q.v.], their and their supporters were defeated by an opposition party under the leadership of Niẓām al-Mulk [q.v.]. On 6 Dhū 'l-Hijja 1132/9 October 1720, Husayn 'Alī was assassinated, and, on 14 Muharram 1133/15 November 1720, 'Abd Allah was defeated near Agra, taken captive and killed in his Dīlīh prison on 1 Muharram 1135/12 October 1722.

The Bārā Sayyids were Shī'īs, and many Sunni Sayyid families, such as that of Shāh Wālī Allah Dīlawī [q.v.], who lived in their neighbourhood, exerted themselves to ensure that the Bārā Sayyids did not recover their political power.

BARIZ, Djabal, a moutainous and, in early Islamic times, apparently wooded region of the Kirmān province in Iran, described by the medi-

ieval historians and geographers as the haunt of predatory peoples like the Kuficfs or Kufs and the Kirman province in Iran, described by the medi-

taeasts as the haunt of (sc. the massif which culminates in such peaks as the Kuh-i Hāzār and the Kuh-i Lālāzār), to the south of the towns of Bām [q.v.] and Fāhrādji; the geographers count it as amongst the garmsirdt regions [see KISHLAK] of Kirman province. The Djabal Bariz rises to 12,450 feet, and the Hudūd al-

ʿālam states that it possessed mines of lead, copper and lodestone.

The actual name appears variously in the sources as Bariz, Bārīdān, etc., the modern form being Kuh-i Bārīčī, and appears to be old. Herodotus mentions Πεισέποιοι who paid tribute to Darius and supplied infantry for Xerxes' army (cf. Marquart, Erōnēstār, 31, and Tābari, i, 894, says that Khusrav Anūhgrnwān re-established Sāsānid control over the people of al-Bariz after the anarchy of Kubādī's last years. Until the early 'Abbasid period, the Djabal Bariz remained a stronghold of Zoroastrianism. The Kūfīčī or "mountaineers" of the region resisted the attempts of Yaʿqōb b. Layth to assert Sullārid control over Kirmān, and it was probably only after this time (sc. the later 3rd/9th century) that Islam began to penetrate there. The geographers of the following century describe the people of the moun-

tain as savage robbers and brigands, whom the punitive expeditions of Yaʿqōb b. Layth, the Buīyids Muʿizz al-Dawla and 'Adud al-Dawla, and the Sādāqī Kāwīrī b. Cāghrī Bēg quelled only tempo-

rarily (see C.E. Bosworth, The Kāfāhī or Qufī in Persian history, in Iran. Jnl. of the British Institute of Persian Studies, xiv (1976), 9-17). Only two villages, Kaftār and Dihaft, are mentioned as market centres for the mountain. The Djabal Bariz long remained an inaccessible place, and Sir Percy Sykes describes it as still being a haunt of thieves when he was British Consul in Kirmān (A fifth journey in Persia, in Geogr. Jnl., xxvi (1906), 433).

Biography. In addition to the references given in the article, see Muḥammad b. Ḳābirdīm, Thārīkā- i Sādāqīkhān-i Kirmān, ed. M. Bastānī-Pārizī, Tehran 1964, 6, n. 1; Ḩudūd al-ʿālam, tr. Gabrieli, Die Erforschung Persiens, Vienna 1952. (C.E. Bosworth)

AL-BARKI, nisba of a ʿShīʿa family of which one member, Abū ʿAbd Allāh Muḥammad (correcting Yākūt, ʿUḍābaʿ, loc. cit.), would appear to be the first mem-

ber of this family to participate in the transmission of ʿShīʿa tradition. A supporter of ʿAlī al-Rāḍī (d. 203/818 [q.v.]), and the father of his son Muhammad (d. 219/833) whom he certainly visited, he was the author, if we are to believe Ibn al-Nadīm, Fīrūz, Cairo ed. 309-10; cf. al-Tūsī, Fīrūz, 153) of a number of works, sc. the Kūṭāb al-Aʿsamī, K. al-Tābṣīrīn, K. al-Ruṣūlā (on transmitters of traditions ascribed to ʿAlī b. Abī Ṣaffīlī and the K. al-Maḥāsīn, which poses an interesting problem of composition and attribution. If we are to judge by the details supplied by Ibn al-Nadīm this K. al-Maḥāsīn would be a collection of "books" (kutub), that is, of chapters constituting a sort of encyclopaedia of knowledge which a good ʿShīʿa would be obliged to possess in order to conform to tradition: Kurān, history, geog-

raphy, ethics, divination from dreams, etc. However, Ibn al-Nadīm, who probably did not have the opportu-

nity to examine all these kutub, numbers about eighty of them and adds that the son of Muḥammad, Abī Dāʿīr Abī Ahmad, composed three works of his own: the K. al-Ḥuḍūd (a subject already dealt with by the preceding), and the K. al-Bālūdīn, "more developed than that of his father." Now the author of the Fīrūzī is, curiously, the only one to attribute a first version of the K. al-

Maḥāsīn to Muḥammad b. Ḫālīḍ. Yākūt totally ignores this individual, whom he mentions neither in the Muṣjam al-buldān, nor in the section of the Muṣjam al-udabh (iv, 132-6) devoted exclusively to Abī Ahmad Muḥammad and probably incomplete; bas-

ing himself, without admitting it, on the Fīrūzī of al-Tūsī (20-2), he lists a total of ninety-six titles, not specifying that they constitute the K. al-Maḥāsīn men-

tioned above, but giving the impression all the same that the number of these kutub is variable and asserv-

ing that he has personal knowledge of those that he enumerates; he judges this Barkī "worthy of cre-

dence, reliable" (tāfa), although he reproaches him for relying on feeble transmitters (dafaʿ) and for taking as a basis hadīṯs transmitted directly by repre-

sentatives of the second generation (imāṭah).

The same reproach is directed at him—and in the same terms—by ʿShīʿa writers who describe how he was temporarily expelled from Kūrm because of the defects of his methods; these authors ignore too the father of Ahmad; they declare that this last was very wise and learned, composed verse and had many disciples (although the ones that they mention by name mostly belong to a later period); they make him an associate of Muḥammad al-Djawād (which he would seem hard to accept) or of ʿAlī al-Halīf (d. 254/868) and a contemporary of al-Muḥaṣṣīm (218-

27/833-42); they make no mention of his successors; and they suggest that he died in 274/887-8 or in 280/893-4.

The articles which the ʿShīʿa nāgābīyān devote to him are conveniently reproduced by Muḥāsj an Al-Muḥāsin in his Aʿīn al-Shīʿa (ix, 266) and most com-

pletely by al-Sayyid Muḥammad Sādīq Bahar al-ʿUlim, who was responsible for the second edition of the Kūṭāb al-Maḥāsīn (Nāṣīf 1304/1914, two volumes bound in one; the first edition, by Dāʿīl al-Dīn al-

Huṣaynī, Tehran 1370 [?]) remained inaccessible to the author of the present article.

It must in fact be said that this celebrated K. al-

Maḥāsīn, which appears to have enjoyed great influ-

ence over a long period, has not survived in an

Bārīz — Al-Barkī
integral form, although it has not totally disappeared, and eleven of its "books" have been preserved: (1) al-Aghānī wa 'l-kāna'ín (11 books); (2) Thāhāb al-umāl (123 books); (3) Bāb al-umāl (70 books); (4) al-Sufās wa 'l-nūr wa 'l-'abasa (47 books); (5) Ma'rūthāb al-zulam (49 books); (6) al-Nabūd (33 books); (7) al-Mā'āf (136 books); (9) al-Mâ' (20 books); (10) al-Manāfi' (6 books); (11) al-Marrāfik (16 books). These titles almost all appear, in the same form, in the ancient lists, where there is also reference to kīthāb derived from bāb in the published chapters. So we possess one-sixth or one-seventh of the original work, which is essentially a collection of hadiths attributed to the Prophet and to the Ahl al-Bayt, in particular to al-Husayn b. 'Abd b. Abi Talib, simply classified and reduced without any interference upon the part of the compiler. To judge by what has survived, the collection consisted of a sort of mezaanof of a particular type grouping together all the traditional elements that the Imam considered to be essential, both in matters relating to the faith and in questions of posterity. It is probable that the author did not neglect literary formation, poetry and other cultural fields, which makes the more regrettable the loss of so many chapters, no doubt considered less indispensable by posterity. It is probable that the kīthāb formed independent fascicules, which would explain both how they could be so easily lost and why authors cannot agree either on their number or their order.

A comparison between Ibn al-Nadīm's list and all the others might perhaps allow an insight into the respective roles of the father and of the son in the compilation of the Kīthāb al-Mahdsin, but this would be a hazardous enterprise and ultimately of doubtful benefit. In other respects, the presentation of these lists is such that it is impossible to see clearly whether Muhammad or his son wrote works that were not included in the composition of the Kīthāb al-Mahdsin; it is however possible that one or the other left biographies of 'Abd Rabbih, a descendant of Hasan b. Masum, who died in 177 AH. Asma'ī as an expert in poetry, al-Kīsāfī in grammar, Maṣūf b. Mājahī in j疑ir, and Ibn Māshāhī in poetry.

BASBÁS is the fennel (Foeniculum vulgare), belonging to the family of umbelliferous plants. The term bīsbas, used in the Maghrib for fennel, indicates in the Eastern countries the red seed-shed of the nutmeg (Myristica fragrans), known as Macis, while the term bāsba, not to be confused with the two other terms, indicates only nutmeg in the entire Arab world. The most often synonym of bāsba is reżāyānūd, borrowed from the Persian. The complete nomenclature, also taken from other oriental languages, has been brought together by J. Low, Die Flora der Juden, iii, 460-5. The Greek term μακανόν is found as μάκανα (μάκανα) in (and variants) in the Arabic medical inventories. Like in Dioscorides, this term indicates the garden fennel (bāsba būsūtān), Anethum foeniculum, while μακανόν (μακανονίθ) and variants, strictly speaking "horse fennel", which is mostly mentioned in connection with the garden fennel, apparently stands for the wild fennel. The term bāsba qānūnī, likewise used for the latter, is confusing for the "mountain fennel" (Seesi) does not belong to the genus Foeniculum. Other kinds mentioned cannot as yet be determined.

The volatile oil extracted from the fruits of the fennel has a strongly fragrant scent and a bitter, camphor-like smell. It loosens phlegm and was, in the form of fennel-tea or fennel-honey, used, as it is now, against coughs and flatulence. A decoction of the flower stalk was considered to be a diuretic and to further menstruators, mixed with wine it was used as a medicinal against snake bites, while the pressed juice is praised as an ophthalmic remedy. The leaves and fruits were added to food as a spice. Aṣma'ī counts them among the precious spices (Nabāt, ed. Qunaym, Cairo 1392/1972, 13 ff.). Abū Ḥanīfa al-Dinawārī praises their aroma, remarks that the plant thrives on wild soil and proves both observations with verses (Nabāt, The Book of Plants, ed. B. Lewin, 59 f.). Fennel has been used as spice from Old Egyptian times until today. Ibn al-'Awāmī consecrates a special chapter to the cultivation of the fennel (Kīthāb al-Fīlāhā, tr. Clément-Mullet, ii, Paris 1866, 250 f.). Curious is the assertion of Nuwayyi'd (Nūhayn, xi, 82), that vipers and snakes, when leaving their holes in spring, rub their eyes at the fennel shrub in order to be able to see again; the same is mentioned repeatedly by Kazwīnī (see Wiedemann, Aufsätze zur arab. Wissenschaftsgeschichte, ii, 336, 386).

BASBAS — BARIYYA OR BUTRIYYA

129

Bashkardia, a region of southeastern Iran, falling administratively today within the 8th utan or province of Kirmān and in the ghubārat or district of Dūrūf, of which it comprises one of the nine constituent rural areas (dīhistānā), see Farang-i dīghīfreh-yi Irān, viii, Tehran 1332/1953, 49. It is the mountainous hinterland of western Makrān, lying to the east of Mināb near the Straits of Hormuz and bounded on the north by the southern fringes of the Dājz-Muryān depression; the peaks of the Mārān range rise to just over 7,000 feet. The whole region has been, and still is, extremely remote and inaccessible, and only in recent decades has a measure of control from Tehran been extended over a people formerly much given to raiding and brigandage. The main settlement is at Angohran, but the population is everywhere sparse; the Admiralty handbook, Persia, London 1945, mentions 100 redoubts at Angohran, and a total population for Bashkardia of an estimated 8,000 families; the Farang, loc. cit., mentions 108 settlements (abādān), with a population of ca. 6,700.

The people of Bashkardia are ethnically Iranian and Shi'i in madhhab; at least until very recently, the social structure there included a slave element, both negroid and native Iranian. It was first speculated by Tomaschek that the modern Bashkardis could be the descendants of the mediaeval Islamic Kūfiks or Kufs, the predatory people of Kirman and Makrān provinces often linked in the sources with the Bālūc [see BALO-GISTĀN and KUPS]; for a discussion of this, see C.E. Bosworth, The Kūfiks or Kufs in Persian history, in Iran, jnl. of the British Institute of Persian Studies, xiv (1976), 9 ff. The actual name Bashkard (Bashkārād) is a form apparently exhibiting a pseudo-Arabic broken plural) is unattested till the mid-19th century, when the first Europeans, Col. M. Mockler and E.A. Floyer, visited the region; Dr. I. Gershévitch, who stayed in Bashkardia for some months in 1956, has nevertheless suggested that the name might derive from the dominant Persian tribe, to which the Aḥaemendins themselves belonged, of the Pasargadae, located by Proclacus in Carmania (= Kirmān). The Bashkārdī language is very aberrant from New Persian, and exists in two forms, a northern and a southern group of dialects. It contains certain old Iranian words not surviving elsewhere, e.g. the hardwood dāg or gādā, identifiable with the O. Pers. yak-wood used in the construction of Darius's palace at Susa, see Gershévitch, Sīsoo at Susa (O. Pers. yaka = Dalhgrega Sīsoo Rock.), in BSOS, xix (1957), 317-20, xx (1958), 174. Bibliography: The main items in the exiguous bibliography of Bashkardia are given by Bosworth in art. cit., 11, n. 13; of special note are the works of Floyer and A. Gabriel, and most recently, of Gershévitch, Travels in Bashkardia, in Jnl. of the Royal Central Asian Society, xlvii (1959), 213-24, and F. Balsam, Étrange Baloutchistan, Paris 1969; Linguistic material was collected by Gershévitch, but has not yet been published in toto; for sections of it so far accessible in print, see Bosworth, art. cit., 13, n. 20.

(C.E. Bosworth)

Bashkut, Qawad Feimi, modern Turkish Cevat Feimi Baṣṣūṭ, Turkish playwright and journalist (1905-71). He was born in Edirne and educated at an Istanbul high school, choosing journalism as his career when he was still a very young man. He began to write plays in the early 1940s and became very popular. Of his 23 plays, most of which were performed in the city theatre (Seher tiyatroos) of Istanbul, the best known are Küçük şehr ("Little Town") 1946; Paydos ("Break") 1949; Harput'ta bir Amerikc ("An American in Kharput") 1956; and Buçul şeridesi ("Before the thaw") 1964. His plays are sentimental and unsophisticated renderings of human dramas and comic situations, with an edifying approach. He writes in an easy style at times tending to be somewhat literary and pedantic.

Basques [see BASHKUNISH].

Batiyya or Butriyya, the pejorative designation for a group of moderate Shi'is in the time of Muhammad al-Bākīr (d. 1177/735) and for the moderate wing of the early Zaydiyya [p.s.] who did not repudiate the caliphates of Abu Bakr and 'Umar. Their position was opposed to the more radical Shi'i stand of the Djarudiyya [p.s.], who considered Ali as the only legitimate immediate successor of the Prophet. The name is most often derived in the sources from the nickname al-Abtar ("The Chief") of the only legitimate immediate successor of the Prophet, or of the recitation of the basma in the prayer which they performed only with a subdued voice, or of the caliphate of 'Uthmān, which they repudiated for the last six years of his reign. The first of these explanations is clearly the most plausible one and points to an origin of the name in internal Shi'i controversy.

Imāmi sources name the Kūfāns Katār al-Nawwāb, Sālim b. Abi Ḥafsā (d. 1377/754-5), al-Hakam b. 'Utaiba (d. 1177/735 or 1157/735), 'Alā al-Mukaddad Thābit al-Haddad as the chiefs of the Batiyya in the time of Muhammad al-Bākīr, and describe them as not recognising his full rank as imām and sole authority in religion and as criticising him for ambiguities in his teaching. 'Umar b. Riyyāh, who at first recognised the imāmat of al-Bākīr, later also renounced him and joined the Butriyya after he had found al-Bākīr contradicting a previous statement and proffering takfīya as an excuse.

Metin And, Eli yih Türk tiyatroos, Istanbul 1973, 438 and index; Behçet Nectağil, Edebiyetinizde tizimli sütçüsə, 1975, s.v.

(Fahir Iz)
Though only a few of the leaders of the Batriyya are expressly mentioned as participants in the rising of Zayd b. ‘Ali in 122/740, it may be assumed that the early Batriyya generally inclined towards supporting him, as his attitude toward the first caliph was close to their own. The Zaydiyya held that ‘Ali was the most excellent of men after the Prophet, but admitted the legitimacy of the imāmates of Abū Bakr and ‘Umar, since ‘Ali had voluntarily pledged allegiance to them. Concerning ‘Uṯmān, they either abstained from judgment or renounced him for the last six years of his reign. Unlike the Djarūdīyya, they did not ascribe a superior knowledge in religious matters to the descen-
dants of ‘Ali, but accepted the hadīth transmitted in the Muslim community and admitted the use of indi-
vidual reasoning (īqāhād, nā’ī) in order to close gaps in the ‘Shāf‘ī. Thus they did not adopt the specifi-
cally Shī‘ī theses in various points of the ritual and law and belonged to the traditionalist school of Kūfā in their fiqh doctrine. A leader of the Batriyya in the revolts of Zayd and of Ibrāhīm b. ‘Abd Allāh (145/762-3) was the traditionist and fakih Abū ‘l-Abd Allah in the mountains of the Shan‘a. Though only a few of the leaders of the Batriyya are expressly mentioned as ... 1914, 83 f. (= lib. v, 113); La “Materia medica” de Dioscorides, ii (Arabic tr.) ed. Dubler and Teres, Tetuan 1952, ... 31-4; idem, Kātib al-Ẓādīn, Strassburg 1929-31, 68 f.; al-Kashshi, Kultus der Ṣaiditen, Strassburg 1929-31, 68 f.; Abu ‘l-Faradj al-Isfaham, al-Nashi‘ī, Masd’il al-imāma, Al-Nashi‘ī Gorgdm, In his cosmog-
yraphy, Dimashqī distinguishes between bawrak and tīkah; he says that both have a natural and an arti-
ficial kind and that both kinds of the latter were used in melting and purifying minerals (Wiedemann, Aufsätze zur arub. Wissenschaftsgeschichte, i, 713). The fact that there existed a class of borax-traders (bawrakan) indicates that trade in these various sodi-
um compounds required specialised knowledge. This trade was apparently lucrative: Ibn Ḥawkal (tr. Kramers-Wiet, ii, 339) mentions a borate (milh al-bawrak) which was delivered from Lake Van to the bakers in ‘Irāk and Mesopotamia (bawrak al-khābahāzīn, see above); this denomination comes from the bakers who used to coat the bread with borate dissolved in water before putting it into the furnace, in order to give it a prettier and more shiny appearance. The particularly valuable bawrak al-sāgā (see above) was exported with great profit from Kāshān to ‘Irāk and Syria.

The books on mineralogy mention the numerous find-spots and kinds of bawrak. Like salt it is found either as a liquid in water or as a solid on the surface of the soil. It is white, grey or red, and causes all kinds of solid substances to melt. Nātrān, a kind of bawrak, cleanses the body and beautifies the skin; it is also used in chemistry as a reagent against impuri-
ties (J. Ruska, Das Steinbuch der Arzteühält, Heidelberg 1912, 118, tr. 173).

In antiquity bawrak (nātrān) was known as vītpov, which is different from our saltpetre (Nitrān). At that time, as in Islamic times and nowadays, it was gained from lakes which have no discharge, in which it was left behind as a gleaming crust as a result of evapo-
rition and corrosion. The particularly valuable bawrak al-sāgā (see above) was exported with great profit from Kāshān to ‘Irāk and Syria.

(BAY'AT AL-RIDWĀN, the name given to an oath exacted by the Prophet from some of his followers during the Medinan period. During the expedition to al-Hudaybiyya [q.v.] in Dhu 'l-Ka‘da of the year 6 (March 628), a report reached Muhammad that the Meccans had killed ‘Ugīmān b. ‘Affān, who had gone into Mecca to negotiate a truce. Muhammad realised that it was a pledge “not to flee” or “to the death” (mawt) and one man (Sinān) is said to have pledged ‘Ugīmān’s death. If the third version is correct, it indicates the purpose of the oath, which was to prevent the Meccans from avenging, and summoned the members of the expedition to take an oath of allegiance to himself. There are different versions of the content of the oath. Some held it was a pledge not to flee; others that it was a pledge “to the death” (‘ālā ma’ fī naṣība); to fight the Meccans would lose face unless ‘Ugīmān’s death was avenged, and summoned the members of the expedition to take an oath of allegiance to himself. There are different versions of the content of the oath. Some held it was a pledge not to flee; others that it was a pledge “to the death” (‘ālā ma’ fī naṣība); to fight the Meccans would lose face unless ‘Ugīmān’s death was avenged, and summoned the members of the expedition to take an oath of allegiance to himself. The chronicles give such exaggerated accounts of the exploits of the Bayḥaki Sayyids in Kašmīr that it is difficult to disengage fact from fiction. The first Bayḥaki Sayyid, however, about whom any reliable evidence exists was Sayyid Muhammad, who gave his first daughter, Tādj Khatun, in marriage to Sultan Zayn al-ʿAbidīn (823-74/1420-70); and later his grandson, Sayyid Hasan, was married to the Sultan’s daughter. On the death of Zayn al-ʿAbidīn’s son and successor Haydar Dughlāt (948-58/1541-51), Sayyid Ibrahim, the son of Sayyid Muhammad, who were not in the fort at the time, carried on the struggle against the enemies of their father, but they were defeated and exiled from the country along with their followers. But after two years the Sayyids were received, and under the leadership of Sayyid Muhammad, they once again became active in the struggle for the throne between Muhammad Shāh and Fath Shāh, intriguing with and making alliances with different groups as suited their interests. In the end, Sayyid Muhammad succeeded in 898/1493 in becoming Wazīr of Muhammad Shāh, but in 910/1505 he was defeated and killed by his rivals. This, however, did not demoralise the Sayyids. Instead, when Mirzā Haydar Dughlāt established his power in Kašmīr (948-58/1541-51), Sayyid Ibrāhīm, the son of Sayyid Muhammad, joined the Kašmīr nobles in overthrowing him.

Under the ʿAlī Sultanān also, the Bayḥaki Sayyids continued to play an important part. ʿAlī Shāh, a son of ʿAlī Shah (978-86/1570-78) appointed Sayyid Mubārak the son of Sayyid Ibrāhīm as Wazīr, and took his advice on all important matters. But on ʿAlī Shāh’s death, Sayyid Mubārak set aside the latter’s son Yūsuf Shāh on grounds of incompetence and declared himself Sultan (986/1578). Yet, after a few months he was overthrown by the nobles, who were
denied by him any share in the government. In spite of this, he joined Ya'kub Shāh, Yusuf Shāh's son and successor, in the struggle against the Mughal armies sent by the Emperor Akbar to conquer Kasim. Finding resistance to the Mughals fruitless, he submitted to the Mughal commander Kāsim Khan Mīr Bārī on 27 Dhu 'l-Hijjah 994/9 December 1586, and was sent to Agra. Akbar wanted Sayyid Mubārak to accompany Yusuf Khan Ḳānī RIDWĪ, who was ordered by him to proceed to Ḳānī to relieve Kāsim. But Sayyid Mubārak refused; so he was imprisoned and sent to Bengal. His son, Abu 'l-Ma'ālī, also fought side by side with Ya'kub Shāh against the Mughals, but was taken prisoner. This was the end of the significant role which the Bayhakī Sayyids had played for over 150 years of Kasim history.

BENĪ MELLĀL, formerly Ḳāsāba Benī Mella l from the name of the tribe living around it), or sometimes Ḳāsāba B. Kugh, a town of Morocco roughly equidistant from Casablanca, Marrakesh and Fās. It lies on one of the slopes of the Dīr (q.v. in Suppl.), at an altitude of 620 m./1,980 feet, in this piedmont region between the Middle Atlas and the wide, historic plain of the Tadla, of which it has recently become the official chef-lieu.

The town is built around the fortress or kasāba built towards 1099/1688 by Mawlāy Ṣamārī, restored in the 19th century by Mawlāy Sulaymān and since once again restored. The Vaubellian spring of Asardān to the south of the town leads one to think that Benī Mellāl, like all the other centres of the Dīr, e.g. Aghmāt, Damām (q.v.), etc., goes back to ancient times, but no traces of prehistoric life have as yet been discovered there. It is possible that Benī Mellāl is Ḳūsī Dāī, the little capital which Yahyā b. Idrīs inherited in the 3rd/9th century at the time of the division of his father's kingdom. It is mentioned by the Arab geographers as a fortress and an important market centre. In 354/1140 or 355/1141 it was occupied by the Almahdā.

The demographic explosion of the town has been remarkable. In 1918 it had an estimated 3,000 inhabitants; now it has 60,000, and the increase between the 1922 and 1960 censuses has been 81%. This undoubtedly stems from its administrative role today, one of the results of agricultural development of the great alluvial plain of the Tadla or else of the very important hydraulic reservoir works and irrigations improvements made over the last 30 years. Benī Mellāl's importance has grown still further from its role as a market centre for provisions of the Berber tribes in the Middle Aṭlā m valleys, and also those of the central Grand Atlas (especially the Wādī Tadghat). A very lively fair is held in the town centre every week, where curious covesets of thin rugs (kaḥāf) in gaudy and evanescent shades of colour are sold, and are much appreciated. Superb gardens, rich olive-groves and flourishing orchards of mulberry trees, oranges and pomegranates, extend as far as the gush six abundant and pure springs of water. In the midst of this oasis is the zāyfa of Sīdī Aḥmad b. Kāsim, whose minaret is attributed to the great Almoravid Yusuf b. Taghīf (it is more probable that it was the work of his grandson Taghīf, who passed through Benī Mellāl before going on to die in Oranita). The town has now become a centre for tourist excursions into the mountains, and has promise of a great future.

THE BEYOND [see AKHIRA].

AL-BILĀWĪ, 'ALI b. MUHAMMAD, 26th shaykh of al-Azhār. He was born in the village of Biblāw near Dayūt in Upper Egypt in Radjab 1251/November 1835. After a period of study and teaching at al-Azhār (q.v.), he was appointed to the Khedivial Library and became its Director (nāzir) for a short period in 1881 and 1882. In the wake of the 'Urābī insurrection in 1882, he was removed from this office, to which he had been appointed thanks to the help of his friend Muḥammad Sāmī al-Bārūdī (q.v.), one of the insurrection's principal protagonists. Subsequently he held the office of šaykh, and from 2 Şafar 1311/14 August 1893 onwards the office of shaykh al-hadīm of the Husayn mosque in Cairo. In addition to the latter office he was appointed nāzir al-asghāf (q.v.) on 6 Shawwāl 1312/1 April 1895, following the abdication of the former nāzir, Muḥammad Tawfīq al-Bakī (q.v.). During his term of office, which was to last until the end of 1320/March 1902, a set of regulations was promulgated, the so-called šaykh nīkābāt al-asghāf (cf. al-Wakīf al-Misrīyya, 17 June 1895, no. 67), which made the incumbent to this office virtually an official within the Ministry of Wakf; and a subordinate to its nāzir. His appointment as šaykh of al-Azhār on 2 Dhu 'l-Hijjah 1320/1 March 1903 in succession to Salīm al-Bīghīr, who had been appointed because of his efforts to frustrate implementation of the reforms provided for in the law of 20 Muḥarram 1314/1 July 1896, was the result of a compromise between the Khedive and his ministers, who had originally favoured other candidates. Only two years later, on 9 Muḥarram 1323/15 March 1903, he found himself compelled to resign when his inability to deal with the obstruction of his efforts to implement reforms had reduced his authority to an unacceptably low level. He died shortly afterwards on 30 December 1905.

Bibliography: Biographies may be found in Aḥmad Tāymūr, Tābirāgam ʿayn al-ḵān al-ṭāhirī, 'aʃar wa-avvīl-ʿal-ṭāhī ʾaʃar, Cairo 1940, 81-5; and Muḥammad b. ʿAlī al-Biblāwī, al-Taʿrīkh al-Ḥusaynī, Cairo 1324, 57 ff.; The biographies by Khayr-al-Dīn al-Zirīkī, al-Āfām, v, 171 f., and by Muḥammad al-Zāfīr, Muḥammad al-Ṣāmī al-dāhkī, Cairo 1950, ii, 140, are mainly based upon Tāymūr's. For additional data see ʿAbd al-Muṭlaṣ al-SA′dī, Taʿrīkh al-ʿlāmī fi ʾl-ʿāṣar wa-ṣalāḥāt min al-ʿāṣar ʿayn ʾl-ʿlāmī, Cairo n.d., 67 f.; and Aḥmad Ṣafīq, Muḥammadīrat fi nisf ḵān,
Cairo 1936, ii, part 1, 214; part 2, 65 f; A'mal Maqālis Īdārat al-Azhār min ibtīdā‘ ta’siṣṣa sana 1312 ālā ghadāt sana 1322, Cairo 1323/1905-6, 119 ff. gives an overview of the controversies and disturbances which occurred in al-Azhār during al-Bīblawī’s term of office and the way in which al-Fahd dealt with these. His al-Awādā‘ al-husaynīyya ʿalā nīkāḥ al-masdūl al-al-mātrīnya, Cairo 1305/1887-8, was a text studied at al-Azhār; cf. al-Azhār fi 12 ‘ām‘, Cairo n.d. (1965).

(F. DE JONG)

BIBLIOMANCY [see KUR‘A].

BĪGHĀ', the Kur‘ānic term (XXIV, 33) for prostitution. "Prostitutes" is rendered by baghiyy (pl. baghiyy), mumis -at, may amis/may amis, mawdmis, ‘ākha, (pl. ‘aakha), ‘aakha, (pl. ‘aakha), etc.; a more vulgar term, although we have here a euphemism, is kaḥba (pl. kibhā), which the lexicographers attach to the verb kaḥba "to cough", explaining that professional prostitutes used to cough in order to attract clients.

Although M. Gaudefroy-Demombynes (Mahomet, Paris 1969, 48) saw in the legend of Isaf and Na‘ila (ed. Hadjin, 112, tr. Houdas, iii, 642), a roundabout way of demonstrating the "reminiscence of sacred prostitution", no such custom seems to have existed amongst the pagan Arabs; T. Fahd considers moreover that the legend in question is edifying in its aim and "has the severity does not always seem to have been complete success. Although travellers and historians are sparing of details, there are pieces of information testifying to the existence of more or less freelance prostitutes as well as the existence of brothels in the various Islamic cities. Thus al-Mukaddasī (Aḥsan al-takāṣṣūm, 407) saw a brothel at Sūs, near the mosque, whilst Leo Africanus speaks of taverns at Fās with whores residing in them (tr. Epaulard, 191) and prostitution at Tunis (385). According to al-Kīfī (Hukamā‘, ed. Lippert, 298), the muḥtasib of Latakia put up for auction the favours of the public women and issued to the successful bidders a ring which they had to show if they were met at night with one of the women.

Indeed, at all times prostitution was not merely tolerated but even recognised officially and very often was subject to a tax payable to the public treasury. At Fās, where the headman of the quarter had the task of supervising the courtesans and of preventing...
women might be distinguished. At the bottom of

Bibliography.

As in many other lands, various categories of
women might be distinguished. At the bottom of the
scale were the somewhat wretched women who
hired rooms in caravanserais by the town gates or
near the centre, and in addition to the rent, paid
a due to the keeper of the caravanserais; but there were
also procurers who brought them clients, mainly
strangers visiting the town; peasants, seasonal
workers, soldiers, etc. Some of these women cer-
sarily sank to the level of the rogues and vagabonds
whose various activities have been described by C.E.
Bosworth in his Mediaeval Islamic underworld (Leiden
1976, 2 vols.). At a higher level, brothels proper
were for a more affluent clientele. As in pre-
Islamic al-T’if, special quarters were reserved for
prostitution, which the authorities were thereby
more easily able to control. This system has remained
down to our own time, and a visit to these locali-
ties, which are sometimes picturesque, may even be
recommended to tourists, male and female, by guides
and travel agents; this is especially the case in
regard to Bouzib (< Prosper) at Casablanca and the
street of "dancing girls" of the Ouled Nail at Bou Saada
(Algeria).

The practice of early marriage among the Muslims,
who can take four legitimate wives and as many
concubines as they can afford to keep, ought in
the natural course of things to have set bounds to
venal love-making. However, many young men from
the modest levels of society were unable to find their
sexual initiation otherwise than by recourse to
prostitutes, and legal marriage entailed financial bur-
dens which men from the masses of people were not
always in a position to undertake, especially if they
had to migrate away from their original home.
Furthermore, the Kur’anic prohibition could always
be easily circumvented by procurers and procurers
lured on by the prospect of gain, whilst the easy facili-
ties for husbands in regard to the repudiation of
their wives [see Tarâs] threw on to the streets women who
did not always have the possibility of returning to
their families.

Bibliography: There does not seem to have
been produced any monograph on prostitution in
mediaeval Islam. In the list of writings of Abu
'Abd al-Saymarî [q.v. above] a K. Naqâdān
al-kawwâd (?) and a K. al-Râba, wa-mumâfî
al-kîyâda, which may possibly have dealt with
pimps, are to be found, but these have not
survived. In addition to sources cited in the article,

heri, La vie quotidienne des musulmans au moyen âge,
Paris 1947, 64-5; R. Le Tourneau, Fès avant le
Protectorat, Casablanca 1949, 557-9 and index;
al-Markaz al-kawmd li 'l-buhuth al-idjitiyঀya
al-Bighâ' fi 'l-Khârîa, Cairo 1961; a fairly well-
developed study by a sociologist is that of A. Boudhiba,
La sexualité en Islam, Paris 1975,
228-39 and the bibl. cited there. On male
prostitution, see Liwât. (Ed.)

BIHBHÂNî, A.G. SAYYID MUHAMMAD BÂKR, Shi'i muqaddhab and proponent of the Usuli [q.v.]
mağhbûr, often entitled Waḥid-i Bihbihânî or Muḥakkiḳ-i Bihbihânî, was one of
his Shi'te contemporaries as the "renewer"
[mağhdûd] of the 12th Hijrî century. He was born in Isfahan
some time between the years 1116/1704-5 and
1118/1706-7. After a brief period spent in Bihbihân,
he was taken to Karbâla' by his father, Mullâ
Muhammad Akmal, whose principal student he
became, while studying also under Sayyid Ṣadr al-
Dîn Kumnî. Mullâ Muhammad Akmal had studied
under Mullâ Muhammad Bâkîr Mağlîsî, the great
divine who had dominated Islamic Shi'ism in the
late 11th/17th century, and had also married his
niece. The young Bihbihânî, who came to exercise
a similar dominant role at the end of the 12th/18th
century, was thus both spiritually and genealogically
related to Mağlîsî. It is related that after complet-
ing his studies in Karbâla', Bihbihânî intended to
leave the city, but was dissuaded from doing so by
the appearance of the Imam Ḥusayn to him in a
dream, instructing him to stay (Muhammad Bâkîr
Khânârî, Rawdât al-ghannâm fi abâl al-ulu'mâ wa l-
â'dîth, Tehran 1304/1887, 122). In obedience to the
dream, he stayed on, and engaged in fierce contro-
versy with adherents of the Akhbarî school of
fiqh, which at that time was predominant in Karbâla' as
well as the other 'atabat [see ʻAmârîyya above]. The
troversy between the Akhbarîs and the Uṣûlis,
centering on various questions of usûl al-fîqh and par-
ticularly on the permissibility of ʻiǧâhâd, was an ancient
one, but had become particularly acute in the Safawid
period and the middle part of the 12th/18th
century. Before the appearance of Bihbihânî, the
Akhbarîs were so assured in their dominance of the
ʻatabat that anyone carrying with him books of Uṣûl
al-fîqh was obliged to cover them up for fear of pro-
voking attack. By the end of his life, however,
Bihbihânî had been able almost completely to uproot
Akhbarî influence from the ʻatabat and to establish
the Uṣûlî position as normative for all of the Twelver
Shi'a. He accomplished this change partly by debate,
polemics and the composition of written refutations
of the Akhbarî school, the most important of which was
Kâlîb al-ʻiǧâhâd wa l-ʻakbâr. Hardly less effective
was the demonstration of the prerogatives of mağhâhid that
he provided. One of his pupils, Šaykh Ḍa'īn Naḍâjî
(d. 1227/1812), records that he was constantly
accompanied by a number of armed men who would imme-
diately execute any judgement that he passed. The
example that he thus gave was to be followed by
numerous Iranian ulâmî ʻulamâî of the Kâdîrî period.
Another pupil of Bihbihânî's was the Ni'mâtallah Sufi order; such was the enmity that he
furnished for them that he gained the title of ʻâlîbâgî
(ʻ öldîr). He died in 1206/1791-2 or 1208/1793-
4, and was buried near the tomb of the Imâm
Husayn in Karbâla'. Bihbihânî is credited with
being one of the twenty persons of them are list-
ed in Muhammad 'Ali Mudarris, Rayhânat al-adâb,
new ed., Tabriz n.d., i, 52, and a further fourteen
titles are preserved in autograph in the library of Bihbihani's descendants in Kirmanshah (see Muhsin al-Amm, *A'yan al-talib*, Beirut 1378/1959, xliv, 96). It is said that his writings on usul al-fikh were compiled into a single volume by one of his students, Sayyid Mahdi Ka'zawini. The number of his pupils was very large; among the most influential we may mention his sons, 'Ali Muhammad, who dominated the life of Isfahan in the first quarter of the 19th century—Hadjji Muhammad Ibrāhim Kābāsī, Sayyid Muhammad Bākī Shafī, and Sayyid Mahdi Bāhī al-Ulum. But his influence extended far beyond the generation of mu'ātahids he trained; through his theoretical vindication of the usul al-fikh position and his practical demonstration of the function of mu'ātahids, he was in effect the ancestor of all those mu'ātahids who have sought since his time to assert a guiding role in Iranian society.

**Bihrang**. **Samad, Persian prosewriter** (1939-68). Bihrang's birth in a lower-class Turkish-speaking family in Tabrīz and his eleven-years' employment as a primary schoolteacher in rural Ardharbāyjān are attested in the greater part of his fārsī writings. These, both fictional and non-fictional, largely deal with village life in his native province and with the specific problems of a cultural minority region. His concern for the plight of Ardharbāyjānī peasant youth prompted a series of educational essays, as well as some twenty children's stories, the chief foundation of his present fame. Notable for their "ideological" content rather than for strictly literary merits, Bihrang's children's stories no longer recommend the conventional virtues of obedience, cleanliness and modesty, but aim at imparting "a correct view of the dark, bitter realities of adult society"). Accordingly, his stories picture the needy, powerless village children, their search for freedom and their revolt against ignorant parents, local landlords or urban aristocracy. The political commitment of most of the above contributions to Bihrang's considerable popularity among the dissident intelligentsia; at the same time, it gave rise to an increasingly restrictive censorship among the Iranian authorities and to a vast wave of rumours at his sudden death in September 1968, reportedly a drowning accident. More explicit views on society and literature are present in Bihrang's essays, notably the insistence on straightforward, firmly committed writing and contempt for the "deformist pseudo-intellectualism" of westernized Tehran. The tenets of his educational criticism are roughly similar to those earlier voiced by the writer Aī-i Ahmad [q.v. above], both a schoolteacher and a writer like himself; rejecting the unquestioned adoption of American teaching methods and finding the current textbooks inapplicable in a classroom with Azeri Turkish-speaking pupils, Bihrang designed an alternative "textbook for village children": the completed but yet unpublished *Alībāyār-i kādārīn-i rūstā*.\footnote{Bihrang, Babak, etc. Thirteen of his children's stories were posthumously collected in *Madā'im-ī-yi kisā'ah*, Tabrīz 1348 sh., which also contains a chapter on *Adabī-yāt-i kādārī* (originally published as part of a review-article in *Rahomā- yī Kūdār* xi (1347-53 sh.), 48-5), outlining the author's conception of children's literature. Not included in this volume are his most successful stories, the internationally awarded *Mēhī-yī sīyāh hādīlū*, separately published in Tehran 1347 sh., and the collection *Tālkūn wa 'andāsī-i digar*, Tehran 1349 sh. A number of his educational essays appeared as *Kandā-yī-kisā' av ī-tarāğī yī 'Irān*, Tabrīz 1344 sh., while other articles on various subjects were posthumously edited as *Madā'im-ī-yi nokālahār*, Tabrīz 1348 sh.; this collection contains several chapters on *Adharbāyjānī culture and language*, including the four articles listed in Algar's *Iran and Islam*, in memory of the late Vladimir Minorsky, xi (1970), 411-8. Bihrang's political role as a "totally involved revolutionary artist" is stressed by Th. Ricks in *The little black fish and other modern stories*, Washington, D.C. 1976, 95-126; his folklore studies are passingly mentioned by L.P. Elwell-Sutton in *Iran and Islam, in memory of the late Vladimir Minorsky*, Edinburgh 1971, 233-4; Of the children's stories, a German translation has appeared in B. Nirumand ed., *Feuer unterm Pfauenthron*, Berlin 1974, 19-35; English translations include two different renderings of *Mēhī-yī sīyāh* . . . in *The Literary Review*, xvii/i (1970), 41-8; and in *The little black fish* . . . *op. cit.*, 1-19. For other translated stories, cf. M.C. Hillmann, ed., *Major voices in contemporary Persian literature*, and M.A. Jazayeri, ed., *Literature East and West*.}

**Bihrang, a term of the Druze religion.** In this, the Binn were conceived of as one of a number of earlier races or sects whose names are also mentioned in the Druze writings, such as the Rimm and the Timm. The Binn were said to have been a group of inhabitants of Hadjar in the Yemen who believed in the message of Shāfi'ī, the incarnation of Hamza
in the Age of Adam. According to the Druzes, the city was originally called Surna (meaning "Miracle" according to Hamza), and Şamīl came there from India. He called on the people to renounce polytheism and worship al-Ḥakīm bi-Amr Allāh [q.a.] as their sole deity. Those who accepted his message be commanded to "be separate" (yabdūnu) from the polytheists; as a consequence they were known as al-Bīnī. This etymology is clearly unsatisfactory, and it is possible that a Persian origin should be sought for this term.

One of the Druze dīs, al-Ḥarīh b. Tīrmāl of Iblīs refused to obey Şamīl, and was expelled from the city of the dīs, being dubbed "Bīlī". He became the amīm of the polytheists in Surna (the dīm in the Druze account). When one of the Bīnī met another, he would say: "Flee from (abdū) Bīlī and his party!". As a result, Şamīl acquired the name of Ḫadjārī.

BISĀT (A.), pls. bast/bustut, abosta, which implies the general meaning of extensiveness (thus in Kur'ān, cf. Kur'ān, LXXXVIII, 16); if it is decorated with a relief design, a mahfūra; specifically, one of fairly large dimensions. Any kind of pile. In Turkey, the Caucasus and the regions of northwestern Persia inhabited by the Kurds, the Turkish or Gordes knot (so called after the Turkish town of Gordes [q.s.]), has been commonly used. But whilst the Persian or Gendeh-knot (so-called after the Persian town of Senneh, today called Sanandaj [q.s.]) is commonly associated with Persia, India and Turkestan, the Gordes knot is also found in Persian rugs and the commonly-accepted geographical demarcation must be treated with reserve (for diagrams of these two knots see IA, v/v, 137). Kilims, and Sumak, Verne and Silc rugs are flat woven, with no pile. Until aniline and chromate dyes were introduced in the eighties of the 19th century, only natural dyes were used (see C.E.C. Tattersall, Notes on carpet-knotting and weaving, Victoria and Albert Museum, 1961; A.N. Landreau and W.R. Pickering, From the Beysoros to Semarkand, flat-woven rugs, The Textile Museum, Washington 1969).

2. History
a. Early Stages

The oldest known knotted carpet was discovered in 1949 in the tomb of a local prince in Fazyrk, in the Altai Mountains. By means of other finds in the tomb, it may be dated to the 4th century B.C. There are as yet no indications as to the place of its manufacture, but the suggestion of its manufacture in Achaemenid Persia has been put forward. Its technique (3,000 Turkish knots to the square decimetre) and its design, in Achaemenid style, are of a remarkable perfection; it is one of, and the most important of, the three extant pieces of evidence for a highly-developed art of knotting of this early date. It shows in a developed form the composition of a central field surrounded by borders, which consist of a wide main border and several subsidiary or guard borders, characteristic of all oriental carpets.

Very small fragments of carpets, conjecturally dated between the 3rd and 6th centuries A.D., were discovered by Sir Aurel Stein during his Turfan expeditions (at Lop Nor). These, however, are not knotted carpets but matted fabrics, in which the pile is produced by the warps, introduced first as loops and later split (see A. Stein, Ruins of desert Cathay, London 1912, 380, plate 116, 4). The "Spanish knot," on the other hand, always tied around a single warp, is used in a fragment discovered by Le Coq in Kucha during the fourth Turfan expedition, the earliest possible date of which is the 5th-6th century (see F. Sarre, Ein frühes Knüpfteppich-Fragment aus chinesisch-Turkestan, in Berliner Musen (1920-1), 110). The piece is too small and the design too faint to permit any conclusions about the carpets of this period. The many small fragments of knotted carpets from Fustat can hardly be dated (see M.S. Dimand, An early cut-pile rug from Egypt, in Metropolitan Museum Studies, iv (1933), 151 ff.; S.Y. Rudenko, The world's oldest knotted carpets and fabrics, Moscow 1968 (in Russian); R.B. Serjeant, Material for a history of Islamic textiles up to the Mongol conquest, in Ars Islamica, ix (1942), 54 and xv-xvi (1951), 29).

b. Turkey

Konya carpets.

The development of oriental knotted carpets can be traced to a certain extent only from the 7th/13th century onwards. The oldest coherent group comes from Anatolia. In 1907 F.R. Martin discovered three large and several small fragments in the
The styles of Anatolian carpets of the 8th/14th and 9th/15th centuries are attested by reproductions in Italian paintings of the period. They are characterised by a series of square or octagonal motifs filled with stylised animals. The best known fragment of such a carpet, which is in the Islamic Museum of Berlin, shows on a yellow ground two octagons, set in squares, in which are found a dragon and a phoenix, the pair borrowed from Chinese mythology (Kühnel, *Islamic art and architecture*, London 1966, 94 and Pl. 37b; and Pl. I).

Anatolian animal carpets.

On the portrait of the merchant Gisze, painted by Hans Holbein the Younger in 1532 and kept in the Picture Gallery of the Staatslichen Museen, Berlin, can be seen a carpet that serves as tabletop. It represents a further group of Anatolian carpets which appear frequently on paintings from the middle of the 15th century until the end of the 16th century; these are characterised as "small-patterned Holbein carpets", and a fair number of them have survived. Their design, too, is based on squares with inset octagons in vertical and horizontal rows. The octagons are formed by bands knotted several times and the corners of the squares are filled by stylised arabesque leaves, which, joined together, merge into diamond-shaped linking motifs. Variety of colours within the squares of some specimens produces a kind of chessboard effect. In the details, these carpets correspond with the so-called large partitioned Holbein-carpets, the pattern of which is limited to a few broad, clearly separated motifs which are arranged only lengthwise. The decoration of the borders is mostly based on Kučic characters. In the earlier designs the vertical strokes which have been directed to the edging of the carpet are clearly recognisable. Later on they develop into a twined band without definite orientation. Red, with brownish shades, blue, yellow, white and green are dominant. The large-partitioned Holbein-carpets are believed to have been made in Bergama, the small partitioned ones in Usjak. See Pls. III, IV.

The fourth type of early Ottoman carpets is also localised in Usjak. These are the so-called Lotto-carpets, because they appear among others, on the paintings by the Italian painter Lorenzo Lotto. They are also called "carpets with arabesque tendrils", since all specimens of this group show a red foundation covered with a yellow net of tendrils, arabesque leaves and palmettes. As is the case with the small patterned Holbein-carpets, their arrangement is basically determined by a system of octagons set in squares, while the fillings of the spandrels form also diamond-shaped figures. More often than the Kučic-borders, those of the Lotto-carpets are made up of undulating tendrils, multi folioed lozenges and later on, alternating cloud bands. See Pl. V.

Medallion and Star Usjaks.

In the 11th/17th century the early Ottoman patterns are replaced by Persian-influenced arrangements of motifs which characterise the Medallion and Star-Uṣaks. The centre of the Medallion-Uṣaks is usually marked by a pointed oval-shaped medallion with a flamboyant outline and a floral inner design. Lengthwise on both sides shield-shaped pendants are attached to the medallion. In the corners of the field quadrants of a differently shaped medallion appear. The composition can be understood as being a part of a system of staggered rows of medallions. Examples showing greater parts of the pattern prove this. The usually red ground colour between the medallions is traversed with entangled, angularly drawn tendrils. The Star-Uṣak, with staggered star-shaped medallions, connected by lozenges, is a variant of the Medallion-Uṣak. Both types occur frequently on Dutch 17th century paintings. Like the Lotto-carpets, the Uṣaks were manufactured in coarse, mis- constructed versions far into the 18th and 19th century (see K. Erdmann, *Weniger bekannte Uschak-Muster*, in *Kunst des Orients*, iv, 79 ff.; and Pis. VI, VII).

"Bird" and "Tschintamani" carpets.

Usjak-carpets with a white ground both in field and border are rare. Two simple patterns can here be distinguished: the "Tschintamani" and the "Bird" motifs. The first, in all-over repeat, consists of two parallel undulating lines and three balls arranged in a triangle over them. This motif is undoubtedly of Far Eastern origin. From the 15th century onwards it is known as a pattern for clothing in Persian and Turkish miniatures, and from the 16th century it was popular on Turkish textile fabrics. The "Bird"-motif consists of horizontal and vertical running stripes crossing each other, and is composed of rosettes and leaves, the form of which superficially looks like birds. Both patterns have often been copied in the 20th century.

Transylvanian carpets.

An important group of small-sized Anatolian carpets from the 17th to 19th centuries, showing analogy with the Usjak-carpets, are the Transylvanian carpets, so-called because they have survived in great number in the churches of Transylvania. Besides some smaller versions of the Lotto-, Bird- and Tschintamani-patterns, they are mainly prayer-
rugs, the inner-fields of which are arch-shaped to represent the mihrāb, often in connection with one or more pairs of columns. They form a link with the Turkish prayer rugs of the 18th and 19th centuries from Gördes, Ladik and Milas (see E. Schmutzler, Altorientalische Teppiche in Siebenbürgen, Leipzig 1933; J. de Vegh and Ch. Layer, Tapiss tissus provenant des églises et collèges de Turquie, Paris 1925; M. Mostafa, Turkish prayer rugs, Cairo 1953; Turkish Rugs, The Washington Hajji Baba, The Textile Museum, Washington 1968).

c. Egypt

Mamluk, Ottoman and Chess-board carpets.

Fifteenth-century Mamluk Egypt saw the origin of clearly recognisable carpets with a kaleidoscopic design, consisting of stars, rectangles and triangles, filled with small leaves, shrubs and cypresses. Their wool is soft and glossy, and the colours normally range between cherry-red, vivid green and bright blue. The many-sided star-like ornaments and the arrangement of the motifs towards the centre show a stylistic connection with the inlaid metal-work, the wood and the leather fabrics and the book-illuminations of the Mamluk period. Only a few large-sized Mamluk carpets have survived, among which one with a silk pile counts as one of the most beautiful carpets in the world (Vien. Museum für Angewandte Kunst). More numerous are small specimens with a medallion that takes up the entire width of the carpet, to the upper side and bottom of which a tightly patterned rectangular field is attached. An essential distinction between the Mamluk and the Anatolian carpets lies in the fact that the former are characterised by groups of patterns and not by regular repeat patterns from which, within a constant internal relation as far as size is concerned, variable formats can be chosen. In the borders rosettes usually alternate with oblong cartouches. European and Oriental sources mention Cairo as an important centre of the knotting industry at least from 1474 onwards.

After Egypt was conquered by the Ottomans in 1517, the Mamluk carpets were replaced by carpets manufactured in the Ottoman court-style. Their luxurious floral decoration presents a sharp contrast to the geometrical patterns of the Mamluk carpets. The palmettes and rosettes, the feathered lanceolate leaves and the naturally treated tulips, pinks and hyacinths are also to be found on the contemporary textiles and on pottery and tiles of Iznik. It would therefore seem obvious to deduce that the carpets also were manufactured in Turkey. However, in their fineness, technique and colour-scheme, they differ completely from the rest of the Anatolian carpets, but match to a considerable extent the Mamluk carpets. It is therefore plausible that they were manufactured in the Cairoine workshops after models made by Ottoman artists. This theory is supported by some hybrid types, i.e. Mamluk carpets with elements of Ottoman carpets, and vice versa. The products of the Cairoine workshops were of a special quality, as may be seen from the fact that Murād III in 1358 summoned eleven master carpet-makers together with their materials from Cairo to Istanbul. It is as yet unknown whether they carried out there a special order or established a local weaving-industry. Among the Ottoman carpets are some prayer rugs. Ewliya Čelebi mentions the use of Egyptian prayer rugs in Anatolia in the middle of the 17th century. See PIs. VIII, IX.

The chess-board carpets hold an intermediate position between the Mamluk and the Anatolian carpets. Their basic motifs are clearly Mamluk in character: a star with eight rays on which small cypress, blossoms and rosettes are radially directed, stands in a hexagon or octagon which is itself placed in a square. The way in which this motif is dealt with, the use of various-sized sections of the pattern, the coarse wool, and the knot (which is always red) point however to Anatolia. The colours are most often bright blue, vivid green and red, and thus come near to the Mamluk carpets. Moreover, these chessboard carpets have the Persian knot in common with the Mamluk and Ottoman carpets. As their place of origin E. Kühnel proposed the area around Adana in Anatolia; Rhodes and Damascus have also been suggested. They can be considered to have originated between the middle of the 10th/16th and the end of the 11th/17th centuries (see E. Kühnel and L. Bellinger, Cairene rugs and others technically related, 15th-17th cent., Washington 1957; K. Erdmann, Kaïtner Teppiche, i, Europäische und islamische Quellen des 15.-18. Jh., in Ars Islamica, v (1938), 179; idem, Mamluken- und Osmantepichte, in Ars Islamica, vii (1940), 55; idem, Neure Untersuchungen zur Frage der Kaïtner Teppiche, in Ars Orientalis, iv (1961), 65).

d. Persia

a. Timurid carpets.

The oldest Persian carpets which have been preserved date from the first half of the 10th/16th century. They represent culminating points of the art of carpet knotting which are inconceivable without earlier stages. Timurid miniatures of the 9th/15th century represent indeed with great accuracy various genres of carpets. Roughly, two basic types can be distinguished. First a small-pattern group with geometrical design, consisting of repeating squares, stars and crosses, hexagons, octagons or circles. They resemble contemporary tile-patterns. The motifs are framed by bright, small bands which interface into stars or crosses and in between into knots. The central field is monochrome or is divided in chess-board style with contrasting colours. In the borders a Kūfic-like writing stands out from a dark background. The relation to the small-patterned Holbein carpets is unmistakable.

This type is replaced by arabesque and flower patterns towards the end of the 9th/15th century. The finest specimens are to be found in the miniatures of the painter Bihzād [q.v.]. He belonged to the school of Herāt and was in 1522 entrusted with the direction of the library of Shāh Ismā‘īl I in Tabrīz. A direct influence on the royal carpet manufactures is thus possible. In this new style with arabesque-patterns, constructed lines cross the field—symmetrical to both axes—and outline semi-circles, circles, multi-foils, cartouches and ellipses. These forms intersect, creating segments which are emphasised by their colour and by their arabesque tendril decoration. There are also carpets in which medallions are arranged over one another. This general principles and individual motifs form the bases of the Safawid carpets of the 10th/16th and 11th/17th centuries (see A. Briggs, Timurid carpets, in Ars Islamica, vii, 26, and xvii, 146).

b. Safawid carpets.

Dating. Four carpets with a date inserted and some
documents provide the basis for dating the carpets which were manufactured in the 10th/16th and 11th/17th centuries under the Şafawids: (1) the carpet with the hunting scene, designed by Ghīyāth al-Dīn Ḫānī, and now in the Museo Poldi Pezzoli, Milan, with the date 929/1522, occasionally also read 949/1542; (2) the famous Ardabil carpet by Maksūd Kāhānī, dated 946/1539-40, manufactured together with one or even two others for the tomb mosque of Šayḵ Šafī; then, after a gap of more than 100 years, (3) a "vase" carpet in the museum of Sarajevo, and in the first half of the 17th century (Pl. XV). With the aid of documentary evidence they can be dated as follows. In 1601 the Persian king Sigismond Vasa III ordered such a carpet in Kāshān. In 1603 and 1621 Şāh ‘Abbās I had five specimens sent as gifts accompanying an embassy to the Signoria of Venice. Besides, contemporary reports of European travellers contain many references to these carpets. European paintings, which contribute to the dating of Anatolian carpets, are of no help in this respect as far as the Persian carpets are concerned. Only the "Herât" carpets occur frequently on Dutch paintings of the 17th century. The Şafawid miniatures show that at the beginning of the 10th/16th century the basic types of carpets had been developed. The reproductions are, however, not sufficiently differentiated for conclusions to be drawn from the schools of painting about periods of their origin and localization. Dates are to a high degree determined by stylistic aspects, the quality of the design and realisation and the shape and various degrees of development of the singular forms being weighted one against another. The margin for a subjective judgment remains thus relatively large.

Localisation. Because of their patterns and technical singularities, the Şafawid carpets, with some exceptions, can be divided into clearly discernible groups. It is however difficult to see the relations of these groups with the historically-established knotting centres. Undoubtedly the successive capitals Tabrīz (from 1502), Қazwīn (from 1548) and Iṣfahān (from 1596-7) had their court weaving manufactories. It is possible that the early Şafawid carpets came into being in Tabrīz under the influence of Bihzād. It is surprising that no attempts have been made to localize carpets at Қazwīn. The work-shops of Iṣfahān are sufficiently documented. Jean-Baptiste Tavernier describes even their exact locality in the Maṇḍān area. The manufacturing of silk so-called "Polish" carpets and woollen carpets is proved to have taken place in Iṣfahān. Apparently Kāshān was known before Iṣfahān for its silk weaving. Pedro Teixeira mentions already in 1604 carpets from Kāshān with gold and silk, beautiful brocades and velvets, and the fame of the town was evident in 1601 when King Sigismond Vasa III ordered there silk carpets, worked with gold. So late as 1670 Chevalier Chardin calls Kāshān the centre of the silk-industry. See Pl. XIV.

The woollen carpets, however, cannot be classified since they are only very summarily dealt with in travellers' accounts. In his appraisal of the quality of Persian carpets, Pedro Teixeira, who left Goa in 1604 and travelled to Europe through Persia, puts those from Yezd in the first place, those from Kirmān—further characterised in 1684-5 by Engelbert Kaempfer as carpets with animal patterns made from the best wool—in the second place, and those from Māhrūsān in the third. Thadâus Krusinski mentions the provinces of Șehrīdān, Karâbāgh, Ǧilān, the towns of Kāshān, Kirmān, Maṣḏhad, Astarābād and the capital Iṣfahān as localities in which court weaving manufactories were erected under Şāh 'Abbās I. Tabrīz was important during the 16th century, but in the 17th century it is hardly mentioned any more. Indications of the regions of origin, like north-western Persia (Tabrīz), southern Persia (Kirmān) and eastern Persia (Herât etc.), which have become quite current in the literature on oriental carpets, represent rather a description of a particular type than a concrete localisation. The discovery of oriental sources like town chronicles, descriptions of weaving manufactories or patterns for designs, might clear up this problem.

Compartment rugs. The "Compartment rugs" of the Şafawids are derived from the carpets with arabesque pattern of the Timūrid period. The early specimens resemble their painted examples so closely that one is tempted to give them an earlier date. A Compart ment rug in the Metropolitan Museum, New York, and its companion in the Musée historique des tissus, Lyons, thus belong entirely to the Timūrid tradition; the net-like pattern consisting of eight-lobed rosettes surrounded by shield-shaped motifs formed by interlaced bands and the East Asian motifs which fill these fields, such as the dragon, the phooenix and cloud bands as well as the arabesque tendrils in the background and the vertical arranged cartouches of the borders can easily be connected with Timūrid miniatures. If dated to the beginning of the Şafawid period, both carpets could have been manufactured in Tabrīz. To this pair of carpets belong some later variants with a raised medallion, establishing the transition to the medallion carpets of North-West Persia, and other variations with shields and quatre-foils in alternating rows. The overlapping fields, found in the carpets in Bihzâd's miniatures, are seen again on several 17th century "Polish" carpets.

Carpets with hunting scenes and animals. The influence of miniature-painting is most evident on the carpets with hunting scenes and animals. Except for a few carpets with figures arranged asymmetrically, the scenes are adjusted symmetrically on the background, both in horizontal and vertical directions. An arrangement of medallions is put above this, usually with one medallion in the centre and quarters of medallions in the corners of the field. The hunters, on foot or horseback, attack lions, leopards, gazelles, deer and hares with spears, swords and arrows. Together with a great variety of birds, these animals appear also on the carpets with only animals, on which fights between deer or bull and lion, or between the چئی لین or Chinese unicorn and dragon are in the foreground. The "Cheīse" carpet of the Victoria and Albert Museum, London (pl. X), with its net of medallions connected by diagonally arranged pointed ovals, holds a middle position between the Compartment rugs and the traditional carpets with medallions and animals. An upward and downward string of arabesque leaves divides the border in interlocking parts of contrasting colours. As "reciprocal pinnacle border", it was, in a simpler form, very popular on the later Şafawid carpets. Among the carpets which are close to the miniatures,
two large, silk carpets with hunting scenes, in Vienna and Boston (see below), are conspicuous. To these are closely connected some silk woven carpets and about 12 woollen carpets (the so-called "Sanguszko" group). Carpets with figures flourished in the 10th/16th century under Shah Tahmasp I. Apart from the mastery of the designs, their technical realisation is exemplary. They are an expression of court luxury. Such carpets were undoubtedly manufactured in Tabriz, but the stylistic and technical differences point to other weaving centres as well. Under Shah 'Abbás I carpets with figures lose their importance, so that the few specimens of the 11th/17th century are mere offshoots of the 10th/16th century carpets.

North-west Persian Medallion-carpets. Together with a series of medallion carpets with figures, a restricted group of carpets which have in common a medallion on a background which is filled with tendrils is localised in north-western Persia, including Tabriz. The most conspicuous specimen is the Ardabil carpet, according to its inscription dated 946/1539-40. A star-shaped medallion, with corresponding quarter medallions in the corners of the field, appears above a fourfold symmetrical double system consisting of elongated spiral tendrils (see Rexford Stead, The Ardabil carpets, J. Paul Getty Museum, California 1974). More characteristic is a simpler class of carpets with medallions on a continuous, somewhat clumsily designed pattern of scrolls with small repeat. Here too the medallions are star-shaped and, as in the case with all medallion carpets of the 10th/16th century, they clearly stand out from the pattern of the background. Often secondary designs are added of a vertical cartouche and a shield-pendant, mostly to be found lengthwise on both sides. Border patterns consist of alternating cartouches and rosettes or a continuous, mirrored repeat of short, interlaced arabesque tendrils. Particularly striking in these carpets is their relatively long format. See Pl. XI.

Herāt carpets. The Herāt carpets normally have no medallion. They are characterised by a variety of large palmettes with flamboyant contours, which cover the points where most delicate spiral scrolls split and touch the symmetrical axes. The colour of the field is almost always purple, that of the borders dark green or deep blue. On the specimens of the 10th/16th century the spiral scrolls are tightly connected. The design is dense, with many bizarre cloud bands and often intermingled with animals and scenes of animal fights. The rich use of East Asiatic motifs has led scholars to localise these carpets in eastern Persia; it is indeed proved that high-quality carpets were manufactured in Khurāsān and its capital Herāt. In a later type, the arrangement of tendrils is looser and wider, the cloud bands are less frequent and more clumsy, and animals are completely absent. The pattern is determined by palmettes and long, often two-coloured lanceolate leaves, also simplified. The details and borders show parallels with the "polish" carpets, and therefore this type of Herāt carpets too can be dated to the 11th/17th century. It is as yet undetermined whether these are identical with the woolen carpets manufactured in Isfahan. Such "Herāt" carpets were exported to India and there imitated. It is difficult to distinguish between Persian and Indian workmanship. So far unambiguous criteria are lacking (see below). These carpets are the only type of classical Persian carpets which appear frequently on European paintings, especially the Dutch genre-paintings of the 17th century. These "Herāt" carpets were evidently a valuable commodity to Europeans, for they have been preserved in great quantity mainly in Portugal and Holland, countries which through their East India Companies had close commercial relations with Persia and India. See Pl. XII.

Vase carpets. In contrast with the medallion and "Herāt" carpets, the "vase" carpets have mostly a rising pattern which is mirrored only with respect to the longitudinal axis. The direction is determined by blossoming shrubs and, on many of these carpets, by receptacles which have the form of vases of Chinese porcelain, filled with flowers, from which the name of this group of carpets is derived. Typical is the division of the field by means of oval rosettes. Three groups of rosettes, placed one against the other, are mostly intersected. They arise from undulating pairs of tendrils which touch each other and retreat behind magnificent flowers. The rosettes may however also be outlined clearly by tendrils or broad lanceolate leaves and be filled up with various colours. Occasionally, the arrangement of rosettes is absent and there remain entangled rows of flower-vases or shrubs arranged in a staggered pattern. Sometimes also patterns of roses occur, intermingled with shrubs and flowers, in connection with medallions. Striking are the wealth of colours, especially conspicuous in large-sized rosettes and palmettes, and the combination of these stylised flowers with naturalistic bushes. The borders are relatively small and the inner or outer guards are often lacking.

Opinions differ about the date of the "vase" carpets. Some fragments with very luxuriant décor and vivid lineation recall stylistically the best "Polish" carpets, with which they can be dated to the beginning of the 17th century. It is still under discussion whether the pieces of the main group, which are designed in a clearer and stiffer way, originated before or after these fragments. Some are of later date, as is shown by the impoverishment of the pattern. More difficult is the decision about others, which are rich in details notwithstanding the rather simple pattern. The "vase" carpet of the museum of Sarajevo, dated 1656, is not typical. Its extraordinary well-executed design and the fact that figurative motifs are in general lacking, favours the opinion that most of the "vase" carpets originated in the 11th/17th century. Southern Persia (Kirmān) is regarded as the region of their manufacture (see K. Erdmann, review of A survey of Persian art, in Ars Islamica, vili, 174 ff.). See Pl. XIII.

Garden carpets. Safavid gardens with their geometrical division by rectilinear canals, as e.g. Hazār Darbār near Isfahan, and the garden at Aghraf, laid out by Shah 'Abbās I in 1612, are reflected in the garden carpets. With their canals and basins with fish and ducks, bordered by trees and bushes in which birds and other creatures frolic, these carpets represent "portable gardens" which are accessible all year round. The earliest specimen is probably a garden carpet in the Jaipur Museum. According to an inscription on the back, this "foreign carpet" arrived at the palace in Jaipur on 29 August 1632, probably by order or as a gift. Apart from this one, only two other garden-carpets from the Safavid period have survived. The type lives on in a later, restricted group which can be distinguished from its Safavid predecessors by the schematic outline of the details, although the general principle remains the same. They may have been manufactured in north-western Persia from the second half of the 18th century until sometime in the 19th century (see M.S. Dimand,
A Persian garden carpet in the Jaipur Museum, in Ars Islamica, vi (1940), 93; and PL XVI, no. 17).

"Portuguese" carpets. The ten to fifteen "Portuguese" carpets all go back to the same model and form thus the most coherent group. They owe their name to the representations of sailing ships with European-dressed persons on board and a man who emerges from the water among fishes and sea monsters. The representation is repeated four times in the corners, and recalls the ornamental motifs on European maps. One of the interpretations of that scene is that it depicts the arrival of Portuguese ambassadors in the Persian Gulf. From the combination of oriental and European motifs it was further concluded that these carpets were intended for Portuguese in Goa. The rest of the filling of the fields is also unusual. It consists of a lozenge-shaped middle field with four small, pointed oval medallions and irregularly notched and feathered outline, surrounded by concentric interlacing stripes of various colours. In the earlier specimens these stripes are vivid and irregularly forked, in the later ones they are rectilinear, parallel and regular. While there is no doubt about dating them to the 17th century, their place of origin still remains uncertain. Formerly these carpets were considered to have originated in southern or central Persia, but now some scholars have proposed India.

Neither hypothesis is supported by convincing proofs (see C.G. Ellis, The Portuguese carpets of Gujarat, in Islamic art in the Metropolitan Museum of Art, ed. R. Ethington, New York 1973, 267).

Silk carpets. The change in style which the Safawid carpets underwent between the 10th/16th and the 11th/17th centuries, is especially recognisable in the silk carpets. The most famous and largest carpet of this kind is the so-called Vienna hunting carpet which was in the possession of the Austrian imperial house and is now in the Museum für angewandte Kunst in Vienna. The use of silk for pile, warp and weft produces a very fine texture and gives the possibility for an extremely precise design. So it is not only because of its costly material that this carpet heads the figurative medallion carpets orientated towards the miniature painting and dating from the period of Shah Tahmasp. Its size of 6.93 x 3.23 m. corresponds with that of the large, woolen, knotted carpets. Many details are executed in gold and silver brocade. It is said to have originated from Tabriz or, more probably, from Kashan, known for its silk industry. A silk hunting carpet from the collection of Baron M. de Rothschild, which can be compared with the Vienna carpet, is now in the Museum of Fine Arts in Boston. Some thirteen small-sized silk carpets, which K. Erdmann called "the small silk carpets of Kashan" (Siebentandert Jahre Orientöffnungen, 143), are related to these two. Apart from these carpets with animals and animal fights in a rising, symmetrical arrangement, they also represent the type of the early medallion carpets. Representations of persons and peris are lacking. They return on some woven silk carpets, also mostly of small size, which fit in stylistically with the figurative woollen carpets of the "Sanguszko" group, and among which a fragmentary hunting carpet in the Residenzmuseum at Munich stands out. Because of its size, theme and quality of delineation it is directly related to the Viennese hunting carpet. It must, however, be taken into account that the technique of a woven carpet does not permit the elegant lineation of a knotted one. All these woven carpets have pointed oval medallions with transverse cartouches, borders with alternating cartouches and quatrefoils. In comparison with the knotted silk carpets the use of gold and silver brocade on large fields is new, and not only with respect to the emphasizing of details. If the making of the Vienna hunting carpet, which undoubtedly figures at the beginning of the development, is dated to about the middle of the 16th century, then the "small silk carpets of Kashan", the figurative woven carpets and the woolen carpets of the "Sanguszko"-group present the style of the second half of the 16th century.

Contrasting with the new figurative woven carpets, there is a large group of woven carpets with purely floral decor, in which a coarsening of the lineation is recognisable. In two of these carpets—one completely preserved in the Residenzmuseum in Munich (Pl. XI) and the lengthwise half of another in the Textile Museum in Washington—the arms of the Polish king Sigismund Vasa III have been woven. As is known from documents, the king ordered in 1601 silk carpets worked with gold from Kashan. In a bill of 12 September 1602 pairs of carpets are mentioned, together with the sum of five crowns for the weaving of the royal arms. In 1642 an undefined number of carpets came as dowry into the possession of the Elector Philip William of the Palatinate by his marriage to princess Anna Catherina Constanzza, a daughter of Sigismund III. Among these carpets were undoubtedly not only the woven carpets with the arms but certainly also the other woven carpets and the "Polish" carpets, now in the Residenzmuseum. The carpets with the arms thus illustrate the style of woven carpets about 1600. They form the starting point for a chronological order of the floral woven carpets, which with their latest specimens may reach as far as the second half of the 17th century. In the shape of their medallions, however, they remain related to the early Safawid carpets.

The view that carpets with figurative representations were no more in fashion in the 17th century is confirmed by the knotted silk carpets, the large fields of which are brocaded with gold and silver threads, and the manufacturing of which flourished under Shah 'Abbās I. At first these carpets were thought to be of Polish origin and therefore were called "Polish carpets". The group includes now about 230 specimens, which came into the possession of European courts or churches as gifts of ambassadors or on order. They were however not only intended for export but were also in Persia a sign of wealth and luxury, and bear witness to the court taste in the beginning of the 17th century. Since these "representation" carpets, in contrast to the woollen carpets, evoked again and again the admiration of European travellers, they form rich source material, much more so than any other kind of Safawid carpets. And thus it can also be ascertained that the main group was produced in the court manufactury in the Maydan area of Isfahān. In the "Polish" carpets the relaxation of the 16th century rules for the form of the carpets is unmistakable. This is shown by the shifting from lines to fields, which finds expression in the abandoning of the monochrome foundation and in the loss of the clear delineation of the medallions against the background. Characteristic is further a luxuriat, merely floral decor.

Production in great quantities brought about a rationalisation of the design, as can easily be shown from the many specimens known. This kind of production necessitated also economy in the material, as may be seen from the preference for smaller sizes
and above all from the use of cotton besides silk in the weft.

The patterns can be reduced to about a dozen basic systems, mostly present in the few large-sized carpets. Variety is brought about by a difference in choice of various details, by different medallions and borders and by variations of colours. Apparently these carpets were preferably knotted in pairs, because until today 25 exact pairs are known, harmonising even in the borders and the division of colours. Continuing the tradition of Kashān, where the earliest of these carpets may have originated, the uniform style of the "Polish" carpets was probably developed in Isfahan at the beginning of the 17th century, after the court was transferred there in 1605/1596-7. The "Polish" carpets, characterised by an obvious negligence in the discipline of the drawing, may date from the second half of the 17th century. The destruction of the Safavid dynasty by the Afghans in 1722 put an end to the manufacture of brocade textile (see K. Erdmann, *Persische Wirkteppiche der Safawidenzeit*, in *Pantheon* (1932), 227; F. Spuhler, *Der figurale Kaschian-Wirktpich aus den Sign.* *des regierenden Fürsten von Liechtenstein, in Kunst des Orient*, v/1 (1968), 55; T. Mankowski, *Note on the cost of Kashan carpets at the beginning of the 17th century, in Bull. of the American Inst. for Persian Art and Archaeology*, iv (1936), 152; M.S. Dimand, *Loan exhibition of Persian rugs of the so-called Polish type*, Metropolitan Museum New York 1930; F. Spuhler, *Ein neuerwerterner "Polentepich" des Museums für Islamische Kunst, in Berliner Museen, N.F., xx/1, 27; idem, *Seidene Reprdsentationsteppiche der mittleren bis späten Safawidenzeit*, inaugural thesis, Berlin 1968, to be published by Faber and Faber, London).

### 18th and 19th Centuries

The few carpets from the 18th century abandon to a great extent the tradition of the two preceding centuries. Simpler repeated patterns with plant motifs like trees, shrubs, forked leaves, palmettes and rosettes are preferred. In the 19th century production revives. The old centres of Tabriz, Isfahan, Kāşān, Kirman and Khūrsān with Herāt gain new importance with mostly large carpets. In Tabriz and Kāşān small-sized silk carpets are knotted too, also as prayer rugs. The arrangement of the medallions on a monochrome or small-patterned background is preferred. A typical design of the 19th century is the "Herāt" pattern, spread all over Persia. The main element of its repeat is a lozenge with four blossoming leaves which run parallel to the sides and a rosette in the centre. The *hokh* or almondstone pattern is equally popular. The figural carpets have their origin in the hunting and animal carpets of the 10th/16th century and came mainly from Tehran and Kirmān. Elements of the classical pattern are geometrised and distorted. Peculiarity and liveliness cannot be denied to the products of the 19th century. This is especially true for the carpets from the surroundings of the town of Bidjār, which are, moreover, of outstanding quality. Characteristic is an extremely fine carpet, dated 1209/1794 (formerly in the McCullian collection, now in the Metropolitan Museum, New York), which in colouration and structure belongs to the Bidjār carpets and for the drawing of which a pattern of a "vase" carpet was used. A series of later Bidjārs can be connected to this one.

In contrast with the preceding centuries, there have been preserved from the 19th century not only carpets from the manufactories, but also carpets that were made by tribes and villages for their personal use, and village products of cottage industries, marketed in the larger towns. They are usually small-sized. Their charm lies in their originality. To these belong carpets from the towns of Hamadān, Saruk, Bidjār, Heriz, Senneh and Kirmānghāb and from the Kurdish tribes in the neighbourhood. Some of the patterns of the Ḍaḵṭiyārīs living to the west of Isfahan are based on the Isfahan-style. The Ḍaḵštānī nomads around Shīrāz use both purely geometrical forms and flowers and animals (see A.C. Edwards, *The Persian carpet*, London 1953) (see further on tribal carpets, Section iii below).

#### c. India

During the 16th and 17th centuries carpets sometimes of very high perfection were manufactured in the towns of Āgra, Lahore and Jaipur, evidently without any preceding Indian tradition in this field of handcraft. The stimuli surely came from Persia. Under the Mughal Akbar I (1556-1605), a strong tendency towards Ṣafawī taste was developing. This led to the summoning of Persian artists and craftsmen and affected all the artistic activities under Akbar’s successors Djiāṅgīr, Shāh Djiānī and Awrangzīb until about 1600. Between 1625 and 1630 European influences too made themselves felt. In the present state of research it is not possible to establish a chronology of the Indian carpets of the Mughal period. It is plausible that the separate groups did not replace one another but existed contemporaneously. Some fragments with grotesque animal patterns which are rooted in Indian mythology are to be placed at the beginning of the development and dated perhaps as early as the 16th century. The miniatures in the *Akbār-nāma* of Abu ‘l-Fadl [q.v.], dated 1602-5, give us an idea of the carpets ca. 1600. With their original medallions, scrolls and cloud-bands, they correspond to the Persian carpets of the 16th century, so that the actual origin remains obscure. In the same way the Indian carpets of the later "Herāt" type cannot with certainty be separated from their Persian predecessors. A group with pattern of scrolls stands out more clearly; it is characterised by lancelolate leaves at the ends of the scrolls, formed by leaves of blossoms which overlap like scales. This group is represented by a carpet which was ordered in Lahore and presented in 1634 by Mr. Robert Bell, now in the possession of the Girdler’s Company of the City of London. Also authentically Indian is a carpet with scenes of animal fights, carrying the arms of the Frewin family (now in the Victoria and Albert Museum in London), which helps to distinguish the Indian animal carpets from the Persian ones. R. Shkelton has proved convincingly that a naturalistic flower style arises in miniature painting between 1620 and 1627, towards the end of the reign of Djiāṅgīr. This style, encouraged by the import of European botanical works, spread to carpets and textile fabrics and did not hesitate to employ plastic effects in its design, produced by gradations of colour. A carpet with rows of blossoming shrubs lies underneath Awrangzīb’s throne on a portrait painted around 1660. A date *post quem* is thus available for quite a number of extant carpets of this kind, with cherry-red background and a fine arrangement of colours. Such a date is valid too for the extraordinarily tight-knotted prayer rugs with a central blossoming bush, standing out from a flat landscape. Apparently both types did not originate before the second quarter of
the 17th century and may have reached their peak of popularity about the middle of that century. Their differing quality indicates that they were manufactured in various centres. In the 18th and 19th centuries the Indian carpets seem to have been made only for export and are artistically without consequence (see R. Skelton, *A decorative motif in Maghul art*, in *Aspects of Indian Art, Papers presented in a symposium at the Los Angeles Country Museum of Art, October 1970, Leiden 1972, 147*; and PIs. XVI, XVII).

f. The Caucasus

The stylised, archaizing representations of pairs of animals, dragons, trees, bushes, etc. on the Caucasian dragon and tree carpets caused F.R. Marquart in 1908, in the first chronology of Oriental carpets, to place these carpets at the beginning of the development and to date them to the 15th/14th centuries. This opinion however is contradicted by the evident influence the Safavid carpets have had on these "dragon" carpets, as is shown by the floral motifs, animals and scenes of animal fights. These carpets got their name from the dragons which are mostly distorted until they are unrecognisable. The dragons are inserted into a rising lozenge-shaped design, made from diagonal stripes. This arrangement and the narrow borders point to a relation with the "vase" carpets. According to modern opinion, only a few of these carpets date back to the 17th century. Together with their Caucasian versions, most of them are derived from the 18th century tree-carpets and floral carpets with spiral tendrils and have their origin in the Shirwan/Karabagh area. Some of the Caucasian carpets of the 17th and 18th centuries are of considerable size, which indicated that they were manufactured in urban manufactories. In accordance with the sense of decoration of the rural population, a profusion of bright patterns with large fields in lively colouration developed in the 19th century from the above-mentioned wealth of forms. With their geometrical design these small carpets and runners—are there no more large-sized carpets in this period—stand out clearly from the Persian carpets of the 19th century. The most important knotting centres were Kazak, Shirwân, Daghistan, Karabagh, Mâhân, *Taghân*, *Gandja* and Kuba (see A. Sakian, *Novouvel documents sur les tapis arméniens*, in Syria, xvi (1936), 177; M. Ağaçgil, *Dragon rugs, an loan exhibition*, *The Textile Museum Washington* 1948; U. Schürmann, *Téppiche aus dem Kaukasus*, Brunswick n.d., Eng. tr. Grainge, Basingstoke 1974; Catalogues: *Kaukasische Teppiche*, Museum für Kunsthandwerk Frankfurt 1962; C.G. Ellis, *Caucasian carpets in the Textile Museum, in Forschungen zur Kunst Asiens*, in *Monument 5 Leerdam*, Istanbul 1969, 194; and PIs. XVII, no. 20).

g. Spain

In a survey of knotted carpets as expressions of Islamic handicraft, the early Spanish carpets should also be mentioned. The so-called synonyme carpet of the Islamisches Museum, Berlin (I, 27), is probably the oldest and may belong to the 14th-15th centuries. They are often large-sized pieces in a style which predisposes the later "Holbein" carpets. The colours of the Spanish carpets are marked by stronger contrasts. The "Turkish" group may date from the 15th/16th centuries and is succeeded by works with Renaissance elements. Alcaraz, Letur, Cuenca and Valencia are known as knotting centres. The technical peculiarity of the Spanish carpets consists in the fact that the knot is always twisted about a warp (see J. Ferrandis Torrés, *Exposición de alfombras antiguas españolas*, Madrid 1933; E. Kühnel, *Maurische Teppiche aus Alcaraz*, Pantheon 1930, 416; E. Kühnel and L. Bellinger, *Catalogue of Spanish rugs, 12th cent. to 19th cent.*, The Textile Museum, Washington 1953).

h. Turkestan

The varieties of the Turkoman productions are determined by the use that is made of them, especially as furnishing of the tent ([see *Bayam*, iv, Central Asia]. Small carpets serve as floor-coverings, as curtains for the entrance, corresponding in format and design with a prayer rug, as tent-bands which border the upper edge of the round part. Various bags to store supplies, saddlebags and camel-ornaments are also knotted. They all have in common a deep-red to dark-purple ground and an all-over, geometric, repeat design in bright red, blue, white and (rarely) green and yellow. The way in which the gul, the star-shaped to octagonal leading motif which has the function of a tribal sign, is executed, may indicate the particular nomadic tribes: Tekke Turkomans, Yomuts, Çavdîr (Tchodos), Ersarîhs and Sârikis, to whom can be linked the Balûc in the west and the Afghans in the south. The way in which transposed rows of principal and subordinate gulks are arranged, already existent on carpets to be seen on Timurid miniatures and on "Holbein" carpets, suggests a long tradition in the knotting art. Since, however, any support for an accurate dating is lacking, one hesitates to date single specimens to the 18th century (see A. Bogolubow, *Tapisseries de l'Aste centrale faisant partie de la collection vienne par A. Bogolubow*, St. Petersburg 1908 (new edition: A.A. Bogolyubov, *Carpets of Central Asia*, ed. J.M.A. Thompson, London 1973); H. Clark, *Bokhara, Turkoman and Afghan rugs*, London 1922; A. Thacher, *Turkoman rugs*, New York 1940; U. Schürmann, *Zentral-Asatische Teppiche*, Frankfurt 1969, Ger. tr., *Central Asian rugs*, London 1970; V.G. Moshkovskaya, *Knyz narodov sredney Azi Konça 19-20 ve.*, Tashkent 1970, Ger. tr., *Die Teppiche der Volken Mittelasien*, Hamburg 1974.

3. Public Collections of Oriental Carpets

*Europe.* The most important collections are in Vienna, Österreichisches Museum für angewandte Kunst; London, Victoria and Albert Museum; Istanbul, Türk ve İslam Eserleri Müzesi; Berlin, Islamisches Museum, Staatliche Museen zu Berlin (East Berlin) and Museum für Islamische Kunst; Stockholm, Stiftung Preussischer Kulturbesitz (West Berlin). Also in Amsterdam, Rijksmuseum; Florence, Museo Bardini; Hamburg, Museum für Kunst und Gewerbe; Leu-Nagrad, Hermitage; Lyon, Fondation Calouste Gulbenkian; Lyons, Musée Historique des Tissus; Milan, Museo Poli Pezzoli; Munich, Residenzmuseum and Bayerisches Nationalmuseum; Paris, Musée des Arts Décoratifs.

*U.S.A.* The most important collections are in New York, The Metropolitan Museum of Art, and Washington, The Textile Museum. Also in Boston, Museum of Fine Arts; Cleveland, The Cleveland Museum of Art; Detroit, The Detroit Institute of Arts; Los Angeles, County Museum; Philadelphia, Philadelphia Museum of Art; St. Louis, City Art Museum of St. Louis.

4. Bibliographies

The most extensive bibliography is in K. Erdmann, *Der orientalische Knüpftepich*, Tübingen 1955 (several
editions) arranged according to areas and within these chronologically by the year of publication (English tr. C.G. Ellis, Oriental carpets, London 1960, 2nd impression, Fishguard 1976; K.A.C. Creswell, A bibliography of the architecture, arts and crafts of Islam to 1st Jan., London 1961, Oxford 1973, 1139-1204, alphabetically arranged by authors (Supplement, Jan. 1960 to Jan. 1972, Cairo 1974 (329-37)); J.D. A bibliography of the architecture, arts and crafts of Islam were precious objects of real artistic value and one's tīrāz its satellites manufactured in the large cities, al-Kayrawan, and its colonies; among them were the Aghlabids to the 'Abbasid caliphs; under the caliphate of al-Ma'mun, there is mention of 120 carpets before 1000, Vienna 1908; Die Ausstellung von Meisterwerken muslimischer Kunst in München 1910, ed. F. Sarre and F.R. Martin, A history of oriental carpets before 1800, Vienna 1908; Die Ausstellung von Meisterwerken muslimisch-

ii. IN THE MUSLIM WEST

In the Muslim West, the term bisāt, pl. buṣāt is attested, notably by Ibn Khaldūn, Muḥammad, who uses it to describe the revenues paid every year by the Aghlabids to the 'Abbasid caliphs; under the caliphate of al-Ma'mūn, there is mention of 120 carpets (buṣāt). It may thus be supposed that these were precious objects of real artistic value and one's natural inclination is to think of "the carpet on which the sovereign and his ministers are seated" (Dūzi, Suppl., i, 85, col. 2). Unfortunately, nothing is known of these carpets which were presumably manufactured in the large cities, al-Kayrawan and its satellites 'Abbāsyya or Rākkiyya, in particular. Does the fact that these products were intended for the highest dignitaries permit us to suppose that, as early as this period, there was at least one tīrāz (q.v.) in Irfīkīya? A workshop of this kind is attested at Mahdiyya in the period of the Fātimid al-Mansūr (Dhahīr, tr. Canard, 75), and there is mention of the manufacture of carpets there. It would seem legitimate to suppose that, under the Aghlabids, there was the capacity for weaving luxury carpets (no doubt inspired by the carpets of the East) intended for the caliphs and for the most senior officials of the Muslim world.

The term bisāt is also employed by Yākūt (7th/13th century), who mentions buṣāt in the region of Tebessa and describes them as sumptuous, well-made and long-lasting. Should these carpets be seen as the antecedents of the lock-stitched carpets which, until recently, still constituted one of the principal items of tent furniture, especially in the region of Tebessa: the tribes of the Nemenzga, the Harakta, the Mahadba and the Hamāma? The most ancient of these products, with strictly geometric decoration, appear to perpetuate the old local traditions such as are still to be found in the Djebel Amour, as well as in the Moroccan Middle and High Atlas.

Bisāt is not at the present time employed in any part of North Africa, where various other Arabic words are used to designate these long, polychrome, woolen fabrics: kīf, kīfī, matraib, jālib, jarājib, while in Morocco, Berber or Berberised words are also used (P. Ricard, Carpetas; as for the carpets manu-

The existence of buṣāt carpets in Muslim Spain is attested by various authors, in particular at Murcia. These products were much valued in the Orient (al-

In the modern and contemporary period, the centres of traditional lock-stitch weaving in North Africa are distributed as follows:

(1) Carpets woven usually by men (reggām), generally within the tent:

Tunisia: the Hamāma, the Mahadba, the Durayd, the Ouled bou Ghanem tribes.

Algeria: the Nemenzga, the Harakta, the Maadid, the Hodna tribes. See pl. XVIII.

All these carpets are characterised by ancient, essentially geometric patterns, with compositions that vary little, and a colour scheme reduced to two or three shades, and by apparently more recent patterns inspired by the carpets of Anatolia, characterised by one or several central polygonal motifs (mṭhrāb) framed by orthogonal fillets. The multiplication of mṭhrāb permits the creation of carpets of large dimensions. They are all polychrome, red being the dominant background colour.

The carpets of the Djebel Amour (Algeria) have remained faithful to geometric décor and to ancient local compositions; there are only two dominant colours, red for the background and dark blue for the motifs (recently replaced by black). At the edges there are fringes woven with a polychrome geometric design. These carpets are comparable with certain Moroccan woven products of the Middle Atlas. See pl. XIX.

Morocco: carpets of the High Atlas: Haouz of Marrakesh, Ouled bou Sbaa, Ait Ouazouguït, etc.; carpets of the Middle Atlas: Zemmour, Zaïan, Beni

144
M'tir, Beni Mguild, Ait Youssi, Marmoucha, Ait Saghrouchen, Beni Alaham, Beni Ouaram, etc.

Anatolian influence (woven by women): range of colours.

local types with a fair degree of originality, (Bizerta cities where the influence of al-Kayrawan has been effective for about a century, there being sometimes in particular).

with variants in different countries, are being replaced by the popular label for the rugs of the Tekke Turkmen.

Morocco: Rabat-Salé, Casablanca, Medina (a also influenced by Andalusia).

All these carpets were, or still are, woven in the home, as a family business.

In the contemporary period, the manufacture of carpets, an export product, is tending to become an industry, especially in the major cities such as al-Kayrawan, Tunis, Tlemcen, Rabat-Salé, Casablanca, and also in the more modest towns such as Nabeul, Bizerta, Tetessa, Cherchel, etc.

iii. TRIBAL RUGS.

1. Nomenclature. Until the 1960s few writers on carpet history except, perhaps, A.C. Edwards (The Persian carpet, London 1975), distinguished between the output of cities, villages and tribal groups, and only in the past twenty-five years has the ancient life style of Central Asia’s pastoral nomads attracted anthropologists, making it possible to isolate and study their artefacts.

The custom of marketing an area’s rugs in the local town has obfuscated classification—for instance, Bergama has lent its name to rugs made by villagers and tribes in its hinterland, while Bukhara is still the popular label for the rugs of the Tekke Turkmen. Such misleading nomenclature, coined in the last century, is now being superseded by more precise classification. Similarly, confusing technical terms, with variants in different countries, are being replaced by clearer terminology, based on I. Emery’s work (The primary structure of fabrics, Washington, D.C. 1966).

In the past the words carpet and rug (and in French the word tapis) have been used synonymously, leading to difficulty in the study of documentary evidence. Carpet is now used to define a knotted article of some size, say, 300 by 240 cm. and upwards, while a rug, also of knotted pile, is smaller, measuring up to about 300 by 200 cm. Both words have been used to define flat-weave articles as well, and these are now named after their technique, for instance, kilim or gilim, which is tapestry-woven, and sumak, after sumak weft-wrapping. Only knotted pilework is discussed here.

2. Technique. There are a number of knots of which, as noted in Section i. 1 above, the two most common are the Gördes or Turkish knot and the Senneh or Persian knot. Both are of known antiquity; the Pazyryk rug, dating from the 4th to 3rd century B.C., was made with the Turkish knot, while the Basadar fragments, possibly a century older, show the Persian knot. Again, these terms have proved confusing. The second was named after Senneh, in northwestern Iran, but in the area of modern Sanandaj the Turkish knot predominates. Consequences, although the so-called Turkish knot is the most commonly used in Turkey, both knots are found in Iran and both have been found in the same rug. Classification by knot only, therefore, should be regarded with caution. Each has different characteristics: the Turkish knot is symmetrical, the two tufts lying evenly on either side of the warps, and it is suited to a longer pile, while the Persian knot is asymmetrical, the tufts slanting to the left or right of the warps, and is favoured where clear definition of a complex pattern is required. Some scholars have now adopted the term symmetrical for the Turkish knot and asymmetrical for the Persian.

Description of designs is also prone to variation and many names have been arbitrarily coined by Europeans. A floor carpet can be described as follows: first, the central field and its ornament (some German writers, however, use the word field to define the motif), while the borders are numbered starting from the inner one and specifying the main, or largest, border and the guards or narrow bands which divide them. This system may be adapted to describe saddlebags, tent-bags and animal trappings.

In city workshops, fixed vertical looms make large pieces possible, and women knotters work from a cartoon under male supervision. Villagers use both vertical and horizontal looms, while among the tribes the latter is normal. The tribal loom (Pl. XX), evolved from streamlined simplicity, consists of wood warp beams, pegged into the ground. It is light, easily transported and flexible since it can be used to weave tapestry or, with the addition of a tripod supporting the heddle rods, can be adapted for knotting or various compound weaves. It is necessarily small, and tension is difficult to control since it may be moved while a rug is being made. While cotton warps are favoured in cities and villages, tribal rugs until recently were knotted on wool warps, or a mixture of wool and goat hair, giving them their characteristic suppleness. Tribal wool is of fine quality, carefully selected and dyed. Vegetable dyes were retained longer by the tribes than by settled weavers, and a much-admired feature is the variations in tone, known as ahroq, due to the dyeing of small batches of wool as required. Most of the dye plants like madder, weld and indigo are common, and it is the recipes which give colours their individuality.

The technique of knotting varies. In southern Iran knots are tied with the fingers and cut with a knife, while up in the north-west the wool is pulled through the warps with a hooked tool, at the other end of which is the cutting-blade. Having begun with up to 20 cm. of flat-weave, known as an “end”, the weaver ties one, two or more rows of knots and between these inserts a row or two of plain-weave fills, packing them down firmly with a carpet comb (Pl. XXI) to hold the knots in position. The cords at the sides is put in as the work progresses. Tribal weavers will use an old rug as a model and are free to improvise, especially on detail. The rug is finished with another “end” and the excess warps form the fringes. Clipping of the pile, requiring great skill, is done by tribeswomen as they go along, while in city workshops the knots are roughly slashed and the finished carpet, looking like an unkempt hedge, is clipped by a specialist. Tribal knotting varies from the coarse, shaggy pile of
Yiirik rugs to the fine, velvety surface of Turkmen bags. Each has its own attraction, since the design is evolved to enhance the quality of the wool.

3. History. The carpet from Barrow 5 at Pazyryk (see S.I. Rudenko, *Naseleniya gornoego Kaza v Shkikrov Vremya*, Moscow-Leningrad 1938, ed. by M.W. Thompson, *Frozen tombs of Siberia*, London 1970, 298-304) pushed back the beginnings of carpet history from the 6th century A.D. to the late 3rd century B.C. It is, however, a sophisticated piece, both in technique and design, arguing a long-developed tradition. It is unlikely that it was made by the Altai people, and it more plausibly reflects an eclectic taste for exotic imports. The Pazyryk burials, however, provide invaluable evidence of the life style of these Central Asian pastoral nomads, putative ancestors of later tribal groups, which was notable then, as now, for the major part played by textiles in their economy and cultural heritage. With their wealth based on their animals and their sources of conflict pastoral water and pasture, they made seasonal migrations, as do the Bakhhtiyar-i, the Khashka'i and Khamseh in Iran today. They produced a class of mounted warriors who revolutionised warfare for both the Romans and the Chinese, gave rise to innumerable legends and bred distrust and fear among urban dwellers. It is likely that the women undertook the knotting and weaving, and even today these activities are considered effeminate by tribesmen with the memory of an elite warrior caste (Pl. XX). It can be surmised that knotting originated among even earlier pastoral nomads living in a harsh winter climate who were naturally reluctant to slaughter their animals and, as an alternative to fleeces, evolved a warm, tufted fabric. K. Erdmann and others believed that knotting may have developed among Turkic peoples in West Turkestan, *Erdmann, Der orientalische Kniipfteppiche*, Tiibingen 1955, Eng. tr. C.G. Ellis, *Oriental carpets*, Fishguard 1976, 14-16) and it would seem likely that it arrived in Anatolia with the Saldjuk in the 11th century A.D., where it was established by the 13th century as is attested by the Saldjuk pieces from the mosque of 'Ala' al-Din in Konya (now in the Turk ve Islam Miizesi, Istanbul, illus. in O. Aslanapa, *Tiirkmenische Teppiche*, exhibition cat., Hamburg, Eng. tr. 1970, *Turkoman carpets*, London 1975, 13-14 for detailed lists of tribes and *19'lebs*).

Turkmen pilework is just as famous for its hard, glossy wool, excellent vegetable dyes and fine knotting, normally using the asymmetrical or Persian knot (but see M.H. Beattie, in *The Tuscara of Iran* [see Bibliography], 38-41, for exceptions), and Turkmen rugs are unmistakable with their ground and borders of the same colour, always red, but varying from the clear tones of Salur and Tekke to the ox-blood of the Sali'ik and aubergine of the Yomut, and having in the central field an all-over repeat of *gilis* which, when used as primary ornament, served as a tribal totem, *tangha*, exclusive to the tribe which used it. Tekke floor rugs (Pl. XXII) have octagonal *gilis* quartered by a lattice to enclose trifoliate forms identified by Moskova as birds (see Azadi, *op. cit.*, 20-41) and also of totemic significance, while the Yomut owned a number of *gilis* including the *kepsi*, based on plant forms, and the *dirnak*, a hooked diamond enclosing birds (illust. in Azadi, *op. cit.*, and U. Schurmann, *Central Asian carpets*, London 1969, pls. 15-25). It is known, however, that the Sali'ik and Tekke used older forms of the *gil* than those featuring in 19th century rugs, while secondary *gilis* and border patterns pose complex

Since they were subjected to continuous wear, very few tribal rugs of a pre-19th century date have survived (although notable exceptions are the Turkmen rugs in the Ethnographic Museum, Leningrad, unpublished in the West), making it impossible to write a coherent history. It can be inferred, however, that these ancient patterns persisted in spite of the revolutionary changes in 16th century Iran under royal patronage, emulated in Ottoman court workshops, where the influence of illuminators and bookbinders emphasised the centre of the carpet and introduced a large new repertoire of motifs. The village and tribal traditions seem to have developed independently of the cities but, although they were inevitably more conservative, there is evidence of borrowing and of organic growth; and 19th century rugs show considerable diversity in the treatment of old themes.

The 19th century, which saw the earliest European documentation of the Central Asian tribes, also marked a watershed, for the definition of the national frontiers of Iran, Russia and Afghanistan dealt a major blow to pastoral nomadism, and this century has seen wholesale settlement.

The ethnically most homogeneous tribal confederation was the Turkmen, who retained their exclusivity until their territory on the Trans-Caspian steppes was split up in the 1880s. Modern study has demon-strated major shifts of influence within the confederacy, however, with tribes like the Salur and Sali'ik, powerful in the 17th and 18th centuries, being overtaken in the 19th by the Tekke and becoming embroiled in tribal feuds. In *Trockenes Kaukasische Teppiche*, exhibition cat., Hamburg, En...
problems, since it is now suggested that these may be the ornaments originally belonging to another tribal group which was subjugated or absorbed. Moreover, a subjugated tribe, having lost its right to its primary ornament, possibly transferred it to small items like bags, while the victorious group might incorporate the weaker tribe’s primary ornament in its own smaller pieces. Ersari rugs are unusual in showing strong outside influences and, in addition to classic Turkmen motifs, large central medallions are introduced to bags while floor rugs and prayer rugs may have floral patterns, treated semi-naturalistically and in a higher tonal key (illus. in Azadi, op. cit., pls. 7, 9, and 36, and Schurmann, op. cit., pls. 41-56). As well as floor rugs, the Turkmen women used to knot many articles for their own use, including the tent-band, yolami, bu, yap, which encircled the tent lattice with the knotted pattern on a white plainweave ground facing inwards; the engsi or ensi, a handsome rug with a cruciform design which acted as a tent door; the kapuniik, a fringed decoration hung over the inside doorway; and a variety of bags, from saddle-bags, khorjia, large storage bags, iwai, to smaller ones, torba, for specific purposes like storing bread, spindles, etc. These articles performed the functions of storing the household equipment, transporting it on the migration, and giving the interior of the round tent a shrines, a fringed decoration hung over the inside doorway, and a variety of bags, from saddle-bags, khorjia, large storage bags, iwai, to smaller ones, torba, for specific purposes like storing bread, spindles, etc. These articles performed the functions of storing the household equipment, transporting it on the migration, and giving the interior of the round, felt-roofed tent an appearance of tapestry-hung splendour.

The finest knotting was reserved for covers, namak-dan, for the much-valued horses, and the Yomut, who made the widest variety of articles and patterns, used to knot a set of trappings for the bridal camel, consisting of pentagonal flank hangings, asmailik (discussed in detail in R. Finer and M. Franses, Turkoman studies, I, London 1979), frequently patterned with hooked stems or lozenges (Pl. XXIII), and matching knee-hangings, aipad dakh, while the two bundles of tent-poles lashed to a camel when on the move would each have a bag-shaped cover, uk bad, fitted over their protruding ends.

Turkmen patterns have been influential, the two groups which have borrowed most substantially from them being the Afgan and the Balci. Modern Afghan rugs are knotted in the towns of Pakistan. Old ones, however, made by tribes related to the Ersari in northern Afghanistan, had qualities of their own. With a medium high pile, using the asymmetrical or Persian knot, their central fields show an adaptation of the Tekke gul, without the lattice, although the squarish octagons are quartered and enclose trifoliate stems and leaves. They have more minor ornament than modern examples, and their colours, which include blues, yellows and browns on a red ground, are in a higher key. Borders include geometrical plan forms, also borrowed from the Turkomans, and angular ribbons. Commercial success has resulted in the standardisation of patterns and colours, and rugs are often chemically washed to produce the “golden glow” popular in the West.

A black-tented people, the Balci nomadise in arid country now forming parts of Iran, Afghanistan and Pakistan. They utilise the good but undurable wool of their sheep and undyed camel hair for warps, wefts and knotting, the Turkish or symmetrical knot being more favoured, to produce a long, medium coarse pile. Distinctive features are the elaborately beautiful ends in a variety of flat-weaves, and a limited range of dark colours: blues, blackish browns, several reds and white. Their patterns reflect borrow-

Among the several tribes of Lur origin in western Iran, the Bakhtiyari still migrate twice-yearly over difficult country in the Zagros mountains, in the proximity of other Lurs and of Mamasani, Kaskha’i and Khamshe. Few of the so-called “Bakhtiyari” rugs are tribal pieces, but were made by villagers in the Cahar Mahall area, near Isfahan (see Edwards, op. cit., 309-12, pls. 354-64). The Bakhtiyari do very little weaving now, but still make a type of bag which is unique to them, the front and back of which are in flat-weave, usually sumak or felt-wrapping with, along the bottom and up the sides, a strip of rather coarse, shaggy pile in the Turkish or symmetrical knot. This gives durability and is visually pleasing when the bags are stacked in the tent. Favourite motifs are 8-pointed stars in octagons, rosettes, the Z-boleh and borders of scrolling stem, while the flat-weave areas share these motifs and often have animals as well. Sizes vary from a very large saddle-bag, taliz, and bedding-bag, irzak, to smaller storage bags, which can be loaded on to pack animals, rikati, to small, lavishly decorated bags, namak-dan, with narrow necks for pouring. Colours are rich dark reds, browns and blues, with white cotton in the flat-weave areas. These bags, hardly known in the West, are often bought by the Khamshe and Kaskha’i and can be seen in their tents.

The Afghans, another tribe of Turkic descent, are believed to have been deported from Afgarbay-djan to Kirman province by Shah Isma’il in the 16th century. Surrounded by Persian villagers, their tribal identity became blurred, so that it is difficult to distinguish a nomad from a village Afghan rug. Both knots are found. Old tribal pieces show a colour scheme of rich mid-blues, a clear red, yellow and ivory, and favour the diamond medallion layout, but the Persian boleh is often used as an all-over repeat, known as dehid, and the chicken, murm, found all over Fars, is a favourite, while more naturalistic floral designs have been borrowed from Kirmanshah and the Chahar Mahall area, near Isfahan (see Edwards, op. cit., 354-64). The Bakhtiyarsi do very little weaving now, but still make a type of bag which is unique to them, the front and back of which are in flat-weave, usually sumak or felt-wrapping with, along the bottom and up the sides, a strip of rather coarse, shaggy pile in the Turkish or symmetrical knot. This gives durability and is visually pleasing when the bags are stacked in the tent. Favourite motifs are 8-pointed stars in octagons, rosettes, the Z-boleh and borders of scrolling stem, while the flat-weave areas share these motifs and often have animals as well. Sizes vary from a very large saddle-bag, taliz, and bedding-bag, irzak, to smaller storage bags, which can be loaded on to pack animals, rikati, to small, lavishly decorated bags, namak-dan, with narrow necks for pouring. Colours are rich dark reds, browns and blues, with white cotton in the flat-weave areas. These bags, hardly known in the West, are often bought by the Khamshe and Kaskha’i and can be seen in their tents.

The tribal situation in Fars province in southwestern Iran has long been a complex one, since it is nomad country par excellence, with the Zagros mountains and hill valleys in the north and warmer plains south of Shiraz, so that the migration routes of a number of tribes have impinged on one another. The two largest tribal confederacies, the Kaskha’i and the Khamshe, were founded for political reasons, the Kashka’i during the 18th century and the Khamshe in 1861-2. The major i’afah of the Kaskha’i are Turkic, with some Lurs, Afghans and Persians, while the Khamshe consists of five tribes of Turkic, Persian and Arab stock. Some tribespeople, however, are settled in villages, while of other groups like the Bolvardi, small sections belong to the Kaskha’i and the rest are villagers with no tribal allegiance. There has been wholesale borrowing of patterns and, since both knots are used, consequent difficulty in rug classification. The Kaskha’i have a reputation for the finest rugs. Their most typical composition, three stepped or hooked medallions in
the central field, is shared by the Khamseh and other tribes, but in Qashqai pieces each medallion encloses a motif described as a crab or a striped sheepkin but more likely a stylised plant form (Pl. XXIII).

This simple scheme is garnished with detail: hooked octagons, rosettes, the Persian botân, the Chinese knot, and flower sprigs, as well as a menagerie of creatures like stylised peacocks, porcupines, gazelles, goats (Pl. XXIVa), hawks, chickens and bees, powdering the cloths to cover the animals when they are tethered, while fringed chest and rump bands are still made, for their own use artefacts both functional and of great care lavished on the most trifling of articles”.

Some attributions of designs to specific tribes have been made (J. Allgrove, in the Qashqâ’î of Iran, exh. cat., Manchester 1976, 64-95, pls. 5-8, 37-46), but the narrow guard bands often retain older forms like the oblique stripe and reciprocal diamond. Skilled dyeing, for which the Sheêl Bokûrì Qashqâ’i and Bûlûlû were renowned, produced a sharp, clear red, several blues, a rich, creamy yellow, apricot, and soft dark brown and green, skillfully juxtaposed against ivory. Rug patterns are repeated on saddlebags of fine workmanship (Pl. XXIVb), chickens are shown here drinking at a fountain. Tent bags are generally made in flat-weave, but the Qashqâ’i have lavished sumptuous trappings on their horses, including saddle covers and horse-cloths to cover the animals when they are tethered, while fringed chest and rump bands are still made, often embellished with blue beads against the Evil Eye.

The role of the tribeswomen who have always been responsible for the textile crafts extends into other areas for, since their rugs are the visual manifestation of tribal culture, the women have been the artists of the tribe and custodians of tribal traditions, a phenomenon unknown in the West; similarly, in this situation artists are not a specialist class, but have made for their own use artefacts both functional and of great beauty, bringing to mind Rudenko’s comment concerning the Pazyryk textiles on the “astonishing skill and care lavished on the most trifling of articles”. These are powerful reasons for studying tribal knotting in its own context.

BIYĀR, AL-BIYĀR (A. "wells, springs"), modern Biyardjumand, a small town on the northern edges of the Great Desert, the Dašt-i Kavir, of Persia. The mediaeval geographers describe it as being three days' journey from Bistām and 25 farsaks from Dāmghān, and as falling administratively within the province of Kuṁs [q.v.], although in Samanid times (4th/10th century) it seems to have been attached to Nīshāpur in Khurasan. It was the northeastern corner of the desert to Turshū in the Safavid period by writing poems on the line of ʿAbd al-Hakīm Fikret and Tewfīk Fikret [q.vv.].

We have in Mukaddāsī, 356-7, 372, an especially detailed description of the town, considering its moderate size and importance, lying as it did off the great highway connecting western Persia with Khurasan; this is explicable by the fact that Mukaddāsī's maternal grandfather had emigrated thence to Jerusalem. He mentions that Biyār had good cultivated fields and orchards, and grazing grounds for sheep and camels; the rather scanty water supply was carefully controlled in irrigation channels. There was an inner citadel approached through a single gateway, but there were three iron gates in the outer walls. There was no Friday mosque, and the inhabitants were all Ḥanafīs, strongly opposed to the Karrāmīyā [q.v.]; nevertheless, Mukaddāsī states elsewhere (365) that the Karrāmīyā had a khānākāh in Biyār. He further stresses the building skills of the Biyārīs, above all in the medium of mud brick. Politically it came within the Sāmānid dominions at this time, and coins in the name of the Sāmānid amīr were minted there between 298/910-11 and 369/979-80; a coin is also extant of the Ghaznawīs, from the year 426/1035, the eve of the passing of ʿAmīr ʿAlī in 426/1035.

BLESSING [see BARKA].

BOAT [see SAFINA].

BOLÜKBAŞI, Rifāʿa Tewfīk, modern Turkish orthography Rıza Tevfik Bolukbasi, Turkish poet and writer (1866-1949). He was born in Dārūr Mustafa Paşa in Rumeitia (Dimitrograd in present-day Bulgaria, formerly Turkish) while his father Khoji Mebmed Tewfik Efendi, a civil servant and teacher, was kaşımarkets there. His mother, a Circassian slave girl, died when Rıdā was eleven years old. His grandfather Ahmed Durmush Bolukbasi was a guerrilla leader from Debra in Albania who had fought against the Greeks during the rising in the Morea ([Erifinda] Kandemir, KohiTG aqзадan Rıza Tevfik ("Rıza Tevfik from his own mouth"), Istanbul 1943, 94-7, 109). After attending various schools (including the Alliance Islāmī school and Galatasaray) in Istanbul, he finished in the râbi'iyâ (high school) of Gelibolu (Gallipoli), his family town, and entered the school of political science (Mekteb-i Muhiyye), whence he was however expelled for political activities and insubordination. He switched to medicine, and after several temporary suspensions, graduated in 1899. He worked as government doctor at the Customs Office in Istanbul until the restoration of the Constitution in July 1908, when he joined the political opposition. An ardent member of the ruling Committee of Union and Progress (CUP) [see İTTIHAD VE TERAKİYE İYİYETİ], he was elected deputy for Edirne, but soon broke with the CUP leaders and joined the opposition and became one of the leading figures of the Liberal Union [see HURKIYET VE İTtgF IYİYET] (Refik Halîd Karay, Minibeb ilemlembub, Istanbul 1964, pasim). He taught philosophy at the University of Istanbul and Turkish literature at the American Robert College. He served as Minister of Education in 1918 and was made president of the Council of State (Shûrâ-yi Davle), in 1919. As a member of the collaborationist Ottoman government, he signed the treaty of Sèvres (10 August 1920), which sealed his fate in the eyes of the Nationalists. Student protests forced him to give up his chair in the University (1921) and he fled the country following the Nationalist victory in Anatolia (September 1922). His name was later included in the list of the 150 undesirables [see VEZEİELLİKLER]. After a brief stay in Egypt, he served for seven years in the government of Amir 'Abd Allah (a former fellow-deputy in the Ottoman Parliament) in Jordan, spent a year in the USA and eventually settled in Dūnîyya in Lebanon, where he lived with his wife in retirement until he returned to Turkey in 1943, five years after the general amnesty of 1938. He died in Istanbul on 31 December 1949. Although Rıdā Tewfik is known by the nickname Fesleğen ("The Philosopher") on account of his numerous publications on philosophical topics (see below), which are mainly works of compilation (but which greatly contributed to the teaching of modern philosophy in Turkey), his real contribution to Turkish literature is as a poet. In the late 1890s a young poet, Muhammed Emin (Yurdakul) [q.v.], suddenly appeared on the literary scene and made a sensation by his use of spoken Turkish, syllabic metre and the use of popular subjects. He was greeted as a guide and innovator, but did not have any following as his poetry was uninspired, awkward in style and totally lacking in musical effect. In contrast, Rıdā Tewfik, who started his career in the same period by writing poems on the line of 'Abd al-Ḥaqīm Hâmid and Tewfik Fikret [q.v.], found, in the early 1900s, the
key to a regeneration of Turkish poetry; he was able to capture the style, language and inner warmth of leading poets and popular mystic (dervish) poets without blindly imitating them, but re-creating their warm and lively atmosphere in a modern garb [see Karajaoglu, Kaygusuz Arsal and Yonca Emre]. His success ushered in a new trend which was later moulded into a school by Dıyā' (Ziya) Gökalp, that of the Millî edebiyatı ("National literature"). Rıdâ Tewfik did not abandon the ārâd like most of his younger colleagues of the new school, but used it in parallel with the heğes. His influence on succeeding generations of poets continued in the 1920s and early 1930s and his style began to date only with the appearance of Orhan Kemal (Orhan Veli Kanık and Faşil Hüsnü [Fażil Hüsnü] Dağlarca, who revolutionised all concepts in Turkish poetry.

Rıdâ Tewfik Böülükbashi is the author of the following major works: 'Abd el-Hakîm ve mülêhagat-i felsefeyyesi ("A.H. and his philosophic reflections"), İstanbul 1329 rûmî 1913; Felsefe derleri ("A course of philosophy"), i, İstanbul 1330 rûmî 1914; Mâyâfâsîl Kâmînî-i felsefî ("A comprehensive dictionary of philosophy"), i, İstanbul 1330 rûmî 1914; Etüde sur la religion des Hokonîsîs, in C. Huart, Textes persans relatifs à la secte des Hâwîfîsîs, Leiden 1909; Serahs annîm ("Notes on Issâs annîm") Istanbul 1942, 2nd ed. İstanbul 1949, (contains all his poems, except some political satires); Omer Hayyam ve râhûbleri, Istanbul 1945. Introd.

BOOTY [see Fay', Şanîmâ].

BORNEO, a large island (area 292,000 sq. miles/755,000 km²) straddling the equator in the Indonesian archipelago, and mainly covered with tropical rain forest. The spinal range of mountains rises to 13,455 ft./4,100 m. in Mount Kinabalu in the northeastern tip of the island. Politically, the greater part of the island has since 1949 formed the Indonesian region of Kalimantan (a name which Indonesia also applies to the whole island); along the northern coast lie Sabah, the former British crown colony of British North Borneo and Sarawak, both of whom joined the Malaysian Federation in 1963, and the British-protected sultanate of Brunei (q.v. in Suppl.).

The following article deals only with the Indonesian part of the island; see also BORNEO in EI.

The island is divided into four provinces (daerah tingkat I): Kalimantan Barat (Western Kalimantan, 157,066 sq. km, 2,019,936 inhabitants, capital: Pontianak), Kalimantan Tengah (Central Kalimantan, 156,552 sq. km, 699,589 inhabitants, capital: Palangka Raya), Kalimantan Selatan (Southern Kalimantan, 34,611 sq. km, 1,699,105 inhabitants, capital: Banjarmasin), and Kalimantan Timur (Eastern Kalimantan, 202,619 sq. km, 733,536 inhabitants, capital: Samarinda). South and Central Kalimantan originally formed one province, until on 23 May 1957, the area was divided because of the opposition of the Dayak people against the "Malays" (Muslims) in the southern parts.

1. Earlier History. In Sambas (north-western Kalimantan), which had been a Buddhist cultural centre already in the 6th century A.D., a descendant of the sultan's family of Johore established a sultanate at the time of Brunei's conversion to Islam (between 1514 and 1521), and Malays began to settle in the area. Chinese workers were brought to work in the gold mines, but in 1770 they revolted and formed semi-independent "republics" (barang). Islam had little influence on them, and only after 1865, when they were required to confess one of the acknowledged religions in Indonesia, did a few of them become Muslims. Sambas has remained a stronghold of Malay culture. The area of Lawei, an old Javanese colony, and Matan on the Pawan river, turned to Islam soon after the conversion of the ports in northern Java. Sokadia, having—like Sambas—experienced the influence of Buddhist Sri Vijaya, was Islamised mainly by Malay and Arab traders from Palembang, which at that time (first half of 16th century) was under the rule of Demak. In 1608-9 Surabaya imposed its dominance, until in 1622 Sultan Agung of Mataraw wiped out the influence of its main rival. Only in these areas of south-western Kalimantan Barat, did classical Javanese (Kawi) remain "the sultan's language", in Ketapang e.g. until this century, although in this place only a quarter of the population had been Muslims. Tewfik did not abandon the heğe. His success ushered in a new trend which was later moulded into a school by Dıyâ' (Ziya) Gökalp, that of the Millî edebiyatı ("National literature"). Rıdâ Tewfik Böülükbashi is the author of the following major works: 'Abd el-Hakîm ve mülêhagat-i felsefeyyesi ("A.H. and his philosophic reflections"), İstanbul 1329 rûmî 1913; Felsefe derleri ("A course of philosophy"), i, İstanbul 1330 rûmî 1914; Mâyâfâsîl Kâmînî-i felsefî ("A comprehensive dictionary of philosophy"), i, İstanbul 1330 rûmî 1914; Etüde sur la religion des Hokonîsîs, in C. Huart, Textes persans relatifs à la secte des Hâwîfîsîs, Leiden 1909; Serahs annîm ("Notes on Issâs annîm") Istanbul 1942, 2nd ed. İstanbul 1949, (contains all his poems, except some political satires); Omer Hayyam ve râhûbleri, Istanbul 1945. Introd.

(Febrîr Ïz)
identical. Becoming a Muslim (= Malay) means for a Dayak to lose his social relationships. Only a few Dayak tribes became Muslims, e.g. the Bakumpai, a former sub-tribe of the Ngaju Dayak (Danandjaja, 139, in consent with Mallinckrodt). In some cases such as Pasti and Kutai [q.v.] saw the rise of colonies of Buginese traders and ship-builders from South Sulawesi, soon after their homeland had turned over to Islam (1605-11). According to tradition, the first teacher of Islam in Pasti was an Arab, while Makassarese preachers, among them the miraculous Tuan Tunggang Parangan, were active in Kutai. Like in South Sulawesi, Islam in Kutai seems to have been mixed with many animistic survivals and remained weak throughout the 18th century. The sultans had their kraton in Tenggarong, between Samarinda where most of the Buginese settled, and the Dayak area. Their story is told in the Salasilah Kutai, written in Malay.

2. Modern developments. As the sultans both in East and West Kalimantan during the times of Dutch supremacy were relatively independent in their internal jurisdiction, Islamic law, more or less modified by the local customary (adat) law, played a significant role. Courts were closely attached to the palace. After independence, the Indonesian govern-ment tried to bring these "religious courts" under the authority of the local branches of the Ministry for Religious Affairs (Lev, Islamic courts, 78 f.). On the other hand, Islamic law has also influenced the adat law of the non-Muslim Dayaks.

Since the beginning of the century, Sambas, Pontianak and Banjarmasin have been caught up in Islamic modernist movements. The Malay periodical al-Imam (since 1906), partly inspired by Rashid Rida's al-Mandār, was distributed in Pontianak and Sambas. The "Serikat Islam", the oldest nationalist move-ment, held a congress in Kalimantan in 1923. In 1930, the traditionalist "Nahdlatul Ulama" established its first branches in Banjarmasin and Martapura, and South Kalimantan remained, besides East Java, a stronghold of this party until 1942. The modernist "Muhammadiyah" became active in 1927, its first branch being opened in Banjarmasin. Muhammadghānī or propagandists from Java and Minangkabau were sent there, some of them being former attendants of the "Thawalib" schools in West Sumatra. Their progress seems to have been slow; at the Muhammadiyah's national congress in 1929, no participant from Kalimantan was noted. In 1935, the movement had 29 branches on the island. It is active in del'wa or missionary and educational work by building schools, clinics, and distributing pamphlets and books, its activities reaching now the Halu (up-river) areas and the border districts between West Kalimantan and Sarawak. In Banjarmasin, a government-related "Institut Agama Islam Negeri" (I.A.I.N.) has been established, whereas in Pontianak a branch of the Fakultas Tarbiyah of the I.A.I.N. Jakarta Giputat is active. A branch of the same I.A.I.N.'s Fakultas Usuluddin, now in Singkawang, is to be moved to Pontianak.

BRICK [see LINT].
BRIGAND [see FALAK, KAZAK, LIJSS, TARIB].
BRUNEI, a sultanate on the northern coast of Kalimantan (Bornoe [q.v.]), 5,765 sq. km. (2,226 sq. miles) in area with ca. 145,000 inhabi-
tants. The capital is Bandar Seri Begawan (before 1970 called Bandar Brunei or Brunei Town), with ca. 45,000 inhabitants. Its principal landmark is the great Megijid Omar Ali Saiduuddin, built after World War II. Since the 6th century A.D., trade relations existed with China. Occasionally tribute was paid, not only to China but also to Buddhist Sri Vijaya (South Sumatra) and Majapahit (Java), where it was mentioned among other Bornean tributaries in ca. 1365. The Sha'ir Awang Semaun, probably the oldest legendary account of Brunei's history, narrates how the 14 sons of "sultan" Dewa Emas Kayangan, who was of celestial origin, founded the empire of Brunei. The youngest brother was the warrior Semaun, their leader Awang Alak Betatar. When the sultan of Johore sent his daughter to be married to the sultan of Sulu, she was abducted and married to Alak Betatar. The sultan of Johore finally agreed to this state of affairs and installed Alak Betatar as the first Muslim sultan of Brunei, bestowing on him the regalia of Johore (Brown, 134 f.). As Sultan Muhammad he is said to have reigned from 1405 to
1415. His successor Ahmad married his daughter to an Arab from al-Ta‘if, and their son Sulaymân became the ancestor of the later sultans of Brunei.

There seems to have existed, however, a rival pagan kingdom besides the Muslim sultanate, which gave the impression, in 1514, to the Portuguese that Brunei was still heathen. When Antonio Pigafetta, an Italian member of Magellan’s expedition, visited Brunei in 1521, he mentioned that the sultan (Bolkiah I, the fifth of his dynasty) was waging heavy warfare against a rival pagan kingdom in the same harbour. Finally, Sultan Bolkiah succeeded in safeguarding his supremacy and brought Brunei to the climax of its glory, ruling over most of “Borneo” (hence its name), the Sulu Islands and parts of Mindanao and Luzon. It was the Siamiards, however, who, since 1578, from their stronghold in Manila, successfully began to confine Brunei’s strength to the northern coasts of Borneo, from where, in their turn, pirates intimidated the Spanish, and other fleets. During the 19th century, the territory of Brunei was encircled decisively. In 1841 most of Sarawak was ceded to Sir James Brooke. In 1888, Brunei became a British protectorate. Later, in 1906, the sultan was granted the right to supervise matters which were formerly handled by the British, the so-called Department of Native Affairs (paid-law). In 1959, however, when a new constitution was introduced—the first written one in Brunei’s history—his judicial functions were turned over to the courts. Nevertheless, his internal position was also strengthened considerably, as a number of rights of the former resident were transferred into his hands. Brunei became “an internally self-governing Islamic Sultanate under British protection”. Only security and foreign affairs were still handled by the British, who from now on were represented by a High Commissioner.

New perspectives for Brunei’s future opened when in May 1961, Tengku Abdul Rahman as the Prime Minister of the Malayan Federation, forwarded the plan for a new federation, Malaysia, which was to include, besides the Malayan Federation, Singapore, Sarawak, British North Borneo (now Sabah), and Brunei. At the beginning, Sultan Sir Omar Ali Saifuddin (the 5th/11th century, BASH.T.R. or BUSH.T.R., a mountain stronghold famed as the headquarters, first, of Umar b. Hafsun [</.y.], leader of Andalusian resistance, his sons until 315/928. The precise location of Bobastro, often confused (as in El Pb 1250) with Barbasto (Barbashturu) in Huesca province, has proved a thorny problem. Erroneously identified by Dozy with Barbastro (Barbaga), it was believed by Simonet to be situated 6 km. east of Ardales when the railroad running from Cordova to Malaga via Bobadilla. This identification was accepted by Lévi-Provencal (Hist. Esp. mus. i, 305 n. 1), and it remains acceptable to some. It has, however, been challenged by J. Vallvé Bermejo, who, after meticulous examination of all available evidence, some of it new, has cogently argued that the facts of the Bobastro cam-
indeed it was there that the amir al-Mundhir died in 275/888 while pressing a siege. In 278/891 his successor 'Abd Allâh tried to take the place, but failed. Subsequent attempts made by his sons Mu'târrif (280/894) and Abân (291/904 and 294/907) to attain the same objective also came to nothing. Not until (280/894) and Abân (291/904 and 294/907) to attain Subsequent attempts made by his sons Mutarrif Abd al-Rahman III. So far as we can glean, Bobastro thereafter to the Berbers who defeated Muhammad II's troops remained an important Umayyad garrison until it fell on the banks of the Guadiaro in 400/1010. For the 316/928 was Bobastro finally subdued after a decade square from the elements of the simple three-fold magic who had just occupied the city. By the 7th/13th century the fortress was in ruins.

expressed in
Abjad by

Other groups of letters from that square are similarly, but not see generally, used, e.g. 'ar, râj, lâm, and together. From some, also, larger squares are built up, as a four-fold on and a six-fold on . In the older Arabic books on magic (e.g. Shams al-ma'thir al-Buni [i.e. in Suppl.], d. 622/1225) this formula plays a comparatively minor part; but after it was taken up by al-Ghazâlî and cited in his Miftâh min al-dalâl (ed. Cairo 1303/1886, 46, 50, tr. W. Montgomery Watt, The faith and practice of al-Ghazali, London 1953, 77, 79-80), as an inexplicable, but certain, assistance in cases of difficult labour, it came to be known universally as "the three-fold talisman, or seal, of al-Ghazâlî" (al-wujûf, al-khatam, al-muthâlla and al-Dawla) and finally has become the foundation and starting point for the whole "Science of Letters" (ilm al-huruf). Al-Ghazâlî is said to have developed the formula, under divine inspiration (ishûhn, from the combinations of letters and which begin Suras XIX and XLII of the Kur'ân, and which by themselves are also used as talismans (Reinhard, Monumenta muslima, ii, 236). For the process, see the Miftâh al-ghayb (ed. Cairo 1327/1909, 170 ff.) of Ahmad Mâsâ al-Zarkawî, a contemporary Egyptian magician, and on the subject in general, the sixth and seventh Risâla in that volume. Others trace the formula back to Adam, from whom it passed down to al-Ghazâlî (cf. the al-'inâya al-râb'hînaya, 44, and al-Âdîr al-râb'hînaya, 16 of Yûsuf Muhammad al-Hindî, an early 20th century Egyptian writer on magic). In all this, al-Ghazâlî's established reputation as a custodian of mystical knowledge and especially of the book al-Dawla, evidently played a part (JAOS, xx, 113; Goldziher, Le livre de Ibn Toumert, 15 ff.). Another suggested origin is the Arameo-Persian name of the planet and goddess Venus, Buduh BUKA. H. G. Hoffmann, Auszige aus syrischen Akten persischer Mârtyer, 128 ff.). But though this name appears in the Fihrist, 1, 311, 7, with magical and diabolical associations and is quoted very occasionally in connection with Zuhara (e.g. Makrizi, Khatâ, 1324/1906, 8; Thâl-âbî, Kiyaq al-âniyba', 1314/1896-7, 29—both with misprints) it appears to be totally unknown in magical or Qâhir literature. Yet the name evidently passed early into South Arabic, became used there as a feminine proper name and as a feminine epithet, "it" and was confused with the root (L, iii, 484, sub ). Other standing in Arabic it does not have. Further, when Budu was associated with a particular planet, it is with Saturn (Zabâl) and its metal is lead (Zarkawi, Miftâh, 170), not copper as Venus would require. Hardly worthy of mention is Von Hammer's fancy that Budu is one of the names of Allah (Ja, 1830, 72) though it may have a Turkish basis (and see, too, de Sacy, below), and the derivation he suggests or the story told by Michel Sablough de de Sacy (Lettres arabes, iii, 364 ff.) that it was the name of a pious merchant whose packages and letters never went astray, though that may well be a popular Syrian explanation. In magical books there are few cases even of personifying the word (e.g. Ya Budu in al-Fath al-râhmanî by Hasjîld Sa'dîn, 21), but for the popular mind Budu has become a Qâhir whose services can be secured by writing his name either in letters or numbers (Ja, Ser. 4, xii, 521 ff.; Spiro, Vocabulary of colloquial Egyptian, 36; Doute, Magie et Religion, 296, with Kayyûm as though a name of Allah; Klunzinger, Upper Egypt, 387). The uses of this word are most various, to invoke both good and bad fortune. Thus, in Doute, op. cit., against menorrhagia (234), against pains in the stomach (229), to render one's self invisible (275) and against temporal impotence (295). Lane's Cairo magician also used it with his ink mirror (Modern Egyptians, ch. xii), and so in several magical treaties. It is also engraved upon jewels and metal plates or rings which are carried as permanent talismans, and it is inscribed at the beginning of books (like ) as a preservative, e.g. in al-Fath al-ajâlî, Tunis 1290. But by far the most common use is to ensure the arrival of letters and pacages.

In these instances, there still appears to be an
Islamic world, bk'a (originally) marshy valley between the Lebanon and Anti-Lebanon ranges in Syria, and doubtless at that of the name al-Bukiya for a settlement near the Lake of Hims (ibid.) (see Le Strange, Palestine under the Moslems, 352). From these senses it acquires the broader one of "province, region, tract of land," as in the classical Arabic geographers (for Mukhadasi, 31, tr. Miguel, 70, bk'a is a simple synonym for mawdi'), and this seems to have been the farthest development of the term in the Muslim West (see Dozy, Supplement, i, 103b, who registers this latter sense only).

However, in the central and eastern parts of the Islamic world, bk'a acquired, apparently during the Saltuk period, the sense of "dervish convent," "a place where dervishes live," genitive "dervishes' house," "a simple synonym for mausoleum," or in general "a building for religious or charitable purposes." The transition here in sense clearly arises from the Kur'anic phrase al-bki'a al-mubdraka (XXVII, 30), traditionally interpreted as "the blessed hollow," the place where God spoke to Moses from the burning bush. From Saltuk times onwards, bk'a appears in epigraphic phraseology. Thus an inscription of Yaghi-basun b. GhazF b. Danishmand (537-60/1142-65) from Niksar and dated 552/1157-8 describes the construction of a bk'a mubdraka, probably to be interpreted as a dervish convent (see M. Van Berchem, Épigraphie des Danishmendides, i, 78, xxvii [1912], 87 = Opera minora, Geneva 1978, ii, 703, with further references to CLA, i, Egypte, nos. 44, 459, and iii, Asie Mineure, 24). It was likewise used in the Syro-Palestinian region from Ayyubid times onwards, e.g. in 595/1198 to describe at Jerusalem a school (maktab) originally endowed by Saladin, and Van Berchem noted that in this same city, a Qâmiq al-Nisâ' adjacent to the pious, educational or charitable purposes.

There is no lack of biographical information about Bukrat among the Arabs; the longest section is found in Ibn Abi Usaybi'a, 'Usân an- 'anbâ', 24-33. Bukrat's teachers are mentioned here (24, 11. 16-17), his father Ikraids (Heracleides) and his grandfather Bukrat; besides his father, the ancient sources name also others, like Herodics of Selymbria (Pauly-Wissowa-Kroll, Real-Encyclopädie der class. Altertumswissenschaft, vi, 1912, 978 f.). He is said to have lived up to the age of 95. The Arab biographers, to be sure, often present misleading information, e.g. Ibn Abi Usaybi'a (op. cit., i, 24, 11. 22-3) says that Bukrat was trained on Rhodes, Cnidos and Cos, while Ibn al-Kifti (Hukumat', ed. Lippert, 90 at the end to 91, l) makes him stay for a while in Fârûka (i.e. Bépoua = Aleppo, in the text identified with Hims; see also Barthebraeus, Tārîkh Mukhtasar al-duwal, ed. Cheikho, 85) and Damascus; both pieces of information perhaps mean no more than that Bukrat travelled far and wide, as was already known in antiquity. On the other hand, one may assume that the Arabs retained scattered biographical data which are not found elsewhere. They were also right in stating that the Corpus Hippocraticum does not go back to one single author and that there have been several physicians of this name: the mathematician Tāhât b. Kurrâ names four Bukrâts or Bukrâts ("Hippocratesians," one might say), the first of whom (in fact the second) would have been the famous Bukrât (Ibn al-Nadîm, Fihrist, ed. Flügel, 293 f.; Ibn al-Kifti, op. cit., 100),
The Arabs also knew about the unconfirmed state-

work, now lost, Flepi TCOV yvrjoicov mi voGcov
it can be found in Ibn Abi Usaybi'a.
Bukrāt is extremely frequently
the. In any case, Hunayn b. Ishāk and his school were at the
head. But there is no inventory of translations from
Hippocrates's works drawn up by Hunayn himself, as is the case for his translations from
Galen's writings. Bukrāt is extremely frequently
quoted by the Arab physicians. The following
works of the Arabic corpus have been published
so far: 1. K. al-Faṣūl. The Aphorisms of Hippocrates,
translated into Arabic by Honain Ben Ishāk, ed.
J. Tyler, Calcula 1832; 2. K. Takdimat al-mufrīdī, ed.
K. Klarmuth in Archiv, xi (1886), 204-33; 3. K. Tadbir al-amrād al-haddā. Hippocrates: regimes in
acute diseases, ed. and tr. M.C. Lyons (Arabic
Technical and Scientific Texts, i), Cambridge 1966;
4. Kātyāṭiyān. Hippocrates: In the Surgery, ed. and
Ullmann, Die arabische Überlieferung der hippo-
kraischen Schrift "De superfectionate", in Sudhoffs
Hippocrates: on the nature of man, ed. and tr.
diseases (airs, waters and places), ed. and tr.
Mattock (ibid., vii), Cambridge 1971. 10. K. al-Aqīna. Hippocrates: on embryos (On the sperm and on the
Nature of the child), ed. and transl. M.C. Lyons and J.N. Mattock (ibid., viii), Cambridge 1978. An effort should be made to establish a Corpus
Hippocraticum Arabice, an aim which is admittedly
still rather far away, but to which the above-
mentioned editions form important preliminary stud-
ies. To this corpus should certainly be joined the
Arabic translations of Galen's commentaries as well
as the most important commentaries and para-
phrases of the Arab physicians.

Bibliography: The Arabic sources for the life
and works of Hippocrates, the new material in
manuscripts which has become widely known,
especially after the last World War, and the
relevant secondary literature have been put
together by M. Ullmann, Die Medizin im Islam,
Leiden-Cologne 1970, 25-35, and F. Sezgin, GAS,
iii, Leiden 1970, 23-47. Further important are:
M. Steinschneider, Die arab. Übersetzungen aus dem
Griechischen, new impression Graz 1960, 298-318;
H. Diels, Die Handschriften der antiken Ärzte. First
part: Hippokrates und Galenos, in Abh. Pr. Ak. W.,
Phil.-Hist. Kl. (1905), Abh. iii; G. Bergstrasser,
Hunain ibn Ishāk and seine Schule. Sprach- und lit-
erargeschichtliche Untersuchungen zu den arabischen
Hippokrates- und Galen-Übersetzungen, Leiden 1913;
H. Ritter and R. Walzer, Arabische Übersetzungen

Begr. von Th. Puschmann, hg. von M. Neuburger

Abi Usaybi'a. However, only 12 of these are
marked as important; they are found in the lists
given so far; for the others, see Ullmann, Medizin,
31-5; Sezgin, GAS, iii, 38-47. From the indica-
tions given on the title-pages and colophons of the
manuscripts as well as in the lists of titles, it
cannot always be established with certainty who
were the Arabic translators of the works. In any
case, Hunayn b. Ishāk and his school were at the
head. But there is no inventory of translations from
Hippocrates's works drawn up by Hunayn
himself, as is the case for his translations from
Galen's writings. Bukrāt is extremely frequently
quoted by the Arab physicians. The following
works of the Arabic corpus have been published
so far: 1. K. al-Faṣūl. The Aphorisms of Hippocrates,
translated into Arabic by Honain Ben Ishāk, ed.
J. Tyler, Calcula 1832; 2. K. Takdimat al-mufrīdī, ed.

AL-BULAYTĪ [see AL-BALATI, in Suppl.]

BULBUL SHĀH, Şafi' saints of mediaeval India. Bulbul Shāh, whose real name was Sayyid Šhārāf al-Dīn, was a Musawwī Sayyid and a disciple of Šhāh N'māt Allāh Fārsī, belonging to the Suhrawardiyya order. His father entered the Valley of Kashmir in the reign of Rādja Suhādeva (1301-20) from Turkistan with 1,000 fugitives, fleeing before the Mongol invasion. Rincānā, a Ladakhi prince, who was so much impressed by its teachings which, unlike those of Buddhism and Hinduism, were simple and free from caste, priesthood and ceremonies, that he became a Muslim and adopted the name of Sadr al-Dīn on the advice of the saint. The next person to embrace Islam was Rawancandra, Rincānā's brother-in-law; and according to one tradition he was able to convert nearly 10,000 people to his faith.

Rincāna built for Bulbul Shāh a khannah [q.v.] on the bank of the river Jehām and endowed it with a number of villages, from the income of which a langār (free kitchen) was opened. Bulbul Langar has disappeared, but a quarter of Srinagar, bearing the name of the hospice still exists. Rincana also built near the hospice a mosque, the first ever to have been built in Kashmir. It was destroyed by fire, and a smaller mosque was built in its place. Bulbul Shāh died in 728/1327 and was buried near it.

AL-BUNĪ, ABU 'L-'ABBĀS AHMAD B. 'ALI B. YŪSUF AL-KURASHI AL-SUFĪ MUḤİY L-DĪN (variants Takrīkh al-Safa, Muhyi 'l-Dīn Muḥiyya al-Saffa, the title is variable; I did not have access to the lithography of Cairo 1517), quoted by Ibn Khaldūn, Mukaddāmāt, iii, 140 (Engl. tr. Rosenthal, iii, 174; Fr. tr. Montel, iii, 1106). In his Risālat al-Shift li-adwādī'ī al-awādī'ī (cf. M. Ullmann, Die medicin im Islam, Leiden 1970, 249), Tashkoprīzād (d. 968/1560) copied much of al-Būnī's magic to warding off the plague.

Most of the other works circulating under the name of al-Būnī seem to be more or less accurate extracts from the Šams al-maʿārif, their relation to one another and to the main work is still to be investigated. We may mention here the Kitāb al-Uṣūl wa l-dawādī'ī, a kind of introduction to the secret sciences; the Kitāb Ṣawākīt al-Fatḥa al-ṭārīqāt on the consonants ṭ, ẓ, ṣ, l, z, n, f, which do not occur in the first Sūra; the al-Lamā' al-nurādīṣa on the highest names and several writings on the divinatory and magical script etc., all matters belonging to the field of the secret sciences; the Kitāb Shark sawādīt al-Fatḥa al-Fātdhāt (the title is corrupted), which cannot be proved by logical intellect, but only by insight into divine wisdom. He expresses himself in the same way in another work, the Kitāb Laṭf al-dawādī'ī fi asār al-huruf al-wasāyīl (the title is variable; I did not have access to the lithography of Cairo 1517), quoted by Ibn Khaldūn, Mukaddāmāt, iii, 140 (Engl. tr. Rosenthal, iii, 174; Fr. tr. Montel, iii, 1106). In his Risālat al-Shift li-adwādī'ī al-awādī'ī (cf. M. Ullmann, Die medicin im Islam, Leiden 1970, 249), Tashkoprīzād (d. 968/1560) copied much of al-Būnī's magic to warding off the plague.

AL-BURAK AL-SARIMI (Suraymi) in Ibn al-Kalbi, (al-HADITHIYYA 12, 9, 120, d. 40/660), a Kharijite. He is said to have been the first to proclaim that "judgement belongs only to God" (hadithi; cf. al-Mubarrad, Kamil, Cairo edn., 917, but who is famed in history because of his being one of the three plotters sworn to kill simultaneously 'Ali b. Abi Talib [see IBN MULJAM], 'Amr b. al-As, [q.v.], and Mu'awiyah b. Abi Sufyan. Al-Burak accordingly proceeded to Damascus and stabbed Mu'awiyah whilst he was praying, but only managed to wound him in the hip. According to tradition, the attack had two consequences: firstly, the "marriage vein" (ik al-nikdh) was severed, so that Mu'awiyah was unable to beget any more children, and secondly, the latter decided that in future he would pray inside a maksura (but see the ironic remark of al-Djahiz, Hayawun, ii, 161, where a dog is said to have led him to take this precaution).

When Al-Burak was arrested, he immediately told Mu'awiyah about the plot hatched against the three persons. He asked him to await news of the attack on 'Ali, and proposed that Mu'awiyah should go and kill the caliph if Ibn Maldjun had failed and then return and throw himself on Mu'awiyah's mercy. From this point, the accounts diverge.

According to some, Mu'awiyah had him executed on the spot; according to others, he threw him into prison and freed him when he heard of 'Ali's death. According to the apparently most current account, he put him to death when he learnt that he had had a child born to him whilst Mu'awiyah remained henceforth sterile.

Bibliography: Mubarrad, Kamil, 993; Tabarsi, i, 3456-7, 3463; Dabih, Bayin, ii, 206; Ibn al-Kalbi-Cascle, Qamhane, ii, 229; Mas'udi, Murji, iv, 427, 436-7 = §§ 1730, 1739. (Ch. Pellat)

BURKU' or KASR BURKU', a ruin situated in northern Jordan about 25 km. north of the pumping-station H 4, now a small village on the road from Mafraq to Baghdad. Here one of the earliest Islamic inscriptions, dated 812/1409 (Gaube, 97 f), is preserved. A karra-plan of about 650 m. altitude surrounds the ruin, which lies on the northeast bank of the Wadi Minkad. About 2 km. northwest of Burk'u, the wadi is blocked by a modern dam forming a small lake which contains water from late autumn until summer. The alignment of the foundations of the southwestern part of the kasr suggests that a similar dam existed there in the 7th century A.D.

The remains consist of a plain enclosure-wall at the northwest and the southwestern sides, and ranges of rooms for the southern and the northeastern sides (six rooms), enclosing a courtyard where there is a rectangular tower. Enclosure and rooms show traces of repeated repairs, plan alterations and reconstructions. The masonry of the structure is of poor Hauranian style (basalt blocks on the inner and outer faces, with a filling of lumps of basalt and clay). However, a thorough technical examination permits the isolation of five different stages of building-activity which can partly be connected with chronological evidence provided by inscriptions found at the site. The inscriptions are: a Greek inscription from the 3rd century A.D. (Field, op. cit. 161 ff.); a Greek inscription from Byzantine times (Gaube, op. cit. 97); an Arabic inscription with the name of Amr al-Wadil (the later caliph Walid I), dated 81/700 (RCEA, no. 12; Field, 154 f.; Gaube, 97); an Arabic inscription dated 782/1380 (Gaube, 97), and an Arabic inscription dated 812/1409 (Gaube, 97 f.).

In the course of its centuries-long use, Kasr Burk' served different purposes. The nucleus of the site, the rectangular tower in the courtyard, was a Roman-Byzantine watch-tower controlling one of the main caravan-roads from Arabia to Syria. All installations to secure the water supply of the place (the artificial lake and two reservoirs) are most probably contemporary with the tower. In the 5th or the 6th century A.D. this advanced post was transformed into a monastic settlement and some rooms were built to the southeast of the tower. By Walid's order, rooms northeast and southeast of the tower and the enclosure were added. At this time Burk' served as a modest country-residence. It proved that in Umayyad times important members of the ruling family erected even small and rather primitive buildings. Later, in the Ayyubid period, the building was restored and was most probably used as a khana.

Bibliography: Given in the article. (H. Gaube)

BURNOUS [see UBIAS.

BURUDJIRDI, HAJJI AKHUSNAS TABBATARI (1875-1961), the greatest religious authority (mardis-taklidi mutlak) of the Shi'i world in his time. He belonged to a well-established and wealthy clerical family from which emerged distinguished figures such as Sayyid Mahdi Bahar al-Ulum (d. 1779). After primary education in his home town, Burudjird, he moved to Isfahan in 1892 and studied fikih, usul, philosophy and mathematics under several specialists, including Sayyid Muhammad Bakir Durqait. In 1902 he went to Najaf and attended the lectures of Khrursani [q.v.] and others until 1910, when he went back to Burudjird with the intention of returning to Najaf, but the death both of his father and Khursani in 1911 made him remain in Burudjird. Despite the fact that Burudjirdi was closely associated with Khursani during the Persian Constitutional Revolution of 1905-11, we do not know of any co-operation between Burudjirdi and Khursani in the latter's constitutionalist campaign. This is an indication of Burudjirdi's conservatism in the field of politics, which continued to present itself during Burudjirdi's sole leadership from 1947-61.

While in Burudjird he was recognised as a respected religious authority in the western part of Iran. He was so popular in his region that in 1926, when he was temporarily living in Kum, he was urged by the Burudjirdis to return to Burudjird; he lived there until 1944. At this time the Kum Circle for Religious Studies which had been founded by Shaykh 'Abd al-Karim Ha'r! [q.v. in Suppl.], in 1921 was being run by three men (Sadr, Hudjdijat, and Khwansari [q.v.]). It was envisaged that due to his priority in age, experience and background in religious leadership, Burudjirdi would be able to...
reorganise the Circle which, under the government’s pressures, and especially after Hā’īrt’s death in 1957, had been greatly diminished. To this end Burūdjīrdī was cordially invited to Kum in December 1944. After the death of Sayyid Abu l-Hasan Isfahānī and Hādīdji Aka Husayn Kummi in Nadjaf in 1946 and 1947 respectively, Burūdjīrdī was unquestionably acknowledged as the sole marjī’-i taklīf in the whole Shī’ī world and held this title until his death.

During his leadership, many religious activities were undertaken: several libraries, hospitals, mosques, and religious schools were established or revived in different locations in Iran and other countries, including Iraq and Germany; the publication of a number of religious books were subsidised; religious emissaries were dispatched to Europe, USA, Pakistan, Saudi Arabia and Africa. The Kum Circle for Religious Studies, which had become only a convenient alternative to that of Nadjaf during Hā’īrt’s leadership, now proved to be the most important clerical centre in the Shī’ī world. Thanks to this centrality, many students and specialists of Shī’ism formerly living in Nadjaf and elsewhere joined the Kum Circle, to the extent that their number exceeded 5,000, and for the first time the Nadjaf Circle looked to Burūdjīrdī for assistance, financial or otherwise.

In the field of scholarship, Burūdjīrdī made noticeable contributions; in addition to regular teaching and handling religious affairs, Burūdjīrdī wrote a number of books on fikū and usūl, several of which were never published; one specialty of his was hadith. He has been widely acknowledged as the initiator of a new extent that their number exceeded 5,000, and for the first time the Nadjaf Circle looked to Burūdjīrdī for assistance, financial or otherwise.

and was eager to learn the language of the country. From 1846 to 1848, having temporarily left the city, he helped his friend in the school at 'Ubay, which the latter founded and which enjoyed a high reputation in this period. It was there, for the benefit of his pupils, that Bustanī composed his two educational manuals Ḥidā' al-ḥidā' fi 'ilm al-ḥisāb and Bulāgh al-ārāb fi nākh al-Ārāb; it was also there that his eldest son Salīm was born. On his return to Beirut in 1848, the American Consulate employed him as an interpreter, a post that he held until 1862. During this period, he continued to educate himself, to learn European and Semitic languages with the object of assisting Dr. Smith in his venture of translating the Protestant Bible. His energy was also reflected in a large corpus of lectures, articles and pamphlets. In 1860, he published his magazine Nafīt Sārīyā ("The Syrian bugle"); then in 1863 he founded his famous National School which continued to operate until 1875 and rendered the country very valuable service. In the American Consulate employed him as an assistant and his understanding of ancient texts which he analysed and annotated to make them accessible to all that might facilitate his task as teacher. Henceforward he devoted his efforts to education and to all that to all that might facilitate his task as teacher. It was to introduce his pupils from the Brothers and the College of Wisdom to Arabic literature that he composed, in three volumes, his valuable textbook Les auteurs arabes. The first of these volumes (1951) covers the period from the pre-Islamic age to the Umayyads, the second (1934) deals with the ʻAbbāsīd age, the third with al-Andalus and the naḥḍa. Later, in 1943, this series was crowned by a fourth volume, an anthology. Even though scientific method is not respected scrupulously in his commentaries, Bustanī excels through the purity of his style and the accuracy of his comments. The last years of his career were spent at the Lebanese University.

Bibliography: M. al-Bustānī, al-Salsabīl, 199-206.

4. Kārām al-Bustānī (1888-1966) was born at Dayr al-Kārām, studied in the Jesuit school there, then went and settled in Beirut with his brother Buṭrus (see above, 3); here he applied himself simultaneously to a number of tasks: teaching, journalistic and critical editing of ancient texts. Over a number of years, he was associated with Catholic missionary establishments (Jesuits, Franciscans, Sacre Coeur, Friars, etc.), where he taught Arabic literature. At this time he was collaborating in various Lebanese reviews and journals that were then in fashion (al-Bark, Li'dn al-ḥāl, al-Ārāb, al-Mākhṣūf, etc.) and he gave generous assistance to his brother Buṭrus in the editing of his review al-Bayān. His thorough knowledge of Arabic and his erudition are shown in his study and editing of Arabic manuscripts and most of all in a series of collections of poetry (Dīwān Ḫan Khālid, Dīwān Ḫan Ḩaṭḥā, Dīwān Ḫan Ḥaṣā, etc.). As regards original production, the work of Kārām is confined to a small number of works of a historic-social nature (Légendes orientales, Princesses du Liban, Femmes arabes).

Bibliography: M. al-Bustānī, al-Salsabīl, 196-8.

5. Sa'īd b. Salīm al-Bustānī (1922-77) born at Marādī in the Shūf, studied in Beirut at the College of Jesuit Fathers, then at the Institute of Oriental Literature, and pursued his studies in France, where he obtained a State Diploma in Arabic and a Doctorate of Letters. On his return to Lebanon, he occupied some important posts at the Lebanese University. In 1974, he was appointed Dean of the Faculty of Administration, then, in 1977, Dean of the Faculty of Literature. In the course of his brief university career, he published his thesis Ibn ar-Rāmī, sa vie et son œuvre (Beirut 1967). In addition, he contributed to the Encyclopedia of Islam and to the Dar'īrī al-maʻārif of F.E. al-Bustānī. In university circles, Sa'īd al-Bustānī was associated with bilingualism and western culture, and he defended his positions of principle vigorously. The hope of the Lebanese elite, he died in mid-struggle, carried off suddenly by an incurable disease, leaving a number of important works unfinished.
6. Sahm b. Butrus (1846-84) journalist and novelist, born at 'Ubey. He studied in the centres established in the north of the Lebanon by Protestant missionaries recently arrived from America to compete with the propaganda diffused over two centuries by the Catholic missionaries. As teachers, he also had his father Butrus and Yusuf al-Athfr, introduced him to the subtleties of Arabic. At the age of sixteen (in 1862) he entered the service of the American Consulate in Beirut as an interpreter, a post that he held for ten years. Then his father insisted upon him to collaborate with him in his many projects, especially in the running of the National School, the editing of his reviews and the elaboration of the Encyclopaedia. Thanks to his knowledge of foreign languages, his civic sense and his literary and philosophical training, Sahm gave a new impetus to the Renaissance, and turned it in directions other than those pursued by the generation of his father, of N. Ya'zidji, A'thfr, Abdab and others. The West influenced his thinking and his conception of society. He went far beyond the cultural level deemed sufficient by his contemporaries and tackled new and original genres in vogue in the West. He displayed this tendency towards innovation in several spheres. First, in participation in the activities of literary societies and cultural associations, in particular in belonging to the Syrian Scientific Society in which he played a significant role; he occupied the post of vice-president, and for the benefit of members and friends, he composed some plays, most notably Madijnin Layla, in six acts, performed on the 11th May 1869, and greeted by Beirut audiences as a masterpiece. Later, he was tempted to pursue this line of activity further and he composed more plays in which prose and poetry lie side-by-side and blend harmoniously. Later, he found in his father's various reviews a useful medium for dealing with subjects fashionable in the western press. The columns of al-Djinan (1870-86) discussed moral and civic questions never dealt with before in Arabic journals of this period. The obsequious journalist, the flatterer of power and high authority (and such men were the general rule at that time), came under attack in Sallm's articles from a thinker fired with civic concern and patriotism, believing sincerely in his mission as social reformer. The titles of his surveys and articles suffice by themselves to reveal the breadth of the spectrum of social, moral, economic and political problems that he studied. We shall quote, by way of example, the following titles: Birth and evolution of nations, Factors of progress, Methods of education, The role of economics in the evolution of society, etc. In addition, he blazed the first trail of the modern Arabic novel. Taking the ancient heritage as a base, he tackled subjects with a historical theme and thus sketched the path later to be followed by Nakhla al-Mudawwar and Dj. Zaydan.

Among his works we shall mention the following:

(a) Nine novels published in serial form in al-Djinan between 1870 and 1879;
(b) Some twenty short stories composed directly in Arabic or translated from French or English (published at the same period in the same review);
(c) A history of France;
(d) A history of Napoleon Bonaparte in Egypt and Syria;
(e) Statesmen.

These three last were also published in al-Djinan.
(f) Volumes vii and viii of the Encyclopaedia (and valuable participation in the editing of the first six volumes).

Bibliography: Dj. Ayyub, Index alphabétique contenant noms d'auteurs et titres d'articles insérés dans al-Djinan, au cours de sa publication (1870-1886), see in particular articles signed by Sallm (typescript thesis, the Lebanese University); M. al-Bustani, al-Salafiy, 152-3; Y. Daghiri, Mosahir, ii, 186; al-Vazir, 152-3, contribution (manuscript essay submitted to the Lebanese University, 1970). See also Li'ân al-hilal, no. 712 (1884); al-Mektatat, i (1884); Tarrazã‘, Ta’riqh al-sibâ‘o, i, ii; Kahhala, Mu‘jam; Zaydan, Ma‘alûr; i; Ziriklî.
Sulaymān shows himself as a reformer, following the path blazed by his predecessors, and he expresses, in a clear and direct style, his ideas concerning different styles of government, liberty, tyranny, and the means of exploiting the resources of the Ottoman caliphate, as well as various procedures to be adopted for the modernisation of the state. In addition, a number of manuscript works are attributed to him, including l'Histoire des Arabes, and a book of Memoirs in English. In the Lebanese civil war of 1975-6, the house where Sulaymān was born in Ibkishtfn was not spared; it was plundered and partially destroyed, and his library suffered the same fate.

8. Wādi' al-Bustānī (1836-1954), born at Dibiyā, studied at the American school of Sūk al-arb, then at the American University of Beirut where he obtained his B.A. in 1907. He was involved in an astonishing range of activities. Following in the tracks of previous and contemporary members of the Bustānī family, he applied himself to literature and to travels in Arabia, especially to the Yemen (1909) and to the Far East (1912) where he became a friend of Tagore. He returned to Egypt, then, after 1917, occupied some very important administrative posts in Palestine, at that time under British Mandate. In 1953, he left Haifa to return to his native country and there he spent the last year of his life. Two major principles dominated his long career. The first was reflected in his participation in all the efforts to preserve the Arab identity of Palestine. The second, more important, and more fortunate in its results, consisted essentially in a long list of Hindu or Western books translated from English, a language which he knew thoroughly. Thanks to him, the major works of Lord Avebury came to be known in Arabic, notably The pleasures of life (Khartoum 1904), The meaning of life (Beirut 1908), The fruits of life (Cairo 1910) and The beauties of nature (Cairo, 1913). Other authors, too, attracted his attention; he translated The Quatrains of Khayyām (Cairo 1912), and some poems of Tagore which he published under the title The sardine fisher (Cairo 1917). His most remarkable and successful achievement was without doubt the translation of the Sanskrit epic of the Mahābhārata (Beirut 1952), as well as other epic or semi-epic works from ancient India.

Other than translations, his principal works are:
(a) **Lyrics of the War.** Poems, Johannesburg 1915;
(b) **The absurdity of the Palestine Mandate.** (Beirut 1936); (c) **Palestinian poems.** (Beirut 1941) (manuscript).

**BUTRUS KĀRĀM,** Christian Arab official and writer, the son of Ibrāhīm Kārām, was born in Hīnṣ in 1774. Together with his father he was converted from the Greek Orthodox faith of the Kārām family to Greek Catholicism. As a result they were forced to migrate to Acre, where Butrus entered the service of the Fāṣqaʿ All al-Naṣrād (1806). In 1811 he moved to Lebanon, where he was employed by the emīr Dāghīr al-Ṣaḥīfī (see BAṢIR) as a tutor to his sons and as head of his chancellery. After Dāghīr's deposition in 1840, Butrus accompanied him to Malta, and later to Constantinople, where he became a secretary of the Sultan and court interpreter, thanks to his mastery of both Arabic and Turkish. He died in Istanbul in 1851.

Butrus composed many poems in Arabic, the majority of which were collected in his divān entitled Sādī al-ḥamāma fi Diwān al-Muṣādār Butrus Kārām.

When one of his Arabic compositions was attacked by a Muslim critic, he replied with a spirited makāmā in which he maintained the proposition that excellence in Arabic letters and mastery of the Arabic language was not dependent on being a Muslim. Notwithstanding the point of this dispute, it was conducted along thoroughly Islamic lines, with opposing views being expressed in verse, and Butrus himself uses forms of expression which differ very little from standard Islamic formulae, e.g. his makāmā begins "In the name of God, the Compassionate, the Merciful. Praise be to God, the Lord of the worlds: Ruler of the Day of Judgement ... ."

Fair-minded Muslim critics appreciated the worth of Butrus's poetry, and one, 'Abd al-Djalīl al-Baṣrī (1776-1854), composed a poem in which he adjudicated between Butrus and his chief detractor, finding in favour of the former.

**Bibliography**:

**BUZZARD** (see BAYZARA).
Muhammad b. al-Kāsim and of the two daughters of Dāhir, the defeated king of Sind (ibid., 243-7). According to the author, ‘Alī b. Ḥāmid b. Abī Bakr Kūfî (about whom see Storey, i, 650), the Cač-Nāma is a translation of an Arabic book which Kūfî found some time after 613/1217-18; the possession of the kūfi dialect of Arabic, ‘Alī b. Ḥāmid b. ‘Uṯmān al-Thākaffī (ibid., 9-10). No details about the author and name of that book are given. However, a comparison between the Cač-Nāma and Arab historians such as Balādhūrī (Fāṭīḥ, 431-46) bears out the Arab provenance of those parts of the book that describe the battles leading to the conquest of Sind; Kūfî might well have used Māḏānī’s Khitṭ Thaqfī al-Ḥind (ibid., 100; Yākūr, Pālābī, v, 315; cf. A. Schimmel, Islamic literatures of India, Wiesbaden 1973, 12). The Cač-Nāma seems to have preserved Māḏānī’s tradition concerning India in a much fuller fashion than classical Arab histories.

On the other hand, the book also comprises a considerable amount of material which probably reflects a local Indian historical tradition. The part dealing with the rise of the Cač dynasty (47-124), the story of Darōhār, Djasīnā and Djānkī (229-234), and some traditions attributed to a Brahman called Rāmīya (179) and some Brahman elders” (bo’sī maḥān-dhī bhardhave) (197; also 200’1) deserve to be mentioned in this context.

The extensive account of the relationship that developed between the Arab conquerors and the local population, which may well reflect a local Muslim Indian tradition, is perhaps the most meaningful and fascinating part of the Cač-Nāma (208 ff.). Here Muḥammad b. al-Kāsim is said to have given his unqualified blessing to the social characteristics of India and to have sanctioned both the privileges of the higher classes and the degradations of the lower ones. He upheld the central and indispensable function of the Brahmins and confirmed the privileges accorded to them by ancient tradition. As for the lower classes, represented in the Cač-Nāma by the Djasī [q.v.] (al-Zūt in Arab historiography), Muḥammad b. al-Kāsim confirmed the disabilities imposed upon them by the deposed Cač dynasty (208 ff.). Some of these disabilities bear a striking similarity to the discriminatory measures employed against the aḥl al-dhimma according to Islamic law. It is fascinating to observe the way in which the ghaṭi injunctions were transposed into the Indian milieu and probably blended with local custom. Even more fascinating is the transformation of the injunctions themselves: they are not applied to all non-Muslims, irrespective of class, because of their refusal to embrace Islam; they serve rather as an instrument to demonstrate and perpetuate the inferior social status of an ethnic group. The Cač-Nāma occasionally sounds like a document intended to accord Islamic legitimacy to the Indian social structure, to sanction the privileges of the Brahmins and to confirm the degraded status of the lower classes. It seems to be a historical and even religious justification of the persistence, under Islam, of a social system which is in sharp conflict with the Islamic world view. It may be considered an illustration of Imtiaz Ahmad’s statement that “...if the formal Islamic ideology rejects caste, the actual beliefs held by the Muslims not only recognize caste distinctions but also seek to rationalise them in religious terms” (Caste and social stratification among the Muslims, New Delhi 1973, p. xxvii).

(CAD, CHAD, a region of Inner Africa). The Republic of Chad (area: 1,284,000 km²; population: about 4,000,000 in 1975) is one of the four states which emerged from the former French Equatorial Africa. The country stretches over 1,600 km. from south of latitude 8° N. to the north of latitude 23° N. Consequently, climate and vegetation vary from savannah woodland with an annual rainfall of more than 1,000 mm. in the south to the arid desert of the Sahara in the north. Chad is torn between two conflicting orientations, between North and Equatorial Africa.

Islam has created a measure of cultural unity in the northern and central parts of Chad, but it has also contributed to the alienation of the region south of latitude 11° N., which remains almost untouched by Islam.

About one million members of the Sara tribe form the main element among the Bantu population of the better-watered south. The Sara are also the largest single ethnic group in Chad as a whole. For centuries the Sara, together with other peoples of the south, were the target for slave raiding from the north.

Further north the open country between latitudes 12° and 15° N. attracted waves of migrants, mainly nomads, from the north (the Tubu) and from the east (Arabs and Arabised groups). The nomads played an important role in the history of that region which saw the emergence of islamilised African states.

Kānim, the earliest state in this region [see KANEM], was first mentioned by al-Yākībī (Tarīkh, ed. Houtsma, 219) in the second half of the 3rd/9th century. The state of Kānim and its Kanembu people evolved as a result of an interaction between rulers of nomad origin (probably Tubu from Tibesti) and the indigenous population at the northeastern corner of Lake Chad. An interpretation of the Arabic sources (Ibn Saʿīd, ed. Verret, 1958, 28; al-Maqrīzī, ed. Hamaker, 1820, 206; a manuscript in Palmer, Sudanese memoirs, iii, 3) suggests that the rulers of Kānim became converted to Islam in the 5th/11th century, undoubtedly through the influence of Muslims who moved along the trade route from Tripoli via Fazzān [q.v.] to Lake Chad. By the 7th/13th century Islam had spread to other
sectors of the population. People from Kanim went on pilgrimage to Mecca and came to study in Cairo, where a madrasa for Kanimi students was established in the 640s/1240s (al-Makrizi, Khita, ed. Wiet, 1922, ii, 266). The ruling dynasty of Kanim claimed descent from Sayf b. Dhi Yazan [g.v.], and became known as the Saiawa. In the second half of the 8th/14th century the Saiawa were forced to evacuate Kanim because of harassment by the Bulula. The Bulula were probably an offshoot of the same dynasty who had mingled with one of the earliest Arab nomad groups coming from the east. The Saiawa moved to Bornu [g.v.] at the south-western corner of Lake Chad (now in Nigeria). After a transitory period the Saiawa rebuilt a state in Bornu, which towards the end of the 10th/16th century, under the reign of Idris Alawoma, regained its hegemony over the Chad basin. Kanim was reconquered by the Saiawa, who preferred to stay in Bornu. The Bulula rulers of Kanim became vassals to Bornu. About the middle of the 17th century the Bulula were removed from Kanim by the Tundjur, who had been themselves pushed out of Waday [g.v.]. Authority over Kanim rested with the alifa (from the Arabic khilafa), who was nominally a descendant of the Prophet Muhammad. The Tundjur, who had been themselves pushed out of the fringes of the Sahara, the Arabs maintained their traditional way of life as camel breeders, but those who had to seek pasture farther south abandoned the camel and became cattle pastoralists (bakkara). They mixed with the local population but retained their Arabic dialect. Though they are divided into many tribes, these Chadian Arabs are generally referred to as Shawu Arabs [g.v.]. To the south, the Arabs reached as far as 11° N., and through their contact with the local population contributed to the spread of Islam. In most cases the Arabs accepted the authority of local rulers though they became involved in intra-state and inter-state politics.

Waday, on the western boundary of Där Für [g.v.], lay on the route of the Arab nomads. The first Muslim rulers of Waday were the arabised Tundjur, but they did little to spread Islam among the local population. The spread of Islam is associated with 'Abd al-Karim b. Djami, of the Arab Djaliyyin [g.v.]. He had propagated Islam among the Maba of Waday and then mobilised them in a qahfah against the Tundjur rulers. The Tundjur had been ousted and 'Abd al-Karim established a new dynasty which has survived to the present time. Until the middle of the 18th century Waday had been considered a vassal to Där Für, but then its suldan asserted their independence and expanded south and west to reach the peak of their power in the 19th century. In 1850 the capital of Waday moved from Wara to Abeshe (Abeche). In 1851 H. Barth (Travels, 1857, iii, 506) wrote: "The Wadayi faqih and 'Islam are the most famous of all the nations of the Sudan for their knowledge of the Kuran, the Fulbe or Fellani are not excepted."

In its westward expansion, Waday came into conflict with Bornu, mainly over the kingdom of Baghirmi [g.v.]. The latter emerged at the begin-ning of the 16th century southeast of Lake Chad on the right bank of the Shari river, in a region which had formerly been raided for slaves. Under the influence of Bornu, its rulers adopted Islam, but the Islamisation of the population of Baghirmi was a longer process, as remarked by Barth (Travels, 1857, ii, 561): "Their adoption of Islam is very recent, and the greater part of them may, even at the present day, with more justice be called pagans than Mohammedans". During the 18th century, when the power of Bornu declined, Baghirmi prospered mainly on trade in slaves procured in raids to the south and the south-east. But in the 19th century both Bornu (which had recovered under the qa‘iba Muhammad al-Amin al-Kanimi) and Waday claimed Baghirmi as tributary. Pressed between her two powerful neighbours and exposed to raids and exactions from both directions as well as from Fazzan, the kingdom of Baghirmi disintegrated. Its destruction was completed in 1892 and 1897 by Rabiḥ.

Rabiḥ b. Faḍl Allāh [g.v.], one of the flag-bearers of the slave trader Zubayr Pasha in the Sudan, retreated westwards after his master had been defeated by Gessi Pasha. At the head of a slave army he skirted the powerful Waday and occupied the disintegrating Baghirmi in 1892. He then invaded Bornu, which had been caught unaware, sacked its capital Kukawa [g.v.] and became master of the whole Chad basin. He wrought destruction by his slave raids and punitive expeditions until he was overcome in 1900 by the advancing colonial troops of France, Germany and Britain. Though Rabiḥ had considered himself for some time a follower of the mahdi of the Sudan, he had little interest in religious affairs. Only in one corner of Chad does he seem to have contributed to the spread of Islam. Där Runga, south of Waday, had been for centuries a hunting ground for slaves, separated from the Muslim north by a hostile boundary. The absence of Muslim settlements or even itinerant traders beyond this boundary inhibited the spread of Islam. Rabiḥ made Där Runga a base for slave raiding farther to the south, and it was during this period that people adopted some Arab customs, Arabic garb and rudiments of an Arabic dialect. The process of acculturation, which brought also the spread of Islam, was most evident among chiefs and in the trading villages which developed at that time.

Most of the Arab tribes in Chad came from the Nilotic Sudan. The northern approaches through the Sahara had always been blocked by the Tubu and the Tuareg. But in 1842 a section of the Awlad Sulaymān, who had been defeated by the Ottomans in Fazzan, migrated south to the region just north of Kanim. During the second half of the 19th century, the Awlad Sulaymān fought against the Tuareg and the Tubu. Feuds among those nomads were somewhat mitigated towards the end of the century when the Sanusīya [g.v.] became established among both the Tubu and Awlad Sulaymān as well as in Waday. In 1835 Muhammad al-Sharif, who later became the sulṭān of Waday, met Muhammad b. 'Ali al-Sanusi [g.v.] in Mecca. Closer relations between the leaders of the Sanusīya and the sulṭāns of Waday developed during the reign of 'Ali b. Muhammad al-Sharif (1858-74), when the two parties cooperated in reviving trade along the route from Benghzai to Waday via Kufra. Sanūsī traders enjoyed virtually a monopoly over this trade, and the influence of the Sanusīya among the Saharan nomads contributed to greater security for the caravans. Successive
centres of the Sanusiyya—Diaghbûb (1856-95), Kufra (1895-9) and Kûrû in Borku (1899-1902)—were along this route. The southward shift of the centres of the Sanusiyya indicates the growing importance of this region for the order.

In 1874 the Sanûsî leader Muhammad al-Mahdi (1859-1902) exerted his influence to settle a succession dispute in Wâdây. The successful candidate Yûsûf (1874-98) became a devoted adherent of the Sanusiyya. In 1909 the Sanûsîs encouraged the sultan of Wâdây to resist the French colonial occupation. In Kânim, the Sanûsî zaîyu of Bîr 'Alûfî led resistance to the French from November 1901 to June 1902. Because of their involvement in anti-colonial resistance, the activities of the Sanusiyya came to an end after the French occupation. The Sanusiyya still have some adherents in Kânim and Wâdây, but the predominant tarîqa in Chad is the Tijjânîyya. The rulers of Wâdây and Baghîrîmi, as well as the alîfa of Mao (Kânim), are Tijjânîs. The Sanusiyya, however, still maintain their influence among the Tubu of Tibesti.

Though the Tubu had been nominally Muslims for a long period, Islam had had little impact on their life until their exposure to the Sanusiyya. The Tubu who had successfully resisted outside cultural and political influences, accepted the Sanûsî traders and teachers. Traditionally the Derde, the spiritual and temporal head of the Tubu in Tibesti, had only limited authority over his tribesmen, and Derde Shay (d. 1939) believed that greater commitment to Islam and the application of the Shari'a would enhance his personal authority. He invited Sanûsî teachers to teach the Tubu the ways of Islam. Though there is still considerable laxity in observing Islamic rituals and customs, the Tubu have become aware of their Islamic identity. Tubu elders often refer to the pre-Sanusiyya period as their ġâhîsîyya.

The Tubu are divided into two main groups: the Teda whose centre is in Tibesti and the Daza who live in Borku and Ennedi. The latter were exposed to the influence of 'ulamâ' from Bornu and Wâdây and seem to practise Islam with greater conformity. With greater security under colonial rule, traders and teachers were able to move more freely and farther away. The growing number of pilgrims from Nigeria and other parts of West Africa who passed through Chad as well as foreign merchants from Nigeria, Fazzân and the Sudan who operate in Chad, added to the impact of Islam on public and private life.

Some ethnic groups which in the past had sought refuge from the agression of the islamed states gradually came out of their isolation, mixed with other groups and adopted Islam. In 1910 Islam had reached only a few notables among the Buduma on the islands of Lake Chad, but in the middle of the century all the Buduma were considered Muslims. Though there are no exact figures, it is estimated that more than half of the population of Chad are Muslims.

Chad was of great strategic importance for France as the link between its African possessions of French Equatorial Africa, French West Africa and French North Africa. In the heart of Africa and remote, more than any other territory in Africa, from sea ports, the conquest of Chad, and subsequently its administration and development, posed numerous logistic problems. Only in 1920 did the French complete the "pacification" of Chad, when they overcame the resistance of the Tubu, who had been inspired by the Sanusiyya.

In 1929 the French introduced the cultivation of cotton as a cash crop in the south, and the Sara were the first to integrate into the modern sector of the economy and to reap its benefits. It was also among the Sara that the French recruited troops to their colonial army, and the Sara continue to dominate the army also after independence. Protestant and Catholic missionaries opened schools in the south and an educated elite emerged among the Sara.

The Muslims in the central and northern parts of Chad had their own system of Islamic education and were reluctant to send their children to French schools, or even to government (non-missionary) schools. Only a few sons of Muslim chiefs were sent to study in French schools in the first years of colonial rule. They returned to hold positions in the administration and were able to articulate support for the traditional authorities. Young Muslims preferred to go for advanced studies to Cairo and Khartoum, but on their return they discovered that because of their lack of French education they could not be employed by the administration. This frustration, combined with Islamic militancy which they had acquired in the Arab countries, led to their being considered a threat both to the colonial administration and to their own traditional authorities. As a remedy, an Arab-French school was opened in 1935 in Abeche. The French preferred the sultan of Wâdây, the alîfa of Mao, the Derde of the Tubu and lesser rulers, cooperated with the French administration and were able to retain, and sometimes even to strengthen, their political and religious authority. Only in the 1950s did the French introduce a series of reforms in local government which imposed some limitations on the power of the traditional rulers. But the latter faced an even greater threat with the introduction of elections to representative assemblies and with the emergence of political parties. With the support of the administration, the sultans were able for some time to send their own men to the territorial assembly. But in 1957, with an almost universal franchise, the neutrality of the administration and the decline of the chief's powers, the radical Parti Progressiste Tchadien (PPT), which had been engaged in grassroots politics, became dominant. The PPT's basis of power was among the Sara who were better educated, more advanced economically and more articulated politically. The PPT exploited divisions
among Muslim politicians, some of whom represented the interests of the traditional rulers while others, who had been exposed to influences from Cairo, North Africa and the Sudan, followed a more radical orientation.

When the Republic of Chad became independent in August 1960, the PPT had a marginal majority in coalition with minor political groups and individual politicians. Its leader, François Tombalbaye, became the first president of the republic. In the following years, Tombalbaye consolidated his power by gradually eliminating political rivals as well as ambitious allies. He relied on the support of the Sara, his own tribesmen, who dominated the armed forces. Most of the university graduates in Chad were also from among the Sara and they were appointed to senior political and administrative positions. But Tombalbaye sought also the cooperation of the traditional rulers, such as the sultan of Wad dé and the alifa of Mao. In order to appease them, he restored some of the powers that the sultans had lost in the reforms during the last years of colonial rule. In order to maintain a semblance of national unity, he had Muslim ministers in his cabinet, some of whom were brought back to the government after periods of isolation in prison or in the political exile.

Muslims in Chad felt humiliated when they found themselves ruled by the people of the south, whom they had considered for centuries savage infidels and a fair game for slave raids. The Muslims found it hard to adjust to the change in the balance of powers, and resentment increased when Sara officials replaced the French not only in the capital but also in the territorial administration.

Since 1966 sporadic clashes between the government forces and dissidents spread from the south-eastern provinces of Salamat to the provinces of Wad dé, Bathja and Baghirmi. Disturbances occurred simultaneously also farther north in Borku, Ennedi and Tibesti. Widespread unrest was channelled into a co-ordinated rebellion by the FROLINAT (Front de Libération Nationale), a radical movement which sought to overthrow the régime of Tombalbaye, to eradicate survivals of French colonialism and to foster closer relations with the Arab countries. Though couched in ideological terms, the rebellion was really an escalation of the conflict between north and south, in which the historical, cultural and religious background had current economic and political implications.

Until February 1972, FROLINAT operated almost freely from Libyan and Sudanese territories. Since then the Sudan has effectively sealed its border with Chad. In the middle of 1972 Libya also agreed to withdraw its support from the rebels, but it still harbours the leaders of FROLINAT and does not stop the supply of provisions and arms into Chad from Libya. French troops were sent to Chad, and they succeeded in establishing a measure of security in the eastern and central provinces. But following the withdrawal of the French troops the government's control of the countryside remained rather fragile.

In Tibesti there is not a clear line between Tubu tribesmen who support FROLINAT and those who fought in the civil war together with the Derde, their temporal leader. Through most of the colonial period the Tubu nomads of the farthest north were under French military administration. By agreement with President Tombalbaye this military administration continued after independence until 1964, when French troops have been replaced by Chadian troops who were mainly from among the Sara. These troops had hardly been prepared for the subtle task of governing the non-compliant Tubu nomads, and the situation has been aggravated by mutual distrust. Following a violent confrontation between troops and tribesmen, the military command resorted to collective punishment and detained for some time the Derde and his sons. In defiance of the government, the Tubu nomads deserted the oases and moved with their herds into the desert, as they had done also in the first years of colonial rule. The Derde and his sons took refuge in Libya, and from there directed the resistance of the Tubu.

On 15 April 1975 a military coup brought to power General Malloum who, like the deposed President Tombalbaye, was a member of the southern Sara tribe. The new government had only a partial success in achieving national reconciliation whereas the military situation deteriorated even further. In February 1978 a northern offensive extended the area controlled by FROLINAT to a point only 250 km from the capital Ndjamena (the former Fort Lamy). Their advance was checked only by French troops who had hastily been flown in. The internal conflict had international implications and Libya, together with Chad's two other neighbours—Niger and Sudan—brought the representatives of FROLINAT and the Chadian government to agree on a cease-fire. For the first time, after twelve years of fighting, there were at least formal arrangements for negotiations aiming at the rebuilding of Chad on the basis of equality between the north and the south. These negotiations, however, are bound to be difficult and lengthy [See also the Addenda and Corrigenda].

ments. As a punishment, the Sultan ordered the destruction of all the houses of the Caks in Trahgam, 25 miles north-west of Baramula. Pandi escaped, but was arrested to counteract the power of the feudal chiefs.

During the early part of Sultan Zayn al-Abidin's reign, Pandi, the leader of the Caks, organised a strike as a protest against coerced labour, and set fire to the Sultan's palace and some government buildings. As a punishment, the Sultan ordered the destruction of all the houses of the Caks in Tralgham, 25 miles north-west of Baramula. Pandi escaped, but was captured and executed along with all the members of his family fit to bear arms. Thus suppressed, the Caks remained quiet for some years. But taking advantage of the weakness of Zayn al-Abidin's successors, they recovered their position, and engaged themselves in the struggle for power against their rivals, the Magres. When Mirza Haydar Dughlat (739-42/1339-42), the founder of the Sultanate in Kashmir, made Lankar his commander-in-chief, patronising the Caks in order to counteract the power of the feudal chiefs.

The Caks ruled Kashmir from 968/1561 to 996/1588. The outstanding ruler of the dynasty was Yusuf Shaikh. He was a good administrator, generous, tolerant and just, but also at times ruthless; he appealed to Akbar for help. The emperor sent Yusuf Khan Ridwi to Kashmir, accompanied by some Kashmiri chiefs who acted as guides. Yusuf Khan, by adopting a policy of conciliation won over many Kashmiri nobles, and at the same time sent a force against Yakub. The latter continued to resist, but finding himself alone and isolated, he surrendered when Akbar arrived in the Valley early in Radjab 996/June 1586. He was imprisoned and died in Mubarram 1001/October 1592 and was buried, like his father, in Biswak.

Although leaderless, the Caks continued to resist the Mughals, but were ruthlessly crushed. Dhahangir's governor of Kashmir, Puqad Khan (1032-7/1623-7) hunted them down and killed them; eventually, they escaped to the hills and remote villages, taking up agriculture and other peaceful pursuits. The Caks ruled, though short-lived (968-96/1561-88), was culturally important, for the Cak Sultans, like the Akbarid Mughals, encouraged education, patronised poets and scholars and promoted arts and crafts. Two outstanding poets and scholars of the period were Babi Daud Khaki and Shakhj Vaikh Sara'i, and the most noted calligraphist was Muhammad Hasan, who entered Akbar's service and was given the title of zarfn kalum. Under Dhahangir and Shah Dinhan also, the most prominent calligraphists were those of Kashmiri origin.

CAD.CAMLÍBEL, Farkh Nafidh modern Turkish FARKH NAFIDH, Turkish poet and playwright (1889-1975). He was born in Istanbul, the son of Süleyman Nafidh, a civil servant in the Ministry of Forests and Mining (Orman ve Ma'dindin Nezareti). After high school he began to study medicine, but soon abandoned it to turn to journalism and teaching. He taught Turkish literature in Kayseri (1922-4), Ankara (1924-32) and Istanbul high schools and the American Robert College (1923-46). He was elected a deputy for Istanbul of the Democratic Party, DP, and served 14 consecutive years (1946-60) in Parliament until his arrest with other DP deputies by the Committee of National Unity (Milli Birlik Komitesi) which carried out the Revolution of 27 May 1960. He was detained on a Marmara island (Yatsinda) until his acquittal 16 months later. He died on 8 November 1973 on board ship during a cruise in the Mediterranean. Farkh Nafidh (as he was known until 1934 when he added Camlibel) began to write poetry at the age of 17 using the traditional türk metre. His early works Şehrîn sdha'nî ("The Sultans of the East"), Istanbul 1918, and Günselden gona ("From heart to heart"), Istanbul 1919, reveal the strong influence of Yahya Kemal [q.v.], who was the dominant literary figure of the period. The impact upon him of Divâliz (Ziya) Gökulp's teaching was most marked, and from then the treaty and declared himself sultan. He carried on the struggle against the Mughals, and inflicted defeats on the Mughal commander, Kasım Khan. Meanwhile, Ya'qub's intolerance towards the Sunnis, who were compelled to recite the name of 'All in the public prayers, antagonised their leader, who appealed to Akbar for help. The emperor sent Yusuf Khan Ridwi to Kashmir, accompanied by some Kashmiri chiefs who acted as guides. Yusuf Khan, by adopting a policy of conciliation won over many Kashmiri nobles, and at the same time sent a force against Ya'qub. The latter continued to resist, but finding himself alone and isolated, he surrendered when Akbar arrived in the Valley early in Radjab 996/June 1586. He was imprisoned and died in Mubarram 1001/October 1592 and was buried, like his father, in Biswak.

Under Dhahangir and Shah Dinhan also, the most prominent calligraphists were those of Kashmiri origin.

on he wrote in the line of the popular bards (şaz şairleri), becoming the most important member of the group called Beğ heyecanı şairî (five poets using syllabic metre, the others being Yusuf Divâ), Orkhan Seyfi, Enis Behlîdî and Khâlid Fakhrî; Dînî neyden ("Listen to the flute"), Istanbul 1913, and Coban şâmeesi ("Shepherd's fountain"), Istanbul 1926. But he did not completely abandon the 'arîdî, which he used (like his contemporaries) whenever he thought the subject matter lent itself better to this metre, as his Suda barkalar ("Circles on the water"), published in 1928 in 'arîdî, shows. In 1933 Fârîk Nâfi'dî published a selection of his poems under the title Bir omar boyu geçti ("A whole life gone by like this"). He collected his humorous poems Tâlî sert ("Bitter sweet") in 1938, and his epic poems Ahen tânsîleri ("Raider's songs") in 1939. Then followed a long silence until the publication of his Zindan duvarlarî ("Prison walls") in 1967. These are impressions of his prison days, in a rather outdated and hackneyed style, in the form of kitâbî (and not rub'î as stated by Mehmed Kaplan, Camhureyti deeri Türk şirîn, Istanbul 1975, 31-3, passim). An anthology selected from all his works was published by the Ministry of Education in 1969, Han duvarlarî ("Inn walls"), which is the title of his most popular poem. A master of form, Camlibel wrote unsophisticated romantic and sentimental poems of love, with no particular depth of feeling, but in an easy, flowing, polished and harmonious style which made him one of the most popular poets of the 1920s. Following the trend of the period, he also wrote patriotic and epic-historic poems, and many poems eulogising Anatolia (and its people), these being increasingly popular subject-matter for literature under the inspiration of the Nationalist movement following the First World War. Camlibel is also the author of a number of verse plays, mostly inspired by political motives (e.g. Azîn ("Raid"), Istanbul 1932), except for his powerful Dînî nur ("The monster"), Istanbul 1926, a vivid portrayal of the chronic conflict between peasants and landowners in Anatolia. Camlibel also attempted one novel, Yıldız yazma ("Rain of stars"), Istanbul 1936.

(See also Tâlî sert; Çawdir)

**Cawdor, or Çawdir, one of the major tribes of the Turkmen [q.v.].**

It appears already in the lists of 24 Oghuz tribes given by Mahmûd al-Kaşghârî (i, 57; Djuwaldar) and Rashîd al-Dîn (ed. A. Ali-zade, Moscow 1965, 80, 122; Dîjâwudur). The tribe participated in the Sâldjîk movement; the famous amîr Çaka, who founded an independent Turkmen principality on the Aegean coast at the end of the 11th century, is said to be a Çawdor. The tribal name (in the form Çawündur) was registered in Anatolia in the 16th century (see F. Sümer, Oğûtân, Ankara 1967, 315-17). The main part of the tribe, however, remained in Central Asia or returned to it from the west. In his Şadgar-i Türkî, Abû l-'Qâzî [q.v.] (ed. A.N. Kononen, text 61, Russian tr. 68), the Çawdor are mentioned among those tribes which came to Mangîshlak [q.v.] after disturbances in the Oghût îl. It remained on Mangîshlak till the 19th century, longer than any other Turkmen tribe. In his Şadgar-i Türkî (ed. Desmapson, text, 210, tr. 224) Abû l-'Qâzî mentions the Çawdor only once, in the account of the Turkmen tribes which paid tribute to the Uzbek khâns of Khîrazm at the beginning of the 16th century. The Çawdor are mentioned in the Ionian as a kind of a form together with another old Oghûz tribe, the Iğdir (in a form "İğdir Dîjâwûdur"); together they are said to pay three-fourths of the tribute imposed on Hasanîli. The term Hasan-i'i (Esen-i'i in the Turkmen pronunciation; also Esen-Kîân-i'i) has continued to exist till the present time, but its exact meaning is not quite clear; it seems that latterly it has been applied mainly to the Çawdors themselves and sometimes only to one of their main clans, the Kara-Çawdor. Besides the Çawdor and the Iğdir, the Hasan-i'i group included also the tribes of the Abdâl, Bûrçaçî (Boz Hâdîjî), Burundjîk and Köyîndîjî (Soînî Hâdîjî). In the 19th century all of them, except the last one, were mostly considered only as different clans of the...
same tribe Cawdor; in some descriptions, however, they appear as separate tribes.

In the 16th and 17th centuries, the dwellings of the Cawdor were located mainly in the northern part of Mangishlak, where the Buzaci peninsula still preserves the name of one of the above-mentioned clans. From the early 17th century, they were exposed to a strong pressure both from the north, by the Kalmuks [q.v.], and from the south, by the Khâname of Khîwâ. As a result of this pressure in the late 17th and the early 18th century, a part of the Cawdor and the Ildar as well as all the Soynandji migrated to the region of the Voigla Kalmuks, and, together with the Kalmuks, they became Russian subjects (see V.V. Bartoľí, Švâmmýn, ii/1, 613-14). At the end of the 18th century, they moved to the Northern Caucasus, and now they live on the rivers Manîc and Kuma in the region (kraj) of Stavropol; in 1960 their total number was estimated as more than 5,000.

The greater part of the Cawdor moved however in the first half of the 18th century to Khârazm, and from the early 17th century, they were the allies of the independent Uzbek rulers of the town of Kungrat in their wars with the khâns of Khîwâ [q.v.]. After the victory of Khlwa over the Khanate of Khîwâ in 1810, part of the Cawdor returned to Mangishlak, but in the 1830s and 1840s they finally left Mangishlak for Khârazm under the pressure of the Aday Kazaks, and since then their centre has become the town of Porsi (now Kalinin), about 30 miles to the east from Old Urgenc. Only an insignificant number of Cawdors still remain on Mangishlak.

On Mangishlak the Cawdor were nomads, though the number of their cattle was relatively small and an important part of their economy was fishing and seal-hunting on the Caspian sea. In Khârazm they became sedentarised farmers. Their exact number is unknown; the estimations of the late 19th and the early 20th century vary between 3,500 and 17,000 families.

Yu. Bregel

ČÄ-Y-KHÂNâ, lit. "tea-house", a term covering a range of establishments in Iran serving tea and light refreshments, and patronised mainly by the working and lower middle classes. The term kahwa-khânâ, "coffee-house", is used almost synonymously, though coffee is never served. This latter name, however, tells us something of the history of this institution, for most of which we have to rely on the accounts of the European travellers. One of the earliest references occurs in Chardin's Voyages (ii, 321), where in his description of Isfâhân in about 1670 he speaks of "les cabarets à café, à tabac, et pour ces boissons fortû qu'on fait avec le sucre du pays." There is no mention of tea here, nor in Hamilton's Journal of Travels, written nearly a hundred years later, even in Malcolm's History of Persia compiled at the beginning of the 19th century. Up to this point it seems that coffee remained the popular drink, but by 1866 Lycklama a Nijeholt was able to write that tea "forme la boisson ordinaire des divers habitants de la Perse" (ii, 105), though elsewhere he mentions that coffee as well as tea was served to him by the Imâm Dju'mâ' of Isfâhân. Yet even he does not use the term čä-y-khânâ, though he does mention that the word kahwa-khânâ was applied to part of the servants' quarters in a large Persian house. E.G. Browne in 1887 records a stop at "a little roadside tea-house" near Tehran, and adds, "Many such tea-houses formerly existed in the capital, but most of them were closed some time ago by order of the Shah. The reason commonly alleged for this proceeding is that they were supposed to encourage extravagance and idle-ness, and, as I have elsewhere observed, evils of a more serious kind. Outside the town, however, some of them are still permitted to continue their trade and provide the "bona fide traveller" with refreshment, which, need-less to say, does not include wine or spirits." (A year amongst the Persians, 82). Elsewhere Browne mentions frequently the serving of tea at private entertainments, but never coffee.

Evidently, then, a fairly sudden change of habit took place during the first half of the 19th century, though why tea should suddenly have been preferred to coffee (neither of which grew in Iran at that time) is not clear. It is not even certain when tea first became known to the Iranians. Birûni's Kîhîh al-Saydâna, written in the first half of the 5th/11th century, gives a detailed account of čäy, but only as a plant grown and used in China. According to a Safavid manuscript referred to without quotation by Faridûn Adîmyât in his Amir-i Kabîr va Iran, tea was drunk in Iran in Safavid times; but the same author suggests that the wide-spread introduction of tea-drinking into Iran was due to Amir-i Kabîr [q.v. in Suppl.], who in 1849 received gifts of silver samovars from the Russian and French governments on the occasion of the coronation of Nâsîr al-Dîn Shah, and encouraged the craftsmen of Isfâhân to copy them. From then on, tea began to be imported in significant and increasing quantities, mainly the black tea of India, which was preferred to the milder Chinese. Tea was not actually grown in Iran, and specifically in the Caspian area, until 1896.

The first dictionary appearance of the word kahwa-khânâ is in Francis Johnson's, published in 1852; but the word čä-y-khânâ does not appear until the most recent dictionaries (e.g. Dihkhâda, pt. 41, 1338/1959). Even the omniscient Haim (1935) does not list it, but under kahwa-khânâ adds the definition "[in Persia] a tea-house". However, the word čäy-khânâ was certainly in common use by that time; indeed A.V. Williams Jackson met it as early as 1903, when he found along his route "muđ cabâms which served as tea-houses (čây-khânâb)" (Persia past and present, 34).

At the present time the terms čä-y-khânâ and kahwa-khânâ are to some extent interchangeable, but the former tends to be used for the small way-
June 1907: "In many of the prose or verse. In Adharbaydjan a similar role is often filled by the local (male) community (a very few have curtained-off compartments for women). Both types of establishment serve much the same fare—tea, prepared with the aid of a large samovar, bread and cheese, eggs, perhaps ăh-ă găšt or some other such simple dish, and of course the kăyă (water-pipe). Căyak Tewfik is obtainable only in the more sophisticated, European-style café (kăfa), patronised by wealthy clients, where tea, ice-cream, soft drinks, and French pastries are also to be had. For entertainment, there is the takht-yı nard (backgammon board), and often the nakkălı, who recites long dramatic episodes from the Şah-ńama, or traditional epics and folktales in prose or verse. In Ādhabāyān a similar role is often filled by the āl-kăh, who recites mystical poems (ma‘bud) in Persian, accompanying himself on a stringed instrument. Dervish fortune-tellers (rammāl) are also commonly to be seen. In times of high political activity the kahwa-khāna may serve as a centre for the dissemination of news and views. Browne, in The Persian revolution, 143, quotes an unnamed Persian correspondent, writing on 19 June 1907: "In many of the Qahwa-khānas professional readers are engaged, who, instead of reciting the legendary tales of the Šah-ńama, now regale their clients with political news."

Many of the older kahwa-khānos are decorated with paintings and frescoes dating from Kăyār times. These may depict religious scenes (the martyrdom of Husayn, for instance, or the fight between Bžhan and Hman), love-stories (Laylā and Majnūn, Shhīn bathing), and dancing girls, musicians and entertainers at the royal court.

(L.P. ELWELL-SUTTON)

CAYLAK TEWFIK, modern Turkish CAYLAK TEFVIK, Turkish writer and journalist (1843-92). A self-taught man, he was born in Istanbul and became a civil servant. He started his career in Bursa and continued in Istanbul where he published the papers Ahir ("Century"). Later renamed Letaş-i ağır and Terâbek ("Progress"). In February 1876 he published his best-known paper, the humorous Câylak ("The Kite"), which became his nick-name and which ceased publication in June 1877 after 162 numbers. In 1877 he went, with a delegation, to Hungary for a month and on his return he published his impressions as Yâdgâr-i Mağârişân ("Souvenir of Hungary"). Câylak Tewfik is the author of the following works: Kâfis-i bu‘ād, alphabetically arranged poems (tanzim-i bu‘ād), the letter dâl); Istanbul’dâ hir sene ("A year in Istanbul"), Istanbul 1297-9 Rûmî (1881-3); his best known work, the general title of a series of five books, consisting of realistic descriptions of everyday life in Istanbul. The subtles of the work are (1) Tandir; (2) Mahalle kahvesi; (3) Kâhîddînâne; (4) Rahmanî gedaşleri; and (5) Meykânè. Câylak Tewfik pioneered the Nâsr al-Dîn Khâdja literature in modern Turkish, and published three volumes containing about 200 stories on him, Lela'î-fi Nâsr al-Dîn, Bu Adan (1883) and Khaçêne Lêt’îf (1885).

ČEH, the Ottoman term for the inhabitants of present-day Czechoslovakia, mainly Bohemia and Moravia, but partly also Slovakia. The Arabs did not use this term, although the territory was known to them as Čehistan until the end of the 3rd/4th century. In the so-called "Anonymus' cartularies" (early medieval Latin) the name Čeh (Čehia) was used for both the Czech and Slovak peoples, preserved by a group of early and later Muslim geographers (Ebn Rusta, Hudâd al-‘alam, Gardizî, al-Bakri, Marwazi, Afi‘î, the name of Svatopouk (spelled variously as Sw.n.t.b.l.k.)), etc.) ruler of the Great Moravian Empire (871-94), is mentioned. The name of his land (Mirwāt, M.r.ât) is also given in some sources, but its localisation is erroneously shifted too far to the east (cf. Ibn Rusta, 142-5, tr. Wiet, 160-5;HUDâd al-‘alam, tr. Minorsky, §§ 42, 46; Gardizî, ed. Barthold, 90-100, ed. ‘Abd. al-Ḥasayn Ḥabib, Tehran 1347/1968, 275; Marwazi, ed. Minorsky, 22, 35).

Al-Mas‘ûdî must have had an excellent informant (probably a Slavonic slave from this region) on the ethnic and political situation in Central Europe, since his relation is entirely independent of other sources and rich in detail not to be found elsewhere. In the list of Slavonic tribes and their rulers we find also the name of Wenceslaus (Prince of Bohemia (871-94), is mentioned. The name of his land (Mirwāt, M.r.ât) is also given in some sources, but its localisation is erroneously shifted too far to the east (cf. Ibn Rusta, 142-5, tr. Wiet, 160-5;HUDâd al-‘alam, tr. Minorsky, §§ 42, 46; Gardizî, ed. Barthold, 90-100, ed. ‘Abd. al-Ḥasayn Ḥabib, Tehran 1347/1968, 275; Marwazi, ed. Minorsky, 22, 35).

the oldest extant in the literature, and the whole account belongs to the most valuable sources of early Czech history. Unfortunately his relation is not conserved in its entirety, but only in excerpts in al-Bakri's al-Mamlak wa'l-masalik, some fragments are preserved by al-Kazwini and by the late Maghribl geographer Ibn 'Abd al-Mun'im al-Himyari in his Kitab al-Rawd al-mirtab (Bibl. Nat. Rabat, Ms. no. 238).

After the 4th/10th century, the country of the Czechs and Slovaks wanes from the horizon of Arab and Persian geographers. The only exception Czechs and Slovaks wanes from the horizon of Arab and Persian geographers. The only exception

The next time the Muslim peoples came into contact with the territory of modern Czechoslovakia was under the Ottoman Empire. The Ottoman expansion in the 11th/17th century touched also some southern regions of present-day Czechoslovakia, these regions then forming a part of the Hungarian kingdom. Following the Battle of Mohacs in 1526, the Turks successively conquered Buda in 1541 and Esztergom in 1543 and occupied the village of Kalat (today Stúrovo), where they built a small fortress, called Cigerdelen Parkani; this was the beginning of Ottoman rule over Czechoslovak territory. In 1544 they conquered the fortress Fil'akovo in eastern Slovakia and Nograd and Szécsény in northern Hungary. This territory was then organized into four sanjaks, those of Esztergom, Nograd, Szécsény and Fil'akovo, where more than 90 villages and hamlets on the territory of present-day Czechoslovakia were located.

During the so-called Fifteen-Years' War of 1593-1606, the Ottomans lost the larger part of this region, so that afterwards only about 200 villages remained under their rule.

The greatest military enterprise of the 11th/17th century, the campaign of Kopruju Ahmed Pasha against the Habsburg monarchy in 1663-4, touched again Czechoslovak territory. In 1663 the Turkish army conquered the important fortresses of Nové Zámky (Uyar, Neuhäusel, Ersekjüvár), Nitra and Levice as well as many smaller fortifications. After the peace of Vasvár of 14 August 1664, the fortress of Nové Zámky, together with 786 villages and hamlets in southern Slovakia, remained in Ottoman hands (cf. Deffer i mutfasî-i eydel-i Uyar, Bağbakanlık Arşiv, Tapu Defterleri, Nos. 115-698). Out of this territory a new eydel was constituted with its headquarters in Uyar. Ottoman rule lasted here until the conquest of Nové Zámky in 1685, whereas in the eastern regions of Slovakia it persisted till a year later, when the township of Rimavská Sobota paid for the last time taxes to the Ottomans.

Since the treaties between the Ottomans and the Habsburg monarchy were frequently infringed, the frontiers remained unstable and underwent many changes. The Ottoman administration considered all villages inscribed in the tax-registers or defters as its own territory and insisted firmly on this view, whereas the opposite party was not willing to accept this state of affairs. There thus emerged a wider frontier zone under the fiscal jurisdiction of both parties, i.e. a condominium. The inhabitants were forced to pay taxes to both sides; the levy of taxes on the disputed territory led to incessant fighting, to punitive expeditions for non-payment, to raids and plunderings of villages as well as to dragging-away of peoples into captivity or slavery. The main raids occurred against Roštava and Jelšava in 1536, Gemen in 1569, Vráble in 1584 and 1630, Krupina in 1564, Zarnovice in 1564, etc. The marauding raids, chiefly by Tatar troops, devastated many times the whole region of the Váh and Nitra rivers (1543, 1555, 1575), as well as eastern Moravia (1530, 1599, 1663).

The only Turkish traveller who visited the territory of Czechoslovakia was Ewliya Celebi, who travelled in the southern regions in 1606-8 and also took part in the campaign of 1663-4. He visited and described the following towns and fortresses, borrowing his information from various sources and being unable to harmonize it (cf. Lewicki, Polska, part 2, passim).

Two Ottoman officials in the same campaign have also left accounts: Mustafa Zuhdi in the Ta’rif-i Uyar (Halis Eleni Ktp., No. 2230) and Mehmed Nedjat I in the Ta’rif-i after-i Uyar (Revan Ktp., No. 1300), both written in 1663. In the Turkish historical literature the events of war on Czechoslovak territory were described in some detail by İbrahim Peçevi (conquest of Fil'akovo, Ta’rif-i, i, 139-40; of Sobotka, ii, 140; the siege of Komárno, ii, 154-6).

Kâtib Celebi gave an account of events of the Fifteen-Years War in his Feghîke, i, 19-20, 132-6, 261-2.

**DABBĀGH (a.), “tanner”, frequent as a niha in mediaeval and modern Arabic. In pre-Islamic Arabia, the tanners were Jewish craftsmen. During the lifetime of the Prophet, his Companions, such as al-Hārīrī b. Sabāra, Sawda, Asma' bint 'Amir and others, were associated with tanning. Saidh al-Karaz, one of the Companions of Muḥammad, was busy trading in fruit of the acacia (karaz) which was widely used as a material for the processing of leather. During the Umayyad, Abbasid and Mamluk periods, there were many Jewish and Arab tradesmen engaged in tannery. Dāhīh mentions Jewish tanners; al-Sam'ānī and Ibn al-Azhīr, on the other hand, cite numerous names of Arabs who were well-known not only as dabbaghs, but also as transmitters of traditions and religious lore.

The tanners worked and lived in the suburbs of towns and villages, and had their separate lanes (darb) in the markets known as darb al-dabbdghin. They had their shops close to the camel-market of Mirbad in Baghdad, granted these districts to a local shepherd (ṣubbān). By the 19th century, the family was divided into two branches, one controlling Tiyek and Ekbez and the other Hacilar. The Coban-oghullari played a part in the attempts of the more powerful derebey families of the Cilician region to maintain their local autonomy against the Porte in Istanbul, and were at times allied with e.g. the Kucuk 'Ali-oghullari (q.v.).

**DABBĀGH, ABŪ ZAYD 'ABD AL-RAḤMĀN b. MUḤammad b. 'Ali b. 'Abd Allāh al-Āyārī al-Usaydī, b. 605/1208-9, d. 699/1300, was, according to the eyewitness and probably interested testimony of al-'Abdārī, the unique true scholar in al-Kayrawān of his time. If one can believe an anecdote which states that he owed his cognomen of al-Dabbagh to the fact that his great-grandfather disguised himself as a tanner in order to avoid the office of ṣubbi, he must have stemmed from an ancient family of Kayrawānī ṣabībīn. Al-'Abdārī, who visited him in 688/1289 and received from him a general indebtage for the transmission of his whole work, praises his hospitality, fine appearance, amiability, lofty mind and breadth of knowledge. He was well-versed in all the traditional Islamic sciences, was a felicitous poet and excelled above all in hadith. His masters had been numerous (over 80), and he devoted to them, in the fashion of the time, a bānānīyya or catalogue, which has survived. He also wrote a work on hadith, al-'Abdārī al-arba'a fi 'aṭām rāyāt Allah bi-'ādāha al-'ilāmān, a history, Ta'dīkh Mulluk al-İslām and a collection of edifying vitae, Qa'a al-ṣafā fi manṣūk al-anbā', none of these works has come down to us.

However, al-Dabbagh owed his reputation above all to his tabākāt devoted, in a chronological order by dates of death, to the saints and scholars who had either lived in al-Kayrawān or had visited it. According to al-'Abdārī, this was called Mālik al-imān wa-ra'ayat al-nasā'īn fi manṣūk al-maghfīrān min sulhā al-Kayrawān, and was in two big volumes. He drew substantially on the oldest sources, and especially on the Taḥākāt of Abu 'l-Arab and the Rādīd of al-Mūlūk. Al-Dabbagh's work is turned copied and enlarged firstly by Brāhīm al-Awswānī (d. ca. 719/1320), and above all by another Kayra-
warn, Ibn Nadji (d. after 839/1435), who completed it by adding biographical notices of the scholars of by the verb kultu "I say". Hence al-Dabbagh's work Mcfalim al-imdm fi ma'rifat ahl al-Kayrawdn. The earlier texts personal remarks generally introduced this (1320-5) is very poor, but has been re-edited in diverse world of piety and The Tunis edition of Hulal, c. 1970, i, Leipzig 1897, 145). The ori- Armenian Grammatik, volume and seems unlikely to continue. For his part, a more critical way by Ibrahim Shabbuh (i, Cairo tors and called the Silsilat al-Dhahab ("Golden chain"). He was in fact the descendant of a famous line of drapet Areac and this originally Iranian word passed in Sasanid Persia to denote the secretaries of the state. A knowledge of writing and secretaryship was such as Aramaic and Armenian; for etymological records that Ardashlr learnt as"lucky door"). AL-DABBAGH, ABU ZAYD CABD AL-RAHMAN — DABU

DABIR (s.) "scribe, secretary", the term generally used in the Persian cultural world, including the Indo-Muslim one (although in the later centuries it tended to be supplanted by the term manushi, so that Yule-Burnell, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases, London 1886, 328, record "dubeer" as being in their time "quite obsolete in Indian usage"), as the equivalent of Arabic käthib and Turkish yazdî. The word appears as dipy/dibhr (Pahlavi orthography dip(w)r), see D.N. MacKenzie, A concise Pahlavi dictionary, London 1971, 26) in Sasanid Persia to denote the secretaries of the government departments, an influential body in the state, and a chief secretary, Erân-dibhrat or dibhr-mahâli is mentioned in such sources as the Kámân-g-i Arđâdîg; see, for instance, Max'ûd Tanbâl, 104, tr. Carra de Vaux, 148, giving the daghrîbdh) as the fourth of the five great dignitaries in the Sasanid state. A knowledge of writing and secretaryship was considered part of a gentleman's education, and the Kârânmag records that Ardashlr learnt dibhr at Bâbak's court (see M. Boyce, The Parthian gozân and Iranian minstrel tradition, in JIRAS [1957], 32-3). From Sasanid usage it passed into Armenia, where we find mention a chief secretary, draped Anau' (H. Hülschmann, Armeische Grammatik, i, Leipzig 1897, 145). The origin of the word is seen in Old Iranian *dâbha- "bearer of writing" and this original Iranian word passed during pre-Islamic times into more westerly languages, such as Aramaic and Armenian; for etymological details, see W. Eilers, Ironisches Lehngut im arabischen Lexikon: über einige Benennungen und Titel, in Indo-Iranian Spr., v (1961-2), 216-17.

For the functions of dibhr in Islamic times, see Kâthib, ii and iii, and also Brown and v. (C.E. Bosworth)

The hyena family comprises four species, distributed geographically throughout Africa and from Arabia to Bengal; this means that the majority of Muslim peoples, and especially all Arabic and Berber speakers, have always been familiar with this repulsive carrier of disease. Stronger and more ferocious than the former, this hyena has no more than one or two cubs a year, and night, the members of a pack pose a formidable threat to cattle and deer, and they have been known to attack isolated travellers; within the pack, a strict law regulates the distribution of captured prey. Much less prolific than the spotted hyena, the spotted hyena has no more than one or two cubs to a litter. The other two species of hyena, the brown hyena (Hyena brunnea), and the aard-wolf (Proteles cristatus), an insectivore, are virtually unknown in the Arab countries, being confined to central and southern Africa.

The Greeks, who knew of the hyena through the writings of Aristotle (Hist. Anim., vi, 32) and Hero-
dotus (iv, 192), had only two words for the animal: ʿuṣṣna and yālūnū, while the Arabs, many centuries before Islam, employed a wide vocabulary of terms to describe both the physical appearance and behaviour of the hyena (see Ibn Sīdūh, Mudhafāsās, viii, 69-72); among the most frequent epithets for this nocturnal animal a whole range of pejorative epithets with the sense of “vileness”, “filth”, such as madām, khan'a, qfshal, khal'a, khaz'al, etc. The effect of this ignominious gait is aggravated by the fact that the female hyena is always inspired disgust, with its necrophagous instinct (al-khqffuf), known in different regions as “the crier” (al-khabar), “mother of the sands” (umm al-rimāl) and “mother of the hill” (umm al-kalada) is a sign of bad luck; striking a light is the only way of banishing this unwelcome companion, this animal which joins forces with the wolf (ādhā nakbāl), the jackal and the vulture in consuming the scraps left behind by the lion, the panther, the leopard or the carcass of the underground cave where the hyena sleeps during the day is often shared by some snake or other large reptile with which it coexists peaceably;

In spite of its ferocious and formidable appearance, the hyena is, in fact, characterised by cowardice; once captured and muzzled and seen in daylight, the animal is so terrified that it gives the impression of total bewilderment and stupidity. This well-known behaviour led the Bedouin to coin the phrase abnāk min ḍabh'a “more foolish than a hyena” and the epithet ḍabab'al/dabab'āl “a hyena” or “a fool”, meaning that the animal before being used as a word of reproof for silly or mischievous children. In the Maghribi, a brutal or foolish person is contemptuously described as madāb'ār or ḍabab'āh, implying that, in the words of the proverb ḍab' rās ḍha', “he has eaten a hyena’s head”. Although the young of the species, if caught before the age of weaning, is easily domesticated and proves very much attached to its master, the adult is quite untamable, as is shown by the tragic story of the kind Bedouin who gave refuge to a hunted hyena and was eaten in its sleep as a reward for his benevolence, an episode which gave rise to the proverbial expression maḏūq umm ʿāmir “protector of the hyena”, applied to excessive hospitality shown towards a stranger.

The incorrigible and unsociable temperament of the adult hyena and its latent malevolence gave rise to the metaphorical sense of the word ḍab'a, as used by the Arabs to describe years of drought and distress and misery which accompanied them (Ḥayawān, vi, 446-7). Still more explicit was the old adage kharāt bayna-hum al-dibdā, “the hyenas have defecated between them”, used in reference to rival tribes divided by implacable hatred. Comparison to the hyena, as to the monkey [see ḫirān] and the pig [see ḥimṣīn], was a grievous insult in Arabic as in Persian; in the latter, rā-yi kafṭar “face of a hyena” was used to describe repulsive features inspiring distrust (Ḥayawān, vi, 452).

Belief in hybrid forms produced by matings of the hyena and the wolf was firmly entrenched in the Arab mentality, and al-Dāḥibī was the first to dare to refute it categorically (Ḥayawān, vi, 181-3). According to the latter, copulation of a male hyena with a she-wolf would have produced the sim, a creature renowned for its agility (see al-Damfrī, Ḥaṭy, ii, 27-8), identified by modern naturalists with the Cape hunting-dog (Lycaon pictus), a canine. An inverse crossing would have produced the ‘ibshār (see al-Damfrī, Ḥaṭy, op. cit., ii, 115-6), probably to be identified with the aard-wolf, a species of hyena mentioned above. According to another legend dating from the early years of Islam, the sim' and the ‘ibshār, offspring of the hyena and the wolf were, in fact, the progeny of two tax-collectors, transformed into these two carnivores by Allah as a punishment for their greed (Ḥayawān, v, 80, 148-50); this alleged pu-
nishment gives historical force to the unfortunate repu-
tation for usury acquired in this period by tax-col-
collectors and money-changers. Still more extravagant was
the idea of the evolution of the giraffe (zardfa),
accord
ing to the following process: in Abyssinia, a male hyena
with, according to its sex, a male or a female oryx,
which, mating in its turn
gives birth to the giraffe as a definite product. Although
this comical explanation defies all the laws of genet-
icics, it does, for the simple-minded, account for the
physique of the giraffe; it has the low hindquarters of
the giraffe and the head of a hyena, the
is asleep!" Another injunction was more distateful
preliminary, to undress and to arm himself with cords
in the burrow itself. The brave
had enthusiasts, using the best means available
in the capture of the hyena; these include the hunt-
traps, consisting of the carcase of some ani-
men. As a result, consumption of the meat of this
hyena, known in Arabia. As a result, consumption of the
meat of this scavenger
is regarded as permissible by the
Shi'is and the Hanbalis (see H. Lauout, Le prêts de
droit d'Ibn Qudamah, Beirut 1950, 224; al-Kalajahshdl,
Shah al-dhgh, ii, 47-8); E. Graf, Jagdhand und Schlachtter
im islamischen Recht, Bonn 1959, 143, 233); Mûlik b.
Anas and his followers were more reticent, consid-
ing the consumption of the meat of this scavenger
"worthy of reproof" (makhrîh). As for Abû Hanîfa, he
maintains categorically that this meat is absolutely
impermissible, on the basis of the formal prohibition
applying to all carnivores equipped with canine teeth.
Whatever the motive, consumption or destruction,
the capture of the hyena was a practice that always had
enthusiasts, using the best means available
according to the time and the place. In Islamic coun-
tries, the simplest and oldest method of hunting, no
doubt dating back to prehistoric times, was to trap
the animal with cords in the burrow itself. The brave
man who had the audacity to confront this adver-
sary, in spite of its terrible bite, was obliged, as a
preliminary, to undress and to arm himself with cords
tied into slip-knots; he would then approach his
ty in the burrow itself; the brave
man who had the audacity to confront this adver-
sary, in spite of its terrible bite, was obliged, as a
preliminary, to undress and to arm himself with cords
tied into slip-knots; he would then approach his

tepy or the snare (kifjî) with a running knot to catch the
paw. Each of these devices was accompanied by a
bait (rimma) consisting of the carcase of some ani-
mal. In more recent periods, metal traps with tongues
have replaced all devices previously in use. Such
traps should be large and very powerful, because in
many case the hyena's vice-like jaws are strong
enough to bend steel. The Mamlûk Ibn Mangî,
summarizing the results of his research
in the 7th/13th century (ms. Escurial
48); he could, for his personal safety, arm himself
with a sharp dagger (see L. Mercier,
Kitab al-Masdîd wa 'l-matdrid
al-bayzara from the 7th/13th century (ms. Escurial
3 fol. 162b-163b), has given accounts of various
procedures, other than that described above, for the
capture of the hyena; these include the hunt-
traps, consisting of the carcase of some ani-
men. As a result, consumption of the meat of this scavenger
"worthy of reproof" (makhrîh). As for Abû Hanîfa, he
maintains categorically that this meat is absolutely
impermissible, on the basis of the formal prohibition

Whatever the motive, consumption or destruction,
to a wall by its tail and to set dogs on it, torturing it for three days before killing and burying it; with the evil destiny thus exhausted, rain was sure to come soon. Such is the interpretation laid on these obscure ritual practices by the mythologists.

In spite of everything, the hyena should not be unjustly abused because, wherever it lives inproximity to man it is, with the jackal and the vulture, a factor in biological equilibrium, contributing to the elimination of decomposing organic matter, the source of diseases and epidemics. In Islamic countries, the rural populations willingly accept the presence of the hyena in spite of its unpleasant instinct for digging (فجاف); at night, the animal is present in large numbers on the outskirts of encampments and villages, disposing of the garbage and waste products thrown out without any regard for hygiene.

In ancient medicine, as practised by the Greeks and later by the Arabs, the hide of the hyena, in all its forms, offered a wide range of therapeutic properties, the most valued being the supposed aphrodisiac quality of its brains and genital organs when dried and made into powder; but this drug only had a generative effect on the man and induced frigidity in the woman. Bearing in mind the mutual hostility between the live hyena and the dog, it was quite logical to extend this hostility beyond death and to use the remains of the former to repel the latter; also, in carrying one's piece of hyena's skin or its dried tongue gave protection against dog-bites and, consequently, rabies. Similarly, anointing oneself with grease from a hyena would prevent dogs from barking at one's approach; this practice was well-known to burglars. Applying the same grease to a placid dog would immediately transform it into a ferocious animal. A hyena skin buried at the entrance to a house was a permanent means of denying access to all dogs and, hung up outside a village, it kept all pestilence at bay. Wrapped round the siege or the measure used in the handling of grain, this skin preserved the seed against depredation by grass-hoppers and birds; with fruit trees, the same effect could be achieved by the use of the animal's claws. In addition, the head and the tongue of the hyena were lucky talismans; the former promoted fertility in a woman and guaranteed a successful birth. To this list of major qualities a large number of secondary properties could be added, and one might conclude that the hyena, for which the Arabs had no sympathy in the early 617/1220 (Djuwaym-Boyle, i, 102, 117), was mortally wounded (see Barthold, op. cit., 250, 295-6). Dabusiyā apparently flourished at this time and was a mint-town of the Karakhānids (see Zambaur, Die Munzprägungen des Islams zeitlich und ortlich geordnet, i, Wiesbaden 1968, 110). During the Mongol period, Dabusiyā and Sar-i Pul both opposed Čingiz Khān's hordes in early 617/1220 (Djuwaym-Boyle, i, 102, 107, 117), and operations around it between warring Ozbeg princes are recorded by Bābur in the opening years of the 10th/16th century (Bābur-nāma, tr. Beveridge, 40, 124).

Dāgh U Taštīhā — Dāhīs

Maydānī, Muḥammad al-amīdī, Cairo 1959, ii, 110-21), and Ibn al-Athīr, Beirut 1965, i, 566-83, neither of whom cites his authorities. The latter version is considerably curtailed and at the same time is eked out by the addition of dialogue and transitional passages to make the story more interesting and to fill in gaps in the narrative. A much shorter account also from Abū ‘Ubaydah, in Ibn ‘Abd Rabbih, al-fikd al-farād, v. Cairo 1946, 150-60, is divided into ayām.

All the primary accounts differ considerably one from another. We shall first summarise the main events of the war as they are related in the Nakād al-aṣba‘a and then point out the more important differences in the other sources.

Dāhīs was ill-omened even before his birth, since the owner of his sire tried but failed to recover the seed deposited in the womb of the dam, because the pair had mated without his knowledge or consent. The stallion grew up to be a swift runner and eventually became the property of Kays b. Zuhayr of Abs, who seized him in a raid (83-5).

Different reasons are given for the ill-will between Kays and Hudhayfa, but whatever the cause, it eventually culminated in a horse-race arranged between the two. Each agreed to run a stallion and a mare. Kays bet on Dahis and al-Ghabrā3 and the entries of Hudhayfa were al-Khāṭṭār (or Kurzul) and al-Hanfā‘. To make sure of winning, Hudhayfa stationed men along the course who seized and held Dāhīs until the other horses passed. When released, Dāhīs overtook the two horses of Hudhayfa and would have come in second behind al-Ghabrā‘ but again the Banū Fazara intervened and beat off the leaders, preventing them from finishing first. Both sides claimed victory, and the wager was not paid (83-8).

First blood in the conflict was drawn by Kays, who while on a raid killed ‘Awf b. Badr, the brother of Hudhayfa. The bloodwit of 100 camels was paid by al-Rabī‘ b. Ziyād al-‘Absī. Despite this, Hudhayfa retaliated by sending a group of men, among whom was his brother, Hamal b. Badr, against Mālik b. Zuhayr, the brother of Kays, who was married to a woman of Fazara and living in the vicinity. Hamal kills Mālik, and when al-Rabī‘ hears of this, he leaves the āwār of Hudhayfa, which he had enjoyed up to this time, and joins Kays (88-92).

At this point there is a digression to explain an estrangement that had occurred between Kays and al-Rabī‘, who had stolen a coat of mail belonging to Kays. The murder of Mālik, however, reconciles the two men, who combine their forces against Hudhayfa (90). They demand the return of the camels that had been paid as blood money for ‘Awf, but Hudhayfa refuses. Then another brother of Hudhayfa, Mālik b. Badr, is killed by a certain Dūmaylī b. al-‘Absī, a distant relative of Kays (93-4).

Peace is then sought by al-Aslā‘ b. ‘Abd Allāh al-‘Absī, who gives several young boys to Fazara as hostages. Hudhayfa, however, is implacable. He gets possession of the boys and kills them one by one, forcing them to call on their fathers for help as he shoots them to death with arrows. Among the boys were Wākid b. Dūmaylī and ‘Uthab, the son of Kays b. Zuhayr (93-4).

Next follows a series of battles in which ‘Abs are victorious. On the Day of Khaṭṭārā‘, at which Hudhayfa was not present, Fazara lost several prominent men, among them al-Hārīth, another brother of Hudhayfa (94). Hudhayfa mustered his forces and set out in pursuit of ‘Abs, but fell into a trap laid

Dāhīs were remote not expected to bring their horses to the muster before twelve years, but after six years since the last muster, one-tenth of their income was withheld. If a mansabdar was promoted to a higher mansab and three years elapsed since he last presented his horses at a muster, he received a personal increase of salary, but was allowed to draw the allowances for the increased number of his men only after the first muster. He then obtained assignments against his old and new men.

The entire machinery of branding and inspection was controlled by the Bakhsjhi-yi ma‘allāt (or Mir bakhsjhi) in the central administration. He had under him bakhsjhi posted at the capitals of šāhās or provinces. The actual work of branding and inspection was done by an officer known as the Dagh u tashiha, who reported to the bakhsjhi. This department was very important for maintaining the Mughal army up to prescribed standards, and the decline in the quality of Mughal troops in the 12th/18th century was widely ascribed to the collapse of the dāgh u tashiha system.

Rawaha, a distant relative of Kays (93-4).
by Kays, who sent off the animals and non-combatants in one direction, and together with his warriors went in another. As he expected, Hudhayfa and Dhubyān followed the animals, and, as they scattered to gather in the plunder, 'Abs fell on them unexpectedly and wreaked such slaughter that al-Rabī’ b. Ziyād and his brothers begged him to desist. This battle was known as the Day of Dhu Ḥusā (94-5).

Hudhayfa and his brother Hamal escaped the carnage, and with a few companions came to the Well of al-Haba‘a, where they were finally hunted down by a group of ‘Abs, among whom was Ṣhadddād, the father of the poet ‘Antara. Both Hudhayfa and Hamal were killed. The Nakkā'ī adds as an after-thought that it was said that Hudhayfa killed the mother of Kays, whom he found among the animals, on the Day of Dhu Ḥusā (95-6).

From this point, the fortunes of war change. The rest of the chronicle is given over to the wanderings of ‘Abs, who, hard-pressed by the combined forces of Dhubyān, leave their homeland in an attempt to find allies or qiwār among the Arabs who were not of Ghatafan. They first defeat the Banū Kalb on the Day of ‘Urār, then they go to the Banū Sa‘d b. Zayd Ṭanār, who give them a pledge of security for Dhubyan, leave their homeland in an attempt to find with the Banū Khims and the chances for ‘Abd al-Hamīl in al-Yamama, but find no support with them. They finally find Ḟudayl with ‘Amīr b. Sat‘a‘a, but it is given grudgingly and ‘Abs are subjected to indignities. It is during this period that they participate in the Day of Shīr Džabal referred to above. Thereafter they leave ‘Amir and go to the Banū Taghlib. Taghlib react favorably to their request and send a delegation to consult with ‘Abs, but among the delegates Kays recognizes an old enemy, Ibn Khīms al-Ṭalghīnī, who had killed al-Hārīth b. Zālīm, the man who had avenged the murder of Kays’s father. Kays slays Ibn Khīms and the chances for qiwār with the Banū Taghlib are ruined (98-104).

Thereafter, weary of war, Kays sends his tribe home to try to make peace with Dhubyān. After some difficulties this is accomplished, but Kays himself refuses ever again to be a majdūr of any house of Ghatafan and departs for ‘Uman, where he later dies. Peace is concluded with Dhubyān by al-Rabī’ b. Ziyād and the rest of the Banū ‘Abs (104-8).

It is clear that whoever put together this account of the war—al-Kalbf or his informants—was a partisan of ‘Abs. Kays is made to appear as a paragon of forbearance (ḥilm) and Hudhayfa an unmitigated villain. Kays in the beginning attempts to call off the wager, which was made without his consent, because he realizes that it can only lead to trouble. Hudhayfa insists on running the race, and then wins it only by cheating. He later on sends Hamal to kill Mālik b. Zuhayr, although he had previously accepted the bloodwit for his brother ‘Awf, and now refuses to return the camels. Kays lets one of his sons go as a hostage in an effort to bring about peace, and Hudhayfa kills him with the other children in a barbarous manner. Later on he kills Kays’s mother. Finally, at the end, at the Well of al-Haba‘a, Hudhayfa shows himself a coward and has to be pushed into the fray by his brother Hamal. Kays, who was not present, expresses in verses his regret at the incident and refers to Hamal as “the best of men”, and says he would weep for him forever, were it not that he had behaved unjustly.

In the other sources, Kays does not appear in such a good light, nor is Hudhayfa so wicked. According to ḳbd, v, 151, Dāhīs and al-Qabārī ‘race against each other and not as a team. The wager was between Kays and Hamal b. Badr, the owner of al-Qabārī, who arranged the deception, and thus appears as instigator of the war instead of his brother.

Kays is said to have killed not the brother, but Mālik (or Naḍba), the son of Hudhayfa, whom his father had sent as a messenger to ask for payment of the wager. As a messenger his person should have been sacred, but Kays said grimly, “I’ll pay you later”, and then thrust his spear through his back (ibd., v, 152; Ibn al-Ṣūhr, i, 752).

The killing of the children is told in two separate episodes. Rayyān b. al-Aslā is taken prisoner, but is released by Hudhayfa and gives his two sons and nephews as hostages. Kays kills Mālik b. Badr and only then does Hudhayfa in retaliation kill the two sons of Rayyān, who die calling for their father. He is prevented from killing the nephew by the boy’s maternal uncles, who were apparently of Fazārā (Ibn al-Ṣūhr, i, 576). Later, ‘Abs agree to pay Hudhayfa ten bloodwits for his losses and give as hostages a son of Kays and a son of al-Rabī’ b. Ziyād. Hudhayfa is only able to get his hands on the son of Kays, but captures two other ‘Absis and kills the three of them together. It is not actually stated that this last group were children (ibd., vii, 577). In still another account of this incident, Kays is made to bear the blame for foolishly insisting on giving hostages against the advice of al-Rabī’ b. Ziyād, who wished to stand and fight (Maydānī, ii, 114). In general, the other sources give much more importance to al-Rabī’ than does the narrator in the Nakkā'ī.

According to the Nakkā’ī, Kays was not present at al-Haba‘a when Hudhayfa and Hamal were slain, but he is there in the other versions, egging his comrades on with the cry labiykham in answer to the cries of the children as they were murdered (ibd., vi, 157; Ibn al-Ṣūhr, i, 579).

‘Abs and Dhubyān were permanently reconciled, and the war of Dāhīs had no political aftermath that affected the course of events after the advent of Islam. For later Muslims, the most important results of the war were literary, since it is the best-documented of all the wars of the pagan Arab tribes. Several famous poets participated in it or allude to it in their poetry. Among them are ‘Antara b. Shaddād and Labīb, whose mother was of ‘Abs, and the ‘Abs leaders Kays and al-Rabī’. The memory of the major events in the struggle was doubtless still fresh when scholars began to collect the poetry and anecdotal material connected with it, though it is likely that the minor incidents, the personalities of the participants, and the real causes of the quarrel had already been invested with an aura of romanticism. Probably the very quantity of data facilitated this process which is apparent in the surviving accounts. Even as late as the Umayyad period, the war was exploited for fikhr and hida‘ themes; several Arabic proverbs and proverbial expressions are said to have originated in the dialogue between Hudhayfa and Kays (Maydānī, nos. 537, 613, 821, and 1530), and Dāhīs became a permanent part of Arab folklore and literature as a symbol of bad luck and enduring enmity, embodied in the proverbs allām min Dāhīs kād auda‘ bayn nāfis min Dāhīs wa i-Qabārī (ibd., nos. 2033, 2925).

DAHIR SANIYYA, the term used for the administration of crown lands in the Ottoman Empire during the last quarter of the 19th century. Saniyya lands were the sultan's money. The Sultan Abdul Hamid II ceded his private properties to the state. The lands continued to be called saniyya, but they were transferred to the newly-formed department of Al-Amlik al-mudawwara.

Within months of the accession to the throne of Abdul Hamid II, vast areas of the richest agricultural lands in 'Irak had been registered as his private property. Most of these lands were in the Hilla-Diwânniyâ, Amâra, and Basra districts. They were acquired by all possible means, from expropriation by imperial order to bonâ fide purchases with the sultan's money. The Saniyya Land Department in 'Irak had close ties with the army, the only source of trained engineers and surveyors able to collect the revenues. The lands continued to be farmed out by ihtizâm; tribes occupying saniyya lands persisted in considering them as their tribal lazma. The Sultan received from saniyya lands both the marâj (owner's share) and the titizâm for their labor. Tenants were granted certain privileges in order to induce them to remain on these lands.

In Egypt, the term was related to the Muhammad 'Ali dynasty. Land given by Muhammad 'Ali and his successors to themselves or to members of their family originally was called dishîh (pl. dishîlî). Ismâ'îl adopted the term dishîlik saniyya or dishîlik al-dî'ira al-saniyya. By 1860 the Dî'ira Saniyya lands amounted to 503,899 feddans, most of them in Upper and Middle Egypt. This land was pledged as security for two loans contracted by Ismâ'îl in 1865 and 1870 and consolidated and unified in 1877 and 1880. After Ismâ'îl's deposition and in the course of the liquidation of Egypt's debt, the Dî'ira lands passed into the control of the state, and only a small part was later restored to the princes in a final settlement in 1893 or repurchased by them. The bulk was sold to land companies and private persons. In 1899 British capital formed the syndicate which later became the Dî'ira Saniyya Company and disposed of all Dî'ira lands on behalf of Egypt's creditors. The operation was completed by March 1906, resulting in a considerable increase in the area owned in large estates.

DAKAR, the capital of Senegal, is situated at the tip of the Cape Verde peninsula. Its position is the westernmost outpost of the ancient world (its longitude reaches 17° 16' W. at the point of the Almadies). The region of Dakar, which covers almost the whole of the peninsula, is subdivided into three parts: (1) An eastern highland area (more than 100 m. in altitude); the N'Djallâ range rises some 70 m. above lake Tanna; to the east, the relief consists of hills or low plateaux with very gentle slopes not exceeding 40 to 50 m.; (2) the tip of the peninsula; from Fann Point to Bel-Air Point, the coastline is very jagged; numerous capes (Fann Point, Cape Manuel, Bel-Air Point) define the bays (Soumboufene, the Madeleines, Bernard, Port of Dakar, etc.); the altitude is very modest, except at Cape Manuel (40 m.); (3) In the north-west of the region, the coast-line is more or less jagged, with a series of capes; the Cape of Yoff, Cape of the Almadies. Here, by contrast, the contours are higher, with the Mamelles (100 m.) and with plateaux at altitudes of between 30 and 50 m. A vast plain links the two mountainous regions of the Cape Verde peninsula. The centre of this plain is a marshy area with stable dunes. In the north, a strong cordon of dunes forms a distinct barrier for sea-farers and isolates a whole series of lakes: lake Yovi, lake Taamara, lake N'Dam, lake Solodeusse, etc. To the south there is a cordon of shifting dunes.

The peninsula of Cape Verde has a special climate totally different from that of the interior of the country. During the “bad season” or rainy season, which lasts from mid-June to October, temperatures reach 22° to 27° C., the air is humid, and there is an average of 600 to 650 mm. of rainfall, the maximum being in the month of August. The singular feature of the climate is the length of the “good season”, or dry season, which recurs from mid-December to mid-March. Temperatures are mild (19° to 23°), owing to the proximity of the sea, but especially to the cold current of the Canaries, which hags the Senegal-Mauritanian coast, and to the alizé, the sea-wind of the Azores, which bars the way to the harmattan (a hot and dry wind).

Historically, the peninsula of Cape Verde was part of the kingdom of Kayor. It was visited in 1444 by the Portuguese Denis Diaz. While Gorée, an island lying 3 km. to the east provided a transit centre for European navigators and for the slave trade, and was the residence of governors controlling the whole of the coastline as far as Gabon, Dakar was nothing more than a tiny village occupied by fishermen of the Lebou tribe (a branch of the Wolof). It was on 25 May 1857 that the captain of the vessel Protet, in agreement with the leaders of the theocratic Republic of the Lebou, officially hoisted the French flag at Dakar, which henceforward became a port of call on imperial communications routes to south America. In 1895, a general government was formed charged with co-ordinating the policy of the governments of the different colonies constituting French West Africa (A.O.F., l’Afrique Occidentale Française). The governor of Senegal was, however, actually installed at Saint-Louis, capital of the A.O.F.

It became a naval base in 1898, the capital of the A.O.F. in 1902 with a governor-general, the focal point of the major axes of communication between the A.O.F. and metropolitan France, and the seat of the General Council of 1957. Dakar also became the capital of the colony of Senegal from 1957 onwards, then that of the Federation of Mali (comprising Senegal and the former French territories of the Sudan), and finally that of Senegal after the accession of the country to international sovereignty in 1960.
Officially the administrative, economic and religious capital, Dakar comprises urban sectors with remarkably clear-cut divisions, regulated by the plans of 1946 and 1961. The former established four zones: (1) A mixed African and European residential zone on the western seaboard as far as Yoff (the airport); (2) A commercial and administrative zone centred on the southern region, bordering on the commercial port; (3) An industrial zone, from the main jetty to Thiaroye; and (4) Finally, a group of reserved territories, non autorisés sectors.

The 1961 plan modified the earlier very little; the only changes were the specialisation of the industrial zone, the constitution of an important university centre, and the designation of the new urban centre of Dagoudane-Pikine as the co-ordination centre for the direct plan.

With reference to the urban structure, the town of Dakar occupies the south-eastern extremity of the tip of the peninsula. It is the region which has developed round the port, on the south-eastern plateaux and on the southern part of the plain where is situated the Medina. The essential characteristic of this urban zone is that it is almost the only area having buildings of solid construction. Grouped within this area are the national organisations of a political nature, the administrative services, the entire wholesale trade, almost all the banks, insurance companies and real-estate organisations. The plan of the town is not a homogeneous unity; the port sector, the most ancient, is in the form of rectangles, squares or triangles; the south-eastern sector is of the radio-centric type with a series of roundabouts; the central part is of chequer-board form with narrow streets, whilst in the south, urbanisation is least advanced.

The town of Dakar comprises several quarters: the business quarter, an ancient nucleus, having as its centre the Kermel market, with several old administrative buildings, the main post-office, the town-hall, an area which is very busy in the morning and deserted at night; the western quarter centred on the Place de l’Indépendance, very modern and full of activity (banks, state agencies, travel agencies and insurance offices); the heterogeneous central quarter which consists rather of services establishments and wholesale houses, and is a centre of the textile trade and of traditional commerce; the human population is very mixed there, with Lebanese and Syrians, French, Portuguese Cape Verdians, Moors, Toucouleurs, etc.; and the administrative quarter with high-rise public buildings: the National Assembly, the Presidency of the Republic, the government ministries, the Embassies, hospitals, the Palais de Justice. It is also a residential quarter.

The northern sector of the town of Dakar comprises an eastern section with some buildings of solid construction in an area of insalubrious shanties (Rebeuss) a central section, with waste-ground and some large buildings (Colis Postaux, the École Malick Sy, the Great Mosque, the Institut Islamique, the Polychnique) and some industrial establishments: Hulierie Petersen, Brosset, Air Liquide, etc.

The third industrial zone contains export and import industries (oil-works, large mills, maritime industries and light industries). This zone is not built up: it is mostly waste-ground with some market-gardens and shanty-towns (Darou Kip, Maka-Colokane, etc.).

The Grande-Médina comprises several quarters: the Gucule-Tabié, relatively urbanised with many solidly-built houses, and some large modern establishments (the Mandel maternity hospital and dispensary, municipal nursery, etc.); Fas, barely urbanised, with very few asphalted roads, dotted with shanties giving place more and more to modern developments (the O.H.L.M. Centre). It is there that the Independence monument and the Kennedy girls' lyceum are situated; Colobane, a quarter identical to Fas; Gibraltar, entirely residential, with some stylish villas constructed by the O.H.L.M.

Grand-Dakar constitutes the most recent, the most extensive and the most populous zone of urban development of Dakar. A very modern urbanisation exists alongside patches of shanty-town. It consists of the following quarters: Farm-Hock, Farm-Residence, Mermoz, Point E and Zone B, a superior residential zone (the University, the École normale supérieure, the École nationale d’économie appliquée, the Blaise Diagne and Delafosse Lycées, numerous embassies and luxury villas for government ministers). In the centre of Grand-Dakar there are some small self-contained estates: Zone A, Cité du Port de Commerce et des Douanes, the estates of Bopp and of Wàgouniaye.

The allotments of the north encompass, between the Avenue Bougainville and the Route du Front de Terre: the Cité de Police, the Karak, the simplest of theself-contained villas of the O.H.L.M., the quarter of the Castors, of Denke and of the Cité des Eaux, some villas of the O.H.L.M. 1 and II.

The Grand-Dakar with its shanty-towns is the quarter with the densest population (500 to the km²). The dominant characteristic is insalubrity. It lies between streets 10 and 13. SICAP and the O.H.L.M. are beginning to apply there a modern urbanisation policy.

Dakar and its suburbs. In the immediate hinterland of the town is a zone where the influence of Dakar is shown by certain characteristic features; installation of industrial establishments as far as MBao where there is a petrol refinery and where there begins the free industrial zone of Dakar-marine; the military camps of Quakam and of Camberene, the international airport of Yoff and its technical buildings; the major telecommunications establishments grouped at Yenoul and to the north of Rufisque, a military conglomeration situated 30 km. from the capital; the presence of residential estates accommodating the workers of Dakar; the estates of the Almadies, of Ngor, of the airport, of Sabe, of Grand-Yoff, of the Patte d’Oie, the villas of the O.H.L.M., Guediawaye, Pikine, Thiaroye and Diaskaw.

Dakar also maintains reciprocal trading relations with certain villages in its close vicinity, providing the villages with fish and vegetables and furniture in exchange for various types of merchandise. These villages are Hann-Pèîtreur, Oukam, Ngor and Yoff.

Demography. Dakar, which had only 20,000 inhabitants at the beginning of the century, today numbers more than 350,000. The census of 1961 gave a total population of 302,920 for the town of Dakar and 71,780 for the surrounding area. The same investigation listed 45,000 non-Africans, of whom 29,180 were French, 9,900 Lebano-Syrians, 5,800 Metis, 500 Antillais and about a hundred North Africans. With the exception of the Lebanese community, this non-African population has tended to diminish as a result of the Africanisation of cadres and the reduction of the French military presence.

The African population in 1961 numbered in total 398,060, or 9/10 of the population of Cape Verde (443,560). There are some thirty tribes represented, but five predominate: the Wolof (203,840 or 51.2%),
The Toucouleurs (50,480 or 12.6%), the Lebou (36,860), the Sererés (25,980), and the Peul and Foula (23,900), a total of 341,060.

The Lebano-Syrians deal in commercial activities. The Africans practise fishing and agriculture (the Lebou), or are agents in public services (functionaries and members of the security forces), workers in personal services (the Toucouleur, Peul, young Sererés and Diola) or members of the liberal professions (lawyers, bailiffs, experts in various fields). Industries employ as many people as do the services. Commerce involves the employees of European commerce (clerks, bookkeepers, administrators), tradesmen based in the African quarters and vendors in the markets with a strong colony of Foula from Guinea (Konakry).

Religion. The two main religions practised in Senegal are Islam and Christianity (both Catholic and Protestant), and it is at Dakar that they are officially represented.

The primary religion of Senegal, after the virtual disappearance of animism, is Islam. In fact, 90% of Senegalese are Muslims, as are 4/5 of the population of Dakar. Unlike Christianity, Islam in Senegal takes on a traditional, even local, character. The Muslims of Senegal, of the Malikite rite, belong, in a general sense, to a religious fraternity (tarika) led by a marabout, their spiritual chief. As a result of the rural exodus, Dakar is the meeting-point of all the fraternities existing in the country. From Dakar thousands and thousands of pilgrims travel once a year towards Touba, capital of Muridism (q.v.), a fraternity founded by Shaykh Ahmadu Bamba Mbacké in ca. 1895, or towards Tivaouane, capital of the Tidjáníyya order. These two towns are certainly religious capitals, but it is at Dakar that contacts between the temporal (the secular state) and the spiritual take place. Periodically, the various religious leaders leave their respective capitals to meet the governmental authorities in Dakar.

The different fraternities represented in Dakar are:

(a) The Tidjáníyya (q.v.), of which the present spiritual chief is the "caliph" (khalif) El-Hadj Abdoul Aziz Sy, the third son of the late El-Hadj Malik Sy (1850-1922). The khalif has his official residence at Tivaouane, a zawiya founded by his father; however, he possesses houses in Dakar which provide him with a pied à terre and serve as accommodation for the talibs, disciples who generally conduct Kur'anic schools. These residences are constantly changing when the khalif is moving through the capital. A large number of the members of the Sy family reside in Dakar, each one of them, in his house, has his following of talibs.

While speaking of the Tidjání at Dakar, one cannot ignore El-Hadj Seydou Nourou Tall, grandson of El-Hadj Omar Tall (1796-1864), a man of the first importance both in the religious and the political sphere, whose residence is constantly full of Senegalese Toucouleur and Malian disciples.

(b) The Murids. With the rural exodus of the peasants from the Baol, where are situated Touba and the zawiya of Shaykh Ahmadu Bamba, Dakar contains a significant number of Murids, who every year make the Magal, or pilgrimage to Touba. Almost all the members of the MBacké family reside either at Touba, at MBacké, at Diourbel or in the neighbouring villages, and to our knowledge, only Serigne Shaykh MBacké, grandson of Shaykh Ahmadu Bamba, representing the industrialist tendency of Muridism, resides permanently in Dakar. He owns many houses there and a quarter bears his name (Sicap Serigne Cheikh); his residence is remarkable for the daily crowds of talibs and of dependents. When the khalif is on his way to Dakar, the crowds become more numerous, each man pressing forward to express his allegiance to his spiritual leader; the talibs sing poems to the founder of Muridism or recite the Kur'ân for the whole length of the journey. Dakar becomes a sort of Touba during the entire visit of the khalif, the Shaykh Abdul Ahad MBacké.

(c) The Kâdiriyya, who have several important centres in Senegal. Senegalese pilgrims often travel to Baghdâd, where there is the tomb of Shaykh 'Abd al-Kadir at-Tidjâni (q.v.), founder of the fraternity, but every year thousands of Kadiris adherents make their way to Nimzat, in Mauretania, where the order arose. NDiassâne in Senegal is the most important centre of the Kadirí fraternity. As in the case of the others, many associations of Kadirí talibs exist in Dakar. They are very active, especially during visits of their khalifas, grandson of Shaykh Sa’du Buh, one of the propagators of the sect in Senegal. In Dakar, the Kâdiriyya has its own quarter in the Gueule-Tapée on street 6.

(d) Of recent creation (1890), the fraternity of the Lâye is less widespread than the previous three groups. The Lâyes take their name from Labâse (a corruption of al-Abbâs), better known as Limâmou Lâye (Imâm Allâh) (1843-1909), marabout and founder of the order whose influence remains limited to the Cape Verde peninsula, more particularly among the Lebou. It was from a base at Yoff that the founder preached his doctrine.

The present khalif is Shaykh Sidîna Mandione Lâye; he lives in Camberence, a village not far from Dakar.

(e) The Tidjâni sub-group of the Niassens is based at Kaolack. In Dakar, Maryama Niassé (daughter of the late El-Hadj Ibrahimia Niassé, founder of the sub-section) lives in Malik Sy Avenue and receives visitors coming from all parts of Senegal, as well as from Nigeria, Egypt, Ghana, Dahomey, etc. Her brother, also in Dakar, supervises an important Kur'anic school whose renown stretches beyond the cocoons of the country.

In addition to its role as a capital, Dakar is the meeting-point of all the fraternities existing in Senegal, where the Muslim religion, because of its importance, enjoys a number of official institutional benefits conferred by the secular state.

At the University of Dakar, in the Faculty of Literature, there is an Arabic section, and there is a department of Islamology at the I.F.A.N. (Institut Fondamental d’Afrique Noire).

The Great Mosque of Dakar is a religious institution of an official nature. Its construction was 90% financed by the state. The Imam is appointed by the Lebou community, but paid and housed by the government. The Friday prayer in the Great Mosque is transmitted only by the radio-masts of the O.R.T.S. and on the occasion of major Muslim festivals, the head of state is always officially represented by the Prime Minister. In the precinct of the Great Mosque is the Islamic Institute of Dakar, which was inaugurated in 1974 by the President of the Republic and which has as its purpose basic research, education and Islamic instruction.

Catholicism is under by a Senegalese bishop who has his seat in Dakar, the centre of the activities of the Catholic Church in Senegal. The Church contributes very effectively to education; it administers infant, primary and secondary schools which
are officially recognised by the Government and receive valuable subsidies from it.

Protestantism is poorly represented in Senegal; the Protestants administer some infant schools which are also recognised by the State.

Educational, sporting, cultural, artistic, manufacturing and tourist institutions are almost all centralised on Dakar. The only Senegalese University—with its Faculties and Institutes, the I.F.A.N. and its major schools, of which the École Normale Supérieure provides higher education, basic research and the formation of higher cadres—is situated in Dakar. The Institutes of Applied Research (Institute of Nutritional Technology, the O.R.S.T.O.M., the Institute of Development and of International Organisations, the Institute of Oceanographic Studies of Thiaroye, the B.A.N.A.S., la Pasteur Institute, the Institute of Psychiatric research, the Institute of Applied Leprology and the National Institute of Arts, are officially recognised by the Government and receive valuable subsidies from it.

An administrative, economic, human, cultural and religious focus, forced brutally into contact with contradictory elements generating conflict between the modern and the traditional, anxious to overcome these contradictions and reduce these tensions so as to progress towards an integral and harmonious development, Dakar tends to be concerned not only with its own destiny, but more realistically, with that of the whole of Senegal.

(AMAR SAMI)

DAKHALIEH [see DAKHALILYA]

al-DALAL, Abu Zakir Nâgin, mawâlâ of the Fahm tribe, musician and zârîf in Medina, born about 70/690, died about 145/762. Like his teacher Tiwâys (d. 92/710) he was a mukhâniât—hence the proverb “more effeminate than al-Dalal”—and is said to have been castrated by order of one of the caliphs, either Sulaymân or Hâshâm [but see Khaṣṣ]. His musical gifts and ready wits he used as an enter¬tainer of Quraysh women and a singer at weddings, accompanying himself on a tambourine (duff). He composed highly artistic [qâfîr al-amâl] melodies in a style called gâhîd mulâšiq; most of them on verses by contemporary poets. Yûsûn al-Kâthîr, recorded one, Ilbrâhîm al-Mawsîlî 19, and Abu 'l-Farajî al-Isbâhânî 30 of his song texts in their kutub al-aqâhîn, the latter using sources like the songbooks of al-Hâshâmî and Hâshâm and the Aqâhîr al-Dalalî by Ishâk al-Mawsîlî.

DALMATIA [Dalmacija in Serbo-Croat], a historic province of Yugoslavia, formerly covering parts of the Federal Republics of Croatia (the territory of contemporary Dalmatia), of Montenegro and a very small section of Bosnia-Herzegovina.

I. Generalities

Skirted by the Adriatic Sea, Dalmatia stretches in a north-west-south-east direction at the foot of the Dinaric mountain ranges (Velebit, Soljava, Biokovo) from the peninsula of Istria (according to some authors, only from the island of Pag) to the Albanian frontier, marked by the river Bojana.

But in fact, the territory designated by historians and geographers under the name Dalmatia is an area without strictly defined borders; these borders have indeed changed a number of times over the centuries. During the periods when the hinterland was controlled by powerful states (such as the Venetians, the Austro-Hungarian Empire under the Angevins and the Ottoman Empire at its zenith), the territory of Dalmatia was limited to the Adriatic islands and to a few strongly fortified towns. In times of disintegration among the continental states, Dalmatia extended further into the interior of the Balkan Peninsula.

At the present day, the term broadly covers the central part of the Yugoslav Adriatic coast, that is, the coast-line from west of Velebit to the source of the river Zrmanja, and from there, in a south-eastern direction, to the frontier of Montenegro. The two other parts of the Yugoslav littoral are on one side Severno Primorje (the northern littoral): the peninsula of Istria, the gulf of Kvarner, as well as part of the coast in a south-easterly direction; and on the other side Crnogorsko Primorje (the Montenegrin littoral): the coast between Herceg Novi and the Albanian frontier.

Dalmatia comprises three geographical regions: (a) the littoral, flat in places, steeply sloping in others, indented with deep gulfs and well sheltered anchorages; (b) the interior of the country, with poorly defined limits; and (c) the numerous islands which make up the Dalmatian archipelago.

The climate of Dalmatia is Mediterranean, although it is colder to the north of Split on account of the wind known as bura (called Bôprôs or Bouprôs by the Greeks, apôros by the Romans). In the past, the economy depended most of all on fishing, on the rearing of sheep, the growing of cereals, olives, vines and fruit-trees; today, additional sources of income are industry, shipbuilding and tourism. Ports worthy of mention include Split, Šibenik, Zadar, Ploče, Gruž (the port of Dubrovnik, formerly Ragusa) and with regard to the Montenegrin littoral, Bar (the contemporary period), without forgetting the bay of Kotor, with Titov, Kotor, Perast, Risan and Herceg Novi; whereas Rijeka (formerly Fiume), the principal port of Yugoslavia, situated at the end of the gulf of Kvarner, is not generally regarded as a city of Dalmatia (the territory of which, as stated above, is reckoned to lie further to the south) but as a city of “the Adriatic coast”.
II. History

A. The pre-Ottoman period.

Inhabited since Neolithic times, Dalmatia was populated in the Bronze Age by Illyrian tribes, one of which would seem to have born the name Dalmates/Dalmates. (This was in any case the name given by the Romans, after the 1st century, to their province of Illyricum or Hilluricum.)

From the time of the 5th and 4th centuries B.C., the Greeks began establishing trading-posts (and later, colonies) on a number of islands (Vis, Hvar, Korčula, etc.) as well as in some of the coastal towns (Solin, Trogir, etc.). In the 3rd century B.C., there are records of raids by Celtic tribes.

The Illyrians of Dalmatia subsequently underwent conquest by the Romans, a conquest which was accomplished in stages, provoking wars of resistance and numerous revolts on the part of the indigenous population against the invaders. Six centuries later, in 297 A.D., the enormous Roman province of Dalmatia (which stretched from Istria to Skadar, and from the Adriatic to Sava, Kolubara and Zaprada Morava) was divided by Diocletian into two regions: Dalmatia and Pannonia (Provincia Praevalitana), the latter approximately covering the present-day Montenegro, with part of Albania, of Macedonia and of Serbia.

Under Byzantine rule from the 5th century onwards, Dalmatia also suffered invasion and temporary subjugation at the hands of various barbarian peoples, first the Ostrogoths, then the Avars; subsequently, it was swamped by the influx of Slavic tribes, who arrived in the Balkans in the 6th and 7th centuries.

During the following centuries, the various regions of Dalmatia passed successively (although belonging effectively, or nominally at least, to the Byzantine Empire) under the domination of the Franks, the different Croatian and Serbian states (Hrvatska, the Principality of Neretva, Zahumlje, Travunija, Dukđja, etc.) and the Normans.

In the intervening period (in the 3rd/9th century), there are records of raids by the Arabs against the Dalmatian coast, in particular an unsuccessful siege of Ragusa (Dubrovnik), which seems to have lasted fifteen months, in 252/866-7 (cf. Théophanes Continuatus, Historia de caelo et rebus gestis Basili . . . , ed. I. Bekkeri, Bonn 1838, 289-90; G. Musca, L’emirato di Bari (847-871), Bari 1967; U. Rizzitano, art. Italiya, in EF).

From the 11th century onwards, domination of the northern part of Dalmatia was contested by the Venetians, the Croats (Regnum Croatiae et Dalmatiae), and the Hungarians, and domination of the southern part by the various local Bosnian and Serbian principalities and kingdoms.

Between 1205 and 1358 a large portion of Dalmatian territory was held by Venice. During this period, there was a raid by the Mongols, who, while in hot pursuit of King Béla of Hungary, devastated the suburbs of Split and ransacked the town of Kotor in March 1242 (cf. R. Grousset, L’Empire des steppes, Paris 1948, 332-3).

Between 1358 and 1409 Dalmatia fell under the domination of Angevin Hungary (regno Dalmatiae et Croatiae), then under that of Venice (1409 and 1420-1579), although for a long time previously, many of the towns had often existed in a more or less (or totally) autonomous state, as was the case of Dubrovnik in particular (cf. M. Novak, Autonomija dalmatinskih Komuna pod Vjesnicom, Zadar 1965).

B. The Ottoman period.

(For the Republic of Dubrovnik, see Ragusa; for the history of the coastal region to the south of Dubrovnik, see KARA DAG, i.e. Montenegro (Crnogorsko Primorje).

The conquest of the Balkan Peninsula by the Ottomans, and their break-through in the direction of Vienna, changed the map of Dalmatia yet again. In fact, throughout the period of the Ottoman Empire’s greatest power, Venice controlled only the Adriatic islands, the cities of the coast and a narrow coastal strip stretching as far as Omiš, while the littoral between the rivers of Cetina and Neretva (Makarsko Primorje), and the entire hinterland, were in the hands of the Turks (sandjak Lika, sandjak Khis, and sandjak Hercegovina). It was only after the beginning of the decline of Ottoman power (end of the 17th century), that Venetian Dalmatia began once more to extend into the interior of the peninsula.

Venetian rule in Dalmatia in the 15th and 16th centuries operated on a feudal pattern. The land belonged to the nobility, the majority of whom were of foreign stock. In the towns the artisans and tradesmen were not permitted to take part in municipal councils. There are records of numerous popular rebellions against the feudal landlords. Maritime commerce was reduced to the advantage of that of Venice. Agriculture, on the other hand, became rather more prosperous (especially on the islands), mainly as a result of the influx of peoples fleeing from the Turks. In the course of the next two centuries, there is evidence of a major transformation of Dalmatian society, a transformation which coincided with the decline of Venice. Finally, we should take note of the emergence of a Dalmatian culture of a very high level.

(a) From the arrival of the Turks to 1570

The first Ottoman raids against northern Croatia began in 820/1417, those against Dalmatia a little later. In 1432 the Turks invaded the region of Zadar, and soon after 1463 that of Senj; subsequently, in September 1468, they mounted attacks against Zadar, Sibenik and Split, then they once more devastated the region of Zadar in 1470, those of Split and of Trogir in 1471, of Modrula (in the region of Lika north of Senj) in 1486, etc. But it was the region of Makarska [at the foot of the mountain of Biokovo] which was most exposed to the Ottoman attacks. From the years 1465-70 onwards, the Turks were in control of the entire hinterland, with the towns of Ljubuški, Vrgorac and Imotski. A little further to the north, Omiš (which was to keep up a valiant resistance throughout the Ottoman period) repelled the first attack, that of 1492. (On the frontiers of Venice in Dalmatia in the 15th century, see M. Šunjie, Pomorje meštan- skih granica v Dalmaciji in odnosi so okolico tokom XV stolječa, in Godišnjak Društva Istoričarstva B.H., xv [1964], 47-62.)

The pressure on Dalmatia became still more intense after the decisive defeat inflicted on the Croats by the Turks (cladis croatica) at Krkavčko Polje near Udbina (1493), and especially during the Venetian-Turkish war of 1499-1503. Having once again devastated the territories of Split, Trogir, Sibenik, Zadar and Nin, the Ottomans took control of the whole of Makarsko Primorje (from Cetina to Neretva) (on the conquest of Makarska, see V. Tipković, Viljet Primorje, in Godišnjak Društva Istoričarstva B. i. H., xiv [1963], 229-37, as well as the salient of Bosiljina [Busoljina?] lying between Trogir and Sibenik [1501].

The peace treaty signed at the beginning of 1503
had little effect on the situation on the ground, with Turkish troops continuing to attack and devastate Dalmatian territories: an attack on Split in 1507, on Omis in 1509, on Skradin in 1512; the capture of Caćina (in Posušje) of Nutjak (on the river Cetina) and of Vir (near Imotski) in 1513, in 1514 attacks on Skradin and Knin, and the capture of Karin; in 1515 an attack on the fortress of Klis; in 1520 the plunder of the region of Split; in 1522 a fresh siege of Klis (by Khosrew Beg [q.v.], the illustrious sandjakbeg of Bosnia), the capture of Knin (cf. V. Klaić, Knin za turskoga vladanja (1522-1688} in Seria Bronsmidiana, 1928, 257-62) and of Skradin; in 1523 the capture of Ostrovecja (an important strong-point, controlling secondary strategic areas to the south of Velebit), the destruction of Nadin and of Vrana; in 1524 the capture of Sinj (according to some authors the town of Sinj was taken in May-June 1513. cf. H. Sabanović, Ezlja Celebi, Putopis, Sarajevo, Syjetlost 1967, 151 n. 14); in 1526 the capture of Gabela, etc.

Thus, after the year 1524, the Turks held all of the hinterland between the rivers Cetina and Zrmanja, with the exception of the fortresses of Klis (besieged again in 1531, finally taken in 1537) and of Obrovac (taken in its turn in 1527), while Venetian Dalmatia was limited to the island of Cres in the following century. The territory lying between Omis and Novigrad (minus the salient of Bosiljina). Also to be noted in this period are a number of popular revolts (revolts of the pušoni against the feudal landlords), which we may add to the long list of similar revolts of the preceding centuries. Worth mentioning are the revolt at Šibenik of 1510, and most important of all the great rebellion of the island of Hvar (1510-14) which had repercussions not only in Split, Šibenik and Zadar, but also in many other regions of Dalmatia.

The Venetian-Turkish war of 1537-40, which followed the capture of the fortress of Klis (1537) and the siege of Omis by the Turks, brought ruin once again to the regions of Split (which was henceforth to have the river Jadrno as its frontier) Trogir, Šibenik and Zadar, and led to the destruction of Vrana (on the town of Vrana under the Ottoman dominion, see S.M. Traljic, Vrana pod turskim upravnom, in Radovi JA& iz [Zadar 1962], 357-58; idem, Vrana imeni gospadari u doba turske vladavine, in Radovi..., xvi, [Zadar 1971], 345-77) and of Nadin (1537-8), while the Venetians briefly regained control of Skradin and ransacked the town. Shortly after, in 1540, the territory (župa) of Poljica passed into Ottoman hands, and was granted special status (cf. A. Suceska, O položaju Poljica u Osmanskoi državi, in Prilozi za orijentalnu filologiju, xvi-xvii [Sarajevo 1966-7 (1970)], 77-91; idem, O državo-pravnom položaju Poljica pod turskom vlasti, in Zbornik Pravnog fakulteta u Zagrebu, xvi/3-4 [1967], 386-94; idem, O položaju Poljica u osmanskoj državi, in Poljicki ^bornik Pravnog fakulteta u Zagrebu, ii [Zagreb 1968/3-4], 111-141; idem, Jedan dokumenat o sjenjskim Uskokima, in Vijeć Vrijenog Mjeseca JNA, vi-vii [Belgrade 1962], 97-108; and naturally the same author's major work Sjenjski Uskok, Belgrade 1973, as well as the two volumes of archive material published by B. Denisca, Istorijski Kolatski Uskoka, Belgrade, SANU, 1950-1; and S. Pavičić, Raseljavanje staroga stanovništva Senja i okolice, nasićavanje uskoksa i njihovo djelovanje, in Sjenjski Zbornik, iii [Senj 1967-8], 324-70).

In the towns there was a remarkable florescence of Dalmatian culture, of literature especially, written either in Latin or in the language of the country, the most significant writers being Marko Marulić (1450-1524), Hanibal Lučić (1485-1553), Petar Hektorović (1487-1572) and others. Three other authors, equally celebrated, deserve greater attention, because they devoted many of their works to study of the Turks, and may therefore be regarded as the ancestors of "Yugoslav orientalism". They are: Feliks Petančić (Felxutus Petanaci, de Petancii, Raptianaus Dalmatiae) [ca. 1455-ca. 1517] of Ragusa; Ludovik Grijević Tuberon (Ludovicus, Aloysius de Cerva, de Crieva, Cervar, Tubero) (1459-1527) also of Ragusa; and Antun Vrančić (Verantius, Vranitis, Wrantius, Vrančić) (1504-73) of Šibenik.

The writings of the first of these include a Histora imperatorum regni Turcici (or Historia Turciac) the manuscript of which is in Nuremberg; De istimuitus in Turciac... (or... Quibus istimuitus Turci sint aggregendi...), ed. Vienna 1522; Genealogia turorum imperato- rum... (or Descriptio Turiciac) the manuscript of which is in Budapest (see D. Kniewald, Felix Petančić i njegova djela, Belgrade, SANU, 1961; M. Kurelec, Enciklopedija Jugoslavije, vi, 474).

The writings of the second include: De Turcarum origine, moribus et rebus gestis commentarius, ed. Florence 1590; Commentationum de rebus, quae temporibus eius in illa Europae parte, quam Pannoniae et Turcicae eorumque finitimis insulis, gestae sunt, liber xi, 1st ed. Frankfurt 1605, 2nd ed. (under the title Syntomea rerum Turchicarum...).

The truce lasted for thirty years. During this period efforts were made to heal the ravages caused by a near-century of devastation and misery. Agriculture and stock-rearing, which had been very severely affected, improved, mainly as a result of the influx of people fleeing the occupied regions. Fishing also prospered, but commerce and craftsmanship were not so fortunate.

But it was a fragile truce, broken daily by the raids of the famous Uskoci on Ottoman territory. These were commando bands of guerrillas, based in Dalmatia (principally in Senj) and conducting mili-
The third (who personally visited Turkey on a number of occasions and lived there for four years) wrote: *Iter Buda Hadriano-polom anno MDLIII...* ed. Venice 1774; *Diarium legationis nomine Maximiliani II...ad portam ottomanas suscepta a C. MDLVI...* ed. in M. Kovacic, *Scriptores rerum Hungarorum, Bodae 1798; Ratio itineris in Turciam facti per Danubium...* ed. in S. Traljic, *Obrovac*, and for a brief period Drnis (where all the Venetians and Dalmatians laid siege to Skradin, and recaptured it briefly in 1647. In the course of their counter-attack, the Venetians and Dalmatians laid siege to Skradin, and recaptured it briefly in 1647. In 1646 the town of Novigrad was taken (3 July 1646) as were Biograd and Nin, but an attack on Šibenik was repelled (October 1646). In the course of their counter-attack, the Venetians and Dalmatians laid siege to Skradin, and recaptured it briefly in 1647. In 1646 the region of Poljica, and, in February 1647, that of Makarsko Primorje (the littoral between the rivers Cetina and Neretva), severed their ties with the Ottoman Empire and allied themselves to Venice (Poljica nevertheless was compelled for some time to pay a kharga to the Ottomans). (On the position of Poljica in the 17th century, see V. Mošin, *Poljičke konstitucije iz 1620 i 1668, in Radovi Staro slovenačkog instituta JAZU*, i Zagreb 1952, 175-206.)

In 1647 the Venetians (the bulk of whose army was made up of Dalmatians and of Slavs who had fled from the regions under Ottoman rule) recaptured the towns of Žemunik, of Novigrad, of Vrana and of Nadin, before inflicting a further defeat on the Turks outside Šibenik (August 1647). Recovering Ostrirovac, Obrovac, and for a brief period Drnis (where all the Turkish fortifications and monuments were demolished), the Venetians attacked Knin and Vrlika, and regained definitive control of Biograd (1648), and, most significant of all, of the famous stronghold of Klis (30 March 1648). The Ottoman reaction was not slow in coming; shortly afterwards, Turkish troops devastated the region of Poljica and that of Ravniki Kotari in the vicinity of Biograd.

Finally, in 1649, major military operations came to an end, when there was an outbreak of plague in Dalmatia, especially in Šibenik and in Zadar, followed by a period of widespread famine (see G. Stanoević, *Dalmaciju u doba Kandiškog rata 1645-1669, in Vesnik Vojnog Muzeja* TKA, v [Belgrade 1958], 93-182; idem, *Trgovina robljem u doba Kandiškog rata, 1645-1669, in Istorijski Glasmk, v [Zagreb 1973], 447-58). For some time previous to this, there are records of a large-scale migration of Slavic peoples known as Vlasi (sing. Vlas or Morlaci (sing. Morlak)—these are clearly to be understood as being armed men—towards Dalmatian territory, daily swelling the ranks of the guerrilla commando bands (hajduci, sing. hajduk, and ukoci, sing. ukok). The latter made constant invasions of Ottoman territory (Lika, Bosnia, Herzegovina), mounting attacks and ambushes far into the interior, pillaging, killing, burning and kidnapping on their way. At the same time, Hadjuci and Uškoci conducted a policy sometimes favouring Venice, sometimes Austria, but more often the latter. A state of permanent minor war was thus perpetuated on both sides of the frontier, a situation well described in Yugoslav popular epic poetry (from both the Christian and the Muslim side), with a full gallery of heroes, all of whom are well-known historical figures. (There are a great

of 1645 by a new Venetian-Turkish war which lasted a quarter of a century. Many things had changed in the meantime, both within the Ottoman Empire (the heyday of which was now long past), and in Europe. But the outcome of the war was once again favourable to the Ottomans, except however in Dalmatia. On Dalmatian soil, the most significant military actions took place between 1646 and 1649. In 1646 the Ottomans mounted a lighting raid into northen Dalmatia, in the regions of Šibenik and Zadar. The town of Novigrad was taken (3 July 1646) as were Biograd and Nin, but an attack on Šibenik was repelled (October 1646). In the course of their counter-attack, the Venetians and Dalmatians laid siege to Skradin, and recaptured it briefly in 1647. In 1646 the region of Poljica, and, in February 1647, that of Makarsko Primorje (the littoral between the rivers Cetina and Neretva), severed their ties with the Ottoman Empire and allied themselves to Venice (Poljica nevertheless was compelled for some time to pay a kharga to the Ottomans). (On the position of Poljica in the 17th century, see V. Mošin, *Poljičke konstitucije iz 1620 i 1668, in Radovi Staro slovenačkog instituta JAZU*, i Zagreb 1952, 175-206.)

In 1647 the Venetians (the bulk of whose army was made up of Dalmatians and of Slavs who had fled from the regions under Ottoman rule) recaptured the towns of Žemunik, of Novigrad, of Vrana and of Nadin, before inflicting a further defeat on the Turks outside Šibenik (August 1647). The Ottoman reaction was not slow in coming; shortly afterwards, Turkish troops devastated the region of Poljica and that of Ravniki Kotari in the vicinity of Biograd.

Finally, in 1649, major military operations came to an end, when there was an outbreak of plague in Dalmatia, especially in Šibenik and in Zadar, followed by a period of widespread famine (see G. Stanoević, *Dalmaciju u doba Kandiškog rata 1645-1669, in Vesnik Vojnog Muzeja* TKA, v [Belgrade 1958], 93-182; idem, *Trgovina robljem u doba Kandiškog rata, 1645-1669, in Istorijski Glasmk, v [Zagreb 1973], 447-58). For some time previous to this, there are records of a large-scale migration of Slavic peoples known as Vlasi (sing. Vlas or Morlaci (sing. Morlak)—these are clearly to be understood as being armed men—towards Dalmatian territory, daily swelling the ranks of the guerrilla commando bands (hajduci, sing. hajduk, and ukoci, sing. ukok). The latter made constant invasions of Ottoman territory (Lika, Bosnia, Herzegovina), mounting attacks and ambushes far into the interior, pillaging, killing, burning and kidnapping on their way. At the same time, Hadjuci and Uškoci conducted a policy sometimes favouring Venice, sometimes Austria, but more often the latter. A state of permanent minor war was thus perpetuated on both sides of the frontier, a situation well described in Yugoslav popular epic poetry (from both the Christian and the Muslim side), with a full gallery of heroes, all of whom are well-known historical figures. (There are a great

In the context of larger-scale battles, mention could be made of the defeat of a Venetian-Dalmatian force outside Knin (1654), and the ravages perpetrated by Ottoman troops in 1657-8 in the regions of Split, Šibenik and Zadar, with a raid on the island of Brač, following an attack on Split (1657).

The peace treaty was signed in 1671. In Dalmatia, the position of the Venetians was then more favourable, since they retained Klis and its surrounding area, the region of Poljica, and the littoral to the south of Omis (Makarsko Primorje) (it may be noted that de jure, this last territory should have remained under Ottoman control, but it belonged de facto to Venice). The whole of Dalmatian territory under Venetian rule was henceforward known as *acquisto vecchio*, and the frontier with Turkey became a fortified line called *linea Nani* (1671) (see I. Grečić, *Jedna mletačka agrarna operacija u Dalmaciji, in Žadarska Revija*, ii [Zadar 1953], 65-76; V. Omašić, *Mletačko-tursko razgraničenje na trogirskom području nakon Ciparskog i Kandyskog rata i njegove posljedice*, Trogir 1959).

The brief period of peace which followed lasted some fifteen years. It was not long enough to allow Dalmatia to recover from the ruin caused by long years of war, nor to revive its shattered agriculture and commerce, not to mention the epidemics and famines which had weakened the country to a considerable extent. Split quickly regained its status as the leading port for commerce between Italy and the Balkans. The port of Zadar was then of secondary importance.

The Ottoman military operations and the situation in Dalmatia in this period are documented in a sometimes whimsical but entirely first-hand account written by the famous Turkish traveller Ewliya Celebi, who in Dalmatia in this period are documented in a some-

The peace treaty of Pozarevac (21 July 1718) at the end of the 17th century and the beginning of the 18th one, Venetian Dalmatia witnessed a spate of popular uprisings (such as, for example, that of the region of Vrana in 1692, and that of Bukovica and Ravniki in 1704), caused in part by the penurious economic state of the peasantry, in part by the aggressive policy of the Roman Catholic church towards the Orthodox one.

On the military level, a new war against the Turks broke out in December 1714. Thanks largely to indirect aid from Austria, Venice scored a number of successes in Dalmatia; in 1715 Sinj repulsed the final siege by the Ottomans, and in 1717 Venetian-Dalmatian troops definitively recaptured the town of Imotski. These victories were augmented by successes achieved in Herzegovina, where the Venetians took the town of Mostar in 1717 (cf. G. Stanojević, *Dalmacija z a vremih njihova boravka*, Zagreb 1888, 233-4, 236-7, and from *M.V. Batinic, Djelovanje franjevaca u Bosni i Hercegovini z,a pnih sest viekova njihova boravka*, Zagreb 1881-7).

(e) From 1699 to the Peace of Pozarevac (21 July 1718)

The decisive defeat of the Ottomans beneath the walls of Vienna (September 1683) signalled the end of their presence in Dalmatia, where a large-scale popular insurrection broke out. The Muslims of the area panicked and fled towards the interior of the empire. Within a short time the whole of northern Dalmatia had been liberated; even before the end of the year 1683, Skradin, Karin, Vrana, Benkovac, O horovac and Omis were in the hands of the rebels, the Turks retaining only the cities of Knin and Sinj.

Venice entered the war in the spring of the following year (1684), and Dalmatia was the scene of a large number of military operations; Sinj was recaptured from the Ottomans in September 1683, Knin, Vrlika and Zvongrad in 1688, Vrgorac between 1690 and 1694, Gabela in 1693, while the territories of Trogir, Šibenik and Zadar were finally liberated.

The peace treaty was signed at Sremski Karlovići (26 January 1699). At the end of the 17th century and the beginning of the 18th one, Venetian Dalmatia witnessed a spate of popular uprisings (such as, for example, that of the region of Vrana in 1692, and that of Bukovica and Ravniki in 1704), caused in part by the penurious economic state of the peasantry, in part by the aggressive policy of the Roman Catholic church towards the Orthodox one.

The new frontier, *linea Mocenigo* (1721-3), passed to the east of the cities of Metković, Imotski, Sinj, Vrlika and Knin and extended as far as Klek and Žabka Gora, and all Dalmatian territory belonging to Venice was henceforward known as *acquisto nuovo*. The Muslim inhabitants who had not succeeded in leaving Dalmatian territory in time were very soon forcibly converted, mostly by the Franciscans (cf. J. Cvijić, *Balkansko Poluotvore*, Belgrade 1966, 377, which gives details borrowed from S. Zlatović, *Franovci države presvetog otkupitelja i Hrvatski pak u Dalmaciji*, Zagreb 1888, 233-4, 236-7, and from M.V. Batinić, *Delovanje franjevaca u Bosni i Hercegovini za prvi šest vekova njihova boravka*, Zagreb 1881-7).
After a certain period of time they had grown considerably in number, and as a result the Muslim religious community (Hanafi rite) of Dalmatia was officially recognised by the Austro-Hungarian government, on 15 July 1912 (see Reichsgesetzblatt für Oesterreich 1912, 875, paras. 1-7; M. Begovic, Organizacija Islamske verske zajednice u Kraljevini Jugoslaviji, [Sarajevo 1963, 10-11].

C. After the Ottomans

Dalmatia remained under Venetian rule until the dissolution of the Republic in 1797. It was subsequently a part of the Austrian Empire (1797-1805), then of the Illyrian Provinces (1809-13), before returning to the Austrian Empire (1815-1918). After 1878 a number of Muslims from Herzegovina (which in that year became part of the Austro-Hungarian Empire) came and settled in Dalmatia. After a certain period of time they had grown considerably in number, and as a result the Muslim religious community (Hanafi rite) of Dalmatia was officially recognised by the Austro-Hungarian government, on 15 July 1912 (see Reichsgesetzblatt für Oesterreich 1912, 875, paras. 1-7; M. Begovic, Organizacija Islamske verske zajednice u Kraljevini Jugoslaviji, [Sarajevo 1963, 10-11].

From 1920 to 1941 Dalmatia was part of the Kingdom of Yugoslavia, then from 1941 to 1945 it was divided between fascist Italy and the Ustaschi Croatian State (Nezavisna Država Hrvatska), finally, since 1945, it has belonged to the People’s Republic of Yugoslavia (as part of the People’s Republic of Croatia). In 1971, there were roughly 4,000 Muslims in Dalmatia (the total number of Yugoslav Muslims at the time was a little over three million, of whom 18,457 lived in Croatia; see K. Hadzic, Brojnost i proračun stanovništva u Republici Hrvatskoj u 1971. godini, Zagreb 1972, 1159 ff.).

**Bibliography:** There has as yet been no study of Dalmatia in the Ottoman period (15th to 18th century) which takes into account simultaneously local, Turkish and Venetian sources. It is true that the existing documentation is indeed enormous, and that a large portion of this (archival documents in particular) is accessible only to a very small number of specialised researchers. Naturally, emphasis should be laid on the writings of Yugoslav historians and Turcologists who have in the past produced an impressive number of studies, monographs and articles on this subject. It should be noted however that the bulk of these publications have been primarily concerned with the Republic of Dubrovnik, and that consequently it is most difficult to present a bibliography concentrating exclusively on the history of the territory of Dalmatia as strictly defined.

An excellent general survey by J. Tadic is to be found in Istoria viora jugoslaviei, ii, Belgrade 1960, 247-74, 519-30, 595-601, 1145-60. This work also contains a wise and intelligent analysis of the sources (the Ottoman sources are simply mentioned) and the entire bibliography available at that date (cf. 266 ff., 528 ff., 1159 ff.). For a convenient list of Yugoslav publications on Dalmatia since 1945, see J. Tadic (ed.), Dix années d’histoire et de géographie des Dalmates, 1945-1955, Belgrade 1955 (see especially 217-55, 268-71, 374-84, 410-15, 540-54, 566); J. Tadic (ed.), Historiographie Jugoslave 1955-1965, Belgrade 1965 (especially 113-42, 201-20 and passim); D. Jankovic (ed.), The historiography of Yugoslovia 1965-1975, Belgrade 1975, (esp. 136-59, 185-96 and passim).

**DAM** (A), pl. dima, “blood”, also “blood-guilt” [see dija, kati]. In the present article it will be appropriate to mention the numerous blood sacrifices offered by the Muslims, but we will not concern ourselves with the theory, nor is it our intention to list them [see dija, hajr, id al-?adsa]. We will confine ourselves to a brief survey of the beliefs relative to blood and the uses to which it is put or to which it may be put by Muslims in the various circumstances where the sacrifice of an animal is required, and the role attributed to it in magic and therapy.

Arabic texts of the Middle Ages speak of four cardinal humors: black bile (sawda), phlegm (balgham), yellow bile (sof), and blood, associating this last with joy and with the second string (matn) of the lute (see al-Dhahih, Tarbi?, § 152), and asserting that it is dominant in March, April and May (al-Masudi, Muruq, iii, 425 = § 1313). But these ideas
are late and unknown to the Kur'ān, which, setting aside the story of the creation of man represented by a cloud of dust (‘alāka, XXII, 5, XXIII, 14, XL, 69/67, LXXV, 36) and the dietary prohibition (see below), makes only one brief reference (VII, 130/133) to the miracle of the river turned into blood (Exodus, vii, 21) and does not even mention the bleeding of the nose (nu'dāf) among the sufferings inflicted by God upon the ancient peoples of Arabia as punishment for their impiety (see al-Djahiz, Tarbi', § 47 and index). The Kur'ān gives no information as to the place occupied by blood during the Djāhilīyya where, however, gory sacrifices were not lacking (see J. Chelhod, Sacrifice, passim), nor as to the conception for their impurity (see al-Djahiz, Tarbi', § 47, LXXV, 38) and the dietary prohibition (see al-Djahiz, Hayawān, i, 5, 310; idem, Tarbi', § 69; al-Mas'ūdī, Marājī, iii, 192-3 = § 1049; see also the legend of Djāhdhīma [q.v.] in which blood plays a certain role); this belief is still alive (see Wellhausen, Reste, 139-40; Douté, Magie et religion 85).

The ancient Arabs considered the blood of kings to be a specific remedy for rashes (al-ḥāb) and possession (al-habul), and it may have happened that it was preserved for this purpose (al-Djahiz, Hayawān, i, 5, 310; idem, Tarbi', § 69; al-Mas'ūdī, Marājī, iii, 192-3 = § 1049; see also the legend of Djāhdhīma [q.v.] in which blood plays a certain role); this belief is still alive (see Wellhausen, Reste, 139-40; Douté, Magie et religion 85).

Al-Djahiz mentions (Bahkātū, ed. Hadjīri, 198, 200), somewhat as an exception, the practice of Bedouins who, dying of thirst in the desert, were constrained, after exhausting the contents of the first well, to provide them with water, to slaughter another; they collected its blood, which they beat carefully so as to separate the sediment (dāyīb) from the serum (called mā' = water); this alone they drank; this drink was called maddāḥ (see L., s.v. d. m. y.); Chelhod, Sacrifice, 175).

Drinking the blood of an enemy does not seem to have been a current practice, in spite of the hatred which tribes sometimes held for one another; there is indeed a recent attestation of it (Jaussen, 177, n. 1), but it is exceptional. On the other hand, an arrow stained with the blood of an enemy (sahm mudāmin) returned to the archer who had dispatched it was retained as a lucky talisman (tabarākāt) by the latter (L., s.v. d. m. y.).

Without being obsessed by blood, the ancient Arabs were especially superstitious about menstruation (see ṣawīra) and considered the woman thus disposed (ḥadda') as impure and disqualified from performing certain acts. After Islam, the notion of impurity remained, but the Kur'ān (II, 222) confined sexual relations to menstruous women during the period of menstruation: and it is said that if this prohibition is infringed, Satan interposes between the partners. From another point of view, it is not impossible that the prohibition regarding the consumption of the hare and the rabbit, differently justified by Deuteronomy, xiv, 7, derives, in certain sects (see ARNAB in Suppl.), in part at least from the fact that the doe, which is believed to menstruate, naturally does not purify itself, the hyena is a similar case, and as a result these two animals cannot serve as mounts for the djinn (al-Djahiz, Hayawān, iii, 529, vi, 46).

Once it has left the veins of a living being, blood is at the same time impure and taboo, for it is through blood that a link is established between the phlebotomist, the free-thinkers asserting that meat is only blood transformed. In this regard, it will be recalled that one of the reason invoked as a justification for the refusal to pay a salary to the blood-letter is that the free Islam used to sell the blood to third parties and that this type of sale was forbidden by a hadīth (cf. R. Brunschwig, Méiers orls en Islam, in St. Isl., xvi (1962), 47). In another connection, a group of Kuraysh was given the name Lās'at al-dam [q.v.] "lickers of blood" because of their practice of licking their fingers after dipping their hands into a receptacle containing the blood of a camel, as a means of sealing an alliance. There are scarcely any attestations of the practice consisting, in cases of the adaption by the tribe of a foreign element, of mixing the blood of the adopted man with that of a representative of the group, but in southern Turkey there still exists the "fraternity of blood", effected by the making on the wrist a gash which is sucked by the contractants (J.-P. Roux, Traditions, 324).

In another connection, a group of Kuraysh was given the name Lās'at al-dam [q.v.] "lickers of blood" because of their practice of licking their fingers after dipping their hands into a receptacle containing the blood of a camel, as a means of sealing an alliance. There are scarcely any attestations of the practice consisting, in cases of the adaption by the tribe of a foreign element, of mixing the blood of the adopted man with that of a representative of the group, but in southern Turkey there still exists the "fraternity of blood", effected by the making on the wrist a gash which is sucked by the contractants (J.-P. Roux, Traditions, 324).
man and God, where it is a case of canonical sac-

in the case of immolations which, although permitted, have retained a pagan character. Once it begins to flow, it is the blood which "gives to the ceremony its true sense of expiation, of purification and of pro-
tection" (Servier, op. laud., 83).

Although the Kur'ān (XXII, 38/7) states with regard to sacrifices, "neither their flesh nor their blood shall reach Allāh, but only the piety coming from you shall reach Him" (cf. Amos, v, 21-2), a hadith, retained only by al-Tirmidhī and Ibn Mādž (no. 3128) but often quoted, proclaims: "the blood [of the victim sac-

in the Kor'an (II, 168/173 and especially V, 4/3) is instructive in this regard, since it declares illic-
tude of Allah even before it has touched the ground" (Ihya, 1278, i, 252; Westermarck, Sacrifices, 199; Chelhod, Sacrifice, 59), and such is doubtless the belief of the Muslims. The more abun-
dantly it is, the greater its power, and it is essential in its own right. It is the animals which are killed, and not ritually bled to death, except in cases of necessity.

Independently of the role played by the blood of the sacrifice of the Great Feast in actually conveying the sacred offering from the Believer to God, it pos-
sesses protective and curative properties sometimes put to profitable use. It is thus that in Iran a piece of cotton is put into water which he is made to drink (H. Masse, Coscences, 142). In Kabylia, blood is mixed with cat-
tle dung which is smeared on a sheltered wall and administered in fumigations (Fichier de Documentation berbère, 1964/4, 12); in the same region a woman takes a little blood to mark the forehead of a child less than one year old (ibid.). In certain tribes, the mist-
ress of the house still smears the posts and the lin-
tel of the door with it to protect her home (Servier, op. laud., 346); it is also poured over a ploughshare to consecrate it (ibid., III-2; among the Zaghawa (M.-J. Tubiana, 149) it is the hoes that are sprinkled with the blood of a he-goat, but in different circum-
stances). On the occasion of the feast of 'Ashūrā [g.v.] it is the practice to dip in the blood of a sacrificed animal branches of rose-laurel which are hung between the stable and the living-quarters (Servier 370); elsewhere blood is sprinkled on the threshing floor (Koller, 325).

In the few examples mentioned above, magical practices have come to be grafted on to rites con-
sidered orthodox; more numerous and more obvious are the vestiges of paganism which appear in the multifarious sacrifices offered to the djinn [see ginn], whose invisible powers whose existence orthodoxy was obliged to admit. Just as during the Dhāhilyya one became united with the divinity by pouring blood over the rocks which were their home (cf. T. Fahd, Le Panthéon de l’Arabie centrale, Paris 1968, 103, on Isāf and Nāvīs [g.v.]), similarly, one enters into communication with the protective genies or wards off the maleficient spirits by means of blood poured on the altar of the home or on high places especially frequented by spirits. Although it is diffi-
cult to arm oneself against the hostile attentions of the djinn which haunt the places, very dangerous
big game, in the Moroccan Rif, some of the blood of each animal killed was set aside to be offered to the spirits of the rocks with the object of lessening the ferocity of the lions (Koller, 331).

In the taking of virginity, and it is well known that on the day after a wedding night, a cloth stained with this blood. Al-Damm, in his Risdla, al-kuddt (d. 7757 1373). The best way to distinguish between them is from whom these details are bor-

Evil sights and others are contained in the Tirmidhi (s.v. zahtab). In the following sketch is based mostly on al-Dawdhir al-mudiyya fi tabakdt al-Hanafiyya (Risdla, ed. and tr. Chehchod, Sacrifices, 185).

The preceding topic brings us back to menstrual blood, which possesses particular properties. In folk-medicine, it is recommended as an antidote for dog-bites, scurvy and freckles and serves also to preserve against the firmness of the breasts, but it also possesses a magical power since seafarers can protect themselves against the dangers of tempests and against the threat of a sea monster called expressively hūt al-hayd “fish of the menses”, by fixing to the stern of their ship a cloth stained with this blood. Al-Damārī, in his Ḥayāt al-hayawān, from whom these details are bor-

The blood of a shemule (yarbu') is efficacious against bladder-stones and that of the mole (kunfudh), while that of the frog (hamd) cures habitual drunkenness if it is mixed with wine, for which it inspires a defini
tive distaste. This is one of the few cases where the blood of an animal is imbibed; in the majori
ty of cases mentioned above, it is used in the form of ointments, but whatever the manner in which it is utilised, it must, in principle at least, for this is not the case with some of the animals mentioned, come from a licit animal, which has been ritualistically slaughtered (al-Kayrawānī, Rīāt, ed. and tr. Bercher, Algiers 1949, 321).

Bibliography: Wellhausen, Reste arabischen Heidentums, Berlin 1897; E. Doubute, Magie et relig

In another context, it plays a particular role in the taking of virginity, and it is well known that on the day after a wedding night, a cloth stained with this blood. Al-Damm, in his Risdla, al-kuddt (d. 7757 1373). The best way to distinguish between them is from whom these details are bor-
by the use of their patronymic (kunya) and first name (ism). Among the eighteen identifiable members of this family, three distinguished themselves from among the others; namely, the eponym Abū 'Abd Allāh Muḥammad (no. 1), his son Abū l-Ḥasan 'Alī (no. 2), and one of their last descendants Abū l-Kāsim 'Alī (no. 15). The eponyms kunya and ism are also those of the latter's brother (no. 16), and for this reason, the eponym was referred to—not it seems, in the contemporary documents, but later—as al-Kābir, the Elder; this was in order to distinguish him from all the rest, not merely from his much later descendants who were too far removed to cause confusion and who had the same kunya and ism (nos 4 and 16), but of whom none was referred to as al-Saghir.

1. Dāmāghāni the Elder was born in 398/1007 in Dāmāghān in the province of Kūrmīs (q.v.), where he was first educated and pursued his initial studies in law. He then came to Baghdād in 419/1029 at the age of 21. Here he continued his studies of law under the two great masters of Hanafī law, al-Kudārī (d. 428/1037) and al-Saymārī (d. 436/1045). The juriconsult Kudārī, famous for his work on law, known especially by his name, Muhādhdhib al-Dawla, with numerous commentaries (see a list in GIL, I, 183, Suppl. 1, 293) was a direct ancestor of Hanafīs anywhere except perhaps in the West. He worked with the Madrasa of Abu Hanīfah and was among the others; namely, the eponym Abu l-Hasan al-Kudūrī (see a list in the Mühr 3b of the Koprulī Library (Istanbul) no. 1584, fol. 41b). Coming from humble beginnings, Abū 'Abd Allāh experienced material difficulties in pursuing his studies in the great capital. The madrasas had not yet begun to flourish in Baghdād, with their endowments for the benefit of students as well as the teaching staff. He had therefore to work, as other needy students did, and pursue his studies at the same time. He took a job as night guard which also allowed him to study by the light of the guard's lamp. He studied hard and learned by heart the current textbooks on law. One night he was surprised by a books on law. One night he was surprised by a

2. After his appointment, the fortunes of al-Dāmāghānī changed. Only three years after his appointment, his residence was rich enough to attract the attention ofzburgers, and again later, in 493/1100, when his son Abū l-Ḥasan 'Alī was the occupant.

Dāmāghānī the Elder was considered in his day as one of the leaders of his legal school, with some reputation in the field of disputation (māznazāra). He continued in his post as Kādī l-Kudūrī for thirty years, under the caliphs al-Kā'im (d. 467/1075) and al-Muktafī (d. 487/1094). He served as a substitute-wazīr under both caliphs, refusing to accept the viceroyalty itself and not wanting to exceed his position as Kādī l-Kudūrī (al-Dawārī [also apud Ibn 'Aqīl, Manzūmān, ix, 211, 11-15; ibn 'Abī tawādū', rubū'ī l-kudāt]). This genuine modesty was perhaps due to a gentle personality as well as to his humble beginnings. The period of his life when he lived in poverty, hardly having enough to eat, was also perhaps the cause of his becoming a voracious eater when he could afford to buy all the food he wanted. One anecdote (Manzūmān, ix, 24, 11-3 II, 7,171 ff.) tells of his finishing off a thirty-pound (rail) plate of pastrgy at the end of a copious meal at a banquet given by the caliph. This genuine modesty perhaps due to a gentle personality as well as to his humble beginnings.

This genuine modesty was perhaps due to a gentle personality as well as to his humble beginnings.

3. Only one work on law has come down to us from al-Dāmāghānī, the Kādī Masā'il al-ḥātūn wa l-turūk (Berlin Ms. 4982). His biographers do not cite any works for him. Among his students was Abū Tāhir Iyās al-Daylamī (d. 461/1069), who was the first professor of law at the great Madrasa of Abū Ḥanīfah founded the same year as the Nizāmīya of Baghdād (see GIL, I, 460, Suppl. I, 637, and bibliography cited; G. Makdisi, I, 171 ff. 6, and index, s.v. Abū 'Abd Allāh al-Dāmāghānī).

Here follows a list of his descendants with full names, according to the enumeration in the sketch below, all of whom were known by the isna of al-Dāmāghānī.

5. Abū 'Abd Allāh b. Muḥammad, Mubadīlī b. al-Dawārī (d. 518/1124); became a shāhādi-notary under his father (no. I); appointed as kādī of the East Side quarter of Bāb al-Tāk in Baghdād, and of the stretch from upper Baghdād to Mawsil, by his brother (no. 2) when the latter became Kādī l-Kudūrī (23 Shābān 488/28 August 1093) (Qawākrī, i, 287-8).

6. Abū 'Abd Allāh Muḥammad b. 'Alī, Tādī l-Kudūrī (d. 516/1122); became shāhādi-notary under his father (no. 2), who appointed him as his representative magistrate in Baghdād and elsewhere; when his father died, he was put up as candidate for the post of Kādī l-Kudūrī to succeed his father, but was not appointed; was sent as ambassador of the caliph to Transoxania and died during the mission at 38 years of age (Qawākrī, i, 96).

7. Abū 'Abd Allāh al-Husayn b. 'Ali (d. 561/1165); substituted for his brother (no. 5) as kādī of the West Side quarter of Karkh in Baghdād, and later of the whole of the West Side quarter of Bāb al-Azād (Qawākrī, i, 82, al-Tamīmī al-Dāfī al-Ghazzī, Manzūmān, ix, 117; al-Tabarqī al-Samīyya fi tārājum al-ḥanāfiyya, i, 473).

Abū 'Abd Allāh al-Husayn b. 'Ali (d. 561/1165); substituted for his brother (no. 5) as kādī of the West Side quarter of Karkh (Qawākrī, i, 199-200).

Abū 'Abd Allāh al-Husayn b. 'Ali (d. 561/1165); substituted for his brother (no. 5) as kādī of the West Side quarter of Karkh (Qawākrī, i, 199-200).

Abū 'Abd Allāh al-Husayn b. 'Ali (d. 561/1165); substituted for his brother (no. 5) as kādī of the West Side quarter of Karkh (Qawākrī, i, 199-200).
of this Damaghani as his informant regarding the notice where the author of the *Djawdhir* quotes Ibn al-Najjâr (d. 643/1245) as citing the father (no. 2) but the biographical notice cites him as a brother of Yahya b. Manda (d. 511/1118), the great hadith-expert and fikh, (d. 510/1116), 'known for both hadith and fikih, and all the kâdis as his authorised representatives, “because a kâdi, unless guilty of moral depravity, may not be dismissed” (li-anna 'l-kâdiya idhd lam yazhur fiskuh, lam yadjuz 'azluh, *Qawdhir*, xi, 118).

8. Abu Mansûr *Dja'far* b. 'Abd Allâh (d. 568/1172-3); born in 490/1097, he studied hadith under the two Hanbâls Abu 'l-Khaštâb al-Kalwâdhânî (d. 510/1116), known for both hadith and fikih, and Yahyâ b. Manda (d. 511/1118), the great hadith-expert (*Qawdhir*, i, 179).

9. Abu Sa'id al-Hasan b. 'Abd Allâh (d. 575/1179); studied hadith under the great hadith-expert Abu 'l-Kâsim Hibat Allah b. Muhammad al-Shaybânî (d. 582/1186); his brother (no. 12) accepted him as hadith-notary (*Qawdhir*, i, 196).

10. Abu 'l-Mu'azzâfar al-Husayn b. Aḥmad (d. 579/1183); his brother (no. 12) accepted him as hadith-notary in 552/1157 and appointed him as shdhid-notary in his appointment under the caliph al-Mustandjid, his representative magistrate in the quarter of the Caliphal Palace on the East Side of Baghdad (Qawdhir, i, 207-8).

11. Abu Muhammad al-Hasan b. Aḥmad (d. 582/1186); his brother (no. 12) accepted him as hadith-notary in 552/1157 and appointed him kâdi in the West Side quarter of Kârkh in Baghdîd, then also in Wâsît; he spent a lifetime in his career as kâdi, in Wâsît and Baghdîd, between dismissals and reappointments (Qawdhir, i, 196).

12. Abu 'l-Hasan 'Ali b. Aḥmad (d. 583/1188); was appointed kâdi in the Karkh quarter of Baghdad's West Side in 540/1145 following his father's (no. 5) death. Then when the kâdi 'l-Kâdit Abu 'l-Kâsim 'Ali b. al-Husayn al-Zaynabî died in 543/1149, he was appointed kâdi 'l-Kâdit in his place, at the age of thirty, by the caliph al-Mu'âsfî. He was confirmed in his appointment under the caliph al-Mustandjid, who then dismissed him. The caliph al-Mustandjid reappointed him, and the appointment being confirmed later by the caliph al-Nâṣîr, Abu 'l-Hasan continued to serve until he died. When he was dismissed by al-Mustandjid, he kept to his home, where he pursued his study of the religious sciences, considering himself as still the kâdi 'l-Kâdit, and all the kâdis as his authorised representatives, “because a kâdi, unless guilty of moral depravity, may not be dismissed” (li-anna 'l-kâdiya idhd lam yazhur fiskuh, lam yadjuz 'azluh, *Qawdhir*, i, 350-2; Ibn Taghbirdât, al-Nâshâya fi 'l-târîkh, xii, 329; *Qawdhir*, i, 350-2; Ibn Taghribirdât, al-Nâshâya fi 'l-târîkh, vi, 104).

13. Abu 'l-Fath Muhammâd b. 'Ali (d. 575/1180); was accepted as hadith-notary by his father (no. 12) on Monday, 12 Radjâb 575/Thursday 13 December 1179), who made him his assistant magistrate in the city of Baghdîd; he died at the age of 29, less than three months after his appointment (Qawdhir, ii, 91).

14. Abu 'l-Fâdi Muhammâd b. 'Ali hâsân (d. 592/1196); was accepted as hadith-notary by his uncle (no. 12) on 12 *Jumâda al-Awâl* 575/Tuesday 11 March 1180, three months after his cousin (no. 13), and was entrusted with the controllership of the caliphal burial grounds in the East Side quarter of al-Rusâfa. He died young (Qawdhir, ii, 40).

15. Abu 'l-Kâsim 'Abd Allâh b. al-Husayn (died Sunday 30 Dhû al-‘Îd 615/17 February 1219); was appointed kâdi in 586/1190, and dismissed in 594/1198; was reappointed as kâdi 'l-Kâdit in 603/1207, and dismissed once again in 611/1214; was highly esteemed for his knowledge of the law according to the various schools of juridical thought, as well as for belles-lettres (Abû Šâmâ, *Târîdjam ridjal al-karnayn al-sâdis wa l-sâbi*, 110-11; Ibn Kâthîr, al-Biddya wa l-nihdya fi 'l-târîkh, xii, 82;
Abd Allah, was also accepted as the uncle as a notary by Abu '1-Hasan al-Damaghanf (of no. 1), but his identification as a shdhid-notary by his father in 466/1073-4, and was accepted as the name of a sister (see Kadi 'l-Kudat Abu Abd Allah al-Damaghanf) which shed light on how he was regarded by some of his contemporaries among the jurisconsults. In one of these, he is said to have refused to accept the testimony of a person who came to him at the behest of the caliph al-Mustazhir. When the latter asked for an explanation, he replied that on the Day of the Last Judgment God would hold him responsible for his actions, not the caliph who appointed him. Another anecdote concerns the Shafi' jurisconsult Abu Bakr al-Shashf (d. 504/1110) who came to Damaghanf to pay him a visit. The Kadi 'l-Kudat did not show him respect by rising for him, so Shashf turned on his heels and left. That was in the 480s. It was not until after the year 500/1106-7 that they came together again on the occasion of a ceremony for mourning over a fellow jurisconsult's death. Shashf arrived first and took his seat. When the Kadi 'l-Kudat entered, everyone rose except Shashf, who did not budge. Damaghanf wrote to the caliph Mustazhir complaining that Shashf did not respect the representative of the religious law. The caliph wrote back: "What do you expect me to say to him? He is your senior in age, a more excellent [jurisconsult], and he would have done the same for you". Shashf also wrote to the caliph complaining of Damaghanf's disdainful treatment of men of religious science, and included the following two verses: "A partitioning screen, conceit, and excessive vainglory / and painstaking reaching for the heights / If all this had come as a result of ability / it would be easy to accept, but it comes as a result of coming from behind (meaning that he succeeded his father, riding on his coat tails)!". The caliph finally brought the two jurisconsults together and they made up their quarrel. But the anecdote ends on a note which shows that Shashf had not quite forgiven the magistrate. Damaghanf sat with Shashf, presumably in the presence of other learned men, and began to give a list of the questions of law that his father, Damaghanf the Elder [q.v.], had discussed in sessions of disputation, together with the names of his fellow disputants in each case. When Damaghanf had mentioned several of these questions, Shashf made the following remark, laden with subtle sarcasm: "How excellently you have memorised the titles of these disputed questions!"—meaning that Shashf was good for superficial memorisation, but not good enough for even remembering the disputations themselves, let alone understanding them.

Ibn 'Akl [q.v.], who had a great respect for Damaghanf the Elder as one of his teachers of disputation, had no respect at all for the son Abu '1-Hasan, to whom he addressed two letters which appear to be open ones written, not in the second, but in the third person (see the French tr. of both letters in Makdisi, Ibn 'Aql, 467-71). In these, Ibn 'Akl compares father and son, laying stress on the inferior qualities of the son. He held against the son the fact that, at one of his sessions as chief magistrate, he cried at the top of his voice that there were no longer any jurisconsults of the rank of mugtahid [q.v.]. Ibn 'Akl considered this a thoughtless attack against the doctrine of consensus or ijma' [q.v.], a doctrine which God had instituted above all that of prophecy, since the Prophet of Islam was the seal of the prophets, not to be followed by other prophets. God thus instituted the doctrine of the consensus of His community in the place of the succession of the East Side quarter of Damascus 1963, 172-5 and index, s.vv. Ibn al-Djawzf, Jurisconsult Abu Bakr al-Shashf, presumably in the presence of other learned

The author of the DAWZAI gives the orthography of the ethnic name al-Damaghanf and says that it is the name of the Kadi 'l-Kudat Abu Abd Allah al-Damaghanf (of no. 1) and of a group of his descendants (see the French tr. of both letters in Makdisi, Ibn 'Aql, 467-71). The author of the DAWZAI, i, 274). There are other persons noted with this name, but with no apparent relationship to this family.

There are other persons noted with this name, but with no apparent relationship to this family.

prophets. He also held against Abu '1-Hasan his neglect of the learned men of Baghdad in favour of those from Khurāsān. He accused him of doing so for the purpose of gaining a broader reputation, presumably because these men would spread his name far and wide. But during their travels back and forth to their home provinces.

Ibn al-Djawāzī (d. 597/1200), who gives a lengthy biography of Abu '1-Hasan and is our source for Ibn 'Aklī's two letters, nevertheless speaks well of him, stating that he was a religious man, with a sense of honour, with generosity and integrity, and that he was knowledgeable in the field of šurūt, i.e. the writing of formal documents. Among his teachers, the Ḥanbalī Abū Ya'la b. al-Farraj (d. 458/1066), Abū Bakr al-Khaṭīfī (d. 463/1071), al-Ṣārifīnī (d. 469/1076), and Ibn al-Nakār (d. 470/1078) are cited as those who taught him hadīth, and is said to have related traditions in turn. He studied law under his father and his brother (see under Dāmaghānī, Abū 'Aīd Allāh, Nos. 1 and 3).

Abu '1-Hasan died in 513/1119 after having served for close on 30 years as magistrate and chief magistrate. He was buried at his home in the quarter of Nahār al-Kullā'īn on the West Side of Baghdad where his father was buried, and the remains of his father were transferred to the shrine of Abū Hanīfa on the East Side. (G. Makdisī)

DAMASCENING [see mā din].

DANDANKAN, DANDANKAN, a small town in the sand desert between Marw and Sarakhs in mediaeval Khurāsān and 10 farsaks or 40 miles from the former city. The site of the settlement is now in the Turkmenistan SSR, see V.A. Zhukovsky, Razvivanie Staraego Merv, St. Petersburg 1894, 38. The geographers of the 4th/10th century mention that it was well-fortified and was surrounded by a wall 500 paces in circumference, the baths and a ribāt or caravanserai lying outside this wall (Ibn Hawkal, 436-7, v, 381-3). It comprised a room with a mihrāb ranging all along the south wall, which opened on to a central, square courtyard through a large, high central bay flanked by two other bays of more modest dimensions. Each of these bays was made up of a rectangular opening surmounted by a lintel and a curved, pointed arch. The central arch was supported on two rectangular pillars, whilst the lateral ones were supported on the piers of the doorway.

Two rectangular rooms, one of them communicating with the prayer room, opened on to the lateral façades of the courtyard, and each communicated with a little vaulted room making up the east and west angles of the northern façade of the buildings as a whole. The central part of this last was made up of a passage way which led both to the central courtyard and also to two further small, vaulted rooms which themselves led to the courtyard. In the centre of the courtyard was a basin for ablutions.

Sauvaget has emphasised the relationship between the plan above and those of the oldest madrasas in Damascus, the difference being essentially in a reduction of the dimensions and the replacement of the iwāns—specific features of madrasas—by lateral rooms. Even so, the distinction between the two types of building was not always clearly made. To cite only one example, the Divā'īya, founded in Damascus by Divā'ī al-Dīn al-Makdisī before 643/1245, is given as a dār al-hadīth by Ibn Ṭūlūn (al-Kalīdī al-djāhchārya fi ta'rikh al-madāris, Damascus, 1949, 76) and as a madrasa by al-Nu'aymī (al-Dīrīs fi ta'rikh al-madāris, Damascus 1948, i, 80).

The opening of the first dār al-hadīth, was followed by the founding of numerous similar institutions based on Nūr al-Dīn's building; unfortunately, these have almost all disappeared. Of the 16 establishments listed by al-Nu'aymī, Damascus has now only the remnants of Nūr al-Dīn's dār al-hadīth; the fine doorway with stalactites of that of Tingiz, built in 739/1338 and whose interior has been completely rebuilt (cf. Sauvaget, Les monuments historiques de Damas, Beirut 1932, 69, no. 44); and a few remnants of walls incorporated in shops or houses. As a result, we are forced to go back to the written sources in order to get information about the architecture of the dār al-hadīth; but these are very rare in this particular aspect, and the passages on these institutions concern themselves almost wholly with the lives of the teachers there. Alone of them Ibn Ṭūlūn devotes a few lines to the buildings themselves, and from him we learn that certain of them were mere
II. Historical development [see ii, 125-6].

Fig. 1. Plan of Nur al-Din’s dār al-ḥadīth, after J. Sauvaget.

Fig. 2. Elevation of Nur al-Din’s dār al-ḥadīth, after J. Sauvaget.
rooms within the house of the ḍarṣī who was giving out instruction. Thus the Ṣubkshākiyya, founded in Damascus by Ibn Shakhtshakha in 656/1258, was only the modest dwelling of this master (cf. al-Nuʿaymī, Dāris, i, 81). The Diyyaʿiya (see above) had a palace resembling that of the Nūrīyya, but the much needed repairs for studies were spread over two floors (Ibn Tūlūn, Kālkatīd, 83). The Kālansīya, founded in ca. 729/1328 by the vizier Ibn al-Kalānštī, not to be confused with the historian of the same name, had a very extensive hall, provided with three large windows looking on to the Nahr Yāzīd, several doors giving access to it, a paved courtyard and a minaret (Ibn Tūlūn, op. cit., 86). The Nūrīyya, founded towards the middle of the 9th/15th century by the kātib ʿIbd al-Dīn al-Dīn al-ʿUmar, showed a structure even more close to that of the madrasas. Three iwāns opened on to a court in whose centre was an abutions cistern. The southern iwān had a mīrāb, and the eastern side was provided with a nāwārī reserved for women (ibid., 88).

Sometimes the dār al-hadīthh had a nīb or kīhākhī [q.v.] annexed to it, or else the founder's own tomb or tawba might be adjacent to it. This was the case with the Nāṣirīya, founded by al-Malāk al-Najīr Yūsuf on the southern slopes of Mount Kāsīyun [q.v.] some time before 659/1261. This imposing architectural complex, built on the banks of the Nahr Yāzīd and decked out with yellow and white stones, was topped by a minaret and also included a mill. According to Ibn Tūlūn, op. cit., 94, it was one of the finest houses in Damascus; but by his time, it had been entirely destroyed and even its site had vanished.

In Aleppo, there are still some remains of the dār al-hadīthh founded by Ibn Ṣḥallād Yūsuf (the biographer of Ṣahlāl al-Dīn) in 618/1221, as attested by the text of a foundation inscription carved on a stone block inserted in a modern wall of the reconstructed building. According to the summary plan deduced by Herzfeld, there remains a rectangular room 16.50 × 6 m. overall, with a mīrāb and three openings. In the north-eastern corner, an entrance contiguous to the room's north wall and at the beginning of another wall perpendicular to the latter gives on to what was possibly the dār al-hadīthh's courtyard (Herzfeld, Materiaux pour un Corpus Inscriptionum Arabo-Mauren, Inscriptions et monuments d'Alep, ii, pl. CXXXVIIa).

The Kāmīliyya of Cairo, founded there by al-Malāk al-Kāmil Nāṣir al-Dīn in 622/1225 on the model of the Nūrīyya, is chronologically the second of the dār al-hadīthh (cf. al-Makrīzī, Khatāṭ, ed. Būlāk, ii, 375). Some remains of this building still exist, in particular, an iwan, whose pointed-arched vault is faced in fired brick and is supported on the walls and on stone piers (photograph by J.C. Garcin, in Tuhfat al-ahdbb, vii [1967], pl. XII).

These various examples suffice to show how the architecture of the dār al-hadīthh remained dependent on that of the madrasa, when indeed it was not included in it. (S. Orv)

II. History (see Vol. II, 1254-).

Dār Šīnī, or Dārsīnī (Persian dār čīnī “Chinese wood”) is the Chinese cinnamon (Cinnamomum cassia), next to the Ceylonese cinnamon (Cinn. cylin-
drum) the most valuable spice from plants of the cinna-
mon species, of the family Lauraceae, perhaps the oldest spice altogether. The rind of the branch of the cinnamon-tree was used in China as medicine, aromatic substance and spice already in the 3rd mil-

lennium B.C., and reached the Near East and the

Mediterranean countries in the 2nd millennium. It cannot be established with certainty with what original plant dārsīnī is to be associated, since in the pharmacognostic texts Chin. cassia is also rendered by saḥīla, which allegedly is not identical with dārsīnī. The Greeks ( Dioscorides) called this class of ma-
deums d'Alep, ii, 375).

The book of plants, ed. B. Lewin, Wiesbaden 1974, no. 814 did not know what to do with the term šīnī and associated it with an unidentified drug sinī mentioned by al-ʿĀṣīnī (Dīsān, ed. Geyer, 201). Ishāk b. Sulaymān al-Īṣāfī (d. ca. 320/932) was perhaps the first to perceive that cinnamon came indeed from China, see al-Qāḍīkī [q.v. below], al-Adīrīya al-maftūda, Ms. Rabat, Bibl. Gen. 135 i, fol. 130a, 11. Like the numerous other Asian spices, cinnamon was traded mainly by the sea route, the most important transit-port being 'Adan (W. Heyd, Histoire du commerce du Levant au Moyen Âge, Leipzig 1885-6, index sv. Cannelle).

The Arabs knew a whole range of kinds of dārsīnī which cannot be determined more completely; the “real Chinese cinnamon” (dārsīnī al-Shīnī), an inferior kind (dārsī šīnī), the “real cinnamon rind” (al-kirfā ʿalā 'l-hākiq), the “five-rind” (kaftāf al-kurūfī), the “pungent cinnamon” (al-hādi fi mādshikh), etc. As spice for food, there served not only the tabular rind of the cinnamon-tree, but also its leaves, blossoms and unripe berries. The pleasant scent is caused by the volatile oil extracted from the rind. Taken as a medicine, cinnamon reduces and softens thick substances, strengthens the stomach, liver and spleen and counteracts their sluggishness, quickens the activity of the heart, invigorates the eyesight and is effective against poisonous bites and stings of scorpions. Spread on excrement and urine, it does away with their nasty smell.

(A. Dietrich)

DARAK (A.), damān al-darak, in Islamic law the guarantee against a fault in ownership. As the most important of the various guarantees aimed at protecting the new legal status brought about by the conclusion of a contract of sale, the damān al-darak ensures that the seller will make good should the buyer’s title be contested by a third party. It is possible, for instance, that prior to the conclusion of a debt against the seller. Thus the wakf, a witnessed document containing the guarantee is drawn up after delivery takes place. Nor is the guarantee given in conveyances in which the alienor is not included in contracts in which the property itself, or its equivalent, if it is fungible, is delivered at a later date, but rather, a separate agreement is not included in contracts in which the property may have been transferred.

There is a difference of opinion on how the seller discharges his obligation; return of the price was the norm, but arguments are made for the return of the property itself, or its equivalent, if it is fungible, or its value together with the value of such improvements as had been made by the buyer at the time the claim was raised. The damān al-darak is usually confined to contracts for the sale of immovable property, but in the formulaires for written contracts we see that the guarantee could be given for movables of value as well, such as slaves, walls (considered movable because they could be dismantled for their materials), and palm trees (sold separately from the land and perhaps uprooted). It is not included in contracts in which the property is delivered at a later date, but rather, a separate witness document containing the guarantee is drawn up after delivery takes place. Nor is the guarantee given in conveyances in which the alienor receives no consideration, as in a deed of gift. The importance of this guarantee and the variety of formulas employed to express it reflect the concern of Islamic law for the protection of ownership and bona fide acquisition.

Bibliography: The term darak is defined in Lane, iii, 874; Dozy, Suppl., i, 436-7; J. Schacht, An introduction to Islamic law, London 1964, 139; al-Saraḥštī, K. al-Maṣābur ʿīl-lurūt, Cairo 1324-31/1906-13, xxx, 173-4, 180, 183, 187-8; Discussion of various aspects of the legal status and the formulae is to be found in the āḏarīt works, e.g., J.A. Wakin, The function of documents in Islamic law: the chapters on sale from Tahāṣīn’s “Ṣūbāḥ al-Sharīʿah al-Kabīrā”, New York 1972, index, s.v.; al-Ṣayrafī, al-Muṭṭakabbīt ʿal-luddʿa fimma yuktub min ummūr al-Shaʾrīʿa, in al-Nuwāyrī, Nihāyat al-ʿarbāʾ fi ṣanʿūn al-adab, ix, 12; Marghīnānī, al-Phatūsāʾ al-Ẓahārīyya, MS British Museum, Rieu Suppl. 4305, fol. 19a; al-Phatūsāʾ al-Ṭāʾārīyya, Calcutta 1251, vi, 424-6. Since this guarantee is a prominent feature of the contract, examples of its use in practice are found frequently in extant deeds of sale. For examples, see A. Grohmann, ed., Arabic papyri in the Egyptian Library, i, 146, 162, 169, 175, 182, 187 and passim; J. Sourdel-Thomine and D. Sourdel, Trois actes de vente damascains du début du IVe siècle, in JESHO, viii (1965), 173; W. Hoenerbach, Spanisch-islamische Urkunden aus der Zeit der Nasriden und Moriscos, Berlin 1965, 41-2, 272; for earlier Near Eastern parallels, see R. Yaron, On disposition clauses of some oriental deeds of sale and lease, from Mesopotamia, in Bibliotheca Orientalis, xv, 15-22. See also damān.

DARB ZUBAYDA, the pilgrim highway running from al-ʿIrāk to the Holy Cities of the Ḥijāz, named after Zubayda bint ʿAbdār [q.v.], the wife of Ḥārūn al-ʿRaʾshīd.

The main section of the Darb Zubayda, from Kūfah to Mecca, is something over 1,400 km. in length. The branch to Medina leaves the main road at Maʿdīn al-Nakira, which is also the point at which the road from Baṣrah joins it. From Maʿdīn al-Nakira to Mecca the distance is about 500 km., and from the same point to Medina it is about 250 km. Between Maʿdīn al-Nakira and Mecca, the section of the road lying between Maʿdīn Bani Sulaym and al-Mislah has an alternative route which runs: Maʿdīn Bani Sulaym—Suayfān—Hādīna al-Mislah. This latter route lies across the ʿחרat Rahat, and was used for the sake of its superior water resources. For the most part, the preparation of the track of the road consisted in clearing the ground of boulders, rocks, etc., but at least one stretch (near Bāṭn al-Aghār) was paved, at the expense of Ḫālisā, the lady-in-waiting of the mother of al-Raʾshīd (al-Ḥarīf, K. al-Mandsik, Riyadh 1389/1969, 305). Fayd, the midway station of the road, was the seat of the amīr al-ḥādīj and the road superintendent (ʿāmil al-ṭIrāk or wālī al-ṭIrāk) [see further, Fayd, below] and was provided with hostels, and under this caliph the first road superintendent was appointed. The names of at least one hostelry were known as ḥusūn.

The main route of the Darb Zubayda had 54 recognised stations (manāṣil). Stopping places for the evening meal were known as multāʿādākā.

There is no archaeological evidence for the use of the Darb Zubayda route before the Umayyad period, but it must have been in use at least from the time of the foundation of Kūfah in the reign of ʿUmār I.

Al-Ḥarīf (al-Ḥarīf, K. al-Mansīṣ, Riyadh 1389/1969, 309) states that ʿUthmān had wells dug at Fayd, and Ṭabarī mentions that among the places at which Ali stopped on his way from Medina to Kūfah in 36/656 were al-Rabādāh, Fayd and al-Thaʿlabīyya. Similarly, Ḥusayn b. Ṭabarī stopped at inter aīla al-Ḥāḏījr, Zāḏīr, Zubālā and al-ʿAzābā. These are all major stations of the Darb Zubayda.

The ʿIrāk-Mecca road was a leading concern of the Ḥābbāsī caliphates, to the extent that as a well-maintained, reliable highway it may be regarded as an ʿAbbāsid foundation. Al-Salḥāṭ set up milestones and established fire-beacons (manāṣil) along the whole route from Darb al-ʿArab (Ṭabarī, i, 81); Ibn al-ʿArīf, Cairo edn., iv, 344), and he also constructed forts (būṣūn) along the northern section from al-Kādisiyya to Zubālā. Al-Ḥānis provided the road with hostels, and under this caliph the first road superintendent was appointed. The names of at
least 21 of these superintendents have been pre-
served. Al-Mahdi enlarged the forts, constructed water tanks, sunk wells and renewed the milestones. It was
during his reign that Yakht b. Mūsā, the most out-
standing of the road superintendents, was appointed
(161777). His incumbency lasted ten years, during
which time the pilgrim road was noted for its con-
venience, comfort and safety ( Ibn Katīf, Al-Bidāya
wa 'l-nihayā, Beirut and Riyād 1966, x, 133).
Al-Rashīd constructed cisterns, sunk wells and built
forts along the road, but he was outdone in these
works by his wife Zubayda, whose contribution is men-
tioned in laudatory terms by many mediaeval
writers. Al-Harbi refers to at least eleven places
which were provided with water facilities and rest-
houses or fortifications at her instigation, and statics
that a cistern of a circular type (biḥa muḍaẖawwa) was
known as a "Zubaydiyya" (al-Mānasik, 288). Much of
Zubayda's work was devoted to the smaller stations
and al-Muktadir were particularly active in maintain-
ing and improving the road. Evidence of the contri-
bution of al-Muktadir is provided by a Kufic inscription
itself in the same way. It may be noted that the medi-
æval writers record the names of many wealthy indi-
viduals, both men and women, who made the upkeep
of the road the object of their benefactions.

Among the later caliphs, al-Wathik, al-Mutawakkil
and al-Muktaḍar were particularly active in maintain-
ing and improving the road. Evidence of the contri-
bution of al-Muktaḍar is provided by a Kufic inscription
on stone, dated 304/917-17, which refers to improve-
ments being carried out under the supervision of 'Ali
b. Ṭāṣī [q.v.].

From the 3rd/8th century, the security of the road
was increasingly disturbed by tribal raids, beginning
with that of the Banū Sulaym in 230/844. In 294/
906 occurred the first of many attacks on pilgrim
traffic by the Kūrmaṭ (q.v.), and these were to con-
tinue for over thirty years. The last pilgrim caravan
organised under an 'Abbāṣid caliph was that of 641/
1243, when al-Mustā'īn's mother performed the
pilgrimage, taking with her 120,000 camels
(al-Nahrāwālī, K. al-Ḥām bi-'l-dīn bāy'ī Allāh al-Ḥarām, ed.
Wüstenfeld, in Die Chroniken der Stadt Mecca, iii,
Leipzig 1897, 178).

After the fall of Bābādad in 656/1258, pilgrim traf-
ffic was often diverted through Damasc, but the Darb
Zubayda continued to be used intermittently in
later centuries, the frequency of traffic depending
largely upon the presence or otherwise of a stable
administration in Bābādad. The use of the road in the
19th century is attested by European travellers
such as Lady Anne Blunt, Huber and Musil.

The coming of motor transport in the 20th cen-
tury had led to the final abandonment of the Darb
Zubayda, although its cleared track is still everywhere
visible, as are many of the waymarks ('l-dānim), which
usually consist of cairns of stones of over 2 m. in
height. Two undamaged milestones from the 'Abbāṣid
period have survived, and are now preserved in the
Riyād Museum of Antiquities. One of these uses the
system of the post-stage (barāt [q.v.]), the other that
of miles. Most of the water facilities of the road can
still be identified, even though many of these are
sanded up; they include square, rectangular and cir-
cular tanks, some of which are connected with set-
ting tanks and flood diversion walls. Many of the
wells are still in use by local tribesmen. The foun-
dations of rest-houses and forts may still be seen at
many points along the road, and in several cases (e.g.
Kaṭr Zūbālā, Ḫisn Fāyd and al-'Aḳīb) more substantial
ruins testify to the high level of workmanship
bestowed on the public facilities of the road.

SAAD A. AL-RASHID AND M.J.L. YOUNG
Based on his estimation, tolls were fixed and those objects chosen which had to be presented as gifts to the sultan or ruler and other high officials. The owner of the chosen gift, however, had to give his consent. Otherwise, according to the Navigation and commercial law of Amamna Gappa (Codex 130, chapter xxxv, see below), this gift would have a personal character and the captain had to pay for it. The collected tolls had to be handed over by the shahbandar to the tunenggung who headed the civil administration of the whole city, including the harbour. The import tax which was demanded in Malakka was not the same for all traders. Those originating “from above the wind”, i.e. the West, had to pay 6% of the value of their merchandise. Only food supplies from Siam, Pegu (Burma), the western coast of the Malay peninsula and northern Sumatra were exempted.

Besides this import tax, 1 to 2% of the value had to be presented to the ruler, the bendahara (treasurer), and the tunenggung. After the shahbandar had reached agreement with the captain and the traders, he was to bring his gifts to their destinations. Tome Pires observed that the Gujarati traders in particular, who sailed with considerably sized vessels, used another procedure to pay their taxes. They asked a delegation of ten traders to re-estimate the whole merchandise loaded on their boat, take 6% of its total value and present it directly to the tunenggung. Thus all duties were paid at once, including the different kinds of gifts for the ruler and his officials. On the other side, the shahbandar was responsible for the Chinese, Siamese and the people from Liu Kiu, “gift”, choosing himself those goods he thought to be suitable.

If a trader wanted to settle at Malakka, he had to pay 3% as taxes, and in addition to this another 6% as royal taxes. For Malays, however, this latter sum was reduced to 3% only (Tjandrasasmita, 74 ff.).

Other regulations were valid for traders originating “from below the wind”, i.e. in the East. Formerly, they seem to have been free from any kind of duties. It was just expected that their gifts to the ruler and high officials should be appropriate and this could mean at least as high as the official taxes and tolls for the traders from the West. Later on, they also had to pay 5% for their goods, except again for food supplies.

In Banda Aceh, the shahbandars together with their secretaries (keureuklon, Malay: karkan) and other personnel were responsible to the Balai Furdah. This was a special office for levying the harbour dues, linked to the Bayi al-Mil (Z. Ahmad, 92), which was headed by the Sri Maharaja Lela and the penghulu kawal, or supervisor of the guard. These officials, too, were not real employees of the sultan, but it was expected that they should gain their living from the gifts the merchants had to deliver.

In relation to sea trade, the following kinds of tolls and taxes (adat wazed) were known in Aceh: the hadia langgar: a gift for the permission to cast the anchor, the adat listik for ships anchoring in the harbour; the adat memohon kuncu, to “ask for the key”, i.e. to get permission for disembarkment after the other taxes have been paid; the adat mengusul, a donation for those Acehnese who guarded the ship during its stay in the harbour; the adat hokk al-kalam, a kind of registration fee; the waris kuala, demanded by the shahbandar for disembarkment or loading certain goods, for preserving the water supply for departing ships, and help for those stranded; the adat cap, to be paid with goods or in money to get the seal or permission of the sultan for sailing; the adat kain, a roll of textiles to be presented by the Indian and European merchants when getting the adat cap, the adat kain yang ke dalam, i.e. textiles destined for the court; etc. (Tjandrasasmita, 77 ff.; Hoesin, 116 ff.).

From the time of Iskandar Muda, every merchant had to pay an additional tax, the wsr (A. "akhir"), for the sultan. Differences between the taxes to be paid by Muslim and Christian merchants are mentioned but not explained.

Of equally high importance for the income of the ruler and his functionaries was the market. Here, the hariya was in charge of securing the payment of a number of duties claimed by the adat; the adat hariya, a rent to be paid by merchants who kept their goods in a storehouse which had to be prepared by the hariya; the adat kamsen, to be taken from merchants as an insurance against robbery; the adat tandi, a fee for the clerk weighing the goods in the market; and the adat teukan, demanded from people going to the market.

All these taxes and tolls mentioned above had to be transferred either by the shahbandar or the hariya to the ulé balang, or district chief, who at the same time served as the local military commander. He distributed part of this money to some of his civil servants, whilst another part had to be presented annually to the court. Like the shahbandar, hariya, or other senior officials, the ulé balang did not receive a salary.

For the people living in the villages, some other kinds of taxes were known. Those farmers who received irrigation waters for their rice fields had to pay the adat blang, or adat buit among. Rent rates to be paid by tenants ranged from 50% to 20% of the yields and depended on the situation of the land. If someone had to be settled, he had first to pay the adat peutaw which permitted him to bring his cause to the court (hak ganceng). The judge (kati, kadi) and other elders sitting in the court session were entitled to receive the adat tuha.

Besides paying their taxes either in kind or money, the villagers had also to give their services voluntarily to the ulé balang or the kegubak, or village chief, e.g. in preparing their rice fields. This had to be done in gotong royong (cooperation) by the villagers, without receiving any compensation but being provided with food.

Taxes which were not under the competence of the ulé balang were those levied on forest products (adat gle) and the adat peutawha for bringing the pepper to the market; trade with pepper was a major concern of the sultan himself.

Complementary to these duties, which were more
ports on the north coast had been very low, and were sometimes completely unknown, as in Gresik before 1612. Only Tuban formed an exception, and this was severely criticised by the Chinese. Moreover, certain nationalities could be exempted from fees, like the Dutch in Japara under Sultan Agung, or the Chinese, the latter certainly profiting from the fact that a number of shahbandars in the north Javanese port were of Chinese descent. But again, gifts were expected to be forwarded by them.

Another commercial centre attractive for merchants from the East as well as from the West was Makassar (Ujung Pandang), which since pre-Islamic days was known too for its free and open attitudes towards trade and its small demands of tolls. Although not directly dealing with questions of taxes and tolls, the Navigation and commercial law of Amanna Goppa, a Buginese codex compiled around 1676 and edited by Ph.O.L. Tobing in 1962 (1977), gives interesting hints about the financial obligations and rewards of the community living together for some time on the same ship. During the journey, the traders are not considered as passengers, but are divided into three or four classes of crew members with special tasks and duties given to each of them. These categorised as "regular crew" may leave the vessel only after having bailed the water from the vessel, paying a fee for "descending" from the ship. The "casual crew" members, however, are free to leave the vessel wherever they want, without paying anything. For each class, the volume of merchandise as well as the part of the hold in which to put their goods are fixed. The freight rate is determined by the distance between the home port and the port of destination, for which detailed data are given.

The sum collected with the freight rates determines the income of the owner of the ship and its senior crew, i.e. the captain, the coxswain, and the jawabatu who has to take soundings and cast the anchor: if neither the captain nor the other two are friends of the owner of the ship, than the proceeds have to be divided into two equal parts, one for the owner and one for the other three. If one of them is a friend of the owner, than two-thirds are for the owner.

A number of regulations deals with the sharing of profit or loss between the dealer and the owner of the goods. According to the principle of bagi laba, the profit or loss have to be divided equally between both of them, if, in case of a loss, this is not due to negligence on part of the dealer. Otherwise, he has to compensate for it. Another principle states that the family of the dealer, if the goods get damaged because of his negligence, cannot be claimed to participate in compensating for the loss (ch. viii). The principle of bagi laba knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, compensating for the loss (ch. vii). The principle of bagi laba knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, compensating for the loss (ch. vii). The principle of bagi laba knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, compensating for the loss (ch. vii). The principle of bagi laba knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, compensating for the loss (ch. vii). The principle of bagi laba knows, however, some modifications. When the dealer has not yet returned and the owner has good reason to assume to that his partner is dead, he may claim a certain sum from his partner's family, compensating for the loss (ch. vii).
heirs cannot be found, his goods have to be turned over to the captain who may trade with them and enjoy the profits. Returning to the domicile of the deceased, however, his property must be handed over to his family, either in money or in kind (ch. xvi).

All these regulations are very similar to those relating to land tenure in the village (desa), and as a matter of fact, during its voyage the vessel is considered as a microcosmos in the same way as is the desa ashore, representing the cosmic order which has to be preserved through harmonious relationships among its inhabitants. The "owner" of this microcosmos stays outside of it, but he is represented by his deputy and his deputy's helpers. This deputy does not receive a salary, but has to live, like his helpers, from what he collects as rent, or taxes.

(b) Mataram, as the most powerful Islamic kingdom in Indonesia, did not base its economies on sea trade but on the products of its agrarian interior in Java. It continued the main spiritual and administrative traditions of the last Hindu empire of Majapahit which was destroyed by Demak in 1478. The student of its taxation system has to note with regret, however, that the late B. Schrieke did not live to implement his new approach to a historical study of taxation (Schrieke, i, 26). The data collected and evaluated in such a study would not only have been helpful in obtaining a clearer picture about the fiscal and economic development of the Javanese kingdoms, and especially of Mataram, but might also have provided a well-documented basis for studies on the religio-cultural currents in Javanese society which continuously gave rise to millenarian movements among the peasantry, caused by the deteriorating economic situation which again was mainly the result of the burden of taxes levied on the farmers.

Basically, the structure of the village (desa) and the kingdom were not much different. The village chief, and similarly the ruler in the greater context, were considered as the representatives of the deity and thus entitled to consider the land of the desa, or the main lands of the kingdom, as their own property, which they then rented out to the people. In some village societies, this conviction was modified: not the village chief himself, but the village community, owned the land, and the council of the elders had to decide who of the villagers might farm a certain piece of land. Thus in Kediri, East Java, all the land was named haqullah, whereas in Banten and Krawang, West Java, only uncultivated land was considered as haqullah, whereas cultivated land became haquladam (Karton-hadikoesoemo, 238). If someone died or moved to another desa without leaving an heir behind, his land hadikoesoemo, 238). If someone died or moved to another desa without leaving an heir behind, his land hadikoesoemo, 238). If someone died or moved to another desa without leaving an heir behind, his land would be redistributed after a certain cycle. Someone who wanted to sell "his" land had to notify the village government and pay the wangi paskin.

The communal understanding of land ownership is evident in the Law Codex of Majapahit, which was, on the whole, still used in Mataram. Para. 259 states that anyone who had asked for permission to farm a rice field but afterwards leaves it uncultivated, has to restore by other means the value of the rice he might have yielded. In para. 261, anyone who leaves an already cultivated rice field on his own, with the result that the crop gets spoiled or is eaten by animals, is categorised as a thief, and that could mean capital punishment (Slametmuljana, 37, 165).

The relationship between the village and the central authority was maintained mainly via the taxes and labour obligations. As the land was never in fact considered as being the property of the farmer, he had to pay the upeti, which means tribute. This tax might rise to 50% of the harvest, but it could always be changed, according to the general situation. Besides this, a capitation tax, housing taxes, dues for different kinds of offences against the laws, etc. were known. Special taxes had to be delivered at occasions like child birth, wedding ceremonies and services for a deceased person. These could sometimes, if they coincided with warfare or other disasters, bring the villagers to the edge of ruin (cf. the report by C. van Maseyck, quoted by Schrieke, ii, 147). The special war tax which Sultan Agung raised mainly among the foreigners during his military operations in East Java (Surabaya) in 1625, is recorded as follows: all married Chinese had to pay 22½ reals, unmarried Chinese 18 reals, married Javanese in the coastal regions who had been his subjects for many years 4½ reals, unmarried and young men 4½ reals, all recently-acquired slaves from Madura and Surabaya ¼ real. This tax was repeated in the following year (Schrieke, ii, 148 f.). At times it was compulsory to purchase some kinds of spices, rattan, and cotton, and above all rice, the staple product of Java, which had already been mentioned, a state monopoly under Amengku Rat. I. A major occasion to deliver the collected taxes at the court was the ‘Id al-Fitr.

Labour obligations due to the ruler included the building of the kraton (palace), important streets or other state projects, and, in times of war, help the army mainly as carriers. The village chief and other district potentates, too, were entitled to summon the villagers for forced labour. Thus the principle of gotong royong, or cooperativeness, became more and more abused. Eventually, a desa could also be exempted from taxes but instead it was charged with the maintenance of a sanctuary.

Another source of income for the district rulers were the toll gates on streets and rivers which, especially since the middle of the 18th century when their number increased enormously, did great damage to inland trade, and therefore time and again contributed to the rise of social unrest.

Upeti, or tribute, had also to be delivered by a vassal or a dependency as a sign of loyalty, or by an ally as reward for any kind of help received before. It could be delivered in kind or money and could also comprise beautiful girls, rare animals or plants. Another way of fulfilling the duties towards the ruler was to send man-power. The annual tribute imposed, e.g., on Palembang in 1668, was one rix-dollar per capita (Dagregister 1668-9, quoted by Schrieke, ii, 227).

et alii (eds.), Sejarah Nasional Indonesia, iii. Jaman Pertumbuhan dan Perkembangan kerajaan-kerajaan Islam di Indonesia, ed. Uka Tjandraasmita. Jakarta 1975; D. Lornbard, Le sultanat d’Aje ou le temps d’Skander Mard, 1607-1636. Paris 1967; Slametmuljana, Penundang-andangan Majapahit, Jakarta 1967; Ali Mubarak Khan NohanT, Sultan Bahlul’s grandson ruled over Bihar till the year 936/1530, his son, Bahar Khan, as his successor. His son and grandson ruled over Bihar till the year 936/1530, where he had joined the camp of the rival prince, Barbak Shah, and in Khayl, the rebel niukta’ of the Pandjab in 890/1485.

During the reign of Sultan Ibrahim Lod!, certain political events caused an estrangement between him and his flight to Kara in 925/1519. In 930/1524, Nasir Khan Noham, his son-in-law, Islam Khan Sarwan!, the rebel in the region of Násiiri-Khurasán, who died between 465/1072 and 470/1077; they were retained when it passed under the control of the Golden Horde [see BATU’IDS], who subjected and absorbed the Kipcak whilst adopting their speech in place of their native Mongolian. John de Piano Carpini and William of Rubruck travelled through the Dağlı-Kipcak during the reign of Bátu [q.v.]. Carpini, who traversed it from end to end, supplied for the first time the modern names of the great rivers he crossed: the Don and the Volga. Rubruck, who entered the steppe via the Crimée, described it as a “vast wilderness” extending in places over thirty days in breadth, in which there was “neither forest, nor hill, nor stone, but only the finest pasturage”. Ibn Batúta’s visit to the region occurred during the reign of Özbek (712-42/1313-41). Like Rubruck he approached it from the south, through the Crimée; from Saray he proceeded in a westerly direction until he reached Byzantine territory. What little we know about social conditions in the Dağlı-Kipcak is derived almost entirely from Rubruck and Ibn Batúta.

DATES [see TAMR].

DAVID [see DAWUD].

DAWÁT, ink holder, a synonym for mihbara, “inkwell”. The term is also used for mikkama, a place for keeping the kalam or pen, and more generally for kalamân, pen-boxes.

Islamic treatises describe the various ways of preparing ink and give different accounts of inkwells, mihbara or dawât, that were used in their time. The dawât is, according to al-KalKaghânî, “the mother of all writing tools”, and “a scribe without an inkpot resembles a man who enters a fight without a weapon”. Following traditional religious relationships between the art of writing, meaning the transcribing of the “Word of God”, the Kur’ân and the tools used for writing, various Islamic writers prohibit the use of inkwells made of precious metals, and call for the omission of human and animal forms in their decoration. However, the 4th/10th century poet al-KuçagÎan already accused the learned men of his time of being proud of their gold-and-silver-decorated inkpots. The religious prohibition of depicting human and animal forms was also disregarded.

The use of glass pots and the preference for the round shape, as suggested by al-KalKaghânî, are documented by some 3rd/9th to 4th/10th century inkpots that have been preserved (Baer, Inkwell, n. 4; The arts of Islam, Hayward Gallery, 1976,
nos. 117-8, with octagonal outer form). A fragmen-
tary cylindrical cast-bronze vessel found at Nīqāpūr suggests that this type of inkwell was used in Eastern Iran as early as the Ṣāmānīd period.

In the course of the 6th/12th century, particularly during its second half, cylindrical bronze inkwells were produced in different Iranian workshops. They were of comparatively small size, and each was originally covered with a separate lid with a domed cen-
tre. Lid and body were generally provided with small loops or handles for fastening the pot to the hand of the scribe, and they were decorated with traced and inlaid silver and copper ornaments. Several signed inkwells from the mid-6th/12th to the early 7th/13th centuries, including some of Ḵurāšānīan workman-
ship, have been preserved. Two of them the decoration includes a human figure, presumably the owner of the inkwell, proudly presenting a cylin-
drical object of the same type as the vessel itself (Toronto, Royal Ontario Museum, ex-Koller collection, and London, Victoria and Albert Museum). The covers of the Iranian inkwells are surmounted by a lobed dome that rests on a flat cylindrical collar. In the Syrian specimen, a hemispherical dome rests directly on the horizontal rim, and is surmounted by a pear-shaped finial terminating in a round knob. Both traditions blend in an early 7th/13th century inkpot in the Metropolitan Museum of Art (Baer, Inkwell). Three West-Iranian, early Safavid inkpots signed by Mfrak Husayn Yazdi point to the continuation of this type in the 10th/16th century. Apart from cylindrical cask-
nets with small glass receptacles for ink and other writing implements, penboxes with a separate com-
artment for the kalam were used since early times. The earliest known so far is a bronze kalamān dated 542/1148 in the Heilbronn which has the shape of a parallelepiped. It is closed and has two openings on opposite ends, one for the ink and the other for the kalam. More common is the open, originally East-Iranian, wedge-shaped type made in two parts, in which the inner, compartmented box could be entirely removed. These penboxes were probably placed in a belt, and were commonly used in the Ottoman empire.

Rectangular open boxes with a hinged or separate cover are apparently based on wooden models. The earliest known metal penboxes from the middle of the 6th/12th century are round-ended, and these contin-
ued to be popular after the Mongol conquest; but in Mamlūk and Ottoman times, the rectangular penbox was more common. It was imitated by the Chinese in blue and white porcelain for export to the Near East and by Iznik potters working in the early 16th/16th century. A good example of its kind, decorated with a pseudo-Kūfic inscription and floral scrolls in pale blue on white, is kept in the Godman collection in England.

Daḵwāt and kalamān are depicted in miniatures as early as the late 6th/12th century (K. al-Dūrākī, Biḥr Fārēz, Le livre de la thériaque, Cairo 1953, Pls. VII-
IX). A round-ended penbox is shown in the Dāḵwāt e-taawấtīkh copy in the University Library on Edinburgh (Seyrēn, Pl. 827 A), while a small inkpot attached to a penbox of the easily portable type is painted by Behzād in a mosque scene of the Buštān of Sa’dī in Cairo, dated 939/1438 (Prop. Kunstgeschichte, no. 333).

Bibliography: General information based on literary sources can be found in A. Grohmann, Arabische Paläographie, i, Vienna 1967, 117-27. There is no comprehensive study of the daḵwāt in visual art. For a short survey, see E. Kühnel, Islamische Schriftkunst, Berlin-Leipzig 1942, 80-4. One type of inkwell has been studied by E. Baer, An Islamic inkwell in the Metropolitan Museum of Art, in E. Ettinhausen (ed.), Islamic art in the Metropolitan Museum of Art, New York 1972, 199-
211. The writer is preparing a comprehensive study of the daḵwāt in Islamic art and civilisation. Representations of the different types are includ-
64; J. Sourdel-Thomine and B. Spuler (eds.), Die Kunst des Islam, Propyläen Kunstgeschichte, Bd. 4, Berlin 1973; The arts of Islam, Hay-
ward Gallery, 8 April - 4 July 1976, The Arts Council of Great Britain, 1976; A.S. Melkian-
Chirvanī, Le bronze Iranien, Musée des Arts Decoratifs, Paris 1973. Signed metal inkwells and penboxes are listed in L.A. Mayer, Islamic metal-
workers and their works, Geneva 1959 (incomplete). (E. BAER)

as a familiar and distinct element within the Frankish army. Indeed, Usama b. Munkidh, writing some three decades after the event, records a visit to the Aqsã Mosque in Jerusalem in the years 532/8-1138-
Hitti, Princeton 1930, 134-5). At the time of Usama’s visit, the Templars had been formally recognised as an order of the Church for only ten years or so (at the Council of Troyes, 1128), and their origins went back only to 1119. As in the case of the Hospitallers, therefore, the Muslims of Syria were not slow to become aware of this new element in Frankish society.

On the other hand, the use of the word Dâwiyya for the Templars raises real problems. For many reasons, one cannot accept Hitti’s suggestion that dâwiyya is a “corruption of a Syriac word for ‘poor’, the original name of the order in Latin being Pauperes Commilitones Christi” (“History of the Arabs”, 644 n. 3). Rather, it seems best to derive the word from Latin devotus, Old French devo, “one who has vowed himself to God’s service”. Phonetically, this etymology seems to fit both dâwiyya and its variant dâsâwiyya reasonably well. Moreover, though it is true that the Templars did not ordinarily call themselves dâwiyya, this term accurately characterises their status and outlook, and may well have been the way in which they were described to the Muslims by local informants. (Cf. the descriptions of them by William of Tyre, RHC, hist. occ., i, 520; Chronique de Michel le Syrien, ed. and tr. J.B. Chabot, Paris 1899-1914, iii, 201-3, 207-8).

As to the understanding of the orders displayed by the Muslim writers of the 6th/12th and 7th/13th centuries, we should not expect any full or accurate descriptions, for this would have required an insight into the corporate nature of Frankish society such as the Muslims did not possess (cf. Crusades and Frangi).

The Franks are often perceived and characterised as individuals in the Arabic texts, but they are very rarely seen as members of a socio-economic class, nationality, or corporate entity; the observations of Usama b. Munkidh, Ibn Ḥusayn, and Ibn Wâsîl (Mufarridj, iv, 248-51) represent the furthest limit of Muslim knowledge and concern in this period. Nevertheless, it remains curious that the Templars and Hospitallers were perceived early on as a group apart from other Frankish warriors and yet their precise nature was never investigated.

Throughout the Sâlûq and Zangid periods notices on the orders are extremely rare in the Arabic texts; it is only in the time of Sâlûq al-Din (especially in the years of the reconquest and the Third Crusade (583-8/1187-92), that they become fairly common. This new prominence is certainly due in part to the orders’ greatly increased military and political importance during and after the 1170s, but it is equally owed to the writings of ‘Imâd al-Din al-Kâtîb al-Fâsihâñ, which were the chief source for Sâlûq al-Din’s reign even for his own contemporaries (c.g. Ibn Abî Ṭâyî, Ibn al-Athir). ‘Imâd al-Din’s al-Fâth al-Kâtîbi shows him to be rather well-informed on the orders and suggests some progress in the Muslims’ understanding of them; he knows which castles belong to which, he can give an accurate description of their buildings in Acre and Jerusalem, he seems to have some sense of their internal organisation (though he never discusses it explicitly). He respects the military qualities of both orders, but reserves his fiercest invective for the Templars. One of the ugliest passages in Arabic literature, unique in its gloating and brutality, is surely that which he devotes to Sâlûq al-Din’s massacre of Templar and Hospitaler prisoners after Ḥittîn. Ibn al-Athîr uses ‘Imâd al-Din’s information to make a point of his own—the orders’ boldness and determination which make them a standing threat to the Muslims, and sound public policy requires their extermination. Indeed, he sharply criticises Sâlûq al-Din on those occasions when he decides to release Templar and Hospitaller prisoners instead of summarily executing them. (Ibn al-Athîr [Beirut reprint, 1960], xi, 331, 538, 558; xii, 22-3).

For the Ayyûbîd period after Sâlûq al-Din (589-658/1193-1260), there are only scattered reports on the orders, but the language used suggests a rising level of knowledge and sophistication. In a long report on al-Mâṣûr Muhammad of Hamit’s campaign against the Hospitallers in 599/1203 (Mufarridj, iii, 141-50), Ibn Wâsîl refers to them for the first time as bayt al-isbitdr (domus hospitalis), an expression which is henceforth common for both orders and which seems to imply some sense of their corporate nature. Likewise, for the first time they are called al-mukaddam (fratres), a term suggesting a similar conclusion. Finally, all officers of the orders had previously been simply named mukaddam, whatever their real rank; now, however, Ibn Wâsîl distinguishes two subordinate officers, mukaddam al-turkabiyâ (Turcopoliier) and kûmis min al-bahriyya (perhaps Commander of the Ship; cf. Riley-Smith, op. cit., 329-30). Though Muslim writers never display a systematic knowledge of the orders’ internal structure, this passage at least signals increased contact and familiarity. On a different level, there is a remarkable passage in Ibn al-Athîr (xii, 465-6, anno 623) which suggests some comprehension of the special tie which bound the Templars and Hospitallers to the Papacy, and which also demonstrates that Muslim authors had access to Christian informants for their information about such things.

The Mamlûk chronicles per se seem to add little that is new to the Ayyûbîd texts, but they do reproduce a number of treaties between the Mamlûk sultan and various European rulers which reveal a sound assessment of the place of the orders in the Mediterranean balance of power, and whose precise terminology suggests a fairly accurate knowledge of their internal organisation. Thus in a treaty of 686/1287 between al-Mâṣûr Kâlûwân and the King of Aragon, the orders are identified as potential enemies of Egypt and Aragon equal to the Papacy, to the Genoese and Venetians, and to the Byzantines (Amari, Bibliotheca arabica-nica, Leipzig 1857, 345). Again, when Kâlûwân dictated the terms of a truce with Acre in 682/1283, he recognised that the royal bâllî could no longer command the obedience of all the Franks there, and so the chiefs of the orders were included among the signatories to the treaty. Especially striking is the precise and accurate titulature assigned to these men (baatrat al-mukaddam al-galîl iṣfâr [Templars]; al-mukaddam iṣfâr [Hospitaliers]; al-marshdn al-adjûl iṣfâr . . . nîb iṣfâr [Teutonic Knights]). It is in this document that the Teutonic Knights appear to be identified for the first time as a separate entity, under the name bayt al-isbitdr al-am (the last word doubtless being an error for al-sâman) (Makrûfî, Sulîk, i, 985-6, 995). Whatever knowledge of the orders may be ascribed to the historians and chancery of the early Mamlûk period, however, it would develop no further. For with the fall of Acre (690/
Henceforth, only the Hospitallers of Rhodes (1306-10), Syro-Egyptian Muslims no longer played any part in Islamic history, sc. that of the Templars (1307-14), the dissolution of the Templars (1307-14), and the transfer of Hospitaller heritage to Rhodes (1306-10).

Bibliography: The literature and published documentation on the orders is of course overwhelming, but the bulk of it refers to their European branches rather than to Syria. (This is especially true of the Templars, whose central archives were destroyed when the order was abolished in the years 1307-14.) The best general history of the orders remains H. Prutz, Der geistliche Ritterorden, Berlin 1996. For the Hospitallers in Syria, we have an excellent recent study by J. Riley-Smith, The Knights of St. John in Jerusalem and Cyprus, c. 1050-1310, London 1967. For the Hospitallers in Rhodes (1306-1523), the most recent overviews are the chapters by A. Luttrel and E. Rossi in K.M. Setton, ed., A History of the Crusades, Madison, Wisc. 1975, iii, 270-339. Due to the lack of archival materials, there is no serious modern work which focuses on the Templars in Syria; however, A.J. Forey, The Templars in Jerusalem, London 1953, is a detailed study of their role in Spain during the reconquista. The political and diplomatic role of the orders in the East is of course presented in the standard works on the Crusades. Archival materials can be approached through two major collections: Cartulaire général de l'ordre des Hospitaliers de St-Jean de Jerusalem (1100-1310), ed. J. Delaville le Roulx, Paris 1894-1906; and Cartulaire général de l'ordre du Temple, 1119-1150, ed. Marquis d'Albon, Paris 1913. An extremely rich source for the Hospital's Rhodian period is the Catalogue of the records of the Order of St. John of Jerusalem in the Royal Malta Library, ed. J. Mizzi, V. Borg, A.Z. Gabarretta, Malta 1964. As suggested in the text, the Arabic sources all but ignore the orders during the Seljuk and Zangid periods. For the Ayyubid period, the most interesting references are in 'Imād al-Dīn al-Kātīb al-Iṣfahaṇī, al-Faḥ Fasahat Fasahat al-Kudrī, ed. Landberg, Leiden 1888; tr. H. Massa, Paris 1972; Ibn al-Aṯīr, Kāmil; Ibn Wāṣil, Ṣuyūṭī al-Ṭūrī, ed. al-Shayyār et al., Cairo 1953. In the early Mamluk period, valuable information is yielded by Ibn ʿAbd al-Zāhir, al-Rawād al-zāḥir (on Baybars), ed. A.A. Khwāvīār (SOAS thesis, 1960); idem, Taḡrīf al-ayām (on Kalāwīn), ed. M. Kāmil, Cairo 1961; al-ʿAynī, Ṭabīd al-qimān, fragments publ. in RHC, Hist. or., ii, Baybars al-Maṣṣūrī, Zubāt al-filāha, unpub. (see Brockelmann, II, 44, S II, 43). In general, Ibn al-Furāt, T. al-duwāl wa-l-mulūk, vii-viii, ed. Zārāyfūz ʿIzz al-Dīn, Beirut 1936-8, gives the most reliable extracts of unpublished 7th/13th century materials. Makrīzī, Sulūk, ed. M.M. Ziyādā, Cairo 1934, though late and of little use in itself, is important because of the editor's careful indexes and cross-references. Among Eastern Christian sources, Kīnānāzūs (Greek), Matthew of Edessa (Armenian), Bar Hebraeus and (of highest importance) Michael the Syrian (Syriac) may be mentioned.

DAWLAT KHĀN LODĪ. 27th ruler of the Dihlī sultanate, was the son of Mahmūd Khān Lodī and a cousin of Mallū ʿIḳbāl Khān. Native Persian chroniclers say nothing about the early history of this Afghan nobleman of Dihlī who emerged as a dominant figure during the early years of the 9th/15th century when Tughlūkūd authority was on the verge of dissolution. He served Sulṭān Nāṣir al-Dīn Mahmūd II, the last ruler of the dynasty, both as private secretary with the title ʿAẓīz al-Mamlūk ("Great one of the State") and as military governor of the Dō'ab. On the death of the Sulṭān in 815/1412, the amīrs offered the throne of Dihlī to Dawlāt Khān Lodī, who thus assumed power, but without the honours of royalty, as incorrectly mentioned by Fīrūzštānī, i, 292; for the Tughlūkī dynasty after Fīrūz Shāh's death in 790/1388 had become a moribund institution, as evidenced by Bāḏāʿī, in his Manūṣṭūṭah al-tawārīḵī, i, 266, where he speaks of Sulṭān Māḥmūd's writ as extending only from Dihlī to Palam, a suburb of the capital.

The first act of Dawlāt Khān Lodī on becoming ruler was to move out of the capital towards Kāηtār, where he received the allegiance of Narsingh Ray and other Hindu landlords. But he had to retreat from Kālpī in the face of fierce onslaughts by Ḫārawid Shāh, the Ṣirāqī ruler of Ǧawānīpūr (see ṢIRĀQĪ). Dawlāt Khān's downfall came at the hands of his arch-rival Khīdhr Khān of Mūltān, who taking advantage of the prevailing disorder in and around Dihlī, attacked the capital in 816/1414. Dawlāt Khān took refuge in the fortress of Sīrī, which was invested by Khīdhr Khān for four months. At last, he capitulated, and was sent prisoner to Ḥiṣār-Emīrzāgh, where he soon died. The Dihlī Sultanate henceforth enjoyed a fresh lease of life for a little more than a century, with Khīdhr Khān becoming the first ruler of the Sayyid dynasty.

DAWR (A. pl. ʿawwār), "revolution, period"; the periodic movement of the stars, often coupled with kāʿūr (pl. ʿawwār), "great period" (see Rassla no. 35 of the Rassla-i Ḥiṣārīn al-Safā, [q.v.]), Fīl-ʿawwār wa-l-ʿakār, in the doctrines of the extreme Shiʿī sects, the period of manifestation or concealment of God or the secret wisdom in and around Dihlī. The Ismāʾīlī doctrine, history is composed of seven ʿawwār of seven "speaking" (nāṭīk) prophets, each of whom reveals a new religious law (ṣariʿa): Adam Noah, Abraham, Moses, Jesus, Muhammad and Khīdhr Khān. Each nāṭīk has his trustee (wāṣṣī) who reveals the inner (bāthān) meaning of the respective ṣariʿa. The seventh nāṭīk, the Khīdhr Khān, will abrogate Muhammad's ʿawwār and restore the pure ʿawwār (q.v.) of the times before Adam's fall. The period between each two nāṭīk is called the "little period" (al-ʿawwār al-saghir). The whole cycle from Adam to the Khīdhr Khān (al-ʿawwār al-kabīr) is also called "period of the concealment" (al-ʿawwār al-satīr), because the gnosia (iṭm) is concealed by the outward (ẓāhīr) and is only known by the initiates. During the period of concealment, the seven planets rule the world. Before the ʿawwār al-satīr, there was a period of manifestation or revelation (al-ʿawwār al-kabīr) during which the twelve angels of the Zodiak kept the unadulterated pure tasāḥīd; at the end of time, the Khīdhr Khān will bring forth a new ʿawwār al-kabīr. In the literature of the Tayyi-biya, an eternal alternation of satīr and kashf is supposed.

The Druzes (see DURŪZ): In the Druze canon,
the periods of reincarnation of the Divine Creator are called adwār. The 13th treatise counts 70 adwār, each of $70 \times 70 \times 1000$ years.

The Nuṣayrīs [q.v.]. Like the Ismāʿīlīs, the Nuṣayrīs assume a cycle of seven adwār, in which the Divine “Sense” (muṣala) incarnated himself in Abel, Seth, Joseph, Joshua, Ṣafī (the vizier of Solomon), Simon Peter and Ἄλω, while his “Name” (ism), i.e. his prophet, was incarnated in Adam, Noah, Jacob, Moses, Solomon, Jesus and Muhammad.

The conception of the seven periods of revelation seems to derive from old Jewish-Christian traditions like those preserved in the Pseudo-Clementine Homilies; it is a well-known topic in the speculations of certain Gnostics and Manicheans (see T. Andrae, Die Person Maimundos in Lehre und Glauben seiner Gemeinde, Stockholm 1918, 322 ff.; H.H. Schaeder, Die islamische Lehre von vollkommenen Menschen, in ZDMG, bxxix (1925), 213 ff.).

DAYN (A.), like obligatio in Latin, means literally “debt”, but also expresses the idea of “claim”. This predominance of the passive aspect makes it necessary to specify the sense of the relationship: hence when one says lahu dayn, this means that an obligation is due to someone, i.e. he is a creditor, whereas with ‘alayhi dayn, this means someone has an obligation to fulfill, i.e. he is a debtor. Claim and indebtedness are thus two aspects of the obligation, according to whether the active or the passive side is in mind, and this is why it seems more exact to speak of “obligation” for dayn.

The obligation (dayn) which is a personal right is opposed to that in an object (hakk fi ‘l-dayn). The idea of dayn rests on that of dhimma, a word which has a very wide sphere of applicability: it is the capacity of being subject to the law, in fact the basis of an obligation. Hence patrimony and dhimma, the expression dayn fi dhimma.

The obligation which has as its object a determinate thing (dayn fi ‘l-dhimma) is divisible from the obligation which has as its object a personal action (dayn fi dhimma). In regard to obligations which have a determinate thing (‘ayn), dayn can arise out of a contract (fān) or personal action (dayn), and in your transaction or marriage), or out of a tort requiring reparation.

The elements of obligation (gharī‘ al-dayn). Obligation necessarily presupposes (a) at least two persons, i.e. a person who is required to perform a certain act, the debtor (muṭālib, muṭālib), and a second person to whom the fulfillment of this performance is due, the claimant (rābib al-dayn, ṭālib). The word gharī‘ indicates the two of them (Latin res). But there can be several principals involved, claimant or debtors, as when there is joint responsibility for the obligation. (b) An object, i.e. the performance which is obligatory and which the other party is legally entitled to exact; a multiplicity of objects is possible (the case of alternative obligations). (c) A cause. Muslim authors often understand by this the origin of the obligation.

The effects of the obligation. This last can be completed or not completed. Where it is completed, see below, there results the extinguishing of the obligation. If it is not completed, the claimant has a right to recover damages because of loss suffered through the non-completion of the obligation. A formal notice is not necessarily: Das interpellat pro homo. From the very fact of non-performance, the debtor is presumed to be at fault, and must prove either force-majeure or act of God (ism al-sulātān, darāra, ṣadūq or ‘ajū samāwyya).

Modalities of the obligation i.e. settlement and stipulations. In principle, only monetary claims can be affected by a settlement. This last is always presumed in the interest of the debtor. The stipulations can be suspenseive or resolutory, but there is a reluctance to validate conditional obligations in which the active and the passive side are not united in practice. It is thus easily understandable why the dayn is classified by Muslim authors among goods or chattels (see al-Mawardī, ‘Adab al-kādī); in effect, it is an incorporeal possession belonging to the creditor and existing in the patrimony of the debtor, as when there is joint responsibility for the obligation. Hence patrimony and dhimma, the expression dayn fi dhimma.

DEED [juridical] [see ṿAD].

DEFAULT OF HEIRS [see fārast].

DEHKHUDA, ʿALI ʿABBĀR (1297-1375/1879-1955), poet, satirist and lexicographer of modern Iran. During the constitutional revolution (1905-9), he acquired a reputation as poet and satirist. But later, with the rise of Kīdā Shāh Pahlavi [q.v.], he gave up all political activities, devoting himself to literature and philology. Besides the satirical pieces, the so-called Īrand u parand, in which his very sarcastic humour secured vast popularity for the journal Sāri Ṣaftī, his literary
output includes a Persian translation of Montesquieu's *Esprit des Lois* (unpublished), a review of Naṣr-i Khusraw's *Diwan* (ed. S.N. Ta'kawi and M. Minaw, Tehran 1937/1928), a four-volume collection of Persian proverbs and aphorisms, called Amghül u hikâm (*Madīmat al-amthaž*), as cited in E.E. Bertiels's *Özerki*, which has not been published as a posthumous volume, and the extensive lexicon, *Luğat-nāma*, which has had to be published mainly as a posthumous work and is still in progress. While Dehkhudā is generally considered a pioneer in modern, simple prose-writing, his poetical work—except for a few pieces published in popular periodicals—seems rather of a turgid and pedantic character, for only a few pieces published in popular periodicals—

Demirdāshīya

DEMESNE [see day'a].

DEMIRDĀSHĪYA, a branch of the Khalwatiyya [*q.v.*] Sufi order named after Muhammad Demirdāsh al-Muḥammadī, an Azeri Turk as is suggested by his name. According to 'Abd al-Wahhāb al-Shārānī, al-Tabākāt al-kubrā, Cairo 1954, ii, 147 ff. (cf. Maḥmūd Rābī) and Ḥasan Kāsim (eds.), Abu al-Ḥasan Nūr al-Dīn al-Makhlūf, Tuhfat al-aḥlāb wa-buqaytīr al-tūlīb fī l-ḥakīmat wa l-maẓrūk wa l-ṭarāqīm wa l-ḥakīmat al-mubāḥahīt, Cairo 1937, 15), he had belonged to the community of mystics which had been gathered around 'Umar al-Rashīdī (*q.v.*), a protegé of the Āk Kūyūnī (*q.v.*), the ruler 'Uzūn Ḥasan and a kāhlīfa (*q.v.*), or the second *ṣīr* (*q.v.*) of the order Yahyā al-S̱īrīnī (*q.v.*). 

The biographies written in the late 19th and early 20th century by Yūsūf b. Ismāʿīl al-Nabāḥānī, *Dāmīt karnāšt-e anvelīb*, Cairo 1929, ii, 9 ff., and Muḥammad Zāhid al-Kawdhārī, *Nawrūz al-muḥaddith fi iṣṣalāt amāh̲ālāt bi-Alāmah Demirdāsh al-Muḥammadī*, Cairo 1364/1944-5, state that Muhammad Demirdāsh had originally been a *maṇīk* of the Sultan al-Aghṣaf Sayy ibn al-Dīn Kāyīt Bāy (*q.v.*) and the *murtid* (*q.v.*) of Muḥammad b. ʿUkba al-Ḥadramī (*q.v.*). After he had joined the disciples of al-Rashīdī in Tabrīz, from where he is said to have returned to Egypt towards the end of Kāyīt Bāy's reign. This version is in accordance with the contents of the official biographies published on behalf of the *tāṬīka* (*q.v.*) at the beginning of the 20th century (appended to Muhammad Demirdāsh al-Muḥammadī, Risāla fi mawṣūf al-baḥāʾīt wa l-maṭḥūth min ṭarāqīm wa l-ṭarāqīmin min al-ṣūrāh, Cairo n.d., 37-54 and 63-65, which are mainly based upon unpublished sections of 'Abd al-Raʿūf al-Munāwīlī al-Kawdhākī durrīyya fī tanāqīm al-sāla al-ṣūrīyya.

Muhammad Demirdāsh was an adherent of Ibn al-ʿArabī's metaphysics, and he must have been influenced by the teachings of the Shādhīḥīyya order in which he had been initiated by his first spiritual master Abū Ṣaʿīd al-Badāwī, *Risāla fī mawṣūf al-baḥāʾīt*, 32 f., 62, as appears in his treatises al-kawāf al-farārī fī mawṣūf al-taḥṣīl, Cairo n.d., and in Risāla fī mawṣūf al-haḳāʾīk, mentioned earlier in the article. The liturgy of the order refers in no way to any special kind of mystical theology, as was noted by E. Bannerth, in *WZKM*, xxi (1969), 20, who described the *tāṬīka* (*q.v.*)—mānā in the terminology of the order—and the ceremonial surrounding the yearly occasion of retreat (*khalīfah*) for a period of three days at the end of Shābān, as it was practiced in the 1960s (see bibliography). It is not unlikely, however, that the liturgy may have mirrored the influence of Ibn al-ʿArabī's thinking upon Muhammad Demirdāsh at an earlier stage, since we have no evidence of a fixed ritual until about a century after his death in 929/1524, when his great-grandson and khāṭīf Muḥammad al-Ṣaḥṣīrī composed a treatise in raḥīm metre, entitled *Tuhfat al-tūlīb al-nūmin min ḥuṭraḍ al-awshahīt wa l-asul l-ʾalāb* (sing, *al-nābūl*) and some members form a circle turning anti-clockwise (or occasionally two circles, one moving clockwise and the other circle moving anti-clockwise), while calling "ha, ha". This period of Demirdāshī ritual has been subject to outside criticism in the past (cf. 'Abd al-Kādir b. Muḥṣīl al-Dīn al-Aḥrīfī, *Hūṣūṣ al-dāʾirīn wa-radd al-maktūb*, Alexandria 1299/1881-2, 43, ff., and 'Abd al-Ḡānī al-Nābūlī, Kībīb al-Ḥaḳīkā fī ṭriḥāt al-Shām wa maṣūr wa l-Ḥuṣūṣ, ms. Berlin 6146, fol. 242a ff.).

From the days of Muhammad Demirdāsh al-Muḥammadī until the present, ceremonial gatherings have been confined to the only existing *ṣūrā* (*q.v.*) of the order, situated in the present-day *Abdīn* quarter of Cairo. The official establishment and the surrounding land had been donated to Muhammad Demirdāsh by Sultan Kāyīt Bāy (*q.v.*), and continued in Cairo in 1364/1944-5, state that Muhammad Demirdāsh had originally been a *maṇīk* of the Sultan al-Aghṣaf Sayy ibn al-Dīn Kāyīt Bāy (*q.v.*) and the *murtid* (*q.v.*) of Muḥammad b. ʿUkba al-Ḥadramī (*q.v.*). After he had joined the disciples of al-Rashīdī in Tabrīz, from where he is said to have returned to Egypt towards the end of Kāyīt Bāy's reign. This version is in accordance with the contents of the official biographies published on behalf of the *tāṬīka* (*q.v.*) at the beginning of the 20th century (appended to Muhammad Demirdāsh al-Muḥammadī, Risāla fi mawṣūf al-baḥāʾīt wa l-maṭḥūth min ṭarāqīm wa l-ṭarāqīmin min al-ṣūrāh, Cairo n.d., 37-54 and 63-65, which are mainly based upon unpublished sections of 'Abd al-Raʿūf al-Munāwīlī al-Kawdhākī durrīyya fī tanāqīm al-sāla al-ṣūrīyya.

The order experienced a severe setback at the end of the 18th century when it was plundered by French troops (cf. 'Abd al-Rāḥmān al-Dībārī, *Aḍābīb al-ʾaḍāb*, Cairo 1297/1879-80, ii, 95), and continued to rank among the less prominent *tāṬīkas* in Cairo until the 1880s, when it experienced a revival under the leadership of 'Abd al-Rāḥmān Muṣṭafā al-Demirdāshī Bāgā, the founder of the Cairoence hospital named after him. After his death in 1929, a dispute about the succession occurred, in which the then muṭīf of Egypt 'Abd al-Maḏīdī Saḥīf intervened (cf. Maḥmūd Abū Rayya, *al-Sayyid al-Badāwī*, Cairo n.d. 182). This dispute ended in the formal investiture of 'Abd al-Raḥīm's six-year old grandson,
equally named ‘Abd al-Rahîm, and the appointment of the principal nakâbî, Amîn al-Šayyâd, as his wakîd or regent, specifically charged with the task of managing the tarîka’s affairs. The latter’s son Husayn was head of the order in the 1970s. Although membership of the order has never spread outside Cairo, this has been the direct consequence of the requirements set upon the potential murîd. Anyone desiring membership had to attend the weekly haqqas of the order held near the shrine of hadrâs, head of the order in the 1970s. During this period he had to be under the surveillance of one of the order’s nukâb, who were always residents of Cairo. The latter had to judge the personality of the candidate, and could propose him for initiation to the head of the order (cf. Zaki Muhammed Mu$$hîdî, al-’Alâm al-a$$arîkîyya, ii, 110).

Traditionally there were never more than twelve nukâbî at one time. New nukâbî were elected by the head of the order in consultation with the nukâbî already in office (cf. Mu$$hâmad Sulaymân al-Ša$$hârî, Tuhfat al-’aláb wa-hiddîntîn al-tarîkî fi’înî yâhîn ‘alâm min al-’aláb, Cairo 1322/1904-5, 81 f.).

The mosque and shrine of Demirdâsh are the scene of an important weekly Žiyâra-day (cf. F. De Jong, Cairene Žiyâra-days. A contribution to the study of the principal wakîl, Abd al-Rahîm, and the appointment of the order held near the shrine of hadrâs, head of the order in the 1970s.

This collection contains also a section with biographical data, liturgical texts and rules, are al-’Alâm al-a$$arîkîyya fi awkâd al-tarîka al-Demirdâshîyya, Cairo n.d.; Mu$$hâmad Labîb al-’Alâm al-’Alâm is a biographical dictionary, edited by Mu$$hâmad Mu$$hâmad al-’Alâm, Cairo 1348/1929-30; and a biography of Abd al-Rahîm Mustafa al-Demirdâshî, compiled by Mu$$hâmad Adham Bek Mu$$nîr, 52 ff.

For other biographies of ‘Abd al-Rahîm, see Zaki Muhammed Mu$$hîdî, al-’Alâm al-a$$arîkîyya, Cairo 1355, iii, 109 ff. These give also additional information about the order’s religious practice, and Mu$$hâmad Sulaymân Badawi, Nolsâm yasta min hayat u$$âdîha al-fâlîd . . . ‘Abd al-Rahîm Mu$$tâfa al-Demirdâshî Behgîî, Cairo n.d. the populations of entire nations to well-reasoned analyses based on incomplete or slightly inaccurate census returns.

**Registration.** In Muslim lands, registration data have always been kept by governments. Ideally, a population register records a person by age and sex and lists his date of birth and death and, perhaps, events such as marriage and conscription. More usually, births, deaths, and other events are registered separately, total numbers of births, deaths, etc. are published, and no attempt is made to keep a record of each individual. The former is usually called a Population Register, the latter a Register of Vital Events.

**Sample surveys.** Surveys ask demographic questions of a scientifically selected sample of the population, often 5% to 10%. The surveys take various forms, but are usually intended to find information on demographic variables, particularly fertility, in a detailed manner not possible in a census. Surveys are normally used to supplement information gained through a census. In countries such as those in the Sahel in Africa, though, in which taking censuses long proved impossible, "sample censuses" were taken instead.

**Censuses.** The census is the basic source of quality demographic data. To be a census, an enumeration must be intended to be an actual count of the members of the population of an area. It must be held in a short period of time. Every census should ask age, sex, and residence of all inhabitants, and questions on marital status, occupation, religion, and others are usually included also. Collections of registration data are not censuses.

Though the census and registration practices of medieval Islam did not differ, some phenomena have been universal. In a Muslim nation's early census or registration records, females are undercounted. Children are also undercounted, and a person seldom knows his exact age, so age-specific data is incorrect. As education, economy, and experience with national statistics grow, these problems lessen.

With few exceptions, completeness and reliability of a nation's population statistics improve as time advances. Few Muslim nations have accurate historical statistics. For this reason, in Muslim nations historical demography depends on modern demography. Only by examining modern and accurate demographic data can an historical demographer gain the basic knowledge of fertility and mortality that he needs to evaluate historical records.

What follows are descriptions of the demography of nations with a Muslim majority or a large Muslim minority. They are arranged by geographic region and nation and two sorts of works are considered—government statistics and analytical/descriptive studies. Censuses are listed by year in which they were taken, not by issuing agency or publication year, for reasons of space. The articles and books cited deal with population and demography as a whole, not with specific subjects such as migration or fertility. Those interested in studies of specific demographic topics will find ample resources in the bibliographies of the works discussed below.

### I. Mediaeval Islam

There is no reliable demography of Medieval Islam. Materials from which demographic calculations could be made, such as tax registers and military payrolls [see DNWA] were kept by mediaeval Islamic governments, but have not survived.

Like the mediaeval Europeans, Muslims were little interested in population numbers for their own sake. Furthermore, the Muslim world felt no need to keep religious statistics, and so it possesses no analogues to the baptismal and marriage records of Western Europe. Though the great geographers and travellers of mediaeval Islam often mentioned the "great size" of cities, the "large number" of people in an area, or gave fanciful estimates of the size of armies, they did not often offer even rough estimates of population numbers. This was reasonable, because there was no way geographers, travellers or others could have known population numbers. No one had counted the population and, as has been proven by the multitudes of erroneous "estimates" of population made in all areas of the world, the only way accurately to know the size of a population is to count it. The enumerations needed for population analysis were not made in the Islamic world, or at least have not been found, prior to the second great period of Islamic expansion, the Turkish empires. In the empires, the keeping of population statistics was the province of the state. Beginning in the late 16th century, the Ottoman governmen began to keep accurate counts of households in the Empire for taxation purposes. Similar counts were taken by the emperor Akbar in Mughal India, and may have been taken in Safavid Iran.

Non-statistical sources. While demography is essentially a statistical study, non-statistical sources can be used to illuminate areas of population history for which statistics are unavailable. The most obvious area in which this is true is migration. Large-scale migration of Arabs, Mongols, and Turks in Islamic times were recorded by geographers and historians. The populations of cities can be at least roughly estimated through archaeological evidence and through measurements of contemporaries such as Ibn Battīţa, who simply measured the size of city walls to gain a picture of the city's size and (by analogy) its comparative population. (Much evidence of this sort is available in Le Strange, *Lands.* There are numerous quasi-statistical sources for specific demographic events. An example of this type of material is al-Makrizi on the plagues and famines of Egypt, whose material is analysed by Michael Dols (The Black Death in the Middle East, Princeton 1977). For a translation of al-Makrizi's work, see G. Wiet, in *JESHO,* v/1 (1962). Such sources give estimates of numbers dying, being born, or leaving a city or an area. It should be stressed that such sources can be used to gain an impression of the scope of demographic events, no more. Their population numbers are usually suspect. Much information may be available from analyses of geographers' accounts of the amenities of towns—baths, mosques, etc.—but this research remains to be done. As to accuracy, the Muslim commentators, who often knew well the areas of which they spoke, are much to be preferred to European sources.

One source of mediaeval Islamic demography is the system of records of Islamic law. The codes of the schools and fragmentary surviving judicial decisions can at least give an impression of what was religiously-accepted in marriage and divorce and in matters that affect fertility, such as lactation, polygamy, and contraceptives. Basim Musallam has made good use of this type of material in his work on contraception (Sex and society in Islam. The sanctions and medical techniques of birth control (dis., Harvard University 1973). Unfortunately, legal codes and court decisions do not necessarily reflect actual practice of the majority of Muslim society, and for
this reason legal matters have limited usefulness as demographic sources.

The fact that demographic evidence on mediaeval Islam is almost non-existent has not meant that estimates have not been made. Josiah Cox Russell has been in the forefront of those using materials such as estimates of city sizes and poll tax revenues to arrive at population totals. (See Late ancient and medieval population, Philadelphia 1958; Late medieval Balkan and Asia Minor population, in JESHO, iii/3 [1960], 265-74; The population of medieval Egypt, in Journal of the American Research Center in Egypt, v [1966], 69-82; and others.) Russell's work is often based, however, on unverifiable secondary sources, vague estimates of army sizes and taxation by historians who lived centuries after the fact, the calm acceptance of population figures drawn without examination from sources such as La Grande Encyclopédie and Encyclopædia Britannica, and incredible logical jumps that conveniently provide estimates when not even poor data is available. Russell does show that estimates are possible from fragmentary evidence, but this evidence must be much more carefully analysed than he and those who have followed him have done.

The use of non-demographic evidence to find population totals seems to work better for urban than rural areas. A good example of this type of analysis, though for a later period than mediaeval Islam, is André Raymond's Signes urbains et étude de la population des grandes villes arabes à l'époque ottomane, in BEO, xxvii (1974), 183-93. Ch. Pellat has made a demographic study out of unusual material in Peut-on connaître le taux de natalité au temps du Prophète, in JESHO, xiv/2 (1971) 107-35, which shows that an exceptional amount of information can be drawn from limited data. Also, his Quelques chiffres sur la vie moyenne d'une catégorie de Musulmans, in Mélanges d'islamologie, Leiden 1974, 233-46, is a pioneering study in the use of biographical references for extracting demographic information.

(Many works on mediaeval Islamic history have uncritically used population estimates as part of their descriptions. For examples of this, see two studies by Eliyahu Ashott, Histoire des prix et des salaires dans l'orient médical, Paris 1960, esp. 237, 239, 272, and 273, and A social and economic history of the Near East in the Middle Ages, Berkeley-Los Angeles-London 1976, esp. 290 and 291, see also his Un mouvement migratoire au haut Moyen Age: migrations de l' Перс vers les pays méditerranéens, in Annales E.S.C. (1972/1), 183-214.)

II. OTTOMAN EMPIRE

The 16th and 17th century Ottoman population registers (defters) were among the first European state records that can be used as population sources. Since the records were not kept primarily as data on population, however, they must undergo considerable manipulation before they can yield total population estimates, and they do not provide information on other demographic variables, such as fertility and mortality.

The study of Ottoman defters was effectively begun by Ömer Lutfi Barkan, who analysed the records for the Ottoman Empire once again began to collect population statistics. Unlike the 16th and 17th century defters, the new registration was the base of a system of military conscription. Each male in the empire was to be recorded in population registers (tahnr-i nifus), at first by general age group ("youth" and "adult" or "youth", "adult", and "aged"-categories corresponding to one's availability for military service). By the 1840s, the registers were being kept, at least in some areas, in much greater detail; each male was recorded by age, household, and his relationship to the head of the household. The tahnir were periodically updated through "events" (waq'ah) registers in which were recorded births, deaths, conscriptions, and migration. During the reign of Abd al-Hamîd II,
registrations of females were kept, as well as those of males, but female registration was only successful in northern and western Anatolia and in the European sections of the empire (see Ender Ziya Kurral, Osmanlı imperatorlukta ilk nüfus sayımı, Ankara 1940; Fazlalı Rıdâ, 1831 tarihinde Osmanlı anadolu idarât taki- mat ve nüfus, in Belleten, xv, no. 60, 617-28; and J. McCarthy, Age, family and migration in nineteenth-century Black sea provinces of the Ottoman Empire, in IJMES, x [1979], 309-23).

The totals collected from the Ottoman registration system in provinces were published at intervals in the provincial yearbooks (sâl-nâmes), listing population by province, sub-province, and district, and often by religious group and sex. At various times the central government updated the data across the empire and published the data in what have been erroneously been called “censuses”. Three of the “censuses” have been translated and reproduced (Kural; Kemal Karpat, Ottoman population records and the census of 1881/82-1893, in IJMES, ix [1978], 237-74; McCarthy, International historical statistics: the late Ottoman empire, Boston 1981). It should be noted that the Ottoman population totals by province uniformly underestimate the number of women and children in the province, and thus totals must be adjusted by from 10% to 30%, depend- ing on the province.

The uses of Ottoman figures for the study of the historical population of the Middle East are obvious. Simply stated, no one but the Ottoman government counted the population and no one but the Ottoman government even remotely knew what the population was. Data on total population from sâl-nâmes and “censuses” is increasingly being used in population studies. It is, however, the archival records of popu- lation that hold the greatest promise. When these records are available and utilised, accurate studies on fertility, mortality, and population change in the Ottoman Empire will be possible.

The 19th century Ottoman registration system has been described by Karpal (Ottoman population) and S. J. Shaw (The Ottoman census system and population, 1831-1914, in IJMES, ix/3 [1978], 325-57). For examples of the uses of sâl-nâmes and “censuses” population records, see Vedat Eldem, Osmanlı imperatorluktan Mısır- daki sâl-nâmeler, hâkikât-ı nûfuslar (Ankara 1970); Leila Erder, From trade to manufacture in Bursa, diss., Princeton University 1976; and McCarthy, The Muslim population of Anatolia, 1878-1927, diss., UCLA, 1978.

Contemporary European sources on Middle Eastern population in Ottoman times will only be mentioned briefly here. Those that were accurate were drawn from Ottoman data, and thus are only valuable if they provide population statistics of areas for which the original Ottoman data is unavailable. The most valuable of the European sources are the books of Cuiinet (La Turquie d’Asie, 4 vols., Paris 1890-1; Syrie, Liban, et Palestine, Paris 1896). Cuiinet collected life and Ottoman popu- lation statistics, as well as data on the social and economic life of Ottoman Asia. No other European source can in any way compare with Cuiinet. (Those interested in European sources should consult N. Michoff, La population de la Turquie et de la Bulgarie au XVIII et XIX siècles, recherches bibliographico-sta- tistiques, 4 vols., Sofia 1919-35, and the various vol- umes of Die Besökerung der Erde, a supplement of Petermanns Mitteilungen, Gotha, especially vol. xi, 1901, 3-23.)

Nineteenth and early 20th century Ottoman geo-
the statistical histories of the three new nations diverged.

In Syria, the French mandatory powers made a population count in 1922, which they updated and published in 1926. This count cannot be called a census, since much of it was based not on actual enumeration, but on population totals given by village leaders. Its totals are too low, as were those of the first census of independent Syria in 1947, which did not count nomads. Modern censuses were taken in 1960 and 1970. (The Syrian government printed, in addition to the results of the census of 1970 itself, volumes of analysis of the census results by K.E. Vaidyanathan.) For an analysis of modern Syrian population and demographic variables, see Moussa Lâiliane Samman, *La population de la Syrie*, étude gio-demographique, Paris 1978; Samman makes extensive use of Izzat Nouss, *La population de la Syrie*, étude demographique, Paris 1951.

The population of Lebanon in the 19th century has been analysed by Youssif Courbage and Ph. Fargues, *La situation démographique au Liban*, Beirut 1974, ii, ch. I. European estimates are detailed in D. Chevallier, *La société du Mont-Liban à l'époque de la révolution industrielle en Europe*, Paris 1971. Both studies are marred by their lack of consideration of Ottoman statistics, except insofar as those statistics appeared in French works such as Guinet's *Syrie*, *Liban, et Palestine*. The bulk of the Courbage and Fargues' work is, however, a good study of modern Lebanese population. The French mandatory administration attempted to enumerate the population of Lebanon in 1921, 1932 and 1941. Even the best of these counts, that of 1932, was deficient and underestimated the Muslim population. For political reasons, no modern census has been taken, and only limited evidence exists on demographic variables such as fertility and mortality (see D. Yaukey, *Fertility differences in a modernizing country*, Princeton 1961). What data exist come from demographic surveys, which are described in *Available demographic data in the Lebanese Republic*, in *Population Bulletin* of the United Nations Economic Commission for Western Asia, nos. 10-11 (Jan.-July 1976), 240-3. J. Chamie, *Religion and population dynamics in Lebanon*, Ann Arbor, Mich. 1977, has described the unusual religious-demographic situation in Lebanon.

In Palestine, the British took an incomplete census in 1922 and a more complete count in 1931. They also recorded migration, an important phenomenon in Palestine, but probably missed much Muslim population movement, especially that of Bedouin. Since the 1948 War and the division of Palestine, Israel has taken censuses in 1961 and 1972, begun a registration system in 1948 (often listed as "the Census of 1948"), and held numerous sample surveys of the population. Jordan has taken censuses in 1952, 1961, 1971, and 1979 and a fertility survey in 1976. The results of the 1952 Jordanian census are very deficient, and those that came from the 1948 Israeli registration count somewhat deficient.

Estimates and census data for Palestine have been presented in great detail by R. Bach, *The population of Israel*, Jerusalem 1976. Bach's volume, which is an extremely valuable source, must be used with care for the period 1880-1922. For that period, he avoids using actual Ottoman population statistics and substitutes British and other estimates without justification. Certain other events with large demographic implications, such as the 1948 and 1967 Wars, are also incompletely and, as regards demography, inaccurately covered. The book is very good, however, on the analysis of Israeli statistics. See also, D. Friedlander and C. Goldscheider, *The population of Israel*, New York 1979, and various analytical volumes published by the Israeli government as part of its census publications.

A. Thavarajah, *Mid-decade demographic parameters of Jordan and population growth*, in *Demographic measures*, 55-75, has adjusted results on population found in Jordanian censuses and registration records. He provides a good brief introduction to the problems of Jordanian data collection from 1952 to 1965. A much more detailed analysis comes in the Jordanian government's *Analysis of the population statistics of Jordan*, Amman 1966, which describes in detail the country's vital registration system, as well as its censuses, and the accuracy of both. "Irāk. M.S. Hasan wrote the first study of the population of *Irāk* in the 19th century, *Growth and structure of Iraq's population*, 1867-1947, in *Bulletin of the Oxford University Institute of Statistics*, xx (1958), 339-52. Hasan, however, accepted as accurate and reliable three types of data—Ottoman statistics as presented by Guinet, European estimates, and the *Irākī* census of 1947—and none of these can be considered accurate without extensive revision. Three Ottoman provinces made up the area of present-day *Irāk*—Mawṣil, Bagdād, and Baṣra. Only in Bagdād were Ottoman population statistics fairly accurate, and even in Bagdād there was a significant undercount of women and children, an undercount reflected in Guinet. European sources had no idea what the population was. Even the 1947 *Irākī* census was an undercount. As a result, Hasan's figures must be rejected. The best source of total population numbers for Ottoman *Irāk* is the series of estimates published by the Ottoman government in the sīl-mīmes of the *Irākī* provinces (McCarthy, *Population of the Ottoman Fertile Crescent*).

The *Irākī* government took censuses in 1927, 1934 and 1947. While the completeness of the censuses improved over time, each one produced an undercount. This was in part due to the use of census records as conscription records. K.C. Zachariah has found numerous errors in the early censuses, and a use of census data for estimating demographic measures of *Iraq*, in *Demographic measures*, 27-54. The censuses taken in 1957, 1975, and 1977 are more reliable. See also Fādīl al-Ansārī, *Sukkān al-*Irāk, Damascus 1970.

*Arabian Peninsula*. The best sources on the population of early 20th century Arabia are three geographic works: Shams al-Dīn Sāmīf Fraghī, op. cit.; *Al Jīdāwīd, Mawādīh-i ūzmāngīyin idnugrajfā bāghštī*, Istanbul 1895; and J.G. Lorimer, *Gazetteer of the Persian Gulf*, Calcutta 1908-1915. The first two offer estimates based on the reports of Ottoman government officials, the third offers the estimates of British consular and intelligence officers, travellers, and merchants. None of the three is useful for anything but rough approximations of population numbers.

In 1947, Nello Lambardi published what he stated were population figures taken from Yemeni government records, *Divisioni amministrative del Yemen con note economiche e demografiche*, in *OM*, xxvii/7-9 (July-Sept. 1947), 143-62. The statistics appear to have been part of a tax register of men and animals. Women and children were surely undercounted, but no figures by age and sex were kept, so the extent of the undercount cannot be determined. The Yemeni data are the only data for South Arabia before the
1970s. The British did keep a register of births and deaths in Aden, but the undercount, especially of mortality, was great.

Turkey. Rather than continue the Ottoman registration system, the Turkish Republic decided to draw its population enumerations from a system of censuses which followed the Western model. In this it emulated the Balkan countries, each of which had taken a census when it became independent from the Ottoman Empire.

Turkey held its first complete census in 1927 and has held quinquennial censuses since 1935. (For a description of the Turkish censuses, see A critical review of demographic data obtained by Turkish population censuses, in Turkish demography: Proceedings of a Conference, ed. C. Shorter and Bozkurt Güvenc, Ankara 1969.) The 1927 census is deficient, especially for the eastern provinces of Turkey, but provides useful information and can be adjusted (McCarthy, Muzlim population, 185-223). From 1935 the Turkish censuses are, along with the Egyptian censuses, the best source of demographic information in the Middle East. Turkey has also held a series of sample demographic surveys, of which the most valuable is the Turkish Demographic Survey. See Nusret Fişek, Demographic surveys in Turkey, in Turkish demography, l-18, and the volumes of the Turkish Demographic Survey, Ankara 1963-5. The modern Turkish registration system has only produced published statistics for births, deaths, and marriages in the central cities of provinces and these are incomplete due to under-registration and migration.

The best short introduction to Turkish demography is an article by Shorter, Information on fertility, mortality, and population growth in Turkey, in Turkish demography, 19-42, and in Population index, xxxiv/1. More detailed coverage is in Figen Karadayi et alii, The population of Turkey, Ankara 1974. Turkey's demographers have produced a large and detailed literature in Turkish, French, German and English on Turkish demography. This work is listed and sometimes annotated in the fine bibliographies edited by Behire Bulutoglu, Türkçe nüfus bilbiyografları, Ankara 1967, continuing. See also Necdet Tunçdilek and Erol Tümererkin, Türkiye nüfus, Istanbul 1959; Yakut Bulutoglu, La structure par âge et la mortalité de la population de la Turquie, Paris 1970; and İh不同 Tekeli, Evolution of spatial organization in the Ottoman Empire and Turkish Republic, in From Malta to Metropolis, ed. L. Carl Brown, New York 1975.)

Iran and Afghanistan. There are no reliable demographic statistics extant for Iran until well into the 20th century. In fact, the only contemporary statements on Persian population before World War I that have been published are European estimates, mainly dating from ca. 1900. The Şafawī and Kādjar registers have not been found, or at least not analysed and published. However, G.G. Gilbar has studied critically European estimates of the population of Kādjar Iran and the effects of epidemics and wars on the population and has made projections of population size, in his Demographic developments in late Qajar Persia, 1870-1906, in Asian and African Studies, xi (Haifa 1976), 125-56. See the comments and reports on Iranian population by Issawi in his Economic history of Iran, 1800-1914, 26-53, and in his Population and resources in the Ottoman Empire and Iran, in Studies in eighteenth-century Islamic history, ed. T. Naff and R. Owen, London 1977, and J. Bharier, A note on the population of Iran, in Population Studies, xxii, 274-5.

The Iranian government made unsuccessful attempts at population registration from 1928 onwards, and carried out an urban "head count" between 1939 and 1941 in 25 cities (B.D. Clark, Iran: changing population patterns, in Clarke and Fisher, 68-96). Censuses were held in 1956 and 1966, but the censuses, while providing the first fairly reasonable population data on many parts of Iran, included significant undercounting of women and of certain geographic areas and minority groups, especially nomadic Kurds and Turks.

Bharier has projected the population of Iran from 1900 to 1970 in his Economic development of Iran, 1900-1970, Oxford 1971, 24-8, which incorporates material from his A note and other articles by Bharier. Djamchid Momeni, The population of Iran, a dynamic analysis, Tehran 1975, 25-30, gives a slightly different set of estimates for the same period. Of the two, Bharier’s analysis and estimates are superior. His estimates of total population size, rural and urban populations, and migration give a broad idea of population change in Iran from 1900. Given the paucity of the data, no more can be expected.

The following can serve as an introduction to the modern population and demography of Iran: The population of Iran, a selection of readings, ed. Djamshid A. Momeni, Honolulu 1977; Djamchid Behnam and Mehdi Amani, La population de l'Iran, Paris 1974; and various publications of the Institute for Social Studies and Research in Tehran.

Afghanistan’s geographical features and the nomadic nature of many of its people have made even the rough estimation of population in Afghanistan a great task. Population sample surveys of Afghanistan were taken in Afghanistan in 1960 and 1968-9, the latter providing detailed information on demographic variables.

These surveys have been described by L. Dupree, Population review 1970: Afghanistan, in American Universities Field Staff Reports, South Asia Series, xv/1 (Dec. 1970), and Hamidullah Amin and Gordon B. Schilz, A geography of Afghanistan, Omaha,
Nebraska 1976, 153-64. Amin and Schilz print useful results of the surveys, but they too readily accept survey and registration data in questionable areas, such as records of female population and completeness of registration, and thus their work must be used with care.

Afghanistán conducted a more complete sample survey of sedentary population in 1971-3 (National Demographic and family guidance survey of the settled population of Afghanistan, 4 vols. 1975). The survey provided the first accurate data on the majority of the population. It was followed by a census in 1979, the results of which are not available. Government registration of males was begun in Afghanistan in 1932, but has produced no useful statistics and is surely incomplete. The best analysis of the Afghan population appears in the analytical volumes (1, 2, and 4) of the 1971-3 National Demographic and Family Guidance Survey. See also two articles by Dupree, Population dynamics in Afghanistan, in Field Staff Reports, South Asia Series, xiv/7 (April 1970), and Settlement and migration patterns in Afghanistan: a tentative statement, in Modern Asian Studies, ix/3 (July 1975), 397-413. J.-Ch. Blanc, L'Afghanistan et ses populations, Brussels 1977; J. Trussel and Eleanor Brown, A close look at the demography of Afghanistan, in Demography, xi/1 (Feb. 1979), 127-51. For Russian articles on Afghanistan, see T. I. Kukhina, Bibliografía Afganista, Moscow 1965.

IV. NORTH AFRICA

Unlike the Middle East, there are few good sources of historical population statistics for the Maghrib. Those that do exist do not go farther back than the 19th century, though one can hope for the future discovery and use of Ottoman registers for earlier periods.

Morocco. The political and statistical situation of colonial Morocco was so fragmented that no reasonably accurate statistics for the entire country exist before 1960. Prior to Morocco’s independence and unification in 1956, the Spanish colonial power only attempted one census, in 1950, while the French in their zone took counts in 1921, 1926, 1936, 1947, and 1951-2. All except the French 1947 “census” were undercounts. In 1947 the government counted ration cards to establish population numbers, and war-time illegibilities seem to have caused an actual overcount, see G.H. Blake, Morocco: urbanization and concentration of population, in Clarke and Fisher, 404-5. The Moroccan censuses of 1966 and 1971 gave more reasonable totals, and the undercount of women and children seen in other censuses of Muslim countries was slight in Morocco in 1971. Two sample surveys of Moroccan population have been held, in 1961-3 and 1971-3.

La population rurale du Maroc by D. Noir (2 vols., Paris 1970) gives full analyses of all demographic phenomena, including historical estimates of the population and an excellent bibliography. The work is essential to an understanding of Moroccan demographic and demographical history. K. Kerkti and R. Beausjou have assessed the accuracy of Moroccan population statistics and arrived at revised figures in La population marocaine: reconstitution de l'évolution de 1950 à 1971, in Population, xxx/2 (March-April 1975), 335-67. La population du Maroc (by the Institut National du Statistique et d'Économie Appliquée of Morocco, Rabat n.d.) is a reasonable summary of basic demographic measures on Morocco, but is disappointing in its lack of detailed analysis or bibliography.

Algeria. Algeria has one of the longest series of censuses of any developing country. The French began enumerating settled Algerian population and nomads (by “tent”, not by person) in the entire country in 1856. Before 1886, a certain amount of estimation was used for remote areas, and it was only in 1886 that the French attempted actually to count the entire population. Even then, however, distrust of the colonial government and the difficulties of counting nomads and certain other parts of the population produced a serious under-enumeration; see G. Negadi, Les sources de la démographie en Algérie, in La population de l’Algérie, Algiers 1974 (?), 1-3. From 1886 to 1911 and from 1921 to 1936 the French held quinquennial censuses of Algeria. After the Second World War, censuses were taken by the French, then by the Algerian government in 1948, 1954, 1960, 1966, and 1977.

Despite their long series, the Algerian censuses only gradually improved in completeness and produced significant undercounts in all censuses prior to 1966. Added to the ubiquitous problems of under-enumeration of women and children, censuses-takers in Algeria experienced special problems with nomads and with migration to Europe. (For a detailed description of the first reasonably-accurate Algerian census and the problems mentioned above, see Abdelaziz Bouisri, Technique, méthode, et résultats du recensement de la population Algérienne, in Revue Tunisienne, vi/17-18 (June 1969), 95-125.)

Algeria’s vital registration system was begun by the French, but under-registration was extremely high, perhaps 30 %. Since independence this figure has improved to 10-15 % of vital events unregistered; see M.L. Fares, Population growth and socio-economic development in Algeria, in Demographic aspects, 396-9). The country took a major National Demographic Survey in 1969-71 which has provided the best estimates of fertility and trends available.

In addition to the articles mentioned above, the following can be consulted as basic descriptions of Algerian population and demography: A.M. Bahri Population et politique en Algérie, in Revue Tunisienne, vi/17-18, 65-88; Zachariah, Basic demographic measures of Algeria, in Demographic measures, 1-25; A. Bousri and F. de Lamaze, La population d’Algérie d’après le recensement de 1966, in Population, xxvi, numéro spécial (March 1974), 25-46; G. Negadi et alii, Situation démographique de l’Algérie, and the other articles and the bibliography in La population de l’Algérie, in Population, xxvii/6 (Nov.-Dec. 1973), 1070-1107.

Tunisia. Both the Ottoman government and the Tunisian Bevlik kept registers of population, mainly as taxation records. J. Ganiage has examined these registers and deduced from them the population of Tunisia ca. 1860; see La population de la Tunisie.
vers 1860. Essai d'évaluation d'après les registres fiscaux, in Etudes Maghrébines, Paris 1964, 165-98, and in Population, xxxi/3 (Sept.-Oct. 1966), 857-62. As is usually the case, the local records are far superior as sources of demographic information than any estimates by travellers or consuls. (For a brief summary of early estimates, see Mahmoud Sekiani, La population de la Tunisie, Tunis 1974, 13-22.)

The French government of Tunisia and later the Republic held censuses in 1921, 1926, 1931, every ten years from 1936 to 1966, and in 1975. (Censuses of the European population of Tunisia were held earlier than 1921.) The first census seems to have under-counted the population due to the enumerators' dependence on tax registers (Clarke, Tunisia: population patterns, pressures, and policies, in Clarke and Fisher, 350; Sekiani, op. cit., 18-19), so it is perhaps not proper to call it an actual census. The latter censuses have shown the usual undercount of women and younger children. Various surveys have provided a more detailed demographic picture than seen in the censuses, especially the Tunisian Demographic Survey of 1968 (J. Vallin and G. Paulet, Quelques aspects de l'enquête nationale démographique tunisienne, in Revue Tunisienne, vii/17-18, 225-37).

Though death registration in Tunisia is very incomplete, since 1958 births seem to have been better recorded; see S. Zaghloul, Demographic parameters of Tunisia, in Demographic measures, 231, 233.

Tunisia has a well-developed statistical system. M. Picouet describes the system and gives an overview of available data in Les sources de la démographie tunisienne à l'époque contemporaine, Tunis 1972. The population itself is described, from the 19th century to 1990, in Sekiani, La population de la Tunisie. See also: Hachemi Chtioui, La croissance de la population et des ressources en Tunisie pendant la période coloniale, in Reue Tunisienne, vii/17-18, 53-64; A. Marcoux, La croissance de la population de la Tunisie, in Population, xxvi, numéro spécial (March 1971), 105-24; and the various publication of the Centre d'Études et de Recherches Économiques et Sociales of the University of Tunis and of the Tunisian Institut National de la Statistique.

Libya. The first population statistics for Libya were the Ottoman registration (males only) records for the Provinces of Benghazi and Tripoli. The Italians took censuses in 1931 and 1935 which under-enumerated the nomadic population, but counted the city regions with greater accuracy, see Pan Chia-Lin. The population of Libya, in Population Studies, iii/1, 100-25. Independent Libya has held three censuses: 1954, 1964, and 1973. Statistics have improved with time, and an undercount in 1954 had greatly improved by 1973, though the 1973 census was still probably incomplete in coverage of nomads.

Compared to the other North African countries, very little has been written on the demography of Libya. R.G. Hartley, Libya: economic developments and demographic responses, in Clarke and Fisher, 315-47, describes population and economy, but provides very little analysis of Libyan demographic data. The best descriptions of the Libyan demography are the short Demographic parameters of Libya, by S. Zaghloul, in Demographic measures, 115-36, and a monograph by the Libyan census department, Population growth, fertility, and mortality based on the 1972 Populations Census, Addis Ababa (UNECA) 1979.

Egypt. Egyptian population before 1800 has been estimated on the basis of taxes paid, land cultivation, and contemporary statements on city sizes, none of which have resulted in anything but very rough approximations. On these estimates, see W. Cleland, The population problem in Egypt, Lancaster, Penn. 1936, 3-6. The first attempt at scientifically counting the Egyptian population was made by members of the French Expedition in 1800. It was followed by an enumeration, based on tax registers, made by Muhammad 'Ali in 1846, this time drawn from household registers similar to those mentioned above for the Ottoman Empire in the same period. A census along modern lines was taken in 1882, but its figures were once again too low. See J. McCarthy, Nineteenth century Egyptian population, in Middle Eastern Studies, xii/3 (Oct. 1976), 1-40, which includes correction factors for the 1882 figures.

The British took decennial censuses from 1897 to 1947. Except for a large undercount in the 1917 wartime census, the British censuses are good population records. The amount of undercounting diminished as the census series went on. Attempts to take a census of the new Egyptian Republic were frustrated in 1957 by war conditions, though preliminary results were reported. The Egyptian government carried out successful censuses in 1960 and 1976, and a sample census in 1966. Registration of births and deaths has been done since the middle of the 19th century and, though it has never been complete, the registration of vital events in the 20th century has been accurate enough to provide a general picture of fertility and mortality patterns. By the standards of the developing world, Egypt has an excellent series of demographic statistics.

The general works on Middle Eastern population cited above usually include the demography of Egypt among their studies. Many monographs on the populations of the Middle East and Egypt are published by the Cairo Demographic Centre.

V. SUB-SAHARIAN AFRICA

Islam is dominant across North-Central Africa from Mauritania to Somalia, and there are significant Muslim minorities in both East and West Africa. Demographic knowledge of this area only begins with the period of colonial domination. Though a few traveller's accounts of the populations of small areas exist for an earlier period, there are no accurate
figures for the total populations of large areas until well into the 20th century.

The type of demographic statistics available for sub-Saharan African countries depends on whether the colonial ruler of a nation was England or France. England was generally able to take more reliable censuses than was France. Only at the very end of colonial rule, though, were the English censuses remotely successful counts of population. Before that time, numerous censuses were taken of the non-native populations, or of the populations of cities, or of selected areas, but the first actual censuses of entire countries were only taken after World War II.

Before the War the British did produce a wealth of estimates of African population. These range from simple estimates based on observation to complex approximations made by comparing the characteristics of areas that had been enumerated with those that had not and estimating that similar areas had similar population numbers. Both estimates and censuses made in British Africa are considered in detail and thoroughly analysed by R.R. Kuczynski, Demographic survey of the British Colonial Empire, 2 vols., Oxford 1948. Kuczynski collected censuses, estimates, and other data and drew from them accurate estimates of total population, fertility, mortality, and migration. While more recent studies have questioned certain sections of his analyses, Kuczynski’s work still stands as a monument to careful scholarship.

The first reliable population data from East African censuses come from the British East African censuses of 1948. These were followed by censuses taken in Kenya in 1962, 1969, and 1979, in Tanzania in 1957-8, 1967, and 1978, and in Uganda in 1959 and 1969. Sample surveys have not been as important in East Africa as in West Africa and the Sahel and population registration has not proved effective.

In West Africa, no complete census was ever taken in Nigeria, Ghana, or Sierra Leone while they were under British colonial rule, though in-exact censuses were taken in Ghana in 1948. Ghana has held decennial censuses since 1960 and Sierra Leone censuses in 1963 and 1974. In Nigeria, following upon a series of population estimates and partial censuses beginning in 1866, the British took a census in 1952-3 that was relatively reliable. Since then, each Nigerian census has proved to be more unreliable than the last. See R.K. Udo, Population and politics in Nigeria, in Caldwell and Okonjo, 97-105. Nigeria has held censuses in 1952-3, 1962, 1963, and 1973.

Unlike Nigeria, the censuses of Ghana and Sierra Leone have proved to be reliable. Sierra Leone censuses have exhibited only a slight, ca. 5%, undercount and the Ghana censuses are of a similar level of reliability. See T.E. Dow Jr. and E. Benjamin, Demographic trends and implications, and S.K. Gaisie, Population growth and its components, in Population growth and socioeconomic change in West Africa, ed. Caldwell, New York 1975, 427-54, and 346-46.

P.O. Olumuyiwa has briefly summarised historical and modern data on Nigeria in his Population growth and its components: the nature and direction of the population, in Population change, 254-74. It is symptomatic of the deficiencies of the Nigerian census system that the only general book on Nigerian population is mainly a study of sample surveys (F.L. Mott and Olumuyiwa, The demography of the Sudan, Uppsala 1978, 169-93. The most complete picture of what is known of Sudan’s population comes from demographic analyses of defective data. For such analyses, see especially P. Demeny, The demography of the Sudan, in W. Brass, et alii, The demography of Tropical Africa, Princeton 1968, 466-514, and Zacharias, Use of population and housing survey data of the Sudan for estimating its current demographic measures, in Demographic measures, 169-93. The most complete picture of the Sudanese population is given in The population of Sudan, Khartoum 1958, but the book too often relies on defective data from the 1955-6 survey and even this data is out-of-date. The articles listed above and K.S. Seetharam and A. Farah, Population trends
and economic development in Sudan, in Demographic aspects, 149-69, give a more accurate picture of the population. That the French in Africa were not as active as the British in taking censuses was largely a function of the French colonial census. The countries of the Sahel—Chad, Niger, Mali, and Mauritania—are ones in which holding an accurate census historically proved to be near impossible. Complete counts of population were hindered by the problems of counting nomads, lack of trained census takers, and the prohibitively high costs of censuses in what were extremely poor nations. Chad has never had a census, and the other three countries only held their first censuses in 1976-7, with uncertain results. Instead of censuses, demographers of the Sahel have relied on “sample censuses” of 5 to 10 % of the population. These have yielded the only fairly reliable data on fertility and mortality of the area. See S.P. Reyna, Chad, and Issaka Pankoussa, et ali, Niger, in Population growth. A similar, though more statistically reliable, set of sample surveys and post-1975 censuses has been held in other areas of formerly French Africa. Pre-independence “censuses” of French Equatorial Africa were actually either estimates or what were called “administrative censuses.” The latter are counts drawn from tax registers, administrative records, or attempts to assemble the population at market towns to be counted and have proved to be uniformly incorrect.

L. Verrière has described Senegal in 1965 (La population du Sénégal, Dakar 1965), basing his work on the 1960-1 sample survey, which was highly deficient. See also P. Meige, Le peuplement du Sénégal, Dakar 1966. The work of B. Lacombe, B. Lawry, and J. Vaugelade, Sénégal, in Population growth, 701-19, is a better description of the population. A. Podlewski has described the population of Cameroon in Population growth, 543-64, but little else has been written on the country’s population. See also J.-M. Cohen et ali, Afrique Noire, Madagascar, Cameroun—Demographie comparée, Paris 1967; Demographic transition and cultural continuity in the Sahel, ed. D.I. Pool and S.P. Coulthard, Ithaca, N.Y. 1977.

Historical demography of Africa is necessarily hindered by the lack of sources. Unfortunately, the Muslim areas of Africa are often those with the most potential for historical population statistics, since no “parish registers” or missionary records of conversions exist for African Muslims. Nevertheless, the application of sophisticated techniques of demographic and historical analysis is producing data on African Muslim populations of the past, particularly in the 19th century. An example of scholarly effort on African population, African historical population, Proceedings of a Seminar at the University of Edinburgh 1977, includes studies on the Sudan, the Ivory Coast, and French Equatorial Africa, all areas of significant Muslim population, and analyses of population statistics of East and West Africa. G. Ayoub Balamoan, Migration policies in the Anglo-Egyptian Sudan, 1884-1956, Cambridge, Mass. 1977, has demonstrated that limited African data can be used to establish sound historical knowledge on migration, demographic change, Muslim topics such as the Pilgrimage, and even political events. Many of the works mentioned above on modern demographic studies have sections on historical demography as well. The volumes by Kuczynski are particularly important for identifying historical statistics and their sources.

Most of the new nations of Africa have taken censuses since independence. F. Gendreau has published a list of censuses, and sample surveys, taken in all the countries of Africa between 1946 and 1973, see La démographie des pays d d’Afrique, revue et synthèse, in Population, xxxii (4-5) July-Oct. 1977. (Some of the censuses listed by Gendreau were not complete or accurate enough to be listed as censuses by the United Nations.) More recent censuses are listed in the United Nations Demographic yearbook (described below).

There are not many general works on the demography of sub-Saharan Africa. The demography of Tropical Africa, ed. Brass et ali, Princeton 1968, is a pioneer work, not only in African demography, but in the study of the populations of developing nations. E. van de Walle’s Characteristics of African demographic data in the volume (12-87) is an excellent summary of the types of errors found in African censuses and surveys. Gendreau lists the populations of cities and countries in his article La démographie, and considers the accuracy of various types of data-gathering techniques—censuses, administrative censuses, and surveys. For a geographic approach to African population, see W.A. Hance, Population, migration, and urbanization in West Africa, New York 1970. The best source on West Africa is Population growth and socioeconomic change in West Africa, the articles of which consider first the demographic variables for the region as a whole, then for specific nations. Nigeria, Sierra Leone, and Ghana are particularly well represented.

VI. CAUCASUS AND CENTRAL ASIA

There are no accurate statistics of the number of Central Asian Muslims in what is today the U.S.S.R. until the 19th century. Barthold, Turkestan, ch. 1, mentions a few Chinese and Arab statements on the populations of cities and numbers in armies, but these are no more than improbable guesses, e.g. the city of Samarkand having 500,000 citizens. In the late 19th century, travellers such as Curzon (Russia in Central Asia, London 1889) and Schuyler (Turkestan, New York 1877) occasionally reported city sizes, taken from Russian records, fairly accu-
The first complete census of Russian (Soviet) Central Asia was conducted in 1926, followed by censuses in 1939, 1959, 1970, and 1979. Official estimates of the Central Asian population were also made by the imperial government in 1911 and the Soviet government in 1956. Since the Soviet state is atheistic, it does not recognize religious distinctions and the category "Muslim" does not appear on the Soviet censuses. A student of Muslim population in the Soviet Union must consider instead the population of multitudinous "ethnic groups" whose ancestors were Muslims. Comparison of Imperial statistics on Muslims with Soviet statistics on "ethnic groups" is very difficult, as is analysis of Soviet Muslim population. Most demographic analyses of Central Asia or the Caucasus are done by region or republic, i.e., multi-ethnic or multi-religious subdivisions, or by ethnic or linguistic groups, not religion.

I.M. Matley's *The population and the land, in Central Asia: a century of Russian rule*, ed. Allworth, New York and London 1967, is a good general article on Imperial and Soviet Central Asian population, as is *Demography*, of Krader's *Peoples of Central Asia*. General volumes such as *The nationality question in Soviet Central Asia*, ed. E. Allworth, New York 1973, 131-8. Estimates of the population of Bukhara and Khiva have been discussed and analyzed by F. Lorimer in *The population of the Soviet Union: history and prospects*, Geneva 1946, 129, and more completely by L. Kroder, *Peoples of Central Asia*, Bloomington, Ind. 1963, 172-3. Like all censuses of traditional areas, the 1897 census figures are incomplete, especially for Muslim women and young children. Nevertheless, its data are excellent when compared to the type of poor estimates that must serve for previous periods.

After independence, the Indian and Pakistani governments continued the censuses. India kept to the British decennial census plan and held censuses in 1951, 1961, and 1971, and is planning a 1981 census. Pakistan took censuses in 1951, 1961, and 1972; Bangladesh in 1974. Of the three countries, India's of the Indian statistical tradition, population, and economic development, the country most studied by demographers. Hundreds of articles are written each year on facets of Indian demography, and it is impossible to consider this vast literature here. Kingsley Davis's volume, mentioned above, is a good introduction to the demography of India up to independence. The Indian Registrar General's Office has published a general introduction to Indian population, The population of India, Delhi 1974, and a Bibliography of census publication of India, Delhi 1972. For a more complete review of the Indian statistical tradition, population, and demography, see Asok Mitra, India: population, economy, and society, New Delhi n.d., gives a detailed view of the Indian censuses. All three countries have held sample surveys which have been especially valuable in evaluating fertility. See, for example, Bangladesh, Census Commission, Report on the 1974 Bangladesh retrospective survey of fertility and mortality, Dacca 1977, and World Fertility Survey, Pakistan fertility survey, First report, Karachi 1976.

India's size and economic situation, as well as its long series of available statistics, makes it the developing country most studied by demographers. Asok Mitra, The population of India, 2 vols., New Delhi 1978. See also R.H. Cassen, India: population, economy, and society, New York 1978.

Information on modern censuses and surveys of Pakistan and its demography is well summarised in Mohammad Afzal, The population of Pakistan, Islamabad 1974. L. Bean has written a short introduction to the subject in The population of Pakistan, an evaluation of recent statistical data, in MEJ, xxvii/2 (1974), 177-84. Though the area of Pakistan has been included in studies on the historical demography of India, studies of purely Pakistani historical demography have been done as well: A.S.M. Mohiuddin, The population of Pakistan: past and present, diss., Duke University 1962, and Pakistan Institute of Development Economics, District Boundary changes and population growth for Pakistan, 1881-1961, Dacca n.d. Earlier studies of Pakistan demography all include Bangladesh as East Pakistan.

VIII. SOUTHEAST ASIA

Indonesia. In the late 18th and early 19th centuries, European colonial agents estimated the population of Java, basing their figures on records of the Dutch East India Company. These estimates, the first of their kind, were gross underestimates. The first attempts at accurate enumeration of the population were made by the British during their brief role in Indonesia (1811-16), when population registers were kept. The Dutch seem to have maintained these registers fitfully until 1880. At that time they enforced more complete registration, to be used as conscription records for compulsory labor. Probably because all who could do so naturally avoided such a registration, these registers also produced a large underestimate of population. Widjojo Nitisastro has analysed early material on the population of Indonesia in his Population trends in Indonesia, Ithaca and London 1970, and has concluded that the Dutch figures on total population are generally useless. Their main use should be as part of complete analyses of small demographic areas. Bram Peper has concurred in Widjojo Nitisastro's analysis and has used alternative demographic methods to calculate the population of 19th century Java; see his Population growth in Java in the 19th century, in Population Studies, xxiv/1 (March 1970), 71-84.

The Dutch colonial government took a census in 1920 in Java, but included few other areas of Indonesia and undercounted Java. Another colonial census was held in 1930, with wider coverage and better results. Independent Indonesia has taken censuses in 1961 and 1971. Some areas were estimated rather than enumerated in 1961 and the 1971 census is superior. A number of sample surveys have also been taken in the 1960s and 1970s. Widjojo's volume is the most complete description of the Indonesian population (to 1970, but it must depend on the 1961 census. The population of Indonesia by the Demographic Section of the University of Indonesia (Lembago Demografi) is more complete for the later period. G. McNeill and Si Gde Made Manus, The demographic situation in Indonesia, Papers of the East-West Institute, no. 28, Honolulu 1973, accurately summarise the available demographic information on the country.

See also J.M. van der Kroef, The Arabs in Indonesia, in MEJ, viii/3 (Summer 1953), 300-23 (Van der Kroef too readily accepts Dutch colonial estimates of population as accurate); J.N. Bhatta, A social science bibliography of Indonesia, Djakarta 1965; N. Islamdari, Some monographic studies on the population of Indonesia, Djakarta 1970; and Masi Singarambun, The population of Indonesia: a bibliography, Yogyakarta 1974.

Singapore-Malaysia. The British began to take population counts in the areas of Singapore-Malaysia in 1824, and made 14 enumerations between 1824 and 1860, none of which can be called reliable. Modern censuses were taken in Singapore in 1871 and 1881 and in both Singapore and the Malay territories decennially from 1891 to 1931. As British colonial power expanded over new areas of Malaysia, the new areas were brought into the census; see Saw Swee-Hock, The development of Population statistics in Singapore, in Singapore Statistical Bulletin, 1/2 (Dec. 1972), 87-93. After World War Two, the British took censuses in 1947 and 1957. The independent federation of Malaysia held a census in 1970, and Singapore, which had seceded from the federation in 1965. Though registration of deaths and births in Malaysia has only been reasonably complete since ca. 1970, the census results since 1921 have been reliable. On registration data, see J.A.

General Bibliographies. The best source of recent demographic statistics on a country is usually the published census, sometimes updated by intercensal estimates in the nation's statistical yearbook. The United Nations Demographic yearbook (New York, annual) summarizes statistics on population, fertility, mortality, and other demographic topics for all nations. Each year's edition of the Demographic yearbook also features detailed statistics on special topics such as marriage or international migration. See also the United Nations Population and Vital Statistics report, published quarterly (New York), which contains topical information.

The populations of Muslim lands have been included as part of the estimates in works on world historical population. The more detailed volumes, such as A.M. Garr-Saunders' World population: past growth and present trends, Oxford 1936, or M. Reinhard's Histoire générale de la population mondiale (with A. Arne), and J. Dupauquier, 3rd ed., Paris 1968, contain fairly extensive statements on the populations of Muslim lands. It must be remembered that these estimates have mainly collected and reproduced scholarship that has been done on the various geographic areas of the world by others, so that researchers might be better served by consulting the more primary works, which contain more detailed analyses. The authors of studies of world population history are forced to provide estimates for regions and times for which population numbers are actually unknown. As has been seen above, Muslim lands are often among those whose historical populations are unknown, so estimates of the populations of those lands in world population books must be used with caution. In addition to Garr-Saunders and Reinhard, see the summary article by J.D. Durand, Historical estimates of world population: an evaluation, University of Pennsylvania Population Studies Center, Philadelphia 1974, and United Nations, Department of Economic and Social Affairs, The determinants and consequences of population trends, 1, New York 1973, ch. 2 (vol. ii is a bibliography on world population).

General Bibliographies. Many articles on the demography of the Islamic World do not appear in the standard bibliographies on Islam, such as Index islamica, since the bibliographies do not usually include technical demographic journals within their purview. The best source of information on works on any facet of demography is Population index (Princeton, quarterly), one of the most thorough and valuable bibliographies in the social sciences. In addition to hundreds of journals, the Index examines all relevant bibliographies from other disciplines for materials on demographic. See also Bibliographie internationale de la demographie historique (Paris); Review of population reviews (Paris); and International population census bibliography, 6 vols. and suppl., Austin, Texas 1965-8, new vols. in preparation.)

General References. The best source of recent demographic statistics on a country is usually the published census, sometimes updated by intercensal estimates in the nation's statistical yearbook. to Sicily, where he was assassinated in 668. That the Arabs failed immediately to follow up this triumph, and did not attack Constantinople itself until Mu‘awiyah’s reign (in 58-64/672-8), was probably the consequence of mounting fitna within the caliphate, culminating in U‘mar’s murder in 566/656 although they were able to sack Rhodes in 53/663-4, just after Dhiyāt al-Sawwārī, if we adopt the earlier chronology for the battle.

(C. E. Bosworth)

**DHIKRIS,** Zikrīs, a Muslim sect of southern Balīcīstān, especially strong amongst the Balīcīs of Makrān [q.v.], but also with some representation amongst the Bahāris of further north. The sect’s name derives from the fact that its adherents exalted the liturgical recitations of formulae including the name and titles of God, e.g. dhikr [q.v.], above the formal Muslim worship, the salāt or namāz.

The Dhikrīs were believed by Hughes-Buller to stem from the North Indian heterodox movement of the Mahdawīyya, the followers of Suyyid Muhammad Mahdī al-Dāmpūr (847-910/1443-505), who claimed to be an ināmī with a revelation superseding that of Muḥammad the Prophet [see al-Dāmpūrī and al’I. art. MAHDAWĪ]. Adherents of the Mahdawīyya would have brought their doctrines to the remote region of Makrān via Fārāb in eastern Afgānīstān, where Muhammad Mahdī al-Dāmpūrī was buried. The rise of the Dhikrīs in Makrān is apparently contemporaneous with that of the local line of Bohēdāy Balīcī mahdīs in Makrān (early 17th century); both they and their successors after ca. 1740, the Gīkīs, were strong adherents of the Dhikrīs, and their heterodoxy brought down upon them several attacks by the orthodox SunnīKhān of Kālāt, Mīr Nasīr Khān (d. 1795) [see KHĀT and G.P. Tate, History of the Ahmadzai Khans of Kalāt].

Because, as with other unorthodox sects in Islam, its opponents spread slanderous reports about the immorality of the Dhikrī sect (incestuous practices, community of goods, etc.), the Dhikrī adherents were often driven to practice dissimulation in religion or tokhiba [q.v.], and it is accordingly not easy to obtain a clear picture of their doctrines and practices. It seems that these were consolidated in the early 18th century by Mūllā Gīkī and that they included the idea of to’ell of the Kur‘ān by the Mahdī, whose interpretation had replaced Muhammad of Mecca’s literal one; the non-necessity of observing the Ramādān fast; and the superiority of dhikr over salāt. These formulae of dhikr are to be recited six times daily in special huts called zikrānas which are not orientated towards the kibla. Instead of pilgrimage to Arabia, the Dhikrīs established a Ka‘ba or shrine of their own at the Koh-i Murdā near Turbat, in the district of Kīt in central Makrān, with a sacred well of its own, the cāhib-i zamān. British observers noted that the mualla of the Dhikrī communities had considerable influence.

Hughes-Buller’s information relates to the first decades of this century, when he noted that the sect seemed to be on the decline, and it is difficult to ascertain the present status of the sect, if indeed it survives at all in Balīcīstān now; the 1961 Pakistan population census reports mention the existence of Dhikrīs in Makrān and Las Bēlā [q.v.], but they may be repeating information stemming from British Indian times.

AL-DIKDĀN, a fortress situated on that part of the eastern shore of the Persian Gulf called the Sīr ‘Umāra, not far from the island of Kayṣ [q.v.], and famous in the 4th/10th century. It was known under three designations, Ka‘laf al-Dikdān, Ḥān Ḵẖbāya and Ḥīn Ḫīn ‘Umāra, as well as the Persian one Dīz-i Pisarti ‘Umāra (Ḫudūd al-‘alam, tr. 126). It stood guard over a village of fishermen and a port which could shelter some 20 ships, and according to Ibn Ḥawkal (tr. Kramera and Wiet, 268-9), following Ḭīṣṭḵār (140), no-one could get up to it unaided, since one had to be hoisted up by means of cables and a kind of crane or hoist. He adds that it was, for the Banū ‘Umāra, an observation post from which they could watch the movement of ships on the sea: “when a vessel approaches, they bring it to a halt and demand a percentage of its cargo”. The name of this fortress (= “tripod”, “trivet”, see Ibn Ḫūrwr- Ḽḏāḥbīh, Glossary, 211), which al-Mās‘aḏī considered as one of the wonders of the world (Mawād, ii, 69 § 501), is to be explained by the configuration of the land on which it was perched.

The geographers connect it with al-Dulandā b. Kan‘ān [Ibn Hawkal] or K.r.k.r (Ḫudūd, tr. 143; cf. Abu 1-Kasīm al-Azḏī, Ḵẖbāya, 130 l. 2.; but it is probable that these two names are a deformation of al-Muṣṭḵār, see Ibn al-Kalbī-Caskel, Tab. 216 and ii, 264). The Banū ‘Umāra claimed to be descendants of al-Dulandā and stated that their ancestors had established themselves in the district in the time of Moses. Now al-Dulandā and his family are known to have been kings in Yemen (Muḥammad b. Ḫabīb, Muḥtabār, 265, 266; Ibn Ḭaḏḡar, Ḫabā, No. 1295; M. Hamidullah, Le Prophète de l’Islam, index; etc.); on this basis, they levied dues on all merchandise and probably indulged too in piracy, since the Kur‘ānic verse (XVII, 78-79) “. . . a king who was behind them, taking every ship by force” was applied to them. In reality, the Banū ‘Umāra were probably a family of the Āḏ [q.v.] of ‘Umān who had settled in Fārs at an unknown date and who con-
trolled the Sif 'Umara during a period difficult to define precisely. Yâkût (ii, 711) certainly states that the Āl al-Djulandâd (the name of several lords of Fârs) were still powerful in his own time, but he only cites (ii, 966), after al-Mas'ûdî (loc. cit., 'Abd Allâh b. 'Umara who died in 399/921-2 after having reigned over the island of Zîrîbâdî for 25 years; his brother (?) Dja'far b. Hanza who reigned six months; and his son Bâtîl b. 'Abd Allâh who succeeded his uncle (?), who had been assassinated by his râhîm. At all events, the fortress was in ruins at the time of al-Kâlkashânî (Subh, iii, 214).

**(Ch. Pellat)**

**AL-DILA', an ancient place in the Middle Atlas region of Morocco which owed its existence to the foundation in the last quarter of the 10th/16th century of a zâwiyâ [q.v.], a "cultural" centre meant for teaching the Islamic sciences and Arab letters, and at the same time spreading the doctrine of the Shâdhîliyya [q.v.] order, more precisely the branch known as the Dja'zilîyya [see al-Gozûlî, Abî 'AbdAllâh Muhammad]. It also sheltered the needy and travelled people. In 1048/1638, the zâwiyâ dîlîyya or bâkriyya (from the founder's name, Shaykh Abî Bakr Ibn Muhammad al-Muhammad) was moved a dozen kilometres and gave birth to a new complex, enjoying a certain importance, in a spot now occupied by the zâwiyâ of the Ayt Ishak, 35 km. southwest of Khenifa and 64 km. northeast of Kâsbât Tâdla. Impelled by the founder's drive, who belonged to a family possessing vast estates and rich revenues, the zâwiyâ developed considerably, especially after 1012/1603, for during the troubled period which followed the death of the Sa'dîd sultan al-Ma'nsûr [q.v.], it provided a safe haven for students coming from the traditional urban centres and, thanks to its library and to the members of the Dîla'iyyîn family, aided by scholars from outside seeking refuge and staying at al-Dîla', intellectual resources which were quite appreciable. The subjects taught there comprised, in addition to Şû'ûn, the Korânic readings, hadîthî, famous logic, grammar, hadîth, jikh, mathematical and astronomic tables. Al-Dijâm al-Djilânî [q.v.], the author of several works which were in some demand in their time, amongst which have been preserved al-Mudahîl al-munâtikîl šîr ma'rûnî al-wâmisât (fêk, Ms. Rabat 276 K), Natî'î'î al-tâhîl fi šîr al-Tâshi'î (of Ibn Mâlik; grammatical commentary in 4 vols. known as far as Egypt), Fâlîk al-Lajîf 'âšî al-tâhîl wa 'l-tâfîl fi 'l-tâfîl al-munâtikîl fi tamârân, and various works (of A. Jâhiz, in Hespèris, xlvii [1956], 215-16). This grammatical manuscript survived the destruction of al-Dîla' and died in Fâs in 1089/1678. Two other members of the family became especially well-known in Fâs. The first, Abî 'Abd Allâh Muhammad al-Ma'sânîwî b. Muhammad al-Ma'sânîwî b. Abî Bakr b. Muhammad b. Muhammad al-Ma'sânîwî b. Abî Bakr (1072-1136/1661-1724), was a preacher and imâm at the Abî 'Inâniyya madrasa, muftî and shaykh al-qâ'îma (i.e. dean of the professors). He has left behind several works, notably a genealogical treatise on the descendants of 'Abd al-Kâdir al-Dîlânî [q.v.], the Nâjîgât al-tâbîkhî fi bîd al-gharîf al-'awdlîh (fêk, Fâs 1309/1891; ed. Tunis 1296/1879; partial Eng. tr. T. H. Weir, The first part of the Nâjîgât al-tâbîkhî, Edinburgh 1903; his output comprises, in addition to treatises on genealogy, law and mysticism, a poem of 40 verses written just before his death in order to seek God's pardon and recite at Fâs at burials, and finally al-Mu'âmâla al-fîshâyî fi mu'dâsîn al-zâwiyâ al-bâkriyya (see Lévi-Provençal, Chorfa, 301-2; M. Lakhdar, Vie littéraire, 152-8 and bibl.). The other Dîla'î worthy of note is Abî 'Abd Allâh Muhammad al-Hâdîdî b. Muhammad b. Abî Bakr, who died accidentally advantage of the decadence of the Sa'dîdîs [q.v.]. Operations began in 1048/1638, and the head of the zâwiyâ combatted, in this same year and on the banks of the wâdî al-'Abîdî, a Sa'dîd army sent from Marrakesh. Two years later, after various adventures, he had managed to establish his authority over the northwestern quarter of Morocco and, on 1056/1646, he reached as far as Taflîlît. In 1061/1651 he proclaimed himself sultan of Morocco and established diplomatic relations with various European powers. However, countermovements soon followed in various towns, and after some successes over other claimants to power and over the Spanish, he was finally beaten in 1079/1668 by the Alawi sultan Mawlay al-Raşîd [q.v.]. He was forced to submit to the latter, who indeed the death of the Sa'dîd sultan al-Ma'nsûr [q.v.], Ahmâd b. 'Abd Allâh (d. 1091/1680) tried in 1089/1678 to recover the lost Zalib and bring the centre meant for teaching the Islamic sciences and Arab letters, and at the same time spreading the doctrine of the Shâdhîliyya [q.v.] order, more precisely the branch known as the Dja'zilîyya [see al-Gozûlî, Abî 'AbdAllâh Muhammad]. It also sheltered the needy and travelled people. In 1048/1638, the zâwiyâ dîlîyya or bâkriyya (from the founder's name, Shaykh Abî Bakr Ibn Muhammad al-Muhammad) was moved a dozen kilometres and gave birth to a new complex, enjoying a certain importance, in a spot now occupied by the zâwiyâ of the Ayt Ishak, 35 km. southwest of Khenifa and 64 km. northeast of Kâsbât Tâdla. Impelled by the founder's drive, who belonged to a family possessing vast estates and rich revenues, the zâwiyâ developed considerably, especially after 1012/1603, for during the troubled period which followed the death of the Sa'dîd sultan al-Ma'nsûr [q.v.], it provided a safe haven for students coming from the traditional urban centres and, thanks to its library and to the members of the Dîla'iyyîn family, aided by scholars from outside seeking refuge and staying at al-Dîla', intellectual resources which were quite appreciable. The subjects taught there comprised, in addition to Şû'ûn, the Korânic readings, hadîthî, famous logic, grammar, hadîth, jikh, mathematical and astronomic tables. Al-Dijâm al-Djilânî [q.v.], the author of several works which were in some demand in their time, amongst which have been preserved al-Mudahîl al-munâtikîl šîr ma'rûnî al-wâmisât (fêk, Ms. Rabat 276 K), Natî'î'î al-tâhîl fi šîr al-Tâshi'î (of Ibn Mâlik; grammatical commentary in 4 vols. known as far as Egypt), Fâlîk al-Lajîf 'âšî al-tâhîl wa 'l-tâfîl fi 'l-tâfîl al-munâtikîl fi tamârân, and various works (of A. Jâhiz, in Hespèris, xlvii [1956], 215-16). This grammatical manuscript survived the destruction of al-Dîla' and died in Fâs in 1089/1678. Two other members of the family became especially well-known in Fâs. The first, Abî 'Abd Allâh Muhammad al-Ma'sânîwî b. Muhammad al-Ma'sânîwî b. Abî Bakr b. Muhammad b. Muhammad al-Ma'sânîwî b. Abî Bakr (1072-1136/1661-1724), was a preacher and imâm at the Abî 'Inâniyya madrasa, muftî and shaykh al-qâ'îma (i.e. dean of the professors). He has left behind several works, notably a genealogical treatise on the descendants of 'Abd al-Kâdir al-Dîlânî [q.v.], the Nâjîgât al-tâbîkhî fi bîd al-gharîf al-'awdlîh (fêk, Fâs 1309/1891; ed. between Mecca and Medina after having made the Pilgrimage (1141/1729). Several of his works have been preserved: poems glorifying the Prophet; Zahir at-hadd’ik [ms. Rabat 306 K] and al-Zahir al-nadi fi l-ghubuk al-muhammadi (ms. Rabat 157 D), an arzūzā on the Chorfa Durrat al-tīdīq (ms. Rabat 496, 522, 1180, 1244 K; lith. Fas), etc. (see Lakhdar, 166-8).

**Biography:** The basic Arabic sources are still unpublished: Yāzīqī, Ḥadd’ik at-ṣāḥīr al-nadiyya fi ʿtārīf bi-ahl al-ṣāḥīr al-dīlīyya al-bakriyya (arzūzā; ms. Rabat 261 D). Tāzī, Nīzhāt at-ṣāḥīr al-arzūzāyīn fi manadhīk al-ṣāḥīr al-dīlīyya al-bakriyyīn (ms. Rabat 1264 K). Hawāwī, al-Buhār al-dīlīyya fi ʿtārīf bi-l-sadāt al-ṣāḥīr al-dīlīyya (ms. Rabat 261 D). These sources, the Moroccan historians in general and the documents of various origin which are concerned with the political, diplomatic and military events, during the period of Muhammad al-Ḥadjīj, have been utilised by M. Ḥajdījī for his excellent monograph, al-Ṣāḥīr al-dīlīyya wa-dawruhd al-dim wa ‘l-ilmi wa ‘l-siyāsī (ms. Rabat 1494, 1964) which very quickly brought him wide celebrity, even beyond the ranks of the Muslims, due to the extraordinary number and quality of his graphic works, which tourists are still today invited to visit (see Guides Bleus, Algérie, s.v. Bou Saada); the house there completed on 6 September 224 was his birthplace (24 December 1929). His funeral took place on 28 December at the Great Mosque in Paris (in whose foundation he had himself been concerned) and which tourists are still today invited to visit (see Guides Bleus, Algérie, s.v. Bou Saada); the house there has lived has been made into a salon by Sliman ben Ibrahim.

This highly-talented painter of oriental topics deserves a notice in the Encyclopaedia of Islam not only because he died a Muslim, but also because he can be considered as a fervent apologist for the faith which he had assumed. Several of his written works have been published in France during his stay in Arabia, there appeared magnificent plates showing scenes of the Pilgrimage as illustrations for the title which appeared in French from “El Hadj Nacir ed-Dine E. Dinet et El Hadj Sliman ben Ibrahim Baemer” and with the double title al-Ḥadajjī ilī Bayt Allah al-Harīm (in Arabic script) and Le Pèlerinage à la Maison Sacrée d’Allah, together with the date 1347. In fact, this narrative, written on the return from the pilgrimage of 1347 and completed on 6 September 1248 (see Dirar b. Camr 225) Rabī’ II 1348/30 September 1929, came off the press in Paris at the beginning of 1930 (2nd edn. 1962), just a few weeks after its principal author’s death (24 December 1929). His funeral took place on 28 December at the Great Mosque in Paris (in whose foundation he had himself been concerned) and which tourists are still today invited to visit (see Guides Bleus, Algérie, s.v. Bou Saada); the house there has lived has been made into a salon by Sliman ben Ibrahim.

His artistic output, considerable in quantity and of high quality, comprises mainly Algerian and Arab scenes and landscapes, which very quickly brought him wide celebrity, even beyond the ranks of the Société des Orientalistes founded in 1887 by Leonce Grimme, Margoliouth, etc., which was subsequently to be extensively used by the Azharf shaykh cʿAbd al-Shark kamd yardhu al-Gharb. This last is a very detailed critique of the studies of Lammens, Hijjlī dīlīyyat al-Shubbdn al-Muslimm, the latter part of his Pèlerinage, and ʿUmar Fakhūrī was to issue at Damascus in, Ard gharbatī fi masʾīlī gharbatī, a version of his L’Orient vu de l’Occident (Paris n.d.) under the title al-Ṣāḥīr ilī Bayt Allah al-Harīm. The last is a very detailed critique of the studies of Lammens, Nöldeke, De Goeje, Sprenger, Snouck Hurgronje, Grimme, Margoliouth, etc., which was subsequently to be extensively used by the Azharf shaykh cʿAbd
al-Halim Mahmūd in the substantial introduction prefaced to his translation of La Vie de Mohommed, Prophète d’Allah, made, in conjunction with his son Muhammad, from the original edition as Muhammad Rastil Allāh (Cairo 1956). It is rather surprising that Dinet’s Sīra which, as we have seen, had a lively success among French-reading circles, did not draw the attention of the Egyptians during the 1930s, at a time when Haykal was in part inspired, in his Sīra halabīyā, by La Vie de Mahomet of E. Der- menghem published at Paris in 1929; possibly, like Dinet’s principal Islamological works seem to have as their aim less a scientific translation appeared in 1958. The translator analyses Nāṣir al-Dīn’s apologetical methods and, basing himself on the latter’s writings, demonstrates the superiority of Islam over Christianity. As opposed to the works of the Arabists whose researches tend only to set forth the reality of Islam, without any polemical intentions, Dinet’s principal Islamological works seem to have as their aim less a scientific study of his new religion than a glorification of it and an encouragement to the whole world to follow his example. His viewpoint is very clearly summed up in a paragraph of his Fēlerintage, where he affirms that Islam responds “to all the aspirations of different kinds of believers. Having a supreme simplicity with Mu’tazilism, wildly mysticaL with Sufism, it brings a sense of direction and a consolation to the European or Asian scholar, for whom “time is money”, as much as that of the deist philosopher, and that of the contemplative of the East as much as that of the Westerner carried away by art and poetry. It will even seduce the modern medical man by the logic of its repeated abductions and the rhythm of its bowings and prostrations equally salutary to the care of the body as to the health of the mind. The freethinker himself, who is not inevitably an atheist, will be able to consider the Islamic revelation as a sublime manifestation of that mysterious force called “inspiration” and will admit it without difficulty, since it contains no mysterious element inadmissible by reason”.

**Bibliography:** F. Arnaudies, É. Dinet et el-Hajjī Sultan ben Ibrahim, Algiers 1933; J. Dinet-Rodier, “The painter’s sister”, La vie de E. Dinet, Paris 1935, translated by a Sudanese negro whom it snatches away from the superstitious worship of fetishes. It exalts the soul of the practically-minded English merchant, for whom “time is money”, so much as that of the deist philosopher, and that of the contemplative of the East as much as that of the Westerner carried away by art and poetry. It will even seduce the modern medical man by the logic of its repeated abductions and the rhythm of its bowings and prostrations equally salutary to the care of the body as to the health of the mind. The freethinker himself, who is not inevitably an atheist, will be able to consider the Islamic revelation as a sublime manifestation of that mysterious force called “inspiration” and will admit it without difficulty, since it contains no mysterious element inadmissible by reason”.

**Dinet** (Ar. and Fr. texts, numerous ills.) was published in Algiers in 1977. (CH. PELLAT)
that God creates (khādākā) everything including man's actions, but he also insisted that man, in order to be responsible for his actions, simultaneously does them himself, either immediately or through "generation" (ta'addūd). In order to describe man's share in them, he used the Kur'anic term kasabah or iktisabah which does not yet mean "acquisition" here, but rather the mere performance of acts (cf. A. M. Schwartz in Islamic philosophy and the classical tradition, essays presented to R. Walzer, Oxford 1972 367 ff.; he stressed man's freedom of choice (iğhād) by assuming a capacity (istittādī) already before the act. The concept is clearly synergistic; Dirār openly talked about two "agents", God and man. This is where Abu 'l-Hudhayl and Bīshr b. al-Mu'tamir saw a sin against the spirit of the school; they eliminated the idea that God "creates" anything in human actions. Dirār could, however, argue convincingly with an example like the Kur'ān: when somebody recites the Kur'ān, not only his recitation, kur'ān, is heard, but also the Kur'ān as created by God. The equivocality of the word (kur'ān and Kur'ān) added to the suggestedness of the theory.

Outside the sphere of man, Dirār supported God's omnipotence by an elaborate metaphysical system based on the exclusively accidental structure of the corporeal world (i.e., God did not create man and later replaced the latter with a new one (cf. K. al-Tahnsh wa'l-īghra3', he had pointed to the plenitude of His essence, but its immediate intention may be explained through this process; here Dirār and his adherents seem to have absorbed certain Aristotelian ideas, especially the concept of ʿāllāḥiyya (istittādī, cf. Ist., xliii (1967), 254 ff.). The entire model is, of course, not Aristotelian; Dirār criticised Aristotle for his doctrine of substances and accidents in a separate treatise (cf. Fihrist, ed. Flick, in Shafi'i comm. volume, 69, title no. 14). The system does not allow for any self-determining and independent nature of things (tābīʿī; this is why it was rejected offhand by Dirār's contemporaries and later on by an-Nazgām, who joined a tradition which was more coloured by Stoic ideas [see kumos]. The consequences were especially visible in the definition of man: he is a conglomerate of "colour, taste, odour, capacity, etc.", but there is no independent and immortal soul.

Using two surprisingly elaborate philosophical terms which were never applied again by the Mu'tazilis, Dirār differentiated in everything which exists between its annīyya "existence" and its maḥīyya "quiddiyā". Opposition arose when he transferred this distinction to God: we know God's annīyya, but we ignore the plenitude of His maḥīyya. For we can infer the aspects of his essence only through rational conclusion; but we know from ourselves that an outsider is never able to explore the hidden sides of our nature to the same extent that we are aware of them ourselves. This is why we must be satisfied with negative theology: "God is omniscient" merely means that He is not ignorant. Full knowledge will be attained only in the Hereafter; then God's essence is possessed, not created through "mū'ā bi 'l-ābādīr as many non-Mu'tazīlī theologians believed, but through a sixth sense created for this purpose by God. This theory seems to have been prepared by Abū Ḥanīfa and was taken over by a number of Hanafis during the following two generations. Later Mu'tazīlis may have seen in it too strong a limitation of revelatory evidence and of the intellectual potential of kalīm; the theory still depended on 'I Ḥām's concept of the total transcendence of God.

They may have felt more familiar with Dirār's idea to differentiate between two aspects of God's will: "God's will" may be identical with what happens, but also with what He only wants to happen, in His commandments. The latter alternative leaves room for man's iktsībū; sin, the crucial problem of Dirār's theory of the two "creators", seems to have been explained by him through ʾaḥrāfū, "abandonment"; by contrast about the nocturnal ascension (mū'addī) of the Prophet or about the martyrs entering Paradise immediately after their death.

This latter point, however, did not bother him very much: he did not accept isolated traditions (ʾaḥārū ʾaḥhād) as a proof in theological questions (ahkām al-dīn), and in his time most aḥādītī still had this character of ʾaḥhād. The only epistemological criterion which, besides the Kur'ān, he found safe enough to base upon it religious truth after the death of the Prophet, was consensus (ṣīmā'); in this he was followed by al-Asamm (i.e.), who took over the Mu'tazīlī circle in Baṣra after him. Dirār's attack against ṣūdīhī had been formulated in his K. al-Taḥārī wa'l-īghrāh; he had pointed to the
fact that all sects used to rely on different and mutually contradicting ahâdith. It is possible, though improbable, that the beginning of Ibn Kutayba's Ta'wil muhkamât al-hadith reflects Dirâr's argumentation (cf. Der Orient in der Forschung. Festschrift O. Spies, Wiesbaden 1967, 184 ff.).

Belief was according to Dirâr, closely linked to intellectual understanding; it begins therefore only with mental maturity (kâmâl al- 'âlim). Simple people who do not rationalise their convictions may always live in unrecognised unbelief (cf. Agh'âri, Makâtibât, 282, II, 2 ff.). But true belief from a Nabataean counts higher than from an Arab, because the Arabs were distinguished by the fact that the Prophet was elected from among them, whereas the Nabataeans always have to transgress the barrier of contempt for not having produced any prophet. If a Nabataean therefore ever entered into competition with a Kurashî concerning the caliphate, preference should be given to the Nabataean as the more appropriate (afdal) candidate. This would have the additional advantage that a Nabataean does not have a powerful clientele and could therefore more easily be deposed if necessary. The Kurashî thus do not possess the monopoly of the caliphate, according to Dirâr, long before him the superiority of neo-Muslims had been defended by mutual arguments (cf. A. Noth in Isl., xxvii (1971), 178 ff.). Nevertheless, Dirâr did not doubt that the first four caliphs were afdal in the moment of their election. Judgment becomes difficult only with the Battle of the Camel. In this case, renowned Companions with equally good reputation stood against each other. The result was that both factions for ever entered into competition with a Kurashî having produced any prophet. If a Nabataean there-
DJIWÂN-BEGI — DJABAL SAYS

Pamyatniki Vostoka 1968, Moscow 1970, 55; Russian tr. by A.A. Semenov, in Sovetskoye vostokovedeniye, v [1948], 147). Russian ambassadors in Bukhârâ in 1669 also describe the diwan-begi as the second high-ranking official after the atalik and mention that he received the credentials from the ambassadors and passed them to the khan (see Nakaz Bori i Semeni Pachâkhîni ... , St. Petersburg 1894, 49, 55, 76). The Aghtakhânî chronicles confirm that one of the duties of the diwan-begi was the reception of ambassadors (see Târîkh-i Mâkîn-Khânî by Muḥammad Yûsuf Mundûr, Russian tr. by A.A. Semenov, Taşkent 1956, 89). In the 19th and early 20th centuries, under the Mangît [q.v.] dynasty in Bukhârâ, the diwan-begi had similar functions, though he was now the second figure after the koh-begi [q.v.], and not the atalîk. He was called also koh-begi-yi pâyân ("the lower koh-begi"), because his residence was at the foot of the ark (the citadel) of Bukhârâ, and zakâtî-yi kalan ("head of the collectors of zakât") [q.v.]. He was the deputy of the "great koh-begi" (kull-i koh-begi), and in the absence or during an illness of the amir he governed the country together with the koh-begi. Both under the Aghtakhânîs and the Mangîts, besides this diwan-begi residing in Bukhârâ, there were also diwan-begis of main provincial rulers, such as those in the Bâlâq and Gârdî, who were in charge of local financial functions. Under the Mangîts, the honorary rank of diwan-begi (the third from the top in the hierarchy of Bukhârâ) was given also to various officials not necessarily connected with financial affairs, such as governors of some towns. In Karatigin [q.v.], both under the independent ġâhs and under the domination of Bukhârâ, diwan-begi was the first deputy of the ruler, and he was in charge of state finance as well as of the ruler's estate (see N.A. Khazâkî, Ocherki po istorii karategina, Stalînabad-Leningrad 1941, 183). In the semi-independent principality of Ura-Tubâ [q.v.] in the 19th century, diwan-begis were local tax-collectors, subordinate to the sârkâr, who was in charge of the collection of kâramdâ and of irrigation in the principality (see A. Mukhtarov, Ocherki istorii Ur-Tubinskogo vladeniya v XIX v., Dushânbe 1964, 53). The title diwan-begi could be given also to supervisors of finance in large private estates, such as those of the Qâbârâhârâkân and the Châtînâs in the 17th century (cf. P.P. Ivanov, Khazmaggite dîwân-begihk, Moscow-Leningrad 1954, 60).

In the Khânate of Khiwa, the post of diwan-begi was probably established only in the early 19th century. In any case, neither the local historian Mu'nis [q.v.] in his Firdaws al-ikbâl nor other sources mention this title earlier, and it is not included in the list of 34 dignitaries (amâldâr) established by Abu Yûsuf Khân [q.v.] (cf. Firdaws al-ikbâl, MS of the Leningrad Branch of the Institute of Oriental Studies, C-571, 65b). This title is mentioned by Mu'nis for the first time in his account of the events of 1222/1808, when the two diwan-begis appear simultaneously [ibid., f. 272a]. Also later, there were at least two diwan-begis in Khiwa. They are mentioned among the high officials of the state along with the koh-begi and the mehter [q.v.]; they were usually of mean origin, often Persian slaves. N. Murâv'yev (1821) mentions diwan-begis as unimportant officials subordinate to the koh-begi and the mehter (see N. Murâv'yev, Puteshestviye v Tartemeniye i Khiwâ, Moscow 1822, ii, 63); none of other Russian descriptions of the khânate compiled in the first half of the 19th century mentions them at all. In the reign of Allah-Kuli Khân (1240-58/1825-42), the chief diwan-begi was entrusted with the collection of zakât and customs (see N. Zalesov, in Vosknity sbornik, xxii [1861], No. 11, 65), and it remained his main duty till the end of the 19th century. Besides him, there was a diwan-begi in charge of the khân's estates and a diwan-begi of the governor of Hazârâsp (a senior relative of khân at his heir). In the reign of Sayyid Muhammad Rabî'î Khân II (1281-1328/1864-1910), the chief diwan-begi Muhammad Murâd ("Mat-Murâd" of Russian sources) became the most influential person among the Khîwan dignitaries and was considered as a first minister by Western observers (cf. e.g. H. Moser, A travers l'Asie centrale, Paris 1885, 238).

In the Khânate of Khokand [q.v.], the title diwan-begi is also attested, though no explanation is available about the duties of its bearer. It seems, however, that it was more a rank than an administrative post, and its position was the same as that of diwan-begi in the hierarchy of Bukhârâ (between the ranks of parâwânî [q.v.] and atalîk). Radžâb Djîwan-begi, executed in 1236/1820, is said to have had the highest title in the khânate, wâzîr al-sawârî (see V.P. Nal'ivkin, Histoire du khanat de Khokand, Paris 1889, 140-1), which indicates, apparently, that he was considered the head of the civil administration; but before that he is mentioned as a governor (kâhâm) of Taşkent (ibid., 125, 135).

DJABAL SAYS, the name of a volcanic mountain in Syria situated ca. 105 km. southeast of Damascus. Around its west and south sides runs a small valley opening to the southeast into a large volcanic crater. In years with normal rainfall, this crater is filled with water for about eight months. A reservoir near its centre makes Djabal Says one of the few secure waterplaces in the region, where sometimes more than a hundred nomad families camp in autumn. At the mouth of the valley on the southeast-slope of Djabal Says and opposite to it, on the fringe of another slope, remains of numerous buildings are preserved. The site was first visited in 1862 by M. de Vogüé and excavated from 1962 to 1964 by K. Brisch. The ruins consist of a considerable number of houses, a mosque, a church, a hammâm, some storehouses for provisions, khâns and/or barracks, and a palace.

The palace is situated on the south side of the valley. It consists of a rectangular enclosure, ca. 67 m. x 67 m., from which eight towers (four at the corners, one in the middle of each side) project. Entrance is given through a door in the central tower of the north side. Behind the door one enters a vaulted vestibule at the back of which is a doorway, opening into a great entrance hall which leads to a courtyard, ca. 31 m. x 31 m. This courtyard is surrounded by ranges of rooms (54 excluding the small rooms in the hollow towers and the entrance hall) most of which are organised into eight groups (bayât) of five or six rooms. In addition to this, there are three pairs of rooms and four isolated rooms, two of which served probably as staircases. An arcade ran around the paved courtyard in front of the rooms. In the centre of the courtyard is a cistern. The lower parts of the walls consist of basalt blocks on the inner and outer faces with fillings of lumps of basalt and mortar rising up at
some places to a height of ca. 2 m. The upper parts of the walls were built of mud bricks. An exception is the entrance tower, the upper parts of which are also of basalt. Most of the basalt sections and some of the brick sections of the walls are preserved. The entrance tower, the upper parts of which served. No traces of ceilings were found. De Vogue, some of the brick sections of the walls are pre-agogo, saw brick vaultings. The building had originally two floors and is stylistically linked with two figures 16 m. x 17 m. It consists of a large eastern room of burnt brick. All rooms with the exception of the west room seem to have been covered by vaultings or domes of burnt brick. The west room was probably not covered at all. The building resembles closely Hammam al-Šarākh [q.v.] in Jordan.

The mosque, ca. 70 m. west of the palace, is a square building measuring ca. 9.5 m. x 9.5 m. The preserved lower sections of its walls are built of basalt. It can be entered by two doors from the north and the east. The interior of the building is divided into two equal parts by two arches running east-west and resting on a pier in the centre and on wall piers. Here, as in the palace, the upper parts of the walls seem to have been built of mud bricks. If this was the case, they could only have carried a wooden roof.

Other buildings. Probably the most interesting feature of Djabal Says is that, in addition to the above-mentioned buildings, a considerable number of more modest structures is preserved. At the south-side of the valley in an area stretching from the hammām (the easternmost structure), ca. 300 m. to the west, the traces of more than 15 other buildings can be seen. The majority of them are of almost square shape and consist of ranges of rooms around three or four sides of a central courtyard. They are of poorer architectural quality than the palace, the hammām and the mosque. Some of these buildings were doubtlessly built at the same time as the palace and served as storehouses and barracks or khāns, whereas some are obviously later. The latter seem to be contemporary with a few smaller buildings whose plans resemble those of simple farmhouses (one range of rooms with a courtyard in front of it). Opposite the valley, at the southeastern foot of Djabal Says, in an area stretching ca. 400 m. from southwest to northeast and ca. 100 m. from southeast to northwest, some thirty other buildings are to be found. Almost all of them have courtyards with rooms at one, two, three or four sides. The most conspicuous structures among them are: a building with towers at its corners looking like a palace in miniature, a structure next to it, which Brisch thinks was a mosque, and a one-room church resembling the large room of the hammām.

Literary sources (al-Bakrī and Yāqūt) tell us that the caliph al-Walid (80-96/705-15) had a residence at Usays, a waterplace east of Damascus, which is doubtlessly identical with our site. This conclusion is supported by inscriptions found on the spot. One of them bears the name Usays, in some others the names of sons of al-Walid are mentioned. Hence the palace, the hammām, the mosque (which Brisch thinks is later than the palace) and some of the buildings next to the palace can be attributed to al-Walid. Some of the buildings were seen by De Vogue, who visited Djabal Says more than a hundred years ago, saw brick vaultings. The building had originally two floors and is stylistically linked with two other palaces, Minya (see EdRbat al-Minva) and Kharrānā [q.v.]. The Hammām al-Šarākh [q.v.] in Jordan.

In the reign of the emperor Justin (518-27), Djabala came into prominence, now as the king of the Ghassānids and his seat in the Djawlan. By that time, the Ghassānids had been won over to Monophysite Christianity and had become its staunch supporters. However, the return of Byzantium to the Chalcedonian position and Justin's expulsion of the Monophysite bishops alienated the Ghassānids and their king, who consequently would not take part in the defense of the oriental provinces against the Persians and their Arab allies, and could not come to the succour of their coreligionists in South Arabia during the reign of Yusuf Dhu Nuwas [q.v.]. But in all probability, it was he who enabled al-Aws and al-Khazraji of Medina to achieve an ascendancy over the Jewish tribes there, Abū Djablaya of the Arabic sources being none other than Djabala himself or one of his relatives.

With the accession of the emperor Justinian (527-65), there was a reconciliation with the Monophysites; the Ghassānids under Djabala returned to service to fight the wars of Byzantium against the Persians and the Lakhmid, but Djabala was not destined to live much longer. His more illustrious son, al-Hārith b. Djabala, is attested as king already in 529, and the presumption is that Djabala died at the battle of Thannuris in Mesopotamia in 528, commanding the Ghassānids contingent in the
Byzantine army against the Persians; the Syriac authors remember him under the nickname of Asfar. In the list of Ghassânid buildings, three are attributed to Djabala, sc. al-Kanāţir, Ashrūt, and al-Kastal.

[Djâbir b. 'Abd Allâh b. Kâb b. Ghann b. Salama, Abû 'Abd Allâh al-Álî (or Abû Muhammad) al-Salamî al-Khaṣrâdî al-Ansârî, Companion of the Prophet. His father, 'Abd Allâh, was one of the seventy men of Aṣwâ and Khazrajî who gave the oath of allegiance at the Akaba Meeting. His father, Abû 'Abd Allâh, was one of the seventy; Djabir himself had attended the Meeting as a very young boy, and is therefore counted in the list of “the Seventy” and in the honourable list of those who embraced Islam together with their fathers. His father prevented him from taking part in the two encounters at Bādhr and Uḥūd, leaving him at home to look after his seven (or nine) sisters. A report according to which he attended the battle of Bādhr and drew water for the warriors is denied authenticity by al-Wâkidî and marked by him as an ‘Irākî tradition. On the Day of Uḥūd, Djabir lost his father, his mother’s brother ‘Amr b. al-Djamûh and his cousin Khâlîlād. Djabir’s father distinguished himself in the fight and was the first Muslim warrior killed in this battle. The Prophet did not object to Djabir mourning for him, and gave him permission to uncover his face. ‘Abd Allâh was buried according to the Prophet’s ruling as a martyr on the spot where he fell, clad in his garment, with his wounds still bleeding. The Prophet personally suggested that he should act as father to Djabir and put ‘Aṣgha in his mother’s place. On the day following the battle of Uḥūd, Djabir asked, and was granted permission to join the force dispatched by the Prophet to al-Hamāra al-Ásâd. After that, Djabir accompanied the Prophet on 18 or so expeditions. The Prophet showed great concern for Djabir and his family and often came to his dwelling. Djabir’s family, who were familiar with his tastes, used to prepare for the Prophet his favourite kind of meal. On one such visit the Prophet blessed the family of Djabir and their abode, on another he cured Djabir of fever by sprinkling on him water which he had for ablation. The Prophet gave his approval for Djabir to marry a woman who was not a virgin, and who would take care of his sisters. By his blessing, he helped Djabir to pay a debt which his father owed to the Jew Abû Shâhîm, and he invoked God’s forgiveness for him when he bought his camel (laylat al-ba’t).

After the death of the Prophet, ‘Umar appointed Djabir chief (ṣafîn) of his clan. During the military operations of the conquest of Damascus he was sent as a member of an auxiliary force dispatched to Khâlid b. al-Walîd. On another occasion he was dispatched by ‘Umar with a small group to al-Kūfâ. When the rebellious Egyptian troops advanced to Medina in order to besiege the house of ‘Uthmân, Djabir was among the group sent by the caliph to negotiate with them and appease them. He is said to have fought on the side of ‘Ali at Sīflîn (37/657) and then to have returned to Medina. During the expulsion of Busr b. Artâf (40/660), Djabir was compelled to swear allegiance to Mu’awîya; this he did in precautionary dissatisfaction (takiyya q.v.), after having consulted Umm Salama, the wife of the Prophet. This is a new trait of character, indicating Shi‘i sympathies, and is one of the earliest cases of takiyya mentioned in the texts. As an indication of Djabir’s attachment to Medina and to the relics of the Prophet, one may adduce the report that he and Abû Hurayra prevailed upon Mu’awîya to leave the minbar of the Prophet in Medina and not to transfer it to Syria. He is said to have visited the court of ‘Abd al-Malik and to have asked him for some grants for the people of Medina. When the force sent by Yazíd b. Mu’awîya against Medina (63/683) entered the city, Djabir opened his voice his objection, circulating an utterance of the Prophet about the punishment which would befall people who allowed the city. He was saved from death by Marwân when a man, enraged by his words, attacked him intending to kill him. After the victory of al-Hâdîjâdî over Ibn al-Zubayr (75/692), al-Hâdîjâdî ordered the hands of some of the opponents of the Umayyad rule to be stamped in the same way as was done to the dhimmis and Djabir was among those opponents. Djabir’s sharp criticism and unkind words with regard to the rulers, especially al-Hâdîjâdî, provoked the latter’s caustic remark that Djabir displayed the same pride as the Jews by which, of course, the Ansâr were meant.

Djabir died at 78/697 at the age of 94 (other reports, however, give varying dates). He is said to have been the last survivor of the group of 70 Ansâr who attended the ‘Akaba Meeting, thus fulfilling a prediction of the Prophet. The prayer over his grave was performed by the governor of Medina, Abûn b. Uthmân, and according to another tradition, by al-Hâdîjâdî b. Yusuf when he came to Medina after his victory over ‘Abd Allâh b. al-Zubayr. Djabir is noted as a most prolific narrator of traditions from the Prophet. The number of those going back to him is estimated at 1,540; al-Bukhrâî and Muslim recorded 210 ḥadîth transmitted by him in their compilations, and the subject-range of his transmission is extremely wide. Of special interest are Djabir’s reports about events which he witnessed and details furnished by him about conditions in which he took part. Djabir was highly respected by the scholars of ḥadîth and is counted in the lists of reliable transmitters and the aṣḥâb al-ḥadîth. He used to recite his traditions in the mosque of Medina; his sessions of ḥadîth-transmission were attended by a wide circle of students, who would discuss the traditions of their master after leaving the mosque. A composition known as sūfiyat Djabir contained a great number of traditions recorded by him. Scholars of ḥadîth were eager to circulate traditions on his authority, without always observing the necessary rules of ḥadîth transmission. Even a distinguished pious scholar like al-Hasan al-Baṣrî was suspected of reporting some traditions on the direct authority of Djabir, although he never was
disciple. The impressive list of those who transmitted his traditions includes the names of three of his sons: `Abd al-Ra¿mân, `Aºf and Muhammd. His descendants are said to have settled in North Africa, in a place called al-Ansâriyya. In Shi'î tradition, Djabir was granted an exceptional high rank. The hadiths recorded in Shi'î sources on his authority touch upon the fundamental tenets of Shi'î belief: the mission of 'Ali, his qualities, his authority over the believers, the graces granted him by God, the divine virtues of his descendants and the duties of allegiance and obedience incumbent upon the believers. It was the imâm al-Bâkîr who asked Djabir about the Tablet which God sent down to Fâtima and which Djabir got permission to copy. In this Tablet God named the imams and established their order of succession. It is noteworthy that, according to some versions, the imâm compared the copy of Djabir with the Tablet in his possession and stated that the copy is a reliable and accurate one. In another story, Djabir confirms the accuracy of the unusual report about the hidgâ as told him by the imâm. Djabir is credited with the hadith about the appointment of 'Ali as wâli, which forms the base of the Shi'î interpretation of Sûra LIII, 1-4. It was he who reported the utterance of the Prophet that 'Ali is the sîrît mustakîm, the right path to be followed. The imâm al-Bâkîr stressed that Djabir was privileged to possess knowledge of the correct interpretation of Sûra XXVIII, 85, which, according to him, refers to the nâjî'a, the re-appearance of the Prophet and 'Ali. Among further Shi'î traditions reported on Djabir's authority is the one which states that there are two weighty things left by the Prophet to the Muslim community; the Kur'an and his Family (al-`ula). Another tradition has it that the angel Dîjîrî bade the Prophet proclaim the vocation of 'Ali and his descendants, the imâm and, tell the Muslim community about 'Ali's distinguished position on the Day of Resurrection and in Paradise. The Sunni version of Djabir's report that the first thing created by God was the Light of Muhammad had its Shi'î counterpart, traced back to Djabir, which said that this Light was split into two parts: the Light of Muhammad and the Light of 'Ali, and that it was later transferred to the succeeding imâm. It is on the authority of Djabir that the significant tradition which states that the last persons to be with the Prophet when he died were 'Ali and Fâtima is reported. Some of his traditions relate the miracles of 'Ali, 'Ali ascended to Heaven in order to put down the rebellion of the wicked djinn, who denied his authority and a luminous angel prayed in his place in the mosque. Another miracle happened when 'Ali walked with Djabir on the bank of the Euphrates: a very high wave covered 'Ali; when he reappeared completely dry after a short time, he explained that it had been the Angel of the Water who greeted and embraced him. Djabir is distinguished in the Shi'î tradition by a significant mission entrusted to him by the Prophet: he was ordered to meet the imâm al-Bâkîr and to convey to him the greetings of the Prophet, which he did. This created a peculiar relationship between the elderly bearer of the good tidings and the young recipient, the imâm al-Bâkîr. According to tradition, the two used to meet, and some of the traditions transmitted by al-Bâkîr are told on the authority of Djabir and traced back to the Prophet. It is evident that the idea that the imâm might have derived his knowledge from a human being is opposed to the principles of the Shi'a. It had thus to be justified that it was merely done in order to put an end to the accusations of the Medinans, who blamed al-Bâkîr for transmitting hadiths on the authority of the Prophet, whom he had never seen. As the traditions reported by Djabir and those independently reported by the imâm and revealed to him by God were in fact identical, the insertion of Djabir's name between the name of the imâm and that of the Prophet was quite a formal act, with no significance. A few traditions are indeed reported with names of some traditions inserted between the imâm and the Prophet. In one of the traditions it is explained that this insertion may make the hadith more acceptable to people, although it is obvious that the imâm knew more than that Companion whose name was inserted between the imâm and the Prophet. The close relationship of Djabir with the family of 'Ali is also exposed in the story relating that Fâtima bint 'Ali asked Djabir to intervene and to persuade Zayn al-`Abîdîn to cease his excessive devotional practices which might be harming for his health. It was a sign of respect and faith that, when Husayn asked his enemies on the battlefield of Karbalá to save his life, quoting the utterance of the Prophet that he and his brother were the lords of the youths of Paradise (sayyidah `uthâb atîl-djânn), he referred to Djabir who would vouch for the truth of the utterance. Djabir is said to have been present at the grave of Husayn shortly after he was killed, and to have met there the family of Husayn who were sent back by Yazîd b. Mu'sâwiya. Another Shi'î tradition reports about his visit to the grave of Husayn and his moving speech over the grave. Djabir has intimate relations with the family of 'Ali and especially with the two imâm Zayn al-`Abîdîn and al-Bâkîr. There are some Shi'î attempts to link him with Dja'far al-`Sâdiq and to fix the date of his death at the beginning of the 2nd century A.H. Finally, the high position of Djabir in Shi'î tradition is expressed by the fact that he was placed in the list of the four persons who clung to the true faith and in the list of the nine persons to whom 'Ali promised that they would be in Paradise. According to most sources, he died in 128/745-6, Abd Allah as their b. Mughlriyya, who recognised the Hasanid Muhammad b. Abl Rabah and Tawus. Al-krima, 'Ata al-Mughlra for lying about them. This makes suspicions of Yusuf b. al-Mughlra for lying about them. This makes them in the introduction to his hadith, such as men who claimed to have been al-Sha'bi [q.v.].

Initial, he held the moderate Shafi'i views widespread among the Kufan traditionists. Later he joined the more radical Shafi'i circles looking to Muhammad al-Bukair (d. ca. 1177/353) and his son Da'far al-Sadik for religious guidance. According to some Sunni here-Cutina, who became the leader of the extremist Shafi'I-isms, he became the leader of the extremist Shafi'i followers of the Mughrira b. Sa'id after the latter was killed by Khalid al-Kasri, governor of Kufa, in 119/737. Imami sources, on the other hand, report a statement of Da'far al-Sadik condemning him for having said the truth about the imams while condemning the Mughrira for lying about them. This makes it appear unlikely that Djabir actually belonged to the Mughrira, who recognised the Hasanid Muhammad b. Abd Allah as their imam, but does point to some relationship between him and al-Mughrira. According to another Imami report, Djabir first aroused the suspicions of Yusuf b. 'Umar, governor of Kufa (120/6-738-44), and then incited the people of Kufa against his successor, Mansur b. Djumhur (126/744). According to most sources, he died in 128/745-6. Other death dates given for him are 127/745-4 and 132/749-50.

Sunni hadith criticism was divided concerning his trustworthiness. His transmission was evidently accepted at first as reliable and highly accurate but later, as 2: Muqaddimah attributes to him, was considered to be 'a statement of Djarar al-Sadik commending him for having said the truth about the imams while condemning the Mughrira for lying about them. This makes it appear unlikely that Djabir actually belonged to the Mughrira, who recognised the Hasanid Muhammad b. Abd Allah as their imam, but does point to some relationship between him and al-Mughrira. According to another Imami report, Djabir first aroused the suspicions of Yusuf b. 'Umar, governor of Kufa (120/6-738-44), and then incited the people of Kufa against his successor, Mansur b. Djumhur (126/744). According to most sources, he died in 128/745-6. Other death dates given for him are 127/745-4 and 132/749-50.
he would not divulge. The Imami attitude to him was also ambiguous. While he was considered a loyal supporter of the imams al-Bakır and al-Ṣadik, he was described as "mixed-up" (mukhtalif) by scholars and ascribed miraculous qualities and powers to him. It is uncertain to what extent reports later circulating under his name among the ghulāt go back to Dībar, whatever his relations with the contemporary Shi'ī extremists. An early Imami source states that 'Abd Allāh b. al-Ḥārīrī, leader of the extremist followers of 'Abd Allāh b. Muʿawiyah [q.v.], after the latter's death in 131/748-9, spread extremist doctrines about metempsychosis, pre-existence of the human souls as shadows (azīla) and cyclical history (dawr [q.v. in Suppl.]), ascribing to Dībar b. 'Abd Allāh al-Ṣadīr and Dībar al-Ḍuḥyī "who were innocent of them" (see al-Nawawī, Fihrist al-ʿālā'ī, ed. H. Ritter, Istanbul 1931, 31). The early Imami scholar al-Najashi (d. 450/1058) mentions the following books of Dībar as still available to him: K. al-Tārifī, K. al-Nawwārī, K. al-Fudārī, K. al-Dimālī, K. Sīfīnīn, K. al-Nāsirīn, K. Mātkul Amīr al-Muʾāmīnīn, and K. Mātkul al-Ḥusaynīn. Dībar occasionally appears in al-Ṭabarī’s Qurʾān commentary and his Taʾrikh as a transmitter of Qurʾān exegesis and in the latter work also as a transmitter of reports on the caliphate of 'Alī and the death of al-Ḥusayn (see Taʾrifī, index s.v. Dībar al-Rawī). It is unlikely, however, that al-Ṭabarī was quoting directly from any works of Dībar. Extensive quotations of his reports concerning the battle of Siffin and the caliphate of 'Alī are contained in the K. Wākit Siffin of Naṣr b. Muzāḥim, Naṣr’s authority for them was, however, 'Amr b. Shīm, who is accused by the Shīʿī al-Tāṣī of having made additions to Dībar’s works.

(W. MADELUNG)

Dībar (Ar.), a marriage concluded under conditions which vary according to the judicial schools. The right of ḥijr is foreseen neither by the Qurʾān nor by the Sunna, and a ḥudūd (al-Bukhārī, Nikāh, bāb 42) actually declares that neither the father nor any other person may give in marriage without the consent of the girl in question, who must be past the age of puberty, and only if she is subject to impediment, as in the other cases; if she is under 15 years of age, the marriage is invalid. The girl may not give her assent before puberty. Marriages are not valid after puberty, which is defined as the moment at which a girl is a legal person. The girl may make a separate declaration of her freedom, which the father is not bound to accept (e.g. with the proviso ‘I will not marry you unless you give me a wife’), but the acceptance of the father is necessary to conclude the contract. The girl’s freedom is not a condition precedent for the exercise of the marriage right, but may be exercised after the marriage contract is consummated. Moreover, the girl enjoys the right of choice, whether she is past the age of puberty or not. On attaining puberty, she may refuse her father’s choice in marriage, and conserve her virginity whether she is a virgin or not. In such cases, the father is bound to respect her consent, and if he does not agree, she has the right to appeal to the court (mawāqif), which will decide the matter.

According to the Hanafīs, both parents have the right to give a girl in marriage without her consent, at least tacit; only the father or the grandfather in fact exercises the right of choice (kubb), but this may not be exercised over a post-pubescent girl (wali ḥudūd) or a virgin girl below 15 years of age (wali ḥijr). According to the Shafiʿīs, the wali ḥudūd may not give a virgin girl in marriage without her consent; at least tacit; only the father or the grandfather in fact exercises the right of choice (kubb). According to the Malākūs in the case of the girl, whether she is a virgin or not. On attaining puberty, she may refuse her father’s choice in marriage, and conserve her virginity whether she is a virgin or not. In such cases, the father is bound to respect her consent, and if he does not agree, she has the right to appeal to the court (mawāqif), which will decide the matter.

For the Hanbalīs, the conditions for the exercise of the right of kubb approximate to those of the Malākūs, who show themselves the most rigorous in combining the notions of impuberty and of virginity. In fact the father has the right to give his daughter in marriage without her consent, not only if she is subject to impedance, as in the other schools, but also, with certain restrictions, if she is a virgin, whether past the age of puberty (she may even be an old maid) or below it; she exercises the right of kubb equally over a pre-pubescent girl deflowered after a legal marriage, and over a post-pubescent girl deflowered accidentally or illegally. There is no right of choice, but the father is obliged to respect the principle according to which the partners must be well-suited (see kafāʾa). So in order to escape the paternal ḥijr, the daughter must be past the age of puberty and legally deflowered (thayyib) or, if she has preserved her
virginity after the age of puberty, she must be emancipated in respect of property, or married for a year or less and divorced, or a widow whose marriage has not been consummated. The *waliَّah* other than the father is never *muğhrif*, that is to say that he only has the right to give a girl in marriage whether she has passed puberty, but her consent, more or less tacit, is then required; having become *thayib*, she must give an explicit consent through the intermediary of her *waliَّah*.

Among the Imāmī Shi‘īs, the right of *gähb* belongs to the father, and, with certain reservations, to the grandfather. In early times, it was applied to the virgin daughter whatever her age, but ultimately it was decided that the post-pubescent virgin is no longer subject to it. Such is the theory. In practice, the governments of the majority Muslim states, whether independent or under foreign protectorate, have long ago attempted to curb the right of *gähb* by fixing the age of marriage at twelve and above for girls and by forbidding the *kādīs* to conduct unduly premature weddings; but is has not always been possible to exercise a very strict control. In the states which have modern legal systems, this right has been totally abolished or restrained by the necessity of the mutual consent of the parties, even if the mediation of the *waliَّah* is still required (if the latter refuses, it is possible to have recourse to the judge). There remain, however, vestiges of it in the most modern legal codes, such as that of Morocco which provides (art. 12) that the judge has the right to use compulsion in a case where it is feared that a girl will misbehave if allowed to remain a spinster.

**DIJABRIDS**, a dynasty based in *al-ʾAḥsā‘* [*q.v.*] in eastern Arabia in the 9th-10th/15th-16th centuries. The Banū *Djabr* descended from *ʿAmir b. Rabī‘a* b. *Ukayl*. The founder of the dynasty was Sa‘īd b. Zāmīl b. *Djabr*, who supplanted the *Darwānīs* of *Ukayl* [*see AL-KATTF*]. Sa‘īd’s brother and successor *Adjudaw* was born in the desert in the region of *al-ʾAḥsā‘* and al-*Katif* in Ramadan 821/October 1418. Adjudaw in his fifties was strong enough to become involved in the politics of Hormuz on the other side of the Gulf. He told the Median historian al-Samḥūdī how he had visited the tomb of Kōlōy, the hero of the saga of the war of al-ʾBūsūs, in Ḥimā Darīyya [*q.v.*], a tomb revered by a Bedouin cult. Adjudaw extended his authority westwards into Nadjaf and towards *ʿUmān* in the east, where he gathered tribute. He won fame as a captain who had suffered many wounds in battle. At the same time he was distinguished for his piety; he diligently collected books of the Mālikī law school to which he adhered, a school with many followers in eastern Arabia. Some of the Mālikī judges whom he appointed were converts from the Shi‘a. He made frequent pilgrimages, the last being in 912/1507, when he was said to have led a throng of 30,000. His generosity was such that the Bedouins of eastern Arabia still remember him as a sort of latter-day Ḥārīm al-Tā‘ī. The traces of a fort near the village of al-Munayzila in al-ʾAḥsā‘ are known as Kašr Adjudaw b. Zamīl.

With the arrival of the Portuguese in the Persian Gulf in 913/1507, Albuquerque learned of the power of the *Djabrīs*. Adjudaw had just died, leaving three sons, the eldest of whom was Muqrīn. The famous pilgrimage in 926/1520 by Muqrīn, whom the Egyptians visiting Mecca regarded as "the lord of the Bedouins of the East", is described in *Al-Katif*.

Back from al-Hīdżāz, Muqrīn in *Shābān* 927/July 1521 encountered a Portuguese force that had descended on the island of al-Bahrayn. Having married a daughter of the Amir of Mecca, Muqrīn had brought with him Turkish craftsmen and sailors to build and man a fleet to oppose the Christian enemy and had strengthened his army with 400 Persian archers and 20 Ottoman sharp-shooters. The battle took place on land. After a heroic resistance, Muqrīn fell gravely wounded and died three days later.

In 928/1521 *Ḥusayn b. Sa‘īd*, the *Djabrī* field commander in *ʿUmān*, joined the Portuguese in expelling the Persian garrison from *Ṣuḥār* on the coast of the Gulf of *ʿUmān*, and the Portuguese recognised *Ḥusayn* as the new governor there, describing him as master of the whole stretch of territory southwards to *Zafar* on the Arabian Sea.

As the 10th/16th century wore on, the *Djabrīs* grew weaker in the face of an Ottoman advance from the north and incursions by the Shi‘īs of Mecca from the west. Rāshīd b. Muḥammādīs of the Munāfikī, an Ottoman subject, dealt the *Djabrīs* a crippling blow in 931/1524-5. An inscription in Masdjid al-Dibs in Ḥīdżāz in 931/1525 depicts the Ottoman subject, dealt the *Djabrīs* a crippling blow in 931/1524-5. An inscription in Masdjid al-Dibs in Ḥīdżāz in 931/1525 depicts the control of the city by the Ottoman governor, Mehmed Farruḳ Pāsha, and the date 964/1556.

In 966/1559-60 the *Shārī‘ī* Hasan b. Abī Numayy, while besieging Mi‘kāl in the oasis of al-Riyād, captured a number of the leading figures there, among whom there may have been members of Banū *Djabr*. Three years later the same Shārī‘ī took towns and forts in al-Khārdjī and al-Yamāmā. On the way home, the Shārī‘ī was attacked by Bedouins of Banū Khālid, whom he routed. This incident lends credence to the likelihood of a direct connection between the *Djabrīs* and this tribe, particularly its section named the *Djabrī*.

**DJĀDIRĪ**

AJABRIDS (435) — DJADJARMI

1. The elder, Bādrl-al-Dīn b. ʿUmr, made his career under the patronage of the Djuwaynīs (q.v.), a clan originating from the same area, which came to political power under the early Il-Khāns. He was in particular connected with the governor of Isfahān, Bāhā al-Dīn Muḥammad al-Djuyānī (d. 678/1280). The contemporary poet Maḥdī-i Hamgar, who also belonged to the circle of this patron, is said to have been his teacher. Bādrl-al-Dīn used as his pen-name either Bādrl or Bādrl-i Djādirī. He wrote elegies on the death of Bāhā al-Dīn, of Shams al-Dīn Shāh-Bīdān and on the death of the mystic Saʿīd al-Dīn Hammūlī, another close relation of the Djuwaynīs. His own death occurred in Djuwaynī II 686/August 1287. Fragments of his poetry have been preserved in the anthology compiled by his son, but he also retained the attention of the tadhkira-writers (cf. e.g. Dawlaṣhānī, 219 ff.; see further Saṭār, *Taʿrīkh*, 558). Although the pretentious title maḥlīk al-qurūbārī has become attached to his name, his works represent the average of the poetry of his age. Notable are two poems of a didactic nature: a short *maḥnūs* in the metre *ṣāhīfī* on palmposcopy (*ṣāhīfī* q.v.), and a *hājdat* dealing with prognostics (*ḥājdatī* q.v.) based on the position of the moon in the various *bārūd* (cf. *Muʿnis*, ii, 861-75 and 1218-21).

2. Muḥammad b. Bādrl, the son, is only known through his extensive anthology of poetry entitled *Muʿnis al-abābī fī dākīt al-ṣāḥfār*, which was completed in Rāmādad 741/February-March 1341. It is distinguished from the works of the tadhkira type by the lack of any biographical data concerning the poets whose works are represented in the collection, as well as by its method of arrangement. The collection contains poems of about 200 different poets from various periods, but the emphasis is on the 7th-8th/13th-14th centuries. The anthologist frequently quotes his father, and has inserted some specimens of his own work as well. Apart from that, the Ḥishānī poet Kāmil al-Dīn Ṣamʿī (q.v.), one of the early masters of the so-called "Īrākī" style, appears to be a distinct favourite. The poems have been arranged into thirty chapters according to their subject-matter, genre or poetic form. Most of them are unabridged. This anthology constitutes a valuable source for the study of mediaeval Persian literature in many respects. It has preserved much material from the Il-Khānīd period, but also from earlier periods, that otherwise would have been lost. Chapter xxvii, on rubāʿīyyāt, contains a special section devoted to Ṣamʿī Ḥishānī, with a group of thirteen quatrains (added as an appendix to the edition of the Rūbaʿīyyāt-e Ḥakīm Ṭāḥṣīb by Fr. Rosen, Berlin 1925). The nature of its arrangement provides a number of starting-points for the investigation of poetic genres.

The *Muʿnis al-abābī* has already been used as a source by Rīdā Kuli Khūnī Ḥīdāyat (cf. Maḥdīna al-ṣaḥafābī, iith. Tehran 1295, i, *mukaddama*). But it became widely known only through the discovery of an autograph, dated Rāmādad 741/February-March 1341, which formerly belonged to the Kharkov Collection. This manuscript at first attracted the attention of art historians on account of a series of pictures illustrating, firstly, a poem entitled *ṣāḥfār* for the *ṣāḥfār* of an *mubawwar*, a book compiled for illustration by Uṣūl Muhammad al-Rawāndī, and, secondly, *Ṣāḥbāt-i Ṡāḥbāt* by Bādrl al-Dīn. The miniatures have been attributed to the ʾIndjū school of painting at Shirāz. The manuscript has been described in detail in the catalogue of the *Exhibition of the Kevorvian Collection ... exhibited at the Galleries of Charles
DJÄDARMI — DJÄ'FAR B. MANSÜR AL-YAMAN

In Djuumâdi 1 556/May 1161 he preached at the funeral of the son of the Imâm, who continued to support him in his struggle against the Mu'tarriffiyâ. He died in 373/1177-8 and was buried in Sânâ'.

Kâdi Djâ'far played the most conspicuous role in the introduction of the religious literature of the Caspian Zaydi community to the Yaman. Through his transmission of this literature as well as through his own works, said to number more than thirty, in all fields of religious learning, he became the founder of a school which recognised the Caspian Zaydi Imâmims as being equally authoritative teachers with the Yaman Imâmims, and he espoused the Baṣrân Mu'tazîlî doctrine in theology and legal methodology already adopted by most Zaydfs outside the Yaman, thus restoring ideological unity within the Zaydîyya. His school became predominant in the Yaman community under the Imâm al-Mansûr 'Abd Allah b. Ḥamza (d. 614/1217), who supported its views in his own many writings and waged a war of extermination against the Mu'tarriffiyâ.

Ṣalâm al-Mu'tarrîf, ed. M.-T. Kamal Husayn and M. C. Amer, Madrasa in al-Mansûriyya (Sabra), to a creditor (see Madelung, A. G., Die schone Mahsati, in the article, see F. Meier, Wiesbaden 1963, 117 f; G. Lazard, in REI, vi (1932), 236; in English in Schools of_SMAD}
al-huruf al-mu'ama; Ta'wil al-fara'id; Ta'wil al-^akat; Ta3wil surat al-Nisd... amongst other things, the rebels sacked the British consulate in Djalalabad; this rising, and the poor performance of sugar cane by irrigation, rice, fruits, etc., and a Ningrahar irrigation project, built around a dam in the Darunta gorge, has recently been undertaken. Ethnically, the Djalalabad region comprises some Tajik villagers but mainly Pushtuns of the Ghilzay, Shinwari, Khugiyani, Mohmand and Safi tribes.

The actual town of Djalalabad only appears in Islamic history during the Mughal period, and Akbar is said to have founded it in ca. 1576. Nadir Shah Afghān campaigned in the district, and defeated the Pushtun tribes at nearby Gondamak. It is during the 19th century that the town really comes into prominence. The American traveller Charles Masson was there in ca. 1826-7, and states that he discerned the ruinous mud walls of two earlier towns on the site, the contemporary town being the smallest of the three. The then governor of Djalalabad was Nawāb Muhammad Zamān Khan b. A'sad Khan, a nephew of Dost Muhammad [see DUST MUHAMMAD], and the revenue of the whole province of Djalalabad, including that from the Tajik villages and from Laghman, amounted to three lakhs (i.e. 300,000) of rupees (Narrative of various journeys in Baluchistan, Afghanistan and the Punjab, London 1842 (repr. Karachi 1974), i, 174-80; Sir Thomas Holdich, The gates of India, London 1910, 352 ff.).

Shortly after Masson's visit, Djalalabad was seized and sacked by Dost Muhammad in his expansion from Kābul (1834). It then played a crucial role in the First Afghan War (1839-42). It was occupied by Major-General Sir Robert Sale's brigade of the British forces ("the illustrious garrison") from November 1841 till April 1842 against the attacking Afghan army of Muhammad Akbar Khan, and fortified by the British troops, despite a severe earthquake there in February 1842 which damaged the defences. It was Djalalabad that the remnants of Major-General William Elphinstone's ill-fated army straggled back from Kābul in January 1842, the town being only relieved three months later by Major-General George Pollock (see J.A. Norris, The First Afghan War 1838-1842, Cambridge 1967, 371 ff.). During the Second Afghan War (1879-80), Djalalabad was again occupied by British troops, who built a defence post, Fort Sale, one mile to the east of the town. It had now become a favoured winter residence of the amirs of Kābul, and in 1892 'Abd al-Rahmān Khan [see ABD AL-RAHMAN KHAH] built a palace and garden near the western gate of the walled town. When in 1919 the amīr Habīb Allāh [see HABIB ALLAH] was assassinated in the Laghman district, his brother Naṣr Allāh was briefly proclaimed king at Djalalabad, but abdicated in favour of his nephew Amān Allāh b. Habīb Allāh. During the Third Afghan War, which followed these events almost immediately, Djalalabad was bombed from the air by the British (cf. L.W. Adamiec, Afghanistan 1900-1923, a diplomatic history, Berkeley and Los Angeles 1967, 107-8, 117, 122). It was amongst the Shinwars and other Pushtūn tribes of the Djalalabād region that the amīr Sabīl Allāh [see SABI] endeavoured in 1928 to exert his centralised authority and to end the extortion of protection money (baqtra) from caravans travelling to Peshāwār, provoking a rising of the Shinwars in which, amongst other things, the rebels sacked the British consulate in Djalalabād; this rising, and the poor performance climate has meant that Djalalabad has for long been a winter residence place for many Kābulis and a winter haven for tribesmen of the climatically harsh slopes of the Safīd Kūh to the south of the river valley and of the Kāfīrīstān fringes. At present, Djalalabad is a thriving market town, a muntaqaddimān (river crossing) and a rising irrigation project, built around a dam in the Darunta gorge, has recently been undertaken. Ethnically, the Djalalabād region comprises some Tajik villagers but mainly Pushtuns of the Ghilzay, Shinwari, Khugiyani, Mohmand and Safi tribes.

The comparatively low-lying and sheltered valley here of the Kābul River gives Djalalābād what Dupree has called a "Mediterranean, dry-summer, sub-tropical climate" (this is in fact more accurate than Humlum's term "monsoon climate"). Rain falls mainly in the three winter months, and the mild climate...
of the royal Afghan army against it, were contribu-

The modern town has since 1964 been the provin-
cial capital of Ningrāhr; its population was estimated by J. Humlum at 20,000-30,000, swollen during the winter by the influx of Kābulīs and others (La gé-
ographie de l'Afghanistan, étude d'un pays aride, Copenhagen 1959, 140). It has by now lost the protective wall and the bazaars of the old city, and the modern town has expanded towards the west. Djalālābād also pos-
sesses a military airport, originally built with US aid for civil purposes.

Bibliography (in addition to sources given in the article): Imperial gazetteer of India, Oxford 1908, xiv, 11-13; Area handbook for Afghanistan, Washington D.C. 1973, index; and the general histories of Afghanistan (Fraser-Tytler, Masson and Romodin, Klimburg, etc.), especially for the events of the 19th century.

The name Djalālābād occurs elsewhere in the Central Asian and Indo-Afghan worlds. For the Djalālābād in the modern Kirghiz SSR, see the article: s.v. in EI3. For the Djalālābād in Sīstān (= Došhak), see Holdich, op. cit., 335, 497. For the Djalālābād in the Shāh-Jāhānpūr District of Uttar Pradesh in India, situated on the Ganges and in lat. 27° 43' N. and long. 79° 40' E., said to have been founded by the Tughluqī Djalāl al-Dīn Frūz Shāh, and the Djalālābād in the Muzaffarnagar District of Uttar Pradesh, in lat. 29° 37' N. and long. 77° 27' E., said to have been founded by one Djalāl Khān under Awrangzīb, see Imperial gazetteer of India, xiv, 13-14. (C.E. Bosworth)

Djalālī, a term in Ottoman Turkish used to describe companies of brigands, led usually by idle or dissident Ottoman army officers, widely-spread throughout Anatolia from about 999/1590 but dimin-
ishing by 1030/1620. The term probably derives from an earlier (925/1519) political and religious rebellion in Amāsya by a Shīwī Djalālī. Official Ottoman use appears in a petition (and as early as 997/1588 Divan-i Kalem- i Kalemi 997-8-C), where the term identifies unchecked rebels (aşkāṇā) engaging in brigandage. Analysis of the three-decade period of Djalālī revolts indicates that these leaders had in common certain objectives which arose through deteriorating social and political con-
ditions in Anatolia.

First, constant warfare for decades on the Ottoman boundaries expended men and treasure, leaving large areas of the Anatolian heartland without proper pro-
tection from local outlaws. By the later 10th/16th century, the Ottomans found themselves unable to move militarily beyond the lines generally established by Sulṭān Sulaymān Kānūnī, both in Hungary and is Persia. Hostilities continued with the Habsburgs from 1002/1593 until the Treaty of Zsitvatorok (11 November 1606); war in the east with the Safawī Shāh [q.v.] continued to 993/1585), increase in population, heavy demands for increased tribute from subject nations, the sale of lands formerly administered by cavalry-
men (iltīzām [q.v.]), debasement of the coinage, and the increase of peasant taxes. Food shortages, even widespread famine, occurred due to limited agricul-
tural technology, a decade of drought (985-1577 to 993/1585), increase in population, heavy demands by Ottoman armies in both Europe and Persia, scorched-earth policies by the Ottoman and Persian armies in eastern Anatolia, and illegal sale of grain to European markets.

Third, as in other areas of the Mediterranean, Ottoman lands experienced unrest and banditry among classes normally quiescent. Peasants (nāşā) on cavalry lands sold as iltīzām [q.v.] found their new absentee landlords interested more in profits than traditional patronage. Legally tied to their lands, peasants felt the oppression of the new landowners, whose excesses could not be bridled, and that of the tax collectors, many of whom could hardly be differentiated from brigands. With technological changes in warfare, increased numbers of Muslim reyāṣa enlisted as daily-wage musketeers (sebkān), returning to Anatolia after their campaigns jobless but expert in the military arts. Another normally tranquil group were students training in madrasas [q.v.] for positions in the Ottoman bureaucracy. Frustrated especially because their number far exceeded available positions, they wandered in groups across rural Anatolia, some preaching religious revival, and most of them participating in anti-social violence against small villages and lonely travelers (Akdağ, Cepsidī iyunlan, 85-100).

Fourth, misguided leadership within the Ottoman government kindled the great Djalālī rebellions. After the astonishing Ottoman victory over the Habsburgs at Hāt Owaşī (Mezö-Keresztes [q.v.]) in Hungary on 23 October 1596, the newly-appointed grand vizier Cihgħāla-zāde Sinān Pağha [q.v.] declared for-
feit the property and the lives of all who deserted (firdār) from the battle. The Firdārīs, whose several thousands included many high-ranking officers, fled to Anatolia where they joined the forces of the Djalālī leader Karāzāzīgīdī 'Abd al-Halīm and fought successfully against Ottoman armies for several years. The unsuccessful actions of important Ottoman generals, including Naşīḥ Pağha against the Djalālī Tawīl Khālīf at Bolvadin (1014/1605), and Farhād Pağha's [q.v.] anti-Djalālī campaign of 1015/1606, demonstrated the need for greater military organi-
zation and discipline in recognition of the serious-
ness of the rebellions.

Where Ottoman leadership often failed because of personal incompetence, bureaucratic sluggishness, and court intrigue, local Djalālī chiefs proved themselves master strategists and attractive leaders, with objec-
tives in many ways unique in Ottoman history. Unlike most rebels, they did not attempt to establish a bureau-
cratic state and a taxation system, to coin money, or to have their names read in the Friday mosque prayer (khutba). The Djalālī leaders primarily desired a place for themselves in the established Ottoman order, usu-
ally accepting a pardon from the weak government, leading to the offer of positions as sandık başları or hegyehes. At such a time, their rank and file became salaried and, as askeris [q.v.], non-taxed. When they failed to obtain governmental recognition, both leaders and led lived on plunder, pillaging villages or outly-
ing city districts, demanding enormous ransoms of the urban dwellers and incurring the hatred of the coun-
try.
tryside. Qalâlî hands ruled wide areas of Anatolia, communicated with one another, and occasionally acted in unity. Though commonly branded as proponents of the Persian Shâh 'Abbâs and of Shî'â Islam, sectarian fervor played little part in their activities. Neither the Persian monarch nor any other foreign power gave them official recognition.

A different kind of rebellion occurred contemporaneously in northern Syria and is often erroneously considered to be a Qalâlî revolt, possibly because of a short-lived alliance with some Qalâlî leaders (Shidyâk, AKBâr al-âyn, 133). Dînîbâllâdodhî 'Alî Pašâ based his revolt on the power of his well-known Kurdish family and Turkoman retainers, as well as on regional loyalties in Aleppo and Damascus. Official recognition came in the form of an alliance with the Grand Duke of Tuscany (Fondo Archivisto Medico, No. 4275 is the Italian copy of the treaty) and a vague understanding with the Safavîd Shâh (Wâsiti, q.v.).

The dangerous international implications of Dînîbâllâdodhî’s revolt were not missed by the newly-appointed (1015/1606) grand vizier, the nonagenerian Kuyûdû Murût Pašâ. On the occasion of peace in Hungary, he immediately marched toward Aleppo, established military discipline, used a variety of loyal non-Anatolian as well as doughty [q.v.] forces, whom he paid promptly, and smashed the Syrian rebel Dînîbâllâdodhî at Orûc Owasî near Lake Amîk (1016/1607). Six months later he turned against the great Qalâlî, took advantage of their fickle individualism, pardoned some, executed most, and routed the army of Kalenderodoodhî Mehdî at Gûksûn Yâyâli, though the rebel leader fled to Persia. A year later Murût Pašâ executed the last great Qalâlî leader, Maşûl Câvusî.

In the years following Kuyûdû Murût Pašâ’s death (1020/1611), though Qalâlî faded from official use in the Mühîmme defterleri, the term remained in Ottoman historical writing to identify certain Anatolian rebels. Ewliya Celebi in the mid-11th/mid-17th century mentions the “Qalâlî Pašas” (Sayhatnâme, viii, 104), and Nâ’îmûd-dîn (Ta’rikh, v, 155) describes the activities of a 12th/18th-century rebel as Qalâlî ("like a Qalâlî"). Today, the memory of the Qalâlî remains only in the folk songs of the Anatolian bero Köroğlu [q.v.].

[DJALALI—DJAMAL AL-DIN ISFAHANI]
Anwarī and Rashīd-ī Wātāwī [q.v.], who seem to have ignored him rather disdainfully. Djamāl al-Dīn's ascetic ideas—including the idea of renunciation—are best presented in the kāfīdas which he wrote in the fashion of Sanā‘ī; though these are far inferior to Sanā‘ī's ones. His Dīwān—comprising kāfīdas, quatrains, and ghazals—contains no less than 10,000 verses and displays the lucid and flowing Tárīkh style. Djamāl al-Dīn is said to have died either in 588/1192 or in 600/1203, the former being more likely.

**Djamāl Karshi, sobriquet of Abu Ḵulīfah Majīd b. Ḫisāb, scholar and administrator in Turkestān during the Mongol era.** He was born at Almāghī around 598/1200. After completing his ḥalāfīyah, he left his mother originating from Merw. He enjoyed the patronage of the local Turkish dynasty founded at Almāghī [q.v.] by Būzār (or Uzār), and obtained a position in the chancellorry there. In 662/1264, however, he was obliged to leave Almāghī, and for the remainder of his life resided at Kāshghār, though travelling widely in western Turkestān.

In 681/1282 he composed a Persian commentary (zand) on the great lexicon al-Sīrāḥ of Ḵawārī [q.v.], subsequently adding to it a historical and biographical supplement. Djamāl Karshi’s Muḥābāt al-Sūrāb ī is in fact the only historical source we possess emanating from the Central Asian state founded by Kaydū [q.v.]. Extracts of the work, which includes particularly valuable sections on the Kaḵāḵānsīdīs [see Ilk-Kūns] and the Mongol rulers of Turkestān [see Ḵāẖatay ‘Eshānī], surveys of various Central Asian cities, and biographies of local divines, were edited by Barthold in Turkestān, Russ. ed., l, 128-52; The Muḥābāt was completed in 1295-6. Of the texts of Kaydū’s son Čapar [q.v.] in 702/1303, the latest date mentioned. The date of Djamāl Karshi’s death is unknown. The surname is due to his connection with the rulers of Almāghī (karší = “palace”), and is not a nisba from Karshi as was formerly supposed.

**Al-Djamāla Al-‘Arabiyya, the Arab League.** Established at the end of the Second World War, this reflects the desire to renew the original unity, a desire which has continued to be active in Muslim communities following the decline and subsequent collapse of the Arab-Islamic empire.

It was during the final years of the 19th century and before the First World War that Arab nationalism became aware of their national homogeneity, based on a common language and destiny, and on a similar way of life and culture (kūsmīya [q.v.]).

Egypt, reverting to the cause of Arabism between the two World Wars, in order to put an obstacle in the way of Ḥāǧemite designs (a plan for a Greater Syria conceived at ‘Ammān, or for a Fertile Crescent, put forward by Baghdādī) took the initiative of assembling in Alexandria representatives of the Arab States regarded as being independent. This meeting, marked by the signing of a protocol (7 October 1944), laid the foundations of a union which was ratified the following year in Cairo, where on 22 March 1945 the Pact of the Arab League was signed by Saudi Arabia, Egypt, Iraq, Lebanon, Syria, Trans-jordan and Yemen.

Subsequently, the League has been joined by the following countries: Libya (1953), Sudan (1956), Tunisia and Morocco (1958), Kuwait (1961), Algeria (1962), South Yemen (1967), the United Arab Emirates, ‘Aṣfār, Bahrayn and ‘Umān (1971), Mauritania and Somalia (1974) and Djibouti (1977). Furthermore, the Palestine Liberation Organisation has been admitted, first in the capacity of an observer (1965), then as a full member (1976).

The text adopted by the founders after long discussion, is remarkable for its flexibility and its simplicity. It specifies that the object of the League is “the forging of links between the member States and the coordination of their policies” with the aim of fostering collective action and cooperation in respect of each one of them.

The components of the Organisation are currently the following:

— The Council of the League, the supreme body, which can meet at the level of Heads of State, Prime Ministers or Foreign Ministers. Summit meetings composed of Heads of State since 1964 have been:

The council decides questions of administration by a simple majority, but in all important cases, decisions are only binding if they have been taken unanimously. Conversely, they are binding only on the States that have voted for them (art. 7).

— Ten permanent committees are charged with studying various questions entrusted to them and submitting in various cases projects for resolution or recommendations.

— An administrative tribunal and a committee of financial control are directly responsible to the Council of the League.

— Seventeen specialised agencies have been instituted by particular agreements to investigate common technical problems.

— The permanent Secretariat-General, which is directed by a Secretary-General elected by a two-thirds majority, himself assisted by a number of additional secretaries, comprises several departments and controls specialised bureaux, institutes and social centres. Three Egyptians have successively held the office of Secretary General of the Arab League:
  3. Mahmūd Rīyād (since 1 June 1972).

The Secretariat-General maintains permanent delegations to the United Nations in New York and

**Al-Djami’a Al-Arabiyya** — Al-Djami’a Al-Arabiyya

Since the creation of the Organisation various plans for reform have been proposed by different states: Syria (1953), Iraq (1956), Morocco (1955, 1963), Algeria, Iraq and Syria (1964). These projects have never come to fruition. Since June 1967 this subject has only been tackled by experts.

Conflicts between member States have not been lacking, leading to almost constant disputes between two or more of the partners. These have been motivated by various factors: frontier disputes, local subversion, differences over the choice of foreign policy, differences of approach concerning the manner of conducting the war or of obtaining peace in the Israeli-Arab conflict, abortive attempts at union, ideological rivalries, personal antagonisms and a permanent struggle for supremacy. Generally, the States concerned have avoided referring their quarrels to the Council of the League. They have preferred to solve their differences by seeking the arbitration either of bilateral diplomacy or of other, larger organisations, such as the U.N.O. or, since its inception in 1963, the O.A.U.

In a number of cases, certain members have failed to attend meetings. Sometimes the tactics adopted by Egypt, by the very fact that the latter is host to the League, paralyse its activity. But to this day no decisive schism has interfered with its workings.

The League, which has supplied a considerable quantity of aid to liberation movements and has assisted the emancipation of Arab nations, serves in fact as a forum where mutual aggressions and rivalries may be diminished, and where, after the confrontation, a measure of co-existence develops.

In the economic sphere, it has given birth in 1948 to a bureau for the boycott of Israel, in 1950 to the Union of Chambers of Arab Commerce, Industry and Agriculture and in 1957 to the Council of Arab Economic Unity. It has played a not considerable role in the matter of oil, organising congresses and providing facilities for meeting and observation attended by experts from all parts of the world, sessions which have themselves led to the establishment of groups of producing States such as O.P.E.C. (Organisation of Petroleum Exporting Countries) in 1960 and O.P.E.A.C. (Organisation of Petroleum Exporting Arab Countries) in 1968.

It is in the name of the League that attempts have been made since 1964 to organise an Arab Common Market, which has never got beyond the stage of a free-trade zone limited to Egypt, Iraq, Syria and Jordan. More recently there have been founded the A.F.E.S.D. (Arab Fund for Economic and Social Development) (1973), the Union of Arab Banks (1975), the Arab Institute for the Guarantee of Investments (1975) and the Arab Bank for Economic Development in Africa (1975). Since 1973 the League has played a major role in the Arab-European dialogue and in Arab-African co-operation.

Handicapped by the weight of nationalities whose evolution remains very slow, paralysed by the political rivalry of member States, affected by the turbulence of an unstable international world, the League nevertheless plays a role that often goes unnoticed as a centre for contacts, exchanges and studies where Arabs may meet, learn to understand one another, overcome their differences and arrive at common solutions [See also the Addenda and Corrigenda].

A recent publication by the League in Cairo is the monthly bulletin in Arabic, *Djamâ'at al-dawâl al-'arabiyâ*, from January 1978.

**Djamâl** (Arabic: camel-driver or camel-herd, also an owner of and herder of camels (hence synonymous here with mu'attari) and a dealer in camels; Persian equivalent, *ugdh-i ban*).

During the pre-Islamic and post-Islamic periods camel caravans travelled enormous distances between the main centres of population and trade. Our sources indicate that relatively high wages were earned by the *djamâ'ât* during the 'Abbasid period. The *djamâl*, also seems, came under the jurisdiction of *hisba* (g.p.) officials in Islamic towns. The conduct of the camel-men came under some criticism from writers like Dāhīz and Ibn al-Djawīzī. Ibn Sa'd cites a tradition that 'Umar b. al-Khaṭṭâb chastised a *djāmmâl* for overburdening a camel. However, the great expansion of international trade between regions during the 'Abbasid period gave the camel-men a significant role to play in Arab society, and they were one of the most important groups of transport-workers. It was during this epoch of greatness of Islamic civilization that we find some *djamâ̄l-lân* among the transmitters of the Prophetic traditions (*ahadīth*). *Iqbâlî* [g.p.] tells a tale that the caliph al-Mu'tamid awarded a pious *djamâl* a monthly allowance of 30 dinārs, besides a royal gift of 500 dinārs in cash. In contrast to their mediavel glory, the modern camel-men's trade is regarded as demeaning and low (*lāl*), and on some of the pilgrim roads to Mecca, one could hear a lot of critical comments about the conduct of the *djamâ̄l-lân* until very recent times.

**Djâmmû, a region of northern India, lying between lat. 32° and 33° N. and long. 74° and 76° E. and extending east of the Čenâb. It is bounded on the south by the Siālkôt district of the Pândžâb and on the north by Kâshmîr, of which it now constitutes a province, covering an area of 12,375 sq. miles. Its capital, the town of the same name, is situated on the right bank of the Ĥavīt.*

The original name of this ancient principality, which lay in the valleys of the Ĥavīt and the Čenâb, was Durgâra, from which is derived the ethnic term *Dogrâ* for its mountaineer inhabitants. Even the name Durgâra, however, figures for the first time only

**AL-DJÄMÎ’A AL-‘ARABIYYA — DJAMMÛ** 241
in copper-plate grants of the early 10th century, and Djammm appears to be referred to in Kalhana’s Rāgadarangini as Babāppāra (Babor). During the reign of the great Kāshmir king Kālāsā (1063-89), Djammm was tributary to Kāshmir, and his subordination continued into the 12th century, when the decline of that powerful neighbour enabled the rāgās to assert their independence. At this time, Čakravāla, ruler of Djammm, played a part in the struggle between the last Gāznawīd sultan in the Pandjāb, Khusraw Malik b. Khusraw Shāh (555-82/1160-86) and the rising power of the Ghūrids [q.v.]. Čakravāla allied with the Ghūrid Mu’izz al-Dīn Muhammad against Khusraw Malik and his Khokar allies, who had been harrying Djammm and refusing allegiance to its ruler, their suzerain (see C.E. Bosworth, The later Ghūrids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186, Edinburgh 1977, 129-30).

The vāmsgaṭālī of the rāgās of Djammm supplies a long list of rulers, often with very few details of their reigns, and the chronology can only occasionally be fixed by reference to external sources. Timūr, in the course of his invasion of this region in 801/1398-9, forcibly converted the Djamms to Islam, and this is probably the Bhlm-dev (d. 1423) whom we find on the throne over the next few decades; but his successors reverted to Hinduism. This did not preclude co-operation with Hasan Shāh of Kāshmir in resisting the invasion of Tātār Khān Lādī, governor of the Pandjāb, around 1480, while during the troubled reign of Muhammad Shāh (1484-7), Parasaravūḍ of Djammm intervened in Kāshmir’s internal politics, putting to death a great number of sayids.

In the 16th century Djammm was divided into two states, Djammm and Bahā (Bos), separated by the Tāvī. Both principalities, which were reunited in the next century, followed the other hill states in accepting the suzerainty of the Mughal emperor Akbar, and remained subject to his successors until the 18th century. With the transfer of power in the Pandjāb after 1165/1752 to the Afghāns, whose authority was weaker, the hill chieftains were able to recover a certain independence. Under Randjīnī-dev (d. ca. 1780), who succeeded Kāshmirī to subjection, Djammm extended as far as the Ravi in the east and in the west even beyond the Čenāb. Randjīnī-dev himself, however, was obliged to pay tribute to the Sīghs, and after his death the disputes among his sons enabled him to consolidate their hold upon the region. In 1819 the Sīgh ruler Randjīt Singh conquered Kāshmir, and for his services during the campaign Dūłāb Singh, a descendent of Randjīnī-dev’s brother, was in the following year made Rājā of Djammm. He embarked on an energetic programme of conquest, reducing Ladākh (1834) and Baltistān (1841). With the death of Randjīt Singh in 1839, the Sīgh empire fell into decline, and Dūłāb Singh stood aloof from the first war with the British (1843-6), acting subsequently as mediator. By the treaty of Amritsar of 16 March 1846 he received from the British, for the sum of 75 lakhs, Kāshmir and all the mountainous territory between the Indus and the Ravi. For the later history of Djammm, see Kāshmir.

by the buffalo to the lion, defined by the admiring al-Djahiz as "stout-heartedness" (şadḫ-acat al-qalib, Hayawān, vii, 142) very soon came to the attention of the herdsmen, then to that of the Muslim rulers who, taking advantage of this fighting instinct, re-sending them out against the great beast (see al-Nuwayrî, Niḥayat al-arab, x, 124).

The earliest introduction of buffaloes into the Near East is attributed to the powerful governor of Syria Muʿāwiyah b. Abī Sufyān [q.v.] who used his political skill to transfer en masse the Zuṭt [q.v.] and their large herds of buffalo, from the eastern frontiers of the Tigris, to which point they had already penetrated, into the region of the 'Amk [q.v.] of Antioch which was infested by lions. These Zuṭt or Dīaṭ [q.v.] (pl. Dīṭān, see Hayawān, v, 407, n. 2), semi-nomadic Indo-Aryans from Sind, a people highly rebellious in the face of any constraint, were at that time essentially breeders of buffaloes, and their steady progress westward was to be an important factor in the proliferation of these Indian bovines around the Mediterranean basin. The northern frontier region of Syria received a second influx of buffaloes, 4,000 according to Ibn al-Fakhrī (see Abīgī du Levant, ii, 222, 234, 264, al-Kazwīnī, ii, 137), under the caliphate of al-Walīd I and for the same reason, sc. danger and instability caused by lions. Then the caliph Yazīd II repeated the operation for the benefit of Cilicia and the lower Orontes (see al-ʿAṣîf). Finally, it was again from these same regions that the 'Abbāsīd caliph al-Muʿtaṣim was obliged, in 222/837, to deport the entire Zuṭt nation, which was settled along with its buffaloes in the vast Mesopotamian lowland region of al-Baţīra [q.v.]; this draconian measure came as a result of the raids and acts of brigandage indulged in by these turbulent and perpetually rebellious Indo-Aryans, a large number of whom had been transplanted thither by the energetic Umayyad governor al-Hādījādī b. Yūsūf al-Thakaff, who transported them by sea from Daybul [q.v.], after their capture in 94/712 by the general Muhammad b. al-Kāsim al-Thakaff. They were to give their name to the Nahūr al-Zuṭt, one of the marshes situated between WāṣÎ and Baṣra (see Yākīt, Muqāmāt, ii, 940, and Hayawān, v, 390); these are the same people who seven centuries later, arrived in western Europe and were nicknamed, according to the various countries, "Tsiganes", "Bohemians", "Egyptians/Gypsys/ Gitanos", "Romani's", etc. After this deportation, buffaloes did not however disappear from Lower Mesopotamia since, following the Zuṭt, Arab tribes, including the Bāhila [q.v.] and the Banū l-ʾAnbar [see TuMÎ], continued to breed them; this species of bovine prospered exceedingly and, in the 4th/10th century, al-Masʿūdî could write (Marāḳī, ii, § 870): "As for buffaloes, in the Syrian border region, they draw chariots of the greatest size; like the bulls . . . [of al-Rayy/Rages] . . . they bear in their nostrils a ring of iron or of copper. The same custom is observed in the province of Antioch . . . large numbers of buffalo are also found in 'Irāq, and especially in the tuftūf of Kūfah and of Baṣra, in the Batāʾīth and the neighbouring regions." In our own times, some ʿIṣīrī Arab tribes, including the Al Bā Muhammad and the Maʿzādàn, still make their livelihood through the rearing of the buffalo to the south of al-Tamārā (Amura) on the approaches to the Hawr al-Ḥammār, and the butter which they produce supplies the market of Baghdād.

In Egypt, the domesticated buffalo (in dialect gāmūs, gāmūsā) guaranteed the prosperity of agriculture in the Nile valley from the Delta to Assān. Its introduction into the ancient kingdom of the Pharaohs was owed to the Muslims, and seems to have been contemporary with that experienced by Syria and the 'Awāqīm; the major Arab historians make no mention of the question, but it may be supposed that the first creatures arrived there carrying or drawing equipment in the rearguard of military contingents coming to take up garrison duties. Whatever the case may be, the fellah whose livelihood was bound up with the periodic flooding and subsiding of the great river found in the buffalo the ideal partner for the efficient agricultural exploitation of the muddy soil left by the receding of the water; there, as in the rice swamps of the Far East, the buffalo manoeuvres easily and its docility makes it the best draught-animal for this kind of terrain. Furthermore, it is able to defend itself against the irritations of mosquitoes by wallowing in the mud of the tributaries in the manner of the pachyderms, and it spends the hottest hours of the day agreeably, submerged up to the nostrils in the tidal waters; its presence along the banks of the Nile proved decisive in the elimination of the crocodiles which infested them (see al-Kazwīnī, ii, 203). The number of buffaloes in Egypt grew so quickly and so extensively that in the 7th/13th century, al-Makrīzī tells us (Rihāt, i, ch. xxxix) certain sultans, in their constant quest for increased revenue, imposed an excessive annual tax of three to five dinārīs per head, which at that time represented half of the value of the animal; this crushing burden on the fellah was fortunately abolished in the following century. It was in the course of the 6th/14th century that the intrepid Moroccan traveller Ibn Baṭṭūṭā became acquainted with and appreciated, first at Damietta and then in the Indies, the excellent milk of the buffalo (Rihāt, Cairo 1928, i, 17, ii, 12). In Ceylon (ibid., ii, 136) he consumed buffalo steaks, then, putting into port at Kaylūkār (ii, 138) while on his way to China, he was offered, among other presents, two female buffaloes by the local princess.

To the many advantages offered by the buffalo to the peasantry dependent on the great rivers of Islam, an additional asset that should be mentioned was the use by craftsmen of its hide, which was particularly resistant and ideal for the manufacture of shields (see Hayawān, vii, 86). It was much in demand by the savage Bedjā herdsmen [q.v.] for their nomadic journeys between the Upper Nile and the Red Sea (see Rihāt, ii, ch. xxxii); from terms such as "baffletece" (French), "buff-belts" (English) we know of the high value placed upon this leather for the equipment of European soldiers up until the last century. In medio-aeval oriental medicine, fumigations making use of this leather were recommended for the elimination of scabies and leprosy.

In the Maghrib, the buffalo (in dialect: gāmūs) is hardly known except in one small herd of about fifty animals living wild on the banks of the Tunisian lake of Ischkeul. The origin of this herd is obscure; the general opinion is that these buffaloes were imported from Italy at the beginning of the 13th/19th century, during the reign of Ahmad Bey [q.v.]. But the studies of L. Joleaud and L. Lavauden (see La chasse et la faune cynégétique en Tunisie, Tunis 1920, 14) tend to show that these animals are
to the reformist movement—which he saw as not being different from al-Wahhabiyya [q.v.; cf. al-Raṣāʾīyā al-ʾaṣryyya, 60 ff., 147]—and attacked and denounced its inspirers Djānmāl al-Dīn al-Afḍārīyya and Muḥammad ʿAbduh (cf. ʿAbūl-Qāsim al-ʿAllāma al-Munṣawāya al-mutawassīlīn, preceding ʿIrāḍ al-Shaʿbīyya Maḥmūd Khaṭṭāb [q.v.], mentioned below, Km. 65; ʿAṣad al-nasīʿa, 120 ff.; ʿIrāḍ al-Shaʿbīyya al-ʾaṣryyya, 46 ff.), as well as its representatives such as ʿAlī ʿAmīn and Muhammad Fārid Wajdī (cf. ʿIrāḍ al-umūm ʿilā yān-baʿ an-bi-kam, Cairo 1338/1919-20, 90; al-ʿAmal al-mabrūr, 49 f.; ʿAṣad al-nasīʿa, 110 f.). The most provocative of his publications (which are still awaiting a proper evaluation) is a book entitled ʿIrāḍ al-Shaʿbīyya Maḥmūd Khaṭṭāb ilā tarīk al-nabī va ʿl-maḥāb, Cairo 1350/1871-8. It contains a lengthy and profound attack upon Maḥmūd Khaṭṭāb al-Sukā [q.v.], the founder of the Djamīyya al-Sharīyya li-Tawāwun al-ʿAmmīn bi-ʾl-Kiṭāb wa ʿl-Sunnah al-Muslīmiyya, commonly known as al-Sukbīyyīn. It must be considered as one of the more significant treatises written against al-Sukbī’s conception of Islam (cf. F. De Jong, ʿIrāḍ wa tariq-opposition in 20th century Egypt, in F. Rundgren (ed.), Proceedings of the Vth Congress of Arabic and Islamic Studies, Stockholm-Leiden 1975, 87 f.). Muhammad al-Djānmālī died in 1927.

AL-DJĀNBĪHĪ, Muḥammad b. ʿAbd al-Nāṣr (other forms are Djānbāihī and Djingbāihī), Egyptian author of a variety of tracts of which the majority have as a central theme the denunciation of what is seen as the various manifestations of decay of Islamic civilization in Egypt.

He was born in 1842 in the village of Djingbaway (Djingbaway, Djimbaway) in the markaz of Ţīra al-Bārūd in the Būḥayra province. After a period of study at al-Āzhar, he held the office of ʿāli in al-Ǧumḥūrīyya mosque in Cairo. He resigned from this office at an early age and returned to his village (cf. ʿIrāḍ al-ahādīn wa ʿl-maḥābāt fi ṭakāmīṣ ḫāṣṣat Abī Fīrās al-Ḥamdānī, Cairo n.d., 16), where he devoted himself to what he saw as his mission: to struggle for the victory of Truth, i.e. of Islam as conceived by him, and to exhort the Islamic world to this end (cf. Tašīṣṣat al-sadīrāt wa ʿṣānīdūh wa al-ʿaṣīrīd, Cairo n.d., 19). These exhortations were set forth in a number of books and pamphlets permeated with a strong mystical strain, and supported by quotations from authors belonging to the ʿAlīshāhīyya order [q.v.] into which al-Djānbīhī himself had been initiated. They were directed against Christian missionary activity (cf. Tašīṣṣat al-tarāqī bi’naḥy Muḥammad wa’l-Māṣiṭ, Cairo 1321/1903-4; ʿAṣad al-ʿākīl wa’l-dīn fi ṭarād ’ulā suḥāfah al-muḥallāhīn, Cairo n.d.; and Maṣāḥim al-ʿaṣīrīd wa ʿl-khālīrāt fi ṭarād ’ulā man dawāwībah al-qādir bi-ṣaḥābah tarār al-ʿaṣīrīd, Cairo n.d.). A chief aim of his journalism (cf. Ḥayāf al-ʿizār ʿan maṣāḥim al-ʿaṣīrīd, Cairo 1902, 4 f., 31), was not just aiming at maintaining political domination, to which al-Djānmālī himself had been initiated. They were directed against Christian missionary activity (cf. Tašīṣṣat al-sadīrāt wa ʿṣānīdūh wa al-ʿaṣīrīd, Cairo n.d., 159), against the foundation and character of the Egyptian University (al-Mūṭabbīs al-ṣīḥa wa ʿl-ṭālīf, Cairo 1431/1948, 30; ʿAṣad al-nasīʿa, 73 f.; ʿAṣad al-nasīʿa al-nahāʾi ʿan al-māḥābāt wa ʿl-khālīrāt, Cairo n.d.), and against Western science and scholarship (cf. Risālat al-Ḥabīb wa-dalalāt al-ṭālīf, Cairo n.d., 68, 99; al-Raṣāʾīyā al-ʾaṣryyya liḥāṣabān al-ʾumma al-Misrīyya, Cairo n.d., 13; ʿAṣad al-nasīʿa al-nahāʾi ʿan al-māḥābāt wa ʿl-khālīrāt, Cairo n.d.). In addition, he denounced the ‘umma as not being able to counter the decay enveloping Islamic civilization (cf. ʿAṣad al-nasīʿa, 13; Ḥayāf al-ʿizār wa maṣāḥif al-ʿaṣīrīd, Cairo 1316/1898-9, 30), and condemned demands for independence as un-Islamic and political demonstrations as bi’dah to which in the past only the Khawārīgīn [see ʿĀrāmīgīn] had delivered themselves (cf. al-Raṣāʾīyā al-ʾaṣryyya, 52 f.). At the same time, he criticised Lord Cromer (cf. al-ʿAmal al-mabrūr fi ṭaḍāsʿ athl al-ṭuḥāyra, Cairo n.d., 136; Risālat al-Ḥabīb, 29), whom he saw as not just aiming at maintaining political domination, but as directed in the final resort at establishing religious domination (cf. ʿAṣad al-nasīʿa, 147); wrote against the calls for istāḥ of those belonging to the reformist movement—which he saw as not being different from al-Wahhabiyya [q.v.; cf. al-Raṣāʾīyā al-ʾaṣryyya, 60 ff., 147]—and attacked and denounced its inspirers Djānmāl al-Dīn al-Afḍārīyya and Muḥammad ʿAbduh (cf. ʿAbūl-Qāsim al-ʿAllāma al-Munṣawāya al-mutawassīlīn, preceding ʿIrāḍ al-Shaʿbīyya Maḥmūd Khaṭṭāb [q.v.], mentioned below, Km. 65; ʿAṣad al-nasīʿa, 120 ff.; ʿIrāḍ al-Shaʿbīyya al-ʾaṣryyya, 46 ff.), as well as its representatives such as ʿAlī ʿAmīn and Muhammad Fārid Wajdī (cf. ʿIrāḍ al-umūm ʿilā yān-baʿ an-bi-kam, Cairo 1338/1919-20, 90; al-ʿAmal al-mabrūr, 49 f.; ʿAṣad al-nasīʿa, 110 f.).
Perovsk of Tsarist Russian times; the Russian archaeologist P. Lerch and the American traveller E. Schuyler identified its site with an old Kirghiz cemetery and the ruins at Khorkhot, a station on the Orenburg-Tashkent postroad (now the track also of the railway), but the identification is not entirely certain (see Schuyler, Notes of a journey in Russian Turkestan, Khokand, Turkestan, Bukhara, and Kuldja, London 1876, i, 62-3; E. Breitschneider, Medieval researches from eastern Asiatic sources, London 1910, ii, 95-6). The site of Khuwāra is totally unknown, and it disappears from mention after the end of the 4th/10th century.

The three settlements were important as entrepôts for trade with the Inner Asian steppes, and Gardīzī (mid-5th/11th century) mentions the route which ran from Fārāb to Yengi-kent and thence to the lands of the Kimak [g.v.] on the banks of the Irtysh (Zyyn al-akhbār, ed. Habibī, 258). All three settlements had a population of Muslim traders in the 4th/10th century. Barthold assumed that these Muslims had themselves founded the settlements as trading-posts, independent of any policy on the part of the Sāmānids to extend their power into the pagan Turkish steppes (cf. his Histoire des Turcs d'Asie Centrale, 49, and Four studies on the history of Central Asia. A history of the Turkmen people, 92). Recently, however, the results of investigations by Soviet archaeologists in the lower Sir Dāryā area have suggested that these places had a pre-Islamic history; S. P. Tolstov has spoken of these in his Goroda Gazor, in SE, iii (1947), 55-102, as “Hunno-Turkish” settlements, resettled and refortified in the 4th/10th century, whence the name “New Settlement”. As well as these three places on the lower Sir Dāryā, there is mention in the sources of other Turkish towns on the middle course of the river, such as Sārvarān and Sīnhāk (the latter on the site of the present-day ruins of Sunaq-qurghan), and Idrīsī, possibly utilising information of over two centuries before from Djiyāhānī, names over ten settlements of the Oghuz on the Sir Dāryā; other sources mention that the Oghuz already in the 4th/10th century included both nomads and sedentaries (see Tolstov, Auf den Spuren der alchoromatischen Kultur, Berlin 1953, 263-4; O. Pritsak, Der Untergang des Reiches des Oghuzischen Tabgu, in Faud Kipti, Armağanı, Istanbul 1953, 399-401; Bosworth, The Ghaznavids, 238-9, 241).

The fortunes of the Saldjūks were, however, in the ascendant after their victory over the Khurāsānīs in 438/1048. By 435/1043-4 they had secured Khāshān and, Shāh Malik was forced to flee from Djand, which also passed under Saldjūk control. Yet the subsequent pre-occupations of the Saldjūks in Persia and the west apparently allowed Djand to slip from their hands, doubtless into those of the local Kipcak. In 457/1065 Alp Arslan had to lead an expedition to Djand and Sārvarān; the ruler of Djand submitted, and was confirmed there as governor of behalf of the Saldjūks (Barthold, op. cit., 298, 302; Perovsk, Der Untergang des Reiches des Oghuzischen Tabgu, 408).

Under the Khārāzīs-Shāhs [g.v.], Djand and the middle Sir Dāryā reaches, together with the Manghīshlak peninsula [g.v.] to the east of the Caspian Sea, were regarded as important frontiers (tabaghūr) against the pagan Kipcak. Atsiz led a campaign from Djand into the steppes early in his reign, probably ca. 527/1133. Because of Atsiz’s humiliation at the hands of his suzerain, the Saldjūk sultan Sanchar, who in the winter of 542/1147 had invaded Khārāzī, Djand was lost to the Shāhs, and passed to Kamāl al-Dīn b. Arslan Khan Muḥammad, the grandson of Sandjar’s Karā-Khānīd nephews Arslan Khan Muḥammad, ruler of Samarqand. Accordingly, at Djawānī, Atsiz and his army appeared at Djand in the spring of 547/1152, on pretext of organising an expedition against the Kipcak, and Kamāl al-Dīn was seized and deposed. The Shāh’s eldest son Il Arslan was now appointed governor of Djand, an indication of the importance attached to it, and the alloting of this governorship to a Khārāzīan prince became herculest frequent; Tekiš was governor at his father Il Arslan’s death, and under Tekiš, the prince Malik Shāh was governor. Various expeditions from Djand against the Kipcak are recorded in the later 6th/12th and early 7th/13th centuries, e.g. in
and Nawáb. The Sídís of Džandjíra were a prosperous community of skilled seamen, noted for their tenacity and fighting spirit, expressed in the warfare and activities of a long and chequered career extending over four-and-a-half centuries.

By the middle of the 11th/17th century, the Sídís of Džandjíra were firmly established as an effective, though small, naval power on the west coast maintaining on behalf of the Súltán of Bîjpúr a powerful fleet for protecting the maritime trade and for providing transport for Muslim pilgrims bound for Mecca. Later on, the Sídís transferred their fleet to the service of the Mughals, who were more willing than the Súltán of Bîjpúr to offer them protection against the mounting menace of the Márâthás. Hence in 1080/1670 Awrangzìb made the Sídí Admiral of the Mughal navy and gave him an annual grant of four lakhs of rupees (400,000) for the maintenance of the fleet.

The most remarkable aspect of Džandjíra's history was its invincibility in the face of determined onslaughts by the Márâthás under three generations of their chieftains, i.e., Sáhâjí, Sîvídî and Sambhâjí—father, son and grandson—to whom conquest of the tiny state continued till 1287/1870 when, following a breakdown in law and order there, the Sídís had to conclude a treaty with the British government, resulting in the introduction of a Resident British Officer.

The erstwhile state of Džandjíra, which consisted of three municipalities—Murud, Shriwardhan and the port of DžaTarabad on the south coast of the sub-continent attained independence in 1947. At present, Džandjíra proper is included in the Murud municipality of the Kolaba district of Maharashtra state.

(ALDUS SUBHÂN)

### DŽANDJÍRA

The Marâthá corruption of the Arabic word _gazirā_ "island", is the name of a former native state in the heart of the Konkan on the west coast of India. It actually owes its name to the fortified island of Džandjíra (lat. 17° 45' N. and long. 73° 05' E.), lying at the entrance of the Rajapuri creek, half a mile from the mainland on the west and 48 km. south of Bombay. The impregnable fort, which has an excellent command over the Arabian Sea, rose to prominence under the Súltán of Bîjpúr (65), they were called Ka'sâdî and Thámâdî (or Náfídî and Thâdî), but the sole point of interest in these indications is the form _C'a 'Câdî_, characteristic of a certain number of feminine names. It is possible that just one of them was called Džarâdâ,
since al-Dījarādatān (Shībī, 85) says that this name was later applied to all singing girls [see Kānna], and that the dual was formed according to a well-known principle (cf. al- Başra’ānī, etc.).

Bibliography: Dārīz, Tarbī, § 151; Tabārī, i, 234-6; Muṣṭafī, Muṣnī, index; Ibn ‘Abd Rabbihī, Tād, vi, 28; Kiyāt, Kiyāt, 107; Maydānī, i, 138-9 (three proverbs arising out of the girls); Aḥṣānī, index; Mā’ṣarī, Ghufrān, index; Nāṣīr al-Dīn al-Asad, al-Ḵyāl wa l-ghind fi l-ṭarīq al-dījarī, Cairo 1968, 73-5.

Also, ‘Abd Allāh b. Dījarādān [q.v.] is said to have possessed two singing girls known as al-Dījarādatān, etc.

vii.—India and Pakistan

This article defines the Muslim press as those newspapers both owned and edited by Muslims. The definition does not include either newspapers in languages normally associated with Islam, for instance Persian and Urdu, with which Muslims have had nothing to do, or newspapers edited by Muslims but owned by men of other faiths.

The Muslim press originated in the government and private newsletters of the Mughal period. There was the waṣʿ, a confidential letter by which the emperor was informed of developments in his dominions, and the akhbār, a semi-public gazette by which information was transmitted to the court. Amongst other groupings in Indian society, based on common political or commercial interests, private newsletters circulated. They were handwritten and several copies of each were produced. Large numbers were noted leaving Dīhilī in the 1830s and they were influential in Oudh (Awadh) up to 1857.

Muslim newspapers in modern form began to emerge in the 1830s. Among the first were the Samuḥār, Sāḥbānagarda, a weekly in Bengali and Persan published by Ṣawyīd Allāh al-Filmi from Calcutta between 1831-5, and the Sayyid al-akhbār published in Urdu from Dīhilī in 1837 by Ṣayyid Muḥammad Khan (Ṣayyid Muḥammad Khaṇ), the elder brother of Ṣayyid Ḥaqq al-Khan. The introduction of Urdu lithography in 1837 gave a boost to the development of the press in north India, and by the 1940s several Muslim newspapers were being published.

In the second half of the 19th century, the Muslim press grew steadily. It flourished primarily in north India, though it had outposts in the Madras and Bombay Presidencies. Its major centres were Lahore, Dīhilī, Lucknow and Calcutta, and its major languages Urdu and Bengali. Very few specifically Muslim newspapers were published in English, though the Punah Observer is worthy of note. Most leading newspapers were weeklies, and only the Pānās Aḥṣābī founded in Lahore in 1880 sustained daily publication over a long period. Amongst the most influential newspapers, though not those with the largest circulation, were the two edited by Ṣayyid Ḥaqq al-Khan from Allīghār, the Tāḥdihī al-akhbār and the Allīghār Institute Gazette. The former educated its readers primarily in the religious and social aims of the Allīghār movement, and the latter instructed them in its educational and political aims. The range of subjects which these publications covered indicated a general trend; newspapers were becoming less concerned with literary exercises and sectarian religious polemic, and more with local, national and international affairs.

During the 19th century, like the Indian press generally, grew in response to the increasing activity of government and the citizen's increasing awareness of the world beyond his locality. Nevertheless, nothing contributed more to the foundation of new Muslim publications, and to major increases in the circulation of newspapers already in existence, than upheavals in the world of Islam. Indian Muslims had powerful pan-Islamic sympathies. This point is made graphically by the striking expansion of the Muslim press which coincided with the last years of the Ottoman empire, in fact from the Italian invasion of Tripoli in 1911 to the abolition of the caliphate in 1924. Newspapers were founded: in 1911 Muḥammad ‘Alī’s Comrade, in 1912 Abu l-Kalām Āẓād’s al-Hilālī, Hamīd al-Anṣārī’s Madina and ‘Abd al-Bārī’s Hamdand in 1913 Muḥammad ‘Alī’s Hamdand. These new publications and established ones sold on a hitherto unknown scale; the weekly al-Hilālī achieved a circulation of 25,000, while Zafar ‘Alī Khan converted his Zamāndār from a weekly selling 2,000 copies into a daily selling 30,000. There was a dramatic improvement in the quality of production; all al-Hilālī and Hamdand were printed rather than lithographed. There was a similar improvement in journalism; al-Hilālī was written in new and forceful journalism; al-Hilālī and Hamdand were the equal of any contemporary Anglo-Indian weekly. These newspapers greatly stimulated and even created political agitations, and government acknowledged their influence by gagging them. They also brought their editors, men such as Abu l-Kalām Āẓād and Muḥammad ‘Alī, to the forefront of Muslim politics.

During the 1920s and 1930s the Muslim press, though never as strong or as vociferous as the Congress or Hindu press, continued to grow. Some of the great newspapers of the pan-Islamic era died, for instance al-Hilālī and Comrade, but others such as Zamāndār and Madina continued. Fresh newspapers were founded; in 1922 Muḥammad Usūlōk, the first English-language Muslim daily of importance, and in 1927 Iskāh, the leading Urdu daily of the 1930s. Both were published in Lahore.

It was not until the 1940s that the Muslim press began to compete on equal terms with that of the Congress. Muslim newspapers played a major role, a role which still has adequately to be evaluated, in winning support for the All-India Muslim League’s campaign for Pakistan. As in the pan-Islamic era, it showed that it was most effective when religious and political issues were combined. Among the leading League newspapers were Āngāmī in Urdu and Deen in English from Dīhilī, NāŒž-i Wākt in Urdu from Lahore, Hamdam in Urdu from Lucknow, and Āẓād in Bengali and Star of India in English from Calcutta. Not all Muslim newspapers supported the League, for instance al-Dīmarī’sayṣ, the voice of Dīmarī’sayṣ al-ulim, and Madina were distinctly pro-Congress, but by the 1940s pro-League newspapers both in numbers and in circulation far outstripped their Congress Muslim rivals.

The partition of the subcontinent in 1947 in large part destroyed the Muslim press as it had existed. In India, despite the country’s vast Muslim population, a specifically Muslim press has been unimportant; among the leading Muslim newspapers are Radiance and al-Dīmarī’sayṣ. Pakistan, on the other hand,
has developed a press of considerable dimensions both in
English and in the various regional languages. In
West Pakistan the leading newspapers in English are
Dawn and Pakistan Times and in Urdu Nawa-i Wakt
and Majhrib; in East Pakistan up to 1971 the lead-
ing English newspaper was Morning News and the lead-
ing Bengali newspaper Azad. By the late 1960s the
Pakistan press was producing 800,000 newspaper
copies daily, of which more than three-quarters were
in languages other than English. This vigorous news-
paper industry existed in spite of heavy restrictions
upon press freedom imposed by government and in
spite of growing competition from commercial radio and
television.

Bibliography: There is no work devoted specif-
ically to this subject. The newsletter is dealt with
by J.N. Sarkar in S.P. Sen, ed., The Indian press,
Calcutta 1967; A.S. Khurshid examines the growth
of the Pakistan press in his contributions to A.S.

viii.—East Africa

The history of the press and its development and use
among East Muslims is very brief. The Muslim intel-
lectuals, however, have received and read newspa-
pers and journals from other parts of the Muslim
world, particularly from Egypt, from the closing years
of the 19th century until the present.

It was such connections that helped develop the
first interest in establishing local media. The first
Muslim to do so was Shaykh al-Amin b. 'Ali b. Na'il
Al-Mazzu'iri [see KENYA, MUSLIMS IN], a Muslim scholar
of Mombasa who was familiar with the works and
publications of al-Afghani, Muhammad 'Abdubh and
Rashid Ridha. Newspapers and journals like al-Manar
were regularly read by Shaykh al-Amin and a coterie
of Muslim scholars on the East African coast.
Concerned about the low status of Muslims and Islam
in this region, Shaykh al-Amin decided to use the
press to raise the level of Muslim religious, cultural
and political consciousness, very much along the lines
of the Middle Eastern reformers.

First he founded a modest-sized paper called
simply al-Salama. Shortly afterwards, in 1932, he estab-
lished a more substantial paper, appropriately called
al-Ilyah. The paper was financed by the founder, with
contributions from well-wishers, and was published in
two parts, a Swahili one and an Arabic one, the for-
er being often a virtual translation of the latter.
Thus a wider readership was achieved through the
use of Swahili, the
lingua franca
of Eastern Africa. It discussed issues relevant to the political, economic and religious situation of the East African coast and
regularly included news from the rest of the Muslim
world, with which the editor of the paper often called
for greater solidarity.

In 1932, Shaykh al-Amin was appointed Kadi of
Mombasa. His new duties compelled him to hand over
the running of al-Ilyah to another Muslim scholar,
Shaykh 'Abd Allah al-Has. There developed a notice-
able difference in approach and style in the paper,
which was not now as popular and effective, so that
the paper declined and its publication ended soon
afterwards. Shaykh al-Amin had continued to write
and published booklets on Islam after his appointment
as Kadi, and, in 1937, as Chief Kadi or Shaykh al-
Islam of Kenya. One such booklet was a reproduction
of selected articles from al-Ilyah which was published
under the title of Uwongozi (Swahili "Guidance").

Even so, it was left to the Ahmadiyya sect [p.s.,
and see KENYA, MUSLIMS IN] to expand the publish-
ing of newspapers. Their arrival in the 1930s had
earned them the immediate hostility of the ortho-
dox Muslim communities, and Shaykh al-Amin him-
selves carried out a campaign to discredit them in
East Africa. Nevertheless, in Tanzania they founded
two newspapers, one in Swahili, Majenzi Ya Mungu
("The Love of God") and one in English, East African
Times. Both papers reflected the characteristic milit-
ant defence of Islam, lengthy exposition of its teach-
ings and their relevance to modern society, and
regular theological challenges to Christians and
Christianity. It is certain that these two papers have
carried to the relative success of the Ahmadi
sect in Tanzania.

It was in Tanzania also that a Muslim monthly
journal, The Light, was founded in the 1960s by the
Ikhna 'Ashari community, modestly printed and com-
pletely financed by members of the community.

A general comment to be made about these publica-
tions, including the other journal irregularly pro-
duced by the Ikhna community, Africa Ismailis, is
that each one of them has a limited distribution.
The two journals hardly go beyond the communi-
ties concerned. The two Ahmadi newspapers are
regarded as heretical propaganda, and thus not appre-
ciated by other Muslims as representing authentic
religious views or the ideal way of reflecting the
image of Islam in East Africa. An acceptable, pop-
ular Muslim press has yet to emerge.

(A.I. SALIM)

ix.—South Africa

The implantation of Islam in the extreme south of
the African continent took place in three phases. The
first Muslims arrived there in 1667, Malayan slaves
whom the Dutch had imported as manual labour to
improve their new colony of the Cape. Their slave
status prevented these Malays from practising their
Islamic religion and from possessing land, and they
only obtained a place of worship in 1797. They were
unable also freely to move about and were compelled
to stay in the Cape, so that Islam was unable to
expand beyond this limit.

However, the importation after 1860 of a second
wave of manual labourers was necessitated by the
growing development of new crops in the territories
of the white settlers (Boers) at the time of the "great
Trek" or migratory movement of 1834-9. Hence from
1860 until the beginning of the 20th century, the own-
ers of sugar cane plantations, a crop which was very
prosperous in Natal, brought in Indian farm workers,
some of whom were Muslims. Islam was thus implant-
ed at two points in what became after 1910 the
Union of South Africa, one in the south and one in the
west.

The economic crisis which began in 1899 threw a
considerable number of Indian farm workers out of a
job and compelled them to seek another living. Some
of them settled in Durban, the capital of Natal, whilst
the remainder spread throughout the land towards
the Cape, Johannesburg, Pretoria, Port Elisabeth
and other South African towns. Thus the third and last phase of the implantation of Islam in South Africa was completed.

The opening of the 1960s was an important period for the Muslim community there, and it marks the beginning of its organisation and its expansion. This process was inaugurated by certain Indian Muslim leaders, who aimed at stimulating the feelings of the diverse ethnic elements of the Muslim community into a consciousness that they were above all Muslims and that, in the light of this, they should work for the progress of the Muslim community. In effect, the Malay and Indian Muslims had previously thought of themselves as belonging rather to their own ethnic community, and their activities, above all those of the very active Indians, had taken place within the framework of their original communities.

This movement brought about the creation after 1960 of several Muslim organisations, such as the association of South African Muslim women or even the association of South African Muslim brothers. It was also during this period of intense activity that the Muslim press came into being, thanks to its launching by a Muslim of Indian origin, M. Sayyed, in the shape of a fortnightly called Muslim News. Its first number appeared at the beginning of January 1961, and had 12 pages, eight in English and four in Urdu, and was edited and printed at Athlone, a district on the eastern edge of Cape Town where many Muslims live. In 1971 the four Urdu pages disappeared, and since that date, Muslim News has contained only eight pages in English. It styles itself the only South African Muslim newspaper; however, there exist two bulletins, the Ramadan Annual and the Muslim Digest, published both by one press group, the Makki one.

Muslim News was meant essentially to inform South African Muslims about religious and cultural activities of the community, and likewise to give exhortation on the practices of the Islamic faith. Without departing from these original aims, it evolved in 1973 in another direction by assuming a distinct political character. Condemnation of apartheid and of white domination was expressed in the course of articles which became more and more specific and violent in tone, a condemnation which arose from a lively denunciation of the very difficult living conditions of the non-white population of South Africa. After the publication of articles criticising government policy on these topics, the direction and editorship of Muslim News were in December 1975 and again in March 1976 brought before the courts in the Cape; but the journal has nevertheless continued to appear.

A perusal of Muslim News allows one to appreciate the efforts made by the Muslim community of South Africa to improve their precarious conditions of living. Great improvements have actually been achieved in various fields, such as health and education. An orphanage has been built, health services have been set up in districts where they were lacking, and finally, numerous mosques and madrasas have been constructed and a programme of Islamic studies organised. All this has come to fruition from contributions and from the gifts of a few very rich Muslims.

Finally, Muslim News at times highlights in its columns the lack of unity within the Muslim community of South Africa, one mainly due to divisions between the three great national Muslim associations, the Muslim Judicial Council, the Muslim Assembly and the Ashura (< گھنیہ). These are essentially quarrels between personalities trying to assert their own pre-eminence. They have no effect at all on the South African Muslim community’s sense of solidarity, and are in fact tending now to disappear; this can only strengthen the community’s determination, for despite its numerical smallness (200,000 members out of a total population of 22 millions) it is certainly one of the most vigorous Muslim communities of the southern hemisphere.

(P. Gorokhoff)

x.—The یومعک [see یومعک].

**DjAWARS** (< Persian گاوک) is millet, *Panicum miliaceum L.* (Gramineae), one of the oldest cultivated plants. While in Europe it is now almost only used as fodder, millet plays a prominent role as cereal and victuals in many areas of Asia and Africa. Although the ancient Spartans ate millet, Dioscorides considers millet as the least nutritious of all cereals (*De materia medica*, ed. Wellmann, i, 1907, 173 f. = lib. ii, 97). This is adopted by the Arab translator (La “Materia médica” de Dioscorides, ii, ed. Dubler and Terés, Tetuan 1952, 179), who renders the Greek κύτταρος with کنگباری (and variants). But already Ibn Māsāṣ, a contemporary of Ḥunayn, says that millet, cooked in milk, or broth mixed with millet flour and fat, is an excellent food (see Ibn-Abī-Bayār, *Djams*, Būlāk 1291, i, 156, 15-16). On the nomenclature, the following can be remarked: occasionally, کنگباری is understood as both *djawars* and *dhura*, and the first of these is equated with the Mozarabic *bantahub*; cf. Anonymous (Ibn al-Rāmiyya?) Nuruosmaniye 3389, fol. 89b, 21; on *bantahub* (Romance panizo), see M. Asin Palacios, *Glosario de voces romances*, Madrid-Granada 1943, no. 406. Others consider *djawars* as a kind of *dhura* (also *alamar* < *πατός*), by which may be meant the small sorghum (*Pennisetum sipicatum*), widespread in the Sudan and also called Moorish millet, while *dhura*, also called *djawars hind* “Indian millet”, indicates the great sorghum (*Sorghum vulgare*). In his book on plants, Abu Hanīfīa equates *bātkhan* with *djawars* and considers it as a kind of *dhura* (The book of plants, ed. B. Lewin, Uppsala-Wiesbaden 1953, no. 405). In the course of time, *dhura* has become the leading expression for millet. Bīrūnī knows already the Turkish term *dašt* for this (*Siyada*, ed. Hakim Muḥ. Sa`ʿīd, Karachi 1973, Arab. 130, Engl. 106), and names the Indian synonyms.

As a foodstuff, *djawars* has the inconvenience of causing constipation, of being hard to digest and of prompting urine, but the constipation effect can be removed by adding fat or purgatives, and also by diluted wine or by baths. On the other hand, when applied in a warm compress, it proves to be a good remedy against gripes and cramps. It has an astrin-gent effect and is therefore suitable to be used as a remedy for those suffering from dropsy, whose stomachs should be contracted and whose bodies should be “desiccated”.

(A. Dietrich)

AL-DJAWBARI, ‘ABD AL-RAHIM (not ‘ABD AL-RAMAN) B. ‘UMAR B. ABĪ BAKR DJAMAL AL-DIN AL-DIMASHKI, dervish and alchemist from the Maghrib out of lzz al-Dm Aybak. He claims to have been also in Cyprus, Bahrayn and India.

Whether or not ḡawhar had the meaning “jewel” from the beginning of this word’s usage in the Arabic language is uncertain, but this meaning is well-attested from early in the Islamic era. For example, whether or not ḡawhar and the plural ḡawhar are used in the Paris manuscript of the Toḥdīh al-Asfārī il-Aristotēlēs (publ. with tr. and comm. in 1912 by J. Ruska as Das Sprechbuch des Aristoteles—see p. 92 for the above-mentioned term), a work which Ruska dated to some time before the middle of the 3rd/9th century. The Arabic lexicographers from at least as early as the 4th/10th century give “jewel” as a meaning for ḡawhar (e.g. in the Toḥdīh al-buqha of al-Azhari [q.v.]). This usage continues throughout the centuries to the present day, traceable both in historical literature and in, for example, the 12th/18th century dictionary Ḥaj ḡawhar (for a more complete listing of the definitions by the Arabic lexicographers, see Lane’s Lexicon, s.v. ḡ-e-h-r).

The word ḡawhar makes no appearance in the Kurʾān, even though there are specific references to both jewelry (gold bracelets, XVIII, 31 and XLIII, 53; silver bracelets, LXXVI, 21; bracelets of gold and pearls, XXII, 23, XXXV, 33 and LV, 22). In four of the five passages mentioning the wearing of bracelets the verb yuḥallata (nous. ḡ-e-h-r) is used. From its root, which means “to adorn”, another common word for jewelry in general (ḥaṭīf) is derived (see Lane, s.v. ḡ-e-h-y). However, ḡawhar was clearly the most important single term for jewelry or jewels in the Arabic language during its reign as the lingua franca of the Islamic world.

Let us now turn from the consideration of words used for jewels to an attempt to form a picture of the objects themselves. That is, what kinds of jew¬

Let us now turn from the consideration of words used for jewels to an attempt to form a picture of the objects themselves. That is, what kinds of jew¬
constitute our main concern in what follows. This will mark the first attempt ever made at a survey of Islamic jewelry, and thus must be regarded as provisional in certain respects.

1. Early Islamic jewelry (1st-4th/7th-10th centuries)

Any history of Islamic jewelry ought to begin with examples from the earliest centuries of Islam. However, to the best of our knowledge, there are very few extant pieces datable to before the first half of the 5th/11th century in either the eastern or western parts of the Muslim world. Consequently, in attempting to reconstruct a picture of the jewelry in vogue during the first three hundred and seventy-five years of the Islamic period we are forced to turn to pictorial or sculptural representations in addition to literary descriptions.

The available representations show that the jewelry and other body-adorning and costume elements worn during the period were very strongly influenced by the Roman, Byzantine and Sasanid ornaments found current in the countries conquered by the Muslims. A few examples should suffice to illustrate this point.

Western influence, on the other hand, can readily be seen in some of the jewelry depicted in the wall paintings at Kusayr 'Amra. The heart-shaped pendants worn by one of the female figures (M. Almagro, L. Caballero, J. Zozaya and A. Almagro, *Qusayr 'Amra*, Madrid 1975, Pl. XXVII, top) bear very close comparison to Roman pieces ([*Allen Memorial Art Museum Bulletin*, xviii/2-3, Oberlin, Ohio—hereinafter abbreviated *Allen—*Fig. 68), as does the shorter necklace of oval elements worn by the same figure (L. Pollak, *Klassisch-Antike Goldschmiedearbeiten*, Leipzig 1903, Pl. XVI, No. 396). A scalloped and jewelled necklace worn by one of the male figures as well as one consisting of a series of pendant elements adorning a female figure (*Almagro et alii*, op. cit., Pls. XI and IX) have close Byzantine parallels (A. Greifenhagen, *Schnucktmacher in Edelmetall*, i, Berlin 1970, Pl. 49, and *Metropolitan Museum of Art No*. 17.190.1667).

The vogue for breast ornaments held in place by crossed straps, seen so often on the figures in Kusayr 'Amra, (*Almagro et alii*, Pl. XVII, top) probably entered the Islamic repertoire from the West also (for a Greek example, see H. Hoffman and P. Davidson, *Greek gold*, 1965, Fig. D), although the earliest example known to these authors is from 2nd century B.C. India, the country which also seems to be the ultimate source for the waist ornaments seen in the paintings in our late 1st/early 8th century Jordanian bath (S. Swarup, *The arts and crafts of India and Pakistan*, Bombay 1957, Pl. 88, left and 104 left).

Thus during the earliest centuries of the Muslim era, the jewelry traditions of the Roman, Byzantine and Sasanid realms seem to have been important as models for Islamic jewelry. Having seen how close the Islamic representations often are to their apparent models, one is tempted to speculate that, to some extent, the scarcity of early Islamic jewelry may be due to our ignorance, and that many of the pieces now classified as Roman, Byzantine and Sasanid are in fact Islamic in date. Another major factor accounting for the “disappearance” of jewels, especially when it comes to the larger and more valuable stones and pearls, was their re-use in new stringings or settings in accord with the taste of the times. From the remarkable series of large stones, especially diamonds and spinel “rubies”, which were inscribed with the names of Persian and Maghrib rulers, we know that such stones had considerable histories (discussed in greater detail below); for example, the inscriptions in the name of Nâdir Shah in two large spinels and a teardrop-shaped example show concretely how in these cases stones from one treasure were re-used by a subsequent owner (in one case as an arm-band, and in the other, on a string of prayer beads—see V. Ball, *A description of two large spinel rubies, with Persian characters engraved upon them*, in *Proceedings of the Royal Irish Academy*, iii/3, 380-100 and Pl. X; V.B. Meen and A.D. Tushingham, *Crown jewels of Iran*, Toronto 1968, 46, 64-5 and 67).

We know from a number of literary accounts concerning the period at present under discussion not only that early Islamic rulers collected precious stones, but that they also used them in ways similar to those which we can verify from much later periods.

In one of the most informative and detail-laden works among those which deal with notable treasures, the *Kitâb al-Dhakhîr wa 'l-tuhaf* of al-Kâfî al-Râghîd b. al-Zubayr (ed. M. Hamidullah, Kuwait 1939), we have in § 18 the following: “al-'Alî recoumed in the *Kitâb al-Dhakhîr* that Sabîh, the secretary, said that ‘Umar b. Yûsuf (i.e. Yûsuf b. ‘Umar) al-Thaâfî sent to Hîshâm b. ‘Abd al-Malik a red ruby which was bigger than his palm and a pearl of the greatest possible size. The messenger came in to him. He could not see the face of Hîshâm because of the height of his throne and the number of cushions. He took the stone and the pearl from him and said: Has he written down their weight? Then he said: Where are the likes of these two to be found? What is particularly interesting about the above account is that it is such large stones and pearls which were considered appropriate for the ruler and that he was fully aware that the real way of recording such items was by weight. Hîshâm’s questions become even more meaningful when we know that, according to al-Bîrûnî [q.v.], al-Râghîd, who also received many comparable gifts, was a great admirer of valuable stones and that he sent the jeweller Şâbîh, the grandfather of al-Kindî [q.v.], to Ceylon to buy stones (see Mohammad Jahia al-Haschmi, *Die Quellen des Stein- buches des Berûm*, Bonn 1935, 14). Not so incidentally, these gifts (sc. the ruby and the pearl) were appropriate to kings not only because of their size but also because they were among the most valued gems in the Islamic world from earliest to latest times, although one often suspects that the huge red rubies, yâkûl,
cited are either red tourmalines or spinels, even though there were those competent to differentiate. For an example of methods used for such differentiation, we may point to al-Biruni who recorded the specific weights of stones in relation to sapphire, which he gave the arbitrary value of 100. Thus the pearl “is 65 and a third and a quarter” (see F. Krenkow, The chapter on pearls in the book on precious Stones by al-Biruni. Part II, in JC, xvi/1 [1942], 26-7).

Specific literary accounts and numerous recorded gifts and purchases as well as pictorial evidence exist which establish the prevailing hierarchy of value in stones. According to al-Biruni in his Kitab al-Djamahir fi l-tajawwal (as cited by E. Wiedemann, Über den Wert von Edelsteinen bei den Muslimen, in IS., ii [1911], 346), there are three outstanding precious gems, the ruby (yākūt), the emerald (zarnunāt) and the pearl. Wiedemann (op. cit., 346 n. 1) also informs us that in f. 5a of the Steinbuch des Aristoteles it says that the pearl, the yākūt and the zabānīgd (topaz) and their kind are preferred by people over other precious stones. For a concrete example, we may cite another passage from the K. al-Djamahir (§ 33) which recounts gifts given to al-Mutawakkil by a favourite slave girl consisting of twenty tamed gazelles, with twenty Chinese saddles and saddle-bags containing musk and ambergris and other perfumes, “And each gazelle had a female slave attendant with a golden belt, having in her hand a golden rod, at whose tip was a jewel, a ruby or an emerald or some other from the jewels of high value.”

It is hardly possible to estimate real prices; thus that given for the famous Dja'bar (see al-Mas'ūdi, ed. Pellat, index) varies considerably according to the sources. Wiedemann states, in op. cit., 346, and following al-Diramgī, that it must have weighed 14½ mithqāl (according to Kahle's conversion figures, in Die Schätzung der Fatimiden, in ZDMG, N.F. xxvii [1915], 336, this would amount to about 64 gr. or 320 carats) for 80,000 dinārs. Furthermore, according to the same source, al-Rashīd is said to have paid 90,000 dinārs for a pearl named al-Yatīna, “the Orphan”. The weight is not given, although weights for pearls of this name are mentioned in several other accounts of the early Islamic period. In the light of the comments of al-Biruni as cited by Krenkow (art. cit., Part I, 407) and of the passage, also from al-Biruni, cited below, it would seem that this name, along with Fātīda, “Unique”, was given to any large pearl, perhaps especially to those pear- or teardrop-shaped, for which no match could be found.

Further accounts of the early Islamic period indicating the value placed on certain stones are the following, all taken from the above-cited K. al-Djamahir:

(i) In the time of the caliph Hīṣām b. ‘Abd al-Malik, the “king of India” sent as a present to Dju'nyād b. ‘Abd al-Rahmān, the then governor of Sīnā, a jewel-studded camel mounted on a silver, wheeled under-carriage, and its udders were full of pearls and its throat was full of rubies, both of which could be made to pour forth. Dju'nyād sent this to Hīṣām, who appreciated it highly. “It amazed Hīṣām and everyone who was in his company, and it remained in the Umayyad treasury until it passed to the Abbāsids” (§ 15).

(ii) There is an account (§ 27) of a gift sent to al-Raschīd, by “one of the kings of India”, of “an emerald rod longer than a cubit. At its head was the image of a bird of red rubies, and it was invaluable.” We are told that this bauble passed down through the ‘Ab-
the passage to follow is amazingly like that which one gets from the accounts of the likes of Tavernier (see Travels in India, tr. V. Ball, London 1889, ii, 150) as well as what one actually sees being worn by Mughal rulers in their miniature paintings (see below in section on Mughal India). Another very graphic passage from the early Islamic period is found in al-Biruni’s chapter on pearls (Krenkow, op. cit., II, 25), in a section discussing the egg-shaped pearl: “The pearl called al-Yatfma weighed three \( \text{mikhlh} \) and it was called al-Yatfma (orphan) because its shell had gone before a sister [pearl] could be born [in it]. Likewise, a similar one was called Farid (unique) when its equal could not be found and it was necessary to make it the centre of a necklace which is called qilada.” Elsewhere in the same work (Krenkow, op. cit., Part II, 35), al-Biruni is arguing against “coral” and for “small pearls” as being the correct understanding of the term \( \text{marj^an} \), and we get an idea of his sense of what is proper as regards the combination of stones with pearls. He quotes a passage from Abû Nuwas and then comments: “Crowned with pearls and \( \text{marj^an} \) like a rose betwixt red anemones.” So he thinks that the white pearl is adorned in the necklace between two reds, meaning the ruby and the coral. Such a necklace would be uncommon and of bad taste. On the contrary, the small pearls are put between every large pearl and two encompassing rubies filling the place between them, holding them apart; then on account of their polish, the redness of the ruby glistens and can be compared with the redness of gold.”

Other such accounts about the combination of rubies, emeralds and pearls of various sizes could be given, but perhaps those cited above are sufficient to indicate something of the nature of a type of jewelry that seems to have had currency throughout the centuries in most of the Islamic world and of which we have nothing but the literary accounts and pictorial representations, together with some of the stones (in such repositories as the Iranian crown jewels and the Topkapi in Istanbul). What we do have left to us in something of its original form, although of less intrinsic value, is of greater historical importance, for it provides us with a better picture of the changes in artistic taste from period to period.

As regards those few objects datable to the early Islamic period, they fit very well into the pattern established for those adornments found in the paintings and reliefs discussed at the outset, i.e., they exhibit a dependence on Roman, Byzantine and/or Sasanid models. However, these objects also show a development away from the older objects in terms of decorative motifs or principal designs, an Islamisation of their pre-Islamic models. Perhaps the most striking example of this is an amulet case excavated at Nishapur which can be dated before 1000 A.D., on the basis of its epigraphic decoration (Fig. 1). Sasanid as well as Byzantine prototypes exist for the general shape (M. Negro Ponti, Jewellery and small objects from Tell Mahaz (North Mesopotamia), in Mesopotamia, v-v[1970-1], Fig. 85, No. 36, and W. and E. Rudolph, Ancient jewelry from the collection of Burton Y. Berry, Bloomington, Indiana 1973, Fig. 153), but its elaborate yet beautiful integration of form and decoration are peculiarly Islamic, as is its nielloed Kufic inscription.

Also datable to the same period on epigraphic grounds are two belt fittings excavated at Nishapur, one of which is shown in Fig. 2. Unlike the smooth-edged and undecorated fittings on the depiction of the horseman in the Nishapur wall painting discussed earlier, these two sculpted and decorated objects may have been part of a set like that in Fig. 3. The latter should be dated to the 3rd/9th century on the basis of its close comparison with the fittings depicted in a painting from Sâmarra (E. Herzfeld, op. cit., Pl. LXV, right). Some of the finger rings from Nishapur also seem to be datable to this period. The silver as well as the gold ring pictured in Fig. 4a and b both show a dependence on Roman models (E.H. Marshall, Catalogue of the finger rings, Greek, Etruscan and Roman, in the Departments of Antiquities, British Museum London 1907, Pl. XV, 526, Pl. XIII, 469), and as will be discussed later, the silver ring can be seen as a precursor of a type of Salûtî Persian ring.

Once we move into the early mediaeval period, not only do we have many more extant jewelry examples than we did for the early Islamic period, but we are also able to establish firmer dates for them. The reasons for the survival of these relatively large groups of objects, as well as the explanations of the lines of development which brought the art to this brilliant flowering during the early mediaeval period, continue to elude us. The jump from the few early objects just discussed to the objects we are about to present is often a very large one indeed.

Pivotal pieces for the study of early mediaeval jewelry in greater Iran are a pair of bracelets, which are illustrated in Fig. 5a-b. Each of the four hemispheres flanking the clasp of each bracelet bears a flat disk of thin gold at its back, which was decorated by pouncing it over a coin, in this case a coin bearing the name of the ‘Abbasid caliph al-Kâdir billah (381-422/991-1031). The late Dr. George Miles was of the opinion that the style of the coins used was that of those minted in 390/1000, 397/1007 and 419/1028, during the rule of Maḥmûd of Ghâzna, and that they were probably struck in the mint of Nishapur. As the gold discs were most probably embossed over relatively new coins, a dating to the first half of the 5th/11th century seems quite secure.

There are a large number of extant bracelets in both gold and silver which are analogous to these, although none are as fine or as elaborate. The main characteristics of this group of bracelets are the four hemispheres flanking the clasp, the tapering of the shank toward the clasp and the twisted effect of the former; or alternatively, a non-tapered shank is subdivided into ball-shaped sections.

Pre-Islamic jewelry has again served as a model for these bracelets, which show a continued conservatism and traditionalism in the medium. Examples of coins and imitation coins on jewelry are quite numerous in the Byzantine period; and the twisted effect of the shank must ultimately derive from Greek bracelets with similar shanks (Metropolitan Museum of Art, No. 45.11.10—see Hoffman and Davidson, op. cit., Fig. 61b). Those with shanks subdivided into ball-shaped sections must have had as their ultimate models Roman rings and bracelets as well (Allen, Fig. 107).

The hollow gold and silver rings from Nishapur with stone settings which we saw earlier seem to have given rise to the type of ring seen in Fig. 6. Its epigraphic and vegetal decoration in niello place it very neatly in the early mediaeval period, more particularly in the 6th/12th or 7th/13th centuries; and furthermore, the type of setting with its heavy
claws is very typical for Persian jewelry of this period. The bracelet illustrated in Fig. 7a-b, whose mate is in the Boston Museum of Fine Arts, shares many of the features seen in the last object discussed. Four of its elements take the form of truncated pyramids (as does the bezel of the ring), and bear the heavy claws to hold the now-missing stones. It also prominently features epigraphic decoration in niello.

The granulated treatment of the border on the obverse of the pendant in Fig. 8a-b, the settings with heavy claws and the niello-like decoration, relate this object to the bracelet just discussed. A feature we have not met with before, however, is that found on the reverse—a double twisted wire decoration laid on the gold sheet. This method of decorating a plain gold surface was very popular in Iran during the period in question and can be seen on a pair of earrings, one of which is shown in Fig. 9, which bear close comparison with a pair found in Russian excavations (in the region between the Sea of Azov and Moscow) whose finds can be dated between the 1170s and 1240 (G. F. Korzukhina, Russkii kladt IX-XIII vv., Moscow 1954, pl. LX). The open-work beads decorating the upper part of these earrings were also an important feature of Iranian jewelry at this time. An important feature of the earrings shown in Fig. 10, are composed of three such beads. There are many variations of such three-bead earrings from 6th/12th and 7th/13th century Iran, and a large number of similar ones were found in the Russian excavations already mentioned (for example, Korzukhina, op. cit., pls. XLV, XLVIII, XXXI, XXXII, etc.).

Fig. 11a-b illustrates a type of ring which seems not to have been in vogue in the Islamic world before the second half of the 6th/12th century. However, once introduced, it enjoyed great popularity and variety. The most essential features of this ring type are a cast shank, often with anthropomorphic terminals, and polygonal bezels. The prototypes, again, are to be found in Greek as well as Roman rings (Marshall, op. cit., fig. 61, and pl. XVI, 552). The ring chosen to illustrate the type is a particularly fine example, with four of the six corners of the bezel decorated with human heads, the crown itself consisting of a repeating geometric pattern executed in openwork filigree and the shank bearing harpies and terminating in double-bodied harpies. Although not as elaborate as our example, many rings of this type were found in the Russian excavations mentioned above whose finds can be dated between the 1170s and 1240 (Korzukhina, pls. XXXVII, 3, XXXVIII, 3, XLV, 4, etc.). The style of the animals as well as the technique employed on the belt fittings in Fig. 12 relate this object very closely to the above ring.

Because the geometrical design and the mode of execution on the two hair ornaments in Fig. 13 are identical to that on the ring in Fig. 11a-b, these objects must be dated to the same time, if not to the same workshop. Between the bronze core and the gold exterior of these ornaments there was a textile which was probably brightly coloured, and this must have heightened the impact of these striking pieces. Hair ornaments had a long pre-Islamic history, and tubular ones are still current in the Middle East today.

The earrings featuring polyhedral beads in Fig. 14 must also be similarly dated, since two hair ornaments with closely related beads were found in the Russian excavations mentioned above (Korzukhina, pl. LIX). Their sophisticated and ingenious transformation of the spherical bead into a pentagonal dodecahedron is quite in keeping with the extraordinary amount of sophistication at the time in the usage of geometric solids as the forms of beads, weights, etc., especially notable in the finds from the Metropolitan Museum's excavations at Nishāpir.

A cache of jewelry and 82 gold coins found in Tunisia about 1910 contains very similar objects, and which relatively firm dates for certain types of jewelry executed in the Fatimid realms (G. Marçais and L. Poinssot, Objets kairouanais, notes et documents, xi/2, Tunis 1952, 467-93, and Marilyn Jenkins, Fatimid jewelry, its sub-types and influences, in Kunst des Orients, in press); and this in turn allows us to date certain closely related objects from the Fertile Crescent.

Marçais and Poinssot have shown that the jewelry in this cache was made before the end of the year 436/1045, and Jenkins has demonstrated that it was very likely produced in Egypt. She has also delineated a number of characteristic features of this jewelry, thus permitting a considerable broadening of the group. On the basis of these works, it seems likely that the gold objects about to be discussed, as well as many others closely related to them, were all produced in a relatively short period of time before 436/1045.

Each sub-type enumerated below will be introduced by one or more Fatimid objects datable by means of the Tunisian cache. These groupings grew out of Marc Rosenberg’s theory of “the battle of granulation and filigree”, in which he suggests an historical progression proceeding from those pieces on which granulation, consisting of grains of more than one size—most often set on paired wires—was the dominant decorative device, to those on which grains are also placed on paired wires but on which the granulation and filigree could be said to be on an equal footing. The third sub-type incorporates only a small amount of granulation; and the final phase shows the complete displacement of granulation by filigree (see Rosenberg, Geschichte der Goldschmiedekunst auf technischer Grundlage, Granulation, iii, Frankfurt 1918, 96-104). The closely similarity among the objects comprising the various sub-groups makes it highly likely that the “battle” was a quick one, at least in the case of Fāṭimid Egypt.

Examples of the finest and most decoratively complex type of Fāṭimid gold work are the openwork biconical and spherical beads in Fig. 15 exhibiting filigree work and granulation with grains of more than one size. Another example of this particular phase of Fāṭimid jewelry is a gold bracelet with a tapered tubular shank and heart-shaped terminals in the Archaeological Museum, Istanbul (G. Breitung et alii, Das Buch vom Gold, Lucerne and Frankfurt 1975, 239, No. 6). The area where the shank meets the terminals bears three large grains, or more properly, a shot. This bracelet bears close comparison with one in the Damascus Museum, also with heart-shaped terminals but with a twisted-wire shank (Catalogue du Musée National de Damas, Damascus 1969, Fig. 119, right). The latter may in turn be compared with several excavated in Russia in finds datable to the 5th/11th and turn of the 6th/12th centuries (Korzukhina, op. cit., pl. XIV). All this confirms that this group of bracelets with tubular or twisted-wire shanks and heart-shaped terminals, whether made in Egypt or somewhere in the Fertile Crescent (as is probably the case with the bracelet in the Damascus Museum), were contemporary with the beads illustrated in Fig. 15 (which are datable by means of the Tunisian cache) and consequently must date before 436/1045.
Another bracelet which must be placed in this finest and decoratively most complex phase is that seen in Fig. 16a-b, which has a mate in the Damascus Museum. The twisted effect of its tapered shank and the four hemispheres flanking its clasp, as well as the treatment of the area where the shank meets the clasp, relate it very closely to the Persian bracelet illustrated in Fig. 5a-b, which is probably datable to the early 5th/11th century. However, the type of bosses on the clasp, the style of wirework on the back of the clasp and the treatment of the shank relate the Freer bracelet more closely to contemporary objects made in Egypt. We therefore attribute this bracelet to a workshop in the Fertile Crescent, most probably in Syria, where both Egyptian and Persian influences would very likely be found.

Also contemporary and made either in Egypt or the Fertile Crescent are a group of six bracelets with twisted-wire shanks whose clasps bear granules in two triangular arrangements, flanked on two sides by groups of three contiguous shot, on either side of a set stone (Catalogue du Musée National de Darnas, Fig. 119, second from right; Collection Hélène Stanitzky, iv. Bijoux et petits objets, Pl. XI, and p. 73, Figs. 11 and 12; and the European art market). The manner of usage of the grains on the clasps of these bracelets is closely related to that on the "blimp-shaped" beads on the necklace in Fig. 15.

The next Fatimid sub-type is illustrated in Fig. 17a-b. Unlike the beads discussed above, this pendant bears grains of only one size, and the filigree and granulation can be said to be equally important.

Those objects exhibiting filigree with only a very sparse use of granulation, such as the bracelet in Fig. 18 with repousséed shank, are examples of the next sub-type. Bracelets with repousséed shanks bearing geometric designs, sometimes filled with human figures, were a later development of such bracelets (Metropolitan Museum of Art No. 58.37, and A. de Rudder, Collection de Cérez catalogue, vii/1, pl. XII, No. 1279).

Another example of this phase is the pair of earrings in Fig. 19. However, the use of undecorated hollow biconical beads as well as the taping of the edges to a point take them out of the Egyptian milieu and, as was the case with the bracelet in Fig. 16a-b and several other objects mentioned above, perhaps a provenance in the Fertile Crescent should be suggested for them (cf. Zakiyya 'Umar al-All, Islamic jewelry acquired by the Iraq Museum [in Arabic], in Sumer, xxx, Pl. 8; Paris, Grand Palais, L'Islam dans les collections nationales, Paris 1977, No. 363; and Metropolitan Museum of Art, No. 95.16.2-3). Closer to its Egyptian prototypes than the above, but incorporating Persian elements as well, is another earring which also must have been made in the Fertile Crescent (Hayward Gallery, The arts of Islam, London 1976, No. 239)

As we have said, the final phase in Fatimid jewelry is represented by those objects with no granulation at all, their decoration being executed solely in filigree or in filigree combined with a technique other than granulation, such as cloisonné enamelling.

It is probable that the representations of jewelry in Persian miniatures do not give an adequate picture of the jewelry in vogue at the time, even for the upper classes. This is partly due to the very limitations of the Persian miniature art itself in terms of what it could show; and one gets the feeling that convention played some part in what jewelry the painter chose to decorate his figures, just as painters' conventions had a part in the architectural forms and decoration represented in these miniatures. However, it does seem on the other hand that the representations do reflect in a general way the types and, as will be seen, the changing styles of jewelry worn. With Mughal miniatures, the representations are more detailed, and give a feeling of being less fanciful, more indicative of a specific time, place and object.

The necklace in Fig. 24a-b is one of two extant pieces of 8th/14th century gold jewelry known to the present authors (the other is a head ornament in the Staatsliche Museum, Berlin-Dahlem, No. 563, which is very closely related to the gilded silver head ornament found in a 14th century tomb at Novorossiisk, for which see R. Zahn, Sammlungen der Galerie Bachstiz, ii Berlin 1921, pl. 123). The shapes used in the wire and stone work on the obverse of the necklace's two principal elements, as well as the contours of these elements themselves, relate it closely to the crown of Anushirwan in a page from
the Demotte ʿAḥmad Mrān (Metropolitan Museum of Art No. 52.20.2; see I. Stchoukine, La peinture iran-aine sous les derniers ʿĀkhasides et les ʿIl-Khans, Bruges 1936, ms. no. XV, no. 24), and the style of the chased design as well as the motifs on the reverse of these elements clearly point to the same period.

In addition, the overall Chinese feeling is in line with what we might expect at this time.

To come back to the miniature mentioned above, we might point out that both of the principal figures wear simple gold hoop earrings and that this fashion can be seen in other representations of the period. For example, in a miniature probably painted in ʿIrāk in ca. 771-81/1370-80 (R. Eitinghausen, Arab painting, New York 1962, 178) we see very similar earrings worn by the Archangel ʿIsrāʾīl.

We may take this occasion to say that the wearing of earrings by men is a custom with a very long history in the Near East, being well-attested in for example, Assyrian, Achaemenian and Sāmānīd reliefs. We have already referred in section 1 above to a man wearing earrings in a wall painting from ʿĪram which also show us examples of Ṭīmūrid earrings.

Period. This popular Ṭīrūnid fashion is also in evidence in two other miniatures, one from ca. 829/1426 and the other from between 1470 and 1480, which also show us examples of Ṭīrūnid earrings. These appear to be either plain gold hoops, hoops with a single pendant tear-drop pearl (seen earlier in paintings from Sāmārāʾ) or gold hoops with four pendant paired pearls (Metropolitan Museum of Art, No. 13.228.13, fol. 17b; see New York, Asia House Gallery, Ḫulm miniature paintings from the XII to XIX century, 1962, 58, no. 41, and No. 57.51.24; MMA Bulletin, N.S., xvi [April 1958], 232).

As regards the fashion in bracelets during the Ṭīrūnid period, a miniature from a Ḫaft pâykar manuscript shows bathing women wearing simple strings of beads at their wrists (Metropolitan Museum of Art, No. 13.228.13, fol. 47a, MMA Bulletin, N.S., xxv [May 1967], 325, fig. 16). One of a pair of cast silver bracelets with dragon-headed terminals and bearing on the top an Arabic inscription can be seen in Fig. 25. At least two other examples of this type are extant, and it may represent a simpler and later version of the Mamlūk bracelets discussed above with animal heads flanking their clasps.

The cast gold and jade seal ring illustrated in Fig. 26 may have developed out of the type of ring illustrated in Fig. 11a-b, as they have several important features in common: the technique of casting, followed by a significant amount of chasing; shanks which have antropomorphic terminals and which are decorated with designs on two levels; and a lozenge adorning the centre of the shank (for the universal importance and use of the seal ring throughout Islamic history, see Khatam and Muhr).

The necklace seen on the woman in the detail of a miniature from a manuscript dated 853/1450-1 in Fig. 27 points both backward and forward in time. The central element is related to one of those on the necklace in Fig. 24a-b, whereas the overall composition is identical to what we shall see is the most popular type of ʿĀṣafād necklace represented in miniatures, although the rosettes here are two-dimensional elements instead of spherical beads as in the case of the ʿĀṣafād necklace.

ʿĀṣafād Spain is better represented by extant jewelry than other areas during this period. The necklace illustrated in Fig. 28 consists of five pendant elements and five beads. The pendant elements show an indebtedness to ʿĀṣtiṣīd jewelry in their box-like construction, the use of gold loops on their circumference for stringing pearls or semi-precious stones, and their combination of gold and cloisonné enamel as well as of filigree and granulation. However, they are not as laboriously executed as the best ʿĀṣtiṣīd pieces, and the work has been further decreased by simply pouring a gold sheet over the decorated front side of the pendant to produce the decoration on the back, a peculiarity of ʿĀṣafād jewelry.

As indicated earlier, the vogue for beads framing the face continued in the ʿĀṣafād period but, in addition, two other types of head ornament—whose sources of inspiration were probably earlier crowns—were very popular during this period. Examples are to be seen in Figs. 29 and 30, both of which appear to be of gold set with stones.

The necklace shown in Fig. 27 was the immediate precursor of that worn by the woman in Fig. 30. The elements and their arrangement are identical, except that the flat rosettes set with a single stone in the 853/1450-51 miniature have, seventy-five years later, become what appear to be granulated spheres set with multiple stones. The central element has also changed from an apparently carved or painted piece to a gold pendant set with stones. Another type of necklace which we see represented in ʿĀṣafād paintings, worn as a choker or close to the throat, consisted of a central triangular, sometimes bejewel-
led, gold element flanked by two smaller gold elements on a string of pearls; and we see Iranian women in paintings of this period wearing a series of strings of beads, plain or bearing a single pendant (Metropolitan Museum of Art No. 52.20.6, unpublished, and a wall painting from the Cihâl Sultân (1057/1647) in Isfahan, unpublished). These paintings also show a continued vogue for bracelets consisting of simple strings of beads.

Also at the Cihâl Sultân, we encounter on the statues at the edge of the pool an early example of the bejewelled tripartite armband which was to have such popularity in the Kâdîjâr period (Fig. 31).

The new belt type, which was first observed in Persian miniatures dating to around 1400 A.D., was further elaborated upon in the Safawid period. The elements are jewelled and the number represented on a given belt is increased (Fig. 32). Two complete Safawid belts and a buckle are extant (Pope, Survey of Persian art, vi, pl. 1394a-c).

The types of earrings current in Safawid Iran show, for the most part, a continued conservatism at least as far as the representations are concerned. We find gold hoop earrings and gold hoops with a single shot at the bottom or at the bottom and two sides. There are also variations on the type of earring consisting of a gold hoop with a pendant pearl which in one case consists of three pendant stones, blue, white and red (Fig. 33). In addition to these, we also see more complex pendant earring varieties composed of gold, pearls, rubies or garnets and emeralds or in some cases composed of the aforementioned stones, but depicted in the miniatures in a way that is not detailed enough to permit a description.

Some of the ring types represented in the miniatures of this period include: archer's rings, usually indicated in black; seal rings and others represented with white and green stones (we may mention the one depicted with a white stone—in Metropolitan Museum of Art No. 1970.301.7, unpublished—which very much resembles in style that illustrated in Fig. 2b); plain gold rings with rectangular bezels; and gold thumb rings.

Another Safawid fashion seen depicted is the wearing of bandoliers, an example of which can be seen in Fig. 53. This one incorporates gold beads, amulets, a rosace and a gold pendant. Others of the period bear jewelled elements (Metropolitan Museum of Art No. 12.224.4, miniature unpublished).

Recognisable representations of jewelry in Ottoman miniatures are almost non-existent. A rare instance shows Mehemmed II wearing a white archer's ring and a ring set with a blue stone (N. Atasoy and F. Çağman, Turkish miniature painting, Istanbul 1974, pl. I). A hint of the kinds of treasures on hand in Tavernier's time (in addition to arms, utensils and the like enriched with diamonds, rubies, emeralds and other precious stones), can be had from the following:

"But what is most precious in that Chamber and transcends all the rest, is a strong Coffier all of Ironwork, which contains another, of about a foot and a half square, wherein there is a vast Treasure. When this Coffier is open'd ye see a kind of Gold-Smiths Jewel Box, wherein are ranked all sorts of Jewels of highest value, as Diamonds, Rubies, Emeralds, a huge number of excellent Topazes, and four of those Gems, call'd Cat-

...
we have a wealth of precise verbal accounts of the jewels, thrones, etc., of the Mughal court, especially those of the sharp and knowledgeable J.B. Tavernier.

One real disadvantage for the would-be student of Mughal jewelry is the lack of available information about the jewelry of India during a very long period prior to the one with which we are here concerned. It must have been noticed that this article has not include any discussion of jewelry made under the Dhilli Sultanate. Pieces must exist, perhaps unrecognized or unpublished, in Indian museums or private collections; but we do not know definitely about such jewelry and have no real notion from any source as to its nature. Despite the absence of extant pieces from some extensive periods of time, it seems safe to say, on the basis of observation of recent and contemporary work and of study of such pictorial records as the highly detailed sculptures, that India has the longest unbroken jewelry tradition of any nation on earth, as well as the greatest variety of jewelry forms, functions and techniques. For the period from the beginning of British domination to the present, there are many studies of particular regional and/or technical types and styles, and we will make no attempt to survey or summarise this material here. We shall content ourselves with presenting a few of the more notable features of the adornment associated with the continuation of the glory of the Mughal Empire, and their continuation into the later period, namely the 18th and 19th centuries.

Aside from whatever may have been the tradition at the time of the Mughal conquest in the 10th/16th century, we may safely assume that a considerable amount of Timurid tradition passed southward with the royal family, its treasures and entourage, and that Timurid tradition in turn represented an amalgamation of other Islamic, and, to some extent Central Asian and Chinese traditions.

Our best evidence for the jewelry styles of the periods of the emperors Akbar until Aurangzib (963-1119/1556-1707) are the miniatures painted under their patronage. A striking confirmation of the veracity of these paintings is afforded by a statement of Tavernier concerning what he saw during the reign of Aurangzib (Travel in India, ii. 150), that there is "no person of any quality that does not wear a pearl between two color’d stones in his Ear." Although the following paintings are somewhat earlier (e.g. Metropolitan Museum of Art No. 30.95.174, no. 11, "Akbar giving audience . . .", ca. 1590-1600, unpublished; and Metropolitan Museum of Art No. 55. 121.10.29, portraits of three nobles, all of whom have this type of earrings, and a huntsman, from the Shah Djahân Album, period of Djahân, 1014-36/1605-27, unpublished), they invariably show earrings with a precious stone (ruby or emerald) between its pearls, confirming the type of earring described by Tavernier. The discrepancy of detail may be due to a change in the arrangement by Aurangzib's time, or may result from a confusion on Tavernier's part, as he had just been describing a pearl in the emperor's collection, the largest perfectly round one he had ever seen and one for which the emperor was unable to find a mate. If he could have paired it, Tavernier says, he would have made of them earrings, each with a pair of rubies or emeralds on each side, "according to the custom of the Country" (loc. cit.). This preference for the combination of pearls, rubies and emeralds coincides with what was said above in section 1, and one sees the combination everywhere in Mughal (as indeed, in Timurid, Şafawid and Kādjar) paintings. The only other colour commonly seen is blue (sapphire), but this latter occurs much less often than the other three.

Of course, we know that from ancient times India was the land of precious stones, and that even stones which did not originate in India itself, such as the rubies of Burma, often found their way to other countries by way of India. Furthermore, India herself was a major market for stones from early times, even for those stones which had to come from considerable distance, such as the emeralds (coming from Egypt). India and her immediate neighbours such as Ceylon, "Indo-China" and the mountains of Badakhshân produced an amazingly large variety consisting of most of the precious stones known up to this day. The Ratnapārakṣā, or "Appreciation of gems", a compilation of Indian tradition about gemstones, their varieties, qualities, sources, etc., which was apparently compiled as a technical guide before the 6th century A.D. (L. Finot, Les lapidaires indiens, Paris 1896), exhibits a surprising degree of knowledge and a surprisingly systematic approach in dealing with a wide variety of stones. In it, we find the canonisation of the "nine gems": the ruby, the diamond, the cat's-eye (chrysoberyl), the "hyacinth" (zircon?), the topaz, the sapphire, the turquois, the coral and the emerald (Finot, op. cit., 171). Despite this great variety, there is already expressed in this compilation a strong hierarchy of preferences, with the diamond considered first among gems. The order of treatment of our other major stones is: pearl, ruby, sapphire, and emerald.

Thus it is not at all surprising that we see Mughal rulers and noblemen represented as wearing earrings, turban ornaments, bracelets and necklaces of a variety of lengths and arrangements consisting almost solely of large pearls, rubies, sapphires and emeralds. For example, in Fig. 34 we see a painting from the Shâh Djahân Album which depicts Djahân with his son Shujâ'. Aside from the jewelry worn by the pair, which consists of pearls, emeralds and rubies, the painting is of additional interest as it shows Djahân with a ruby between the fingers of his right hand and other rubies and emeralds in a dish held in his left hand. We are making no assumptions in interpreting the red stones as rubies, the green as emeralds, etc., as the following passage from Tavernier (loc. cit.) shows. He describes and offers a line drawing of a large pearl belonging to Awarngzib: "Numb. 4. Is a great perfect pearl, as well for its Water as for its form, which is like an Olive. It is in the midst of a Chain of Emeralda and Rubies, which the Great Mogul wears; which being put on, the Pearl dangles at the lower part of his Breast."

Perhaps something should be said here about the diamond, in light of its mention in connection with the Ratnapārakṣā as well as Tavernier's ample testimony not only to the presence of diamonds in the Ottoman Treasury (see above), but the great amount of mining, cutting and use of diamonds in India in his time (op. cit., ii, passim).

As is well known, India was the great source of diamonds up until their discovery in Brazil and South Africa, and as the Ratnapārakṣā and other early Indian texts indicate, the Indians were using the diamond as a jewel well before Muhammad's time. Indeed, even as early an author as Pliny (Book xxxvii, 15) seems to speak of the diamond under the term adamas and he calls it the most valued of human possessions, having been for long only known to kings.
But he also seems to confuse it with other stones; and his assertion that it cannot be broken even by hammer blows on an anvil has the status of mere hearsay. He does speak of its use to engrave other stones and such usage probably has a more ancient history than we shall ever be able to establish.

According to Firet (op. cit., p. xxvii), certain of the early Indian texts with which he deals indicate that it is undesirable to cut diamonds and that the ideal form is the perfect octahedral crystal (cf. op. cit., p. xxvii). What is most important to notice here, however, is that the practice of cutting the diamond was known to them. Even as late as Tavernier’s time (see ii, 56, of Ball’s translation), such an expert on gems as he could say of cleaving diamonds (to avoid wastage by simply grinding away material) that the Indians “are much more accomplished than we are.”

Al-Biruni, cited by Wiedemann (op. cit., p. 352), seems to offer contradictory information regarding the use of the diamond in the early Islamic period. He says on the one hand, that the people of Khurásan and Trak only use the diamond for drilling (and cutting) and poisoning, and on the other, that a “drachme” of diamond in one piece costs one thousand dinars, whereas if in small pieces the price is one hundred dinars. This price quotation seems to clearly indicate a gemstone usage, not an abrasive one, where only small pieces are used anyway. In any case, according to al-Biruni in another place in his stone book (as cited in Haschmi, op. cit., 28-9), the diamond is mentioned by poets of the Diakhiriy and the Umayyad period (Imru ’l-Qays and Abu ’l-Nadim respectively). Again from al-Biruni (Haschmi, op. cit., 13), in a treatise by Naṣr b. Ya’kub al-Dinawari comes much more solid and detailed information, according to which the Buwayhid Mu’izz al-Dawla Ahmad b. Buwayh (ruled in ‘Trak 334-56/945-67) gave his brother Rukn al-Dawla a ringstone of diamond which weighed three muskbahs. Furthermore, he says (loc. cit.) that Mansur b. Nuh al-Samani (either Mansur I 350-65/961-76 or Mansur II 387-9/997-1007) had several ringstones, of which one was a diamond, and that “one never saw a larger diamond.” Thus it seems fairly certain that the diamond was known as a gemstone throughout the Islamic Middle Ages. How these diamonds were cut and set we do not know. Even the Mughal miniatures show nothing which to our knowledge can be identified as a diamond. The earliest inscription on a diamond of which we are aware is one in the name of Ni‘am Shadh with the date 1000/1591-2, now in the Iranian crown jewels (Meen and Tushingham, op. cit., 46, unpictured “rose-cut” diamond, 22.93 ct.).

To return to our discussion of the forms of Mughal jewels, another ubiquitous item in Mughal paintings is finger rings which come in some variety, although their details are generally not possible to ascertain, except for the colour (and by deduction, the type) of the gemstones. One well-known type of ring that is identifiable is the archer’s ring (discussed above under Safavid Iran), which we know from many extant examples, usually of jade and often inlaid with gold and precious stones. Another form of jewel usually associated with men is the subha or string of prayer beads. These beads were of course made of every variety of material from wood and bone to stones of all sorts. The passage cited above (in section 1) about the inscribed stones in the Iranian crown jewels shows that Nadir Shadh had a subha with emeralds, and there are in fact representations in Mughal miniatures of precious stone subhas. For example, a painting of Akbar done in the period of Daghângir (1014-36/1603-27), a detail from which is seen in Fig. 35, shows Akbar fingering a string of prayer beads consisting of large rubies, sapphires and pearls. Although the number of beads is not correct for Muslim prayer beads (being neither 33 nor 99), this must be attributed to a mistake, casual or otherwise, on the part of the artist.

Certain fashions already noted in 9th/15th to 13th/19th century Iran are also to be seen in the Mughal miniatures. Among these are the bandolier, which passes over one shoulder and down under the opposite arm, on which is strung various jewelled charms, including amulet cases of a form similar to that from Nishapur (Fig. 1) and those in Iranian miniatures (see Fig. 39) and of which numerous Mughal examples from the 18th and 19th centuries exist (e.g. Metropolitan Museum of Art No. 15.95.137 and 138, unpublished).

In another miniature in which we can observe such bandoliers (Fig. 36), we see a profusion of clearly-depicted jewelry. Most of the ladies shown have chokers fitting high on the neck which consist of a central jewel (a large ruby or emerald set in a square or rectangular gold “box”) held by three rows of pearls which complete the circuit of the neck. Another type of choker is made of closely-placed rectangular gold and stone jewels forming a continuous band bordered on top and bottom by a single row of pearls. Most persons also have intermediate-length pendants, apparently held by silk cords, which also consist of large central stones (rubies or emeralds) set in a simple rectangular or elliptical gold box, with pendant pearls. In addition, one sees the strings of large and small stone beads and pearls which are universally represented and described. We see here also a lady wearing the type of jewelled tripair armband discussed above as seen on a statue from the Çihil Sutun (extant Mughal examples from the 18th and 19th centuries include Metropolitan Museum of Art No. 15.95.40, 41 and H100.118, both unpublished). Other types of arm decorations seen in this rich miniature include: apparently solid gold armbands which fit at the elbow; a wide tapered close-fitting bracelet set with pearls, sapphires and rubies; another bracelet very similar to a choker described above; with a large ruby set in gold held by two rows of pearls; and an upper-arm band which is similar to another of the chokers, with a series of stones set in rectangular gold settings and bordered with rows of pearls. Finally, we may mention some of the types of ear and more nose rings seen. There are several examples of the type of ear-ring with the stone between two pearls discussed above, but there they have also a pendant teardrop-shaped pearl. The same type of ring, but without the pendant pearl, occurs as a nose ring. The other major type of earring is a large, disc-like one of gold set with stones large and small and sometimes with a pendant pearl. Some of these (particularly that on the lady in the centre) bear a rather close resemblance to the star-like element on the head-ornament (Fig. 37a). The position also was similar since this element rested at the side of the head at the ear.

The detail of this piece (Fig. 37b) shows that granulation was an art which continued at a high technical and artistic level in India. This technique has existed in India from at least the 1st-2nd centuries A.D., as the jewellery excavated at Sirkap, Taxila, now in the Central Asian Antiquities Museum, Dihli, shows (see The art of India and Pakistan.

The way in which the elements in the necklace from Taxila (Ashton, op. cit., fig. 180) fit together almost in the manner of a jigsaw puzzle has striking parallels in many of 18th and 19th century Indian necklaces, (one example of which is shown in Fig. 38). In these and a myriad of other ways, the jewelry art of India displays an astounding tenacity for the preservation of traditions.

Another striking demonstration of this traditionalism is to be found in the pair of bracelets in Fig. 39. Bracelets of this type are well-known and exhibit an ingenious type of pivoting clasp closed with a threaded pin. The universally-used type of clasp pin in Islamic jewelry outside India and in one or two isolated examples of the 8th/14th century, is one which is held in place by friction. But a pair of bracelets found at Pusztta Bakod in Hungary (now in the National Museum, Budapest, see Franz M. Feldhaus, Die Technik der Anstecke und des Mittellasters, Potsdam 1931, 221-2 and Figs. 292 and 254; and M. Rosenberg, op. cit., i, 123 and Figs. 141-5) and dating from the period of the tribal migrations (perhaps 5th-7th centuries A.D.), displays not only terminals of similar type but also of the same type of thread used in our Indian ones, but they, like the Indian ones, are closed by a counter-clockwise threaded screw. This type of screw closure is found on a variety of types of Indian jewelry, and almost invariably the threads are made not by cutting but, like those on the much earlier bracelets just mentioned, by soldering on to the pin and into the hole which receives it coils of wire with regular spaces between (Feldhaus, op. cit., 221-2, traces the screw closure in jewelry back to at least the 5th century A.D., as it is found in a fibula from the grave of Chulderich, d. 481). It should be noted that all of the above mentioned jewelry found in Europe which exhibits the screw closure is of the type with hammered-in garnets, a type which was widespread in Europe and Asia between about the 4th and (depending on the region) the 10th or 11th centuries. The screw pin may have come to India with some of these migrating peoples.

Our pair of bracelets exhibits two other features for which Mughal and post-Mughal India is justly celebrated. The white jade shanks are inlaid with gold forming graceful floral patterns, the leaves and flowers of which are formed by stones set into the gold. Although sporadically practised in Turkey and Iran, possibly under Mughal influence, this art in those areas did not rival that in India either in level of technique and artistry or in longevity.

The gold terminals of these bracelets are covered with brilliant enamels which demonstrate a masterful control of the medium. Jaipur is best known for this type of enamelling, which is perhaps best described as "encrusted", in which three-dimensional forms are covered. Additionally, details are sometimes cut into the metal under transparent enamels to contribute to the liveliness of the effect. The literature on the subject of Indian arts and crafts from the 18th to the present century contains much information on Indian enamelling, and we will not dwell upon it, beyond saying that the art here reached one of its greatest consummations. These enamels, of course, like other precious techniques from time immemorial, adorned and bejewelled a whole array of objects which were not jewelry in the modern sense such as arms, thrones, utensils and the like, and as such they constitute a branch of jewelry.

As we suggested at the outset, the subject of Indian jewelry is an enormous and complex one, especially because of the wealth of evidence in the sculptures and paintings and the variety of recent and contemporary forms. And this situation, combined with the great dearth of known pre-18th century pieces, leaves one in a great state of puzzlement about where all the older pieces went. We can of course explain this to some extent by remembering that even within families it was customary to reset stones in the latest style, especially after passage from one owner to another, and in the process to melt down the precious metals for re-use. To cite a particularly notorious case of radical and wholesale change of ownership, that of the Mughal royal treasures, we know that most of what was on hand when Nâdir Shâh took Dhil was immediately transformed into ingots for ease of transport (Meen and Tushingham, op. cit., 11); and of course the stones and pearls were hauled away, either to be remounted or simply deposited in the Iranian treasury. Such "radical and wholesale changes of ownership" have of course been taking place throughout Islamic (and other) history, and we can well imagine that many of the stones that were in the Mughal treasury at the time of Nâdir Shâh's visit had in turn formed part of the treasuries of various earlier houses. The Mughal treasury may for instance have included stones that had once belonged to some "Abbasid or Fatimid caliph. Such would be impossible to prove in the absence of inscriptions on the stones; but there are tantalising bits of information to be found. For example, when one compares the weight reported (23 mūškālā, which by Kahle's precise formula of one mūškāl = 44.14 gr.—and not 4.5 gr., to which he rounds it off—gives 101.5 gr. or 507.5 carats) for a large balas ruby which was part of the enormous loot dispersed from the Fatimid treasury during the chaotic period in al-Mustansir's reign (see Kahle, op. cit., 336, 356) with that of the largest known balas ruby in the world, now in the Iranian crown jewels (reported as 500 ct. by Meen and Tushingham, op. cit., 46, 47, 67), one is struck by the agreement in weight. Of course it may be a coincidence, but the embers of hypothesis are fanned when we know that Nâṣir al-Dīn Shâh told Dr. Fevier, his physician in the 1890s, that "the hole... was pierced to take a cord by which it hung around the neck of the Golden Calf" and that "this ruby came from a king of Abyssinia, and had been brought back from India by Nâdir Shâh" (Meen and Tushingham, op. cit., 67).

Despite the various reasons for and the mechanisms of the transformation and transfer of jewels from one period and region to another, one is still left in a quandary. In the case at hand, where are all the pieces of the period which were not in the Mughal royal treasury? Surely some were kept as family heirlooms or were remounted, to be found later?

We must believe that future excavations, in conjunction with heightened awareness on the part of researchers in museums and on historical texts, will continue to provide information on this as well as other periods where we are faced with these hard-to-explain lacunae.

4. The final phase of the tradition (18th and 19th centuries)

The conservatism in style which has been noted as a major characteristic of the three broad periods covered so far continues in the final phase of the Islamic jewelry tradition which is to be treated here.

In Kâjgâr Iran, bandoliers were still fashionable
for men and women (SJ. Falk, *Qajar paintings*, London 1972, pls. 2, 26, 46, 47), although instead of the metal amulets and pendants sometimes set with stones seen on the *Safavid* examples, the *Kadjar* ones seem to have consisted solely of pearls or of elements composed of pearls and/or precious stones. The style of the belts in Iran during this period remained essentially the same.

Strings of beads were still worn on the wrists (Falk, pls. 26 and 43), in addition to bracelets composed of precious stones set into square bezels hinged one to the other, as well as plain gold bangles (Falk, pls. 17, 23, 25).

One of the latter paintings referred to above (that in pl. 17) also shows a continuation of the vogue for a string of pearls framing the face. In the *Kadjar* period, however, the pearls only appear to have extended from ear and the strings are longer so as to serve as necklaces (Falk, pls. 19, 20). There was also an elaboration of jewelled head ornaments, especially for women, in the *Kadjar* period. These were worn either pendant from their head cloths or in combinations serving as simple or elaborate head-dresses (Falk, pls. 5-7, 18-21). An example of one of these pendant elements can be seen in Fig. 40a-b. The small and large elements are hinged together and a ring is attached to the top of the former. The two projecting ornaments are removable, for decorating the top of a feather (Falk, pls. 5, 20). A similar object, in this case used to decorate the foreheads of Jewish and Muslim brides in the region of Bukhārā, can be seen in Fig. 41a-b. Influence from the Indian sub-continent is very obvious on this subject, as on much *Kadjar* jewelry, particularly in the manner of setting the stones.

A very popular type of earring in Iran during the 18th and 19th centuries consisted of a series of hemispheres or cones, hung one below the other, with pendant elements (Falk, fig. 1). These were executed in enamel, sheet metal or in filigree, with either pendant pearls or balls, repoussé- or wire-decorated metal sheets of a combination of both (see Fig. 42). A prototype for this kind of earring is to be found in 1st or 2nd century India (The Royal Academy of Arts, London, *The art of India and Pakistan*, pl. 22, No. 185). Another popular earring type can be seen in Fig. 43. This variety consists of a semi-circular lower part often decorated with dragon-headed terminals and spherical or knob-like protrusions around its circumference (Falk, figs. 3, 4). Again, these were executed alternatively in enamel, sheet metal and filigree.

A very fine example of the ubiquitous *Kadjar* arm-band, referred to earlier in connection with the *Safavid* example, can be seen in Fig. 44a-b, here executed in gold, enamel and precious stones.

Aside from a continued vogue for strings of beads at the neck (Falk, pls. 14, 38), pendants or roundels set with precious stones on strings of pearls or beads were a popular necklace type during the *Kadjar* period (Falk, fig. 7, pls. 17-19). The last painting also shows a necklace bearing a central element very similar in shape to that seen in Fig. 27.

To the best of our knowledge, aside from the new pieces in the Topkapi Hazine (most of which are either turban ornaments or belt buckles of well-known types), very little Ottoman jewelry of any significance made and used in Turkey itself has survived from the period in question. However, we can learn a considerable amount about fine Ottoman jewelry of this period from that made in the more distant regions of the Ottoman empire and even from Morocco.

When one compares pieces which can be attributed to Istanbul (*Collection Hélène Statthatos*, ii. *Les objets byzantins et post byzantins*, Limoges 1957, pl. XI, nos. 79, 80, 82 and pl. XIII, nos. 107-9) with the gold jewelry from Morocco of the same period, one feels quite justified in stating that the provincial craftsmen were drawing at least some of their inspiration from the Turkish capital. The similarity is so great, in fact, that one can safely use such Moroccan pieces to fill in the large gaps in the Istanbul jewelry.

The style of the gold work on the Moroccan head ornaments in Fig. 45 is very close to that on the diadem and the oval pendant in the Statthatos collection. That iconography was also shared can be seen on the necklace in Fig. 46. The double-headed bird, whose body is set with stones and from whose tail extend pendants of pearls and precious stones, is very close to a pendant in the Statthatos collection. The two enamelled cylindrical beads on this necklace, however, are descendants of those seen on the *Nasrid* necklace in Fig. 28.

The necklace in Fig. 47a-b combines precious stones on the obverse with enamelling on the reverse, which is another feature of the Istanbul jewelry.

The largest body of Muslim North African material, however, has a series of styles all its own assuming a myriad of forms and drawing its inspiration from a variety of periods and areas. There is a rather detailed literature on the subject which can be studied by those with a particular interest (see *Bibl.* below). A study of the literature on this jewelry, which extends into the 20th century, as well as the later Indian jewelry, provides insights into the ways various earlier pieces and types were worn, and gives an idea of their overall effect. The same can be said for ethnographic studies, which often provide the best documentation of recent and contemporary jewelry from the various regions whose earlier jewelry productions have been discussed above.

Djawhari, Djawhari, modernist Egyptian theologian. He was born in 1278/1862 in the village of Kafir ‘Awd Allah Hıdızı in the Nile Delta to the south-east of al-Zaţazik. He studied at al-Azhar [q.v.] and at Dār al-‘Ulum [q.v.] from 1889 until 1893 when he graduated. After his graduation, he worked as a school-teacher at various primary and secondary schools until his retirement in 1922, except for the period between 1908 and 1914 when he taught at Dār al-‘Ulum (ethics, ta’ṣrīf, hadith and grammar) and at the Egyptian University (Islamic philosophy).

He is the author of an impressive oeuvre of nearly thirty published books—some of which were translated into a number of other Oriental languages—and numerous articles on a variety of subjects published in different periodicals throughout the Islamic world. The majority of his writings constitute an effort to show how the teachings of Islam, and in particular, the contents of the Kurrân, were in accordance with human nature, and with method, theory and findings of Western modern (19th and early 20th century) science, with which he had familiarised himself mainly through popular accounts in English.

His principal work is his Kurrân commentary, al-Djawhārī ft tafsīr al-Kurrân al-kārim, Cairo 1923-35, in 26 volumes, which was analysed extensively by J. Jomier, Le Cheikh Tantawī Jawhari (1862-1940) et son Commentaire du Coran, in MIDEO, v (1958), 115-74. The scope and nature of Tantawī’s writings and the extensive learning displayed by him, drew the attention of European orientalists like D. Santillana, M. Hartmann and Carra de Vaux, who gave mostly eulogising analytical accounts of some items (cf. Carra de Vaux, Les penseurs de l’Islam, Paris 1926, v, 275-284; M. Hartmann, Schauk Tantawī Dchauhārī, Ein moderner egyptischer Theolog und Naturfreund, in Beiträge zur Kenntnis des Orients, xiii (1916), 54-82; D. Santillana, Kitāb ayn ‘īnān (review), in RSO, iv (1911), 762-3).

Throughout his life, Tantawi Djawhar showed a theoretical as well as practical interest in spirituality, as appears from passages in many of his writings and in particular from his books Kitāb al-Arwaḥ,

3. Bronze belt fittings, cast. Probably Irâk or Iran, 3rd/9th century. Collection of Mr. and Mrs. Everett Birch, St. Thomas, V.I.* (Illustrations marked with an asterisk are photographs by courtesy of Patti Cadby Birch.)

4a-b. (a) Silver ring, hollow, fabricated from sheet. From the excavations of the Metropolitan Museum of Art at Nishapûr, Rogers Fund, 1939. Probably Nishapûr, probably 4th/10th century. Tehran, Mûze-i Irân-i Bastân.

6. Gold ring, decorated with niello and set with turquoise and pearls. Iran, 6th-7th/12th-13th centuries. Freer Gallery of Art, No. 57.3. Courtesy of the Smithsonian Institution, Freer Gallery of Art, Washington, D.C.*
5a-b. Pair of gold bracelets, fabricated from sheet with applied twisted wire and granulation. Eastern Iran, probably early 5th/11th century. (a) Freer Gallery of Art, No. 58.6. Courtesy of the Smithsonian Institution, Freer Gallery of Art, Washington D.C.

(b) Metropolitan Museum of Art, No. 57.88, Harris Brisbane Dick Fund, 1957 (detail of underside of clasp).

7a-b. Gold bracelet, hollow, fabricated from sheet, decorated with niello and granulation. Iran, 6th-7th/12th-13th centuries. Freer Gallery of Art, No. 50.21. Courtesy of the Smithsonian Institution, Freer Gallery of Art, Washington, D.C.*

10. Pair of gold earrings, fabricated entirely from wire and granules. Iran, 6th-7th/12th-13th centuries. The Metropolitan Museum of Art, No. 52.4.5-6, Rogers Fund, 1952.

11a-b. Gold ring, cast, fabricated and engraved. Iran, 6th-7th/12th-13th centuries. The Metropolitan Museum of Art, No. 1976.405, Gift of Mr. and Mrs. Everett Birch, 1976.

12. Set of silver-gilt belt fittings, cast and chased. Iran or Anatolia, 6th-7th/12th-13th centuries. Reproduced by courtesy of the Trustees of the British Museum, No. 1959 7-22 1-5.*

13. Pair of gold hair ornaments with bronze core, decorated with twisted wire and granulation and (formerly) coloured cloth. Iran, 6th-7th/12th-13th centuries. The Metropolitan Museum of Art, No. 52.32.9,10, Rogers Fund, 1952.

43. Pair of gold earrings, enamelled and set with faceted, coloured glass "stones". Iran, 19th century. Collection of Joseph Benyaminoff.

who, adds al-Djâhi, used the sâdi of the diviners (!) and gave apposite replies to questions put to him. When al-Ma'mûn arrived in Baghâdîd, Dhibâbîn pointed out to him the hiding-place at Cteisophon/ al-Madînîn of a casket of black glass containing a piece of brocade in which were preserved one hundred leaves. Dhibân informed the caliph's secretary, al-Hasan b. Sahl [q.v.], that it was the Djaâidhân khârid translated from the language of Hûgâng into Persian (= Pahlavi) by Gandiyâr b. Isândiyâr, vizier of the king of Iranshâh. Al-Hasan b. Sahl had each leaf read out and explained, one after the other, by a certain al-Khîrîr al-Khadîrî b. 'Ali, then put the text into Arabic. However, since the leaves as given to him were in a state of disorder, he had to pass by a great part of them. The tradition adds that al-Ma'mûn, when he heard about this translation, could not prevent himself from expressing his admiration.

Such is the legend concerning the discovery of the Djaâidhân khârid, the fate of whose Pahlavi original is unknown. Neither is anything known about what happened to al-Hasan b. Sahl's Arabic text, which must have been in circulation for a significant period before being itself translated into Persian. R. Henning (in ZDMG, iv [1956], 73-7) thinks that it could possibly have been preserved in the translation asal-sûlûn attributed to Ibn al-Mukaffâ [ed. Kurd 'Ali, in Rasâ'îl al-balaghâh], Cairo 1365/1946, 145-72) which displays several points in common with the Djaâidhân khârid of the historian-philosopher Miskawîy [q.v.].

The latter actually, that, after having been struck, when a youth, by the enthusiastic judgment on the Djaâidhân khârid by al-Djâhi, he felt compelled to bring it to light again, and that his untiring researches at last enabled him to find a copy with the help of a mûhadhîn mûhadî of Fârs. Even conceding that this information has a base in reality, it is regrettable that Miskawîy gives no indication as to what language it was written in. It might be supposed a priori that it was a copy of the Pahlavi original, but such a hypothesis seems hardly plausible if one gives attention to the complete harmony, in Arabic, between the wording of an important number of the sentences of the Tatimât al-sûlûn and this author's own Tâkimât al-sultân. In order to achieve his aim, he conveys to the reader "a rambling succession of moral reflections or philosophical discourses borrowed from various sources" to which "the libraries of Ibn al-Amid and 'Adud al-Dawla [q.v.] had enabled him to find easy access" (on these sources, see M. Arkoun, Contribution à l'humanisme arabe au IVe/Xe siècle: Miskawîy philosophe et historien, Paris 1970, 146-58; from a more general point of view, the interest of this anthology of Miskawîy [ed. 'A. Badawi, Cairo 1952, under the title al-Hikma al-makkâlî] consists essentially in the author's clearly-manifested intention of inculcating that "among all the nations, intelligences concur in following the same way, and neither differ according to the countries involved nor change with the elapsing of time", after having pinpointed many resemblances between the wisdom of the ancient Iranians, illustrated by the document which he claims to have rediscovered and the Pahlavi texts which he has utilised, and that of the Indians, Arabs and Greeks. In order to achieve his aim, he conveys to the reader "a rambling succession of moral reflections or philosophical discourses borrowed from various sources" to which the libraries of Ibn al-Amid and 'Adud al-Dawla [q.v.] had enabled him to find easy access (on these sources, see M. Arkoun, Contribution à l'humanisme arabe au IVe/Xe siècle: Miskawîy philosophe et historien, Paris 1970, 146-58; from a more general point of view,
Arkoun has devoted an extended study to Miskawayh’s work, *Introduction à la lecture du Rûbat* “Jâwâdîn Khirad”, as a preface to the Persian version of Shâhâbî, in *Wisdom of Persia*, xvi, Tehran 1976, 1-24. Miskawayh’s extensive readings provided him with a rich documentation on the wisdom of the Persians (5-88), the Indians (89-100), the ancient Arabs (101-208), the Greeks (282-4) and the “modern Muslims” (285-342). Especially worthy of note is the Table of Cebes (229-62), and this Arabic adaptation has since long taken back the attention of orientalists (Span. tr. P. Lozano y Casela, *Paragrazie iraba de la Tablade Cebes*, Madrid 1793; ed. and tr. Suavi, *Le Tablado de Cebes* or the image of the life humane, Paris 1873; R. Basset, *Le Tablado de Cebes*, Paris 1889; and see Arkoun, *Contribution à l’humanisme arabe*, 158-60).

**Djawz** is the nut in general, and in particular the class of the walnut (*Juglans regia L*), rich in varieties. Term and object are of Persian origin (gauz), as correctly recognised by the early Arab botanists (Abû Hanîfah al-Dinawârî, *The book of plants*, ed. B. Lewin, Uppsala-Wiesbaden 1953, 86, l. 14). They also relate that the walnut-tree is widespread in the Arab peninsula, especially in the Yemen, and that its wood is appreciated because of its firmness; shields made from wood of the walnut-tree are mentioned also in poetry because of their hardness: *saštâta türmân gauzukhâh lam yâthekhabbi* (*op. cit.*, 16, l. 2 and 86, l. 17; *Dâyîl Dîwân Ibn Mukbil*, ed. *Izzat Hasan*, Damascus 1381/1962, no. 4). In Islamic times, Iran remained an important area for the cultivation of the walnut-tree. Geographers occasionally describe the differences in climate in view of the trees that are found: walnut-trees grow in cold regions, date-palms in hot regions, according to *Mukaddis T.*, 459, 463. For the cultivation areas in regions, date-palms in hot regions, according to Shushtar, in *Mukhtârât*, Haydarabad 1362, ii, 50; P. Schwarz, *Djawz al-sûr*, another kind of nux vomica, *Elocia iemandiosa Forsk.*—5. *Djawz al-khar*, the Abyssinian nut, *Unona aethiopica* (?).—11. *Djawz al-kaşâlah*, an Indian nut, *Gardena dametorum* (?).—12. *Djawz armînîyûs*, the Indian nut, *nux vomica*, fruit of the *Guercina mangostana*. For further material, see Dozy, i, 233; M. Meyerhof’s commentary on Mainmîd, *Shahr asmû al-’ukkdr, no. 82*; F.A. Frücker, *Pharmakognosie des Pflanzenreiches*, Berlin 1891, Index s.v. *Nux*.

dA-djawza' [see muntakat al-hurufi].

dA-djahhini, surname of viziers of the Sarnainids [q.v.], of whom one at least wrote a famous Kitab al-Masalik wa l-mamalik which has never been found in spite of the hopes raised by S. Janicsek (Kitdb al-Masdlik wa 'l-mamdlik famous Kitab al-masalik val-mamalik: (al-Djaihani's lost is it to

peoples and the places that they inhabit, without
Leipzig 1939, text § 4, tr. 6, tr. M. Canard, in AIEO Alger, xvi (1958), 54 relates that a Djayhan, who bore the title al-shaykh al-'amid, obtained for him an audience with the young Sarnainid Nasr b. Ahmad (301/913-43 [q.v.]) and arranged for his lodging at the time of his journey to Balkh in 309/922; he refers only to the nisba of this individual and makes no mention of any literary activity whatsoever. In 336/947, when revising the Murad, al-Mas'ddi as yet had no knowledge of the Kitab al-Masalik, but he mentions it in the Tanbih (ed. Saw!, 65) some years later (before 346/957), and summarises its contents: a description of the world, marvels, cities, capitals, seas, rivers, peoples and the places that they inhabit, without reference to the relevant itineraries (cf. Jakut, Cairo ed. 198 (Wdfl, ii, 80-1, no. 389, and viii, 53-4, no. 3463) copies, under the same headings (in other words, respectively, Ahmad and Muhammad) the two articles of Yakut which he nevertheless considers suspect; the correct reading seems to him to be Ahmad b. Muhammad. Hadiji Khalfa (no. 166) opts for Abu 'Abd Allah Ahmad b. Muhammad, but Kahhala, while following this last biographer (Mujam al-mut'talifin, ii, 165) and attributing to Ahmad, who was still alive in 367/978, the K. al-Masalik, the K. al-Ras'd'i and the K. al-Ulh, has no scruples about a contradiction and makes Abu 'Abd Allah Muhammad b. Ahmad (ix, 25) the author of the Ras'd'i and the Masalik, following the K. Hadiyyat al-'arifin of Isma'Il Paiga al-Baghdad. It is not unusual for the commonness of names such as Muhammad and Ahmad to lead writers and their copyists astray, but here, we have the clear impression that the Sarnainids employed three viziers bearing the nisba of al-Djayhan: the first (I), who served in the latter part of the reign of Nasr b. Ahmad; his accession, must have been called Abu 'Abd Allah Muhammad b. Ahmad as Nasr; he was replaced, no doubt in about 310/922, by Bal'arni [q.v.], Abu 'l-Fadl Muhammad b. 'Ubayd Allah, whose successor was Abu 'Ali Muhammad b. Muhammad al-Djayhan (ii); this last was vizier from 326 to his death in 330/937-42 (ibn al-Ashir, vii, 283), that is, at the end of the reign of Nasr b. Ahmad, and there is no reason to suppose that he was not the son of (I); no doubt it was his own son, Abu 'Abd Allah Ahmad b. Muhammad b. Nasr (iii) who was deprived of his office, according to Yakut, in 367/978, and replaced by al-Ubi. Among these three individuals, who clearly seem to belong to the same family, one should attempt to ascertain which is the author of the K. al-Masalik (the other three works mentioned are too little known to be taken into consideration); V. Minorsky (preface to the Hudud al-ismam, xvii), V.V. Barthold (ibid., 16, 23) and A. Miquel (Le geographie humaine du monde musulman, Paris-The Hague 1973, xiii-xxiv) opt, with D.M. Dunlop and Sarton (History of science, i, 635-6), for no. 1, which seems however unlikely, since it is probable that his book would
have been known to al-Mas'ūdī—who is in fact the only one to refer to the name of Muhammad b. Ahmad—before the revision of the Murūj (323/943). The association of no. II with al-Balkhi would incline us to attribute the K. al-Masālik to him, but his kunya of Abū 'All rules out such an identification, since the author of this work is always Abū 'Abd Allah.

In these circumstances, it is legitimate to suggest, as a hypothesis, that the K. al-Masālik is a family work, perhaps begun by Muhammad b. Ahmad (I), continued by his son Muhammad b. Muhammad (II) and completed by his grandson Ahmad b. Muhammad (III) in the years immediately following 330/941-2. Examples of this kind are not rare in Arabic literature (see al-Barkī in Suppl., Ibn Sād al-Majmū/controller, etc.) and it is probably the plurality of authors which gives rise to confusions which the other exploitable sources do not enable us to solve, although they supply some information regarding the work in question.

Ibn Hawkal (writing in ca. 375/985) declares (Ṣarāt al-ard, text 329, tr. Kramers-Wiet, 322) that he took with him in the course of his travels, which certainly began in 331/943 but stretched over a long period, the books of Ibn Khurraḍāḍibih, of al-Djāhān and of Kudām, but he regrets possessing the first two which have monopolised too much of his attention, and he does not seem to rate them very highly, although he does not hesitate to exploit al-Djāyahānī (453/438) insofar as regards Khurraḍān, visited by him in the third quarter of the 4th century. Al-Mukaddasī (375/985), who also utilises on a number of occasions, is more explicit; in his Abān al-takāsim (3-4, tr. Miquel, Damascus 1963, §§ 10-11), he describes Abū 'Abd Allāh al-Djāyahānī (without further qualification) as a philosopher, astronomer and astrologer and adds that he gathered together people "who were acquainted with foreign countries in order to inquire from them concerning the different states, their resources, their access routes, the height at which the stars revolve there, and the position occupied there by the shadow ... For him this was a means of conquering these countries, of getting to know their resources and of perfecting his knowledge of the stars and of the celestial sphere". While acknowledging his merits, al-Mukaddasī seems subsequently to reproach al-Djāyahānī for having developed at length the physical geography of the countries described, thus neglecting some important facts. Finally, Gardzī, who was writing between 440 and 443/1046-52, confirms al-Mukaddasī's suggestion by declaring (Qanūn al-akhbār, ed. Nazım, Berlin-London 1928, 28-9) that al-Djāyahānī was in contact with correspondents residing in areas stretching from Byzantium to China, obtaining written information and making selective use of the material.

The K. al-Masālik perhaps consisted of seven volumes (cf. note on ms. C. of Al-Mukaddasī, tr. Miquel, op. land., 14), but the information supplied by this note is confusing and should be treated with all the more caution seeing that it is hardly likely that Ibn Hawkal would have encumbered himself with such a voluminous work (unless, of course, it was an abridged version that he carried about with him). It must in fact have supplemented the K. al-Masālik of Ibn Khurraḍāḍibih, with which moreover it appears sometimes to be confused. On account of this, some authors attribute to this work a particular political stamp, but the information consists above all of purely geographical data, unpublished and difficult to obtain otherwise, which must have been of interest to other writers, and we cannot but be astonished as the disappearance of a work so widely exploited. The debt of the author of the Hudūd al-ilm, of Gardzī and others to al-Djāyahānī has been the object of scholarly speculation on the part of Mīmarī and of Barthold (see prefaces to the Hudūd, xvi-xvii and 23-6), but it is clear that too many uncertainties remain for absolutely firm conclusions to be reached.

Bibliography: in addition to the sources mentioned in the article, see also Marquart, Streifzüge, xxxi-xxxi and passim; A. Miquel, Géographie humaine, xxiii-xxv, 92-5, and index. (G. Pellat)
work of his predecessors, including Apollonius of Byzantium (?), the Pseudo-Archimedes, the Pseudo-Plato (3rd/9th century), and a certain Yunus al-Asqalani. Other writings and constructions, whose originators were unknown to al-Djazari, are also mentioned. Secondly, his use of and improvement upon the earlier works, together with his meticulous descriptions of the construction and operation of each device, enables us to make an accurate assessment of the level of achievement reached by the Arabs in mechanical technology by the close of the 6th/12th century.

Bibliography: Eight valuable articles on al-Djazari's work were published in the early years of this century by E. Wiedemann and F. Hauser, listed in Der Islam, xi (1921), 214; see also Wiedemann, Aufsätze zur arabischen Wissenschaftsgeschichte, Hildesheim 1970, ii, index, 846; The miniature paintings from two of the manuscripts are discussed in A.K. Coomaraswamy, The treatise of al-Jazari on automata, Boston 1924; See also Brockelmann, S I, 902. For the other writers mentioned, see ibid., in Suppl.

Djazari—Djazzar

AL-DJAZARI. Shams al-Milla wa-l-Din Abu Abd al-Nabi Makdisi al-Makkah (kassabun), a native of Makdisi, died in 701/1301. His Makdasi al-Makkiyyah, which was written in 672/1273 for the author's son Zayn al-Din Abu'l-Fath Nasr Allah, are a good example of the imitations of the Makdasi al-Hariri. The external form of the work follows that of al-Hariri precisely; there are 50 makdasi, most of which are named after towns. The various episodes are linked together by a common hero, Abu Nasr al-Masri, and a common narrator, called al-Kasim b. Djayyad al-Dimashki. The narratives of al-Djazari's makdasi are overwhelmed with the ingenious puns, elaborate rhymes and other forms of wordplay for which they provide the vehicle. The lavish use of rare words to provide long series of phrases ending in the same rhyme makes an immediate understanding of the makdasi difficult. They copy the form of their famous model to the point of exaggeration, but do not have the inspired wit of its contents.

Brockelmann records six surviving MSS of al-Makdasi al-Makkiyyah (II, 205, S II, 199). In addition there are 13 selections from al-Djazari's work in the Leeds Ar. MS 169, whose principal contents are the Makdasi al-Hariri. The selections from al-Djazari are from the following makdasi: al-Rusdiyya, al-Aniyya, al-Dinmiyya al-Shirdazzia, al-Islandariyya al-Khara', al-Dimashkiyya, al-Dabtd, al-Qamalimsha al-Dinmiyya.

Bibliography: Hadddi Khaliif, ii, col. 1785; Brockelmann, loc. cit.; for some specimens of Djazari's rhymed prose and verse, together with English translations, and a full list of the titles of his makdasi, see R.Y. Ebied and M.J.L. Young, Shams al-Din al-Jazari and his Al-Ma'mam al-Makkiyyah, in The Annual of Leeds University Oriental Society, vii (1975), 54-60.

Djazzar (A.), "slaughterer", of camels, sheep, goats and other animals. These formed a distinct group of workers in medieval Arab society, quite apart from the kassab and labham, the two terms used for the butcher. In modern times, however, the djazzar is synonymous with the latter terms. Djazzir and other writers use the words djazzarin and kassabin alongside each other to show them as separate groups; there were dar al-djazarin in Medina and Mecca during the 1st century A. H.; while there were many sak al-djazzar as well as sak al-kassabin in Bagdad and other Islamic cities throughout the Middle Ages. The word djazzar seldom appears as a proper name, though kassab is often used as an occupational surname among the Arabs.

The djazzar was required to be an adult (haghi), and a sane (akhi) Muslim who would utter the name of God at the time of each slaughter. The муkBаин saw to it that the djazzar slaughtered animals free from illness or defects. The non-Muslim (dimm) butchers practised their trade side-by-side with their Arab colleagues in the Middle East and North Africa. Friday was the weekday when most slaughtering of animals took place, according to Djazari.

Unlike craftsmen of low prestige like tanners and cuppers, the slaughterers and butchers were not socially ostracised in Arab society. The Prophet forbade one of his relatives to employ a kham (q.v.) in the trades of a slaughterer (djazzar), or butcher (kassab), cupper (haghdh), or goldsmith (adghal), (al-Kattani, al-Tarabil, ii, 106). The djazzar was usually a free person (hur). The slaughterers were disliked by Arabs for the uncleanness (nagdus) of their work. Ibn al-Imad cites a case of an unscrupulous djazzar who utilised a dead animal for selling its meat, and the case was perhaps not untypical. Some Arab udabba' discussed the professions of the nobility (sind'dt al-kassab) and cited the names of many Kuryah (q.v.) like al-Zubayr b. al-Awwam, 'Amr b. al-As, 'Amir b. Kurayz, and Khalid b. Asid, among djazzarin in their early careers. The djazzarin, according to Djazari, could never be rich, and their economic condition remained unchanged in Arab society over a long period. During the Buwayhid period, the slaughterers, butchers and other tradesmen had to pay additional imposts (maks), although they were usually exempt from taxation. The daily earnings of a djazzar in Egypt during the reign of al-Hakim bi-Amr Allah (386-411/996-1020) was one disir, which was an exceptionally high income for a worker.

The slaughterers and butchers are portrayed in Arabic history books as groups of persons with violent tempers. The butchers were expelled from the Round City of Baghdad by Abi Dja'far al-Mansur for their tendency towards violence. Tabarri records that the djazzarin rioted in Mecca in 262/875-6, producing 17 casualties and jeopardising the pilgmezine of many people. For this and other reasons, a minor Arab poet echoed the sentiments of the public by saying that he did not wish to live in a locality where a slaughterer would be his neighbour. Al-Lhubdi, a jurist of the Mamluk period, came to the conclusion that the occupation of the djazzar was undesirable (makruh), because it bred hard-heartedness among men. Despite these criticisms, however, one gets the impression that the slaughterers were not generally despised in Islamic society.

AL-DJAZZĀR PASHA. ABRAH, the dominant political figure in southern Syria (the eydlets of Sidon and Damascus) during the last quarter of the 18th century and the early years of the 19th. A Bosnian by origin (some sources assert that he was of Christian priesthood), he was born ca. 1722; the story of his early life is confused with legend. He appears to have been a successful trader at the slave market in Constantinople, from which he amassed a fortune of silver in Istanbul, where he entered the service of the Grand Vizier Ḥakīm-Oghlu ‘Alī Pasha. In 1756, when his master was sent to attend to the affairs of Egypt for two years, he accompanied him there and stayed behind to attach himself to the local Mamlūk military system. His Mamlūk patron, ‘Abd Allāh Bey, was administering the Buḥayra district in the Delta region as kāfīf when he was murdered by the local Bedouins in the course of a rising. The qālid al-balad ‘Alī Bey (1760–73) appointed Dajzzār to succeed his master as kāfīf of the district, raising him to the rank of Bey. It is alleged that Djazzar came to be so-called (djazzār = ‘butcher’) as a result of the ferocity with which he proceeded to subdue the Bedouins of the Delta; it is possible, however, that Djazzar was his original surname, or that it was a nom de guerre which he adopted at the start of his career to promote his image as a competent professional soldier.

Djazzar remained attached to ‘Alī Bey in Egypt for several years. By 1768, however, he had become dangerously compromised in Mamlūk political intrigues. Fleeing Cairo, he returned for a short while to Istanbul; it was probably then that he first became officially attached to the Ottoman state as an agent. He then proceeded to settle in Syria, where he set out to establish for himself a large mamlūk household and a private army of Bosnian, Albanian, North African and other mercenaries which became the basis of his personal power.

Between 1768–74 the Porte was involved in a war with Russia; in the course of the hostilities, a Russian naval squadron appeared in the eastern Mediterranean, and Russian agents were sent to Acre (‘Akka) to encourage the powerful chieftain of Galilee, Dāhīr al-‘Umār, to join ‘Ali Bey of Egypt in a revolt against the Porte (Dāhīr had successfully usurped power in the southern parts of the eylūt of Sidon, with Ottoman acquiescence, since the 1730). It was after Dāhīr rose in revolt that Djazzar was sent in 1772 by the governor of Damascus to defend Beirut, which had shortly before been bombarded and pillaged by Dāhīr’s Russian allies. Since 1749, Beirut had been controlled by the Shihāb amīrs of Mount Lebanon; technically, however, it was part of the eylūt of Sidon (as was, indeed, the whole of the Shihāb domain). The ruling Lebanese amīr, Yūsuf Shihāb (1770–88), was opposed to Dāhīr, and happy at first to see Djazzar established in Beirut. However, when Djazzar refused to honour the Shihāb claim of suzerainty over Beirut, Yūsuf Shihāb turned to his old adversary Dāhīr for help, and the latter summoned the services of the Russian squadron against Djazzar. Beirut was bombarded for a second time in 1773 and besieged by land and sea for four months before its garrison was starved into surrender. Djazzar fled the town and was given refuge for a time by Dāhīr in Acre. Betraying his host at the first opportunity, he fled to Damascus, smuggling out with him a convoy of Dāhīr’s munitions. Delighted by his persistent loyalty, the Porte raised him to the rank of Paşa and appointed him beylerbeysi of Rumelia, then miyettāřī of the sanjak of Karā Hīşar in Anatolia in 1775. Later in that same year, when Dāhīr al-‘Umār was finally defeated and killed by his own men, Djazzar was appointed beylerbeysi of the eylūt of Sidon, and established the seat of his government in Acre. In the following year, he was confirmed in the government of the eylūt with the rank of wa♫r, and continued in the office and rank until his death in 1804.

In Acre, Djazzar followed in the footsteps of his predecessor and his private army to set up a régime of remarkable stability; his policy of ruthless repression, and the cruelty with which he meted out punishments, made him the object of general fear. On one occasion, in 1790, a group of his officers and mamluks, supported and possibly prompted by his political enemies in Istanbul and by the French traders in Acre, staged a rebellion against him which was almost successful, but the rebellion was crushed by a surprise action and never repeated. Despite the constant intrigues against him in Istanbul, Djazzār’s mandate in the eylūt of Sidon was annually renewed, without interruption, for twenty-nine years—a record without precedent in the his-tory of Ottoman provincial administration. On four different occasions (in 1785, 1790, 1799 and 1803), the eylūt of Damascus was also entrusted to his care. At a time when the general decline of the Ottoman state was encouraging rebellion and the usurpation of power in the provinces, an efficient and loyal governor in Syria, which was an area particularly prone to insubordination, was badly needed, and Djazzar was just the man for the job. In the coastal eylūt of Sidon, which was already overshadowing the inland eylūt of Damascus in importance because of the increasing European (and particularly French) maritime trade with the Levant, Djazzār suppressed the unruly Mitwalfs (Twelver Shi‘is) and other tribes of the hill country of Galilee and northern Palestine, and established his administra-tion firmly in the area. While he was not able to destroy the Shihāb emirate in Mount Lebanon, he did manage to exploit the Maronite-Druze con-fessional jealousies and the political factionalism prevail-ing there to reduce the Shihāb amīrs, who had once fought successful wars against the governors of Damascus, into docile and subservient fiscal agents. In Acre, Sidon and Beirut, he was careful to keep the lucrative commercial activity going, but at the same time took strict measures of control to derive the max-imum profit from it for himself. He established a person-AL-DJAZZAR PASHA

268

sional monopoly over the cotton and grain trade in his territory, and also made heavy impositions on the silk trade; as a result, he amassed a huge fortune, which contributed to the perpetuation of his power. His payments of the required tribute to the Ottoman
treaury, though at times unpunctual, were always correct. In 1799, when General Bonaparte advanced northwards from Egypt to occupy Syria, Djezzar, assisted by the British, successfully repelled his attack on Acre and forced him to retreat; he thereby set the seal on the failure of Bonaparte’s eastern venture, and paved the way for the final expulsion of the French from Egypt two years later.

Despite the great power which he came to wield in southern Syria, Djazzar administered the eyalet of Sidon in strict loyalty to the Porte, and not in the manner of the mutaghabilba—the tribal chieftains and military adventurers who seized the opportunity of Ottoman decline to establish autonomous principalities in the provinces. In Syria, the mutaghabilba (like Dahir in Galilee, and the Shihabs in Mount Lebanon) normally sought to promote their power by catering politically to the fierce particularism of the local tribes and sects, of whom the Maronites and Druzes of Mount Lebanon and the Mitwafs and other tribesmen of Galilee and northern Palestine were prime examples. They also tended to identify themselves with the interests of the new and predominantly Christian merchant class which thrived on the import-export trade with Europe. In Mount Lebanon and Beirut, the close association of the Shihabs and the Maronite silk merchants was reflected by the conversion of an increasing number of the amirs from Sunni Islam to Christianity; in Acre, Dahir had favoured the Christians generally, and surrounded himself with Christian agents and advisers. Like Dahir, Djazzar by necessity employed competent Christians (of the Sakrudj, Iddl, Kalush and Maron families) as secretaries, treasurers and stewards; he was careful, however, not to pamper the Christians as a community, and most Christians who served him ended up in prison, in the torture chamber, or on the gallows, with their fortunes confiscated and their families reduced to destitution. Likewise, Djazzar cared little for the support of the tribesmen and peasants of the mountain hinterland, whom he knew to be venal andickle, and ultimately undependable. Instead, he appears to have sought popularity among the Sunni Muslim populace of the towns by appealing to their ins titutive sentiments. At a time when the Ottoman state, as the universal Muslim state, was suffering repeated defeats and humiliations at the hands of Christian powers, the high-handed manner in which Djazzar dealt with the local Christian bourgeoisie, and with the French and other European traders in Acre and Sidon, could only have met with strong approval among the urban Muslims, particularly those of the lower classes. The Fajja’s repressive policy towards the crypto-Maronite Shihabs and the heterodox Druzes and Mitwafs must certainly have had the same effect. As governor of Beirut in 1772-3, Djazzar had armed the Sunni Muslims of the town to help in its defence against the Russians. As ruler of the eyalet of Sidon, his unwavering championship of the Ottoman cause, which was the cause of Islam, probably secured for him some popularity among the lower Muslim classes of the coastal towns. Whatever the extent of this popularity was, it has remained unrecorded, because the available accounts of his regime were not written by his own contemporaries. The Christian, the foreigners and the Muslim notables who, as communities and sometimes possibly as individuals, had suffered at his hands and were unanimous in branding him as a bloodthirsty tyrant.

On the whole, the Djazzar regime represents the last reassertion of the Ottoman imperial prerogative in the traditional manner against the particularist tendencies in Syria, before the radical social and political changes of the 19th century. His determined efforts to break the stubborn local autonomyaforeshadowed the policy of centralisation of the Tanzimat period.

Djebedji (Fr. “armourer”), the name given to a member of the corps of “Armourers of the Sublime Porte” (Djebedjiyan-darbagh-i-ah), a kgeli Khul Corps. The Corps closely associated with the Janissaries and, on campaign, to transport this equipment to the front, distribute it to the Janissaries and to collect it at the end of the campaign, keeping a record of losses and repairing damaged items.

The Corps was presumably founded shortly after the Janissaries and, until the late 10th/16th century, its recruits came from the penel-gi, the principle by which the state took one in five of prisoners of war and the daujihme [q.v.]. However, the system broke down when the djebedji, like the Janissaries, received permission to marry and recruit their own children and native Muslim to the Corps.

Like the other Kgeli Khul Corps, the djebedji were divided into thirty-eight divisions (orta), the first of which was divided into nine sections (boluk). Each orta represented a different craft in the repair or manufacture of guns, gunpowder and other war materials. The chief officer of the Corps was the djebedji bagh, under whom came the bagh ketkhdud, who usually succeeded him if his post fell vacant, and four other ketkhduls. Another officer was the djebedji ota, who commanded each orta, and under him was the ota bagh, and the chief craftsmen, called ota. The central barracks of the Corps was in Istanbul, but its members served in turn in the frontier fortresses of the Ottoman Empire. A group of djebedji would always accompany a Janissary garrison. Their total strength varied according to the size of the Janissary Corps; there were about 500 djebedji in the mid-10th/16th century and their numbers fluctuated between about 2,500 and 5,000 in the 12th/18th century.

The Corps was abolished, together with the Janissaries, in 1241/1826.

Djezzar [see Djazzar].
AL-DJILDAKI, 'IZZ AL-DIN AYDAMIR R. 'ALI R. AYDAMIR, Egyptian alchemist, who died in 743/1342 or later. He was the last outstanding Muslim adept of his art, of encyclopaedic, though rather uncritical, learning. Almost nothing is known of his life; he himself, however, tells that he spent more than 17 years on extensive travels, which lead him to Irak, Asia Minor, the Maghrib, Yemen, Hijaz, Syria, and Egypt, where he ultimately settled. Al-Djildaiki represents the mystical and allegorical trend in Muslim alchemy, but there is evidence that he had real experience in practical operations and chemical substances. His interests extend also to the khawadis, i.e. the magic properties of things, and to pharmacology, medicine and astrology, especially the attribution of metals and other substances to the seven planets. He often reflects on the parallels between natural and alchemical processes, and he attacks Ibn Sinah who denied the possibility of artificial transmutation (see Aviceana De congelatione et conglutatione lapidum, ed. E.J. Holmyard and D.C. Mandeville, Paris 1927, 6-7). His very numerous works, which still exist in many manuscripts, are valuable for the history of alchemy through his philosophically-accurate quotations from his predecessors.

He is familiar with Dschibir b. Haysan's theory of balms (see P. Kraemer, Dschibr ibn Haysan, in Mem. de l'Inst. d'Egypte, xlv (1943), xlv (1942), indexes). Among other Greek, Indian and Persian authorities he refers to Hermes [see Hermes], Cleopatra (see M. Ullmann, in WZKM, xiii-lxiv (1972), 161-73), the caliph 'Ali and Khadij b. Yazid [q.v.], and he also composed lengthy commentaries on writings of Apollonius (see BAlINUS), Ibn Umayl [q.v.], Ibn Arfa [q.v.], Ibn Umayl [q.v.], Ibn Arfa [q.v.], and al-Sinawi.

DIJRGA (Pakhto: P. H.G. Ravndal, A dictionary of the Pakhto, Pakistan, or language of the Afghans, London 1867, 330b), an informal tribal assembly of the Pathans in what are now Afghanistan and Pakistan, with competence to intervene and to adjudicate in practically all aspects of private and public life among the Pathans.

In the course of his abortive mission to Shahr Shudjar and the Durrani court of Kabul in 1809 [see AFGHANISTAN, v. History (3) (A)], Mountstuart Elphinston described the djirga system as alive and vital, with assemblies at various levels, from the village at the bottom up through the clan or khii to the tribe or ulus at the top, with a djirga of subordinate chiefs among the tribal khan; but he observed that it was a model frequently modified or disrupted rather than a neat hierarchy of institutions. He noted too that the djirga was the principal means of administering criminal justice, where an offended party had not already avenged his wrongs in blood, and of determining amounts of compensation due to a victim; and he adjudged it a useful and tolerably impartial institution (from account of the kingdom of Caubul, London 1839, i, 215-26). At the very apex of the system, the Amir of Afghanistan might summon a "great (loya) djirga" of leading chiefs for consultation at critical junctures.

The political division of the Pathans in the course of the 19th century into those to the east of what became the Durand Line and in British India and those to the west in the independent kingdom of Afghanistan eliminated the loyalty djirga as an effective expression of feelings of the whole Pathan nation, although the institution was eventually incorporated into the political structure of modern Afghanistan as a representation of all ethnic and social groups with the state, and not merely of the Pathans; for the djirga in Afghanistan of the last two centuries, see MADJLIS.

On the British side of the Frontier, the djirga has continued as an instrument of democratic tribal expression; it was, for instance, tribal djirgas which in November 1947 signified the adhesion of the North-West Frontier Province to the nascent Pakistan, and in February 1980 a djirga of Pathan and Baluch chiefs and notables met at Shibi in northern Baluchistan to affirm opposition to further Soviet Russian encroachment after the latter power's occupation of Afghanistan towards the end of 1979. As far back as the second half of the 19th century, a modified and less authentic type of djirga had been made part of the Frontier Crimes Regulations, originally promulgated in 1872. Under this arrangement, cases involving tribal honour, blood feuds and women could be withdrawn from the magistrates' courts and arbitrated upon by a djirga, which was however in this case a group of tribal elders appointed by the magistrate and acceptable to both parties. Here the djirga was an ancillary of British Indian law, though after ca. 1880 in the recently-pacified parts of northern Baluchistan and the newly-administered tribal areas of the North-West Frontier Province, the djirga was adopted as a substitute for the formal legal system, thus in effect enshrining Pathan custom.

DJUDHAM (A.), leprosy or Hansen's disease.

I. Terminology. A number of Arabic terms that may refer to leprosy were created on the basis of the symptomatology of the disease. Aside from the distinctive symptoms of advanced lepromatous leprosy, various terms were adopted that were descriptive of leprous lesions, but they were not restricted exclusively to leprosy. No clinical cases of leprosy are reported in the mediaeval medical literature that might clarify the terminology. There can be little doubt, however, that qudham referred to leprosy, particularly of the lepromatous form. The term was used in pre-Islamic Arabia; it was derived from the Arabic root of the word, meaning "to mutilate" or "to cut off," and is descriptive of serious disfigurement that occurs in cases of leprosy.
matous leprosy. Thus, 

mutilation reported by a dentist in an arm or foot cut off, or "leper" and "leprous" (al-Murtada, Qurur al-faw' id, Cairo 1954, i, 5). Conversely, the use of this root would strongly suggest that the leprousomatous form of the disease existed in pre-Islamic Arabia. Considerable confusion exists concerning terms other than 

d^udhdm; the difficulty is certainly due to the numerous forms that leprosy may take, particularly in its early stages and its mimicry of other skin diseases. This term was definitely used to name leprosy, but it could be applied to other skin disorders. This term was also used in pre-Islamic Arabia. It was derived from the Arabic root that may mean "to be white or shiny." Emphasis on the whiteness of the skin in the Arabic medical accounts of baras and barah may have referred to the hypo-pigmentation occurring in the early stages of dimorphous leprosy or the macules and infiltrated lesions of tuberculoid leprosy. Depending on the context, white and black baras, white and black bahak, wadad, and kawbbah were often used to name leprous symptoms. In addition, the following terms could apply to leprosy, but they were rarely used—some are clearly euphemistic: abhar, akfir, arbak, asla (asla), barah, hayd (hayd); da' al-asad, da' al-ku'tdl, murakka, su (sul), da' al-asad, da' al-ku'tdl, murakka, su (sul), barash, baydd (baydd'). Depending on the context, white and black baras, white and black bahak, wadad, and kawbbah were often used to name leprous symptoms. In addition, the following terms could apply to leprosy, but they were rarely used—some are clearly euphemistic: abhar, akfir, arbak, asla (asla), barah, hayd (hayd); da' al-asad, da' al-ku'tdl, murakka, su (sul), barash, baydd (baydd').

II. Medical History. There is no persuasive evidence that true leprosy occurred in ancient Egypt, Mesopotamia, or Persia before the time of Alexander the Great. It must have existed much earlier in India, the Far East, and probably central Africa. Sorotat, the so-called leprosy of Leviticus, does not correspond to any modern diagnosis of the disease; it was a non-specific condition and essentially a non-medical notion. The lepra (Gr. leproi, "scaly") mentioned in some of the Hippocratic writings was also a skin ailment that could not be identified and was probably not related to leprosy. It was not before 300 B.C. that true leprosy entered the sphere of medical science. At that time, physicians of Alexandria became acquainted with its lepromatous form and named it elefantiasis because of the thickening and corrugation of the skin. The tuberculoid type, however, was not yet clearly described and was named after the hypo-pigmentation occurring in the early stages of dimorphous leprosy or the macules and infiltrated lesions of tuberculoid leprosy.

The medical textbook of al-Madjusf [q.v.] is quite important because it was one of the first Arabic works to be translated into Latin (Liber panegy) and then into French in the 16th century. It was translated into Latin by Constantinus Africanus [q.v.], and its translation by Constantinus Africanus [q.v.] was done for the Western terminology of leprosy. The translator could not use the word elefantiasis in translating al-Madjusf's account of leprosy because in Arabic the term (dâ' al-fil) was already used for the present-day disease of that name. In this situation, Constantinus seized upon Biblical usage, where the Latin translation of Hebrew and Greek was lepra; hence, he therefore translated 

gudjam as lepra rather than mutilatio, which would have been more precise and would have avoided the stigma attached to lepra. As it was, the use of lepra for leprosy in general caused confusion with the Hippocratic use of the word and extended the application of the name with its evil connotations to a wider range of skin disorders. Al-Zahrawf's work was also translated into Latin and became well-known in Europe. In his discussion of leprosy, al-

Zahrawf made a significant contribution to medicine by describing, for the first time apparently, the neurological symptoms of the disease. It is difficult to believe that local anaesthesia had not been observed among lepers much earlier. In the Middle East, the loss of sensation caused by leprosy was noticed by Ibn al-Kuff; the source of his observation is unclear. (The leprosy of Baldwin IV [d. 1206], king of the

the thierac of vipers. Together with the classical descriptions of leprosy, the various treatments entered into Arabic medical science.

The earliest indisputable proof of leprosy in the Middle East has been found by Möller-Christensen in two skeletons from Egypt (Arwân) that date from about A.D. 500. Therefore, there can be little doubt that genuine leprosy existed from the early Islamic period and that Muslim doctors had sufficient opportunity to observe it. Practically every Arabic writer on medicine discussed leprosy. The earliest account seems to have been the K. fi v-gudjam by Yuhamm b. Mâsawîy [q.v.]. The work is apparently lost, but it was frequently quoted by later Arabic authors; an anonymous treatise does exist that contains the opinions of Ibn Mâsawîy as well as those of al-

Râzî and Ibn Sînâ (A.Z. Iskandar, Catalogue of Arabic manuscripts, London 1967, 70 f., 126). The first full account of leprosy in Arabic medicine is to be found in al-Tâbarî's Firdawsu 'l-Hîmat (ed. Siddiqi, Berlin 1928, 318-25); the pathology and therapeutics of the disease are largely consistent with the earlier Greek medical texts. Arabic writers who discussed leprosy included the following: al-Kindî (Fihrist, tr. Dodge, New York 1970, ii, 621; Medical forma-

The medical textbook of al-Madjusf [q.v.] is quite important because it was one of the first Arabic works to be translated into Latin (Liber panegy). It is difficult to believe that local anaesthesia had not been observed among lepers much earlier. In the Middle East, the loss of sensation caused by leprosy was noticed by Ibn al-Kuff; the source of his observation is unclear. (The leprosy of Baldwin IV [d. 1206], king of the

DJDHAM
Latin Kingdom of Jerusalem, is described by William, bishop of Tyre; the narrative contains the only incontrovertible clinical evidence of the anaesthetic symptoms of leprosy in the Middle East [4 history of deeds, tr. Babcock and Krey, New York 1934, ii, 296, 406].

The description of insensitivity by al-Zahrāwī was repeated in the Western medical literature, at least from the 12th century. It served as a means of distinguishing lepers and excluding them from society. As opposed to the Galenic tradition of the other works, al-Azrākī's work may be regarded as a good example of "Prophetic medicine" (al-tibb al-nabawi). Al-Azrākī's quasi-medical discussion of leprosy may well reflect popular beliefs and practices that persisted throughout the mediaeval period alongside those of professional medicine. Moreover, it was a common practice during the mediaeval period to attribute to stones the ability to ward off disease; for leprosy, topaz (zabarajad) was reputed to have this property (M. Ullmann, Neues zum Steinbuch des Xenokrates, in Medizinistorisches Journal, vii [1973], 71).

In sum, the Arabic medical writers borrowed heavily from Hellenistic sources, but their works were not entirely imitative. The description of leprosy in the Arabic medical textbooks followed the encyclopaedic form of ancient manuals; the descriptions of leprosy were brief, non-clinical, and largely theoretical. The Muslim understanding of the disease was most clearly indebted to the earlier physicians. It is probable that Arabic terminology is attested by the famous Arabic poets of the period. The second and more famous was al-Hārīth b. Hillīza al-Yaṣḥūrī [q.v.], who wrote the seventh of the Mu'allakāt.

The Kur'ān mentions in two places the healing of the lepers (al-abrāq) by Jesus (III, 48 and V, 110). More important for their influence on Muslim society are the al-ḥādīth that are attributed to the Prophet concerning leprosy. The best-known of these traditions is the statement that a Muslim should flee from the leper as he would flee from the lion. Similarly, another familiar tradition asserts that a healthy person should not associate with lepers for a prolonged period and should keep a spear's distance from them (Wensinck, Handboek; al-Bukhārī, al-Ṣahih, Būlāk ed., viii, 443; Ibn Kūtayba, Ḥujj jah al-ṣāhīḥ, Cairo 1929-30, iv, 69; LA, xiv, 354 f.).

The two pious traditions are prescriptions for social behaviour and appear to deal with both moral and medical difficulties posed by the leper. The traditions may have strengthened the desire of Muslims to avoid those individuals who were conspicuously afflicted by the disease because it was morally as well as physically offensive. Leprosy was believed by some to be a punishment by God for immorality. Consequently, leprosy was often invoked as a curse on a Muslim for his immoral behaviour. Medically, both traditions seem to express an implicit belief in contagion. The idea of contagion is also found in other traditions that are unrelated to leprosy and in the medical and non-medical literature. Nevertheless, the belief in contagion was denied by the Prophet in a number of other traditions which state that disease comes directly from God. The tradition advising flight from the leper is, in fact, preceded by a complete denial of contagion in the collection of al-Bukhārī. Thus the issue of contagion is quite contradictory; it was the subject from an early time of religio-legal discussion that attempted to harmonise these traditions. The contradiction was not resolved; it would appear that many witnessed contagion and found justification for it in the traditions, while the more religiously inclined may have adhered to the principle of non-contagion. The latter were partially justified in the case of leprosy because it is only moderately contagious and some individuals are not predisposed to it at all. There were also traditions that recommended supplication to God for relief from leprosy, for the matter should not be left entirely to fate.

The legal status of the leper was directly related to the pious traditions. Leprosy is not discussed in the Arabic legal texts as a separate subject, but it is treated as a disability within such broad areas as marriage, divorce, inheritance, guardianship, and interdiction of one's legal capacity [see haj]. Because leprosy was considered a mortal illness, the leper was limited in his legal rights and obligations along with the minor, the bankrupt, the insane, and the slave. The leper's status seems to have been particularly close to that of the insane in legal matters, especially in regard to marriage and divorce: a marriage could be dissolved by either person...
because of the disease. In Mālikī law, a man in an advanced state of leprosy should be prevented from cohabiting with his slave wives and still more so with his free wives, which is consistent with a belief in the hereditary nature of the malady. Also, Malikī law allowed an automatic guarantee of three days, at the expense of the seller of slaves, against any “faults” in a slave; the guarantee was extended to one year in case of leprosy. In addition, the development of leprosy in a slave might be a cause for his manumission.

In general, the differing religio-legal traditions served as the bases for various interpretations of the disease. These traditions account for the wide spectrum of behaviour by and toward the leper, ranging from his total freedom of action to segregation in lep-rosaria. The range of popular responses to the leper is reflected in early Arabic literature that deals with leprosy and other skin irregularities. Al-Dājīzī and Ibn Kutayba [q.v.] collected poetry and narrative accounts on this subject. Al-Dājīzī’s compilation of material is to be found in his al-Burṣān wa t’-urdān (Cairo 1972, 8-110), which is concerned with a large number of physical infirmities and personal characteristics. The author’s objective is to show that physical infirmities and peculiarities do not hinder an individual from being a fully active member of the community or bar him from important offices. Al-Dājīzī maintained that such ailments are not social stigmas but are what may be called signs of divine blessing or favour. The afflicted were spiritually compensated by God and special merit should be attached to their lives. Thus he countered the contrary opinion that the infirm should be disparaged or shunned for their afflictions. Most of the poets quoted by Ibn Kutayba also appear to say that skin disorders should not be the cause of scorn and revilement but should prompt the sufferer to repentance (‘Uyūn al-ālkāhār, iv, 63-7). Ibn Kutayba and al-Dājīzī cite numerous references to leprosy in Arabic poetry, as in the fierce poetic duels of Dājrīr and al-Farazdak, and mention those poets who were themselves leprous, such as Ayman b. Kharaṣ. [q.v.] These leprosy verses are other historical accounts of probable instances of the disease in early Islamic history, such as that of Ibn Muḥrīz [q.v.].

The most important political figure in early Islam who was probably afflicted by leprosy was ‘Abd al-‘Azīz b. Marwān [q.v.]. It is reported that he suffered from “lion-sickness” i.e. djudhām. He was given many medications for the ailment, but they were ineffective. Therefore, his physicians advised him to move to Hulwān [q.v.] because of the sulphurous springs there, and he built his residence there (Abū Sallīḥ’s, The churches and monasteries of Egypt, ed. and tr. B. Evetts in Anecdota Oxoniensia, vii, Oxford 1895, 154). Shortly after the time of ‘Abd al-‘Azīz, we have the brief but significant statement of al-Tabārī that the caliph al-Walīd I was in Syria, probably Damascus, in 88/707 and conferred a number of benefits upon the people. Al-Tabārī says “He awarded the lepers [al-mudiḥadhīmīn] and said: ‘Do not beg from the people.’ And he awarded every invalid a servant and every blind man a leader (tārītīh),” (Cairo 1963, 56). The specific discrimination against lepers in these two instances appears to show that the theological proscription of contagion had very little practical effect (see M. Ullmann, Islamic medicine, Edinburgh 1978, ch. vi). Furthermore, lepers commonly begged in the streets of the cities, despite the pious endowments on their behalf and laws against mendicancy. While many must have been genuinely leprous, it was not unusual during the mediaeval period for men and women to feign the disease by intentional disfigurement in order to receive public charity (C.E. Bosworth, The mediaeval Islamic underworld, i, Leiden 1976, 24, 84, 100). Deception of the opposite kind was also common in the slave market, where a buyer had to be on his guard against the concealment of leprous sores on the bodies of slaves. During the later Middle Ages, the reappearance of plague must have destroyed large numbers of lepers because of their exceptional vulnerability to diseases other than leprosy. The Black Death in the mid-8th/14th century and the serious recurrences of plague thereafter may account for the particular depopulation of lepers among a generally-diminished population.

In the Islamic West, leprosaria were established and special quarters were designated for lepers. The quarters seem generally to have been located outside the walls of many Muslim cities, often in conjunction with leper cemeteries (Leo Africanus, Description de l’Afrique, ed. and tr. A. Épaulard, Paris 1956, i, 60 f., 229, ii, 399; E. Lévi-Provençal,
The traditional ways of dealing with lepers in Muslim society lasted well into the 19th century. Lepers and leprosaria were particularly noticed by Western travellers, and their accounts add to our Description de l'Egypte, i, Paris 1809, 492-8, ii/2, Paris 1819, 217-219.}

Moses of Khoren refers to Golt’n as ginetac (“wine-rich”). On the main route northwards from Tabriz to Nakhidjevan and Tiflis, in the 10th/16th century Djulfa became the centre of a flourishing community of Armenian merchants, trading as far afield as Europe, India and Central Asia, and with a special interest in the traffic of silk. According to Cartwright, at the end of the century the population was 10,000, with 2,000 houses (John Cartwright, The Preachers Travels . . ., London 1611, 35-6).

After his successful campaigns against the Ottoman Turks, Shah Abbās I resolved to depopulate eastern Armenia and to create an empty tract between him and his enemy. To this end, he transferred the major part of the population to Persia, estimated at some 60,000 families, including numbers of Georgians and Jews besides Armenians. The exodus is described by the Armenian chronicler Arak’el of Tabriz, who refers to it as the great surgin (“exile, expulsion”) (Arak’el of Tabriz, Livre d’histoires, St. Petersburg 1874, tr. M. Brosset); it was considered disastrous in the eyes of the Armenians, who composed many bitter folk-songs lamenting their eviction from a prosperous area. Shah Abbās I captured Djulfa in 1013/1604, and recognising the useful role that the merchants might play in his new Central Asian empire, he invited them to Isfahān; he gave them three days to gather their possessions, and then destroyed the town and bridge. Although Djulfa was ruined, a few Armenians made their way back later in the 11th/17th century. Remains of churches and the ancient cemetery still survive.

The extension of the Russian railway system to Tabriz in 1078/1667, when Czar Aleksei Mikhailovich granted the Armenians special privileges, including the right to travel north from Astrakhan and deal directly with European buyers, was established, with Armenian merchants settled as far afield as Tonkin, Siam, Java, the Philippines, the Far East and India; silk was exported from Persia to Europe; in return, a large variety of European goods was imported into Persia, including cloth, glass, clocks and watches, metal-work and oil paintings. As one traveller observed, “All the commodities of the East were made known to the West, and those of the West serve as new ornaments for the East . . . in the midst of Persia is now (ca. 1112/1700) seen everything that is curious throughout all the countries where the merchants have extended their correspondence and their trading” (Berkeley, Relation d’un voyage du Levant, Paris 1717, iii, 232-5).

Shah Abbās I accorded the Armenians something close to equal status with his Muslim subjects; New Djulfa was organised as a separate entity within the city, under the jurisdiction of its own kalāntr (q.v.), responsible for the collection of taxes, and a kadkhuda (q.v.) for the maintenance of civic order (see Isfahān, Vol. IV, p. 103). Foreign embassies and missions were generally housed in New Djulfa, as the Armenians were skilled linguists and often acted as interpreters and intermediaries, this gave them a double advantage in the conduct of exchanges between the foreigners and the Persian court. Foreign missionaries, such as the Jesuits, Dominicans and Carmelites, were also established in New Djulfa; so were foreign craftsmen, like jewellers, gunsmiths and watchmakers, who often took Armenian wives. Shah Abbās I took a personal interest in the affairs of the Armenian community, visiting them in New Djulfa and even attending religious ceremonies, such as Christmas and Easter. In 1029/1619, he took part in a special ceremony on the banks of the Zayandārūd, afterwards dining and spending the night with his Armenian hosts (P. della Valle, Voyages, iii, 100-13).

The increasing wealth of the Armenian community was reflected in the erection of numerous churches and private houses erected in New Djulfa in the first half of the 11th/17th century. The churches, of which thirteen still survive, combine Armenian plans with Persian construction, brick replacing the Armenian traditional use of dressed stone; two of the churches have onion-shaped domes with double shells. The decoration is an eclectic mixture of Armenian, European and Persian elements. The interiors of the two largest churches, Surb Amenaperkitch (All Saviour’s Cathedral) and Meydani Betghahem (Bethlehem Church), contain carved gilt stucco, cuerda seca tile panels, and wall-paintings in European style; the paintings are probably the work of Western artists and Armenian assistants. New Djulfa was also a centre for copying and illuminating manuscripts; a number of these are among the collection of almost 700 Armenian manuscripts in the Museum adjacent to the Cathedral, which also contains other items of historical
interest. A few private houses still survive of the Safawid period, either built round a central courtyard, or in the middle of a walled garden, with separate quarters for men and women. Several are decorated with wall-paintings in European manner, as well as in more conventional Persian style. When Sir Thomas Herbert visited the house of the kalantar Khādija Nażar in 1038/1628, the impropriety of the wall-paintings earned his disapproval.

The Armenians were responsible for introducing a number of Western innovations, the most significant of which was the printing-press using cast metal type; the first Armenian work printed in New Ɗjufļa was the Book of Psalms (Saghmos), which appeared in 1638.

Sbāb ‘Ābbās I’s friendly policy towards the Armenian minority continued under his successors, Sbāh Sa’d and Sbāb ‘Ābbās II, but by the second half of the 11th/17th century, during the reign of Sbāh Sulaymān, relations between the Persians and the Armenians became strained. In the 12th/18th century under Nādir Sbāh, the Armenians suffered excessive taxation and other penalties, and many Armenians emigrated, particularly to India. At present the Armenian community is reduced to less than 500 families. A large Armenian cemetery, with several thousand carved gravestones, including those of a number of Europeans, lies to the south of the town.

II. New Ɗjufļa. The leading Armenian source is Y. Tēr Yovhantantz, Patmouc’in Nor Ɗulaj or yShparhan (History of New Ɗjufļa in Isfahan), New Ɗjufļa 1880; see also V. Gregorian, op. cit.; On the special dialect of Ɗjufļa, see K. Patkanov, Izledovanie o dialekcti armianskogo yazīčka, St. Petersburg 1893, 76-103; Ismā’īl Rā’īn, Iranian ARMANI, Tehran 1350 sh, gives a general history of Armenians in Iran. The history of the community in New Ɗjufļa is richly documented in the works of European travellers; in addition to those already mentioned, see Pietro della Valle, Della conditioni de Abbās Ri di Persia, Venice 1628; idem, Viaggi di P. della V. . . ; Venice 1661; G. de Silva y Figueuera, L’ambassade de D.G. de Silva y Figueuera en Perse, Paris 1667; Sir Thomas Herbert, Travels . . . with some account of some thousand carved gravestones, including those of a number of Europeans, lies to the south of the town.
the Armenian cemetery at Isfahan, in JRAS, xi (1919).

**DJULLANÂR** is the blossom of the pomegranate (< Persian gâl-i anâr), in Greek pòlakuotiov, the wild pomegranate tree (rummdn barnâ], bdlawustiyun al-mazz Stephanos-Hunayn translation. It is the blossom of Yemen highlands, puts forth blossoms but does not bear fruit and has a hard, inflammable wood. The outer layers of the seedshell—and not the blossoms themselves, as the texts have it—yield a jelly-like, tasty juice which produces a satisfying effect and is used as a medicine. **Djullanâr al-arî** is occasionally put together or compared with the Hypokistis (hvbakistidhâs = șonxvutidôc), a pulpy herb growing in the roots of the Cistus and also used for extracting juice. Both also largely correspond as far as healing effect is concerned, as was already emphasised by Dioscorides in the respective sections: they have an astringent effect and are good for gastric complaints, dysentery and enteric ulcers; they knit together fresh wounds, staunch venous and arterial blood and secure loose teeth (al-asndn al-muthar-îka); applied on the head in compresses with vinegar, they check congestion of the blood to the brain. In the absence of blossoms, one can also use the shells of the pomegranate.

In the absence of blossoms, one can also use the shells of the pomegranate.

(A. DIETRICH)
phorical language, kināya and one type of tamthil. An image is thus viewed not as an alternative to, or ornamentation of, literal statement (as widely believed in both Arabic and western criticism until this century), but as a distinct act of imaginative creation which expresses a meaning otherwise impossible to express.

The āsrār is devoted to the study of imagery, its nature, function, relationship to thought and various forms. Al-Djurdjānī identifies two types of maqāḍīz, one pertaining to language (bughāṣa'), the other to the intellect (āṭā'), and differentiates the types of maqāḍīz based on transference from those involving no transference, distinguishing sharply between two fundamental relationships, contiguity and similarity. The latter he asserts to be the raison d'être of istī'āra (q.v.). Defining the concept of istī'āra further, he denies the dominant view that istī'āra involves transference. One type of istī'āra shows clearly to be based on proportional analogy and to involve no transference of a single word at all, the other type (involving the usage of a single word) he defines in contextual terms. Istī'āra, he believes, consists in using a word to refer to a thing other than its original referent, on the basis of some similarity revealed between the referents, while however still possessing its literal meaning and thus becoming a double-unit underlined by tension. In this fashion he anticipates I. Richard's work which has revolutionised the study of metaphor.

All types of imagery, except kināya, originate in similarity, and similarity, al-Djurdjānī argues, is a sharing (istibārāk) of an attribute, or set of attributes, between two entities, which may occur either in the attribute itself (fi-l-ṣya nafshu wa-ha-kākit ḥānis-hā), or in something presupposed by or resultant from the attribute (fi-bhām l-ḥāl wa-nukta'dā). Similarity also varies in its remoteness and intensity from one image to another. Al-Djurdjānī uses these basic distinctions to classify the various types of imagery and explore their imaginative and stylistic role. He thus establishes two inseparable criteria to define an image: the imaginative basis underlying it and the linguistic apparatus in which it is formulated. Tāshkhīṣ is thus differentiated from tāmthil and istī'āra, and the ambiguous structure involving the copula "wa" (a noun) is described as an intensified simile (tāshkhīṣ bālgh) rather than an istī'āra (a distinction not yet made sufficiently clearly in modern European criticism). Consequently, al-Djurdjānī denies the interchangeability of tāshkhīṣ, tāmthil and istī'āra.

The central piece of al-Djurdjānī's work on istī'āra is his classification of its types according to the nature of the dominant trait or point of similarity in each type. This fundamentally anti-Aristotelian classification represents one of the later developments in the analysis of metaphor in European studies (e.g., K. Abu Deeb, Al-Jurdjanī's classification of istī’āra with special reference to Aristotle's classification of metaphor, in Journal of Arabic Literature, ii (1971)).

Throughout his analysis, al-Djurdjānī uses psychological criteria of a strong Gestaltian nature. He also hints at an organic approach to poetry according to which a poem is to be studied as an organic whole whose parts interact with, and modify, each other, their interaction being determined by the dominant emotion underlying the poem. His practical criticism is a fine example of the power of this approach to illuminate aspects of the poem which would remain otherwise hidden.

EKINÇI B. KOŞAR, Turkish slave com-

mander of the Sakidjiks and governor for them in Khūra-

zam with the traditional title of Khūra-

zam-Shîh 4 in 490/1057. He was the successor in this office of Anuğhîn Ghârâ̄t, the founder of the subsequent line of Khūra-

zam-Shîhs who made their province the centre of a great military empire in the period preceding the Mongol invasions. According to Ibn al-"Atâ', x, 181-2, Ekenî was one of Sultan Berk-Yarûk's slaves (but according to Diwâynî, ii, 3, tr. Boyle, i, 278, one of Sancar's slaves), and was appointed to Khūra-

zam by Berk-Yarûk's representa-

tive in the east, the Dâd-Beg Hâshêh, probably when Berk-Yarûk came himself to Khûrashân early in 490/1097. Ekenî did not enjoy power there for long, however, being killed later that year by a conspira-

cy of ghulâms, his successor as Khūra-

zam-Shîh then being Anuğhîn's son Kubh al-Din Muhammad. Ekenî's son Toghrîl-ıgîn is mentioned also by Ibn al-"Atâ', as one of the famous towns of the northern Deccan. The Dhil Sultan 'Alâ' al-Din Khalâjî captured it in 695/1296 during his first expedition against the Râdja of Deogiri Râmâcândra [see DAWLATABAD], who was made tributary to the Sultans; and when
Deogiri finally fell in 719/1318, Elícpur and Berar came under direct Muslim rule. Under the Bahmanis [q.v.], it was the capital of Berar province, and featured prominently in the campaigns of the Khálidí ruler of Malwa [q.v.], Mahídíd Sháh (839-65/1436-62) against the Bahmanis, being sacked in 870/1466, so that the Bahman Sultan Muhammad III Láhidji was compelled to cede to Malwa Berar as far as Elícpur [see also KÁLÁ]. From 890/1485 to 980/1572 Elícpur was under the Bahmanis' epigoni, the 'Imád-Sháhids [q.v.]. Under the Mughals, it was at first placed in the shade by the new centre of Bálápur, but soon regained its importance as the capital of the súba of Berar, with a fort being built there of brick and stone; according to the Aátn-i Ahkání of Abu l-Fadél, the revenue of Elícpur (which Akban gave its name at first to one of the Districts of Berar, de nominally on perpetual lease, and then it became 26,082, including 18,500 Hindus and 7,250 Muslims), now the largest town in Berar (population in 1901, near by). After the rise of the first independent ruler in Haydarábád, the Ásaf Dítn Nízhám-Múluk (d. 1161/1748 [see HÁYÁRÁBÁD, b. Haydarábád State]), Elícpur sank to only local significance under governors of the Nízhám. The governor Saláhát Khán erected various public buildings in the town in the early years of the 19th century, and he and his son Nargís Sháh Khán held the title of Nawwáb of Berar till the latter's death in 1843 and the subsequent extinction of the line.

In later British India, Berar was taken over in 1853 from the Nízhám as the "Hyderabad Assigned Districts," nominally on perpetual lease, and then it became de facto part of the Central Indian Province. Elícpur, by now the largest town in Berar (population in 1901, 26,082, including 18,500 Hindus and 7,250 Muslims), gave its name at first to one of the Districts of Berar, but in 1905 it was incorporated in the Amraoti (Amravati) District. In the present Indian Union, Elícpur is now called Ácálpur and falls within the Amravati District of the Nagpur Division of Mahárañátrí State. The 1971 census gave population figures of 43,326 for Ácálpur town and 24,125 for Ácálpur camp.

The monuments of Elícpur include a famous shrine of darghá of the Muslim warrior 'Abd al-Ráhmanda Sháhí, described as a kinsman of Mahmidí of Gházna like the much more celebrated Salár Máhadí, buried at Bahráré in Uttar Pradesh [see GÁRÁZ MÝJÁN], but more probably a commander of Frúz Sháh Káhjdí. To the south of Elícpur is the hill fortress of Gáwílgárh [q.v.], and there is a group of Jain temples at Muktagíri nearby.

ERGÜN, Şáh al-Dín Nízhéht, modern Turkish Sádettn Nínezéht Ergün, Turkish scholar and literary historian (1901-1964). Born in Bursa, he was educated at the Faculty of Letters of Istanbul University and taught Turkish literature in various secondary schools in Anatolia and later in Istanbul, where he also worked as a librarian. He started his career as a scholar while he was a teacher in the Konya lycée, with a book on the folk-lore of Konya. A hard-working and prolific scholar, his works are based on first-hand research into what is mostly original manuscript material; this being presented with only limited criticism. He is the author of a great number of studies and monographs on many classical and folk poets and on some modern writers. His major works are Konya kálklýkát vet harkýlýkát, (with Mehméd Ferit), Istanbul 1926; Muhkt jáwt-lrrleri, 3 vols, Istanbul 1926-7; Karacagönü, hayatté ve şüretleri, Istanbul 1932 (a pioneer work on the great folk poet); Baki divam, Istanbul 1935; Türk şairleri, 3 vols, Istanbul 1956-65 (his most important work, published in fascicles comprising alphabetical biographies of poets, together with examples, which stopped at the letter F, in the 96th fascicle); Türk muskísi antolojisi 2 vols, Istanbul 1943; Cenap Şebeketin, Istanbul 1934 (a pioneer work on C. Ş., whose poetical works are put together for the first time in this monograph); and Bektaçý şairleri ve nefseleri, Istanbul 1944.

ERMÉN [see FARKW].

ERSÁRI, one of the major tribes of the Turkmen [q.v.] in Central Asia.

The name is not mentioned in the lists of the Oghuz tribe of Emperor Mahmid al-Káshghári and Kashid al-Dín. It appears for the first time in historical works of Abu l-Ghází [q.v.] written in the 17th century. According to the Turkmen tradition as rendered by Abu l-Ghází (Seláhíd-ye Tabriíka, ed. A.N. Kononov, text, 67-9, Russian tr., 72-3), Ersári Bay (the eponym of the tribe?) was the great-grandson of Oghurúddí Alp, a descendant of Salár Kazan (cf. on this personage, Káhjd-ï Dedem Korkud, passim), who left Irák after a quarrel with Bayandur Bek and came to Mangháshí [q.v.] with a part of the Salár tribe. Thus this tradition indicates the genealogical kinship of Ersári with the well-known Oghuz tribe Salár (Seláhíd of Mahmid al-Káshghári). In another place of the same work (text, 73-4, tr., 75), Abu l-Ghází tells that Ersári Bay, who lived in the Bálkán [q.v.] mountains, was a contemporary of Shaykhy Sharaf Khán adá of Urgenc, who wrote for him, on his request, the múl'm al-múrát, a religious and didactic treatise in verse, in Turki (about the book, written in 713/1313-4, and the author, see: A.N. Samoylovic, in Mir-âl-šáhí, Leningrad 1928, 138; A.Z. Velid, [Topul], in Turkát mecmuus, [1928, 315-30; J. Éckmann, in Philologica turcae fundamento, iii 279 f.]) Ersári Bay appears also in another place of Seláhíd-ye Tabriká (text, 78, tr., 77-8) as an ancestor (udaw atá "great-grandfather") of the tribe Ersári, which owned a number of springs in the Great and Little Bálkán mountains. The Turkmen tradition, as related by Abu l-Ghází, places this story in the middle or the second half of the 14th century (after the death of the káhjd of the Golden Horde Berdi Bek, 1359); the same tradition shows that the tribe Ersári was already rather numerous by that time, so that its origin must be related to some earlier period rather than the beginning of the same century, when Ersári Bay allegedly lived.
ERSARI — ES'AD PASHA

ERSARI Bay was probably an historical figure; his tomb, known as Ersari Baba, is situated near the south-eastern corner of the Kara-Boghz gulf, on the heights bearing the same name Ersari Baba, and was described by Russian traveller N. Murav'yev in the early 19th century, as well as by modern archaeologists. The latest archeological researches in western Turkmenia, as well as in Afghanistan, have revealed a Turkmen genealogical tradition connecting the Ersari with the Salur (see S.P. Polyakov, Etniceskaya istoriya Nezairo-Zapadnykh Turkmenii v srednej veka, Moscow 1973, 122-3, 102-4).

At the beginning of the 16th century, the Ersari were spread over a vast territory in western Turkmenia, from Mangiaghlagh to the Little Balkhans mountains. Not only the tribe itself, but also its main clans are mentioned in the Shagano-ji Turk by Abu 1-Ghaiz (ed. Deirmasinos, text, 237, 267, 313, tr., 254, 286, 337) in connection with the history of the Khânaate of Khiwâ in the 16th century. At the beginning of this century, the Ersari were at the head of the tribal group known as the "outer Salur" (Tâtkhi Salur, iibl., text, 209, tr., 223), which included also the tribes Teke [q.v.], Sârîk [q.v.] and Yomut [q.v.], nomadising between Mangiaghlagh and northern Kharasân, while the "inner Salur" (Bík Salur), or the Salur proper, remained on the territory of Mangiaghlagh. However, already by the end of the same century, the Ersari began to move eastwards, partly as a result of pressure from the north by the Mangit [q.v.], but mainly because of growing desiccation of western Turkmenia, salinisation of wells and shortage of pasture. At the beginning of the 17th century, at least part of Ersari returned to Mangiaghlagh, but in the second quarter of the same century they were finally driven out of this region, this time by the Kalmuks [q.v.]. For a short time, during the reign of Isfandiyar Khan (1032-52/1623-42), Ersari apparently played some role, together with the Salur, in the Khânaate of Khiwâ, but they had to leave it as a result of the military campaigns of Abu 1-Ghaiz and his son Anûgha against the Turkmenia described in Shaqano-ji Turk. Apparently, at that time the Ersari migrated to the middle course of the Amû Darya [q.v.], the Labab (cf. A. Vâmbéry, Travels in Central Asia, London 1864, 231), where there had remained till the present time. There are also, probably, some indications of another route of their migration, through Marv (either directly from Mangiaghlagh and Balkhans or from Khârazm) and Marûchak to the Afghan Turkustain. In 1740 they fled before the army of Nadîr Shâh which marched on Buhkârâ along the Amû Darya, and came again to Mangiaghlagh (Muhammad Kâzîm, Nâma-i Ilâm-brî-yi Nâdir, facsimile ed., Moscow 1965, ii, f. 257a), but in the next year they returned to their homes.

On the Amû Darya, the Ersari became mostly sedentarised and settled in a narrow strip of land (from 4 to 20 miles wide) along the river, mainly on its left bank from Denau in the north to Karîf in the south, where they were occupied with farming based on irrigation. This territory formed a part of two wilayats of the Khânaate of Bukhârâ, those of Çârdûyâ [see Amû] and Karîk; now it forms the Kanjou region (oblast') of the Turkmen Soviet Republic. Shortage of land suitable for cultivation caused permanent emigration during the 19th century, especially to Afghan Turkistan, where Ersari settled in the regions of Andkhûy [q.v.], Aka and Mazâ-ri Sharîf [q.v.]. It seems that cattle-breeding was for these groups of Ersari of greater importance than for their kinsmen on the Amû Darya.

The exact number of Ersari has never been known. Figures given by 19th century travellers vary greatly (from 25 to 110 thousand families); at present, neither in the Soviet Union nor in Afghanistan are there any statistical data on individual Turkmen tribes.

ES'AD PASHA, ŞAKİZİ AHMED, twice Ottoman Grand Vizier and holder of various high offices, military and civil, born in Scios (Tkish. Sakiz) in 1244/1828-9, son of Mehmed Ağa, locally known as Kule aghasî. A graduate of the War College at Istanbul (Harbiye [q.v.]), Es'ad was appointed aide-de-camp to Fu'ad Pasha [q.v.], who, when Grand Vizier, appointed him as director of the Ottoman military school in Paris as well as military attaché. Es'ad in 1868 became lieutenant-general (fetîk) commanding Bosnia-Herzegovina and governor-general (valî) of Scutari (Ishkodra). His career, military and civil, was a succession of appointment, dismissal and reappointment, characteristic of this period: field-marshâl marshal or commander (magîfî) of the First Army (Istanbul), valî of Yemen, minister of war and commander-in-chief (ser'asker), commander-in-chief of the Fourth Army and valî of Erzurum, valî of Ankara (for one day only), valî of Sivas, Minister of Marine, again ser'asker, Grand Vizier from 15 February until 15 April 1873, valî of Konya, field-marshâl commanding the Fifth Army in Syria and valî of Damascus, again Minister of Marine, and from 26 April till 29 August 1875 again Grand Vizier, then Minister of Works, and valî of Aydûn. He visited his birthplace Scios again, and he died at Izmir in the same year of 1875. Es'ad Pasha was chosen for the suite of Sultan 'Abd al-Azîz on his European tour in 1867. But his lack of political experience caused him to stay only a short while at the top; thus he could not deal effectively with the revolt in Herzegovina (July 1875). In politics, Es'ad seems not to have belonged to a leading group. He was a young military man enjoying the Sultan’s favours up to a point, but was a mere figurehead in politics.

Bibliography: Sâmi, Kâmüs al-âlam, ii, 910; Siğîlî-î Oğlundî, i, 342 f.; İ.H. Dânîşemend, Içihî Ormanlı tarhi kronolojisi, Istanbul 1971,
The page contains a biography of Memduh Eyref, a Turkish short story writer and politician, born in 1883 and died in 1952. He was a member of the Nationalist government and wrote satirical poems and short stories. The biography mentions his political involvement, including his service as a government official in neighboring provinces and his work as a representative of the Nationalist Republican People’s Party for four years. It also highlights his diplomatic roles, such as serving as an ambassador in Tehran, Kabul, Moscow, and as Secretary-General of the Committee of Union and Progress. The text notes his retirement from politics in 1925 and his death in Ankara in 1952.

Memduh Eyref was a native of Gelenbe, near Manisa, and began his political career in the Ottoman empire. He was introduced to the famous 9th/15th century Sufi Tarika, the son of Hafif Musa, of the Usuoghullari family. He attended for a while a madrasa in Manisa, where he learnt Arabic and Persian, and after serving as a government official in neighbouring provinces, went to Istanbul (1878), where he was allowed to go to Izmir (1903) where he became a very popular character, although under strict supervision. In 1904 he went to Egypt where he continued to write his satirical poems against Abd Al-Hamid II and his regime.

which he founded is a blend of the Kadiriyya tarika and the Bayramiyya, with special emphasis on isolation and asceticism.

Eshrefoghlu's poems are written in a warm and flowing style, where both tazir and hadis metres are used, following the poetic and mystical traditions of Yunus Emre. His divān was printed in Istanbul in 1280/1864 and in Roman script in 1944 (edited with an introduction by Asaf Halet Celebi). Another popular edition was published in 1972.

Eshrefoghlu is also the author of many popular mystical works on an edifying nature, the most famous of which is Mevâdî 'l-nafîsî ("The Purifier of souls"), which remained a practical manual of dervish life for centuries and is a masterpiece of 9th/15th century Turkish prose; it was printed in Istanbul in 1281/1865 (for a good MS., see Konya, Archeol. Lbr. no. 5452, for specimens based on MSS, see Fahim Iz, Eski Türk edebiyatında nesir, Istanbul 1964, 70-92).

Esrar Dede, Turkish Mevlevi poet of the 13th century, a close friend and protege of the great poet Ghalib Dede. Born in Istanbul, Esrar was trained as a Mevlewi dervish in the Galata convent, under the supervision of Ghalib Dede, its shâhâr. He died in 1211/1796-7 before his master (who wrote a famous elegy for him) and was buried in the convent cemetery.

Esrar wrote mystical poems in the line of Ghalib Dede. His little Divân has not been edited. Esrar Dede is also the author of an incomplete Tâdikriye-i gülâva-i mevlâviye which contains the biographies of more than 200 Mevlevi poets. The work, which has also not been edited, is based on Sâhib Dede’s Seftinâ mevlâviye and was published in a shortened form by ’Ali Enver under the title of Semîkâtîne-i edeb (Istanbul 1309 Rûmî/1893).

EYYÜBOĞLU, BEŞİR KÂMİ, modern Turkish Bezîrî RaMI EYYÜBOĞLU, Turkish poet, writer and painter (1913-75), younger brother of the following. He was born in Gorele, near Trabzon on the Black Sea. Educated at Trabzon lycêe and the Istanbul Academy of Fine Arts, he spent two years in Paris for further study in painting. On his return (1933) he was appointed to the staff of the Istanbul Academy of Fine Arts, where he taught until his death from cancer on 21 September 1975.

His writings and sketches began to appear in Yeni Adam in 1933. As a painter he became interested in folk arts and crafts and studied popular motifs in rugs, scarves, socks and colour patterns, and was greatly inspired by them. In his predominantly descriptive poetry, which brought a new tone to contemporary Turkish verse, he used the same colourful technique, strongly influenced by folk poetry and music. His first volume of verse was published in 1941: Taradana mektublar ("Letters to the Creator"), followed by Karadut ("Black mulberry") in 1948. Then several volumes followed which were all put together in Dol karabakr dol (1974). His essays, written in an informal small-talk style, were posthumously published in book form, Deftikat (1973) and Tazik (1976).

Bibliography: Asım Bezciri, Dünende büyük bir türk şairi, Istanbul 1968; Behçet Nectatîgîl, Edebiyatımızda ismiyet sözlüğü, Istanbul 1978, s.v.

EYYÜBOĞLU, ABÂH-AL-DİN RAŞMI, modern Turkish, until 1934 SABAHATTİN RAŞMI, afterwards SABAHATTIN EYYÜBOĞLU, Turkish essayist, writer and translator (1908-73). Born in Akçaabat (Polatkan) near Trabzon, the son of Raşmi Eyyûboglu, a civil servant, he was educated in Trabzon. He then went to France on a government scholarship and studied French literature and aesthetics in Dijon, Lyon and Paris universities (1928-32). Becoming lecturer (doçent) in French literature in the University of Istanbul (1933-9), he was invited, together with some of his colleagues, by Hasan Ali Yîngil (Yücel), the reforming Minister of Education (1938-46), to Ankara where he served respectively as member of the Advisory Board (Talim ve terbiye kurulu) of the Office of Translation (of world classics) and teacher at the Hasanoglan Higher Village Institute (see KÖY ENSİTÜLERİ). Back in Istanbul after one year's study leave in France, he taught in Istanbul Technical University (1951-8). Because of his liberal ideas, he was arrested and detained for several months in 1971, during the emergency régime of 1971-2. He died in Istanbul of a heart attack on 13 January 1973.

Sabâhab-Din Eyyûboglu developed a theory of nationalism which is mainly based on Kemalism, with particular emphasis on secularism and "populism" (halkçılık) and with the addition of the notion of an "Anatolian" people accepting as "ours" all the peoples, arts and cultures which have flourished on Anatolian soil (without distinction of race, language and faith). Many of his essays elaborate on this theme, rejecting rival ideologies like Turkism, Turanism, Islamism and Westernism. His numerous essays were published in various periodicals, particularly Varlık, İnsan, Yaprak and regularly in Yeni ufuklar, and they cover a great range of subjects from literature, language and cultural change to art, folklore and politics. He always laid special emphasis on the need for the fusion and identification of intellectuals with ordinary people in order to develop an original culture.

Eyyûboglu writes in a simple straightforward style and is considered, together with Ataç, as a master of contemporary Turkish prose. However, he lacks Ataç's originality and conciseness and is often shallow and repetitve. His major contribution is his translations from the French, some of which are masterpieces of the genre (see below). Sabâhab-Din Eyyûboglu is the author of the following major works: Misir ile kara ("Blue and Black"), Istanbul 1961, enlarged edition 1967, a selection of his essays; Saniat özorine denemeler ("Essays on art"), Istanbul 1974, published posthumously, contains most of the essays omitted from the previous work; Yunus Emre, Istanbul 1971, an impressionistic study of the 13th century Turkish poet; and Turan yolunda ("On the way to Turan"), Istanbul 1967, which satirises Pan-Turanism and is based on a misunderstanding.
of the allegory in André Malraux's autobiographical work *Les noyers de l'Altenberg*. Among more than fifty titles of his translations, the following are outstanding: Montaigne's *Essais*, Rabelais' *Gargantua* (mainly based on *Umar Khayyam's Rubâ'ïyat*), and verse translations of La Fontaine's *Fables*. Among more than 10,000 works, the famous circle of *Les nqyers de l'Altenberg*. Of the allegory in Andre Malraux's autobiography, *MÉTHODES*, F. Sezgin, GAS, ii, 623-4; M. Stiglauer, Die Sängerinnen am Abbasidschen Hof um Die Zeit des Kalifen Al-Mutawakkil, Vienna 1975, 31-4.

**FAITH, BELIEF (in God)** [see *AKIDA*].

**FAKHR-I MUDABBIR**, the *sadra* of Fakhr al-Din Muhammad b. Mansur Murak Shâh al-Kurâshî, Persian author in India during the time of the last Ghaznavids, the Ghurids, and the first Slave Kings of Delhi (later 6th/12th century-early 7th/13th century).

His birth date and place are both unknown, but he was a descendant, so he says, on his father's side from the caliph Abû Bakr and on his mother's from the Turkish amir Bârîk, the immediate predecessor in Ghazna of Sebiiktîgin and father-in-law of Izz al-Dîn or Shihab al-Mu'tamid, who dedicated his other great Persian prose work, *Adab al-harb*, to al-Mu'tadid (279-98/892-902), was able to obtain one verse of *Shâhnamah* and *Kazbind Tabakht al-shifara* al-djâhiliyyum, which brought him to the attention of Kutb al-Dîn Aybak [q.v., 373; Ibn al-Nadîm) knew a small collection of her poetry. Her verses were set to music by several contemporary court musicians.

**Bibliography:** *Aghâni*, xix, 300-13 (see also indices); Ibn al-Mu'tazz, *Tabakht*, 426-7; *Fihrist*, 104; Ibn al-Sâ'î, Nârî al-mulbaqâ', 84-90; Kutubi, *Fawa'id*, ii, Cairo 1951, 253-5; Suyûtî, *Mustażraf*, 50-6; Cl. Huart, La poésse Fadhlî, in JAS, v, 7, xvii (1881), 5-43; F. Szczin, GAS, ii, 623-4; M. Stiglauer, Die Sängerinnen am Abbasidschen Hof um Die Zeit des Kalifen Al-Mutawakkil, Vienna 1975, 31-4. (E. Neubauer)

**FADL AL-SHA'IRA**, al-Yâmmiyya al-'Arâdîyya, Mawlât al-Mutawakkil, Arab poetess, died in 257/871 (or 260/874). Born probably as a ma'ullaîda and brought up in Bârsra, she was presented to and later on freed by al-Mutawakkil. She was called the "most gifted poetess of her time" by Ibn al-Sâî and, being a good songstress and lute player too, held a famous literary circle in Bârsra. Amongst her admirers were the poet Sa'id b. Humayd and the musician Bûnân b. Amr al-Dârîb. Ibn al-Dârîb (quoted by Ibn al-Nadîm) knew a small collection of her poetry. Her verses were set to music by several contemporary court musicians.

**Bibliography:** *Aghâni*, xix, 300-13 (see also indices); Ibn al-Mu'tazz, *Tabakht*, 426-7; *Fihrist*, 104; Ibn al-Sâ'î, Nârî al-mulbaqâ', 84-90; Kutubi, *Fawa'id*, ii, Cairo 1951, 253-5; Suyûtî, *Mustażraf*, 50-6; Cl. Huart, La poésse Fadhlî, in JAS, v, 7, xvii (1881), 5-43; F. Szczin, GAS, ii, 623-4; M. Stiglauer, Die Sängerinnen am Abbasidschen Hof um Die Zeit des Kalifen Al-Mutawakkil, Vienna 1975, 31-4. (E. Neubauer)

**FATIMAH** [see *MATHALI*].

AL-FADL B. AL-HUBBÁB A. KHALÎFÁ MUHAMMÁD B. SHU'AYB B. ‘SHÂKIR AL-DJUMÁRÍ, (d. 305/917-18), littérateur, poet, traditionist and kâdid of Bârsra. He was a ma’alla of Djjumah of Kuraysh and the nephew, on his mother’s side, of Ibn Sallâm [q.v.]. He was born in and died at Bârsra, where he made himself the transmitter of a fairly extensive number of religious, historical, literary and genealogical traditions. He also received a legal training sufficient for him to act as the kâdid of Bârsra towards 294/907 in Murûdî, viii, 128-34 = §§ 3264-70. His biographers kâdi with functions delegated by the Malikî kâdi Abû Muhammad Yûsuf b. Ya’qûb b. Ismâ’îl al-Azhdî, whose seat of office was in eastern Bâr-rid (L. Massonneg, in WJ, 1948, 108) but who also had jurisdiction over southern ‘Irâk (Wâdi), Akhîr al-sûdâât, Cairo 1366/1947, ii, 182.

At this time, Abû Khalîfá was already famous in his native town, where he was in contact with well-known personages, especially the Tanhhîs [q.v.]; he had a particularly deep knowledge of Arabic poetry, taught the works of his maternal uncle and was himself the author of a Kitâb ‘Tabâkht al-qulwâ’ al-djâhiliyyin and a Kitâb al-Farsân. He also gathered into a diwan the poetry of ‘Imrân b. Hîtjân [q.v.], which brought him accusations of Khândîr sympathies, but Shî’i tendencies were also imputed to him, and one verse implies that in fâh he was a Hanâfi. His works do not seem to have survived, and his verses only exist in part, but his name is often cited in adab works. He is, moreover, the hero of a certain number of anecdotes in which his tendency to express himself in rhymed prose is ridiculed. One of these, if it is authentic, allows one to affirm the survival at the end of the 3rd century of a Basran tradition which sent as delegates to the caliphal court officers charged with expressing, in rhymed prose, the people’s complaints, which had always cause to lament the hardness of the times and the arbitrary ways of the local authorities. Abû Khalîfá, as the mouth-piece of a delegation sent to al Mu’tadid (279-98/892-902), was able to obtain satisfaction through provoking his audience to mirth because of the affected nature of his speech (al-Masudi, c. 18), litterateur, poet, traditionist and kâdi of Bârsra.

**Bibliography:** *Aghâni*, xix, 300-13 (see also indices); Ibn al-Mu’tazz, *Tabakht*, 426-7; *Fihrist*, 104; Ibn al-Sâî, Nârî al-mulbaqâ’, 84-90; Kutubi, *Fawa'id*, ii, Cairo 1951, 253-5; Suyûtî, *Mustażraf*, 50-6; Cl. Huart, La poésse Fadhlî, in JAS, v, 7, xvii (1881), 5-43; F. Szczin, GAS, ii, 623-4; M. Stiglauer, Die Sängerinnen am Abbasidschen Hof um Die Zeit des Kalifen Al-Mutawakkil, Vienna 1975, 31-4. (E. Neubauer)
cribess himself as being by then an infirm old man (pir-i dāyż), he probably died before the end of that sultan’s reign in 633/1236.

There is some uncertainty over the possible identification of our Fakhr-i Mudabbir with a Fakhr al-Dawla wa’l-Din Mubarak Shah b. al-Husayn al-Marwarrūdhi mentioned by the literary biographer ‘Awsfī in his Lakhū b-istahbī, ed. ‘Sa‘īd Naqish, Tehran 1335/1956, 113-17, as a good poet in Arabic and Persian and a nādīm or confidant of the Qhurid Ghiyāţ al-Dīn Muhammad b. Sām (558-99/1163-1203). E. Denison Ross, in his edition of the introduction and early part of the Shadj_ara-yi ansdb, London 1927, accepted this identification. Storey, however, rejected this, despite a similarity of names, adducing detailed arguments in his Persian literature, i, 1166-7, and his reasoning seems conclusive; the poet Mubarak Shah al-Marwarrūdhi seems to have been the author also of works on astronomy and ethics.

The main claim of fame of Fakhr-i Mudabbir himself is his authorship of the Adāb al-ḥarb wa’l-sha’dā’a, or as the name appears in one of the extant ms.s., the Adāb al-mulâk wa’l-kifṣayt al-mamluk (edition by Ahmad Suhayli Khānsārī, Tehran 1346/1967, unfortunately based on the shorter mss. and not on the fuller India Office one, which has 40 abwab or chapters as opposed to only 36). This is both a treatise on kingship and statecraft (hence partaking of the "Mirrors for princes" genre) and also a rather theoretical and idealised consideration of the art of war. In addition to advice on tactics, the organisation of troops, the use of various weapons, etc., the book is liberally interspersed with historical anecdotes, giving it a distinct value as a historical document, above all for the development of the eastern Islamic world. The eighteen anecdotes relating to the Ghaznawids have been translated into English by Miss Iqbal M. Shafl as Fresh light on the Ghaznavids, in IC, xii (1938), 189-234; they furnish useful information on the dynasty not found elsewhere. A translation of the whole work into a western language would be welcome.

(C.E. Bosworth)

FAKIR OF IPI, the name given in popular parlance to Hādżī Mirzā ‘All Khān, Pathan mul-lah and agitator along the Northwestern Frontier of the Indo-Pakistan subcontinent in both the later British Indian and the early Pakistani periods, d. 1960.

A member of the Torī Khel group of the ‘Uthmānīzāy Wazirs of North Wazīristān, probably one of the most unreconciled of the Pathan tribes of the Frontier in British times, he came to especial prominence in 1936-7, inflaming the Torī Khél and the Mahśīds of the Tochi valley against the British military presence, and then retreating to a series of caves at Gorwekht near Razmak, not far from the Afghan frontier, which served as his headquarters for the rest of his life. In 1941 he was apparently contacted by Axis agents from the German and Italian embassies in Kabul with a view to raising the frontier against Britain, but nothing much materialised. After the Partition of 1947 between India and Pakistan, the Fakīr actively identified himself with the Afghan-sponsored “Paštūnistan” movement, and after 1950 became president of a southern “Paštūnistan” local assembly based on Gorwekht, where stocks of food and arms and a small Pashto printing press were kept. He died in 1960.

FAMILY [see ‘ARū]

FA’R (A, pl. faran, fāra, fā’ar) masculine substantive with the value of a collective (noun of singularity fa’rī) designates, like the Persian māgy, firstly, among the Rodents (kāwānd, kāwāḏom), the majority of types and species of the sub-order of the Myomorphs (with the Dipodids, Glirids, Murids, Spalacids and Cricetida, secondly, among the Insectivores (dīlūl al-haḡār, the family of the Soricids. The term is applied equally well to the largest rats as to the smallest shrews and gerbils. The adjectives of abundance fa’ar, fa’ara, mafara and maf’ira which are derived from it contain the same general idea, so that, in texts, fa’ir and farān always present a problem of discrimination between rats and mice; this lack of precision persists with the dialectal form far, fā’ar, as well as with its Berber equivalent agherd, pl. agherdan. However, jointly with this collective of broad semantic extent, several more precise nouns fortunately help towards a skeleton classification of all this prolific world of mammals which flee the light and whom humanity treats, in general, as undesirables, by reason of the depredations to which their way of life forces them. Without pretending to be able to apply, with the existing Arabic philological resources, a scientific system which proves most complicated, it is, nevertheless, possible to give a glimpse of all the known species of the Muslim populations by dividing these species under one of the four following most significant rubrics: djarabh, fa’ra, khudl and yarba.

A. Djarabh (pl. djarabhan, djarabhan) and its derivative djarabawm, with the dialectal forms djar, djar in the Maghrīb and djarun in Syria, defines all rats of a large size without distinction of species. Among the numerous strains of rats, the ordinary man of every people has for long recognised two categories according to their ethology, the town-dwellers and the rustics, and the fable of the meeting between the town rat (hadāri) and the country rat (rīf) remains one of the themes of fables common to all literatures. The majority of rats whose life is linked with towns are of a large size (‘udul pl., sūlān), the Brown rat (Mus domesticus) or “Surew rat” which is grey-brown, hence his name mutnah (Maghrīb: tabba, Tamaḵāx tagẖālī, pl. tīghālīn) and the Black rat (Mus ratti), both of which owed their rapid extension of their area of distribution to the maritime commercial traffic in the Mediterranean basin since the high Middle Ages. It was the same for the Alexandrian rat (Mus alexandrinus) also called “palm rat” or “roof rat” (Mus sectornum) and whose chosen habitat is in high places (granaries, terraces, the tops of date-palms) and not in the infrastructure of buildings. Proper to Egypt, this rat was introduced into Italy by merchant shipping; it makes a nest at the top of palms and, when it is hunted, is able to let itself fall to the ground without injury by blowing himself up like a balloon. In the
large oases it is confused with the “palm rat” (Saharan: tunba, Tamahak akkolene), an erroneous name of a small ground squirrel (Eusurus erithopous) which feeds on dates. Still included among the “true rats”, so the naturalists say, there must also have been the large burrowing rats of Egypt and Arabia called the Fat sand rat (Ps. oculus) which is cream-coloured. All the Maghrib used to know the Striped rat or “Barbarian rat” (Arviculthus barbarus) by the name of zarâdînî (Tamahak akkender, pl. ikkender). Numerous geographical strains, such as the Mus colopus and Mus peregrinus, still remain to be studied in Morocco.

In the vast group of country rats, scoundrel of farmers and habitual nourishment of nocturnal predators, the Voles and Field-mice (types: Arvesola, Microtus and Apodemus), confused under the name of akbar (Hebrew ‘akbâr, i.e. I. Sam. vi, 4-5; Isaiah ii, 20, lxvi, 17; Levit. xi, 29), have had since the most ancient antiquity the just reputation of being terribly harmful. The most common, the Common vole (Microtus arvalis) ‘akhar hakli, fo’rat al-ghayî, is present in all the cultivated zones, along with the ahbar hakli, cannabis (Microtus arvalis) rat al-ghqyt, microtus, (in Syria, al-Thurah al-kharâmîn, Arabic ‘tesircelâris). The Field mouse (Apodemus sylvaticus), dojâmîna, fo’rat al-hirâdîn (in Syria, djûrânî) prefers living in trees, and is found in company with the Dormouse, the Garden dormouse (types Glis, Myoxus, Eliomys), djûrânî singâbîî, karkadân, and the Small dormouse (Muscardinus), zgûhîa. On the Saharan borders lives Munby’s dormouse (Eliomys minutus), thâdghagath in Berber, which the Tuareg eat on occasion, as well as the Goundis (types Ctenodactylus and Massoteria), kundî/gûndî, Tamahak tellât, taralent, large, very suspicious, burrowing rodents rather similar to the Cobaye (Cavia porcellus). It is perhaps to the latter as well as to the Hamsters that the Arab philologists attribute the name of yahyâr, defined as being “the largest of all the rats”.

Al-Djahiz was happy to record all the information that he had been able to glean on the subject of rats (Hâyânûn, v, 245 ff. and passim). Regarded as noxious creatures, he tells us that in Khurâsân and Anatoch the rats are particularly aggressive, holding their own against cats and going as far as nibbling the ears of sleeping persons; the frightful trench wars with their train of rats which our century has known, alas, only confirm these sayings.

Their depredations and their less engaging aspects are in every man’s repugnance, as nothing resists their inexorable incisors, unless it is metal. On the other hand, al-Djahiz shows, out of concern for justice, a positive aspect in the presence of these parasitic hosts; if they invade a dwelling, it is because they find there something to satisfy their appetites and so it is a sign that it enjoys a certain prosperity. Hence the wish expressed in this old adage is understandable: akhânî ‘illîh “djûrânînî haythî ‘may Allah multiply the rats of your house”.

With the same intention, a storyteller of Medina used to offer up this prayer: Alâhûmmà akhîr ‘djûrânînî namâ láydhûhî (y)îyânî“O Allah, give us many rats and few children”, evoking implicitly the danger of misery which overpopulation could bring about.

On the contrary, the expression tâfârâkab ‘djûrânînî haythî “the rats of his house have dispersed” may be an image of being wrecked by poverty; in our days and with the same idea, sailors may see a sign of the inescapable loss of the ship when the rats desert it. Furthermore, rats often show proof of ingenuity; faced with an oil container, the rat will know how to sample the contents by dipping in its tail a number of times. Caught in a cage, it soon manages to escape with the help of its sharp teeth. In the countryside, rats take care not to dig their hole (‘hkbâr) on roads in order to avoid the danger of being trampled by beasts of burden. Some rats may be attracted, like the so-called “thieving” Magpie (‘akêkî), by anything which shines and steal jewels and money, and the adage asrîk min qârât “more thieving than a rat” is truly spoken; al-Damîrî records, with reference to this, (Hâyânûn, iv, 191-2) the discovery, in the time of the Prophet, of a cache concealing several dinârs thanks to a rat, and the one who discovered it had full possession of the find, which was attributed to divine intervention.

Before Islam, certain rats, especially the country ones, were hunted for their flesh, as were the uromatix lizard [see Sâbb], the hedgehog and the porcupine [see kafrûn] and the jerboa [see below].

These primitive tastes did not disappear immediately with Islam since, according to Abû Zayd al-Nabîwi (Hâyânûn, iv, 44, v, 253, vi, 385), the famous ra Düja poet Ru’ba b. al-‘Adjdîjdî [q.v.], of the 2nd/8th century, used to feast on roasted rats caught in his own house.

In the Hijâz, the palm rat used to be so common that the expression umm ‘djûrânînî “mother of rats” designated metaphorically the top of the date palm where the animal chose to live, and ‘djûrânîn became the name of a variety of date. Finally, authorities on horses gave the name al-djûrânînî “the two rats” to two symmetrical dorsal muscles of the horse because of their shape.

B. FA’RA, while being the noun of singularity of fa’r, designates more especially the mouse and every small rodent which resembles it. The Common mouse or “grey” mouse (Mus musculus), fo’rat al-bqyt, present wherever there is man, numbers numerous geographical strains, of which M. m. gentilis, aëreus fir and Hâyânûn, i, 191-2) the discovery, in the time of the m. variegatus in Egypt, M. m. pretextus in Syria and M. m. flaviventris in Arabia.

At every time, the mouse was at the origin of misdeeds, seen as catastrophes, coming unexpectedly to disturb daily life. Already in the Ark of Noah, according to the legend, its depredations excited the complaints of the women, from which resulted the creation of the pair of cats, then that of the pair of pigs [see imâte]. The Prophet Muhammad himself had set a trap to get rid of his “little rascal” (fuwâsak), which, according to several traditions, had only just missed setting fire to his house by pulling, in order to nibble it, the wick of the lighted lamp; thanks to the immediate intervention of the master of the house, the only damage it did was to make a hole in his prayer carpet. From this episode, which was no doubt authentic and not the first of its kind, an irrevocable curse fell upon the mouse, which was then added to the list of the four execrable species (fawâisik), i.e. the crow, [see Gârib], the kite, hida’, the scorpion [see Tâkhr], and the bating dog [see Kálb], a list to which Mâlik b. Anas added the lion [see Asâd], the panther, namir, nimr, the leopard [see Fâhir] and the wolf [see ‘Adirn], to be destroyed at all times and everywhere in Islam, even by the pilgrim in a sacrificial
state. It was, furthermore, enjoined on the young community to extinguish every lamp at night, in their homes and in the mosques, and not to do as the Christians who imprudently left permanently lighted a sanctuary night-light in their churches and chapels (Hayawān, v, 121, 269, 319).

Fa'ra was also widely enjoyed, among the Arabs, any greater credit, since it passed as being the metamorphosis of a Jewish sorceress to some and that of a dishonest crow to others which propose that the mouse was a creation of Ahriman, genius of Evil.

The words fa'ra and bīrār include, apart from the Common mouse, all the other species of small rodents such as the Dwarf mouse (Microtus minutus) also extends to cover Fa'ra (Hayawan, iii, 298 ff.) the words of the Avesta which propose that the mouse was a creation of Ormuzd, genius of Good, while the cat was that of Ormuzd, genius of Good, while the cat was that of Ahriman, genius of Evil.

like a spear and its head, hence its ancient name of *diy√a* "t-rumayh" "with the small spear" given to every species. The Arabs, nevertheless, distinguished the jerboa and gerbil, calling the former *yarbâ‘* *ǧafrîl* "the great" and the latter *yarbâ‘* *ta’dîri* "the small"; in our own time, the Marâzîg of Tunisia make the same difference with *dibb* and *fâr ad-îmar*. From Africa to Arabia, as many geographical strains of jerboas are enumerated as of gerbils and jirds, but, without attempting a system for the most part complicated, it is to be maintained that the most common jerboa is that said to be of Egypt (*Jaculus jugularis* or *Jaculus aegyptiaca*) which is to be found from Mauritania to the Arabo-Persian Gulf; it is this of which the Arab authors speak and al-Dhârî († Hayân, v, 260, v, 385) then al-Dâmîrî († Hayât . . , ii, 409) mention some similarities between its behaviour and that of the hare [see ARNAB, above], notably in their common usage of *tawbîr* or *zamâ‘* consisting of only resting, in light soil, on the shaggy pads (*zamâ‘*dt) of the heels in order to leave the faintest possible tracks. But it is especially for its genius at escaping (*nîfâk, tanfîk*) when it is hunted that the jerboa is famous among the Beduins who, at all times, eagerly hunted it as choice game. By day, the jerboa lies asleep at the homes of its burrows under ground lair with many obstructed outlets, with a small pile of spoil earth showing them on the outside. The hunter who, in order to dislodge it, sounds the corridors of the burrow with a long stick can then easily make it come out; if it finally comes out, it is with such bounds and such abrupt swerves that it very often keeps in check the most alert saluki. After tens of metres of frantic running, it soon seeks to plunge back into the ground. These retreat outlets of the jerboa bear the names *nîfâkât*, *ka‘îsât*, *râhînât*, *dâm-mâ‘* (see Ibn Sîdûh, Makhâsas, viii, 92), and it is from the first of these words (root *N-F-K*) that there is derived (according to the philologists and exegetes) the Kur‘ânic meaning of *nîfâk* "dissimulation, duplicity, hypocrisy" in the matter of faith (al-Dâmîrî, *Hayât . . , ii, 408-9*).

In the pre-Islamic period, the Beduins used to refrain from hunting the jerboa by night for, like the hedgehog and porcupine [see KUNFUDH], it passed as a mount of the *al-jîm*. Jerboas, gerbils and jirds live in small societies, of which each one colonises a sector (*a‘id marhâ‘a*), and it was also believed that, as with the monkeys [see *kîr†*], they each had a chief in the role of nocturnal sentinel of the group and ensuring a permanent surveillance for the security of the young (*dirr, p. a’drâs, darîs*) who could easily stray, as the proverb says *afjll min wâlîd al-yarbâ‘* "straying more than the young of the jerboa"; if the chief relaxed his vigilance, he was hunted and replaced.

Finally, the great round, jet black eye of the jerboa is used as an image in the Maghrib, where *‘a‘in al-ĝarbi‘a* designates a large buck-shot for shooting large game and, in Tunis, the colour "mouse grey" is called *ĝarbi‘* "jerboa grey".

Of all these small creatures of the soil (*haqâqât al-ad*) which *fâr* represents, only the jerboa, in Kur‘ânic law, was recognised as legal for consumption by three of the four juridical schools of orthodoxy, the Hanafis contesting this legality. For all the other rodents, the prohibition of consumption relates not only to their flesh, but also to every commodity in which they have put their teeth (*‘a‘r al-fâr* "rats, mice scraps") and every alimentary liquid (oil, milk, honey, vinegar, etc.) in which one of them has fallen (*fâr‘î*; also any product "contaminated" cannot be put on sale.

In urban areas, the destruction of invading rats and mice has always been a permanent necessity and the means employed, in mediaeval Islam, were very varied, but their absolute efficacy was rarely assured. The most widespread method and was poisoning with the aid of baits prepared for the purpose; the poisons which they contained were either of vegetable or chemical origin. As toxic plants they used the sea-onion (*scilla maritima*), *‘anjyl bâ‘rî* called *basal al-fâr* "rat onion", the rose bay (*merian oleander*), *dîfîl, sâmîn al-hâmîr* "donkey’s poison" and the hyoscyamus (*hyoscyamus ather*) and *bîndî*. Among chemical products they had vitriol (*kalândîn*), sulphur of arsenic (*gâshûk, gâshûb, rats, naçûb*) or *ratsbane* (*sâmî fl-fâr‘î*), called in Irâk *târdh bâ‘lîk* "killer earth", which was extracted in Khûrâsân, and litharge (*marâk, mar-dîsângdî*); oxgall, donkey’s urine and iron filings were also included in these preparations. Another practice was to smoke out the holes of the rodents by burning cumin, horn of horse’s hoof and natsor (*ma’tîrîn*). Cages were made with several systems of fall-traps and box-traps in pottery, whose patterns are still in use, but the simplest and most effective was that which al-Dâmîrî called *dâmîrî*, . . . ms. Eскорial, Ar. 903, fols. 165b-166a. This advocate in the 11th century in the Maghrib of a small pit, and consists of a basin filled with water and on which is placed a rolling-pin (*gaukhalî*), baited in the middle with some dripping or cheese; attracted, the greedy rodent, creeping along this unsteady pole, makes it shake unavoidably with its own weight from one side to the other and ends up by drowning. Complementing all these stratagems, a permanent hunt was assured in homes and shops by small domestic carnivores such as the cat, the aforementioned weasel, the civet (*zâbîh*) and the genet (*dîrât*). The protection of doves [see *HAQÂQÂ‘A*] against the rats which preyed on the eggs consists, in our own time still, of encircling the outside of the flight grilles with a covering of completely varnished ceramic squares at the bottom of a slope; sometimes the exit holes consisted of pottery pipes going well outside in order to place an insurmountable obstacle in the way of every climber, and this is a method constantly employed in the pigeon-houses which adorn the Nile Valley. To all these direct means of defence must be added the rich arsenal of magic formulas, talismans and conjuring practices which serve to reinforce in the imagination the chances of success; of these, one of the most widespread was to kill a mouse, cut off its tail and bury it in the communal room of the house.

In ancient healing, the specific virtues attributed to the corporeal elements of rodents were relatively limited. The head of a mouse placed in a linen cloth and applied to the head was used to dispel migraine and headache. The eye of a rat carried as a talisman alloyed malaria; the upper lip of a Mole rat had the same effect, while the blood of the latter was a beneficial eye-lotion for all ocular troubles. The spoil earth of its galleries and its brain mixed with rose water made a good plaster against gout. Finally, one of the most curious and useful properties was that of the urine of a mouse which, it appears, perfectly erases ink on parchments. It is to be supposed that the difficulty was in procuring a little of this precious liquid, but it could be achieved by capturing in a small cage-trap, one or a number of mice and rigging up at the bottom of the device a small spout leading to a bottle. It was then suffi-
cient to provoke a sudden irruption of the house cat in order to achieve, under the effect of the terror, among the captives, the awaited physiological reaction of urination; it is this, at least, which al-Damlrl (op. cit., ii, 2009 suggests, who seems to have experienced this in Al-Ma'arr, about the use of urine with the aim of reuniting parchments, this material being always very highly valued in the Middle Ages.

From this glimpse of the manner in which Muslim opinion treated rats and mice, these terrible carriers of plague and cholera, it is evident that in Islam they scarcely enjoyed any more credit than in Christianity and that there was no good to be expected from this race of parasites on the fruits of man's labour; the experience which this old Moroccan adage conceals: el-far mā la-yūl el-ghāfīr “the rat/mouse can only beget a grave-digger” sums up well this general contempt.

**AL-FARĀBĪ, AḥĪ IBRĀHĪM IṢRĀʾ B. IBRĀHĪM**, lexicographer.

The early sources are sparse in regard to him. Only Yākūṭ gives him a whole notice (Udāhā', vi, 61-5 = Ḥadîdā', ii, 226-9); al-Suyūtî reproduces a few extracts from this adding nothing (Bagyūs, i, 437-8); and al-Kīfī speaks of him only incidentally in his Inbā' (i, 52-3), in his notice on Abu l-'Alā' al-Ma'arrī.

His date of birth is unknown, but he probably died in 350/961 (the date given by Brockelmann, F., 133, and Kraemer, 212). He was the maternal uncle of al-Djawharî, author of the Sīhāt (d. ca. 400/1009 [q.v.]), which keeps al-Farābī within the 4th/10th century and excludes the date of 450/1058 (Yākūṭ, vi, 62; cf. al-Kīfī, Inbā', i, 53). He lived in his natal town of Fārāb (q.v.). Yākūṭ, loc. cit., reports, however, on the authority of the kādī Yūsūf b. Ibrahim al-Kīfī (father of the author of the Inbā') from the Yemen, where he resided, that al-Farābī went to the Yemen, lived in Zabīd, composed there his Diwān al-adāb and died there also, before he had been able to teach it, at a date ca. 450 A.H.; but Yākūṭ himself, on the basis of all the historical details which he had brought together (vi, 63-5), rejects the reports of the kādī Yūsūf (vi, 65). Yākūṭ bases himself here on, in particular, the fact that he had read as follows, written in al-Djawharî's own hand, kaw'tahu ʿalā Ibrahim, yakumahu Allāh, bi-Fārābī “I read it [sc. the Diwān al-adāb] at Fārāb with [Abū] Ibrahim [the author]”. Elsewhere Yākūṭ says (vi, 159, notice on al-Djawhari), “I found at Tibriz a copy of the Diwān al-adāb, written in al-Djawhari's hand (bi-khāṭṭ al-Djwārī) in the year 383”. It is also appropriate to consider the old ms. to be mentioned further on.

For his part, al-Kīfī (Inbā', i, 52) repeats an anecdote which brings in Abu l-'Alā' al-Ma'arrī in order to explain how the Yemenis were able to believe that al-Farābī had come to the Yemen, as they asserted; that anecdote has pungency, but hardly any value.

The Diwān al-adāb's editor, Ahmad Muqmîr 'Umar, in his sketch of the author (i, 3-10), also rejects this alleged trip to Yemen (6) and considers it reasonable to think that he went to Bukhārā and Baghdađ, especially as he would only have been able to find in the latter city the necessary material for the composition of the Diwān al-adāb; hence it is very probable that it was put together in Baghdađ. All this, however, is a question only of probabilities.

For al-Farābī's sources, see ibid., i, 31.

He taught his book at Fārāb and it became known in neighbouring regions (i, 7), and it was there that the earliest study on his work appeared, in the shape of the Tahjīb Diwān al-adāb of al-Ḥasan b. al-Muzużafir al-Naysārībīr, a luḥāṭī who lived in Khāzām and died in 442/1050-1 (ibid.).

The Diwān al-adāb [fi biyān luḥāṭ al-Amān], according to the complete title in the Oxford ms. (Kraemer, 212) is an original dictionary. The vocabulary is set forth according to the forms (waṣṩ̮̣); under each waṣṩ̮̣, in the alphabetical order of the last radical consonant. This innovation had a great renown in Arabic lexicography; al-Djawhari adopted this arrangement for his Sīhāt, and it became widespread. Al-Farābī nevertheless retained something of al-Khalīl's way: he divided the subject-matter up into six kata (1) the Kībūt al-silm; (2) the K. al-mudāf; (3) the K. al-mūm; (4) the K. al-dhawdt al-arabī; and (5) the K. al-khoms. In each kitāb there first came the nouns and then the verbs, strictly separated.

This dictionary arranged by waṣṩ̮̣ is a precious aid for Arabic philological studies, for it permits one to study these waṣṩ̮̣. But for practical consultation it is not easy. Ahmad Muqmîr 'Umar's edition is with the mutāfaqāt of Ibrahim Anīs, who opens the first volume with a taqaddum. So far, three volumes have appeared at Cairo (1394/1974 and each following year), and a fourth will give the kitābs 5 and 6 and indices. Brockelmann lists 30 mss. (F., 133, S.I., 195-6, III, 1196); the editor cites 23 of these (i, 31-2), but has based his text on five, and especially on the two oldest, from 391 and from before 390 (i, 57-60).

Ḥaḏīrī Khalīlī in his Kaḥīl al-zānīn confused the Diwān al-adāb with al-Zamakhshārī's Mukaddemat al-adāb, see the editor's makaddema (p. 1), and there is also a confusion between al-Farābī the lexicographer and al-Farābī the philosopher (ibid.).

The Diwān al-adāb had a deep influence on al-Djawhari's dictionary, which not only followed the arrangement by the last radical, but also took over the same subject matter, māliq Kopf observe już̮̣t [see al-Djawhari] that the latter's own contribution was minimal. Al-Farābī's work also had an influence, in regard to method, on the Shāms al-'ulūm of Nashwān al-Himyari, according to the editor (i, 52-3), and on two Arabic-Persian dictionaries, those of Abū Abī Allāh al-Husayn al-Zawzawī (d. 486/1093) and of Abū Da'far Ahmad al-Bayhaqī (d. 504/1110-11). It was further the model, in regard to form, of the Turkish dictionary by Mahmūd al-Kāshgārī, the Diwān luḥāṭ al-tārkh (Kraemer, 212).

Lost works of al-Farābī include a Bayān al-ilāb and a Shāhīd Adāb al-kābit, mentioned by Yākūṭ (vi, 63), al-Suyūtī, Muṣārīrī, i, 211, gives an extract from a K. al-Abīz; wa ʿībarī on the value of the tribes for their 'advarma. It begins it thus: kān Abū Naṣr al-Fārābī, which was the kunya of the philosopher, and the editor, following Ibrahim Anis, sees here an error by al-Suyūtī (as earlier by Abū Hayyaṇ) and prefers to connect the work with Abū Ibrahim al-Farābī the lexicographer. Both these scholars are unaware of the K. al-Ḥuruf of Abū Naṣr al-Farābī, published in Beirut.
FARĀMUSH-KHĀNA

As the oldest title by which the work has been known, but since Ibn Abī Uṣayyibā'ī has been known as the K. al-Alfāz wa 'l-hurūf (mukaddima), 34. Al-Suyūṭī’s citation is indeed there (147, and at not the beginning), but not word-for-word. From there the attachment of the impressive and generally mis-leading slogan “liberte, egalite, fraternite” to continental freemasonry. Thus we see spokesmen of modernism such as Sayyid Djamal al-Dīn Asadabdī who, after Ilīf’s initiation became the British ambassador to Iran. Ilīt’s friendly relations with the British were so close that he received a monthly payment from the East India Company from 1810 till his death in 1846. Another early Iranian man to have been happily initiated into freemasonry was Mīrzā Sālih Shīrāzī, one of the students sent to Europe in 1815. In 1857 Mīrzā Malkam Khan Nazīm joined the farāmūsh-khāna in London in 1817. A “Mr. Harris” who was known to Mīrzā Sālih as “the chief of the farāmūsh-khāna” had honoured him with two masonic ranks. A week before his departure from London, Mīrzā Sālih was urged by Mr. Harris to attend their masonic lodge in order to receive the rank of a master in masonic hierarchy; “otherwise”, Harris said to Sālih, “you will go back to Iran with defects” (Mīrzā Sālih, Safar-nāma, Tehran 1968, 109, 372, 374).

Generally speaking, almost all the Iranian notables who went abroad in the 19th century, either as exiles like Rādī-kulf, Nādīf-kulf, and Taymūr, three Kādjar princes (in 1835), or as diplomatic representatives such as ‘Abd Allān Garmrūdī (in 1839), Farrūk Khān Amīn al-Dawla (in 1857), and many others, were initiated into freemasonry lodges. According to some reports, the Iranians were very curious to find out about freemasonry; they were given the impression that freemasonry had an oriental origin and that the Persians should revive this ancient tradition. Masonic activity particularly appealed to Iranian modernist thinkers because of the attachment of the impressive and generally misleading slogan “liberte, egalite, fraternite” to continental freemasonry. Thus we see spokesmen of modernism such as Sayyid Djamal al-Dīn Asadabdī “Afghānī” and Mīrzā Fath ‘Alī Aḥfand-Zāda well-inclined to freemasonry. It seems, however, that Aḥjūdandbāhī, who believed that the farāmūsh-khāna “lacks anything which may bring benefit to religion and state”, was one among few exceptions (Muhammad Muḥīrī, Șarb-i mu‘ānīyat-i ʿAǧādāndbāhī, Tehran 1968, 398).

Despite their existence in Iran, the Iranian masons do not seem to have carried on any noticeable masonic activity during the first half of the 19th century. However, in 1858 Mīrzā Mārkam Khān Nāzīm al-Dawla who had been initiated into the Sīmar-e ami-ūt, a masonic lodge in Paris, in 1857, established for the first time a farāmūsh-khāna in Tehran. Malkam had reportedly secured Nāṣīr al-Dīn Shāh’s full consent for this, but his farāmūsh-khāna was not recognised by any internationally-known masonic lodge. Many distinguished individuals joined the farāmūsh-khāna. Accounts of the motives behind the establishment of the farāmūsh-khāna are abundant, but it seems clear that through this secret organisation, Malkam was able to introduce his audiences to modern social and political ideas. However, some internal forces, including traditionalist conservatives, and external elements such as the Russians, turned Nāṣīr al-Dīn Shāh against it, so that he declared its abolition in 1861 in these words: “From now on, if the phrase farāmūsh-khāna comes out of anyone’s mouth, let alone his possible involvement in its organisation, he will be most severely punished by the government” (Muḥamd Kāṭrāt, ʿArāmānīn dar Iran, Tehran 1968, 74).

Mīrzā Khān’s farāmūsh-khāna was accordingly closed, but the secret activities did not entirely die out. Those who were acquainted with the farāmūsh-khāna gathered together secretly and, after the assassination in 1896 of Nāṣīr al-Dīn Shāh, they

1969 (Recherches, Série i, vol. 46) and edited by Muḥīmūn Maḥdī. K. al-Hurūf is the oldest title by which the work has been known, but since Ibn Abī Uṣayyibā'ī has been known as the K. al-Alfāz wa 'l-Hurūf (mukaddima), 34. Al-Suyūṭī’s citation is indeed there (147, and at not the beginning), but not word-for-word. From there the attachment of the impressive and generally misleading slogan “liberte, egalite, fraternite” to continental freemasonry. Thus we see spokesmen of modernism such as Sayyid Djamal al-Dīn Asadabdī who, after Ilīf’s initiation became the British ambassador to Iran. Ilīt’s friendly relations with the British were so close that he received a monthly payment from the East India Company from 1810 till his death in 1846. Another early Iranian man to have been happily initiated into freemasonry was Mīrzā Sālih Shīrāzī, one of the students sent to Europe in 1815. In 1857 Mīrzā Malkam Khan Nazīm joined the farāmūsh-khāna in London in 1817. A “Mr. Harris” who was known to Mīrzā Sālih as “the chief of the farāmūsh-khāna” had honoured him with two masonic ranks. A week before his departure from London, Mīrzā Sālih was urged by Mr. Harris to attend their masonic lodge in order to receive the rank of a master in masonic hierarchy; “otherwise”, Harris said to Sālih, “you will go back to Iran with defects” (Mīrzā Sālih, Safar-nāma, Tehran 1968, 109, 372, 374).

Generally speaking, almost all the Iranian notables who went abroad in the 19th century, either as exiles like Rādī-kulf, Nādīf-kulf, and Taymūr, three Kādjar princes (in 1835), or as diplomatic representatives such as ‘Abd Allān Garmrūdī (in 1839), Farrūk Khān Amīn al-Dawla (in 1857), and many others, were initiated into freemasonry lodges. According to some reports, the Iranians were very curious to find out about freemasonry; they were given the impression that freemasonry had an oriental origin and that the Persians should revive this ancient tradition. Masonic activity particularly appealed to Iranian modernist thinkers because of the attachment of the impressive and generally misleading slogan “liberte, egalite, fraternite” to continental freemasonry. Thus we see spokesmen of modernism such as Sayyid Djamal al-Dīn Asadabdī “Afghānī” and Mīrzā Fath ‘Alī Aḥfand-Zāda well-inclined to freemasonry. It seems, however, that Aḥjūdandbāhī, who believed that the farāmūsh-khāna “lacks anything which may bring benefit to religion and state”, was one among few exceptions (Muhammad Muḥīrī, Șarb-i mu‘ānīyat-i ʿAǰādāndbāhī, Tehran 1968, 398).

Despite their existence in Iran, the Iranian masons do not seem to have carried on any noticeable masonic activity during the first half of the 19th century. However, in 1858 Mīrzā Mārkam Khān Nāzīm al-Dawla who had been initiated into the Sīmar-e ami-ūt, a masonic lodge in Paris, in 1857, established for the first time a farāmūsh-khāna in Tehran. Malkam had reportedly secured Nāṣīr al-Dīn Shāh’s full consent for this, but his farāmūsh-khāna was not recognised by any internationally-known masonic lodge. Many distinguished individuals joined the farāmūsh-khāna. Accounts of the motives behind the establishment of the farāmūsh-khāna are abundant, but it seems clear that through this secret organisation, Malkam was able to introduce his audiences to modern social and political ideas. However, some internal forces, including traditionalist conservatives, and external elements such as the Russians, turned Nāṣīr al-Dīn Shāh against it, so that he declared its abolition in 1861 in these words: “From now on, if the phrase farāmūsh-khāna comes out of anyone’s mouth, let alone his possible involvement in its organisation, he will be most severely punished by the government” (Muḥamd Kāṭrāt, ʿArāmānīn dar Iran, Tehran 1968, 74).

Mīrzā Khān’s farāmūsh-khāna was accordingly closed, but the secret activities did not entirely die out. Those who were acquainted with the farāmūsh-khāna gathered together secretly and, after the assassination in 1896 of Nāṣīr al-Dīn Shāh, they
founded a secret society called the Qâmî-i 'adâmiy-yât ("League of Humanity") on the basis of Malkam Khan's forâmidî-khâna and propagated Malkam's ideas. This secret society was headed by 'Abbâs-kuli Khân Adâmiyât and composed of Iranian intellectuals who were actively involved in the Persian Constitutional Revolution of 1906. Certain members of this society organised a masonic lodge (iâbîd, 95), and, according to Ismâ'îl Râ'tîn, the society itself contributed to the forward-ing of British policy in Iran (Fârâmush-khâna va forâmidî-khâna dar Írân, i, Tehran 1968, 576-7). This society was banned by Muhammâd 'Alî Shâh in 1908. The angumân-i mlâsâhat which began to operate openly in 1899 and was active in the Constitutional Revolution is also known to have been formed of members obedient to the international masonic lodges.

Although Sir Arthur Hardinge speaks of a certain amount of masonic activity in Iran at the turn of the present century (Ismâ'îl Râ'tîn, Angumânâ-yi sîri dar inkâlib-i mu'âsâmât-i Írân, Tehran 1967, 45 ff.), it seems that the first internationally-recognised masonic lodge was established in Tehran in 1907 by the Great Orient of France and called "Loge du Roiâ de Perse". Some of the men initiated into this masonic lodge was established in Tehran in 1907 by the Grand Orient de France and called "Loge du Roiâ de Perse". Some of the men initiated into this lodge were reportedly affiliated to the Rotary Club, World Free-Masons, and Moral Re-armament (Raî'n, Farâmûsînîyân, iii, 11-477).

Due to the secret character of freemasonry, literature on Persian masonic experience was quite scanty and fragmentary until recently. Some treatises were written for and against the Malkam Fârâmush-khâna in the 1860s, but they were not then published (for the text of two such treatises, consult Kutîfî, fî cit., 159-93). Apparently the first Persian book which was wholly devoted to the subject was published in India in 1874. For more elaborate accounts of Persian freemasonry, we have to had wait until the 1960s, when a number of informative books and articles appeared, although most of them were largely inaccurate and poorly-documented. The most informative of all is Râtîn's above-quoted three-volume work (1968) which contains, among other things, the names of many living Iranians who have been affiliated to masonic lodges. The author's own name, however, was omitted "despite his alleged membership of an American affiliated lodge" (Hamid Algar, An introduction to the history of Freemasonry in Iran, in Middle Eastern Studies, vi (1970), 293).

Bibliography: Abu 'l-Kasîm b. Zayn al-'Abîdîn, Fihrist-i kutub-i khatib i examines the text of the Declaration of Independence; the text of the Constitution of 1906-7; the text of the first internationally-recognised masonic lodge; the text of the first Persian book which was wholly devoted to the subject; the names of many living Iranians who have been affiliated to masonic lodges; the author's own name, however, was omitted. The author's own name, however, was omitted "despite his alleged membership of an American affiliated lodge".

Hamid Algar, An introduction to the history of Freemasonry in Iran, in Middle Eastern Studies, vi (1970), 293.

(ABDUL-HADî HARI) FARÂNGî MAHALL, a family of prominent Indian Hanîfî theologians and mystics flourishing from the 12th/18th century to the present day. The family traces its ancestry through the great scholar and mystic Khâdîja ‘Abd Allâh Aqârûn of Harât to Ayyûb Aqârûn, the Prophet’s host in Medina. It is not known when the family migrated to India but, according to the family biographers, one ‘Aqla’ al-Dîn settled in Sihâlî of the Awadh [q.v.] province of north India during the 8th/14th century. His descendant, Mullâ Hâfîz, was acknowledged as a distinguished ‘ulîm by the emperor Akbar who made a generous mujâdîd-i mâ‘âqgrant in his favour in 937/1530 (Aqârûn, A very early farman of Akbar, see Bâhî). In 1103/1692 the great-great-grandson of Mullâ Hâfîz, Mullâ Kûthî al-Dîn, who was also hailed as a leading ‘ulîm of his time, was murdered in a squabble over land and his library burned. The emperor Awanrâgî recommissioned his four sons by assigning to them a European indigo merchant’s palace in Lucknow and by granting pensions to support their scholarly work. Around 1106/1695 the family moved from Sihâlî to the palace which was known as Farângî Mahall.

The descendants of Kûthî al-Dîn made Farângî Mahall into a centre of learning which for 250 years attracted scholars not only from all parts of India but also from places as far away as Arabia and China. Teaching was the profession of most Farângî Mahallîs and the man who first established their reputation was Mullâ Nîzâm al-Dîn [q.v.], the third son of Kûthî al-Dîn. In the early 12th/18th century he made Farângî Mahall into the biggest centre of learning in north India. Students from outside Lucknow were boarded at the city’s Tîla mosque, which had room for 700, and the expenses involved were met in part by the Mughal emperors (Aqârûn, Bântî-i Darsî-i Nizâmiyya, 88-9). Yet there was at this time no madrasa in Farângî Mahall, and no central organising institution; members of the family simply taught in their homes those who came to them. This remained the pattern of teaching for over 200 years. Attempts were made to found a madrasa in the 19th century but only in 1232/1805 did one Farângî Mahallî, ‘Abd al-Bârî [q.v. in Suppl.], coordinate the efforts of his relatives and bring them within an institutional framework. This Madrasa-yi ‘Âliyâ Nizâmiyya continued its work until the 1830s/1960s.

Although Farângî Mahall always remained their base, many of the descendants of Kûthî al-Dîn travelled widely as teachers. Some like ‘Abd al-Bârî and ‘Abd al-Bâkî (b. 1288/1869-70) taught in Medina; others taught and set up madrasas in India. Notable amongst these are: the great logician, Mullâ Hâsân (d. 1209/1794-5), who left a reputation in Rampûr capable of winning respect and support for the teaching efforts of the Farângî Mahall family nearly 200 years later; the extremely successful Mullâ ‘Ulamâ’ Mullâ Hâydar (d. 1256/1840-1), who established the Hyderabad branch of the family and brought Farângî Mahall into a continuing association with India’s most powerful Muslim state; but most important of all, ‘Abd al-‘Alî Bahir al-Ulîm [q.v.] who in the sixty years before his death in 1225/1801-0 after his death in 1225/1801-0 taught in Lucknow, Shâhidjâbânpûr, Rampûr, Buhâr and finally in Madras where, through his teaching and through the madrasa which he set up in the Wâlîgâhî mosque, he inspired a revival of learning in South India.

In Lucknow and wherever they travelled, the Farângî Mahall family pioneered a new curriculum known as the Darî-i Nizâmiyya. Till recently this curriculum has formed the basis of most madrasa courses in India, including that of the Dîr al-ulâm at Deoband. The Darî-i Nizâmiyya was created by Mullâ Nizâm al-Dîn. It is designed to direct the student not only to the most difficult or most comprehensive books on each subject, so that he is both forced to think and has a chance of finishing his education by the age of sixteen or seventeen. The curriculum has been criticised for placing too much emphasis on the rational sciences. This seems unjustified. It stipulates no specific bias and insists on no particular books. It is at both the teaching and the emphasis is left to those who use it.

Members of the Farângî Mahall family also wrote much, and amongst the most prolific were Mullâ Mu‘ûn (d. 1225/1801-0-1) and ‘Abd al-Bârî who wrote 111 books. Of course, many of their books were glosses and super-glosses on the classical texts they taught, but there were also works on mysticism and collections of poetry; there were biographies like ‘Înâyât Allah’s Tadhkîra-yi ‘ulâmâ’i Farângî Mahall which is the major source of family history; and there was a collection of works from notable scholars like Wâli Allah (1182-1270/1768-1853) who ranged from a commentary on the Kurân in five volumes to a treatise on government, Adâb al-salatîn. Works which should be noted in particular are: Mullâ Hâsân’s text on logic which has been popular for nearly 200 years amongst those teaching the Darî-i Nizâmiyya, Bahir al-Ulîm’s study of Rumî’s Mu’âdînât, and Mullâ Nizâm al-Dîn’s work on the life and deeds of his friend and teacher, Mullâ Mubîr (d. 1225/1810-11) taught in Lucknow, Shahjahanpur, Rampûr, Buhâr and finally in Madras where, through his teaching and through the madrasa which he set up in the Wâlîgâhî mosque, he inspired a revival of learning in South India.

The scholarship of the Farângî Mahall family placed particular emphasis on jurisprudence and logic, which was to be expected from ‘ulâmâ’, many of whose pupils were initially destined to become government servants and who with this in mind were patronised by the Mughal emperors. They represented a distinctly different tradition to that founded by Shâh Wâli Allah [q.v.] of Dîhî in the 12th/18th century and sustained by the Deoband school from the 13th/19th century. The Farângî Mahallîs fostered the skills designed to support Muslim states; the followers of Wâli Allah were concerned to develop the resources to enable Muslims to cope with the loss of political power. They looked
back to classical Islam emphasising in their scholarship the Qur'an and the Hadith. Followers of the two traditions of course crossed swords. 'Abd al-Hayy had a notable exchange with Nawâb Siddîq Husân Khân [g.v.], the leader of the Ahl al-Hadîth (madrassah) in the Madrasa of the Farangi Mahall family. Abd al-Ali debated successfully with 'Abd al-'Azîz of Dîhil, Shâh Wâli 'Allî's son, that 'Abd al-'Azîz felt compelled to address him as Bahîr al-'Ulûm or "Sea of knowledge" ('Imâyî âlîh, Tâhâkîn, 141). A further feature of the Farangi Mahall tradition was tolerance, and though Lucknow is renowned for its Shirk-Sunnî quarrels, many Shî'îs sat at the feet of these learned Sunnis. Their independence of mind was another characteristic. Mulla Nizâm al-Dîn, for instance, gave fatâwâ at variance with many of those in the great legal guide of his time, the Fatâvâtâm Aâtâmîr (Aynârî, Bârî; Dârs-i Nizâmî, 163-4), while the great strength of 'Abd al-Hayy as a scholar was his capacity to cast aside precedent and go back to first principles in promulgating an understanding of Islam. Much work needs to be done before the scholarly achievement of the Farangi Mahall family can be fully appreciated, but Shîhîb Nû'mân did not exaggerate when, after visiting Farangi Mahall in 1313-14/1896-97, he summed it up in these words: "This is the Cambridge of India" (Shibîlî; 99).

The Farangi Mahalls, however, were not just scholars; they were also, to a man, mystics. Even 'Abd al-Hayy, whose grave is one of bare earth open to the skies, stressed the benefits of visiting the shrine at Bânsa and in his will urged his relatives to study the works of Ibn al-'Arâbî up to the 20th century. Sayyid 'Abd al-Razzâk (d. 5 Shawwâd 1366/27 June 1724), the illiterate "pir" of the Kâdirî order, was the saint to whom all members of this learned Farangi Mahall family looked. They regarded their association with 'Abd al-Razzâk as crucial to their spiritual well-being, while the sajdât of his shrine at Bânsa some 30 miles from Lucknow were careful to pay the scholars of Farangi Mahall special respect. There are also three important centres of devotion within the family. The shrine of Mulla Nizâm al-Dîn in Lucknow, which is renowned for the benefit it can bring the mentally disturbed and scholars in difficulty; the shrine of Shâh Anwâr al-Âkhâr, and has successors and followers, which is also in Lucknow, and the shrine of Mawlânâ 'Abd al-'Ali Bahâr al-Âlûm which is the Maâlîjâh Mosque at Tripicanic, Madras. There are, furthermore, three important sâlihât which run through the family: the Kâdirî flowing from Sayyid 'Abd al-Razzâk of Bânsa, the Cîshî-Nizâmî from Shâh Kudrat Nizâmî ofSaîpûr, and the Cîshî-Sâbîrî which goes back through Mulla Kuth al-Dîn to Shâykh Muhîb Allâh of Allâhâbâd, the great proponent of Ibn al-'Arâbî, to Shâh Ahmad 'Abd al-Âkhâr of Radawî.

By the present century, the springs of Indian mysticism were failing, but where they still flowed, the Farangi Mahall family were often prominent. They had connections with many of the major shrines in North India. They taught the sons of many sajdât at the Madrasa-yi 'Aliya Nizâmîyâ, the calendar of which was arranged to enable students to attend important 'urs. Consequently, the Farangi Mahalls were given much respect. The last important pir of the family was 'Abd al-Bârî. His influence was ramified widely throughout North Indian society, where his disciples ranged from the cadets of great landed families to politicians such as Muhammad and Shawkât 'Ali and to relatives of the sajdât of the most important shrine in India, that of Mu'în al-Dîn Cîshî at Adjîmir. His influence, and that of Farangi Mahall, was demonstrated when at the 'urs of Mu'în al-Dîn Cîshî in 1334/1916 he played the leading role in founding the Bazm-i Sîfiyya-yi Hind, which aimed to revive and to reform Indian mysticism.

From the time when they were established in Farangi Mahall, the descendants of Kuth al-Dîn, through the expansion of the family, through teaching, through writing, through giving fatâwâ and through providing spiritual leadership, made wide connections throughout Indo-Muslim society. As modern politics developed, these connections represented a significant network of influence reaching from Lucknow to Madras and from Karachi to Chittagong. When the Farangi Mahalls wished to organise an India-wide movement, as in the campaign to protect the shrines of great places of Islam embodied in the Angumânsi Khudwâm-i Ka'ba [g.v. in Suppl.] founded in 1331/1913, or in the campaign to support the Sharîf Husayn against Ibn Sa'ûd in 1343-4/1925-6, their activities were based on this network. Moreover, it played a similar role when Farangi Mahalls joined "modern" politicians in the great religio-political movements of the period. They were in the forefront of those driving forward the Indian Khilafat movement up to the end of 1338/1920, while they were again prominent in the revival of the All-India Muslim League after 1356/1937. In all these campaigns Farangi Mahall 'ulamâ' promoted policies which, as in most other things, Deobandi 'ulamâ' either found difficult to support or opposed outright. This Deobandi opposition only serves to illuminate the point that the Farangi Mahalls were the first 'ulamâ' to enter modern Indian politics. Men such as 'Abd al-Bârî, Salâmât Allâh and 'Inâyât Allâh, orators, writers and builders of organisations, were important channels through which modern politicians based in Dîhil and Lucknow made contact with the Muslim masses.

The contributions of the Farangi Mahalls to Muslim education, learning and politics over three centuries make them remarkable among Indo-Muslim families. Family tradition itself helps to explain this record of sustained achievement. Each generation has placed orators, writers and builders of organisations, were in the family's network. Moreover, the family has remained united except for one division which developed over the succession to Bahîr al-Âlûm in Madras. Only from the middle of the present century, as Islamic education has retreated before western education and as the partition of the subcontinent has divided the family between India and Pakistan, has the hold of family tradition weakened, and the record of achievement declined.

Bibliography: Much biographical material relating to members of the Farangi Mahall family may be found in: Wali Allâh Farangi Mahall, al-Aghsân al-arba'î, Nadwa ms., Lucknow;

(F.C.R. Robinson)

**FARAS AL-MĀ’** (A., pl. *khayī al-mā’, khāvīl al-mā’*) and synonyms *faras, al-bahr faras al-nahr, faras nawřt, bīṣān al-bahr*, denoting the hippopotamus, are nothing other than Arabic translations of its Greek name ʿʾṭatōs the ptolemid in the works of Herodotus, then ṣināb ṣināb in the works of Galen and Aristotle; Herodotus also calls it ṣināb to Nīlōu, whence *faras al-Nil*—”horse of the Nile” and Pliny simply translated the Greek as *eōpous floraŭlīs*. In Nubia it bears the name *bitūnī* and in the Touareg country, *gambant* (Amin al-Mal’ūf) attributed to the hippopotamus seem to be errors of definition.

Belonging to the order of non-ruminant artiodactylae, this bulky African pachyderm (*Hippopotamus amphibius*) forms, with its dwarf relative from Liberia, the recently-discovered pygmy hippopotamus (*Choeropotamus liberiensis*), the family of hippopotamids, which is closely related to the suids and whose habitat at the present stretches over central and south-eastern Africa, from Senegal to Ethiopia and the Transvaal. In the mid-Quaternary period it was present in large numbers in Europe and North Africa, as is proved by fossil remains. It was widespread throughout the Sahara in the Neolithic period and at the dawn of recorded history; Hannon, in the course of his famous journey, came across the animal in a river which was probably the Saguiet-el-Hamra flowing to the north of the Jordan were acquainted with the creature in close proximity to women and children; this was said to be an effective means of protecting them from the jaws of the ever-lurking crocodile. When it leaves the river to graze, adds al-Djahiz, the hippopotamus is that “innoc, toth, Neil, whence ʿʾṭatōs, the hippopotamus, to the extent that in his *Treasury*, the Florentine Brunetto Latini (13th century) could still write: “I yopotame est un peissons qui est apelez cheval fluvial per caque il naist el flun de Nīle.” The creature only began to be known with the accounts, in 1344, of P. Gilles and P. Belon who were able to observe at leisure, in Constantinople, one of these animals kept in captivity. In the East, Arab authors, cosmographers and encyclopaedists, while retaining the assertions of Aristotle, were able nevertheless to collect, from Nubia and Abyssinia, more precise information. Thus al-Dāhīz, without himself knowing the animal, reproduces on the subject (Hayawān, vii, 129-45, 250) some interesting details supplied by travelling merchants. He declares notably that the traces left by the hippopotamus, in the course of its nocturnal sorties, on the muddy banks of the Nile, shows to the river farmers the farthest limit to which the river will rise when in flood, and that, if captured young, the hippopotamus is easily domesticated and used to be kept in homes is easily domesticated and used to be kept in homes in close proximity to women and children; this was said to be an effective means of protecting them from the jaws of the ever-lurking crocodile. When it leaves the river to graze, adds al-Dāhīz, the hippo-
potamus goes a considerable distance and only starts browsing while returning to the water, as if it has calculated in advance the quantity of food that will be necessary for it during the night. Its teeth had the power, among the Nubians, to soothe their frequent stomach ailments, caused by their crude diet of raw fish and the habit of drinking muddy water; the invalid would wear one of these teeth over his

quent stomach ailments, caused by their crude diet

the power, among the Nubians, to soothe their fre-

hippopotamus were regarded by them as a good

remedy against the periodical seizures of epileptics

at the time of new moons

§ 805) that

(Al-Makrizi, Hitat, Cairo 1346/1928, ii, 201). "...There were there," he tells "sixteen enormous quadrupeds which astonished me and which I took to be ele-

creatures that were to blame for the damage; in

three authors, made mention of the hippopotamuses content to repeat what had previously been said. It is, however, curious to find that al-Idrissi, describing the Nile and Nubia (Nachtat, climate I, section 4), devotes only two lines to the animal, stating that it has webbed feet. Still more astonishing is the lack of attention paid to it by al-Makrizi (Hitat, ch. xx) in the context of "wonders of the Nile"; repeating al-Mas'udî, he adds only that the animal is present in large numbers in the mining district of the Shanqir, on the double bend of the river. Al-Damiri completes all the pre-

with his customary rubrics about the per-

eminence of eating it, the particular qualities of its

organs and the animal's role in onirocancy. Thus

we know (Hayât al-hayawan al-kubrâ, Cairo 1356/1937, ii, 221-2) that according to the scheme of Kur'anic

law, the flesh of the hippopotamus may be consumed because it is a wild herbivore "resembling" a horse. We also learn that the skin of the pachyderm, buried in the middle of a village, protects the latter from every scourge; that after burning, the ashes of this

skin mixed in a paste with flour of the vetch (kir-

sanna) makes a plaster which, in three days, cures abscesses; and that the gall, after prolonged soaking,

is dried to make a powder for treating eyes affect-

ed with the dark cataract (al-mâd al-`asad). What al-

Damiri omits to mention is the high value accorded to the ivory of the teeth and tusks of the hippopotamus. In fact, this ivory was exported from East Africa along with that of the elephant [see 350] and Fil.] and the "horn" of the rhinoceros [see KARKADAN], but at a higher price because of the superiority of its grain, of which the pure white does not grow yellow in the course of time; confused with the ivory of walrus-tusks under the name rohart, that have left the water to graze on dry land. They are larger than horses, but they have the mane, the tail and the head, although their foot is that of the elephant. I had occasion to see these hippopotami again when we travelled down the Nile (at the Niger) in canoes to Timbuktu (Timbuctou, formerly called Gogo); they were swimming in the middle of the river, lifting their heads above the surface and breathing noisily. For fear of these animals the canoists moved closer to the bank lest they cap-

size us. The natives have a cunning method for fighting these brats; they use javelins of which the (barbed) iron tip is pierced with a hole through which they thread strong cords. They attack the animal with these throwing-weapons and, if the spear strikes the foot or the withers, the iron becomes deeply embedded; all the hunters then have to do is drag the victim to the bank with the ropes; they then dispatch him and feed on his flesh. Hence the abundance of bones strewed the whole length of the banks of the river." We may add that, since then, the massacre has not ceased and has intensified with the coming of the Whites to Africa; the hippopotamus provided, to a considerable extent, the subsistence of the armies fighting in the Cameroons at the time of the First World War, and it has since paid a heavy tribute to suppliers of shipyards and to local militia chiefs, without counting "safari" enthusiasts in search of spectacular trophies. Some partial meas-

ures towards the protection of the animal have for-
tunately intervened in some modern African states,

for there can be no doubt, as an English explorer has written, "...that once civilization has driven the hippopotami away from an African river, that river loses one of its greatest charms and one of its major ornaments."

Freemasonry was indeed a facet of European influence; their clandestine nature. Prince Halfm, Grand Master of the Grand Orient of Egypt in 1867-8, attempted to use the freemasons in his struggle against the Khedive Ismâ'îl. In 1876, the deposed Sultan Murâd V unsuccessfully sought to enlist the assistance of the freemasons in Istanbul to ensure his safety from 'Abd al-Ḥamîd II's designs and probably even for launching a counter-coup. Early in the 20th century, masonic lodges in mostly those in Salonica, served as a cover for the meetings of the leaders of the Young Turks, of whom at least one, Tal'at, was an active freemason. There is, however, no conclusive evidence that freemasonry as such played a role in the preparation and implementation of the Young Turk Revolution. True, freemasonry could—and did—operate more freely in the post-Hamidian era (it had been proscribed during 'Abd al-Ḥamîd II's reign), although only for a short period, as Enwer forbade its activities soon after World War I broke out. Persistent rumours about freemasonry have nonetheless discredited it in Republican Turkey and some of the Arab states (in Syria and Egypt freemasonry is prohibited; in several others, it is severely limited). This is hardly due to the number of freemasons: There were about 500 freemasons in Turkey in 1923 and ca. 2,367 in 1966; figures for other Middle Eastern states are not available, but seem to be equally modest (e.g. in 1931, there were ca. 1,500 in Palestine and ca. 1,000 in Tunisia) and declining since the disappearance of the Mandates and Protectorates. Rather, freemasonry's universalist and international character, partly beyond the state's immediate control, awakened suspicion in nationalist circles, while the non-Muslim origins of its founders and the marked secularist spirit in many of the lodges aroused animosity among devout Muslims. Freemasonry's social and educational philanthropy has been resented, as well, which may explain why many, if not most published works on freemasonry, in both Arabic and Turkish, tend to attack rather than defend the virtue of those printed in the Arab states link freemasonry and Zionism (without tangible proof), denigrating both. Such works have been published in Turkey, too, where the most prolific exponent of anti-freemasonry was Cevat Rifat Atılam. Recently, Turkish organs sympathetic to the Nationalist Action and National Salvation Parties have systematically been presenting freemasonry as evil and hostile to both Turkey and Islam. These attitudes notwithstanding, Masonic activity continues in Turkey, which does not at all the Arab states, with varying degrees of success.

2. In Persia. For this, see FARMASUNIYYA, above.

FAROUK [see FARK].

FARRUKHAN, the name of two ispahbadhs of Tabaristan: Farrukhan Dflanshah, ancestor of the Dbbyid dynasty of Tabaristan and of the Bdhspand dynasty of Ruyan, and Farrukhan the Great, his grandson and the second Dabuyid ispahbadh of Tabaristan.

2. In Persia. For this, see FARMASUNIYYA, above.

FAROUK [see FARK].

FARRUKHAN, the name of two ispahbadhs of Tabaristan: Farrukhan Dflanshah, ancestor of the Dbbyid dynasty of Tabaristan and of the Bdhspand dynasty of Ruyan, and Farrukhan the Great, his grandson and the second Dabuyid ispahbadh of Tabaristan.

1. FARRUKHAN DflANSHAH, ispahbadh of Tabaristan at the time of the Arab conquest, in about 22/645. He claimed to be the great-grandson of Djamasp, brother of the Sasanid king Kawadh I (488-531), at the time of the decline of the central Sasanid power, enjoyed auton-}
Dūnbāwand, Kūmis and Djurgān, thus encircling Tabaristan. Also, "the ispahbadhs of Tabaristan became aware of these facts, they went to consult their suzerain, upon whom they all depended, and who lived at Amul, in the centre of the province. This was a powerful man, a Gīlānī, his name was Farrukhān Dījlānshāh, who was called ispahbadhs..." (Balʿamī, iii, 493). Farrukhān advised submission with the payment of a meagre 500,000 dirhams in tribute for Tabaristan (Balʿamī, iii, 493-4; al-Ṭabarānī, i, 2659-60), which was far less than the sum paid to the Sāsānids, according to Ibn Isfandiyār, 118. This submission was to prove purely formal, hence this led in 30/651 to an expedition by Saʿīd b. al-ʿĀsh, which initially met with fierce resistance (al-Ṭabarānī, i, 2656, ii, 1322; Balʿamī iv, 354-5; al-Baladhurī, 334-5; Ibn Isfandiyār, 98). The local historians indicate neither the length of the reign of Farrukhān, nor the date of his death, but state that his son Dījl Djawbara seized control of Daylam and Dījlān (which were reckoned to form part of the possessions of Farrukhān Dījlānshāh), raised an army there and threatened to invade Tabaristan (another of his father's territories). The King of Kings Yazdgird III (632-51) was obliged to accept the fait accompli and to invest Dījl Djawbara with the title Dījl Djīlān, Padshāh Tabaristant (Balʿamī, iii, 493). "Now these events are placed in the 35th year of the new Persian era, which corresponds to 667 A.D., if the era in question is that of Yazdgird III. This shows that the exploits attributed to Farrukhān the Great of the local sources correspond to the reign of the last Dabuyid, Khurshīd, a Fakhrān and a Farrukhān, both sons of Djusnas. Furthermore, Unvala declares that the coins of Farrukhān have no marginal inscription on the right, whereas those of Farrox an bear the words ʿamd and nwak (= "miraculous, marvellous, good"), after the year 72 T. (Unvala: 7, § 3; 8, § 4, 5, 7, 9, 10; 30, § 10; n. 6; 31, § 11, 15). There is no question here for 16 years, that there are two princes: Farrāx (the Farrukhān the Great of the local sources) who reigned 10-11 years, from 60 to 70 T. and another prince, whom he calls Farrāxān, who would be the son of Farrāx, and who would have reigned 8-9 years, from 72 to 79 T. (reproduction of the coinage of Farrukhān the Great, of the years 60, 63 65-70 75, 77 T. in Unvala, Plate). To justify this distinction, he stresses the difference in the orthography of the names: Farrāx and Farrāxān, which is also found in Ibn Isfandiyār, 114. This historian mentions in the reign of the last Dabuyid, Khurshīd, a Fakhrān and a Farrukhān, both sons of Djusnas. Furthermore, Unvala declares that the coins of Farrāx have no marginal inscription on the right, whereas those of Farrāxān bear the words ʿamd and nwak (= "miraculous, marvellous, good"), after the year 72 T. (Unvala: 7, § 8, § 4), who thinks that the reference is to the same individual, Farrukhān the Great, of whom the local historians speak (reproduction of the coinage from 60-2, 65-70, 75, 77, in Walker, i, Pl. xxii), but does not give reasons.

In our opinion, there are important objections to Unvala's hypothesis: seeing that Ibn Isfandiyār distinguishes so carefully the sons of Djusnas, there is no reason why he should confuse Farrāx and Farrāxān. On the other hand, Unvala (8, § 4; 31, § 15) makes Farrāxān the son of Farrāx "as the patronymic indicates", which is not conclusive, for Fakhrān and Farrukhān are two brothers, and not father and son. Finally, the supplementary marginal inscriptions do not imply ipso facto the existence of two persons: in fact the coins of the governor of Tabaristan Hānī b. Hānī have marginal inscriptions on the right, which vary (reproduction in Walker, i, Pl. xxv, 12-15, xxxviii, 12-15); some of them mention only the name of the governor, other bear the initial ʿ of ʿāš (=
"justice") above the name (accord ing to Unvala: 12, § 6). There is no question here in Unvala's mind of two distinct governors.

On the other hand, the anonymous coinages of 134 T., 135 T., and 137 T. are of three varieties: the first are marked nwak (\(\text{nwak}\)), nwak, \(\text{nwak}\) (= "very, good"); the second (\(\text{nwak}\)), \(\text{nwak}\), \(\text{nwak}\) the third ʿamd
and (according to Unvala: 12, § 9; 10, § 25; reproduction in Walker, iv, Pl. xxvi, 15-17, xxvii, 1-9, 13, xxxviii, ii, 14). The Pahlavi words apd and mwaţ are thus homologues of the initial ψ of zdr, and it is clear therefore that a Farroxd and a Farrozān cannot be distinguished in the Pahlavi dictionary of Tabaristan and Nāshapur, and put an end to the incursions by the Turks of Dihistan with whom he settled with his entourage in October 1935. Sgt.-Major W.H. Parker looked after his physical fitness training.

According to Ibn Isāndiyār, 27, Farrukhān the Great took control of the territories lying between Tabaristan and Nīshāpur, and put an end to the incursions by the Turks of Dihistan with whom he set the throne on 6 May 1936. He was proclaimed Crown Prince on 13 April 1922, officially named Prince of the Sa'd (Upper Egypt) on 12 December 1933, and proclaimed King of Egypt on 28 April 1936, in succession to his father who died on that day. He officially ascended the throne on 20 January 1938 he married Saffānā Dhu l-Fikār, daughter of Judge Yusuf Dhu l-Fikār, Vice-President of the Alexandria Mixed Court of Appeals. Saffātāz was given the name and title of Queen Farīdā of Egypt. There were three daughters from the marriage, before it was dissolved in November 1948, when Farrūk divorced Farīdā. On 6 May 1951 Farrūk, at thirty-one, married Nārinān Sādīk, the seventeen-year-old daughter of Husayn Fahmī Sādik, who was already betrothed to Zākī Ḥāshim, an Egyptian official of the United Nations Secretariat. She bore him a son, Crown Prince Ahmad Fu'ād, who was born in Cairo on 16 January 1952.

Farrūk's intended education was suddenly cut short at sixteen when his father died. It is, however, unlikely that he would have taken to serious study in preparation for his royal duties even had his father lived longer. Until he was fifteen, Farrūk spent most of his time at home. His English governess, Mrs Ina Taylor, was generally in charge. She tried to impart the main features of a typically English formative education into a prince living in ornate, European-modelled palaces, but in which much of court life, practice and behaviour remained a mixture of imported European formalities and native Ottoman oriental standards. His father tried gradually to introduce the young prince to his future royal duties. Thus Farrūk was made Chief Scout of Egypt in 1933 at the tender age of thirteen. A year before that he had made his first appearance in a public function. The following year, 1934, he deputised for his father at the Air Force celebrations in Heliopolis. At fourteen and fifteen he cut a dashing young figure of a handsome, polite prince. King Fu'ād, however, was a political-minded monarch. Between 1930 and 1935, crucial years in Farrūk's life, Fu'ād was involved in one constitutional or political crisis after another, an economic depression, and mounting opposition from the so-called popular political parties such as the Wafd. He hardly had much time to devote to his son. Consequently, Farrūk spent those crucial formative years mostly with his three sisters, his governess, his mother and her female relatives. His only frequent male companions were palace servants, guards and his French gymnastics master. It is not known, for instance, if during those formative years, he had any male friends of his age.

Farrūk failed to gain a place at Eton. Nevertheless, his father sent him to England in 1935 with a view to entering the Royal Military College, Woolwich. He was accompanied by his officially-designated tutor Ahmad Hasana'y (Pasha), a Balliol man, champion fencer and famous explorer, who was later to have a great influence over the young king, especially in the period from 1941 to 1943. The notoriously anti-British General 'Azīz All al-Masrī accompanied Farrūk as his military tutor. Farrūk failed the entrance examination to Woolwich, but he was allowed to attend some lessons two afternoons a week. The rest of the time he spent at Keny House, Kingston Hill, Surrey, where he settled with his entourage in October 1935. Sgr.-Major W.H. Parker looked after his physical fitness train-
ing, including fencing. Faruk's six-month sojourn in England was short and of limited education value since he attended no formal or regular course of study. He did, however, acquire a taste for London's attractions, particularly its famous shops.

Returning to Egypt upon the death of his father, Faruk's royal route carried him all the way until he had attained his majority which, by the Hijra calendar reckoning, was to be in August 1937. Until then a Regency Council, consisting of his uncle Prince Muhammad 'Ali, 'Aziz Pasha 'lzzat and his maternal uncle Sharif Pasha Sabri, acted for him. 'Ali Mahir, a man close to King Fu'ad, had been Prime Minister since January of that year, and generally exerted a direct influence over the young monarch. Subsequently, as Chief of his Royal Cabinet and Prime Minister again in 1939-40, he was to complicate Faruk's relations with the more popular leader of the Wafd, Mustafa Nahhas Pasha, embroil him in contacts with the Axis powers and thus further exacerbate his relations with the British Ambassador Sir Miles Lampson especially, and the British generally. Another early, dubious influence on the young inexperienced king was that of Shaykh Mustafa al-Maraghli, Shaykh of the Azhar, a man who was also close to his Uncle Sharif Pasha Sabri, the anti-British sympathies. Both these men, as well as others among his courtiers, were to involve Faruk in the treacherous shoals of Egyptian politics from 1936 to 1952. They seemed to counter the influence of the political parties and the British. By all indications is shaping for the role of traditional oriental despot. His ultimate overthrow will occur when Nahhas goes. By all indications is shaping for the role of traditional oriental despot. His ultimate overthrow will occur when Nahhas goes.

FARUK, however, began his reign quite auspiciously as a highly popular young monarch. His month's tour of Upper Egypt in January-February 1937 was a great success and the envy of the politicians. A second tour of Europe in April-July 1937 seemed to initiate Faruk into the less edifying delights of European capitals. By 1940, before he was 21, the men around him, led by 'Ali Mahir, had fully acquainted him with the need jealously to guard his political prerogatives against the Wafd and the British. Thus he tacitly approved of Mahir's use of certain new radical youth movements, such as the Young Muslims, of the Wafdist, anti-British sympathies. Both these men, as well as others among his courtiers, were to involve Faruk in the treacherous shoals of Egyptian politics from 1936 to 1952. They seemed to counter the influence of his mentor, Ahmad Heibariedoctasanaya, an ambitious though dexterous and consummate politician, who somehow tried to smooth relations between the king, the political parties and the British.

FARUK, however, began his reign quite auspiciously as a highly popular young monarch. His month's tour of Upper Egypt in January-February 1937 was a great success and the envy of the politicians. A second tour of Europe in April-July 1937 seemed to initiate Faruk into the less edifying delights of European capitals. By 1940, before he was 21, the men around him, led by 'Ali Mahir, had fully acquainted him with the need jealously to guard his political prerogatives against the Wafd and the British. Thus he tacitly approved of Mahir's use of certain new radical youth movements, such as the Young Muslims, of the Wafdist, anti-British sympathies. Both these men, as well as others among his courtiers, were to involve Faruk in the treacherous shoals of Egyptian politics from 1936 to 1952. They seemed to counter the influence of his mentor, Ahmad Heibariedoctasanaya, an ambitious though dexterous and consummate politician, who somehow tried to smooth relations between the king, the political parties and the British.

Faruk gathered the leaders of all the political parties in his palace to discuss the crisis. As Lampson did not specify in his Note to the King what kind of government Nahhas might lead, Faruk invited him to lead a national coalition government. But Nahhas insisted on a purely Wafdist cabinet, which the King would not accept.

When Lampson marched into 'Abdin Palace at 9 p.m. to confront Faruk, accompanied by General Stone, GOC British Land Forces, and backed up by a battalion of armoured troops that had surrounded the Palace, he did not do so with the intention of imposing on the King a purely Wafdist government. Rather, the ultimatum he read to the King demanded his abdication. Faruk, however, on Hasan's advice, offered with alacrity the compromise formula of a purely Wafdist government headed by Nahhas.

The so-called Palace Incident of 4 February 1942 had paradoxical consequences. It made Faruk, temporarily at least, very popular with Egyptian nationalist leaders as well as with the Egyptian officer corps, but created a permanent rift between him and Nahhas of the Wafd, whom he planned to dismiss at the earliest opportunity. It also deepened the incurable antipathy between him and Lampson. In fact, Faruk acquired a deep resentment for the British in general. A motor accident in al-Kaṣṣāfīn on 15 November 1943 added to his fears, fantasies and resentments. Yet after the Battle of Alamein, he had no choice but to affect an overtly pro-British attitude.

Immediately after the War, Faruk faced serious political problems in the country made even more difficult by the greatly strengthened violent movement of the Muslim Brethren [see AL-MA'RIFAN-AL- MUSLIMIN], army officer conspiracies, Communist and other extremist groups. He escaped annually to Cyprus or Europe on prolonged summer holidays.

HM by all indications is shaping for the role of traditional oriental despot... His ultimate overthrow will occur when Nahhas goes. lampson was forty years older than Faruk and his opinion of the young Egyptian king may have been influenced accordingly. What is certain, however, is that Lampson did not appreciate Faruk's flouting of British war interests in his persistence appointed governments of his choice, his refusal to deal firmly with several crises in 1940-1, occasioned by Italy's entry into the war and the collapse of France, and his continued connections with 'Ali Mahir and his anti-British agitation through the use of extremist political groups such as the National party, the Muslim Brethren, the Young Egypt Society and the Azhar. It seems that he took Ahmad Hasanain's advice in appointing both the Hasan Sabri and Husayn Sirri coalition governments (June 1940-January 1942). But neither of these governments was strong enough to deal with the exigencies of war. Both were open to the machinations of the palace and to the attacks of the majority Waf party. Actually, the latter began to agitate against them in order to recapture the initiative in the nationalist cause. Nahhas Pasha in June 1941, when the British were being pressed by Rommel's forces practically at the gates of Alexandria, approached the British with a view to his returning to power. The timing was crucial, for Britain was in a most difficult military position in Greece and the Western Desert. When Nahhas threatened to foment popular agitation in the country, Lampson felt he must act. It was the concatenation of these events that suggested vigorous British intervention in Egyptian affairs. The intervention was to prove futile for the career and future of Faruk.

Amidst anti-government and anti-British demonstrations in January 1942, largely inspired and organized by pro-'Ali Mahir elements, the King procrastinated over severing diplomatic relations with Vichy France. When his Prime Minister Husayn Sirri, did so, the King dismissed his Foreign Minister, a move against which the British protested vehemently, leading to the resignation of the Sirri government on 1 February. A British request that Nahhas be invited to form a government went unheeded for three days, while Faruk gathered the leaders of all the political parties in his palace to discuss the crisis. As Lampson did not specify in his Note to the King what kind of government Nahhas might lead, Faruk invited him to lead a national coalition government. But Nahhas insisted on a purely Wafdist cabinet, which the King would not accept.
He grew corpulent, lazy and coarse. He seemed to sleep most of the day and wander at night, accompanied by his trusted servants Antonio Pulli, Ernesto Vernucci, Pietro Garo, his ADC `Umar Fathfi and his Albanian bodyguards. He divided his time between the Auberges des Pyramides and the Helmia Palace nightclubs, his various private garconnieres in Cairo and Alexandria, and the Royal Automobile Club gambling table in the centre of modern Cairo. The insecurity and unhappiness of his childhood, and his interrupted or nonexistent education, added to his inferiority complex and inability to concentrate. He was estranged from his wife and mother and sought escapist pleasures in the company of women procured for him by his servants. He became addicted to all kinds of pills, hormonal preparations, a variety of elixirs, food and gambling. He acquired a mania for collecting coins, stamps, pornographic literature, aids and ephemera. He became more elusive, unupright and socially impossible, with his coarse practical jokes, kleptomania, compulsive boasting and bad sportsmanship, characterised by a streak of cruelty. He could neither lead—and thus mitigate the internecine warfare between Egyptian politicians—nor be led by any other than by sycophantic courtiers like his Press Adviser, Karim Thalbit, or his Business Adviser, Elias Andrawus. He lived in the gilded cages that were `Abdun, Kubba, Muntazah and Ra`a-Al-Tin palaces, or in his fortress-like estate at Ingha, 35 miles from Cairo, where 2,500 feddans of the best agricultural land produced citrus fruits and housed a model poultry farm. He coveted everything which he did not own, including other men's women and possessions.

Faruk's scandalous European holiday from August to October 1950 prompted a petition signed by most opposition party leaders and politicians protesting against his shameful behaviour. At the same time, extremist groups led by Young Egypt, and other underground organisations such as the new Free Officers and the Marxists, openly called for the overthrow of his régime. Considered widely to have committed the ill-equipped and unprepared Egyptian army to the war in Palestine in order to indulge his rivalry with King `Abd Allah of Jordan, and openly accused of having profited from arms purchases connected with that war, his marriage to Naramin in 1951 and the birth of the Crown Prince in January 1952 did not improve Faruk's image or fortunes. The rot was too advanced. By autumn 1951 Faruk was set on a collision course with the stirring forces in the country, chief among them the Free Officers. He appointed the pro-British Hafiz `Alfi Pahta as Chief of his Royal Cabinet and recalled his ambassador to Britain, `Abd al-Fattah `Amr, to serve as his political adviser. More significant was his attempt to pack senior military posts with his own men, such as General Haydar, the Chief of Staff, and General Husayn Sirr `Amir, who replaced General Muhammad Nadjib (Naguib) as Commander of the Frontier Defence Force.

The violent events which accompanied the problems of Anglo-Egyptian relations since 1946 culminated in the Wafd's demagogic and fateful unilateral abrogation of the 1936 Anglo-Egyptian Treaty in October 1951 and the explosion of the mob that destroyed the centre of modern Cairo on 26 January 1952, Black Saturday, and these gave Faruk the pretext to dismiss `Ahmed and the Wafd from power. A succession of palace-appointed ephemeral governments, including one led by his old mentor `Ali Mahir, were unable to deal with the drifting, explosive political situation. In the meantime, Faruk had himself proclaimed a Sayyid, or descendant of the Prophet, a most unlikely genealogical claim in view of his Macedonian-Albanian forefathers. Neither Lampson nor his successors were able or willing either to deal with Faruk firmly or to conjure up a formula to resolve the impasse. Nor was a Conservative government in London after 1951 willing to play an impartial role in Cairo, barely four years after leaving India.

Yet Faruk's security agents had uncovered the real threat to his throne, namely, the Free Officers. His couriers, however, were suspicious of each other as always, ever-solicitous and sycophantic, but were incapable of concerted action. Equally, the politicians were sunk in their petty quarrels, all anxious to keep the Wafd, by now weakened and relatively corrupt, out of power at any cost. On the very day when Faruk in Alexandria ordered the arrest of the Free Officer conspirators at 9 p.m. (22 July 1952), the latter seized power three hours later.

Faruk believed that the British were behind the army conspiracy. Even though he tried to contact British GHQ in the Canal for help, he did not trust them. Instead he sought the help of the Americans with a view to saving his and his family's lives. Ironically, his old friend and mentor adviser, `Ali Mahir, brought Faruk the army officers' demands, signed by Naguib, requiring the dismissal of his immediate entourage of courtiers. Two days later on 26 July `Ali Mahir returned as Prime Minister of the new military régime with the order for Faruk to abdicate in favour of his infant son, Crown Prince Abase Facad, and to leave the country permanently by 6 p.m. Less than a year later in June 1953, the monarchy in Egypt was abolished in favour of a republic.

Like his grandfather the Khedive Isma'il, Faruk sailed off to Naples on the Royal Yacht `Mahfusa' with his family, gold ingots and over two hundred pieces of luggage. He had been depositing money in Switzerland, Italy and the United States for many years, at least since the end of the Second World War. What he could not take with him were the vast tracts of land (over 30,000 feddans) and palaces, a collection of books, his remarkable coin, stamp and pornographic collections. He finally settled in Rome. His daughters from his marriage to Farafa were packed off to Switzerland, and his second wife Naramin soon returned to Egypt with her mother. She was divorced from Faruk and remarried a Dr. Adham Nakib. Faruk reverted to his life of girlfriends and nightclubs, a familiar massive and rotund figure in the bistros and nightspots of Rome, interspersed with occasional visits to Switzerland and to the gambling tables of Monaco, which principality had granted him citizenship.

Two weeks after he had left a heart clinic in Switzerland, he drove one of his Italian girl friends to a roadside inn, the "Ile de France", for dinner around midnight. He suffered a heart attack while just starting to enjoy the Havana cigar which he had lit after a gargantuan dinner. He died two hours later at 2.08 a.m. on 18 March 1965 in a Rome hospital, aged 45 years, 2 months and 7 days. At the request of his family and according to his will, he was buried in Cairo two days later very quietly and in the dead of night, alongside his forefathers. His was the last effective reign of the Muhammad `Ali dynasty, founded by that soldier of fortune from Kavalla in 1805.
Al-Fāsī, individual nisba of the members of a prominent family of Moroccan scholars. Descended from the Kuraybītīe clan of the Banū Tibār, originally established in Spain but settling in Fās at the end of the 10th/16th century, this family is known collectively under the name Fāsiyyūn, while the citizens of the town are called rather Ahī/Al-Fāsī. In view of the fact that the author article AL-FASĪYUṺ in Volume II of the EI deals with the population of Fās in general, it has been considered useful to supplement this with the basic facts relating to the members of this line who have contributed the most actively, over the last four centuries, to religious, intellectual and literary life, without limiting themselves solely to passing on a varied, and still highly appreciated, form of teaching.

In general, the genealogical tree drawn by E. Levi-Provençal (Cherja, 242) continues to be valid, and we shall confine ourselves to referring the reader to it; the accounts devoted by the learned historian to the most notable personalities of the Fāsiyyūn have lost none of their value, but they can be considerably enlarged and made more accurate in the light of documents, mostly manuscripts, that are now available. The work of Muhammad al-Fāsī and M. Hajji in Arabic or in French, of 'A. Gannūn in Arabic, of M. Lakhdir in French and of still others, enables us to acquire an increasingly clear view of the merits of a group of eminent scholars who could, however, be better served by a detailed monograph in view of the extensive documentation provided by biographical sources, whether long-established or recently discovered.

I. — Abu 'l-Mahāsīn [q.v.]. Yusuf (d. 18 Rabī‘ I 1013/14 August 1604) was the founder, in Fās, in the district of the Kalkaliyyūn (see Le Tourneau, Fes, Casablanca 1949, index), of the zāwiya of the Fāsiyyūn, which was given the name Sīdī 'Abd al-Kādir al-Fāsī. He was born, according to the autobiography that it gives of his father and the early history of the family.

II. — His brother Abū Zayd 'Abd al-Rahmān b. Muhammad (d. 1036/1626) founded a second zāwiya in the same district and wrote commentaries and annotations of religious works; a number of these have been published, notably al-Anwār al-dāmiyya fi 'l-dhār 'alā 'l-ghiyb, lith. Fās 1317/1899.

III. — Among the four sons of Abu 'l-Mahāsīn, Ahmad al-Hāfīz (971/1021/1564-1612) also wrote commentaries on works relating to liturgical pieces (al-īqār bi 'l-īqār, lith. Fās) or ecstatic dancing (bukm al-sama‘ wa 'l-raks, lith. Fās).

IV. — The brother of the latter, Abū 'Abd Allāh/Hāmid Muhammad al-‘Arabī (988/1052/1580-1642) was the author of a number of works, among which the most notable is al-mahānā mīrakā shaykh Abū 'l-Mahāsīn (lith. Fās 1324) important for the account that it gives of his father and the early history of the family.

V. — The following generation is represented most notably by 'Abd al-Kādir (1007-91/1599-1680) [q.v.], b. 'Ali (960-1030/1553-1621) b. Abū 'l-Mahāsīn who left only some responses, but whose prodigious scholarship and teaching inspired his son 'Abd al-Rahmān (no. VI) to write two hagiographic pieces (Tuhfat al-akhdār fi mādhīk al-shaykh Abū 'l-Kādir and Badrīn al-azghīr) and a treatise relating to his disciples (Iḥtīyāj al-ḥaṣrā‘ir); this last has been studied by M. Ben Cheneb, in Actes duXIV Congrès des Orient., vi, Paris 1907).

VI. — The son of the preceding, Abū Zayd 'Abd al-Rahmān (1042-96/1631-85), has been made the subject of an article in vol. I of the EI; add to the bibliography M. Lakhdir, La vie littéraire, 88-95, and bibliography cited; see also 'Amal, 3.

VII. — Another great-grandson of Abu 'l-Mahāsīn, Abū 'Isā/Abd Allāh Muhammad al-Mahdī (1023-1109/1614-98) b. Ahmad (d. 1062/1653) b. 'Ali b. Yusuf, was the author of a number of important works some of which have survived, on the Kur'ānic readings, the Šīrā, law, mysticism etc. and most notably of a biography of Abu 'l-Mahāsīn, al-

(F.J. VATIKIOTIS)
Dinawir al-safiyya (ms. Rabat D 1234), an abridgment of his Rawdat al-maḥsūn al-taḥṣīla.

VIII. — Ābū ʿAbd Allāh Muḥammad al-Ṭayyib (d. 1113/1701) b. Muḥammad (d. 1116/1704) b. Ṭābāq al-Kādir (no. V) left no works of importance, but his cousin Ābū ʿAbd Allāh Muḥammad (1058-1134/1648-1722) b. Ṭābāq al-Ḥanīfīn (no. VI) was the author of several works, among which attention should be drawn to a fahrasa [q.v.] entitled Minah al-badhīyya fiʿl-aṣāniḍ al-ulāya and used by al-Ṭirānī [q.v.] (ms. Rabat K 1249; see also al-Maknūsī, Aḥmām maṣādirī, 121-2).

IX. — Ābū Mādīyān Muḥammad (1112-81/1706-65) b. Muḥammad b. Muḥammad b. ʿAbd al-Kādir (no. V), preacher and teacher at the Karawīyīn, wrote, besides conventional commentaries, some literary compositions of which the titles are sufficiently revealing: Muḥammad fiʿl-aṣāniḍ waʿl-biṣāma, Tuhfāt al-ʿarīf wa-nuzhāt al-lālīb (ms. Rabat D 590, fols. 81 b - 144 b; summarily edited and translated into Latin by Fr. de Bombay, Vienna 1805), Māṣīmān al-zuwaq wa-dījāmīn al-turaj (ms. Rabat K 1717, fol. 2-93); these are adab compilations.

X. — Ābū ʿAbd Allāh Muḥammad (1118-79/1706-65) b. Muḥammad. Muḥammad, brother of the preceding, was the author of biographical works of which only one, a short treatise on the Chorfa of Morocco, would appear to have survived.

XI. — The son of the preceding, Ābū ʿAbd Allāh Al-Mālikī ʿAbd al-Wajhī (1172-1213/1758-99) was a poet who wrote a fahriya partially in verse, a monograph on the Sīḥīliyyīn Chorfa (ms. Rabat G 97) and an udqāqa on the Kādirīyyīn (ed. Tunis).

XII. — A descendant of Muḥammad al-ʿArībī (no. IV), Ābū Ḥaṣīf ʿUmar (1125-88/1713-74) b. ʿAbd Allāh b. ʿUmar b. Ṣuṭūn b. Muḥammad al-ʿArībī was a psephograph who composed various commentaries, annotations, letters of a judicial nature and a Dīdān containing numerous imitations of more or less well-known poems on subjects generally of a mystical flavour.

XIII. — A distant cousin of the preceding, Ābū ʿAbd Allāh Muḥammad (1300-1214/1718-99) b. ʿAbd al-Salām b. Muḥammad b. ʿAbd al-Salām b. Muḥammad al-ʿArībī (no. IV) specialised in the Kurʿānic readings, to which he devoted a number of writings that have in part survived.

XIV. — Ābū ʿAbd Allāh Muḥammad al-Ṭahiri (1246-85/1830-68) b. ʿAbd al-Raḥmān is considered to be one of the most brilliant members of the family, although he went against the example of his parents and entered government service; as Palace secretary he was a member in 1276/1860, of a diplomatic mission sent to London, to the court of Queen Victoria, by Sultan Ṣūṭūn Muḥammad (1276-90/1859-73) and, on his return, composed an account of his journey which has just been published by M. El Fasi (Rabat 1976-7, index).

- The son of the preceding, ʿAbd al-Ḥāfīz b. Muḥammad (no. IX) a preacher of Fās who is said to have been the author of a chronological index entitled Taqāṣīrāt al-maḥsūn bi-nuwaṣṣāṣ al-dīn wa-nawāṣṣāṣ al-nīn, which is still missing.

- We are one to attempt to assess the contribution of the Fāsīyyīn to Arabic culture and literature, it would appear from their impressive corpus of writings that they contributed most of all, as much by their teaching as by the commentaries and annotations that they composed, to the maintenance of the classical tradition in the intellectual capital of Morocco; some of them were composers of verse, but not one of them proved to be a true poet. Hence we can doubtless declare without injustice that their most tangible contribution consists in their fahrasas, their accounts of journeys, and their monographs on their family or on certain of its members.

Bibliography: In addition to the general biographical works, see especially Muḥammad al-Fāṣī (no. IV), Mirāt al-maḥsūn, lith. Fās 1324; Sulaymān al-ʿAlawī, Inṣāṣāt ʿulā miṣāṣi bi-ḍaḥāk āl Fāṣī b. al-Ḍād, Fās 1347/1892; E. Lévi-Provençal, Chorfa, index; M. El Fasi, in Hesperis, xxix (1942), 63-81; A. ʿAmmānī, al-Naḥḥād al-maghrībi, Beirut 1961, index; M. Lakhdar, Le vie littéraire, index; M. Hajji, L' activité intellectuelle au Maroc à l'époque sa'dide, Rabat 1976-7, index.

(C. PELLAT)

FAṢĀD, ḤADJDJĀM (A.), two terms denoting blood-letter (fasād, lit. "phlebotomist" and Ḥadjdjām, lit. "cupper"). Al-Dajīḥī indicates that Ḥajdjām (cupping) and fasād (phlebotomy) are similar professions. Some pseudo-scientific books on phlebotomy and blood-letting were written by reputable physicians in "Abūsād Baghdādī and Aghlabīd Kayrawān in the 3rd/9th century, e.g., Yūḥāmā b. Māṣawāy (d. 232 H./857) wrote a Kitāb al-Faṣād wa-liḥājīmān ("Book of phlebotomy and blood-letting"), and Ḥākāh b. ʿUmrān (d. 279/892) wrote in Kayrawān a medical treatise called Kitāb al-Faṣād (cf. Ibn Ḍuḏḏul, Tabakdt al-atibba wa'l-hukamd', Cairo 1955, 65, 85). The phlebotomist was required by customary law to be learned and reliable in the anatomy of organs, veins, muscles and arteries, and he practised his craft in consultation with a physician. They bleed veins of the human body and also performed circumcisions (ṣīḥān) for men as well as women in Arab society. Phlebotomy involved some hazards. Many persons actually died as a result of improper venepuncture, according to Ibn Bassām al-Muḥtasīb. Arab customary law made the fasād liable to pay compensation in the event of injury or death of a patient resulting from careless opening of veins. This was probably the reason why the maḥṣīb stipulated that the faṣādīm should practise their craft in public places and that they must keep a number of their instruments, including lancets, in good condition. Among Muslim jurists, Ābū Ḥanīfā reckoned phlebotomy much-satirised character in Arabic tales, and had a
very low status. Unlike the phlebotomist, the cupper practised blood-letting on parts of the human body other than veins, and used his cup for relief of pain or itching.

Abū Tayyība was a ḥāджdjām who served the Prophet Muhammad and was much honoured in early Islamic society. He performed ḥāджdām on men as well as women. Although ḥāджdām was permitted by the sunna, there are conflicting Islamic traditions about it. A saying attributed to the Prophet described the earnings of a cupper as evil (ḥabāḥīḥ), analogous to the earnings of a whore. Some other traditions state that the cupper was paid in cash and kind by the Prophet. The anti-ḥāджdjām traditions are likely to be apocryphal and they only express the prejudices of the Arabs of the Umayyad and 'Abbasid periods. Arab writers cite instances of cuppers, including the poet Abū l-Aslāhīyā, who did not accept any fee for ḥāджdām from their clients. Tuesday and Saturday were regarded as auspicious days of the week for ḥāджdām, according to an Arab taboo of the 3rd/9th century, as it is mentioned in early poems like Zuhayr b. Abī Su Cóma al-Shammarī. The Prophet sometimes referred to ḥāджdām in the same way as the jāhīm of the jāhīmī jūdūlī, and the term was analogously used for things which were regarded as auspicious days of the week for ḥāджdām.

A proverbial saying of the 3rd/9th century crystallised public opinion: “A look in the mirror of the ḥāджdīm, surviving for the ḥāджdīm, is demeaning haaj<dmdm the hiajd mj.dma. The cupper was paid in cash and kind by the Prophet. The social isolation of cuppers, including the Prophet, was extensive. One source further states that the son of a cupper was qualified from giving valid testimony in a court of law, and the cupper was deemed unfit of a whore. Some other traditions state that the cupper was said to be given to gossip, and the allegation was attributed to the Prophet described the earnings of a cupper as analogous to the earnings of a whore. Some other traditions state that the cupper was paid in cash and kind by the Prophet. The anti-ḥāджdjām traditions are likely to be apocryphal and they only express the prejudices of the Arabs of the Umayyad and 'Abbasid periods. Arab writers cite instances of cuppers, including the poet Abū l-Aslāhīyā, who did not accept any fee for ḥāджdām from their clients. Abī Su Cóma al-Shammarī. The Prophet sometimes referred to ḥāджdām in the same way as the jāhīm of the jāhīmī jūdūlī, and the term was analogously used for things which were regarded as auspicious days of the week for ḥāджdām.

A proverbial saying of the 3rd/9th century crystallised public opinion: “A look in the mirror of the ḥāджdīm, surviving for the ḥāджdīm, is demeaning haaj<dmdm the hiajd mj.dma. The cupper was paid in cash and kind by the Prophet. The social isolation of cuppers, including the Prophet, was extensive. One source further states that the son of a cupper was qualified from giving valid testimony in a court of law, and the cupper was deemed unfit of a whore. Some other traditions state that the cupper was said to be given to gossip, and the allegation was attributed to the Prophet described the earnings of a cupper as analogous to the earnings of a whore. Some other traditions state that the cupper was paid in cash and kind by the Prophet. The anti-ḥāджdjām traditions are likely to be apocryphal and they only express the prejudices of the Arabs of the Umayyad and 'Abbasid periods. Arab writers cite instances of cuppers, including the poet Abū l-Aslāhīyā, who did not accept any fee for ḥāджdām from their clients. Tuesday and Saturday were regarded as auspicious days of the week for ḥāджdām, according to an Arab taboo of the 3rd/9th century, as it is mentioned in early poems like Zuhayr b. Abī Su Cóma al-Shammarī. The Prophet sometimes referred to ḥāджdām in the same way as the jāhīm of the jāhīmī jūdūlī, and the term was analogously used for things which were regarded as auspicious days of the week for ḥāджdām.

Ibn al-Athîr, Beirut 1385-7/1964-5, vii, 553); in 312/924 the Carmathians under Abû Tâhir al-Djânnâb massacred near there a large part of the pilgrim caravan of the East and elsewhere ('Arîb, Sîlâ T. al-Tabârî, 118-19; Hamadânî, Tahmîkât T. al-Tabârî, ed. A.Y. Kazîn, Beirut 1961, i, 43); whilst in 412/1021-2 the Nabhan of ʿAyyârît, under their chieftain Djâyy, besieged in Fâyd the pilgrimage from Khrûsânîn financed by Maâîmûd of Ghazna, after receiving already a payment of 5,000 dinars as protection-money [see gwswa], but were finally repelled (Ibn al-Djâwîrî, al-Muntazam, vii, 2; Ibn al-Athîr, ix, 325). Ibn Dûbayrî, loc. cit., and Ibn Baṭṭûtâ, Râhîl, i, 409-10, tr. Gibb, i, 252-3, record, in their time, the pilgrims entered Fâyd in warlike array in order to ward off the Bedouins.

In later times, Fâyd began to lose its importance in favour of ʿÂlî when the pilgrimage route began to pass through the latter town and caravans went via the oasis of al-ʿAdwa (cf. A. Musîl, Northern Nâjîl, a topographical itinerary, New York 1928, 66). It is described in its more modest circumstances by European travellers in the later 19th century. W.G. Palgrave passed through it on route from ʿÂlî to al-Kâṣîm (Narrative of a year's journey through Central and Eastern Arabia (1862-3), London and Cambridge 1863, i, 227-30), as did C.M. Doughty, when Fâyd was in the territories of Ibn Râshîd, amir of ʿÂlî (Travels in Arabia Deserta, London 1921, ii, 19). Musîl says that it comprised only 35 huts, inhabited by Tamâmîs. It is now a large village, with date palms, pasture for beasts and a good supply of fresh water. The mediaeval settlement lies about one mile/1½ km. to the north, and has remains of buildings and cisterns, and possibly of a mosque, together with deep wells; these constructions have been much reduced in recent times by stone-plunderers.

Bibliography: Given substantially in the article, but see the survey of earlier historical and geographical information in Musîl, loc. cit., Appx. IV, The station of Fejd in history, 216-20, and now the doctoral thesis of S.A.'A. al-Râshîd, A critical study of the Pilgrim Road between Kafr and Mecca (Dhrîb Zuḥaydîn, with the aid of field-work, Leeds 1977 [unpublished], with a full description and plan of the site. (C.E. Bosworth)

FAYD-I KÂSHÂNî, the pseudonym by which Muhammad b. Murtâdâl, called Mawlâ Muhsîn, one of the most prolific ʿIshâfi theologians of his time, is better-known. He was a poet, philosopher, expert on hadîth and skilled authority on ʿIshâfi law; his mind dominated most of the religious sciences of his time, and his writings touched on several different domains.

The exact date of his birth is unknown, but he died in 1091/1680 at an advanced age, so that he must have been born, in the town of Kum(rîn), in ca. 1007/1598. After initial studies in his natal town, he left for Khorasan to hear the lectures of the famous philosopher ʿÎdâr al-Ḥidîr, al-Shirînî, who gave to him one of his daughters in marriage. His incisive mind allowed him to assimilate a large range of subjects, but he was generally recognised as one of those theologians especially attached to the traditions of the Prophet and the Imâms, and as a traditionalist scholar, was the adversary of the philosopher and founder of the Ṣâkhîrî trend of thought, ʿAlîbî Ahmad Abâsî [q.v.]. However, he incurred equally the hostility of some traditionalist theologians who opposed certain of his mystical ideas. He was, in fact, a poet who also excelled at the philosophical sciences. His main work is undoubtedly the Ṭabarî al-ṣawānîn ("Gates of paradise"), written in 1055/1645; as a philosophical mystic, his intuition and incisive mind made him close to al-Ghazâlî. His other works include the Ibn al-ʿalîkhîn fi wâl al-dîn, which is an exposition of the principles of ʿIshâfi faith, apparently modelled philosophically on Ibn Sînâ's Ighâsûn, since it is made up of a series of wâl or principles just as Ibn Sînâ's work is a series of jihâd or indications. His second important work here is the Munâhâr al-nuqûtîn, in which Kâshânî deals with the practice of the principles of ʿIshâfi faith. It is divided into chapters corresponding to the five articles of faith, (1) the divine unity; (2) the divine justice; (3) prophethood; (4) the immamate; and (5) the resurrection.

Kâshânî's abundant output comprises over 90 works in Persian and Arabic, in all of which is discernible his predilection for poetry; all of his prose is sprinkled with his own verses or with those of the great Persian and Arabic poets, e.g. the Arabic text of his Kolmât makhânâ is full of Arabic and Persian quotations. Several others of his family were noted as scholars, and especially his brother, the author of several works on ethics.

Bibliography: Khânsârî, Rawdât al-ṣawânîn, 522-42; Fâyûm Kâshânî, Muʾâlî al-khâtûb, introd., 1; Maʿâmûn 'Abî Shâhîn, Fârûk al-ḥalâkî, i, 177, 181, 183. (M. Aghana)

FAYOUM [see AL-FAYYUM].

FAYSAL b. 'ABD AL-'AZIZ b. 'ABD AL-RAHMAN AL SUDI (ca. 1323-95/1906-75), king of Su'udi Arabia (regn. 1385-96/1964-75). His mother was Turfâ l-Shâykhî. Educated traditionally, the young prince rode in battle at the age of 13 and soon became his father's stalwart commander; at the same age, he began his diplomatic career when, in 1337-8/1919, his father deputed him to congratulate the English king on the defeat of Germany. Abroad, he made characteristically acute independent observations of Western society and, most exceptionally, ultimately learned English and French privately. Soon after 'Abd al-'Azîz [q.v. in Suppl.] conquered al-Hîdjâz (1345/1925), he appointed Faysal viceroy of the new province and foreign minister. He lived most of the next thirty years in al-Hîdjâz, but diplomacy took him to Europe frequently, and, following the establishment of diplomatic relations with the United States (1359/1940), to that country also.

Faysal had a total of four wives. First was Suṭânûa b. Ahmad al-Sudâyri, by whom he had 'Abd Allâh. In 1350-1, he married 'Ilîfah b. Ahmad al-Hîjàñûn, a relative raised in Turkey. They had six sons: Muhammad, Suʿund, Turîkî, Suʿund, 'Abd al-Râhîmân, and Bandar. Around 1359/1940 he married Hayya b. Turîkî al-Djâwîrî, and they had Kâshânî. All the sons were educated in the United States and England as, reportedly, were several of his six (?) daughters. Of his wives, two were divorced years before his death, and one died; 'Ilîfah remained his constant helpmate and encouraged him to more liberal attitudes toward women.

Before King 'Abd al-'Azîz died in 1373/1953, he had arranged that his eldest living son, Suʿund, should succeed him, and he had designated Faysal as Suʿund's successor. Faysal served as prime minister for part of Suʿund's reign as well as foreign minister. The reign did not prove successful. In 1376-7/1957 Faysal had several stomach operations in the United States, and when he returned home, he found...
the kingdom in some disorder and near bankruptcy. Senior members of the royal family decided to ease out Su'ūd, who in 1377/1958 "voluntarily" surrendered power to Faysal while remaining king nominally. By 1379/1960 Su'ūd reasserted himself, but the family will prevailed, and in 1384/1964 Faysal was proclaimed king.

Intelligent and equally at home in Bedouin tent or Western capital, King Faysal proved a masterful ruler. Domestically, he faced with considerable success the challenge of leading a very conservative traditional society, propelled by unprecedented oil-based revenues, into the modern world. Externally, he opposed Israel and communism, headed the conservative Muslim bloc, and maintained friendship with the United States. After 'Abd al-Nasir's [q.v.] death in 1390/1970, Faysal reached an understanding with the new Egyptian leader al-Sadat, financed Egypt and Syria in the Arab-Israeli war of 1393/1973 and participated fully in the subsequent oil embargo and in the phenomenal OPEC-sponsored oil price increases.

When shot down in majlis [q.v.] on 26 March 1975 at the age of 70 by a youthful royal assassin, King Faysal's country had been set on a peaceful course of modernisation and was a major force in the Arab world and enjoyed widespread respect for his astute politics, his piety, and we think, his pro-Shi'a compatriot al-Iyad [q.v.]

First four Fatimids. His life, like that of many of his contemporaries in Ifrikiya, is very little known. He was succeeded by his brother ful course of modernisation and was a major force in the subsequent oil embargo and in the phenomenal OPEC-sponsored oil price increases.

Thus there is no notice of him in the ancient dictionaries. The verbal forms of fida, fida', tafidid, tafidr, tafid, and fidd, fadd, tafdd are more common there (e.g. Ibn Nadjī al-Dabbagh, railing to memoirs of figures, and appreciations of Faysali; al-Dāra, i/4 (1395/1975), 210-62 (an index of all Faysaliana in the gazette Um al-Kurā). See also Procs. of the conference held at Santa Barbara under the auspices of the Univ. of Southern California, May 1978.

(R. BAYLY WINDER)

AL-FAZĀRĪ, Abu l-Kāsim (? ) MUHAMMAD, SUNNAH poet of al-Kayrawān and contemporary of the first four Fātimids. His life, like that of many of his contemporaries in Ifrikiya, is very little known. Thus there is no notice of him in the ancient sources, unless his grandfather Ibrāhim (?), classed by al-Khusnāni amongst the Mu'azzila; convicted of ta'if, the "stripping away of God's attributes", he was executed for it. As for his father, 'Amir, 'Abd Allāh or 'Ali, he is classed by al-Zubaydī amongst the grammarians of the Ibrīkiyyan current; he is said to have appropriated the sums of the khāragāh which he had collected in the Sahel of Tunisia on behalf of the Shī'ī caliphs and to have taken refuge in Egypt. These two "stains" on Abu l-Kāsim's "image" brought him the gibes of a certain Muhammad al-Tīnīsī, who may have been, we think, his pro-Shī'ī compatriot al-İyadī [q.v.], Nearer our own time, H.H. Abdullah has given a brief notice of him, from which it appears that the poet was born and lived at al-Kayrawān and that he died in 345/956, but these are pieces of information of little reliability since they are not based on any explicit source.

Some 112 verses only of al-Fāzārī's poetry, scattered in the text, are attributed to al-Malik al-Mammasr, one of the "85 martyrs" of al-Kayrawān who fell in the ranks of Abū Yazīd [q.v.]. To these gleanings should be added the 63 verses of the Kasida Fāzārīyya dedicated to al-Mansūr [q.v.] after his victory over the Khārджīs. This poem seems to owe its fame not so much to the originality of its laudatory themes as to its curious prologue, viz. 33 verses in which the poet passes in review the legendary heroes of the Arabic knightly tradition, in a laboured parallel between these great names and that of the dedicatee, as if the poet, ashamed of his palinode, were reducing to a strict minimum the eulogy of a recent adversary.

In sum, al-Fāzārī is a minor poet, but a representative one, at the side of his compatriot Sahl al-Warrāk, of the Mālikī current in urban Ifrikiya, divided between his hatred of the Fātimids and his distrust of the revolutionary tendencies of the "man on the donkey", Abū Yazīd.

(Ed.)

AL-FAYṢAL B. 'ABD AL-'AZĪZ — FIDA'
the West by the Maliki ūkāha' as a means of redeeming believers held captive in Christian territory, is the payment of this ransom in the form of pigs and wine previously submitted by dhimmis to the Islamic community, this contribution then being reckoned acceptable as an element of the payment of the ghāṣab tax by these tributaries. But this did not often happen.

More frequently, ḥidā' operates on a financial basis. In principle, it is the Muslim state which has the obligation to provide the necessary money, deducting it from public funds; however, the ransom is usually put together by relations or friends of the captives, and it consists of contributions made for this purpose by individuals. In 578/1182, for example, in the time of the Almohad caliph Ābū Ya'kūb Yūsuf, the town of Seville ransomed, at a price of 2,700 dinār, seven hundred of its citizens who had been captured by Alfonso VIII of Castille; this money had been raised by appeals made for this ḥidā' in the mosques of Seville.

The devout individual who devotes himself totally or episodically to the ransom of Muslims held captive by infidels is called al-fakākāk. It is not often that such an agent is able to travel alone and spontaneously in Christian territory for the purpose of arranging the release of captives; the "infidel" power tends to be uncooperative. In 1318, for example, the king of Aragon rejected a request from his subjects in Lorca, asking him to grant safe-conducts for "al-ffequech" who had accompanied this accredited diplomat acting as guide to a group of Granadans whom he had ransomed in the Balearic Isles and whom he had detained in Granada, although he arrived there armed and followed. In 738/1371, for example, a Catalan slave in the Nasrid kingdom and Granadans held captive in the lands of the Crown of Aragon; also, in 837/1434-5 between subjects of Alfonso the Magnanimous, King of Aragon and Sicily, held prisoner in Hafsid territory, and Tunisian slaves in the lands of King Alfonso, etc.

There were other ways in which the ḥidā' could operate; sometimes, a Muslim captive sends for a number of co-religionists from his own land and makes them hostages, as a guarantee for the ransom which he has promised and which he himself goes to raise. This was the course followed by, for example, in Oviedo, ca. 287/900, by an important member of the court of Cordova, who left in his place one of his sons, two of his brothers and a nephew, who had come to the Asturias for this purpose. Sometimes, a slave concludes a "contract of liberation" (contract of "taliq") with his proprietor: either because he is authorised to collect money, or because he is hired out to a third party and is allowed to keep the supplementary payments given him by the latter when the occasion arises, or because he makes his living in one way or another, or because he receives money from home, such a captive is free from the day that he succeeds in remitting to his master the sum required within a period determined under the contract. In 705/1303, for example, two Muslim slaves in the kingdom of Valencia were authorised by their proprietor to travel round the country to raise a certain sum within ten months, demanding from their co-religionists (the free Muslims of the kingdom) "alms of precept" and "supplementary gifts". This fact is known to us from a deed drawn up by a kāfīr of Valencia in Rabs'ī 703, preserved in the archives of the Kingdom of Aragon in Barcelona; this is a document designed to facilitate fundraising on the part of slaves who were bearers of it, introducing them to all fakākh, ālamī, ālimī, ṣhukākh, administrators, nobles and other Muslims living in the territory of the King of Aragon.

GÎGS [see TDB].
FINDIKOĞLU, DÎYÂ-AL-DÎN FAHIRî, modern Turkish ZIYAEDDIN FAHRI FINDIKOĞLU (1901-74) (he was also occasionally used his original name AHMED KHALİL), Turkish sociologist and writer. He was born in Tortum near Erzurum in Eastern Anatolia, and graduated from the School of Posts and Telegraph (Posta-Telgraf mecâb-i âlîsî) in 1922, and also from the Department of Philosophy of Istanbul University (1925). He taught philosophy and sociology in various schools in Erzurum, Sivas and Ankara, until in 1930 he went to France on a government scholarship and obtained a Ph.D. in philosophy from the University of Strasbourg (1936), being then appointed lecturer (doçent) in the University of Istanbul. In 1937 he transferred to the Faculty of Economics, where he became Professor in 1941. He died in Istanbul on 16 November 1974.

Findikoglu became interested at an early stage in literature and folk-lure, and published poems and studies on folk poets (e.g. Baybudlu zohri, 1928). Later, he concentrated on research on 'Abdî (Ziya) Gokalp and Ibn Khaldûn and on problems of social change in their legal and sociological implications, and also on the co-operative movements, making considerable contributions to both these fields. From being a moderate liberal, he developed into an extreme conservative and traditionalist, and in his many articles in various periodicals, particularly in his own Îly ('Action'), he waged a relentless war against reformist tendencies and against all innovations (e.g. he signed 'Abdî (Ziya) Gokalp and Ibn Khaldun as the former was more in keeping with old Turkish usage). He joined the opponents of the language reform movement and carefully avoided all neologisms in his writings.

(Fahîk İz)

FINDIRISKÎ, MÎR ABU 'L-KASIM B. MİR AHMED HOSAYTÎ ASTARAŞÎ, known in Persia as Mîr Findiriskî, Persian scholar and philosopher. He was probably born in Isfahan, where he studied and spent much of his life. He also travelled extensively in India, and died in Isfahan in 1050/1640-1. His tomb is located in the Takht-i Fulad cemetery, and this shrine is visited by many devotees throughout the year. Mîr Findiriskî was one of the most famous of the philosophers and scientists of the Safavid period, respected by both Shâh 'Abbâs and the Mughal court in India, yet little is known of the details of his life. In Isfahan he taught the sciences, and especially the philosophy of Ibn Sînâ, above all the Shâhî and the Kânîn, and such well-known figures as Aka Husayn Khân 'ansârî, Muhammad Bâkî Sabzavârî, Radjab 'Ali Tabrizî, and possibly Mullâ Şadrâ, studied with him. Yet he was far from being merely a rationalistically-oriented philosopher; he was also a Stîfî, an alchemist, a profound student of Hinduism, a gifted poet and one who was believed by his contemporaries to possess supernatural powers. Besides being, along with Mîr Dâmâd and Bahâ'î al-Dîn 'Amîlî, one of the main figures of the "School of Isfahan", Mîr Findiriskî was also the most notable intellectual link between the tradition of Islamic philosophy in Persia and the movement for the translation of Sanskrit texts into Persian in India which is usually associated with the name of Dârâ Shukoh [q.v.].

Few works survive from Mîr Findiriskî's pen, but those which do are all of exceptional interest. Perhaps the most important of his works, which is also unusual in both its theme and treatment in the annals of Islamic philosophy, is the Persian Râtâ-yi șînâ'îyya, which concerns the metaphysical study of human society. In this work, various occupations and professions in society are placed in a hierarchy corresponding to the hierarchy of knowledge and also of being. Another of this treatises, Râtâ-yi harakat, again in Persian, deals with a refutation of the Platonic ideas upon the basis of Aristotelian physics. This is quite surprising, because Mîr Findiriskî is the author of one of the most famous philosophical șafrîds of the Persian language, beginning with the verse:

Heaven with these stars is lucid, pleasing, and beautiful; Whatever exists in the world above, has in the world below a form.

These verses clearly confirm the reality of the archetypal world.

As a matter of fact, this șafrîd is the best-known of Mîr Findiriskî's works in Persia, and one upon which his philosophical reputation rests. It was commented upon by such later figures as Muhammad Sâlîh Khâlîlhâri and ھâkim 'Abdâlah Darâbî. In his Persian answer to the question of ھâkî Muzaffar Kâghânî on whether there is analogy in quiddities, he follows those who believe in the principality of quiddity, and is far from the position of a metaphysician of being such as Mullâ Šadrâ. Mîr Findiriskî, this contemporary of Michael Meier and Robert Fludd, was also widely known as an alchemist, and it is in fact well established that he buried in an iron coffin to prevent his body from being stolen. He is thus the author of an Arabic treatise on alchemy, as well as a Persian poem on the royal art, both of which have been discovered recently but remain unedited. Finally, he is the author of a summary of the Yoga Vasistha and a voluminous commentary upon the Persian translation of this work by 亼nâm al-Dîn Fâânîpâbh, both of which are also still unedited. This commentary is without doubt one of the peaks of the intellectual encounter between Islam and Hinduism. Although only these few works survive from Mîr Findiriskî, and the manuscript of the Usûl al-fusul on Hinduism and a history of the Safavids attributed to him have never been discovered, he remains a vivid and lively figure in the later history of Islamic philosophy in Persia and survives to this day, even in the consciousness of the common people, as one of the greatest sages of the Safavid period.

where their treasuries and materials of war were stored; Yakut adds to this information that it was the capital of the Karinids since pre-Islamic times, an event recorded by the itineraries of the geographers, and an authority issues from 499/1105 onwards are all from the Sarāb region (iii, 890; ed. Beirut, iv, 260). The information that Firrm was the fortress of the Karinids was anachronistic by these geographers’ times, because the Bawandids continued to hold Firrm. They minted coins after the execution of Mazyar b. Karin in 225/840. The Bawandids held by the Iranian native princes of the Caspian coast, the town of Tabaristan in the region, firstly the Karinids and then the Bawandids, who were certainly installed there in the 4th/10th century (coins of Rustan b. Sharwin, no. 472 (discusses all issues then extant), and idem, ibid., 135-6). A certain amount of Muslim settlement may have taken place from early ‘Abbāsid times onwards, since Ibn Iṣḥāqī, who mentions it in his Ta’nk-i Tabaristan, considered it as a means to check in both man and animal the long for coitus (Abd Allah al-Ghunaym, Cairo 1392/1972, 17). They describe it as a fragrant plant with an acrid taste, square-sectioned stalk and leaves similar to those of the “mountain-mint”, also called Mentha buluk (L.; (b) Judhanaj). The term is of Persian, and apparently ultimately of Indian origin (p. 938, fol. 99a-b) and knows the following three kinds of it: (a) the “river-mint”, also called fawdanaj, fawtanaj, fudhandj, and variants) in Stephanos-Hunayn, with the “mountain-mint”, also called fudhandj, dafelθi, the “mountain-mint”, also called ndbuta (< Latin nepeta, cf. F. J. Simonet, Glosario de voces ibericas y latinas usadas entre los mozárabes, Madrid 1888, 397 f., with Mozarabic complementary forms), probably Mentha camphorata ssp. iatifolia, cultivar Camphorata.

The peppermint, also known as *Mentha pulegium* L.

This simple basic pattern was completed and differentiated by later pharmacologists. For the river-mint there appear the Arabic terms *nabak al-md* and *nabak nabri*, in Egypt *nabak al-tunsid*, in Andalusia the Mozarabic *mantarashar* (mastranto, etc., see Simonet, op. cit., 359); the last term indicates in fact another kind, namely *Mentha rotundifolia* L. In the literature of translations the river-mint probably corresponds with *siṣaṣāyūn* = *sisinbaryun* (and variants). The mountain-mint is later mostly equated with the "rocky" (*al-jākhr*) and with the wild mint (according to Ibn al-Wahlshiyiya in Nuwayri, *Nihāya*, xi, Cairo 1935, 69, 7). In Mozarabic the wild mint is called *buluyah, juliuyah* (*puleo < Latin *pulegium*, German *Peterselie*, see Simonet, op. cit., 452), and also *ghubrani* or *timid*. To this shohoh beheld above all the "cultivated mint" (*bulubani baha* that is, the peppermint, *Mentha piperita*, the *busubans* *tādżamun* of the literature of translation, well-known and favoured as a curative notion. The juice of the river-mint, taken with honey, has a strong heating and sweat-producing effect; taken with water, it helps against shooting pains and sciatica, promotes menstruation, drives off the tape-worm and is useful against jaundice since it opens up the sluggishness of the liver. Mountain-mint dilutes thick and stickly fluids which accumulate in the breast or lungs, and secretes them. Peppermint, taken with vinegar, does away with nausea and vomiting and clears haemorrhages. On the specific effect of menthol is based its use, common until now, for diarrhoea, gripes, flatulence and, above all, cardiotonic for the coronary tubes. A few verses praising the fragrant peppermint tea are found in Nuwayri, op. cit., 71 f.

**FUKĀḤA’ AL-MADĪNA AL-SABA’**

The seven "jurists" of Medina, to whom tradition attributes a significant role in the formation of *fīkh*. J. Schacht, who was especially interested in these *fukāhā*, wrote (Esquisse d'une histoire du droit musulman, Paris 1952, 28; cf. *idem*, *An introduction to Islamic law*, Oxford 1964, 31): "The Medinans... traced back the origin of their special brand of legal teaching to a number of ancient authorities, who died in the final years of the first and the early years of the second century of the Hegira. In a later period, seven of them were chosen as representatives; these are the 'seven jurists of Medina'.... Almost none of the doctrines attributed to these ancient authorities can be considered as authentic. The transmission of the jurists' doctrine of Medina only becomes historically verifiable at the same period, approximately, as in Iraq, with Zuhri (died in the year 124 of the Hegira)." It may further be noted, in this context, that the name of al-Zuhri [q.v.] figures prominently in the enumeration, by the biographers, of those who supposedly formed the audience of the seven *fukāhā*. J. Schacht (The origins of Muhammadan jurisprudence, Oxford 1950, 22 f.; 243 f.) is also able to show that the list of these jurists, to some extent variable, but finally fixed, rests on no foundation, and he considered that in fact it is a question of a conventional group of *sāḥibūn* mentioned for the first time in definitive form by al-Tahawi (d. 321/933) in his *Ṣāḥib maṣāni l-īhār* (Lucknow 1301-2, i, 163), then by Abu 'l-Faradj al-Isfahānī (d. 356/967) in his *Aḥāri* (ed. Beirut, ix, 136, 145). He recognises, however, that this list was definitely drawn up at an earlier date, although he cites no reference in this context. Now the *Fukahā* (ed. Cairo, 315) mentions a work of Ibn Abī 'l-Zāhir (d. 574/1179) [q.v. in Suppl.] entitled *Rā'y al-fukahā' al-sab'a min al-Madīna wa-mā al-fukahā* (Bibliography), which creates the impression that this group—whose composition had been probably already fixed—was felt, towards the middle of the 2nd century A.H. not only as a historical reality, but also as early evidence of the doctrinal pluralism accepted by Islam, since it was possible to find out divergencies of opinion from among equally-respected "scholars". The fact remains, however, that the seven *jurists* of Medina, to whom tradition attributes a significant role above all else to be purveyors of tradition, for whom the sources are, in the nature of things, almost all the same. In addition, it may justifiably be supposed that their reputation was established considerably later than the time of their disappearance, since the date of death of the majority of them is not known with certainty; one might however expect it to be fixed in the year 947/1213, designated precisely by the name *sanat al-fukahā*, since according to tradition a number of them are said to have died in that year.

Whatever the case may be, the definitely-adopted list comprises the following personalities, with regard to whom it has not been judged beneficial, following
the studies of J. Schacht, to undertake researches into the works of fikh:

I. — ABD BAKR b. `ABD AL-RAHMAN b. AL-HARIITH b. HISHAM b. AL-MUGHIRA AL-MAKHZUMI, a prominent KURAYSHITE who became blind and was surnamed AR-HAB or RABIB KURAYSH on account of his piety. AL-TABARI (ii, 272) is the only one to give him the name of `UMMAHAT and Ibn al-KALBISH-CASHEL (Tab. 23) mentions only two other sons of `ABD AL-RAHMAN b. AL-HARIITH. Too young to serve as a combatant at the Battle of the Camel [see AL-QAMAL], he remained a Kurayshite who became blind and was surnamed al-

...Hisham b. al-Mughira AL-MAKHZUMI, a prominent MALIK b. MARWAN, who commended him to the care of his son al-WALID. He passed on some HADITHS of the Prophet to a mufti secretary. Appointed mufti (ed. Beirut, ix, 135-47) and it is in the chapter devoted to him that Abu `AFARAJ enumerates twice (135, 145) the seven fikah", the second time with reference to a passage in which `Ubaydallah is supposed to cite his six colleagues; Schacht (Origins, 244) believes with some justification that this is a fabrication invented for the requirements of circumstances; it seems in fact to have a mnemonic quality, like two verses (with rhyme-`a/za`) quoted by Ibn KHALIKIN in the article on Abu Bakr b. `ABD AL-RAHMAN Ibnu `UbaydALLAH, who was blind, died in about 98/716-7 and was buried at al-BAKR.

II. — GHABISH, B. HISHAM, d. 118; in Nakt al-himydn, i, 102-3; Ibn TAGHRIBARII, ed. Derenbourg, 167, 168; Ibn al-KALBI, ed. BEITUR, ix, 135-47. He was considerably younger than his brother `ABD ALLAH [q.v.], in whose activities he played no part; in fact, he avoided involvement in politics, but it was he who is said to have brought to Abu al-MALIK b. MARWAN, in 73/692, the news of the defeat and death of the anti-caliph. He lived subsequently in Medina, where he is said to have written, on the instruction of Abu al-MALIK, a series of epistles on the beginnings of Islam. He collected traditions from his aunt `AIYSHA, from his mother, from his father (?) and from Abu Hurayra and passed them on notably to his own sons, to SULAYMAN b. Yasar (see below) and to al-ZUHRF. The biographers tell that he was most courageous and that he endured in silence the amputation of a foot.

III. — ABD ALLAH b. MARWAN, d. 185-6; in Sira, ii, 276; Mas'udi, iv, 148, 254, 255, v, 118 = §§ 1479, 1581, 1874; Ibn Khallikan, no. 215; Ibn al-KALBI, SUPRAINN, ii, 302-3; Ibn Hadjar, Tahdhib al-Tahdhib, iv, 228-30; Mas'udi, v, 462 = § 2214; Ibn al-IsmAD, Shajarat, i, 134.

IV. — `UbaydALLAH b. `ABD ALLAH b. `UtbA b. Mas'ud b. HISHAM b. `ABD ALLAH b. HISHAM, great-nephew of `ABD ALLAH b. MA'UD [q.v.], who collected traditions from his father, from Ibn al-YABDIS, from Abu Hurayra and other Companions and had a number of transmitters, in particular al-ZUHRF. He was extremely learned, according to his biographers, and is said to have been the teacher of `Umar b. `ABD AL-AZIZ at Medina. He is known as a MURDJITE. He owes to his skill as a poet his inclusion in the Akhbar (ed. BeirUT, IX, 135-47) and it is in the chapter devoted to him that Abu `AFARAJ enumerates twice (135, 145) the seven fikah", the second time with reference to a passage in which `Ubaydallah is supposed to cite his six colleagues; Schacht (Origins, 244) believes with some justification that this is a fabrication invented for the requirements of circumstances; it seems in fact to have a mnemonic quality, like two verses (with rhyme-`a/za`) quoted by Ibn Khallikan in the article on Abu Bakr b. `ABD AL-RAHMAN `UbaydALLAH, who was blind, died in about 98/716-7 and was buried at al-BAKR.

V. — ABD ALLAH b. `UtbA b. Mas'ud b. HISHAM b. `ABD ALLAH b. HISHAM, great-nephew of `ABD ALLAH b. MA'UD [q.v.], who collected traditions from his father, from Ibn al-YABDIS, from Abu Hurayra and other Companions and had a number of transmitters, in particular al-ZUHRF. He was extremely learned, according to his biographers, and is said to have been the teacher of `Umar b. `ABD AL-AZIZ at Medina. He is known as a MURDJITE. He owes to his skill as a poet his inclusion in the Akhbar (ed. BeirUT, IX, 135-47) and it is in the chapter devoted to him that Abu `AFARAJ enumerates twice (135, 145) the seven fikah", the second time with reference to a passage in which `Ubaydallah is supposed to cite his six colleagues; Schacht (Origins, 244) believes with some justification that this is a fabrication invented for the requirements of circumstances; it seems in fact to have a mnemonic quality, like two verses (with rhyme-`a/za`) quoted by Ibn Khallikan in the article on Abu Bakr b. `ABD AL-RAHMAN `UbaydALLAH, who was blind, died in about 98/716-7 and was buried at al-BAKR.

VI. — ABD ALLAH b. MARWAN, d. 118; in Nakt al-himydn, i, 102-3; Ibn TAGHRIBARII, ed. Derenbourg, 167, 168; Ibn al-KALBI, ed. BEITUR, IX, 135-47. He was considerably younger than his brother `ABD ALLAH [q.v.], in whose activities he played no part; in fact, he avoided involvement in politics, but it was he who is said to have brought to Abu al-MALIK b. MARWAN, in 73/692, the news of the defeat and death of the anti-caliph. He lived subsequently in Medina, where he is said to have written, on the instruction of Abu al-MALIK, a series of epistles on the beginnings of Islam. He collected traditions from his aunt `AIYSHA, from his mother, from his father (?) and from Abu Hurayra and passed them on notably to his own sons, to SULAYMAN b. Yasar (see below) and to al-ZUHRF. The biographers tell that he was most courageous and that he endured in silence the amputation of a foot.

VII. — AL-KAMIS B. MUHAMMAD B. ABD BAKR, Abu `ABD AL-RAHMAN Abu MuHAMMAD. Grander of...
the first caliph, and, as the story goes, of the last Sásānid, because his mother was allegedly one of the three daughters of Yazdāḏird (see al-Mas‘ūdī, Murūḏ, index, s.v. Šahrbanu), he was adopted by his aunt ‘Aṣgha after the death of his father in 38/658. He transmitted to al-Zuhri and to a number of other recipients traditions from his aunt and from several Companions, including Abū Hurayra. He died in ca. 1086/724-5 at Kudayd and was buried at al-Abwā‘. 

Bibliography: Dāhīz, Bayān, ii, 322; Ibn Kutayba, Ma‘ṣūf, 175, 588; Mus‘ab al-Zubayrī, Nasab Kūrgy, 279; Ibn al-Kalbī-Caskel, Tab, 21; Ibn Sa‘d, index; Abū Nu‘aym, Hīyāt al-anwā‘ī, ii, 183; Mas‘ūdī, Murūḏ, v, 463 = § 2214; Makdisī, Création, vi, 80; Ibn Khallīkān, no. 553; Harawi, Ḥayātī, 175, 588; Makdisī to the earliest source, Gada‘ī played an important role at the beginning of Akbar’s reign, and the regent consulted him on every matter because of his familiarity with Indian affairs. The Tūrānī nobles got annoyed with him when he did not join hands with them against the Shī‘ī Bayram Khān, in spite of the fact that he himself was an orthodox Sunnī. He retired largely from politics after Bayram Khān’s dismissal and settled in Dīsālsalmer. After a few years, Gada‘ī came back to Dhilī and spent his last years as a Śufi there. On his return, Akbar showed him much respect, most probably for his past services at the crucial time of his reign, and his land was also restored to him. Being wealthy, Gada‘ī led a luxurious life; he was very fond of music, in recognition of his father’s services, Humāyūn made Gada‘ī his courtier in place of Dājmālī. Gada‘ī was also a gifted poet and musician, composing verses both in Persian and Hindi, his musical compositions in Hindi being famous during Akbar’s reign. 

After Humāyūn’s defeat by Shīr Shāh Sūrūn Kaynawd in 1941/1550, Gada‘ī fled to Gujratāt; from there he went to Arabia for the pilgrimage. On his return he remained in Gujratāt where he was joined by his murādīs, some of whom belonged even to Afghan families, and he became famous in Gujratāt for his opulent sessions of tawā‘īkh. With the restoration of Mughal rule in India in 962/1555, the political situation changed, and Gada‘ī again joined Akbar’s court in the Pandjāb some time before the second battle of Panipat took place in Muḥarram 964/November 1556. Bayram Khān Khān-i Khānān, who had become the regent, appointed Gada‘ī as Sadr of the Mughal empire for old friendship’s sake as well as for political reasons, hoping that Gada‘ī would act as a liaison between the Mughals and the Indian elite. But the Mughal historians of Akbar’s reign, who generally compiled their works after the fall of Bayram Khān, are critical of Shaykh Gada‘ī, accusing him of arrogance, high-handedness and favouritism in the distribution of land-grants and stipends among the Shaykhs, Sayyids, scholars and other deserving persons. Akbar also complains in his farnān to Bayram Khān, issued at the time of the latter’s dismissal, that one of his misdeeds was the elevation of Shaykh Gada‘ī to the Sadrī in preference to Sayyids and ‘ulamā‘ of nobler origin. In fact, all such complaints and grievances were concocted to provide Akbar with a pretext for removing Bayram Khān from power. 

According to Shaykh Rizk Allāḥ Muḥtākī, the earliest source, Gada‘ī played an important role at the beginning of Akbar’s reign, and the regent consulted him on every matter because of his familiarity with Indian affairs. The Tūrānī nobles got annoyed with him when he did not join hands with them against the Shī‘ī Bayram Khān, in spite of the fact that he himself was an orthodox Sunnī. He retired largely from politics after Bayram Khān’s dismissal and settled in Dīsālsalmer. After a few years, Gada‘ī came back to Dhilī and spent his last years as a Śufi there. On his return, Akbar showed him much respect, most probably for his past services at the crucial time of his reign, and his land was also restored to him. Being wealthy, Gada‘ī led a luxurious life; he was very fond of music, in recognition of his father’s services, Humāyūn made Gada‘ī his courtier in place of Dājmālī. Gada‘ī was also a gifted poet and musician, composing verses both in Persian and Hindi, his musical compositions in Hindi being famous during Akbar’s reign. 

After Humāyūn’s defeat by Shīr Shāh Sūrūn Kaynawd in 941/1550, Gada‘ī fled to Gujratāt; from there he went to Arabia for the pilgrimage. On his return he remained in Gujratāt where he was joined by his murādīs, some of whom belonged even to Afghan families, and he became famous in Gujratāt for his opulent sessions of tawā‘īkh. With the restoration of Mughal rule in India in 962/1555, the political situation changed, and Gada‘ī again joined Akbar’s court in the Pandjāb some time before the second battle of Panipat took place in Muḥarram 964/November 1556. Bayram Khān Khān-i Khānān, who had become the regent, appointed Gada‘ī as Sadr of the Mughal empire for old friendship’s sake as well as for political reasons, hoping that Gada‘ī would act as a liaison between the Mughals and the Indian elite. But the Mughal historians of Akbar’s reign, who generally compiled their works after the fall of Bayram Khān, are critical of Shaykh Gada‘ī, accusing him of arrogance, high-handedness and favouritism in the distribution of land-grants and stipends among the Shaykhs, Sayyids, scholars and other deserving persons. Akbar also complains in his farnān to Bayram Khān, issued at the time of the latter’s dismissal, that one of his misdeeds was the elevation of Shaykh Gada‘ī to the Sadrī in preference to Sayyids and ‘ulamā‘ of nobler origin. But the Mughal historians of Akbar’s reign, who generally compiled their works after the fall of Bayram Khān, are critical of Shaykh Gada‘ī, accusing him of arrogance, high-handedness and favouritism in the distribution of land-grants and stipends among the Shaykhs, Sayyids, scholars and other deserving persons. Akbar also complains in his farnān to Bayram Khān, issued at the time of the latter’s dismissal, that one of his misdeeds was the elevation of Shaykh Gada‘ī to the Sadrī in preference to Sayyids and ‘ulamā‘ of nobler origin. In fact, all such complaints and grievances were concocted to provide Akbar with a pretext for removing Bayram Khān from power.
tradition from ‘Ali b. al-Din ‘Ali b. Ahmad al-Sabir (d. 690/1291) of Kalyar, the founder-figure of the Sāhibiyā branch of the Chishtiyya. Though nominally the disciple and successor (khātīf) of his brother-in-law, Muhammad b. Arif b. Ahmad ‘Abd al-Haqq, ‘Abd al-Kudūds appears to have been initiated into Sufi practices by Shāykh Piyārē, an old servant at the khānqāh. In 896/1491 ‘Abd al-Kudūd migrated to Shāhābād (midway between Sirhind and Fānpāt) at the suggestion of Sikandar Lodi’s amīr ‘Umar Kháñ Kāsi. When Bābur sacked Shāhābād in 932/1526, ‘Abd al-Kudūus moved across the Djamna River to Gangoh where he died in 944/1537 (not in 950/1543 as noted in ‘An-i Akbari), and is venerated at his shrine until today.

His most important disciples are his son, Rukn al-Dīn Muhammad (d. 982/1574) who collected the anecdotes about his father in the Latā‘īf-‘i Kudūdis (Dihlī 1311/1894; including the reminiscences of the Afghān soldier Dattā Sarwan); his chief khātīf, Dīlāl al-Dīn Muhammad b. Māhmūd Thānāsāri (d. 989/1582), the author of Tahkik arddi al-Hind (Fānsād al-Jamī‘ī, Dihlī 1311/1894; including the reminiscences of the Arab b. Ahmad Sirhindī, bir dhī al-sudr at Akbar’s court. ‘Abd al-Kudūus wrote commentaries on Suhrawardī’s Fusus al-hikam at Akbar’s court. His brief compendium of Anwar al-kudūsīyya was brought into use for measuring road lengths; while a much smaller gaz was introduced in use until 994/1586, when Akbar instituted the gaz-i ildhī, equal to ca. 32-32½ inches.

The gaz-i ildhī was the standard unit of measurement during the reign of Akbar, and continued to be so during the reign of Dijāhāngīr. During the reign of Shāh Dijāhān, a slightly longer measure, the dẓrḍ-‘i Shāh Dijāhānī, of about 32.80 inches was introduced for calculating road lengths; while a much smaller gaz was brought into use for measuring area.

Bibliography: Abu ‘l-Fadl ‘Allāmi, ‘Adī-i Akbarī, tr. Jarrett, Calcutta 1948, iii, 437; ‘Abd al-Haqq Dihlawī, Akhār al-akhyār, Dihlī 1332/1914, 224-225; Muhammad b. Hasan Ghawthī Mandawī, Gulsār-i abrāh (= Adhkdr-i abrāh, tr. Urdu, Dihlī 1312/1895), some of which were addressed to Sikandar Lodi, Bābur and Humāyūn as well as to various Afghān and Mughal nobles. His works also include the Anwar al-sīyān fi asrār al-makānīn (Lāghnā’īn 1295/1878; ‘Alīgār 1323/1905; Lāghnā’īn 1327/1909) which records the sayings of Ahmad ‘Abd al-Haqq Rudawlawī; a Sūfī tract, Qarid‘ī al-fuqad‘ (Dihlī 1314/1897); and two mystical treatises entitled Nār al-hudūd and Khwān al-dīn (MS Ezh 1924, 14 and 16). His brief compendium of ‘Anwar al-kudūsīyya (Dihlī 1306/1889) advocates a popularised version of wahdāt al-wujūd which, alludes to Nathapanthī Yogic practices.

In accordance with our actual knowledge, Ibn Abū ‘Uṣayfīyya (‘Uṣayfī al-anbūhī, ii, 133, 14), Ibn al-Baytār was accustomed to take this work continuously with him on his scientific journeys, together with a few others. Other writings of al-Ghāfīkī are not known.

M. Meyerhof repeatedly expressed as his belief that al-Ghāfīkī was the most important pharmacist-botanist of the Islamic Middle Ages (latterly expressed in ‘Sahr aswād al-‘ulkār. Un glossaire de Materia medicalis composi par Marmiodes, Cairo 1940, introd., xxiv f.).In accordance with our actual knowledge, Ibn Samaḍjīn and Ibn al-Rūmīyya, both also Spaniards, will have to be put on the same level as al-Ghāfīkī. The three of them, especially Ibn al-Rūmīyya, were primarily not pharmacists but botanists; because of their exact description of
plants they were copied by Ibn al-Baytār, not entirely—as Meyerhof thought—but to a great extent. The Arabic text of al-Ḡafikī has become known only in recent times; until then one had to depend on a Latin translation from which M. Steinenschneider compiled a list of drugs, Grandmaison's Verzeichnis einfacher Heilmittel, in Virchow's Archiv für pathologische Anatomic und Physiologie, lxvii (1879), 507-48; lxxv (1881), 132-71. To the manuscripts enumerated in M. Ullmann, Medizin im Islam, 277, should be added a valuable copy, found in Tamgrut and now preserved in Rābat, which contains the first part of the work (up to the letter ẓayy) (cf. Ṣayyid Muḥammad al-Ṭāṣir, in Trudy 15. Mezdunarodnogo Kongresa Vostokovedov, ii, Moscow 1963, 19).

Al-Ḡafikī arranged his collection according to the abjad alphabet. Names of drugs beginning with the same letter appear twice under this letter; firstly as heading of a section and, as sources are mentioned, then again in a kisi fā'ir al-asmd, i.e. a short list of synonyms from various languages. As sources are mentioned Dioscurides, Gaēn, al-Ẓāri, Abū Ḥanifa al-Dinawari, Ibn Samadjun, al-Dīzmāshkī, Ibn al-Tarbāf (Abū b. Rabbān), Ibn Wāfīd, Ibn Sinān, an unknown person (maghāfīl, often), Ibn Māsawaw, al-Ṭāṣir (Ṣaybī b. Sulaymān), al-Fāliḥa al-mubātāiya—to name only those who occur most; personal observations of the author often form the conclusion. The status of the manuscripts now known is sufficient to justify a critical edition of this important work.

A century after al-Ḡafikī, Barbebraeus [see Ibn al-Bīrī] composed an extract from his book on drugs under the title Muntakhab Kitāb Dīmāt al-mufraddt li-Aḥmad... al-Ḡafikī, available in an edition, with translation and valuable commentary, by M. Meyerhof and G.P. Sobhy, that unfortunately reaches only as far as the letter ṣayn. It is a valuable copy, regarded as its suburbs: on the Golden Horn the Muslim quarter of Kāsim Piās, the site of the Ottoman arsenal (iserān-e ẓāmīr) and, on the Bosphorus, that of Ṭopkāhane, which developed after the conquest around the state cannon-foundry (topkāhane-e ẓāmīr) outside the Porta di li Bombarде/Ṭopkāhane kaplās.

Ḡalaṭa (from the quarter of the Galatians) in the early Byzantine settlement of Ṣyktā) was of little significance until the aftermath of the Fourth Crusade and the restoration of Byzantine rule in Constantinople. The original concession situated in a locus apud Gathalam, granted to Genoa in 1267, lay along the lower shore of the Golden Horn, between the present-day Atatürk bridge and the ferry terminus at Karaköy, with its landward limits marked by what is now Vonyoda Ḍäd neces and Yānīk Kapl Ṣokāghī. This settlement was burned by the Venetians in 1296; rebuilt and surrounded by a wall; delimited by an Imperial edict of 1 May 1303 (translation in Belin, Latinité, 129); destroyed once more by fire in 1315 (accessiti... igne accidentalis quasi tota Peire combusta est); and, despite a Byzantine interdiction, fortified on the land side and rebuilt in the following year. Thus established, Ḥalaṭa intra muros, the “communità de Peyre”, self-governing under the authority of a podestà sent out annually from Genoa, developed rapidly to reach its final form and extent in the years immediately preceding the Ottoman conquest of Constantinople. The first extension to the original mensect was constructed in 1348-9, enclosing a triangle of steeply rising ground with its base formed by the eastern half of the long land-wall and its apex marked by the massive circular Torre di Cristi, i.e. the Ḥalāṭa Kulesi which has ever since been the major landmark and symbol of the district.

From this time, i.e. from the middle of the 13th/14th century, the Republic of Genoa and its colony of Peru cultivated close relations with the rising power of the Ottomans—cf. the letter of the Signoria dated 21 March 1356 to “Messer Orscham, grande amirato (i.e. amiri kabīrī) de la Turchia”, from which it is clear that the Genoese of Ḥalāṭa—“i nostri de Peira che sum nostri figi e servioi e verai”—were already closely involved in commercial relations with the Ottomans and acting as their political allies against Venice and Byzantium. By the latter part of the same century, if not earlier, Muslim merchants must have been a familiar sight on the streets of Peru: the agreement concluded in 1389 by Murād I and Genoa (Belgrano, 146-9) provided for the partial exemption from customs dues of “Türks” who were engaged in commercial activities in Ḥalāṭa, and in the reign of Bāyezīd I Ottoman envoys were received by the podestà, and members of leading Perote families were sent to the Ottoman court as ambassadors (Belgrano, 153, 160).

In the late 14th-early 15th centuries, almost certainly in response to the first Ottoman siege of Constantinople by Bāyezīd I, Ḥalāṭa intra muros took on its final form. The districts which lay immediately to the west of the original concession and the extension of 1348-9 were enclosed by a wall which...
ran from the Tower to the Golden Horn, and slightly later the entire eastern quarter of Galata, fronting the Bosphorus, was also enclosed by a wall. The total area of Galata intra muros was thus brought to approximately 370,000 square metres, the circuit of the outer wall being approximately 2,900 metres (cf. J. Gottwald, , Die Stadtmauern von Galata, in Bosphorus, N.F. iv [1907], 22).

The fortifications of Galata were further strengthened and improved by the efforts of successive podestà in the last decades of Genoese rule. Most of the surviving or recorded inscriptions date from this period (cf. the collections, made from the 17th century onwards, by Covel, de Mat Latrie, Belgrano, Gottwald, etc., listed in the Bibliography). The Genoese colony at this time played an ambiguous role between the Ottomans and the Christian powers, e.g. in 1444 field-guns ("canons et cullevines") were supplied from Galata to Murad II (Wavrin, Recueil de chroniques, v, 49). Even at the last hour, when the fate of Constantinople was sealed, the authorities in Pera made desperate attempts to avoid the inevitable conquest by the Ottomans. In 1452 a semi-circular curtain-wall was built on the uphill side of the Tower in order to provide protection from artillery bombardment, but in the new era of gunpowder warfare it proved insufficient. Galata and its defences were vulnerable from the heights of the Bosphorus and the Golden Horn and the hilly area to the north of the Tower. Two centuries after the conquest, Ewliya Celebi noted (Sevâhat-nâme, i, Istanbul 1314, 426-36) that in the reign of Murad IV, Galata possessed 60,000 Muslim and 200,000 non-Muslim inhabitants, divided amongst eight Muslim, seventy Greek, three "Frank", i.e. Latin, and two Jewish quarters (mahalle).

Simultaneously with the establishment and growth of Muslim settlement occurred changes in the composition of the Christian population of Galata. Elements of the Latin population were enumerated in 1580-1 as 500 kharâqi-paying subjects of the sultan; 5,000 liberated slaves; 2,000 slaves "of all nationalities"; five or six hundred "étrangers de passage", mostly from Spain, Sicily and Venice; one hundred staff of embassies and a further six or seven thousand slaves (excluding the labour corps of the arsenals at Topkâhâne and Kâzım Paşa). Many of these post-conquest Latin elements in Galata later came to claim a more exalted pre-conquest lineage.

After 1453 the walls of Galata lost most of their significance, and from the early 10th/16th century, settlement on the heights of Pera, e.g. by the "beys son" Luigi Gritti, son of a doge of Venice and constant and growth of Muslim settlement occurred changes in the composition of the Christian population of Galata. Elements of the Latin population were enumerated in 1580-1 as 500 kharâqi-paying subjects of the sultan; 5,000 liberated slaves; 2,000 slaves "of all nationalities"; five or six hundred "étrangers de passage", mostly from Spain, Sicily and Venice; one hundred staff of embassies and a further six or seven thousand slaves (excluding the labour corps of the arsenals at Topkâhâne and Kâzım Paşa). Ghalata occurred in the middle of the 19th century. In 1844 de Mas Latrie could still describe Ghalata as "une ville franque, qui existe encore entier avec son donjon, ses tours, ses eglises, ses creneaux". Within twenty years, the walls, with the exception of the Tower and some fragments, were demolished and the land-wall ditch filled in. This act, together with the construction of the one, later two bridges across the Golden Horn, the rapid expansion of Pera/Beyoğlulu to the north in the latter part of the 19th century; the granting of a degree of municipal autonomy to Beyoğlulu and the construction of a short underground railway (1884) from Karaköy to the heights of Pera and of tramways, began the final effacement of Genoese and Ottoman Ghalata intra muros as an identifiable entity. Since then, the process has accelerated, and the development of a new economic centre of gravity in Beyoğlulu on the axis of Taksim/Harbiye, when coupled with the decline into insignificance of the non-Muslim indigenous population of Ghalata, has tended to erase further the differences between Ghalata and the rest of Istanbul.

GHAHÂNA (a.), a feminine singular noun with the value of a collective (with the plurals agnâm, ghânâm and agânâm) designates the class of small livestock with a predominance, according to the countries, of sheep (şevâ al-da’n, şevâh al-da’în, dâîna), or goats (Şevâh al-me’dî, ma’dîça). Like the two other collectives ibîl [q.v.] "camelidae" and kâyîl [q.v.] "equidae", ghanâm defines one of the three aspects of nomadic pastoral life covered by the term bakar [q.v.] as well as an important activity of the sedentary agriculturist countryfolk [see filâha], who may be periodic migrants; small livestock constitute for the one group a direct and unique source of subsistence (kânî al-ghanâm) with the milk, the fleece, hide and rarely the meat and, for the others, an extra product negotiable in the fairs through the intermediary of the sheep merchant (gâllâb).

The root gh-n-m implies the acquisition of goods by means other than those of barter and purchase; the synonyms ghâm and ghântîma [q.v.] "booty, war trophy" set in relief this idea, excluding from it any allusion to the means of illegal and immoral appropriation. Also, ghânâm (dialect. ghêm güiem) is understood in the sense of "sheep-goat patrimony" (see Kurân, VI, 146/147, XX, 19/18, XXXI, 78) completing with bakar [q.v.] "cattle" the full meaning of ndâm "livestock" (pl. anlâm, used 32 times in the Kurân). In Arabic, it is the equivalent of the Latin nouns peculium and pecam, derived from pecus "beast". Parallel with ghânâm and with the same meaning, one finds, especially in the Maghrib, the terms mâl [q.v.] and kasb/kiss [q.v.], whence the dialectal kiba/kib ("block of sheep" (cf. Berber ulbi, from the radical l to "possess").

Although the Kurânic verse (VI, al-An’âm, 144/143) saying: "[Allah has provided you] with eight species of animals in pairs, two for the sheep and two for the goats..." does not make any discrimination between the two species, a long polemic between intellectuals reported by al-Dâjhî (Hâjâwač, v, 455 ff.) brought into opposition the partisans of the sheep and those of the goat. However, this sheep-goat duality was not new, since echoes of it are found in the two monotheistic religions prior to Islam. In fact, to the degradation of the goats, the Jews had their rite of the "scapegoat" at the time of their Festival of Atonement, while Christian demonology saw in this animal an incarnation of the devil. By contrast, sheep enjoyed the favour of the two communities, as they were favourites of God; there is the ram of Abraham, the paschal lamb, the symbol of the mystical lamb applied to Christ and the parable of the "good shepherd" wisely leading his "sheep" (Vulgar Latin ovula, from ovis). The Arabs, long
before Islam, used to sacrifice a ewe (ṭīṭra) to their deities, in the month of Radjāb, whence its name ṭaḥābaya, by way of prayer and as an act of thanksgiving; while in the Maghrib and Tunisia in particular, the cult of the ram was widespread, remi-
nissant of the Egyptian cult of Ammon Ra, and it was only by the energetic repres-
sions of the Aghlabid amirs, in the 3rd/9th century (see T. Lewicki, La culture du bélier en Afrique du Nord, in Hesperis, xxxv [1948], 93-124). In veneration for Abraham, Islam preserves the rite of the sacrifice of the sheep on the 10th of the month of Dhu l-Ḥijja, the day of the pil-
grimage [see ḥajj], culminating at Mina [q.v.] called ẓam al-nahr “day of slaughter”; for all the Muslim countries it is the “feast of the sacrificial victims” (ṭid al-aḍḍāḥ) or “feast of the offerings” (ṭid al-karbān) and, in the Maghrib, “the great feast” (al-ṭid al-kabir). Engaging in historico-religious arguments, the apol-
ologist for the sheep would point out the superiority of the former over the goat on account of its wool, its milk and its flesh; furthermore, in grazing, the sheep does not have the “acid tooth” of the goat which uproots the plants, damages the bushes by devouring the boards and heysaks down buildings by its need to climb over everything, whence the proverb al-maṣ'āt tabāti wa-tā tabāt “the goat destroys and does not build”. Finally, the sheep with his thick fleece and covering tail decently conceals his posterior, whereas the stump of tail of the goats, shamelessly raised, is a defiance to modesty, not to mention the goatish odour which makes the company of the ṭaqyīs “goat-herd” shunned. Linguistically, to call someone a ṭaqṣ (pl. ṭaqṣa, dialect, ṭaṣ) was a great insult and, notably, in the expression mā ḥaṣṣa ʿllā ṭaqṣa fi ṣuḥma “he is only a goat in a boat”, alluding to the nau-
seous and persistent smell which the animal leaves wherever it has stayed. On the contrary, the nick-
name kabīb “ram” was eulogistic and flattering, es-
pecially in the metaphor ḥaṣṣa kabīb min al-khāliṣ “he is a chief ram”, synonymous with ḥaṣṣa faḥl min al-
ṣuḥma “he is a chief stallion”, i.e. “he is a champi-
oni”. Against these notions is the defender of the goats al-ḥaṣṣ al-maṣṣ, in whom one should see, at the time, either the Ḥijāzī or the Yemenī, their respec-
tive homelands being particularly abundant in goats; for such a person, the goat outclasses the sheep as much by the varied products which it supplies as by its vitality and resistance. In the society of go-
atherds one would say of an energetic man: ḥuṣa maṣṣ min al-nīqāl “he is a goat among men”, whereas one would snub the incapable wearing with mā ḥaṣṣ ʿllā maṣṣ min al-nīqāl “he is only one of the ewes”. Apart from the important place occupied by goats’ hair, as smooth (ṣabah) as flock (mirkūṣ), the equal of wool (lubad, ʿṣf) among weavers, goats’ hide was and still is the principal material for containers, bags, straps, shoes, cloths and covers (see the list in Hayawān, v, 485); although camel-breeders, the tribes-
men of Mudar remained faithful to their red tents of superior race). Among the great nomadic camel-breeders scorn for the small nomadic sheep-breeders was expressed by degrading proverbs such as al-ʿa ḫīl beḍ al-nīq “the she-goats after the she-camels”, stigmatising the misfortune of a group forced by poverty to give up camels for small livestock, for, to them, this meant really a descent, since al-ṣil fā ḫīl wa-l-būḥ “the cloven hoof of small livestock is not seen alongside the hoof of the camel”. All these tribal oppositions arising from the kinds of husbandry were to vanish with Islam, for the position of the Prophet in favour of small livestock was very clear; having been a shepherd himself, he was pleased to say “Among all things, small livestock is an invitation to modesty and an incitement to choose poverty, leaving aside grandeur and pomp; prophets and just men were pastors of small livestock”. In his eyes, the sheep-goat association was for man a divine gift and he used to say, moreover, “I recommend you to have the greatest care for sheep, clean their mucus (rūḥdm) and clear their enclosure of every thorn and stone, for these animals are also to be found in Paradise”, advising the shepherd to perform his prayers near the fold. Small livestock also provide him with a metaphor to express his aspirations for the Islam-
isation of the conquered regions by encouraging the crossing of beasts with a black fleece (= the Persians) with those with a white fleece (= the Arabs, of super-
ior race).

In the linguistic domain, sheep and goats were defined by a considerable number of terms which the great Arab philologists of the 2nd/8th and 3rd/9th centuries attempted to gather together in specialised works, of which very few have been preserved for us. One of the first seems to be al-Nadr b. Ṣhamayl (d. 203/818) [q.v.] with his Kitāb al-ghanam, the fourth volume of his huge encyclopaedia of Bedouin life, the Kitāb al-Sifāt. At a later date there are a Kitāb al-nīq al-ghanam and a Kitāb al-ḥil wa l-ṣil of Abī Zayd al-ʾAnṣārī (d. 214/829) [q.v.], a Kitāb al-ghanam ascribed to al-Ḥijāzī al-Awṣāt (d. ca. 215/830 or 221/835) [q.v.], the Kitāb al-ṣil (ed. Hafner, 1895) of al-ʾAṣmāʾī (d. 213/828) [q.v.] and, finally, a Kitāb al-ghanam wa l-ṣilāthā of Abī Ḫubayd al-Kāʾṣim b. Sallām (d. 224/838) [q.v.]. Ibn Ṣūṭūd gives an idea of the extent of ancient terminology concerning goats and sheep in his Maḥṣāṭas (vii, 176-95; viii, 2-20) in the chapter kitāb al-ghanam, consisting of about forty pages. To this ancient base must be added the other mass of material contained in the different Arab and Berber dialects, from Ḥūrāk as far as the Atlantic Ocean, of the tribes devoted to the husbandry of small livestock. The scanning of several lexicons dedicated to these dialects, such as that of G. Boris for South Tunisian (Parler arabe des Marazig, Paris 1958) or that of Cl. Denizeau (Parlers arabes de Syrie, Liban et Palestine, Paris 1960) allows the evaluation of a minimum of two hundred terms, the elementary word-store which each tribal group uses in the exer-
cise of its pastoral activity; this approximate figure still remains well below the reality for some sections. Such an abundance of vocabulary sets in relief the vital character which the husbandry of sheep and goats presents for a mass of Muslim populations, sedentary as well as nomadic; this linguistic richness is not specifically that of the Arabic language, but is to be found among Turkish-speaking shepherds as
well as Persian-speaking ones and Berber speakers.

In spite of this plethora of terminology, it remains hard to define precisely the many strains of sheep and goats belonging to the Arabs and other Islamised peoples, just as in the West the zootechnicians have had some difficulty in unravelling the skeins of the domestic strains of the sheep (Ovis aries), undoubtedly descended from an oriental wild sheep (Ovis ammon), as well as those of the goat (Capra hircus), possibly a descendant of the Aegagrus or Pasang (Capra ibex aegagrus), as these two species are naturally polymorphs.

Among the sheep one can distinguish, according to the language and in a very general manner, the strains with a large fatty tail (alwa) or Barbary sheep (= from Barbary or the Maghrib), those with a long, non-fatty tail, those with long humps peculiar to India and Guinea and from which derive the strains of Northern Europe and, finally, those of Spain with the “merinos” introduced from the Maghrib under the dynasty of the Marinids whose Hispanised name it has kept. All these strains are subdivided, according to the desired aim of their breeding, into wool sheep and dairy sheep; the sheep kept for its meat, despite the absolute legality of the consumption of its flesh, has not attained in the lands of Islam the importance that it has attained in feeding Western Christendom.

On the subject of zoological strains, the Arab authors and al-Dähīz in particular (Hayawān, v. and vi, pasim, see index), speak only of a few, especially in Arabia, the most widespread being distinguished by some typical anatomical anomaly such as dwarfishness. Also among the species with a very foresh ortness shape there is the hadštāf “the docked one” of the Hijāz and Yemen with a black fleece and almost without a tail and ears; similar was the kahd, but with a russet-coloured fleece. Bahrayn had the nakad “puny beast”, a stunted sheep, but a good wool producer, whose small size gave rise to the image ādghal min al-nakad “slighter than the dwarf sheep”. In Yemen the bahālāt is still bred, itself a dwarf, and the timtim with shorn ears and with a woolly dewlap under the throat; whereas the adghīt was large and its wool of a pure white, while the gālam of Taʾīf, very high on its hooves, had a fleece so smooth that it approached half-wool of African origin. Among the strains with a fatty caudal wen, apart from the Barbary sheep (dial, mahdīyā), the “Caracul” [see KALB] of Central Asia cannot be omitted, with its long wavy black fleece whose lambs were frequently sacrificed for their precious coat called “breitschwanz” or “astrakan” [see ASTRAKHAN].

For the goats, it can be maintained that the majority of the strains of Arabia and the Near East were of African origin. The nihdīya “Nubian” and the habashīyya “Abyssinian” goat were distinguished from each other, both large with broad, hanging ears and a short fleece. Quite similar was the hadštīna (from Mount Ḥadān) in Najjd and whose hair was black or deep red. The šhamīyya “Syrian” strain was long-haired, being related to the strains of Asia whose most renowned representative across the centuries remains the “angora” (ankar) [see ANKARA] from the name of the great Turkish commercial centre where its “flock” (mirīzī, mirīzḵ, mīřīz) was known to be of Kashmir and Tibet, whose silky down covered with a sub- (samrī), unwashed and separated from the buttermilk, is given to the lambs and kids or incorporated in culinary preparations. On the other hand, the fresh milk (labān) consumed immediately either as a drink or a food or put to curdle with the rennet (infāhā) to make a mild cheese (gābn) whose residual whey (al-ʿubn) is given to the lambs and kids or incorporated in culinary preparations. On the other hand, the fresh milk and the butter as it comes from the churn would be, in the eyes of the Bedouin, an unthinkable waste in view of the three or four sub-products present in the milk; hence one of the interest shown is in the churning of the goat milk and its contents in this dialectal metaphor from the Maghrib yeddoh fi al-ṣāqṣāt tīdīl mā ḍābd el-līhīn yeghdī ez-zehdāl “He has his hand in the churn; if he does not draw out buttermilk, he will draw out butter!” to describe someone who has
found a situation which is very lucrative and not very tiring, and parallel to the French image “avoir trouvé un bon fromage” (cf. American English “He became a big cheese”).

Apart from the two daily necessities of the watering and the milking, the shepherd’s year numbers several more for the general survival of men and beasts. First, at the beginning of winter, there is the shearing (djazzza) of the wool-bearers and the shearer (djazzza) has to know how to manage the shears (djalam) with dexterity and rapidity on the animal, while it is held on the ground; the mass of wool obtained (djazzza) will serve as currency in the oases for utensils and durable foodstuffs (dates, sugar, flour etc.). Another crucial period and, perhaps, the most harrassing for those responsible for the flock who have to stay awake day and night, is that of the parturition (miñâ) of the pregnant females with all the care demanded by mothers and newborn, lambs and kids being confused at the beginning under the names sakhla (pl. sakhl, sikhâl, sakhâlûn) and bahna (pl. bahâm, biânâmûn). The latter, as they grow, take on different names whose system of nomenclature will not be treated exhaustively here, as it varies from one region to another. If a birth threatens to be difficult and may endanger the life of the female in labour and that of the young, there is no hesitation in practising a Caesarian section and the off-spring saved is called hallûn, hullûm. In ancient terminology, the distinction between lamb and kid only appeared clearly at the age of weaning (fitâm) around four or five months. Until then, the young lamb-kid (badhadj., farm, furdr, furfur...) is left to its mother and, if there are only goats. With the sheep and goats can be very variable as to the number of an infinitesimal part. Among the sedentaries, a youth suffices for the he-kid, (badhadj., farm, furdr, furfur...) if there are only goats. With the male is the (badhadj., farm, furdr, furfur...) for the shearers, the term “troupeau” (French) and “flock” (English), without numerical precision, do not have a direct correspondent in Arabic. The joining together, for common needs, of several small family flocks of ten to forty animals, (comp. “a sea of sheep and goats”) and with this idea of multitude one arrives at the ghanam mughannama (the group is very rich in sheep and goats”).

Equally highly variable is the condition of the pastor (vârî, dial. vârîb, Berber ameka, anâdâmîn), shepherd or goatherd, or most often, both at once, according to the framework of the society in which he is integrated. Among the sedentaries, a youth suffices to guard the few beasts of the family circle, but, in some villages, the livestock of each is gathered into a single flock which may be quite large, each animal bearing the mark of its owner, and they also have recourse to a professional shepherd. He is engaged under a renewable seasonal contract covering two seasons (kanâla, either summer-autumn, or winter-spring) and he is paid mainly in kind. On the day of his engagement he receives a small sum as a deposit, the other garments (tâbî, burnûn) and the hâm indispensable against inclement weather, a large woolen haversack (kurz, amârâ) to carry his personal possessions and, also, for those of the newborn who may arrive during the journey for pasture, and a crook (“nikkâz, hâsfî) which can be a strong club as a defensive weapon. He is assured of daily food and at the expiry of his contract, he has the right to twenty lambs and kids (nâdâs). In the case of his contract not being renewed, he gives back the deposit, the cloak and the haversack. In fact, the good shepherd is automatically re-employed and his services for the same employer can last a lifetime (seeCodin, Chrestomathie marocaine, 216 ff.).

However small a flock may be, the shepherd has to be vigilant at all times; he must prevent the animals from trespassing on the cultivated lands, round up the stragglers, ward off every danger from predatory carnivores and thieves, assist a female in her labour and take care of the newborn. He is bound to compensate for every animal that dies through his negligence, but if a wolf or lion or panther kills it despite his intervention, he is cleared, if he can bring the carcasse (biûtâm) to justify himself. This last clause hardly functions nowadays where governments have practically eliminated the insecurity reigning in the isolated regions, but the danger from thefts has not entirely disappeared. In addition to his dog, the shepherd may have the help of a youngster (râssûlî) to keep the young apart while their mothers are milked or to lead the animals in small groups to the watering place. It is in this school that the boys learn the craft. Even among his flock the shepherd finds auxiliary help with, on the one hand, the “leader” (dalul, marî, marîn) wearing the chief’s alf collar (gabbbâl, ghabbbânt), and old ram or billy-goat whom the flock follows blindly in ranks fleece against this extra burden. In the evening, the flock having returned to its covered or open fold (sotâ, zotûb, markâd, bazzâ, sitâ), the shepherd goes to eat with his master and returns to sleep among his animals. They, confident in the man, obey his orders expressed by fixed onomatopaeic calls such as bâhût to gather them together, sikkî, ággît, hurût, gîrît, têtî to urges them
on, highl, kakhkhl, taktabl, to stop them and hitchl to invite them to the water. Contrary to the usage in Christendom, the animals of flocks, in Islam, do not wear bells.

In the mountainous regions (the Atlas, Lebanon, Sinai, etc.) an annual migration takes place following the periods of the growth of herbage at high altitude. For these fixed migrations the flocks of several clans or villages are joined together and the long line of horns and undulating chines slowly climbs the slopes accompanied by the cohort of dogs, mules and donkeys charged with the food and necessary impediments for camps of several months. For this occasion, each owner delegates a man in charge (ka’ad) to coordinate and control the movements of the group and to ensure the feeding of the shepherds. This putting out to grass (tahrbl) can be prolonged for four or five months according to the atmospheric conditions encountered at the high altitudes. During the hot hours and the night, the animals are put under cover in caves (dial kattln, ma’zab, shakif) and other natural shelters.

Among the small sheep nomads, all the men are shepherds and their life is much harder than that of the sedentary shepherds, for it is linked to a constant quest for pastures and drinkable water, while having to face the merciless competition of the great camel nomads.

The condition of the shepherd of small livestock, notwithstanding the eulogistic Prophetic traditions, concerning him, seems always to have been the object of disrepute in general Muslim opinion; to be a ghalil still retains a pejorative nuance (see W. Marçais and A. Guiga, Textes arabes de Takrouna, i, Paris 1925, 257-9, nn. 37 and 39). In the eyes of the cultivator, the shepherd passes for a piller, when he is not reproached with particularly shameful practices with his animal (Hagawân, v, 458).

In pre-Islamic Arabia the protection of the livestock was often the task of slaves and, in the Middle Ages, this scorn for the pastor might also be reinforced by racial oppositions (see Ibn Khaldûn, Berbers, i, 106). Al-Dâhîz cites (Bukhârl, French tr. Ch. Pellat, Le livre des avares, Paris 1951, 198) this Bedouin’s curse hurled at his adversary: "If you lie, may you draw milk seated (= may Allah change your noble she-camels into vile ewes). In the Maghrib, the shepherd is in the lowest rank of the country proletariat, esteemed with a red-hot iron (dj.arab) and mange (bu battl) full of this substance to provide for a billy-goat or ram carries around his neck a cow-camels into vile ewes.

In spite of so much disgrace and by force of circumstances, the pastor of small livestock remains, in all the lands of Islam, one of the indispensable artisans, ensuring the subsistence of the rural and civic populations. Furthermore, the shepherds, constantly observing nature and the sky, and this since the domestication of the goat and sheep (the verb râ’d means at the same time "to pasture the flock" and "to observe the stars"), have made a great contribution through their experience acquired in the progress of the astronomy and meteorology proper to each season. To be convinced, one has only to consider the sum of precise evidence preserved, in a concise form, in the rhymed sayings that these contemporaries of the heavenly vault composed for each of the twenty-eight "anwal" of the year (see Pellat, Dictoms rimés, anwal’ et mansions lunaires chez les Arabes, in Arabic, ii [1955], 17-41); these sayings mention the notable influences on the flocks of the evolution of time in the course of the twelve months; for the craftsman, their laconicness is very telling. By way of example, two of these sayings taken from the fifty best known will suffice to sketch the rough contrasts of climate which the shepherd had to endure. The first evokes the dog-days and the scarcity of water (Pellat, No. 14) in these brief terms, "When Sirius rises [at the end of June] in the morning (safarî, if you do not see rain (matta’t), do not give food to the she-lambs or he-lambs (immaran) . . .” [for they will risk dying of thirst]. The second relates to mid-December when the water becomes ice (Pellat, No. 32), "When al-Nâ’îm ("the Ostriches", i.e. ð, ð, ð, ð, ð, ð, ð) rise, the animals stay motionless (al-bahd’ai’m) because of the constant (al-dô’î’m) ice, and the cold awakens every sleeper (nî’î’m)". With this monthly guide to the constellations the shepherds regulate their migrations which, far from straying, lead them where their flocks will find the best condition of subsistence.

Apart from the vicissitudes arising from the harsh weather to which the animals of the flock are exposed, they can also be victims of accidents and individual or collective illnesses. In the past, with the lack of effective therapeutics, the shepherds had to lament a percentage of certainly high losses. Epi-demics (wâbî’, maustan) would occur periodically with their terrible consequences; spontaneous abortion (âlbdâch, âkîl, âlbdâd), agalactia (ghiyûs) and sterility (’abîr). The causes were attributable especially to many neighbouring viruses of the brucel- la type entailing brucellosis or Maltese fever (kamûn mâliûtta) and foot-and-mouth disease (âlbdâch, kmunâ kâlîyûa). The sheep pos (anlika, nakkkî) also ravaged them, as did coccidiosis (qû’ûm), bringing on diarrhoea and anaemia. Sarcopic mange or "black-muzzle” (naghaf), psoroptic mange (kabîl, dial. bû tagga), gastro-intestinal strongylosis and fluke worm due to the small fluke of the liver (Dicrocoelium lanceolatum), all leading to aqueous or dry cachexia, also destroyed a great number of animals. Viral infections of the febrile bronchoes as foot rot (îlîbhî al-faus), and hoof inflammation (kuwâm), which could lead to the dropping-off of the horn cover and decalcification of the intest (’u’ub, khumûl), condemned their immobilised victims to enforced slaughter. Infections of the respiratory tubes were endemic, with pleuroneumonial of goats (kasabah, dial. bû jardû), pulmonary strongylosis provoking sneezing (kudâs, nathîr) and mucus or glanders (mahakh, chîrist, rgbûm), attested by the Prophetic tradition cited above. Finally, cases of cenurosis or turn sick (gawan, dial. bû nudu’dûl) were frequent, as were swellings (buhât) and convulsus of the oesophagus (dial. farannû) due to dehydration. Against this cohort of invisible ene-mies constituted by the microbes, the shepherd would find himself totally unarmed, attempting, despite everything, some empirical treatments for the external infections. Purulent sores were cauterised with a red-hot iron (ka’y), and mange (gara’ab and ringworm (karâz) are, even nowadays, treated by the application of tar (ka’an, kir), it is with tar also that the waters of the brackish or magnesian watering place are purified (nasâq) and, in Syria, a billy-goat or ram carries around his neck a cow-corne (batâ’ib) all of this substance to provide for the hour of waiting. Many other therapeutics, sometimes extravagant, mixed with conjuratory magical practices take place everywhere in Islam, as in Christendom, and the list would be very long.
Meanwhile, in modern times, veterinary science is propagated under the auspices of the authorities of each state, and competent services periodically bring effective prophylactic measures, to the countryside by means of vaccination (talkih), disinfection (lathir) of contaminated sites and by injection (bakht) of powerful medications absorbed into the body of the sick patients; it can also be confirmed that at present the flocks of sheep and goats of the Muslim countries are almost freed from the scourge of the great epidemics.

Man has very often known how to exploit to his profit the natural gentleness and docility of sheep and goats, and the servility in which they keep them makes them the object of griefs with which the ram reproaches him in the course of the whole philosophical "colloquium" which the Ikhwân al-Safa' (see Rasa'il) hold with the domestic animals in their memorable Epistles (see Rasa'il, ed. Beirut 1957, ii, 215). In fact, sheep and goats had not only to feed their domino, but also to amuse him; jugglers and circus performers would be seen distorting the market crowds with their "knowledgeable" (lakina) sheep and goats in association with dogs and monkeys [see KIRD] in turns of balance and dance, and the Meccan sheep (qayt makkaiyya) passed as particularly gifted in this kind of exercise (Hiyawân, vii, 218). In the East and the Near East the public still shows an indefatigable taste for ram fights (nîdâ), giving rise to bets which can reach large sums; the organisation of these fights is the affair of the kahhâbî, breeder-selector of rams, whose fortunate profession was not besmirched with the disfavour of that of the goatherd (ma'âz), for it satisfied the innate passion of orientals for the game.

The names taken from the vast Arabic terminology concerning small livestock are numerous in the fields of zoology and astronomy. In the former are found 'anîz/'aniza, designating at the same time the females of the vulture, the eagle and the houbara bustard; it is also the name of the reef heron (Egretta gularis), while the glossy ibis (Plegadis falcinellus) is nicknamed 'anîz al-mâl and ma'azat al-mâl "water goat". 'Anîz al-mâl is also the trigger fish (Balistidae carpiovus) and 'annâz "goatherd" used to designate the black stork (Ciconia nigra), one of fourteen homologous birds (nîdâz al-nîdâgh) for the sporting bands of crossbow shoot-
ers (nîdâl al-banduk) until the 7th/13th century. As for the nîdaj the "sea ewe" (nîdaj al-bahri) repre-
sents both the turnstone (Anaria interpres) and the oyster-catcher (Hausmatopus ostralegus), which are gen-
erally confused. The great white oryx and addax antelopes [see MAKH] are nicknamed nîdaj al-raml "ewe of the sands" and the diminutive mînîdaj represents the wood ibis (Ibis ibis). The manatee (Trichechus inunguis) is called "sea lamb" and, finally, the cattle egret (Bubulus ibis) is nicknamed abâ ghanam because of its symbiosis with the flocks which it clears of flies and parasites of the fleece.

In astronomy, "the shepherd" is the constellation of Ophiuchus (or Serpentarius) with the star kalb al-nâth "the shepherd's shoulder" (see Rasa'il). A similar error is that of some authors who named nîlî and kalb al-nâth the stars y Cephei and p, k Cephei; the same applies to "Rigel" (B Orionis) which is rigîl al-djauwa' "Orion's foot" and not nîlî al-djauwa'. By contrast, nîlî al-nâth is "the shepherd of the ostriches" corresponds to λ Sagittarii. The constellation of the Coachman (Auriga) is named 'annâz "goatherd", a name
pastors, in Rec. Ec. Anthrop., xvi (1906), 102-4;

GHANİMAT KUNDJÂLI, MUHAMMAD ARRAM, poet of Mughal India and exponent of the "Indian style" (zakha Hindu, in Persian poetry of the subcontinent.

He was born at an unknown date in the first half of the 11th/17th century at Kundjâl, a small village in the Gujrât district of the northern Pandjab (now in Pakistan). He was an adherent of the Sufi order of the Kâdiriya [g.], but apart from stays in Kâdiriya, Dâl and Lahore, did not go very far from his native village, where he died in ca. 1106/1695. His works comprise a Divan, mainly of ghâzâls, and a madkhâni poem written in 1092/1681 called the Nayr-ang-i 'isâk "Talisman of love", a romance set in contemporary India with mystical and symbolic overtones (Divan, ed. Ghulâm Rabbânî 'Azîz, Lahore 1958; Nayr-ang-i 'isâk, ed. idem, Lahore 1962, replacing Nawal Kishore texts) 'Azîz Ahmad has detected in the madkhâni's sensuousness and sentimentality signs of Mughal decadence (Studies in Islamic culture in the Indian environment, Oxford 1964, 227). A. Bausani, whilst conceding this charge, has pointed out the interest of Ghahimât's poetry as examples of the peculiarly "Indian style", and has suggested that his fondness for lengthy compound expressions echoes the enormous compound epithets of Sanskrit poetry of the Kâyâ style, especially as Ghanîmât's century was one of considerable Muslim-Hindu cultural interaction, in which, for instance, several Sanskrit works were translated into Persian at the Mughal court (Indian elements in the Indo-Persian poetry: the style of Gahamât Kûndjâlî, in Orientaux hispan- tico se studia F.M. Paredes octogenario diecata, ed. J.M. Barral, Volumen I Arabica-Islamica, pars prior, Leiden 1974, 105-19).

GHARUKA, a system whereby a debtor landowner transfers part of his plot, and the right to cultivate it, as security on a loan until redemption. Other Arabic terms for the same system were hâzîfâ and baî' bi-isâgîfâl, and in Ottoman Turkey isâgîfâl (Pakalan, ii, 97). This is the French antichresse. It is not identical with al-baî' bi-awqâf (the French vente à révérer), i.e. a "conditional sale" to the lender to be nullified as soon as the debt is redeemed, a system preferred by fellâhs who hesitate to part with the material possession of their land. In fact, however, the difference was small, since according to the latter contract too the creditor often "leased" the land to his debtor, i.e. the yield of the land served as inter- est on the loan in the form of "rent". Both systems were rather common prior to the 19th century because Islamic and Ottoman law did not provide for mortg- ages, but they did not disappear after the introduc- tion of mortgages, because of administrative difficulties involved in the latter.

Ghârîka is a form of usury, and as such prohibited by the Şârî'a. According to all four law schools or madhîb, a profit derived from a pledge belongs to the creditor and the creditor is not required to relinquish his right to the pledge. A Mâlikî Azhari has even stated explicitly wa-mâ tâ'ala al-âmîm min al-ghârîka harâm (Shenouda, 39 n. 1). The Hanafi school, however, has created a loophole by making it lawful for the debtor to cede of his own free will the profit from the pledge to the creditor (Muhâkâ al-abhur, fâsil entitled rahana radjulun 'astrân; Hûlûya, book xlvi, ch. 4).

Early this century, ghârîka seems to have been common usage in Egypt. One of the customary systems of pledging land in 'Irâk was identical with the Egyptian ghârîka (S.M. Salim, al-Cibdyish, Baghdad 1957, ii, 281).

GHASSÂL (a, lit. "a washer of clothes and also of the dead"), is nearly synonymous with the word kâsar (al-Khaṭîb, cf. Terûkî Baghdadî, vii, 127). In classical Arabic there are a number of terms for corpse-washer such as ghâsăl al-mañâc, ghâsil al-mañâc and simple ghâsîl. The modern Arabic term for a washer of clothes is ghâsâl, but the corpse-washer (ghâsîl) in Syria is also called muqghâsîl.

The act of washing the corpse, putting a shroud on it, attending the funeral prayers and burying the deceased are some of the obligations on all Muslims, according to the Şârî'a. The minimum qualification of the ghâsîl is that he must be well-versed in the Kitâb al-Dhârâtîz (the book of funeral rituals) in Islamic jurisprudence. The corpse-washer is required to wash the dead body three times according to standard Islamic practices. In the case of a female corpse, the daughter of the deceased, a near rela- tive or a female corpse-washer (ghâsilî) is employed for ritual washing. The corpse-washer must not look at the genitals of the deceased or divulge any knowl- edge of physical deformities of the naghetti. It is, there- fore, necessary that the ghâsil should be a trusted (amin), reliable (dişka) and an honest (sâkhîr) Muslim, says Ibn Kudâmâ. A tradition of the Prophet reads: "Let the trustworthy persons wash your corpse" (al-
Some individuals performed the work of corpse-washing out of an inner sense of piety (zuhd) and observance of the sunna, wrote Khajib al-Baghdadi.

Under normal circumstances, the male as well as female corpse-washers performed their work without any interference from government officials. But during the Fatimid rule in Egypt, the caliph al-Hakim imposed a number of restrictions on outdoor activities of women, who were prevented from going out of their house, from entering a public bath (hamam) and from asking a cobbler to make shoes for them. Consequently, every female corpse-washer (ghasal) had to seek a special permission or license from the sahib al-madinah and judicial authorities to practise her trade from the year 405/1014 onwards (cf. al-Muntazam, vii, 299). However, some writers tend to suggest that a similar ban on female corpse-washers was enforced for the first time in the year 253/867 in Egypt under 'Abbasiid administration. The ghasal's work was probably a part-time occupation; it usually earned him an adequate wage which, of course, varied according to capability of payment of hirers, but in Egypt under 'Abbasid administration. The ghasal, like other workers of despised status, such as the cupper (hujjam), the veterinarian (basir), the sweep (kunnah), the watchman (hara), the fishmonger (samah) and the tanner (dabbah), were denied the honour of being addressed by their patronymic (kunya) in Arab society (cf. Tawhidi, Basir, Damascus 1964-6, i, 355).

GHAWTH (a.), literally "succour, deliverance", an epithet of the Khut [g.x.] or head of the Sufi hierarchy of saints. It is used of him only when he is thought of as one whose help is sought, or that, from the nature of the Khut, is practically always; thus it is a normal sequent to Khut. Other, however, say that the Ghasath is immediately below the Khut in the Sufi hierarchy. In Sunni Islam, such a figure as al-Hasan al-Basri [g.x.] came to be thought of as the "Institutor of Sunnism" and the Ghasath of his time; and we also find an allusion to the term in the title of one of the pseudographs of 'Abd al-Kadir al-Djilani [g.v.], sc. the Ghasathyya or Mir'djiyya, a questionnaire on Sufi terminology.

(D.B. Macdonald*)

**GHAZAL**

i. **— See Vol. II, s.v.**

ii. In Ottoman Turkish literature.

After their conversion to Islam, the Turks adopted and assimilated Arabo-Persian cultural institutions, but in literature they tended to follow the Persian type. Thus it was the Persian ghasal rather than the Arabic one which became a model both in Eastern (Caghatay) and Western (Ottoman) Turkish litera-
The Turkish ghazal, which became the most popular poetic form after the mathnawi [q.v.], is very similar to the Persian ghazal from the point of view of technique [see GHAZAL. ii. In Persian literature]. It is a short poem of 5–15 bayts, with a single rhyme. In the first bayt, called the matol', both matol's rhyme together; the last bayt, in which the author mentions his maktha ("pen-name") is called makta. The content is of love, mystical or real, the joys of life, wine, the beauties of nature, etc. There are also edifying and didactic ghazals which concentrate on hikmet [see HIKMATA], philosophical statements on the world, human destiny and actions, such as the majority of the ghazals of the 11th/17th century poet Nâbi [q.v.]. Each bayt of a ghazal is an independent unit in content, and need not be connected with the preceding and following bayt except by rhyme. Occasionally a ghazal may have a unity of subject, in which case it is called yok-dâ'âz ("one harmony"). The most commonly-used metres in the Turkish ghazal are hâzadî, ramât, ra'daî, mudânî and mutâkhirî. One shortcoming of Turkish poets writing in arûd is particularly striking in the ghazal form. This is imâle (imâla) (the reading of a short vowel as a long one in Turkish, which has no long vowels, simply for the sake of metre), which no matter of what origin, would somehow be avoided to such an extent that it has become so much so that the imâle (considered by some as a proof of the existence of long vowels in Turkish, see Bûkî) ended up by being considered as an embellishment during the post-classical period. Most folk poets (Sâz şairleri), with rare exceptions [see KâKAFAQÂN] occasionally used arûd and also wrote ghazals in imitation of divân poets (M. Fuad Kopriil, Sâz şairleri, Istanbul 1962, Introd.). The ghazal form was cultivated in Turkish literature from the 7th/13th century until the second half of the 19th one, and then only sporadically by some modernist and neo-classicists (see Kopriil-zâde Meñmmed Fu'a'd, Tûrk III. Ottoman Turkish literature, in El.). Turkish biographies of poets (sâz şairleri) list the names of several hundred poets who each produced a divân (the bulk of which, as a rule, consists of ghazals), but only half a dozen outstanding and about a dozen minor poets wrote ghazals which rise above the level of mediocrity and have a claim to art. Although Turkish poets (both Çagqatay and Ottoman) were inspired and influenced by classical Persian poets, it would be a superficial judgment to consider the former as blind imitators of the latter, as is often done. A common technique and limited vocabulary, and the same world of imagery and subject matter based mainly on Islamic sources, were shared by all poets of Islamic literatures (see Fahir Iz, Eski Türk edebiyati, Istanbul 1967, Introd.). A mere perambulation of these in poems of the same or diverse languages could easily lead to easy and misleading conclusions (e.g. by Hasibe Mavzolu, Fâcili-Hasic, Istanbul 1962). A closer study reveals that outstanding Turkish poets of the early periods such as Kâdi Burhân al-Din, Nesîmî [q.v.], 'All Şirî Newârî, Neqîji, and many of the classical era like Fudulî, Bâkî, Shaykh al-Islâm Yahyâ, NeFilî, Nâmî and particularly Nedîm, were conscious of this originality and they expressed their own feelings in many of their ghazals and fakhriyêes. It is fair to say that outstanding Turkish classical authors managed to retain their personal and their Turkish character, even though using Persian set themes, figures, conceits and imagery, in the same way that Corneille and Racine remained French in spite of their use of Greek and Latin poetic conventions, characters and plots. During the literary Tanzimat movement of the mid-19th century, the ghazal continued to be cultivated partly by modernists like Divâ (Ziva) Pasha, Nâmî Kemâl and others, and exclusively by the "neo-classicists" of the so-called Endiwin-i shir'âr group (Leskoftâlâl Çâlibî, Yehülüheiriî "Awîni, etc.). In contemporary Turkish literature the ghazal form was revived by Yahyâ Kemal Beya'dî (1884–1958 [q.v.]), who from 1918 until his death wrote a number of ghazals in the language and style of some 17th and 18th century poets (particularly Nâmî and Nedîm) which were posthumously collected in a book as Eski şairâr rûzgârîye ("With the breath of past poetry"). These very popular and successful pastiches did not go beyond being curiosities, and the ghazal form was not practised after the 1920s except by an occasional traditionalist or for humourous and satirical purposes (e.g. in Khânîl Nîhad Bostpe's Şıkâm-i ibân (1921) and Faruk Nazî Çamlîbel's Ta'lî set (1938)).

**Fahir Iz**

**GHÂZI KHÂN,** Indo-Muslim military leader. Known to Kashmiri chroniclers as Sulân Çâzî Şâh Çâk, he was the son of Kâjî Çâk, the leader of the Çaks [q.v.] and a powerful chief. Nothing is known of Çâzî Khân's early life except that in 933/1527 Çâzî with other chiefs defeated the Mughals sent by Bâbûr to help Sikandar, son of Sulân Fâth Şâh, against Muhammad Şâh the reigning Sulân of Kashmir. Next year, however, the Çaks were defeated, and Çâzî Khân, who fought under his father, was taken prisoner. In the middle of 959/1552, he joined the Çâzî Khân nobles to defeat Haybat Khân Niyaizî and his Afgân followers. Towards the end of 962/1555, he became Wazîr of Sulân Ismaîl Şâh by setting aside his cousin Dawlat Çâk and blinding him. Early in 963/1556, Abu 'l-Ma'âlî, a turbulent Mughal noble, having escaped from the wrath of Akbar, invaded Kashmir, but Çâzî Khân defeated him, and then suppressed the rebellion of Çâzî Khân noble, who were against him. In the summer of 967/1560, Akbar sent Karâ Bahâdur, a cousin of Mirzâ Haydar Dughâtî, with an army to invade Kashmir, but the latter was defeated at Kânpjâri and then at Dagner. In 968/1561, under the pretext that Habîb Şâh (964–8/1557–61), grandson of Muhammad Şâh and his own nephew, was incompetent, Çâzî Khân set him aside and himself ascended the throne, assuming the title of Sulân Nâşîr al-Din Çâzî Khân and thus laying the foundation of the Çâk dynasty. He was brave, able and a man of strong will. He suppressed rebellions, established law and order and successfully defended Kashmir against the Mughals. He was a cultured man and a poet and patronized learned men; but he was also the first Kashmir ruler to introduce the practice of blinding his political rivals and cutting off their limbs. In his old age he suffered from leprosy, which impaired both his health and eyesight; hence he entrusted the work of the govern-
ment to his brother, Husayn Khan. Later, he changed his mind and tried to recover power, but Husayn Khan deposed him and himself ascended the throne. Ghazi Shah died after four years in 1576.

Bibliography: the best accounts of Ghazi Shah are in the anonymous Bahānāt-i Shāhi, India Office ms. 509, and in Haydar Malik’s Ta’ṣīl-i Kāngārr, I.O. ms. 510; see also Mohibbul Hasan, kaγmīr under the Sūlrāns, Srinagar 1974; G.M.D. Sufi, Ḵāḏīr, Lahore 1948-9.

GHAZĪPUR (area, 1.473 sq. m.), a District in the easternmost part of the state of Uttar Pradesh in India. It lies in the great alluvial plains of the Ganges and extends in equal portions on either side of the river. Though one of the smallest in size, it is one of the most thickly-populated and closely-cultivated districts of the state. For administrative purposes, it is divided into four tahsils, namely Ghazipur, Muhammadabad, Sa’fdpur and Zamānīya. Paddy, wheat, cotton, sugar and tobacco are the traditional products of the district.

Ghazipur is obviously a name of Muslim origin, and the Hindu tradition, which ascribes the foundation of Ghazipur town to the eponymous hero Radja Gadhd, who called his stronghold Ghazipur, has no historical basis whatsoever. Though the territory constituting the modern District has a long history going as far back as the days of early Indo-Aryan colonisation, the town was not really founded until about the middle of the 8th/14th century. According to reliable local records, during the reign of Sultan Ffrūz Shah, one C akawa Mandhata, a descendant of the famous Radja Prithiwraj of Dihll, with the title of Malik al-Sadat Ghazi, which was the palace of the above-mentioned ‘Abd Allāh Khan, who lies buried in the garden known as Naqīb ki Čahār Dīvārī. Another landmark is the tomb of Lord Cornwallis, who died there in 1805; this consists of a domed structure supported on twelve Doric pillars, with a marble bust executed by Flaxman.

(ABDUS SUBHAN)

AL-GHAZZĀL. Abu ‘l-Abbās Ḥāmid b. al-Mahdī al-Ghazzāl al-Andalusī al-Malakī, the secretary of the sultan of Morocco Sūrī Mu-hammad b. ‘Abd Allāh (1171-1204/1757-89), who entrusted to him various diplomatic missions. In 1179/1766 he was the head of a delegation sent to negotiate an exchange of captives with Charles III of Spain; he was received with great honour in Madrid, and was able to return to Morocco with a Spanish mission which made a peace treaty with the sultan and an agreement about the exchange of prisoners. In 1182/1768 he was sent to Algiers to oversee the exchange of Algerian with Spanish prisoners and accomplished this with success. However, the Spanish king, after the sultan had besieged Melilla in 1185/1771, had to renounce the terms of the treaty made between the two rulers and drawn up by al-Ghazzāl, so that the latter fell into disgrace. He retired to Fās, where he died in 1191/1777 and was buried in the zāwiyā of ‘Abd al-Kādir al-Fāsī [see al-Fāsī, above].

This diplomatist left behind an account of his journey to Spain called Naqdīg āl-ad-dīhāt wa l-mahdīm, of which numerous mss. are extant; a résumé was made by Bodin in AM, iii (1918), 145-85, and it was published by A. Bustanī at Tetuan in 1941. Al-Ghazzāl’s rūḥā is doubly interesting. From the historical aspect, it is a valuable document since the author gives details about the aim of his mission and lists the names of the Muslim prisoners; from the literary point of view, although it is written in rhymed prose, it describes the stages of the journey and gives a picture of Spain under Charles III. He notes, like other travellers in Europe, the things which were new to him, but shows himself somewhat partial, insisting on the superiority of his own country.

He is, furthermore, the author, notably, of epistles in praise of his sultan and of a biography of the head of the Īsāwī religious order, al-Nūr al-shāmil (ed. Cairo 1348/1029).

AL-GHAZZĀL — AL-GHITRĪF B. ‘ĀṬA’

**AL-GHAZZĀL, Abū ‘Īsāb Ibrāhīm b. Yāḥīyā’** b. ‘Uṯmān b. ‘Abbās al-Kalbī al-Shāhi (441-524/1055-627), Arabic poet of the Ṣalṭūqī period. He was born in Ghazza [q.v.] at a time when that town was still under Fātimid rule, but as a Șaḥīfī Sunnī and as a person especially proud of emanating from the Imām al-Șaḥīfī’s own birthplace, his life was to be oriented towards the East, where the establishment of the Șaḥīfīs favoured a resurgence of Sunni orthodoxy. He was studying in Damascus in 481/1098 as a pupil of the traditionalist Naṣr b. Ībrāhīm al-Makdisī (d. 490/1096, see Brockelmann, S I, 603), but then left for Ӏrāk. Disappointed at Hīla in his expectations of the Mazyadicl Sayf al-ட, ultimately from al-Sam anī’s copy. The great majority of great contemporary poets, together with his friend and correspondent Abū Ismā‘īl al-Husayn al-Tughrī and with Abu l-Muṣaffar Muhammad al-Abīwardī and Abū Bakr Ahmad al-‘Arradī (q.v.).

**AL-GHITRĪF B. ‘ĀṬA’** — AL-DJURASHI, ‘Abbasīd governor. He was the brother of the famous Khayzurānī [q.v.], the Yemeni girl of slave origin who married the caliph al-onent and was mother of the two successive caliphs al-Ḥādī and al-Raṣīd. Al-Ghītrīf is also given the nisba of “al-Kindī” in the biography of him by Gardīzī (probably stemming from al-Sallāmī’s lost Ta’rikh al-ौl Khurāsān) and by al-Samā‘ī, and may accordingly have been a mawdū‘ī of the great South Arabian tribe of Khayzurān [q.v.].

Al-Ghītrīf was again disappointed, this time by the Yazdīds. Dawla Ṣadāk, he spent some time at the Nizāmīyya madrasa. Hilla in his expectations of the Mazyadicl Sayf al-ট, apparently fallen into poverty. Al-Sam anī, in his *Tabghū*, married Harun al-Raḥīm, his fortune rose with the disturbed situation in Transoxania, with internal threats and threats from the Turks of the Turkestan down. Al-Ghazzī enjoyed considerable contemporary renown, with some erotic poems addressed to have found favour with the Sultan Sandjar at Bukhara. The story is given in detail by Narshakhl in his Ta’nkh-i Bukhara, ed. Qutb, i, 237-8; Ibn Khallikān, ed. Iṣāhāb, i, 57-62, No. 18, tr. de Slane, i, 38-42; Zirīkli, al-Ṭūḥ, i, 113; Brockelmann, F, 294, S I, 448; ‘Ali Ḍawād Al Tāhir, al-Șīr al-arabī fi ’l-Irāk wa bīlād al-ʿAḏa’m fi ’l-ṭarīq al-saljūkī, Baghdad 1961, i, 177-84.

GIFT [see ILGA].

GILGIT, a town in the northwest of Pakistan, with a population of 4,671, situated on the right bank of the Gilgit river, a tributary of the Indus, 4,890 ft. above sea level. Owing to its geographical position, being near the borders of several countries and because roads radiate from it into the surrounding valley and beyond to Sinkiang and Transoxiana, it has always been an important trading centre and of considerable strategic significance.

Gilgit's ancient name was Sargin, which, owing to reasons unknown, was changed to Gilgit. Ibn Hawkal, ed. Kramer, 490, tr. 470, describes Ghitrif dirhams as circulating in the region of Hayatul, i.e. Bactria and the eastern fringes of Khurasan [see Hayatul]; al-Mukaddas, 340, speaks of them as circulating in Buksara and certain other localities of Transoxiana; and the translator into Persian of Nanhakhi's history states that in his time (522/1128), 100 pure silver dirhams equalled 7½ Ghitrif dirhams, and the gold mughal equalled 7½ Ghitrif dirhams. See further Frye, Notes on the early coinage of Transoxiana, Amer. Numism. Soc. Notes and Monographs 113, New York 1949, 41-9.

Bibliography: Given in the article, but note that Zambaur, Manuel, 48, gives al-Ghitrif's name and the date of his governorship wrongly.

GHYATH AL-DIN BALBAN. [See BALBAN, in Suppl.]

GHUBAYRA, a site of an early Islamic city in Kirmân Province in Iran. It is situated some 70 km. south of Kirmân, the provincial capital, in the Bard Sir Valley, at the confluence of the Carî and Ghubayra rivers. At the time of the Arab conquest the provincial capital was at Sirjân, some 200 km. to the south. The main caravan route from Sirjân to Bagh runs considerably to the south of Kirmân city. Ibn Khuradadhbi, 49, describes the stations on this route, and Ghubayra is mentioned as the fifth from Sirjân towards Bagh. According to Iṣṭaḵrî, the stations between Sirjân and Bagh were as follows: Shâmart, Ghâr, or Bahâr, Khannâb, Ghubayra, Kûghân, Rayîn, Sarvistân and Darânî, modern Darzîn (ed. Iran) Afghar, Tehran 1933, 141 f. and map facing p. 129. A detailed account of the town is given by Mukaddasî, 462-3, who writes that “it is a small town surrounded by villages, with a fortress in its midst, while outside was the market recently built by Ibn Ilâyâ. Both this place and Kûghân have fine mosques and the water comes from kânts”. During the 8th/th century Ghubayra belonged to the Muzaffarid realm. The town was looted and destroyed by Timur's army in 795/1393. It appears that Ghubayra as a town ceased to exist at that time, although archaeological evidence indicates that there was a small settlement on the site in Safavid times.

The ruins of Ghubayra were first reported in modern times in J.R. Caldwell's excavation report of Tal-i Ilîs (Caldwell, Chase and Fehervari, in Investigations at Tal-i Ilîs, ed. J.R. Caldwell, Springfield, Ill. 1967, chs. vi, viii). Subsequently,

GOURARA (Gûrârâ), oasis group of the central Sahara, in Algerian territory, contained within the southern fringe of the Great Western Erg to the north (the border on this side may be located at the furthest centres of permanent settlement), the north-west flank of the plateau of Tadmait to the south-east, and Oued Saoura to the west (the border on this side being the last centre of Berber-speakers, Bahamoum, as opposed to the exclusively Arabic-speaking population of the Saoura). To the south, on the Touat side, the border was traditionally imprecise, the oases alllying themselves to Timimoun (Gourara) or to Adrar (Touat) by means of off agreements. The French administration created an artificial border here, definitely fixed in 1944. Physical geography. Between the plateau of the reg of Meguiden to the east (altitude 325 m.), a mound of clays and red sandstones of Continental Interca lary, and the Villefranchian hamada (silicified limestone) of Ouled Aissa to the west (350 m.), the heart of Gourara is constituted by a depression, the base of which is occupied by plains of salinated clay (sékba), unsuitable for any crop other than palm-trees, of which the biggest is the sékba of Timimoun, a huge channel 60 km. in length and varying in width between 2 and 15 km., lying on a north-north-east to south-south-west axis at the foot of the Meguiden, the base of which dips to an altitude of 192 m. At its extremities, the sékba adjoins sectors of more abundant vegetation, bearing the name “oued”, which seems to be synonymous with “pasturage”. The sékba corresponds to an ancient water-course flowing towards the south, founded on the hamadian surface along a pre-tertiary rib, but the erosions of the quaternary periods of humidty have eaten more deeply than pre-tertiary erosion. No importance need be attached to the remarks of Ibn Khaldûn (Histoire des Berbères, tr. de Slane, 2nd ed., Paris 1925, i, 196), who did not know the region personally, on a river “flowing from west to east”. No doubt this arises from a confusion with the Saoura. Between the sékba and the plateau of Ouled Aissa, there stretches a complex morphological zone, where the substratum of carboniferous sandstone and limestone, modified by intense pluvial plêts giving rise to appalachian relief (the mound of Timimoun, east-west), partially fossilised by deposits of Continental Interca lary and Tertiary formed into projecting hillocks, is invaded by various dunary formations, branches of erg and lesser forms.

Human geography. In severe climatic conditions (15 mm. annual rainfall), there has persisted a sedentary population, descendants of an ancient stock of judaised Zenatas, which remains for the most part Berber-speaking. In 1952, out of a total of 25,000 habitants, the Gourara consisted of 61% Berber-speakers and 39% Arabic-speakers. The Arab elements, of Hilâlian origin (Meharza and Khenafa) arrived in the 6th/12th century, and it is this period which saw the first appearance of the Arabic-speaking kour, present only in the north in the Tinerkouk and in the south in the Deldoul and the Aouguerouet, although the recent settlement of Châneba nomads has joined an important Arab nucleus to the old Berber centre of Timimoun. This settlement process is actively continuing at the present day, and the sedentary population, which has grown steadily over the past three decades in spite of a considerable level of emigration towards the Tell, must currently be approaching the figure of 40,000, with a proportion of Arabic-speakers certainly superior to that of 1952. In addition, the dark-skinned Haratîn (see HÀRTÁN), either Berber-speaking or Arabic-speaking according to the language of their masters, in 1952 constituted nearly a half (46%) of the population (compared with estimates of 29% “Zenata” and 25% “Arabs”).

This population lives today in concentrated groups in villages (kour), of which the largest is Timimoun (5,000 habitants), often dominated by a kasâba containing the individual granaries where the people’s crops are preserved (in other cases, granaries are attached to private houses). It seems that the habitat was formerly more dispersed, as is indicated by the existence of numerous small ruins, in a period of domination by nomadic tribes, the fixing of large sedentary fixed of large sedentary groups of Zenata or Arab tribes on whom the sedentary population was strictly-speaking dependent. The progressive concentration of the habitat would testify simultaneously to a trend towards sedentary living and to a renewal of instability in the 19th century. The economic basis is provided by palm-trees (about 400,000), of which the surplus production (5 to 6,000 tonnes of dates) partially compensates for the inadequacy of cereal production (300 tonnes of wheat and barley), and permits the purchase of wool used in the weaving of dokkali, dyed materials manufactured by the women (350 looms) and partially marketed abroad. Small-holding is the rule, and indirect exploitation is common. Palms and gardens are irrigated largely by subterranean drainage channels (foggara) in the sékba of the east, sometimes combined with hoisting machinery to raise the water of the channel when the level is too low for irrigation purposes, and with wells whose water is raised by balanced arms in the northern region at the fringe of the Erg. Bibliography: K. Suter, Timimoun. Zur Anthropographie einer Oase der Algherischen Sahara, in Mitteilungen der Geographischen Gesellschaft Wien, xciv (1952), 31-54; R. Capot-Rey, Le Sahara français, Paris 1953, passim; J. Bisson, Le Gourara, étude de géographie humaine, Algiers 1956 (Université d’Alger, Institut de Recherches Sahariennes, Mémoire no. 3), 222 pp. (basic; contains all the preceding bibliography and refers to the sources), to be supplemented by H. Schiffer (ed.), De Sahara et sa Randgebiete, Munich 1971-3, passim. (XÀVIER DE PLANHÔL)

GÖVSA, İBRAHİM ‘ALİ AL-DİN, modern Turkish İBRAHİM ALEET'TİN GÖVSA, Turkish author, biographer and poet (1889-1949), was born in Istanbul, the son of Mustâfa ‘Aşım, a civil servant, from a Turkish family of Filibe (Plovdiv in present-day Bulgaria). Educated at the Vefa lycée, Istanbul, and in Trabzon, where his father was chief secretary (mekâtûd) of the province, he studied in Istanbul University (1907-10), subsequently taught in Trabzon lycée and in 1913 went to Switzerland with a government scholarship, where he studied psychology and pedagogics at the University of Geneva and at the
Jean-Jacques Rousseau Institute. On his return (1916), he taught at the Istanbul Teachers' Training College (Dér al-mu'allimin), where later he also became Director. Appointed in 1926 as a member of the Advisory Board (T'd'dm we terbiye da'isii) of the Ministry of Education in Republican Turkey, he was later elected in 1946, with a brief interval in 1935 when he was an inspector for the Ministry of Education. He died in Ankara on 29 October 1949.

Govsa started his career as a poet, published his first poems in the traditional 'ird metre in the Thetre-i funun (1908), but later switched to syl- labic metre (ho'je wezni) following the new literary trend in Yelî mejmü'a (1917 onwards). One of the pioneers of children's verse (Çocuk şairleri, 1910), Govsa continued to write poetry until 1940 on lyric and epic (Canakkale izleri, 1926) topics, using alternately both metres. Though not outstanding as a poet, he occasionally reaches a level above the average when he is inspired by an unusual event (e.g. his famous elegy for Atatürk, Tavş, 1938). He also wrote humorous verse and prose and successful pastiches (e.g. Nazif'fcn Hamide altırret mektuplar, 1932). But Govsa is particularly known as a biographer and ency- clopaedist. A meticulous and responsible collector of materials from written and oral sources, he contributed greatly to contemporary biographical literature in Turkey. Apart from his great share in the planning and preparation of the Turkish Encyclopaedia (İnönü Ansiklopedisi, later Türk Ansiklopedisi) from 1941 onwards, of which he was also Secretary-General (1943-5), Govsa is the author of the following major works in this field: Meşhur adamlar ("Famous men"); 4 vols., 1935-8; Kâşifler ve mucitler ("Explorers and inventors"), 1939; Türk meşhurlar ansiklopedisi ("Encyclopedia of famous Turks"), n.d. (1946); and Resmiy yeri lâgi ve ansiklo- pedi ("New illustrated encyclopaedic dictionary"), 1947-9 (up to the letter L).

GUMİLĐİNE, the Ottoman Turkish form of the Greek Komotini, Komotini, a town of over 30,000 inhabitants in Western Thrace, the modern Greek province of Rhodope, which from the sixties of the 14th century until 1912 was without interruption a part of the Ottoman Empire. The name Komotino is the academic version of

Sultân, Srinagar 1974; G.M.D. Sufi, Kaşgir Lahore 1948-9. (MOHIRLU HAN) GUMĂL, Gomăl, a river of the Indus valley system and the North-West Frontier region of the Indo- Pakistan subcontinent. It rises in eastern Afganistân some 40 miles/62 km. east of the Āb-ī Istāda lake. Flowing eastwards it is joined from the south by the Kundar and Zhob rivers, and forms the southern boundary of the South Waziristan tribal agency of the former North-West Frontier Province of British India (now Pakistan). Below the settlement of Murtâdā, it leaves the mountains and enters the lower-lying lands of the Dēra Īsmā'īl Khân district [see DERRAGAT], and is diverted into many irrigation channels; from this point also it is known as the Lānī River. The bed of the river is often largely dry in rainless periods, and only in times of flooding do its waters actu- ally reach the Indus itself.

Where the river emerges from the northern end of the Sulaymân Mountains into the lower terrain we have the Gomāl Pass, a defile some four miles long and one of the routes from Afganistân to the Indus valley; although much used by nomadic Ghāţays [q.v.] and other Pathan tribes bringing merchandise down to the plains, its comparative isolation and wilderness have not made it such a historic route for the pas- sage of armies as the routes further north of the Kurrām [q.v.] valley and the Khyber Pass [see KhYBRAR], although in the spring of 910/1505 Bâbur used part of the track along the swollen Gomāl River when travelling from Bānū to Ghazna (Bâburnāma, tr. Beveridge, 235-6).

During the 19th century, Sarwâr Khân, chief of Tank in Bânû, dammed the Gomāl River just below where it emerges to the plains (see H.B. Edwardeis, A year on the Pathan frontier in 1844-9, London 1851, i, 414-15). Towards the end of the century, Sir Robert Sandeman, the pacifier of Bālūčistân, planned to open up the Gomāl Pass for general access and thus gain an alternative route to the one from Multān to the Zhob valley of north-eastern Bālūčistân, occu- pied in 1889. In that same year, as part of the "Forward Policy", the Viceroy of India Lord Lans- downe authorised subsidies for the Wazârls and other tribesmen. Tribal milâds and qiyâns were summoned to a durbar at Apozai in Zhob, and military posts established in the Gomāl valley in order to command the route and in the hope of exerting some influence in Waziristan. The system worked for some time, but in the long run hopes of making the Gomāl Pass gen- erally accessible have proved vain for both the Government of India and its successor Pakistan.

Koumoutsinas, which was already used by Cantacuzenos in the mid-14th century. The Destān of Umār Pasha (ed. Melkoff, 101, 124) appears to be the first Turkish source to use the form “Gümüldjine” when relating Umār Aydinoğlu’s actions in Thrace in and after 745/1344.

Komotene emerged as a small urban centre (polisima) after the Bulgarian invasion of Czar Kaloyan in 1207, during which the old city of Mosynopolis was thoroughly destroyed. The remaining inhabitants of Mosynopolis fled within the walls of an uninhabited but rather well-preserved stronghold, Komotene. This new town is mentioned in connection with the actions of the Emperor Andronicus III against the Turkish pirates and during the Byzantine civil war of the 14th century, which were catastrophic for the lowland population of Thrace.

The old Ottoman chroniclers (‘Ashikpashazade, Negri, Obru, Anonymus Giese, Idrīs-Destān IV) unanimously place the conquest of Komotene by the Ottoman army in or around 762/1361, after the capture of Xanthi and Karaman to Murad I, congratulating him on the conquest of Filibe, Zagora and Gümüldjine, and also the annexation of Thrace (after Xanthi or Iskece). According to the Ottoman inscriptions, still preserved, record these actions. Ewliya numbers “4,000 prosperous, stone-built houses”, 16 mahalles and 5 Friday mosques, 15 zawiyas, five medrese, seven mektebs, 17 dāms and 400 shops. A number of his figures can still be checked and are correct, others look suspiciously high (viz. the figure for the houses). This source especially sings the praises of the pious foundations of Ewrenos and Ahmed Pasha. His description of the latter’s mosque is very accurate, and in no way exaggerated.

In the 18th century, epidemics of plague ravaged the Thracian lowlands and led to the disappearance of whole villages. (A lonely minaret in the fields 4 miles/7 km. of Komotene pathetically marks the site of the village of Eski Gümüldjine.) In the 19th century, the town witnessed again a considerable revival. In Komotene he erected a small mosque for the travellers (sc. an imaret). Shortly afterwards, in the first decade of the 17th century, Komotene shared the attention of the defterdar of Ahmed I, Ekmekджizade Ahmed Pasha, who dotted most of Thrace with buildings for the promotion of Islamic culture. In Komotene he erected a small mosque, a double hammâm, a doned and lead-covered mekteb, a medrese and an imaret. The mosque is the only Ottoman structure on Greek territory which is panelled with a number of multi-coloured tile panels dating from the best period of the Iznik kilns (988-98/1580-90).

Most of the information on Ottoman Komotene is contained in vol. viii of the Seyhāt-nāme of Ewliya Čelebi, who visited the town in 1078/1667-8. By then, the place had apparently enjoyed a great expansion. Ewliya numbers “4,000 prosperous, stone-built houses”, 16 mahalles and 5 Friday mosques, 15 zawiyas, two imarets, two hammâms, five medrese, seven mektebs, 17 dâms and 400 shops. A number of his figures can still be checked and are correct, others look suspiciously high (viz. the figure for the houses). This source especially sings the praises of the pious foundations of Ewrenos and Ahmed Pasha. His description of the latter’s mosque is very accurate, and in no way exaggerated.

In the 18th century, epidemics of plague ravaged the Thracian lowlands and led to the disappearance of whole villages. (A lonely minaret in the fields 4 miles/7 km. of Komotene pathetically marks the site of the village of Eski Gümüldjine.) In the 19th century, the town witnessed again a considerable revival. Entire new quarters arose on its periphery, and especially on the eastern side. During that century, a number of Ottoman buildings were restored and new ones erected. The Eski Djam (the old meşid of Ewrenos Beg) was greatly enlarged by enveloping it by a spacious prayer hall in the Ottoman “empire” style. The Yeni Djam (of Ekmekджizade Ahmed) was enlarged in the same manner. In the time of ‘Abd al-Hamīd II the town was linked with Istanbul and Salonica by a railway. The same sultan erected a large clock tower in the town as well as a medrese. Ottoman inscriptions, still preserved, record these actions.

Since the reorganisation of the provincial administration of the empire in the sixties of the 19th century, Komotene was the chef-lieu of a sandjak in the wilayet of Edine. In the eighties of the last century, the town is reported to have contained 13,560 inhabitants, ten Friday mosques, 15 meşids, two Greek and one Armenian churches, one synagogue, four medreses, two schools for higher education, ten mektebs and various schools for the education of the non-Muslim part of the population. The
During the First Balkan War (1912), Komotene suffered a Bulgarian occupation. In the few months between Balkan War II and World War I, Komotene suffered a Bulgarian occupation. In the few months between the political turmoil of the Balkan Wars and World War I, the area was a magnet for different groups, including Serbs, Turks, and Greeks. The town was ceded to Greece, which promised to respect the ethnic-religious composition of its population (around 1900, 149,230 Turks (including a group of 20,000 Bulgarian-speaking Muslims, the Pomaks); 58,357 Greeks; and 35,122 Bulgarians).

Under Greek administration, the Muslim element dwindled down to 112,665 in 1961, but the Greek element had mounted to 243,889 for all of Western Thrace. The Bulgarians disappeared during and after the two world wars.

Today Komotene is a mixed Muslim Turkish-Greek Orthodox town, roughly fifty-fifty between both groups. In 1961 the total number of inhabitants was 28,355. The town is the largest urban centre of Western Thrace. It is the seat of the wilayet of Edirne of 1310/1892 has substantially the same numbers, but adds details on the ethnic-religious composition of the town’s population, vary in various publications. Compare Adil Özgüç, Batı Trakya Türkleri, Istanbul 1974, and K.G. Andreadis, The Moslem minority in Western Thrace, Salonica 1956, where the Turkish and the Greek views are set forth. For the minutes of the Lausanne Conference, see for example Locanz Barj konferansis (tutukla, belgelere), in Siyasal Bil. Fak. neşr. Ankara 1969.

For the monuments of Ottoman architecture and epigraphy, see for the time being M. Kiel, Observation on the history of Northern Greece during the Turkish rule, in Balkan Studies, xxx/2 (Salonica 1971), 415-62, and also in Abdurrahim Dede, Rumeli’de biraklanlar, 53-74; A more comprehensive account is forthcoming by Kiel, The Ottoman Balkans, a survey of monuments of Turkish architecture in Albania, Bulgaria and Greece.

GÜRAN, SHAHSH ABU ‘L-FATH B. SHAHSH MUHAMMAD, official and commander in 10th/16th century Muslim India. An Indian-born Muslim (shaykhzâda), he took service under Ibrahim Lodi (923-32/1525-26) and was posted at Koyl (q.v.) (modern ‘Aligarh). After the battle of Pandpât (q.v.) (932/1526), Bûbur sent Mullâ Apâk to Koyl for enlisting troops. Shahshh Güran came over with two to three thousand men. He subsequently occupied Sambhal on behalf of his new master, and shortly afterwards seized Gâwalîr from Tatár Kân. In the Battle of Kânwa (933/1527) he was one of the commanders of the right wing, and after the battle, he was sent to Koyl to expel the rebel Ilyâs Kân. In Muharram 934/ October 1527, at the invitation of Shahshh Güran, Bûbur paid a visit to his house at Plahna (12 miles south of Koyl) and was entertained there hospitably. He participated in the siege of Chandî (934/1528). In 936/1536–7 he was appointed Kûndân al-asrâf and castellan of Gâwalîr, a post which he held till Bûbur’s death (937/1530).

During the reign of Humâyûn, he was appointed governor of Mâlwa, and held this post till his death in 943/1536-7. He died in Mandore and his dead body was brought from Mandore to Koyl, where he lies buried in an identified grave.

Shahshh Güran is said to have been an accomplished musician. He was usually referred to as Hindustani Aykâr.

GÜRÂRA [see GOURARA, in Suppl.]

GÜRÇÂNI, a Balûc tribe of modern Pakistan, living partly in the Indus valley plains of the Dera Ghazi Khân District of the Punjab [see on this, Deraj], and partly in the Mârî and Drâgal hills of the Sulaymân Mountains range and the upland plateaux of Shâm and Paylîwâgh, extending as far west as the modern Loralai District of northeastern Balûcistan.
The tribe is of mixed origin, some sections being Dokans of mingled Baluch-Sindhi Rajput extraction, whilst others are pure-blooded Baluch of the Rind and Langar groups; the chief's family belongs to one of the Dokan sections.

In the early 19th century, the Gurcanis had a reputation for turbulence and bellicosity, so that Edwardes could call them "troublesome" and "a vain and capricious race, ever ready to take offence and never to be relied on". After 1819 the Sikh ruler Ranjit Singh extended Sikh power across the Indus and by 1827 had overrun all the Dera Ghazi Khan district, this last being from 1832 to 1844 under the governorship (khan). Diwan Sawai Mal of Multan. He experienced much trouble from the Gurcanis, and was compelled to build a fort in their country at Harand. This fort was in fact successfully defended for the Sikh cause by Mulhammad Cand against Lt. (afterwards Sir) H.B. Edwardes during the Second Sikh War of 1848-9, although the Gurcanis, who controlled the surrounding countryside, joined the Baluchis and Pathans of the British forces against their old opponents the Sikhs. Subsequently, in British India, the eastern part of the Gurcani country came within the tribal area of Dera Ghazi Khan administered from the Pindah, and the western part within the tribal agency areas of Baluchistan and the khanate of Kalat (see Kalat); a complaint of the Gurcanis in the later part of the 19th century was that these administrative divisions weakened the unity of the tribe and exposed them to depredations of their enemies in the adjacent territory of Kalat, the Bugtis and the Marris (see T.H. Thornton, Colonel Sir Robert Sandeman, his life and work on our Indian frontier, a memoir, London 1895, 337-8).

(C.E. Bosworth)

GWAÎR, a town and district on the Makran coast, formerly a dependency of the sultanate of Umân and since 1378/1958 a territorial possession of Pakistan. The district of Gwárâd extends for 40 miles along the shoreline of Gwárâd West Bay, from Cape Pishkan to Gwárâd Head, and some 14 miles inland. The town stands on a sandy isthmus, about a mile wide, at the foot of a seaward, hammer-head promontory rising to 400 feet. Its inhabitants, numbering perhaps 5,000, are mostly Makrân tribesmen of the Bulayday Maliki and Gikhii groups, along with small groups of Baluchis, Arabs, Khôijdas and descendants of African slaves. They live mainly by fishing.

Until the mid-12th/18th century Gwárd, like the rest of Makrán, was in the hands of tribes who seldom recognised any paramount authority. Thereafter Makrán fell under the sway of Mîr Nasîr Khán of Kalát (regn. 1168-1299/1750 to 1794-5), the head of the Brahui confederation of the Baluchis, who in turn acknowledged the Durrânî Shâh of Afghanistan as his suzerain (see Kalat). Nasîr Khán gave Gwárâd to Sayyid Sulùn b. Ahmad of Maskât in 1198/1784 when the latter sought refuge at his court after being driven from Umân. Whether the grant was in perpetuity is unclear; for while the Arabic sâf Sa'id apparently continued to pay tribute for Gwárâd to successive khans of Kalát, in the form of occasional gifts of slaves, until ca. 1274/1857-8, in 1277/1860-1 the ruling khán suggested that the government of India might purchase Gwárâd from Umân and make it over to him.

The completion in 1279/1862-3 of the first section of the Indo-European telegraph from Karachi to Gwárâd coincided with the assertion of Persian claims to Makrán, including Gwárâd, and led the government of India to depute Colonel F.J. Goldsmid to investigate the nature of the Umâní title to Gwárâd. He reported the right of possession to be prescriptive and indefeasible and the Persian claim to be groundless. The frontier of Persia with Kalát was subsequently (1288/1871) fixed as starting at Gwatar Bay, some 50 miles west of Gwárâd town.

The incorporation of Gwárâd into Kalát, which was under British protection, was suggested by the viceroy, Lord Curzon, in 1320/1902, both to prevent the smuggling of arms through the port to Persia and Afghanistan, and to preclude any possible French or Russian designs upon it. The suggestion was not acted upon lest it contravene the Anglo-French declaration of 1278-9/1862 on the integrity of the Umâní dominions. Gwárâd remained an Umâní possession until it was ceded to Pakistan in 1378/1958, reputedly for the sum of 3 million sterling.

(J.B. Kelly)

GYROMANCY [see râmî].

H

HABBA KHÂTÚN, Kashmiri singer and poetess. Called Zûn ("moon") before her marriage, she is a semi-legendary figure in the Valley of Kâshmîr. Daughter of a peasant of the village of Candahâr, near Pampûr, 8 miles to the south-east of Srinagar, she was unhappy with her husband who ill-treated her, so she left him. Birbal Kârûrî in his Wâlikât-i Kâshmîr, which he wrote in the middle of the 19th century, says that she was a good singer and possessed of a melodious voice, she captivated the heart of Yusuf Shâh Câk (986-94/1578-86), who married her. But this account appears to be apocryphal, for it is not supported by any earlier authority. Neither the historian Haydar Malik nor the author of the Bahâ-
prominent queens of the mediaeval period. This, however, does not mean that she did not exist, as some writers have begun to say in recent years. In the first place, there is a strong tradition, which is impossible to ignore, in Kashmir that Habba Khatun lived in the second half of the 10th/16th century; and in the second, there is a large body of her songs and poems in Kashmiri which are attributed to her and to no one else. What seems more probable is that she was a mistress of Yusuf Shāh (Ta'rikh-i Hasan, ii, 296), and Birbal waved round her all kinds of romantic stories. After Yusuf Shāh surrendered to Akbar's general, Rādja Mān Singh, at the end of Safar 994/middle of February 1586, and he left Kāmrī with Rādja Mān Singh, never to return, Habba Khatūn retired to the village of Pāṇḍačūk, about 5 miles to the southeast of Srinagar. She continued to live quietly in a cottage close to the mosque, both of which she had built, and died at the age of about 55 years.

Habba Khatūn appears to have been a cultured woman interested in music and the education of girls, for whom she opened madrasas. She was a poetess and introduced bēls or love lyrics in Kāmrī poetry. The songs which she composed are even to this day sung by the common people of Kāmrī; and it was she who is said to have introduced the melody known as nāst Kāmrī.

HABSIYYA

HABSIYYA, a poem dealing with the theme of imprisonment. The term occurs in the Persian tradition for the first time about the middle of the 6th/12th century in Niẓāmī 'Arūdī's Dāvār makāla (ed. Kazwīnī-Mu'īn, Tehran 1955-7, mast 72). It is applied there to poems that were written by Mas'ūd Sa'd-i Shāhnām (q.v.) more than half-century earlier and which were still greatly admired as the sincere expression of the poet's sufferings. Although several Persian poets have composed poetry of this nature, the habsiyya of Mas'ūd have remained both exceptional and exemplary. Not only was he the first to write them, but the theme itself was a characteristic of his work. It is developed by Mas'ūd to an extent that has not been equalled by any imitator of later times.

There is a very close link between the prison-poetry of Mas'ūd and the story of his life. Twice in the course of his career he became involved in the political downfall of his patrons at the provincial court of the Ghaznavids at Lahore. Consequently, he had to spend almost two decades, 480/1087-8 to 500/1106-7, banished to a number of remote fortresses (see C.E. Bosworth, The later Ghaznavids, splendid and decay. The dynasty in Afghanistan and Northern India 1018-1186, Edinburgh 1977, 16, 67-8, 72, 74, 88). The habsiyya are, therefore, first of all topical poems, by means of which the poet tried to evoke the element of the Sultān's of Ghazna, either directly or through the intermediary of influential friends.

Poems of various forms could serve this purpose. The nature of the panegyric kastīlī offered the possibility to take the theme as the subject of the prologue (cf. e.g. Dīwān, 19, 335 f., 356 f., 515). More often, however, a section especially devoted to an account of the poet's condition (hash-i hāl) was added to the panegyric address of the patron (Dīwān, 58 f., 93 f., 107 f., 312 ff., 439 f., 498 f., 526 f.). In one instance, the two variants are combined (Dīwān, 427 ff.). There are also several non-panegyric kastīdas among the habsiyya of Mas'ūd (e.g. Dīwān, 63 f., 67 ff., 106, 329 f., 331 f., 351 f., 354 ff., 486 ff., 493, 503 f., 552 f.). Sometimes the characteristic habbiyya motifs only occur incidentally in poems dealing mainly with other themes. Other forms besides the kastīda lent themselves for the use of a prison-poem.

The contents of the poems vary from complaints of the prisoner's misery in more or less general terms, hardly to be distinguished from the wider category of poetical complaints about any grievance whatsoever, to the specific portrayal of his life in the dungeon. In spite of the close relation between these latter poems and the reality to which they refer, there is a certain amount of conventionalisation to be noticed in the representation of the poet's condition. Recurrent motifs are the description of the physical and mental state of the prisoner, of the dungeon, the chains and the jailer, and the poet's longing for freedom, or at least to see some bright object, such as the stars through the narrow window of his cell, and of the suffering on account of his long separation from relatives and friends. Mostly, the heavenly powers, instead of the Sultān, are blamed for the misfortune that has befallen the poet. But Mas'ūd sometimes admits that the real cause is to be sought in the fact that he, being only a poet, has aspired to political and military office (cf. especially Dīwān, 153 f., a kastīda addressed to a certain Muḥammad-i Khatūnī who had met with a similar fate).

The habbiyya elements are in these poems often connected with passages in which the poet speaks about his profession. These statements usually contain the conventional boast about the artistic abilities of the author, undoubtedly intended as an argument in favour of his release. But there are also utterances that are more specifically related to the habbiyya theme: writing poetry is the sole comfort left to the prisoner; the poet resents the favours bestowed in his absence on worthless flatterers; and he becomes disgusted with the poetry of the court and pronounces his intention to abandon it altogether after he will be released (e.g. Dīwān, 109, 516, 526). Religious elements are only rarely mingled with these ruminations.

The models for prison-poetry set by Mas'ūd-i Shāhnām have continuously influenced other poets who for one reason or another have had to undergo a period of confinement. Two poets of Shirwān, Fākār and Khākānī (q.v.), who both flourished in the middle and later part of the 6th/12th century, are among the earliest imitators of Mas'ūd's habbiyya. Khākānī's most celebrated prison-poems are the two odes in which he addressed Christian princes, although in these poems the display of the poet's exceptional knowledge of Christian terms and concepts overshadows the habbiyya-elements (cf. V. Minorsky, in BSOAS, xi [1945], 550-78). With Khākānī, the motif of imprisonment is often only a metaphor. He likes to refer to Shirwān as his "place of imprisonment" (habsgīh) where he has to stay against his will like a "captive" (gahārdand). This is particularly evident in a kastīda written on the occasion of Sultān Sandjar's capture by the Ghuzz, which scattered the poet's hopes of a career in........
HABSIYYA — AL-HADI ILA 'L-HAKK

Khurāsān (cf. Diwan, 155 ff.; see also 45, 282 and Tuhfat al-clrdkayn, ed. by Yahya, 334 ff.), whose chief promoters were hunted down and banished in 1925. His experiences and his reflections inspired him to write an important work, al-'Ummāl al-tāniyyān wa-ṣaḥīh al-arḍāk al-nādākbiyya (Tunis 1927; 2nd ed. Tunis 1966), in which he gave an historical characterisation of trade unionism in Tunisia and of the Qidmi'at umm al-adhām al-tunisiyyun wa-al-dir'at bi'l-adhām al-tunisiyyun (Tunis 1925), in which he endeavoured to prove that his own liberal ideas were not in contradiction to the teachings of Islam, which had been the first to give dignity to the Arab woman, but should now develop progressively further. In this work, he inveighs against polygamy, the wearing of veils (assimilated to muzzles), the marriage of Tunisian males with foreigners, divorce, which is a calamity, and finally, the ignorance in which women are kept. The first remedy for the ills of society is thus the education of girls and consequently, the setting-up of schools in which they can receive an education complete in every sphere, so that once they reach adult years, they will be on the way to organising more rationally the life of their family and to sharing in national activities just like the menfolk. Inevitably, there were criticisms. The main one directed at him was that of Muhammad al-Salih b. Murād, in his al-Hidā' 'ala 'musrat al-Haddad wa rallat al-klhadat wa'l-huwiya wa'l-kujr wa'l-bida' allati hawdhd Kitāb 'Imrā'atun Nakd (Tunis 1931), see also ‘Umar b. Ibrahim al-Barri al-Madani, Suyf al-hakīk ‘ala man mā xāra al-hakīk, Tunis 1931.

Al-Ṭāhir al-Haddad, who died at Tunis on 7 December 1935, left also behind a certain amount of poetry in which he expressed some of his social ideas. Finally, in 1975 a collection of his reflections was published in Tunis under the title of al-Masuqīn.

(J.T.P. de Brujin)

AL-HADDĀD, AL-ṬĀHIR, nationalist and reformist Tunisian writer, considered as the pioneer of the movement for feminine liberation in his country.

Born in Tunis ca. 1889 into a family of modest status originally from the Hāmān of Ulūm, he studied at the Zaytūna (q.v.) from 1911 to 1920 and gained the ṭatārī (corresponding to the diploma for completing secondary education). He then took part in the trade union movement and was put in charge of propaganda in an organisation founded in 1924, the Qidmi'at umm al-adhām al-tunisiyya, among the poets who composed [q.v.], have also been written in Urdu (cf. Annemarie Schimmel, The Islamic literatures of India, Wiesbaden 1973, 11).

As far as modern Persian poetry in Iran is concerned, the best examples of prison-poetry are to be found in the works of Muhammad-Takfī Bahār [q.v.], who was imprisoned for political reasons on three occasions. Most of his ḥabsīyya came into being during the last two periods, which occurred respectively in 1929 and 1933-4. It is evident that Bahār was inspired directly by the mediaeval ḥabsīyya, although he introduced many contemporary elements, such as a complaint about the traffic noise outside his Tehran prison. Like Ṣa'dī-Dīn al-Salmān, he used various forms of poetry. His most interesting work of this kind is a majnūna entitled Kāmurīn al-ṣādān (Diwan-i aṣgār, ii, 2-126) in which the theme of the ḥabsīyya is combined with a wide range of other subjects. The poem has been designed to provide a narrative about a meeting with the poet Sanā'ī [q.v.].

Modern Persian prose has also become a vehicle for the expression of the experiences of political prisoners. Outstanding examples of this new branch of the ḥabsīyya are Ayām-i mubāhas by 'Ali Dāghī and Warākpadā-yi zindān by Buzurg 'Alawī.

by his family, including his fathers and uncles, as the most suitable candidate for the Yazdî imâmât. Between 270/884 and 275/889 he visited with his family Amîn in Tabaristan, then under the rule of the Zaydl Alîd Muhammad b. Zayd, evidently in order to seek the support of the adherents of the doctrine of his grandfather al-Kâsim b. Ibrâhîm [q.e.] there. His activity soon aroused the suspicions of Muhammad b. Zayd and he was forced to leave precipitately. He also seems to have visited Baghdad briefly. In 280/893-4 he came to northern Yaman for the first time, invited by tribes in the region of Sa'da who were hoping that he might put an end to their feuds. He led a campaign as far south as al-Shârafâ near San'â', but meeting much disobedience among his followers, decided to return to al-Fâra', a day's trip southwest of al-Madînâ. Three years later, he was again urgently invited and on 6 Safâr 284/15 March 897 entered Sa'da which became his capital and permanent base of opera-tion. Shortly after his arrival, he issued his formal call (da'îwan) for support as the imâm and assumed the title amir al-mu'mînîn with the caliphal name al-Hâdî ila 'l-Hâkî.

After consolidating his control over the area of Sa'da, he extended his rule over Nadîrân in Djiinâdâ II 284/July 897, where he concluded a special treaty with the large community of Djiinîs. In the following year he conquered the towns of Khyâyân and A'dhâfîn south of Sa'da. His efforts to gain possession of San'â' were only temporarily successful. The town was voluntarily turned over to him by its ruler, Abu 'l-'A'tâhîya of the Alî Tarîf, who had already previously supported him, and he occupied it for the first time on 22 Muharram 288/19 January 901 and then pushed his conquests south as far as Dhamâr and Djâyshân. The opposition of the Alî Yûfîr and the Alî Tarîf, who had been entrenched in these regions, was strong, and he quickly lost them again and definitely relinquished San'â' in Djiinâdâ II 289/May 902 in a state of severe illness. A year later, a new campaign to take the town ended in failure and the capture of his son Muhammad by the enemy. In Djiinâdâ II 293/April 906 he again entered San'â', invited by a coalition of Yamanî chiefs opposed to the Karmat'î leader Alî b. Al-Fadlî. After a quarrel with Alî's Abd Yûfîr, he left voluntarily in Muharram 294/November 906, and the Karmat'îs took possession of the town. Only during a campaign of Alî as well as to Tihâmâ, capitam of al-Hâdî once more occupied San'â' from 19 Rajab—12 Shawwâl 297/7 April—23 June 910. Also abortive was a campaign of al-Hâdî to Tihâmâ, probably early in 293/august 905. Even his rule in northern Yaman was shaken by numerous tribal rebellions, especially in Nadîrân, where the Banu 'l-Hârîth revolted on every occasion. In 296/908 they succeeded in killing his governor, and al-Hâdî, already plagued by illness, was apparently unable to restore his rule over the province. His most loyal supporters were, besides members of his family and various other 'Alîs, a small troop of "Tabarîs", i.e. Yazdî volunteers from Daylamân and Kâlâr who arrived in two groups in 285/898 and 289/902. He died on 19 Dhul Hija 298/18 August 911. His tomb in the mosque of Sa'da became a place of pilgrimage for the Yazdîs.

Al-Hâdî's doctrine in ǧihd, laid down chiefly in his unfinished K. al-Abîkâm and the K. al-Muntakhâb collected by his follower Muhammad b. Sulaymân al-Kûfî, became authoritative among the Yazdîs in Yaman as well as part of the contending Yazdî community. It was based on the doctrine of his grandfather Alî b. Kâsim b. Ibrâhîm, though in some points al-Hâdî adopted more strictly ǧihd views, and was further elaborated, in Yaman, by al-Hâdî's sons Muhammad al-Murtaḍâd (d. 310/922) and Alîm al-Nâṣîr (d. 322/934), and, in the Caspian community, by the imâm Muhammad b. Mu'ayyad b. Bilâh (d. 411/1020) and Abu 'l-Tâhîb al-Nâ'îd (d. 424/1033). In his theological works, al-Hâdî generally espoused the doctrine of the Mu'tazî school of Baghdad rather than that of his grandfather. It is unlikely, however, that he ever was a student of Abu 'l-Kâsim al-Balkhî, the contemporary head of this school, as some late sources state. Concerning the imâmât, he took a radically ǧihd position, sharply condemning Abu Bakr and 'Umar as usurpers.

HADJDI AL-DABIR — HADRAMAWT

336

(P. JACKSON)

HADJDI IBRAHIM KHAN KALANTAR

Persian statesman, was the third son of Hadjdji Hāgūm, the headman, or kākhkūd-dāšt, of the Haydarīkhāna quarters of Shirāz in the reign of Nādīr Shāh. His ancestors were said to have converted to Islam from Judaism. One of them emigrated from Kāzwīn to Iṣfāhān and is said to have married into the family of Hādji Qawām al-Dīn Shirāzī. Hādji Māhmūd ‘Alī, Hādji Ibrāhīm’s grandfather, was a wealthy merchant of Shirāz. After the death of Mīrzā Muhammad, the kalāntar of Shirāz in 1200/1786, Dja’far Khān Zand made Hādji Ibrāhīm kalāntar of Shirāz, which office he continued to hold under Dja’far Khān’s successor, Luṭf ‘Alī Khān. He appears to have enjoyed a position of considerable influence in the city and among the tribal leaders and governors of the surrounding districts. Although his relations with Luṭf ‘Alī Khān were disturbed by mutual suspicion already in 1204/1789-90, when Luṭf ‘Alī set out to attack Iṣfāhān in 1205/1790-1 he left Hādji Ibrāhīm in charge of affairs in Shirāz. The latter signed the city during Luṭf ‘Alī’s absence. Disorders meanwhile broke out in Luṭf ‘Alī’s camp. He escaped and fled to Shirāz, thinking that the city was still in his hands. After Hādji Ibrāhīm had refused him access, he retired to the south. Hādji Ibrāhīm sent an army after him, but this was defeated in Tangistān. Meanwhile, Hādji Ibrāhīm entered into negotiations with Aḵā Muḥammād Khān Kāḏgar and was appointed beglarbokh or governor of Fārs. Zand resistance, however, continued and was not finally overcome until 1208/1794 [see KADJAR].

In 1209/1794 Aḵā Muḥammād Khān made Hādji Ibrāhīm sād-i ʿazam, in succession to Mīrzā Shāfi, Māzandārānī, with the title Ptimad al-Dawla, which office he held for seven years, first under Aḵā Muḥammād Khān and then under Fāth ‘Alī Shāh. He appears to have been a competent administrator and virtually to have presided over every department of state. His brothers and sons also held governments. His power, however, aroused jealousy. His enemies persuaded Fāth ‘Alī Shāh that he was plotting to overthrow him, and on 1 Dhu ’l-Hijja 1215/15 April 1801 he was arrested in Tehran. Those of his relatives who held provincial governments were also seized. He was blinded and exiled to Kāzwīn, where he died, and his estates were confiscated. Only two of his sons, twins, ‘Alī Riḍā and ‘Alī Akbar Kāẕm al-Mulk (b. 1203/1788-9, survived.

HĀDJI AL-DABIR

i.v. — See Vol. iii.

vi. — In MOROCCO.

This office, which existed already in the Almohad organisation, though with a very modest role, appears again under the Marinids (J. TEMPORAL, translator of Leo Africanus, calls the hādji “chief of the menials”, and A. EPAULARD, another translator, makes him “a chamberlain”, head of the “court attendants”) and was still alive under the Saʾids.

Under the Alawīs, the hādji was for long the most important official of the Sharifian palace. He was specifically designated as the intermediary between the sovereign and the high officials on the Makhzan [g.e.], and it was through him that they were given their orders and commissioned for missions. He kept the seal or stamp for fixing to all official documents emanating from the ruler, and he had under his command all the internal professional groups (ḫinta, pl. hāndāt) of the palace servants, e.g. tapestry-weavers, cooks, etc. In the protocol list, the chief minister came after him, and he himself had the place immediately behind the ruler, whom he followed like a shadow. The office seemed so necessary that the pretender al-Hūfa [g.e. in Suppl.], almost immediately when he was proclaimed sultan in the Sūs in 1912, nominated someone as his hādji. The Hādji Ahmad b. Mūsā known as Bā Ḥnaḏm [g.e. above] was remembered as a great man in Morocco at the end of the 19th century.

However, since the recovery of independence in 1956, the hādji has lost his importance, and many of his responsibilities have passed into the hands of the Director of Protocol appointed by the Ministry of the Royal Palaces.

(G. DEVERDUN)
our knowledge of relations between Sabaean and Hadramawt. These were sometimes peaceful, as in the case when a Sabaean mission was sent to Shabwa to take part in the festival of the Hadramite national deity (Ft tarīgh al-Taman, 184). At other times relations were hostile, and the most striking text of this kind (no. 15) shows that while the main Sabaean and Hadramite armies were engaged in battle in the Wādī Bayḥān, a small Sabaean flying column, aimed at "rescuing" the queen of Hadramawt who was sister to the Sabaean king, managed to capture the royal palace in Shabwa and hold out there for 15 days until relieved by the arrival of the main Sabaean army after it had decisively defeated the Hadramite force; the king of Hadramawt was sent back as a prisoner to Ma‘rib. Subsequently, the Sabaean forces raided the port of Cane and destroyed a number of ships there—evidence that the later fame of the Hadramiūm as seafarers goes back to early times.

In 1974-6 Garbini has plausibly argued that the view (up to then almost universally accepted) of the nature of the South Arabian pantheon is devoid of serious evidence in favour of it, and exposed to vital evidence contradicting it. Hence the reference in the earlier entry to "the astral triad of moon, sun and Venus-star", and the identification of the Hadramite national deity as a moon god, must be treated now as out-of-date. Garbini’s re-evaluation of the Sabaean evidence contradicting it. Hence the reference in the later fame of the Hadramiūm as seafarers goes back to early times.

Significant new facts are now available about the foundation of a Hadramite settlement on the coast east of Salāla; this Firenne identifies as the classical Mūsākhā. This opportunity may also be taken of saying that the spelling of the name of the sand-desert between Ma‘rib and Shabwa as Sab‘atayn (a spelling that the spelling of the name of the sand-desert moscha."

In Islamic tradition, the name is derived either from the personal name Ḥadramāwī b. Ḥimyar, or from ḥādir mayṣūṣ, or some such expression.

The name is applied to the wadāl, the area and the kabīla of South Arabia. The wādī runs roughly west-east along the 16° line about 48° 15’ to 49° 15’, at which point it becomes the Wādī al-Maṣlla, as it turns south-east and then due south to flow into the sea between Ḥayṭānū and Sayhūṭ on the Indian Ocean coast.

The area of Ḥadramāwī begins in the west at a line drawn between Shabwa in the north to the sea at Mayṣūṣ on the Wādī Ḥadqr and extends south of Wādī Ḥadramāt as far as Wādī al-Maṣlla in the east. The main towns of the area, which covers the territories of the pre-independence Ku‘ayyīr and Kuṭbīrī sultanesates and now falls within the fourth and fifth governorates of the People’s Democratic Republic of Yemen, are, in the north and along the Wādī, Shabwa, Ḥurayda, Shībūm, Sayḥūṭ, Tarīm, Ibnāt [as below] and Kabr Ḥidīr. The chief southern coastal towns are al-Mukkālī, al-Shīhr (though see below, on history) and Ghayl Bā Wazīr. Ḥadramāt is thus bounded by the sea in the south, Mahra country, the sixth governorate, in the east, the desert, the Empty Quarter, in the north and the western half of the fourth governorate in the west.

The tribal group named Ḥadramāt is supposed to inhabit the east and central areas of the Wādī itself, Shībūm being described as the beginning of its territory. Its members are descended through Saba’ī al-Asghar from Ḥimyar. 1. History.

It is difficult to build up a comprehensive picture of the early and mediæval history of Ḥadramāt. This is due to the relative inaccessibility and lack of exploitation of local Hadramiūm chronicles, still with few exceptions in manuscript, and to the extremely cursory treatment of the area in the Yemeni histories, in which Ḥadramāt appears only as a distant province of the Yemen.

First contacts with Islam were made directly with the Prophet, rather than through the Yemen, however, and there was correspondence between him and the local Kinda leaders of Ḥadramāt, resulting in the visit of al-Asghar b. Kays (or perhaps Wā’il b. Ḥadqr) to Medina. There he was well received by the Prophet, who accorded to his request and appointed Ziyād b. Labīb al-Asghar as ruler of Ḥadramāt. The latter remained there until after the Prophet’s death. There can be no doubt that the conversion of the Hadramiūm to Islam was not carried out as simply and as speedily as the Muslim sources insist, and the role of Ziyād and his successors in the area must have been more one of religious propagandist than of political leader. Indeed, Ḥadramāt, like the Yemen with its appallingly difficult problems of communication, must have entered the Islamic fold very gradually over an extended period of time.

The Prophet, the Orthodox, Umayyad and ‘Abbāsid caliphs until the 3rd/9th century, all appointed governors to Ṣan‘a’, al-Dīnār and Ḥadramāt. It is clear that the governor of the first always reported directly to the seat of Islamic government and that occasionally the latter two did also. For the most part, however, the governor of Ḥadramāt was merely a junior assistant of the governor of Ṣan‘a’, and thus Ḥadramāt became a province (mālikī) of the Yemen. It should be mentioned at this juncture that al-Shīhr, perhaps because of the independence of strong local rulers, during the early and mediæval periods invariably figures as a separate political entity, not part of Ḥadramāt at all and always mentioned alongside it. Probably due to the steady exodus of many prominent Hadramiūm from their native land to other parts of the empire during the Orthodox caliphate, the area sank into relative obscurity in the Umayyad and ‘Abbāsid eras.

The year 130/747 saw the introduction into Ḥadramāt of Ibāḍī doctrines by Abū Ḥamza al-Mukhtarī b. Ḥafṣī. The idea of Ḥadramāt as early as 66/685, when a party of
Nagid'iyya, the followers of Naqâda b. 'Amir al-Hanaft, arrived. It is possible therefore that the area was still receptive to Isâdi ideas in the 2nd/8th century. Al-Muhârîr b. 'Awf was a native of Baxān and met 'Abd Allâh b. Yahyâ during the pilgrimage of 128/745. He was persuaded to return to Hadramawt with 'Abd Allâh al-Manṣûr, the latter's two years later. To what extent the Isâdiyya managed to control Hadramawt is not at all clear, though al-Mas'âdî, writing of the position in 332/943, states that they were predominant in the area and that there was no difference between them and the Isâdis of Umâm. Certainly, the final blow to the movement in Hadramawt did not come until the intervention from the Yemen of the Sulayhidids. staunchly Shi'i and maintaining close ties with Fatimid Egypt, in the mid-9th/11th century.

It is evident that the Isâdiyya did not exercise political control over the entire area of Hadramawt, however. The Banû Ziyâd, originally 'Abbasid representatives in the Yemen in the early 3rd/9th century, operating from their headquarters in Zubdî, conquered Tibhâma and ruled independently. They then for some unknown reason became involved in Hadramawt also. The founder of the dynasty himself, Muhammad b. Ziyâd, had been appointed governor of the Yemen by the 'Abbasid caliph al-Ma'mun. It was his son, Yâsîn b. Ziyâd, who established his Ziyâdi rule in Hadramawt, which was to continue after his death in 245/859 until the fall of the Ziyadids in 407/1016.

In fact, Hadramawt fell into Sulayhid hands after their capture of Aden in 454/1062. The Ayyubids, Lâhîj, Abyan, al-Shîhâr and Hadramawt were all at the time in the hands of the Banû Ma'n, the little-known descendants of Ma'n b. Zâ'ida [q.v.], who were at first left to administer the territories on behalf of their conquerors. In 473/1080, however, after the Ma'nids' refusal to pay the agreed khârij to the Sulayhids, the latter installed their Shi'i protégés, the Banû Zuray', to run the affairs of the area, including Hadramawt, on their behalf. Thus the situation remained until after the entry of the Ayyûbidins into the Yemen in 569/1171.

It is difficult at this stage to work out the exact chronology of events in Hadramawt. Certainly, with Sulayhid control of Hadramawt through their clients, the Zuray'idis, lost, three powerful local dynasties appeared on the scene. Centred on Tarîm, the Banû Kâbîn took over much of the area, while the remainder fell to the Banû 'Ib-Dâ'arî in Shîbân and the Al Ikbâl on the coast in al-Shîhâr. The greater part of Hadramawt was taken by 'Uthmân al-Zandîjî, the Ayyûbidin nâ'îb, in 576/1180 after the departure for the north of the first Ayyûbidin ruler, Turân-Shâh b. Ayyûb, however, though pockets of local rule continued into the 10th/16th century, for the Ayyûbidins were never in a position to pay much attention to Hadramawt, a fact due to the local situation on the Ayyûbidin administration in the Yemen proper were too great to allow the luxury of firm control there. Other local dynasties followed: the Al Yamânî, for example, from 621/1224 in Tarîm, surviving into the 10th/16th century.

The Ayyûbidin's efforts in pacifying almost the whole of the Yemen proper and in putting an end to all local dynasties, with the exception of the Zaydîs north of Shan'âl, ensured for their successors, the Rasûlidids, a peaceful and stable country. The brilliant Rasûlid administration, which had assumed power through bloodless change, was not only able to consolidate the efforts of their erstwhile masters, the Ayyûbidins, but was also able to think of eastwards expansion and the recapture of Hadramawt, in any case a province of the Yemen. There was, therefore, considerable Rasûlid activity along the south coast, even during the reign of the first sultan, al-Mâlik al-Manṣûr 'Umar who died in 647/1249. During that of his son and successor, al-Mu'azzafar Yusuf, who died in 694/1295, Rasûlid power was first exemplified as far along the coast as the port of Zaflûr, which under the Rasûlidids marked the eastern limit of their control.

Possibly the only, and certainly the greatest challenge to Rasûlid authority in Hadramawt was that of the Habûdîs. Though originally from Habûd in Hadramawt, the dynasty was founded in Zaflûr by Muhammad b. Ahmâd (d. 620/1223). The family continued on the coast through Ahmâd b. Muḥâmmad (d. 628/1230) and Idrîs b. Ahmâd (d. 670/1271). The latter's son, Sâlim b. Idrîs, seized the opportunity to take Hadramawt in 673/1274. Despite the cries of help to the Rasûlidids from the local population in Hadramawt, it took the plundering by the Habûdîs of a Rasûlid ship off Zaflûr and the Habûdîs' urging the Rasûlid vassals of al-Shîhâr to cast off their allegiance to their masters to bring the latter with all speed eastwards from their Yemeni capital, Ta'izz. Zaflûr was recaptured and Hadramawt recovered. The Habûdî house was once more established.

It was the Tâhirîs who succeeded in the mid-9th/15th century to most of the territories held by the Rasûlidids, particularly those in the south and east, though they were never strong in the Yemen north of Ta'izz. Although much less is known of this dynasty than of the Rasûlidids, their predecessors, it is possible to assert that Hadramawt for a time came under their control. By the latter half of the 9th/15th century, however, the Kathîrîs, a tribal group originating from Zaflûr, had taken over some of the interior of the country. They also controlled al-Shîhâr which they had at first held for the Tâhirîs. Possibly as early as the beginning of the 10th/16th century, a new political force was introduced into the area, for with the Kathîrîs quarrelling among themselves, one fiction brought into Hadramawt to assist it a group of Ya'fîs, a large tribal unit inhabiting the area to the north-east of Aden. Ya'fî influence lingered on after this dispute, particularly in the seaports of al-Mukâllâ and al-Shîhâr. From now on down to the 20th century, the political history of Hadramawt is nothing more than the chronicle of disputes between the Kathîrîs and at least two Ya'fî tribal factions, though of course from the early 10th/16th century both the infidel Portuguese and the Turks had shown an interest in the seaports along the South Arabian coast and had at times attacked and even occupied them.

In the 20th century, under the British Protectorate Hadramawt was divided between the Kathîrî sultanate, with its capital in Sayûn and the Ku'ayfî sultanate, originally a Ya'fî tribal group, centered on al-Mukâllâ. Both sultanates were thus part of the Eastern Aden Protectorate until the independence of the whole of South Arabia in 1967.

2. Social organisation.

In general terms Hadramî society can be divided into four classes: the sayîdîn, the mashîyîkh, the kâblî (tribesmen) and the masâkîn or da'lî ("poor"). It is interesting to note that the pre-Islamic South Arabian inscriptions refer to an aristocratic group of musawwads, a word used to this day in Hadramawt to denote the sayîdîn. The latter are the descendants of the Prophet, while the mashîyîkh are
those noble families with the right to the hereditary title of sayyid, a word denoting class distinction, not a tribal chief. The sayyids reached Hadramawt in the early 6th/12th century, where they found many scholars, particularly in Tarfm and mainly of the mashayikh class. Petty jealousies and quarrels between the sayyids and mashayikh have continued from the time of the arrival of the former in Hadramawt, though these have never prevented the transmission of knowledge and learning between the two social strata. By the close of the 6th/12th century only the ‘Alawi group of sayyids remained to give their name to them—the ‘Alawi sayyids.

In an area of constant warfare and hostilities, the institution of the neutral territory was essential. Thus in Hadramawt the hawta [g.v.] came into being at an early date. A saint in his own life-time would demarcate the area of the hawta and arrange for the agreement of the tribes and, if necessary, the authorities in the area, that a particular hawta should remain inviolate and under the control of a manṣub. Before the arrival of the sayyids in Hadramawt, the hawtas were in the hands of the mashayikh. It was only then that the sayyid hawtas were gradually established, leading to the general decline of the mashayikh ones.

3. Geography.

Hadramawt is a hot and, with the exclusion of the coastal strip, dry land. The coastal plain is naturally extremely humid, as well as hot. Again if one excludes the coastal areas, it is mountainous too, and this, together with the extremely low rainfall throughout the area, means that very little of the total can be made over to agriculture, the chief industry. Dates have traditionally formed the main crop, though in more recent times cotton has been an important commodity also. Local grain crops include maize and oats. Tobacco is also found in places. Agriculture is watered either by the perennial flow of water in the wadis (ḥayṭ) or by wells.

4. The people.

The inhabitants of Ḥadramawt are Shafi‘i Sunnis. As is not surprising in such a poor area, they have always been prepared to travel abroad in search of earning their livelihood. Many travelled to the East Indies, in particular to Java, and their financial gains remitted home have always been the mainstay of the local economy.

(G.R. Smith)

(T.M. Johnstone)

ḤĀFĪZ TANĪSH ṢĪR MUḤAMMAD AL-BUKHĀRĪ, with the poetical name Nakhla, historian of 'Abd Allāh Kān [q.v.], the Shāybanīd ruler of Bukhārā. His father was close to Ḫubāy' Allāh Kān (940/1560), which must place the date of his birth much earlier—probably, or the capture of Samarkand (986/1578). Ḥasan Nīṭhārī mentions in his historical work that he began to write it, being 36 years old, when 'Abd Allāh Kān established his rule over Transoxania and made Bukhārā his capital. It was believed for a long time (including by the present author) that he means the official accession to the throne of 'Abd Allāh Kān, which took place in 991/1583, and therefore the date of his birth was supposed to be 956/1549 (36 years before the date of the beginning of his work, cf. below). However, Ḥāfīz Tanīsh mentions also that he wrote a kasida on the accession to the throne of Iskandar Kān, the father of 'Abd Allāh Kān (968/1560), which must place the date of his birth much earlier—probably, in the 1530s or even 1520s. In that case, Ḥāfīz Tanīsh may have meant by the establishment of the rule of 'Abd Allāh Kān over Transoxania the capture of Bukhārā by his brother Kull Khan (under whom 'Abd Allāh Kān was the actual ruler), or the capture of Samarkand (986/1578). Hasan Nīṭhārī in his anthology Muḥādkkār al-ahbāb, written in 974/1566-7 (see Storey, 802, no. 1102), mentions a poet Nakhli among those poets who had not yet reached an advanced age and lived in Bukhārā (MS. of the Leningrad Branch of the Institute of Oriental Studies, B-4020, ff. 126-7); this person may very probably be Ḥāfīz Tanīsh.

He began to write probably his Persian history of 'Abd Allāh Kān in the 1570s or 1560s; it was known already in 993/1585, when his contemporary Ṣīr Sayyid Muḥammad praised it in his Aḥākār al-azkīyā (see B. Ajmievod and K. Munirov, Ḥāfīz Tanīsh Būkhārī [in Uzbek], Tashkent 1963, 55). After 'Abd Allāh Kān had been proclaimed the supreme khan of all the Uzbeks (991/1583), Ḥāfīz Tanīsh was introduced to his court by the historian's patron, an influential amir Kutb-Bābā Kōkāštā, and became an official historiographer, usually also accompanying the khan in his numerous military campaigns. In 992/1584 he began to re-write his history according to a new plan, and gave it the title Sharaf-nāma-yi Shāhī (a chronogram = the date 992); both in Central Asian historiography and in modern scholarly literature it became known also as the 'Abd Allāh-nāma. According to the initial plan of this second version, as laid down in author's preface, it was to be divided into a mukaddima (the genealogy of 'Abd Allāh Kān and a short history of the Djuḍis and the Shāybanīd predecessors); two makālas (1) from 'Abd Allāh Kān's birth in 940/1533 to his accession and (2) from his accession onwards; and a kḥātima (on the outstanding qualities of the khan, the famous people of his reign, his buildings, etc.). The first makāla was apparently finished not earlier than 995/1586-7 (mentioned as the current date in the text) and before 998/1589-90 (mentioned as the current date in the preface to the second makāla, found only in one of the existing manuscripts). He carried his work up to 997/1588-9 (the date of the last event which he mentioned, the conquest of Harāt by the Uzbeks), but then the plan of the work was changed, and Ḥāfīz Tanīsh included the whole material in the first makāla. The kḥātima, absent in all existing manuscripts, was most probably not written at all. It is not known when the author finished the work in its existing form.

The Sharaf-nāma-yi Shāhī is based mainly on personal observations of the author, reports of other eyewitnesses and official documents. In his mukaddima, Ḥāfīz Tanīsh used various literary sources, which he partially noted as well as oral tradition. The work is written in ornate prose, with extensive use of sadja and numerous verses (their total number is 4,760); both by Tanīsh himself and other poets. The main deficiency of the work, besides its pompous style, is the frequent absence of precise dates. Nevertheless, it is one of the major works of Central Asian historiography and the most important historical source for the Shāybanīd period.

The further career of Ḥāfīz Tanīsh is not clear. Nothing is known about his life in the last several years of the reign of 'Abd Allāh Kān, nor during the short reign of his son 'Abd al-Mu'min. Some sources mention a poet with the same poetical name of Nakhli at the court of the Shīrāzī Shāhīn Ismā'īl Kūl Kān (1020/1611-42) (see Tadhkira-yi Tābir-i Naṣrābādī, Tehran 1316-17/1937-8, 435; Tadhkira-yi Mukām Kūl Kān by Muḥammad Yusuf Munšī, Russian tr. by A.A. Semenov, 83, 90); according to Naṣrābādī, after the death of Ismā'īl Kūl Kān (1054/1645-4) this Nakhli went to Balkh, where he died. Two preserved manuscripts of the divān of Nakhli are preserved in Taškent and Dūghanbe; one of the kasidas in this divān is dated 1045/1635-6. If this Nakhli is identical with Ḥāfīz Tanīsh, it must mean that the latter was still active at an age of about 100 or more. Even more doubts are thrown upon this identification by the fact that none of the poems belonging to Ḥāfīz Tanīsh and cited in the Sharaf-nāma-yi Shāhī is included in the divān of Nakhli. Some scholars, nevertheless, accept the identification without reservations.

Bibliography: biographical information about Ḥāfīz Tanīsh is discussed especially in the following works: B. Ajmievod, in his preface to the first volume of the Uzbek translation of the Sharaf-nāma-yi Shāhī (see below) and in his work, together with K. Munirov, cited above; V.P. Yudin, in Materiali po istorii kazakhskikh khanstv XV-XVII vekov, Alma-Ata 1969, 237-40; M.A. Salakhettindinova, in VII godininya naučnogo sessiya LO IVAN (krafty svobodennya), Moscow 1971, 111-3, and in VIII godininya naučnogo sessiya LO IVAN, Moscow 1972, 48-52; N.D. Mil’khukho-Mayklay, Opisanie periyodskih i tadzhikskih rukopisi Instituta Vostochnovedenii, vplusk 3, Moscow 1975, 295-6; The text of the Sharaf-nāma-yi Shāhī remains unpublished. Concerning the manuscripts and publications of short extracts, as well as Russian translations of extracts, see Storey-Bregel, 1130-3, no. 990; The publication of a full Uzbek translation begun in 1966 is still not finished: only two volumes (out of four) were published in 1966-9 (see Storey-Bregel, 1132).

Hayography [see MANĀKEH]

ḤĀIFA [see ḤAYFĀ]

ḤĀFĪZ TANĪSH (A.), pl. Ḥāfīz, also Ḥayfā (synonym, nasaj), weaver. Given the supreme importance of textiles in mediaeval Islamic life and economy [see e.g. WARK and ISHW], the class of weavers was probably the most numerous and certainly one of the most important groups of artisans. The weavers of Damascus, Bagdad, Egypt, the Yemen, and a host of other towns throughout the Islamic
world wove fabrics ranging from the coarse and workaday types to the finest and most delicate (cf. R.B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, passim). Especially high-skilled workers were to be found in the irdz [q.v.] factories producing for the court and for the state during the Umayyads, ‘Abbāsid and Fātimid periods, and these were probably somewhat better-paid than the mass of textile workers. The overwhelming majority of these last worked in their own homes for dealers or middlemen or in small workshops situated in the markets of cloth merchants. On the whole, the weavers were, as in the ancient and classical societies of the Near East, an exploited and ill-paid class, working in vile conditions, and this fact no doubt contributed to their image in mediaeval Islamic times as a turbulent and socially-volatile group, easily swayed by heterodox religious and political doctrines; one recalls the similar image of weavers in mediaeval France, Flanders and England, when in the first two regions at least, tisserand was at times almost synonymous with “heretic”. Certainly, at the beginning of the 3rd/9th century, the Coptic weavers of the Nile delta in Egypt earned only half-a-dinar per day, “insufficient for the bread of their mouths”, as they complained to the Patriarch Dionysios of Tell-Mahre (see Mez, Renaissance, 433-4, Eng. tr. 461).

The materials used included cotton, wool, linen and silk. Some jurists recommended that a weaver should not weave silken cloth, which is forbidden for men’s wear. The legality of whether a cloth should be woven in silk mixed with other material forms the subject of juristic discussion. If the warp of the fabric (ṣād) is inūn and its weft (ḥāla) is ḫun or ḥazz (flax silk), it was permissible (cf. Ibn Ṭūlūn, Nakd al-tdlib, Chester Beatty Ms. 3317, fol. 50). Weaving was carried on by men as well as women, but spinning was done by womenfolk only.

In mediaeval Islamic times, opinion was in general condemnatory of the manners and habits of the weavers. Typical anti-ḥāʾik opinions are as follows: “The most silly persons are the weavers”; “When a weaver is asleep, he is worthless and harmful; when he is awake, his companionship brings disgrace”; “The intelligence of a woman is equal to that of seventy weavers”; and the like. According to a legend, told by many Arab and Syriac writers, Jesus’ mother Mary (Maryam) once lost her way in search of her son and asked a tailor (khayd), who showed her the right path. Thereupon Mary cursed the weaver but blessed the tailor. This is why the weaver is alleged to be damned for ever. This legend served as the basis for prejudice against weavers. Arab sentiment about the weavers is further epitomised in Džahir’s words, “The weavers in every age and in every country possess in equal measure foibles such as short temper, stupidity, ignorance and iniquity.”

In Islamic tradition literature (ḥadīth), the trade of the Ḥāʾik is often linked with other noisome and unpleasant callings, sc. those of the coppersmith (see ṭaṣṣāb in Suppl.), the tanner (see ʿabbrad in Suppl.) and the sweeper. This condemnation was noted by Goldziher, who pointed out that the reputed Roman times was despised, and that in the early Islamic period, many of the weavers, both male and female, were slaves (Die Handwerke bei den Arabern, in Globus, lxvi [1894], 205 = Gesammelte Schriften, iii, Hildesheim 1969, 318). R. Brunsvich subjected the low status of the weaver to a detailed examination in his Metters viss in Islam, in SI, xvi (1962), 50 ff. He demonstrated that this could not be from the unpleasant and polluting nature of the trade, as with tanning and sweeping, but must rather have arisen on religious grounds, from the many traditions in circulation attributing to the weaver, in addition to other prominent dignitaries of early Islam, condemning weavers as the offspring of Satan (cf. also the story of Mary and the Ḥāʾik, above). However, the gradual spiritualisation of Islamic society by the ‘Abbāsid period, the notion of the equality of all believers, and the evident high economic value of the textile trade, did eventually contribute to an amelioration of attitudes towards weavers.

Thus Islamic society adopted paradoxical attitudes towards the weaver and his craft. The weaver is despised, but weaving (ḥijāka) as a handicraft is praised. Ibn Kūtyaḥa, Ṣaʿalib, and Bayhaḵi include Ḥijāka in a list of the crafts of the nobility (ṣināʿāt al-adnfrif), and Ibn Tāmyiya, Ibn Ṭūlūn and other scholars upheld the theory that weaving is one of the obligatory duties of the collective body of the Muslims (jadr khifaya [see Fard]). Ghazāli and al-Lubūdī said that weaving is a highly beneficial and indispensable craft. “Weaving and tailoring are two essential crafts in the ordinances of Islam”, which, in the days of the Prophet, were bountifully rewarded to the weavers because of their merit for content”, argued Ibn Ḥalīfān also. In spite of these pronouncements on the importance of weaving, public invectives against the weavers persisted in traditional Islamic societies.

The legal status of weavers and other despised professions was weak, and there was discussion over their ‘adḥa, their probity and their admissibility as bearers of legal testimony (ghālida) in courts of law [see ʿadilla]. The attitudes of the law schools varied somewhat. The Ḥanafīs were inclined to admit the ‘adḥa of the despised trades, if their practitioners displayed religious and moral qualities; the Mālikūs were the most rigorous, only admitting it where necessity had compelled adoption of the trade in question; the Shāfīi’s and Ḥanbalīs took up intermediate positions. The Imāmī Shīʿi attitude was more liberal than the Sunnī one on matters like ʿadilla and on the doctrine of kafʿa [q.v.], comparability of status in marriage. Social restraints notwithstanding, early Islamic societies produced learned men among some sects of weavers, e.g. Abū Ḥamzah Māḏajma b. Samʿān al-Ḥāʾik, an Islamic traditionist, and Ibn al-Ḥāʾik, the author of Kitāb Dżazairat al-ʿArab.

After the imposition of the British mandatory rule in Iraq was partially transferred to Iran, whose then strongest man, the Sardar Sipah (later Rijāl Shāh), was in fact to curtail it; there was created in Iran a strong religious base which would by its nature weaken the young Persian Communist movement; and finally (perhaps the most important of all), clerical leadership came in part to the hands of Hā'iri, who unlike his Nadjaf colleagues, would not intervene in politics. Hā'iri only once was drawn into these: in 1924 the Sardar Sipah attempted a republican form of government which gave rise to a popular uprising and involved the clergy, including the banished ‘ulamā’ then residing in Kum. On this subject, meetings were held by the ‘ulamā’ of the exodus and chaired by Hā'iri in Kum (F.O. 4167/4, 26 March 1924, no. 126) and finally, to terminate the confusion, Hā'iri and other ‘ulamā’ were urged to declare that they requested the Sardar Sipah to disperse with republicanism. In other cases, however, Hā'iri rejected politics; he did not fully identify his position with that of the ‘ulamā’ of the exodus.

He is said to have composed 42 books, several of them in Persian. Many of his writings were brought to the Yaman, where they gained high esteem among the Zaydi scholars, who frequently referred to the author merely as al-Hākim. His extant Kurʾan commentary al-Taḥdhib, in nine volumes, supports Muʿtazili doctrine more consistently than al-Zamakhshari's al-muṣḥaf and contains numerous quotations from earlier, lost Muʿtazili commentaries. It was later twice abridged. His continuation of 'Abd al-Djabbar's Taḥdhib al-Muʿtazila, contained in his Shah al-ʿaynn, has been edited by Fuʾād Sayyid, Fadl al-ʿīlās wa-tābābī al-Muʿtazila, Tunis 1393/1974, 365-93. His K. Qulṭi al-abābār, a collection of wide-ranging lectures and narrations, was quoted by Ibn Isfandiyar for its reports on the Caspian 'Alids (see Taʾrikh-i Tabaristan, ed. 'Abbas Ibtāb, Tehran 1320/1942, i. 101).

Hāl (pl. ahaḍā; hāl is normally fem, but often in Asʿārī texts is taken as masc.; the form hala is occasionally found in both Muʿtazī and Asʿārī sources), a technical term of philosophy employed by some of the Baṣran muṭakallīmūn of the 4th/10th century and the 5th/11th one to signify certain “attributes” that are predicated of beings. The term was taken over from the grammarians first by Abu Ḥāmid al-Djubbaʾī [qa.], and subsequently used in two basic ways, one by Abu Ḥāşim and his followers in the Baṣran Muʿtazila and the other by al-Bikilānī and al-Djuywaynī [qa.], in the Asʿārī school. The treatment of the hāl within the contexts of the two school traditions differs to such an extent that one must recognise two distinct concepts. The discussion of the ahaḍā by later Asʿārī writers (e.g. al-Shahrastānī and Fakhr al-Dīn al-Rāzī), though they tend to focus primarily on the prescriptive nature of their own predecessors in the Asʿārī tradition, does not keep the two conceptions clearly distinct, and certain modern studies based chiefly on these sources have tended to misconstrue the problem, particularly in regard to the Muʿtazī tradition.

A. The Muʿtazila. For Abu Ḥāşim and the Baṣran Muʿtazila following him, the expression hāl designates the “attribute” (ṣifā) as the latter is conceived to be an ontologically real and distinguishable portion of the being or an essential entity (ṣayḥ, naqṣ, dāfʿ). In the works of the classical Muʿtazila, accordingly, the hāl is most commonly designated by the term ṣifā (ṣifā, as defined below). In order to understand the concept it is necessary to clarify the verbal and conceptual context of its formulation and of its occur-

HĀFIĪZ — HĀL
rence within the texts. Most importantly, there occurred in the development of the Baṣra kalām from the 3rd/9th century until the 5th/11th an accretion of new formal meanings for the terms sīfa, wasf, and hadūm (some of them peculiar to the Muʿtazila or to the Ashʿarīs, and others shared by the two schools of thought that must be distinguished if the ontology of the ahwāl, as treated in the texts, is to be understood.

So far as concerns the discussion of the nature of things, the teaching of the Baṣra kalām was from the outset explicitly cast in terms of an analysis of the predicates that are said of them: of the predicates (the Arabic nouns and adjectives: al-asmāʾ wa l-ʿasāf) that are predicated of beings and those particularly that are said of God in the Qurʾān. The word sīfa, in its first and probably original sense in the theology of the Baṣrans, is taken over and adapted from its use by the grammarians with the meaning “a descriptive term”. In this sense, then (sīfa), it refers to any general or descriptive predicate term and so combines the grammarians’ categories of noun and adjective (verbs being paraphrased into adjectives) (see e.g. Aḥbāb al-Ḍabbār, al-Majmūʿ, v, 198). Ṣīfa is thus virtually synonymous with wasf; the expression (kasīfa) employed in describing (wašafā) some entity is implicitly asserted to be, in which the particular word is predicated of a subject noun which is taken to denote some concrete entity (shayʾ). In another sense (sīfa, the predicate expression (sīfa) may be considered from the standpoint of its meaning (al-maʾnāʾ, what is meant as opposed to the word or material utterance: al-ʿibāda, al-ʿiqlq) and so as signified by any of several expressions (wasfīf, asmāʾ) that are considered to be synonymous in their strict sense (ḥabba) as they are said of a particular entity (e.g. “al-khāl = al-kawāl = al-wajh”, as said of God). A proposition affirming a particular sīfa, as true of something may be thus formulated, employing any one of a number of sīfāt = (wasfīf, asmāʾ) (see e.g. Aḥbāb al-Ḍabbār, al-Majmūʿ al-muhit bi l-taklīf, 172). Within the Baṣran tradition of the kalām, then, the question, whether to affirm a given predicate as true of an entity (wašafābuh hū) is, or is not to assert (al-duḥa) the reality of an “attribute” belonging to it and that of the ontological status of such an attribute; if any is held to be asserted by the sīfa, then the questions in terms of their various responses to which the major schools may be distinguished, and on the basis of which their conceptions of the ahwāl are divided.

For Aḥbāb al-Ḍabbār, an entity (shayʾ) or essence (naṣr, ṣaff) is an object of knowing (maʿlūm) that strictly speaking exists (waqīʾa) or does not exist (ṣūmā) and which, as an object of knowing, may be directly referred to (al-duḥa) and may be made the subject of a predication (al-duḥa waḥāka) (see e.g. Aḥbāb al-Ṣafar, Muḥsam al-Idāmāyyīn, ed. H. Ritter, Istanbul 1929-30, 519). It is not, however, said of something else. Ṣīfāt, are employed in describe entities, i.e. to express what is known about them. According to the mature teaching of al-Ḍabbār and of the Baṣran Muʿtazila after him, Ṣīfāt are those expressions that name the “essence” or essential entity as such or that describe it as it is in some particular way distinguished from entities essentially similar to it. Generic terms, i.e. those which designate broader classes of beings, embracing several kinds of essential entities, they do not consider to be Ṣīfāt, in the strict sense but rather as quasi-ṣūmā (terms whose use to name or describe something is in part arbitrary). As predicate expressions or terms (thus excluding the use of an expression to name an entity and to refer to it as the subject of the proposition), the Ṣīfāt, are not, as such, directly referential. They are, however, understood to have implicit reference when said of a particular being. That is to say, when predicated of a particular being, most Ṣīfāt, implicitly assert the entitative reality either of the being denoted by the subject term or of another being, and accordingly the various predicate expressions are systematically paraphrased in order to make explicit what ontological assertion (iḥbab) is implicit in each particular affirmation. Thus for example, to say “Zayd strikes” is to assert that there exists an act of striking (darb) that has occurred on his part (darb = waṣafābuh darb); or to say “Zayd knows” is to assert that there exists an act of knowing that belongs to him (“ālim = laḥū ālim”). In these instances, the entities whose reality is asserted in the affirmation of the propositions are termed the “cause” (išā, pl. istil or maʾnā, pl. maʾānī) of the proposition or judgement (hadūm) that the thing is so, and the predicate term comes, therefore, to be called ṣīfat maʾnān (i.e. a term whose affirmation of the subject implies the reality of a maʾnā; maʾnān originally meant the “sense” of the predicate or judgement: hadūm the “sense” or “meaning” being the identity of the Basran kalām, as the reality of that entity the presence of which, in a given relationship to the subject, is asserted by the particular predicate. By the time of al-Ḍubbāʾī, the two words ṣīla and maʾnā are employed as synonyms, being used interchangeably in most contexts, and within a century the semantic origin of this sense of maʾnā seems to have been forgotten). As conceived by the Baṣra mutakallīmin, the maʾānī, are not, however, attributes. They are, rather, entities in the strict sense: beings that are themselves distinct objects and that as such are not predicable of something else. In al-Ḍubbāʾī’s analysis, then, since God is absolutely one and undivided, when one says “God knows” (Allākā ālim) there is no assertion of the reality of any entity other than God’s self (naṣr-suhā) and accordingly the predicate term is, in this instance, called an “essential predicate” (ṣīfat, nafṣ): a predicate expression whose affirmation of the subject implicitly refers to and asserts the reality only of the self or essence of the entity denoted by the subject term). All terms that name or describe the self or essence of a thing as such are, when used predicatively, Ṣīfāt nafṣ. Thus al-Ḍubbāʾī nowhere speaks of attributes, if we understand “attribute” in its usual sense (as, e.g. a property, characteristic, or quality of a thing, as when we speak of a figure’s “being triangular” or “triangularity” as a property belonging to it); he has no term for such a concept and uses no formal expression that would imply the reality of such a thing.

The concept of the attribute as an ontologically real perfection, property, or state of the being of an entity was introduced into the Baṣran kalām by Abū Ḥāǧīm. Though most often referred to in the Muʿtazilī texts by the term sīfa, the attribute, thus conceived, is also referred to by the word ḥāl (state). This latter term Abū Ḥāǧīm apparently took from the grammarians of the Baṣra school (the Kiṣāṣ employ a different expression reflecting their own grammatical analysis), and it is likely that he formed the philosophical concept partially in terms of a reflection on the significance of ḥāl expressions as these are understood and analysed by them. When explicitly discussing Abū Ḥāǧīm’s conception of the attribute (ṣīfā, ḥāl) for the purpose of refuting it,
the Ag̲h'arī texts (e.g. al-Bakillānī and al-Shahrastānī) most often speak of it as hāl, probably to avoid the ambivalence of the word sifa, though in other contexts where the doctrine of Abū Ḥāşim and his followers is discussed, one often finds sifa in the Ag̲h'arī texts and occasionally also waqf, the latter representing more properly Ag̲h'arī usage.

The attribute (sifa, hāl) is not an essential entity (qayr, dhāl) as this is strictly defined and understood. It is therefore considered to be an object or entity that can be known in isolation as one knows less grasped and understood (ma'kuld) (yu'lam c mudj_arradihd). Thus not though a distinct object of knowing and so not “known” (ma'duma) in the strict sense of this term, the attribute or state is nonetheless grasped and understood (me'dalā) as one knows a thing is specifically qualified by it (mak'Lallas bhāh). Furthermore, since the attribute or state is not an entity, it cannot be said to be existent (maudijīdūta) or non-existent (me'dalma) because these predicates are properly used only of entities. In that it is, however, an ontologically real perfection or state of the being of an entity, the attribute (sifa) does have actuality (tajd_addud al-wuajud); it refers properly only of entities. In that it is, however, the functioning of the sense organ.) It may be that “being perceiving” is the only true attribute which they class into five basic categories according to the attributes whose actuality flows immediately from (ṣada'ra 'an) an entitative, determinant cause (hul dhdtihi) as, for example, the atom’s occupying space (kaunahuhu mutharrik1) or God’s being existent, living, knowing, etc.

3. The attributes whose actuality flows immediately from (ṣada'ra 'an) an entitative, determinant cause (hul dhdtihi) as, for example, a human individual’s being knowing (kaunahuhu 'alīm), an attribute whose actuality is asserted in the sentence “’Aṣyād knows” (’Ayd 'ālim) and whose actuality arises indirectly from its being existent (‘ālim al-mahāli), the only true act of knowing (al-ma‘īn) that exists as a concrete entity in the heart. The attribute (sifa, hāl) in this instance is a perfection that specifically qualifies (tajṭus'ūs) not its immediate physical locus (al-mahāli), but rather the living corporeal whole (al-qimla al-hayya) that is the individual, and it is for this reason that Abū Ḥāşim and his successors say that the predicate “knowing” is said of the whole and not of the organ or substrate. “Moving”, on the other hand, is predicated only of the material substrate (al-mahāli) since the attribute of “being in motion” (kaunahuhu mutharrik1) belongs only to the locus of the entitative cause of its actuality.

4. Attributes whose actuality depends upon the agent that effects the existence of the thing and which, therefore, are said to be bi ‘sifī. Though many characteristics (abkām) of temporal entities are ascribed to an agent as their source, either immediately to his agency as such or mediatly through the manner of the act’s occurrence (‘ālim al-mahāli), the only true attribute (sifa, hāl) in the strict sense) that is said to be “due to the agent” is that of a temporal entity in its being existent (kaunahuhu mautijīdūta). Attributes whose actuality in the thing is due “neither to its essence nor to an entitative cause” (lā tā ‘nafs aw-lā bi-lilla li-ma‘īn), the designation of a class of predicates (ṣifat, wuqf, isma) as lā tā ‘nafs aw-lā bi-lilla would seem to have originated with Abū ‘Ali al-Djubba. Because of the basic difference of his analysis and ontology from that of the later school, however, the predicates that he so classed are not the same as those so classed by Abū Ḥāşim and his successors. What predicates (ṣifat) and what attributes (ṣifat) Abū Ḥāşim may have classed under this heading, if any, indeed, is at present uncertain. His followers, however, assign the attribute (sifa, hāl) of “being perceiving” (kaunahuhu mudrīk) to this category, since perception, according to their view, arises directly from the perceiver’s being living on the condition of the appropriate presence of the percipient. (Perceiving is here distinguished from sensation—al-hiss—since the predicate “sensing”—ma‘ūs—is taken to indicate not a true attribute but only the functioning of the sense organ.) It may be that “being perceiving” is the only true attribute which they class
thus; predicates (ṣfāt) which are implicitly negative are said to be là li ʿtaʿafs wa-lā li-šīla, but they do not indicate ontologically real attributes.

For us the essential reality of a thing (its bakkāḥ) is its essential attributes, for what we understand and refer to when we speak of it as its being as it is known to us in the attributes. Predication, according to the classical Muʿtazila, are said of essential entities that are known (maʿlūma) and distinguished as such; the predicates that refer to a thing's essential attributes (al-ṣfāt al-dhātīyya) are those which we employ to define it. According to Abū Ḥāshim and his followers in the Baṣrān Muʿtazila, it is thus that through their essential attributes we know entities, i.e. in that they are so manifested to us as belonging to the same essential class (gūna) or to different classes, for beings that share (ṣfatara) in one essential attribute must be alike (tāmāzgha) in that which entails (skūdā) the actuality of the attribute, and so must share in all their essential attributes. (See, e.g., ʿAbd al-Djabbar, Shahr al-ṣulṭ al-ḥamsa, 108, 9-12 and 199, 3-5; al-Mughnī, iv, 270 f. and 252, 8-10).

One speaks also of the “modality” of an attribute (kayfyya al-ṣfā), Existence (a thing's being existent: wasḥuḍdūk = kawvnū mawṭūd), for example, it is “possible” (wādūd) or “impossible” (mawlah). Some entities, however, (sc. all beings other than God) are temporally existent (wudjādūhū — kawnū mawṭūd). Some entities, however, (sc. God) are eternally existent (lam yawqū mawṭūd). Others can be in that state which are eternal existent (kawnū hālī fi mawḥūdī) while others (sc. all beings other than God) are temporally existent (wasḥūdūk). The terms “eternal” (kaddām) and “temporal” (mawḥūdī) refer to the modality of the attribute of existence. Similarly the term “inherent” (hālī) of the attribute of existence is inherent in its substrate (kawvnū hālī fi mawḥūdī) as the term “eternal” (kaddām) refers to a modality of its existence. (See, e.g., ʿAbd al-Djabbar, al-Mughnī al-muḥīt bi l-taklīf, 163, 4-7 and Abū Ṭabīḥī, Ḥiyādāt al-dharr, 384, 14 f.).

Not all predicates that may be affirmed as true of an object imply the presence of an ontologically real attribute (ṣfāt, hāl). Some terms, for example, refer to the “characteristics” (akhkām) of attributes; others (e.g. ethical terms) refer to contingent characteristics (akhkām) of acts which, determined by one or another of the states of the agent (awḍāʿ al-ḥālī) (see, e.g., ʿAbd al-Djabbar, al-Mughnī, viii, 159 and al-Ḥūdūsī, al-muḥīt bi l-taklīf, 352), derive immediately from the manner of its coming to be (waṭdūq al-wadādūq = waṭdūq waṭdūq) and others to the modality (kayfyya) of an attribute. Some, viz. those that describe a thing in its perceptible qualities, refer not to (ṣfāt, ʿabāl̄) for positions (hayyāt) of the material substrate; some descriptive terms are implicitly negative (e.g. “inanimate”, “other”, “dissimilar”) and the like, and refer to no real attribute; some refer primarily to a being other than that denoted in the subject, viz. the “derived predicates” (al-ṣfāt al-muḥājīna) (see, e.g., ʿAbd al-Djabbar, al-Mughnī, vii, 58, 3-7 and for the term of Ibn Fārūs, al-Sāhīb fi ṣīk al-ḥagha, ed. M. El-Choûmèni, Beirut 1383/1964, 86 ff.), i.e. those that assert the actuality of an action performed by the subject and those that assert the actuality of the state (hāl) or act of another (e.g. “known” or “commanded”).

Generic terms, finally, are not considered to be truly descriptive terms (ṣfāt) by the Baṣrān Muʿtazila, as was noted above. Accordingly, one must distinguish those instances where the expression kawvnū al-ʿṭāliq “(its being ...)” is employed to denote an ontologically real attribute (ṣfāt, hāl) and those in which it is employed merely as a nominal periphrasis for a sentence (e.g. kawvnū al-aṣaad as a periphrasis for kwana awsaad “it is black”) that does not assert the actuality of an attribute (ṣfāt, hāl) of the being that is denoted by the subject term. The differences in the understanding of these terms by the Muʿtazila and the Ashʿarīs are characteristic of those in their conception of the al-hāl.

B. The Ashʿarīs. Among the Ashʿarīs, the concept of the “attribute” (hāl) as conceived by Abū Ḥāshim was borrowed, adapted, and employed by al-Bākīlānī and al-Djuwaynī and, it would seem, by no others (see, e.g., al-Ṣahhāratānī, al-Šāhīya, 131). Al-Bākīlānī’s acceptance and use of the concept was, however, inconsistent; in some works (among them his two published compendia, al-Ḥiṣāf and al-Tamhīd) he expressly denied the validity of the concept (though it implicitly underlies the discussion in a number of important passages in both al-Ḥiṣāf and al-Tamhīd) while in others, including his last major kalām work, al-Hidāya, he is reported to have asserted its validity and to have integrated it into his treatment of the predicates of being and of the divine attributes (see, e.g., al-Djuwaynī, al-Ṣāmil, 294, 629). Al-Djuwaynī, on the other hand, seems to have expressly employed the concept in most if not all of his kalām works, though he is reported to have rejected it in his late juridical writing (see, e.g., Abu ʿl-ʿIṣār, Kāsim Subayān, b. Najm al-Amārī, Šahr al-ṭarīqī, Princeton University ms. ELS 634, fol. 356). In the present absence of any direct, adequate evidence concerning al-Bākīlānī’s treatment and use of the al-hāl concept, the present outline reflects strictly only the discussion and terminology of al-Djuwaynī. The sources, however, indicate no major difference between al-Djuwaynī’s understanding and use of the concept and those of al-Bākīlānī; one may therefore suppose that their teaching in this respect was substantially the same.

Like Abū Ḥāshim, the Ashʿarīs who employed the concept of the “attribute” as hāl describe it as “the thing’s being such and so” (kawn al-ṭayy). The context to which the concept was adapted and into whose overall structure it had to be integrated differs, however, in several important respects from that of the Muʿtazila tradition of Basra, even though the Ashʿarī analysis of the predicates that are said of beings is in some ways analogous to that of al-Ḏubbārī. Omitting those predicates that refer to actions (ṣfāt, al-ʿād) and so to an entity essentially extrinsic to that denoted by the subject term, al-ʿAsharī and his followers, in contrast to the Muʿtazila, recognise only two categories of descriptive predicates (asmāʿ, awāsaf, ṣfāts), since they divide the entities which constitute the ontological basis for the truth of the predication (ʿākhdak al-ʿawāf: the thing’s “deserving to be so described”) and whose reality, accordingly is asserted (maʿṣūd), as that which requires its affirmation (maʿṣūd) into (1) the “self” (nafs) of the being denoted by the subject, as when one says of a being that it is “existent” (maʿṣūd) or “temporal” (mawḥūdī) or is a “colour” (laun) or of God that He is “eternal” (kaddām) or “majestic” (ṣāmīn); and (2) those that assert the reality of an entitative, determinant cause (maʿṣūd, ilā) subsistent in the subject, as when one says of a being that it is “living” (“living” = “life belongs to it”: ḥayy = laḥā ḥayy) or “knowing” (“knowing” = “an act of knowing belongs to it”: ʿalām = laḥā ʿalām) and the like. In addition to the words maʿṣūd and ilā, the Ashʿarīs often (and in some contexts almost always) refer to these entities (al-ʿawāfs) as ṣfat, (This, in fact, is the only sense in which al-ʿAsharī himself employs the word ṣfat). Against al-Djdubbārī and others, the
Ash'arīs insist that predicates such as “living,” “knowing” and the like always imply the presence of an entitative determinant (mād̄ūm, līla, sīfa) in the subject, whether they be said of a material being or of God, who is immaterial. Again, whereas the masters of the Bāṣrān Mu'tazila take descriptive predicates to be predicated of phantasmal entities which, known and recognized as particular essences, are described by the predicate (wasi, sīfa), the Ash'arīs understand the subject term to denote an individual entity simply as an object: as an existent whose existence is its “self” (nafs). Thus God is “living” (mas'ūd) whilst the non-existent is simply the unreal subject spoken of in a negated proposition: “it is not true that there exists an object such (that).” Thus, where the Bāṣrān Mu'tazila after al-Ḍuwaynī distinguished expressions that they consider to be descriptive (ṣīfāt) strictly speaking, i.e. those which name the essence as such or describe it in some particular way, from those they consider to be quasi-ālāḥ, i.e. those which we employ to assign an essence to various broader, generic classes and which, therefore, are said univocally of beings that are essentially different, the Ash'arīs make no such distinction, but rather consider both kinds of terms to be truly descriptive, classing the second of the Mu'tazīlī categories amongst the “essential predicates” (al-ṣīfā, al-nafṣiya), viz. those that assert as the basis of the validity of their affirmation of the subject only the reality of the object (nafs al-mawjud = waqūgdhū) of which they are said. No more than al-Ḍuwaynī, however, does al-ʿAshrī speak of “attributes” as this word is commonly understood, nor does his analysis, or that of most of his followers in the two centuries immediately succeeding, make place for such a concept. The sīfa, simply a mād̄ūm, (līla), They agree that the being of God’s sīfāt differs from that of those belonging to creatures and there is some question as to the exact ontological status of the former, i.e. as to whether God’s sīfāt are validly termed asīfa or mas'ūdā if or if they are denominate; but it is nevertheless clear that sīfāt are entities of some kind (more precisely, of two kinds) though not of a sort that nowadays we should term attributes. (Al-Bākīllānī, cited in the Kiyā al-Ḥarāṣī, Uskū al-dīn, fols. 114a and 123a, says that, in contrast to the ʿahd, they are entitative objects or beings, dhāt, ʿayn, mād̄ūm. One notes that with but two or three exceptions, common also to the Mu'tazila, abstract terms are not employed in the writings of al-ʿAshrī and of the majority of his followers until the 5th/11th century and that the expression kawnuhu . . . is almost everywhere shunned, chiefly for accuracy of expression but also, no doubt, in order to avoid the semblance of accepting Abū Hāšim’s ontology.

Al-Ḍuwaynī rejects the common Ashīrī thesis that all the “essential predicates” (ṣīfāt al-nafs, al-ṣīfāt, al-nafṣiya) assert simply the being of the “self” of that which is asserted (al-hukm), in affirming one of the sīfāt, al-mād̄ūm, (al-ṣīfāt, al-mūnṣiya) is simply the reality of the being of the mād̄ūm, (sīfa), as belonging to the subject. For every positive predicate (wasi, sīfa) he recognizes an “attribute” (wasi, sīfa), which he considers to be expressed by the expression kaunuhu mas'ūdā, e.g. the atom’s “being an atom” (kawnuhu muthaqaf)” “its being an entity” (kaunuhu ʿayn) “its being inherent” (kaunuhu mawjudā, “its being inherent” (kaunuhu mālūmu, “its being inherent” (kaunuhu ṣūr), “its occupying space” (kaunuhu mutawāṣṣāṣ), etc.; and so also with the sīfāt, mūnṣiya, the attributes (ṣīfāt), signified by the latter being commonly termed ʿahd, as well as sīfāt, wasi, see e.g. al-İrshād, 30, al-Żāmīl, 308, et alīhī). He holds, moreover, in regard to those predicates which do not refer simply to the existent as such (to its existence as its “self”: nafs) that one must posit the reality (gūbdhū) of the attribute (wasi, sīfa, hukm) as a state (ḥāl). This, he says, is necessary in order to have an ontological basis for the true sense of the common or universal predicate terms and their definitions (viz. al-ḥakā‘ik wa ʿl-hudūd) (see e.g. al-Żāmīl, 633, and the citation of al-Bākīllānī in al-Kiyā al-Ḥarāṣī, op. cit., fols. 115a and following), as also in order to explain what is known and asserted to be true in the case of the mād̄ūm, (līla), i.e. in order to explain what is known and asserted to be true (al-hukm), of the entity to which the mād̄ūm, (līla) belongs as the effect (mūd̄ūm, mād̄ūm) of the latter (see e.g. al-Żāmīl, 629 f. and al-İrshād, 80 f). In these cases what is known (ʿalima) of something is not the thing itself (al-nafs = waqūgdhū) but an ontologically real attribute (sīfa, ḥāl) or state (ḥāl) of it, and it is this that the descriptive predicate strictly speaking refers to and asserts as real (gūbdhū). Regarding the “essential attributes”, al-Ḍuwaynī says “Every attribute (wasf) that is not understood negatively and the ignorance of which is not contradicted by the knowledge of the existence of the being that is denoted by the subject (al-mawjud), is a state (ḥāl) (al-Żāmīl, 630, 17 f. cf. also al-İrshād, 80). Thus when one says of a being that it is a (unit or quantum of) black (wāṣūd) or that it is a colour (lām) or an accident (ʿarrad) or that it is inherent in a substrate (ḥāl fī maḥdū), the reference is to “its being black” (kaunuhu āṣūd), “its being a colour” (kaunuhu lām, “its being an accident” (kaunuhu ʿarrad), and “its being inherent” (kaunuhu ḥāl)”; “its blackhood” (as-ṣawāṣṣ), “accidentality” (al-ṣawāṣṣ), etc. Each of these attributes (ahd, sīfāt, wasf) is a distinct object of knowing (mūṣīm). Likewise the knowledge of an entity’s being knowing (kaunuhu ʿalīm) is distinct from the knowledge that the act of knowing (al-ʿalīm) by virtue of whose subsistence in it is knowing, exists (kaunuhu mawsūd = nasfuh) and is an act of knowing (kaunuhu ʿalîm = al-ʿilmisṣāṣ); each of these attributes (ṣīfāt), as an ontologically real state (ḥāl) or characteristic (ḥukm), of the subject, is a distinct object (mūṣīm), known in a distinct act of knowing (ilm). As the attribute (ḥāl, sīfa) is other than the entity to which it belongs (the sīfa is other than the mawsūd), so al-Ḍuwaynī holds that existence (al-waqūgdhū = nafs al-mawsūd) is not a ḥāl (see e.g. al-İrshād, 31). Though it is an object insofar as it is known (mūṣīm), the ḥāl is not an entity (ṣīfāt) (al-Żāmīl, 640, 679 and so is not described as existent (mawsūd) or non-existent (mūḍīm, muntasf); see also the citations of al-Bākīllānī in al-Kiyā al-Ḥarāṣī, op. cit., fols. 114a and 115a).

The “self” as such is understood and conceived not as an essence but as an object, and the predicates which assert the entitative reality of the “self” as such (e.g. ʿayn, ḥāl, nafs, mawsūd) neither are synonymous with those which assert the actuality of its ʿahd (e.g. gūbdhū, ʿarad, lām, ʿilm, ṣawāṣṣ) nor do they imply the assertion of its ʿahd. Since, then, the ʿahd is neither identical with nor derived from the “self” as such of the being of which they are attributes and are known separately from the knowledge of its existence, that a being should have one essential attribute (ṣīfāt, nafs) does not necessarily entail its having another. Beings that are essentially diverse (mukhtafṣa) may share
in common essential attributes, as for example a human act of knowing (‘ilm) and a motion of an atom share in accidentality (al-‘aradāyya, i.e., kaunahumād ‘arayayn) and a human act of knowing (a ma’nā, which is an accident) and God’s eternal act of knowing (a ma’nā, which is not an accident, i.e., it has no other form). Although, in his essentialism, the immediate substrate (al-muhit) have in common (isgā‘amā‘ī fi’t) their being acts of knowing (kaunahumā ‘ilam = ‘al-tātūya) and so are, both, correctly denoted and described by ‘ilm. Like entities (al-mā‘īln, al-mutamā‘īln) are alike in and by virtue of their selves (i.e.,‘aṣṣa‘ashinā) (see e.g., al-Shāmil, 312); they are therefore those beings that are analogous (sadda ahadā‘umahān masadā ‘l-Tākī) or are equivalent (musta‘ṣṣa‘yin) in all their essential attributes (ṣi‘fāt, al-nafs, al-sefāt, al-nafṣyin) (cf. e.g., al-Shāmil, 299, 312). In no sense does al-Djuwaynī take up the ontology of Abū Ḥāšhim and his Mu’tazilī followers. Nowhere does al-Djuwaynī treat the attribute (ḥāl, ṣija) as an ontologically real perfection of a being in terms of which other perfections, properties, characteristics, qualities, or operations are to be understood and explained. He does not speak of an attribute’s entailing (ṣaḥḥah) the actuality of another attribute or its being (ahdā‘ūna) or a characteristic or quality of a thing, nor does he regard any attribute as constituting the immediate ground of the possibility (ṣahhaba) of some qualification of an entity or as the condition (ṭaṣṣāt) of its actuality. Similarly, he does not speak of attributes (ṣi‘fāt, ḥawāl) as having modality (kayfīyya) nor of the characteristics (ahdā‘um) of attributes. Finally, where the Mu’tazīlīs distinguish four categories of mu’dīln, one as effecting no hāl whatsoever, either of its immediate substrate of inherence or of the whole of which the latter is a part, and others as producing one or another qualification (ḥāl) either of the immediate substrate or of the whole composite (al-djam‘a), al-Djuwaynī makes no distinction whatsoever, asserting simply that every ma’nā causes a hāl (those of material entities only in their immediate substrate of inherence) (see e.g., ‘Abd al-Djabbār, al-Majhdhanī, vi/2, 162 and ix, 87, and al-Djuwaynī, al-Shāmil, 629 ff.). Though there may be found sometimes a certain parallelism of argumentation (cf. e.g., ibid, 637 f. and ‘Abd al-Djabbār, e.g., al-Majhdhanī al-ma‘āht bi ‘l-Tākī, 188 f.) the conception of the āhawāl and their role within the integrated contexts of the systems is significantly different in the teaching of the Ash‘arīs and in the thought of Abū Ḥāšhim and his followers. Al-Djuwaynī employs Abū Ḥāšhim’s distinction between the Attribute of the Essence and the essential attribute (categories 1 and 2 in A above) together with the concept of the hāl in order to find a distinction in the Ash‘arī essential predicates in terms of their denotation. Thus, although he speaks of “attributes” in both instances, he distinguishes those predicates (awwāfī, ṣi‘fāt) that denote or assert simply the existence (i.e., the “self”) of an entity as such from the rest, which assert distinct attributes that are states (āhawāl). Similarly, he posits the reality (ṣhabā‘) of the “states” as real attributes (ṣi‘fāt, ẓhabītah) or characteristics (ahdā‘um, ẓhabītah) as the effect (mu’dīl, maqābl) of the ma’nā, in order to distinguish ontologically the assertion of the ṣi‘fāt, ma’nāsyya from that of those expressions which refer to the ma’nā, and describe them as such (e.g., to distinguish the reference of ‘ilm from that of ‘imn), a distinction effectively denied by most of the earlier Ash‘arīs (see e.g. al-Bākilīnī, al-Tanhdīh, § 92, and al-Djuwaynī, al-Shāmil, 631). Al-Djuwaynī, in short, (and the same is clearly true of al-Bākilīnī when he used the āhawāl) posits the āhawāl only in order to supply referents for certain predicates and concomitantly to resolve certain difficulties of logical reference and extension, particularly in predicates that are said both of God and creatures; the āhawāl serve no other function. Al-Djuwaynī’s conception of the hāl constitutes the very foundation and core of the metaphysics of the Baṣrī Mu’tazī from the time of Abū Ḥāšhim, al-Bākilīnī, and al-Djuwaynī employ it without introducing any essential alteration into the tradition of Ash‘arī metaphysics. Finally, by the explicit introduction of purely intentional referents (viz. concepts thematically understood as entia rationis) into the Ash‘arī kalām along with the Aristotelian loge, al-Ghazālī (p.e.) was able to resolve in a much less awkward manner the problem that his master, al-Djuwaynī, had sought to deal with by means of the āhawāl.

who shaved the Prophet Muhammad’s hair. The was a person of very humble status, ridiculed by writers and grocers. Seldom did a barber attain prominence, and Muslims have followed this practice ever since.

The well-known barber in the Islamic society of Medina was Khirbâš b. Umayya, who shaved the Prophet Muhammad’s hair. The Prophet had his hair shaved at Minâ at the time of the hajj, and Muslims have followed this practice during the Greater and Lesser Pilgrimages ever since.

Some barber’s work at the time of the Pilgrimage received attention from the Arab writers, who recorded unusual events. For instance, a hallâk while shaving the hair of Abû Sukñ (q.v.), accidentally cut the wound (kâfd) on his head, and this reportedly caused his sickness and death in 20/640, says al-Samhûdi. During the Umayyad period, another hallâk became widely known at the time of the hajj of Yazid b. al-Muhallab (q.v.), who paid 5,000 dirhams to the hallâk after ritual shaving of his hair. The event illustrates that some barbers received charity from pilgrims in addition to their usual fee. Some Muslims used to have a yearly hair-cut on the Day of Sacrifice (yawm al-nahr), as was the practice of Hasan al-Ba’rî (q.v.), and Muslims even today observe this custom.

The hallâk worked at market places and also in public baths in Islamic cities on specific days of the week. During the Ḩaǧd (q.v.) period, the hairdresser was one of the five regular attendants at every hammâm. The muḥtasib demanded expertise from each hallâk, who could neither shave a child’s hair without his guardian’s permission nor cut a slave’s hair without his master’s approval. Usually a hallâk received a dirâm for each hair-cut. It was also customary for the hallâk to give free hair-cuts to the poorer members of society during the Mâlîkî period, writes al-Ittâfî. In spite of their useful services, the barber was a person of very humble status, ridiculed by writers. A hallâk could marry only within his own social group, according to the customary law of faṭ’î, which imposed similar restrictions on sweepers, weavers, copperers and grocers. Seldom did a barber attain prominence in early Islamic society, either by acquiring knowledge of Islamic sciences or otherwise. The only known exception to this was Abu l-Hasan A‘îb b. Muhammad al-STîf al-Muzayyin, the barber who distinguished himself as a practising mystic and a close friend of al-Dînawî (q.v.).

Hâmâdîshâ, or Hâmâdshâ as they are locally called, are the members of a loosely and diversely organised religious confraternity or “path” (tarîkha) which traces its spiritual heritage back to two Moroccan saints (awlâd or sayyids) of the late 17th and early 18th centuries, Siddî Abu l-Hasan A‘îb b. Hamdush (d. 1131/1718-9 or 1135/1722-3), popularly called Siddî ‘Ali and Siddî Ahmad Dghughî (q.v.). Although little is known historically of the two saints, their lives, like the lives of other popular North African saints, are rich in legend. These legends stress the saints’ acquisition, possession, and passing on of blessing in the form of ṭâ’lîf (scars) or baraka (blessings). Some scholars, like al-Lubûd fi al-Qaṣîdân (q.v.), have argued that this is in imitation of the master of Siddî Ahmad, is thought to have derived his teachings from ‘Abî al-Salâm b. Mâshîq (q.v.) and his student Abu l-Hasan al-Shadîlî. (Members of the confraternity recite on occasion a ḥīz which they trace to al-Shâdîlî.) Siddî ‘Ali spent years at the Karawiyîn University in Fas, and, according to the Salâdî al-anfîs of Da‘far al-Kattânî, he is to be classed among the šâdîs of the mystical tradition in which the trance (bâlî) is powerful. He would occasionally fall into lion-like rages. Both Siddî ‘Ali and Siddî Ahmad are buried on the south face of the Djebel Zarhûn some sixteen miles from the city of Mkânîs, Siddî ‘Ali in the village of Banî Rashîd, Siddî Ahmad in Banî Warûd. Their sanctuaries (khâbars), which are under the charge of their (putative) descendants (awâlid), are the object of individual and collective pilgrimages. The latter, the mukâm (masjûm), takes place each year on the sixth and seventh day after the mûlûd (ma’mûd), the Feast of the Prophet’s Birthday, and is attended not only by the Hmâdshâ but by tens of thousands of devotees of the saints. The Hmâdshâ are in fact members of one or the other of two distinct confraternities which are closely related and often confused. The ‘Allâiyyûn are the followers of Siddî ‘Ali and the Dghughîyyûn of Siddî Ahmad. Both brotherhoods have a network of lodges (zâwa‘în) and teams (la’îfîs) that extend throughout the principal towns and cities of northern Morocco and through the Gharb and Zarhûn areas. The Hmâdshâ brotherhoods, which have neither the membership nor the fame of such popular orders as the ‘Isâwîyûn (q.v.), do not extend across the Moroccan frontier. In a figure that is undoubtedly too low, Drache estimated their membership in 1938 at 3,400. Today, despite a marked decrease in the popularity of the confraternities in Morocco, the Hmâdshâ’s number is considerably greater than Drache’s estimate.

The members themselves fall into three distinct classes: the awâlîd al-sayyid, who trace their descent back to their ancestral saint, live principally in the village in which he is buried, and do not usually participate in his ecstatic ceremonies; the farkârî who are members of lodges (zâwa‘în) or teams (la’îfîs); and the devotees, or muhibbûn who are simply attracted to the saint and his cult. Each of...
the brotherhoods is in the charge of the head, the *mazwar,* of its respective *adila,* and more frenetic, in the shanty towns of the Maghrib! brotherhoods. (It tends to be more similar in form to the ceremonies of the *djawija* or *halberd* [shakrid]—there is no standard ceremonial halberd or trance-dance. Men and women dance first to the music of drums (*tabl*) and oboe (*gwal*) and then to that of the drums and either a reed recorder (*nifa*) or a guitar (*ganbri*); they fall first into a light somnambulistic trance called *djidha* and then into a deeper, wilder trance called *djedhba.* It is during *djedhba* that acts of self-mutilation (by men, rarely by women) are performed and animals (pigs and camels) imitated (see *'Isawa,* Aisha Kandfsha 3). It is during *djedhba* for the brotherhood—and continues with the hadra (tabl and oboe and gwal) music of drums and oboe and gwal)—that acts of self-mutilation (by men, rarely by women) are performed and animals (pigs and camels) imitated (see *'Isawa,* Aisha Kandfsha 3).

The *hadra* is not understood in terms of a mystical union or communion with God. Rather, the *baraka* of the saint is held responsible for the *bâl,* *djedhba* is usually interpreted as possession by a *djinn* (*djinni*) or more frequently by a *djinniya.* The most common possessing spirit is the *djinniya* or *ghila* *'Aisha Kandfsha* [q.v. above] who is said to manifest herself as either a beauty or a hag, always with the foot of a camel or some other hooved animal. The possessing spirit is thought to respond to a particular musical phrase (*rîh,* often accompanied by words, which it finds pleasing. The *Hmâdja* themselves serve primarily as cutters of the *djinn*-struck and the *djinn*-possessed. Their aim is less to exorcise permanently the possessing spirit than to establish a symbiotic relationship between the spirit and its victim. Often membership in the brotherhood occurs after a *Hmâdja* cure. Their ceremonies are thought also to bring *baraka* to their sponsor, to those in attendance, and to the ceremonial area itself.

AL-HMÂSÅ [see Mintakat Al-Hur-Qu]

HAMASA, the epic genre in Islamic literature.

vi. In Swahili Literature.

In Swahili literature, the word *hamaasa* occurs rarely and has the meaning of “virtue, courage, energy.” The normal words for “courage, valour” in Swahili literature are *ushakia,* *uasiri,* *usabiti* and *uhodari,* all words of Arabic origin, and so is the word for virtue, *fahoda.* There are only a few non-narrative documents known in Swahili literature, most of them self-praises in true African fashion. The most famous of these is the Ukawafi of Liongo, praising himself, and at the same time an Ode to Freedom: “I am a young eagle. When this iron is broken, I will soar up into the skies, higher than all.” [see Madih 5. In Swahili.]

The vast majority of heroic poetry in Swahili is narrative and composed in the *stanz* metre of lines of eight syllables; every four lines form a stanza *usha* (the word is formed on the basis of *baya*). The rhyme scheme is a a b b, in which b represents the rhyme of the last line of every stanza. Throughout the whole poem; there are in Swahili more than a thousand words ending in *ya,* *ra,* etc. Rhyme in Swahili means the identity of the last syllable, so that *amba,* *inba,* *ombak* are rhyming-words.

About the life of the semi-mythical poet-hero Liongo we possess a few epic fragments which however, are certainly not contemporary (the life presumably ca. 1010/1600). The oldest datable Swahili epic in Swahili is also the finest ever written in it; the ms. in Hamburg is dated 1141/1728. Its theme is the myth of the Prophet Muhammad’s expedition to Tabik where according to this legend, he encountered and defeated the Emperor of Constantinople, Heraclius I, hence the epic’s title, *Utendi wa Herekali,* or *Chau cha Tambuka.* The published text (1958) has 1,145 stanzas. The sophisticated structure, the compact language, the intense style and the rich imagery show that it stands at the end of a long evolution of epic poetry in which we have no documentation. All we know is that the *Herekali* had many imitators, none of whom ever reached the powerful diction and the visionary heights of this first epic. The author, Bwana Mwengo b. Atumani, worked for a time at the court of the sultan of Pate, who requested him to versify the Arabic legend (*hadithu,* in “Swahili.” Mwengo’s son Abu Bakari composed at least one epic on the theme of an other *mogâzî* [q.v.], tradition, the *Kifïrui,* i.e. the expedition of Muhammad against king *Ghirri* (ms. in SOAS, undated, but probably ca. 1750-60). Here follows a list of the major heroic-narrative poems in Swahili. *Abida-Rahman.* This adventurous son of Abî Bakr, whose bride is a daughter of the infamous Abî Sufyan, fights numerous battles which made him so popular that there are two epic poems about him in Swahili.

Abî “Abî is by far the most popular hero in Swahili epics literature, but so far no complete epic about his life has come to light. His exploits are celebrated in the *Utendi wa Anzurini* in which he defeats the *gâyân Anzurîn* (cf. Kurâ, VII, 14); in the *Utendi wa Herekali* in the *Kifïrui,* in the *Râ’sul-u-Ghuli* (ca. 1870), a Swahili version of the *Futûh al-Taman,* one of the longest Swahili epics (4,300 stanzas) and of course in the epic of Haibara, on the battle of *Khabar* [q.v.], of which only an incomplete ms. survives. The *Utendi wa Muhamudi* contains among others the episode of the Battle of the Trench (*Hamri* [see MUNDAM]); this epic of the life of Muhammad is the longest in Swahili literature, and with that, the longest epic ever composed in an African language. The *Utendi wa Badiri,* the Epic of the Battle of Badr [q.v.] is the next in length, with 4,500 stanzas; yet it is not long that makes an epic great literature.

Hajji Chum of Zanzibar (fl. ca. 1920) wrote an epic on the Battle of Uhud which contains some beautifully dramatic scenes; it was edited by H.E. Lambert (East African Literature Bureau in Nairobi; 739 stanzas). Hemedi b. Abdallah al-Buhriy (d. 1922) wrote, apart from the long version of the Abida-Rahman mentioned above, an equally long epic about the German conquest of the Swahili Coast in 1884. For the pious Swahili, this was a Holy War
against “Christian” invaders who bombed women and children from their safe warships. It is by far the best modern epic, i.e. one that deals with recent historical events instead of the mainly mythical events set during the life of the Prophet. The only epic set after his life are the three known versions of the historical events instead of the mainly mythical events.

( J. Knappert)

**AL-HAMDAWI, Abū ‘Ali ISMA‘IL b. IBRAHIM b. ḤAMDOWAYN, better known as AL-ḤAMDUNI (this nisba being due to a defective reading, cf. al-Samʿānī, Ḥasib, ed. Hyderabad, iv, 241), minor poet of Basra in the 3rd/9th century. From his profession (that of kātib, Ibn Kutayba, ‘Uṣūn, iv, 89) and his origin, he belonged to the class of high officials of Persian origin in the ‘Abbāsid administration; his grandfather had been ʿsrī al-zandīkā under al-Mahdī from 168/784-5 (Goldziher, ms. Raʾfs al-kuttab 769, v. 154a, 159 b, 161 a; Aydamfr, al-Durr al-fard wa-bayt al-ḵast, ms. Fāṭih 3761, 26 b, 193 a, 354 a; Husayn Šabīl al-ʿAllāk, al-Sawārī al-kuttah fi ʿl-fās māl ʿl-khāld al-fādī, Beirut 1975, index; Ibn Khalilikān, Bālūk, ii, 472-3, ed. Iḥṣān ʿAbūs, vii, 95, 98; Ṣafādī, no. 3994. The poet’s dīwan has been brought together and published in the Iraqi journal al-Maḥrūm, iii/1 (1974) (additions in iv/1, 1975) by A. Dī, al-Nadjī; it has been studied by A. Arazī, Thèmes et style d’al-Ḥamdawī, in JA, ccxxvii (1979), 261-307. (A. Arazī)

**HAMDŪN IBN AL-HADĪDJ [see IBN AL-HADDJ]**

**HAMDĪD KALANDAR, Suft mystic and poet of Muslim India.**

He was born in Kilgohar (Dīhil) some time towards the close of the 11th century. His father, Mawlānā Tājī al-Dīn, was a devout disciple of Sayyīḥ Nizām al-Dīn Awlīyā, and Hamdīd Kalandar visited the Shaykh along with his father when he was a mere child. His father made proper arrangements for Hamdīd’s education, and he completed his studies according to the traditions of his age. When Muslim families were forcibly transplanted by the order of Sultan Muḥammad b. Tughluq from Dīhil to Deogarh, Hamdīd also had to move to the Deccan. In Dżawāltābād (Deogarh) he benefited from the company of Mawlānā Barhān al-Dīn Gharīb, the Ḥaḍīfa of Shaykh Nizām al-Dīn Awlīyā, and Hamdīd Kalandar visited the Shaykh along with his father that he was a mere child. His father made proper arrangements for Hamdīd’s education, and he completed his studies according to the traditions of his age. When Muslim families were forcibly transplanted by the order of Sultan Muḥammad b. Tughluq from Dīhil to Deogarh, Hamdīd also had to move to the Deccan. In 1353/1352 returned to Dīhil. In 1341/1340 he paid a visit to Sayyīḥ Naṣīr al-Dīn, the successor of Nizām al-Dīn Awlīyā. Being informed about his father’s association with his master, Shaykh Naṣīr showed him much regard, asking “Mawlānā, how can I address you as Kalandar?” (sc. because he was a scholarly man). He told him that once Nizām al-Dīn Awlīyā had told his father that the child would live in the fashion of a Kalandar [g.o.]; he accordingly shaved his head, eye-brows, moustaches, beard, and wore saffron clothes like the Kalandars. Hamdīd Kalandar compiled the Ṣayḥiyyāt or sayings of Shaykh Naṣīr al-Dīn of Dīhil in Persian, depicting the great Shaykh, inter alia, as talking to different people who belonged to the various strata of society and came to the Shaykh’s ḥāṣkāh with their manifold
problems. The work is characterised by clarity of thought and is free from miracles and other mystical cubractions. He also left a Dīwān of poetry which is not extant, although Shaykh 'Abd al-Hāqī Muhaddith says that his verses were of poor quality and unimportant.

The Mādīghāt-i Ṭawūsīfīn, an early 9th/15th century anthology and biography (Ms. 4110), contains a number of kāfidas composed by Hamīd Kandalār in praise of Sūfīs, but it is nevertheless correct that Hamīd possessed neither a house, nor a wife or a child, and always lived as a Kandalār.

Hamīd al-Dīn Kādī Nāgawrī, Muhammad b. Ṭūrī, Sūfī saint and scholar of Muslim India. On becoming a Sufi he lived frugally and was known as Shaykh Hamīd al-Dīn. Having travelled to different Muslim countries, he came to Dīlār during the reign of Ilutmīṣh (607-33/1211-36, [q.v.]) and soon developed an intimacy with Shaykh Kutb al-Dīn Bahānīyār Kākī, the leading Sīfī saint of Dīlār. He himself belonged to the Suhrwarī order and was the Ḫāṭif or chief disciple of Shaykh Shīhāb al-khāfīf. Dīlār 1356/1937-48; Muhammad Mubārak Kirmānī, Aligarh Library, Aligarh 1937-8; Mir Khurd, Guldār-i ʿabrār (a 17th century work), Aligarh Library, Aligarh 1937-8. (I. H. Siddiqui)

Hamīd al-Dīn Māhāmīd,HS, Sūfī saint of the Kuchriyya order. He was the son of Bābā Ḫᵛājah, a highly respected Sufi, and was born in about 900/1494-5. He studied the Kurān, Madrasa al-Shīfā, and there is a quatrain composed by Shaykh Hamīd al-Dīn in praise of Shaykh Farīd al-Dīn Gangī Shāhīkar, which was founded by Sūfī Hasan Shījah (876-81/1472-84). He studied in Sīlahgarh known as Dar al-Shīfā, which was later known as Dar al-Shīfā, which was also the headquarters of the movement against Shīfism, and there is a quota

Hamza Makhdūm became a follower of the Kuchriyya order. He exhorted the Muslims to adhere to the Sīfī order and to give up all un-Islamic beliefs and practices which they had borrowed from the non-Muslims. He was also one of the leaders of the movement against Shīfīm, which began to spread in the Valley in the first half of the 10th/16th century due to the efforts of Mīr Shams al-Dīn Ṭāqī and his followers. Hamza Makhdūm, therefore, undertook tours in the Valley to prevent the spread of Shīfīm and to propagate Islamic fundamentalism. Ghāzī Shījah Čāk (968-5/1561-3), the first...
ruler of the Čak dynasty, being a staunch Shi'i, banished him from Srinagar to Bīrū, a village 20 miles away. He was allowed to return to Srinagar by Sultān Husayn Shāh (970-8/1563-70), who was a liberal ruler. But Ḥamza Makhdūm did not give up his anti-Shīʿī activities and was again in party to invoking the Emperor Akbar to conquer Kashmir and restore Shiism. He died at the age of 84 and was buried on the slope of the Hari-pat ballock in Srinagar, below Akbar's fort. He is greatly revered by the Ḥajāmīrs, who hold his anniversary every year and visit his tomb in large numbers.

HANDASA [see 'ILM AL-HANDASA].

HANDZIĆ (AL-KHANDIJ), MUHAMMAD B. MUHAMMAD B. ŠĀLIḤ B. MUHAMMAD, a leading Bosnian Muslim and Arabic author who was born in Saray Bosna about 1999. He received his early education in Bosnia, and his higher education at al-Bayhak, where he was admitted to the degree of al-ʿāmīyā. After this he performed the ḥajdī with his father, and returned to his native country to teach. He belonged to the Ḥanāfrī madhhab, and followed the teachings of Ibn Taymiyya in fiqh. He died in Saray Bosna on 29 July, 1944.

During his short literary career he contributed both to the international literature of Islam, with his various works on theology, and to the Arabic literature of Yugoslavia with his poetry, his works dealing with various aspects of the local history of the Muslims in Bosnia, and his literary study al-Ḍawwārīr al-anā'ī fi ṭāʾāfīm uṣūm wa-ṣuḥūrā Ḫōnā. In addition to the latter work his published writings include a commentary on Rāḍūl Ḥaṭī ṣābīn al-anbāyī by Ḥamīd al-Bayḥakī, a commentary on al-Kāmil al-tayyib of Ahmad b. Taymiyya and Rāḍūl al-Baḥrī-Fāţī ṣābī ṭāḥāt niḥām ṣayyidīna al-Maṣīḥ. A number of his works remained unpublished, including some Arabic poems and a supplement to Ḥadījī Muʾīn's Kāḏī al-ṣawīn. Bibliography: Zākī Muḥammad Muqāḥādī, al-ʿĀlām al-ḥakīmyā fi ʿl-maʿālī ʿaqrā' al-ḥāḏrīyya, ii, Cairo 1950, 174; Ummāt Rīḍā Khāḥalāh, Muḥammīd al-maṭībīn, xi, Damascus 1960, 280; for his unpublished works, see K. Dobercā, Fīhrī al-maṭībītī al-arāyīn ʿaqrā' al-ṭībāsīyya wa-ṭābībīyya wa-fīrāsīyya, i, Sarajevo 1963, passim; R.Y. Ebrīd and M.J.L. Young, An exposition of the Islamic doctrine of Christ's Second Coming, as presented by a Bosnian Muslim scholar, in Orientalia Lovaniensia Periodica, v (1974), 127-37. (R.Y. ERIED and M.J.L. YOUNG)

AL-ḤĀRĪTH B. KALADA B. 'AMR B. 'ILĀD AL-ṬHAKAKI [d. 13/634-5], traditionally considered as the oldest known Arab physician.

It is nevertheless difficult to pin down his personality. He came originally from al-Tāfī, where he was probably born a few years after the middle of the 6th century A.D., and is said to have been a lute-player (trained in Persia?) before studying medicine at Gondhārā [q.v.], and, adds Ṣawīd al-Andalusī, Tābākhī al-dīn, ed. Čilecikho, Beirut 1476, divorced, as for the first child, Nufāy, known historically by his kāmsa of Ḫabūr [q.v.], was not recognised by al-Ḥārīth, who gave out that his father was one of his slaves called Maṣūrī; as for the second child, Nafīr, several sources (in particular, al-Baladhūrī, loc. cit.) make him the son of al-Ḥārīth, but Ibn al-Kalbī (-Gaskel, Tab. 118) only mentions a Nāfī b. Kalada, who would accordingly be the brother of the physician. Without becoming aware of a contradiction, since he affirms that al-Ḥārīth was childless. Ibn Abī Ṣayyād attributes to him a daughter Azdā who was the wife of Utba b. Qazwīn [q.v.]; the latter brought his three brothers-in-law to Basra and employed Ṣawīd as a secretary (see also al-Baladhūrī, Anābī, iv/a, 164). Complicating the situation even further, Ibn
Habib (Muhabbar, 460) further cites another daughter of al-Harith, Kilaib, who married a distant cousin, 'Amr b. 'Umayr b. 'Afw (Ibn al-Kalbi-Caskel, Tab. 118).

It can be seen that this family history is very difficult to disentangle, and it offers a characteristic example of the confusions brought about by the efforts of many ma'asib to provide themselves with an Arab genealogy and, in this particular case, by the fierce political propaganda aimed at blackening the Umayyad's names. According to the information mentioned above, Sumayya was apparently married at least once, since it was her husband 'Ubayd who was the alleged father of Ziyad. Now the historical sources reflect, in regard to Mu'awiya's recognition of Ziyad's position as collateral relative (sibhi), an anti-Umayyad tradition according to which Sumayya was a prostitute, which makes this "physician of the Arabs" a procurer, since she had been installed at his instigation in the harrat al-haghiya in al-Taif in return for paying him a share of her earnings (al-Mas'udi Muruq, v, 22, 24 = § 1778, 1781).

Logically, the physiognomists ought to have intervened and pronounced upon the father of each of her children [see bigas, above], but the sources say nothing about this.

al-Harith b. Kalada probably gave up this latter activity—if indeed the information about it is authentic—after he was converted to Islam and had acquired the status of one of the Prophet's Companions. According to a tradition which has clearly been reshaped (see al-Tahri, i, 217-28; al-Mas'udi, Muruq, ix, 184 = § 1518; cf. al-Fadhi, ed. Dernouër, 133), 'Abd Bakr was poisoned by the Jews, and al-Harith, who had shared his meal, lost his sight and died soon afterwards.

One discerns that, if the historical existence of the "physician of the Arabs" cannot be put in doubt, his personality is surrounded by a host of legends which detract from the true from the false. As well as the treatise on hygiene attributed to him, there are some verses given under his name, notably the following (al-'Askari, Simocata, 125): "There are some people who shower strangers with happiness right till death".

al-Harith b. Kalada — al-Haritithi 355
In 1871 Turki b. Sa'id re-established the sultanate with a Ghāfirī tribal army, encouraged by the British and financially aided by his brother Mājid from Zanzibar. Āzān was killed in the siege of the capital and Sa'id b. Khalīfī murdered after he had eventually been persuaded by the British Agent in Muscat. From then onwards, Sāliḥ directed the Ibadī movement until his death in 1896.

In the Ibadī literature Sāliḥ is described as al-Imām al-muḥtāshīb, that is, 'alīm with the dependability and integrity to lead and advise the Muslim community until such time as an Imām can be properly elected. It was in this guise that he continued his attacks, with the support of the Sharkīyya Hīnawīs and their bade Wahīḥī allies, on the sultans in Muscat (1874, 1877, 1895), and against dissident tribesmen, notably the campaign in 1894 against the Banī Shuhayn of the Wāḍī Damā, who were the shaykhī clan of the Māṣikāra, the Ḥirījī great rivals in Ibrā, and in 1896 against the Banū Dāhīr, leaders of the Ghāfirī confederation of central 'Umayma who were harrying the Rāhbiyyān allies of the Sharkīyya Hīnawīs. It was during the latter attack that he met his death, struck by a bullet in the thigh at al-Dajyīla.

During the first part of this period, Sāliḥ's main aim seems to have been that of undermining the position of Turki b. Sa'id (Sultan 1871-88), but after the failure of the 1877 attack he largely confined his activities to intriguing against the regime at Muscat and in maintaining his political authority in the interior. In Faysal b. Turki's time, on the other hand, he does seem to have had ideas of sponsoring Sa'ūd, a son of Āzān b. Kays, as a candidate for the Imāmat. However, in 1894 he had eventually been persuaded to surrender by the British Agent in Muscat. From then onwards, Sāliḥ directed the Ibadī movement until his death in 1896.

Sāliḥ's surviving literary work is a collection of ḥudūdāt, arranged in 1916-17 by A. Wālīd Sa'id b. Humayd b. Khalīfīn al-Ḥirījī, later kādi of the Imām Muḥammad b. 'Abd Allāh al-Khalīfī (Imām 1920-54), under the title 'Ayn al-masālīh (see Bibliography).

AL-ḤASAN b. AL-KĀSIM R. AL-ḤASAN b. 'ALI R. AL-ḤASAN b. AL-KĀSIM

B. 'ABD AL-RAJĀMĪN b. AL-KĀSIM R. AL-ḤASAN b. ZAYD. R. AL-ḤASAN b. 'ALI R. AL-ḤASAN b. AL-ṬABĪ').

Khusraw Fīrūz went to Gilân to seek support. In Djamāda II 307/November 919 he retook Amul while the two sons of al-Nāṣir were absent in Gurgān. He defeated Ahmad near Astāraham and then won him over by offering to share the rule with him. Dā'ārār, who had remained in Gurgān and was deserted by his army, fled to Gīlan. In 307/921 Iltī, the Naqīm, another of Dā'ārār's governor of Gurgān, conquered Dāmghan, Nīshāpūr and eventually Marv, introducing the ḥukmā of the ‘Aid. He was defeated by a large Sāmanid army and killed near Tūs in Rabi‘ I 309/July-August.

When the defeated army returned to Gurgān, a group of Daylāmī and Gilī leaders conspired to depose al-Dā‘ī and to put Ahmad on the throne. Informed about the plot, al-Dā‘ī hastened to Gurgān and during a reception killed seven of them, among them Harūsindan b. Tūrdād, the king of the Gilī. This ruthless punishment of the plotters led to a defection of many Daylāmī and Gilīs to the Sāmanīds and eventually caused his downfall.

In 310/922-3 al-Dā‘ī and Ahmad were defeated by the Sāmanīd general Sīmūdār al-Dawātī at Dālāyqīn in the region of Gurgān and were forced to retreat to Tadmīṣ. Ahmad recovered Gurgān on 1 Dhu ‘l-Hijāja 310/22 March 923 and was entrusted with the government of the town while al-Dā‘ī ruled Amul. Shortly afterwards, however, Ahmad made again common cause with his brother Dja‘Tar who had revolted in Gurgān against al-Dā‘ī. Ahmad attacked al-Dā‘ī in Amul but was defeated and joined Dja‘Tar in Gīlan. The two brothers then invaded Tabaristān, supported by several Daylāmī and Gilī leaders, among them Mākān b. Kākī [q.v.] and Asfar b. Shīrūyā [see ASFAR B. SHIRAVAYHI]. Al-Dā‘ī fled, first to Sāriya and then into the highlands while Ahmad took over the rule in Amul on 28 Djamāda I 311/11 September 923. After Ahmad’s death two months later and the succession of Dja‘far, al-Dā‘ī attacked Amul but was defeated by his supporters and sought again refuge in the mountains and later in Gīlan. Only after Mākān, having been involved in a conspiracy, was expelled from Tabaristān, did al-Dā‘ī gain again a powerful supporter. Early in 314/spring 926 Mākān seized Amul, expelling the ruling ‘Aid, Ahmad’s son Abī Dja‘far Muhammad, and brought al-Dā‘ī from Gīlan to restore him to power. At this time the Sāmanīd Ahmad b. Naṣr tried to invade Tabaristān, but was encircled in the mountains and forced to pay a ransom of 20,000 dinārs to al-Dā‘ī for his release. Disapproving of the conduct of Mākān, al-Dā‘ī once more left for Gīlan. Mākān kept urging him to return and, on his protest, immediately released Abī Dja‘far Muhammad, al-Dā‘ī’s brother-in-law, whom he had seized and imprisoned. Eventually al-Dā‘ī rejoined Mākān in Amul, and in 316/928 they set out on an ambitious campaign of conquest and took Rayy from its Sāmanīd governor early in 316/January half of September. Their absence from Tabaristān was used by Asfar, who was ruling Gurgān under Sāmanīd overlordship, to invade that country. Al-Dā‘ī quickly returned to Amul with 500 men, but failed to get the support of the people there on which he had counted. He was defeated outside Amul and on his flight was killed by Mardawīd b. Ziyār, who thus avenged the death of his uncle Harūsindan b. Tūrdād, the king of the Gilī. This ruthless punishment of the plotters led to a defection of many Daylāmī and Gilīs to the Sāmanīds and eventually caused his downfall.

During the final crisis of Mukhtar’s revolt in Kūfah (67/687) he decided to join the movement; he arrived, however, too late and went on to Nīsābūr where a certain Abī ʿAṣīr Būdāyir b. Abī ʿAṣīr directed the last pocket of “Khashābī” resistance against the troops of al-Muhallab b. Abī Ṣufra, who supported Mus‘ab b. al-Zubayr (cf. for this episode, ṬUṬUṬI b. al-Zubayr, 139 f.). Al-Ḥasan had his letter recited in different places by Abd al-Wahid b. Ayman, a Meccan mawld with whom he was on familiar terms.
Ash'ath. The treatise does not yet refer to the Risdâl written by al-Hasan al-Basri to precede and accompany the revolt of Ibn al-
there, but it presupposes the existence of a rather which may have been composed only shortly after-
years later those who were considered to be rational as well as on exegetical grounds. Against his
in a later refutation written by the Zaydi

In his discussion of omnipotence he does not as the result of the withdrawal of God's "support"

Al-Hasan b. Muhammad b. al-Hanafiyya also stressed the omnipotence of God also with respect to human actions, but he does not say that God forces man to act against his will (only this would be gâbîr in his view). With al-Hasan al-Basri and other Kadariyya, he shares a similar position, but whereas the Kadariyya interpreted God's "leading astray" as a mere secondary reaction which is justified by man's sin, al-Hasan b. Muhammad b. al-Hanafiyya sees sin as the result of the withdrawal of God's "support" (tawâfîk). In his discussion of omnipotence he does not yet differentiate between divine predestination and
divine foreknowledge. The treatise is structured in the form of hypothetical questions and answers (in kâla . . . kâthâ) and as such represents the earliest example of kâlatm literature in Islam. It is not preserved in its entirety, but in extensive fragments embedded in a later refutation written by the Zaydî imâm al-
-Hâdi ila l-Hâk (245/958-895/911; cf. the edition in

al-Rasdîl al-

Muhammad Tâmara,

the Kadariyya interpreted God's "leading astray" as

and as such represents the earliest exam-

ath, especially in its final phase (82/701). Al-Hasan seems, however, to have been responsible for the invention of this term, which was to have a rather multifaceted history in early Islam.

In addition to the K. al-Irdjâ, he appears as the author of an extensive refutation of the Kadariyya which may have been composed only shortly afterwards, perhaps during the religious discussions preceding and accompanying the revolt of Ibn al-

He was the mentor of Yusûf b. Sulaymân, the twenty-
ty-fourth dârî malîk. The books read by him with his teacher in various branches of the 'âlim al-dawa are fully described in the introduction to his Kûbî al-Azhâr. He was also closely associated with 'Ali b. Husayn b. Idris and Muhammad b. Idris, who later became the twenty-second and twenty-third dârî malîks.

He appears as the

K. al-Irdjâ

It also contains extensive excerpts from Sunnî and Zaydi3 works, especially on the life and character of 'Ali b. Abî Tâlib [q.v.]. Volume one was edited by 'Adî al-Awwâ in Mantakhabat Imâmîyya, Damascus 1958, 181-250, whereas the remaining volumes are in manuscript. Major subjects of each volume are described in I. Poonawala, Bibliography of Ismâîlî literature, Malibu, Calif. 1977, 178-83.

**Bibliography:** The main biographical source is the author's own work Kûbî al-Azhâr, i, 186 ff; Ismâîl b. 'Abd al-Raşîl al-Maghâjin, Fânîrî, ed. 'Ali Naqî Munzawî, Tehran 1966, 77-88.

**HASAN, MIR GHULAM** (1140-1201/1772-86), Urdu poet noted for his mathnawis, was born in Dihlî, the son of Mir Dâlîk, a poet of modest attainments who was satirised by Sauvâ. Mir Hasan had a liberal education, which included the Persian language, but apparently not Arabic. He learned the poetic art from his father and from Mir Dard. After the sack of Dihlî in 1739 by Nâdir Shâh, he emigrated with his father to Faizabad (or Fayyâdâb [q.v.]), the capital of Oudh or Awadh [q.v.]. En route, they stayed at Dig, near Bharatpur, and joined the pilgrimage procession to the festival of the saint Shâh Madar at Manpur. The poet was to describe this journey and festival in a colourful mathnawâ, Galûzâr-i Irân, composed about nine years before his death. In Faizabad, Mir Hasan joined the service of the Nawâb. In 1189/1775 the new Nawâb, Aṣâf-al-Dawla, transferred the capital to Lucknow, so the poet moved there also. Here he composed his longest and best-known mathnawâs, Sihr al-bayân ("The enchantment of eloquence"), which won immediate acclaim, and is frequently known merely as "Mir Hasan's Mathnawî." This was finished in 1199/1785, less than two years before the poet's death. Mir Hasan's complete poetical works do not seem to have been published. He is known to have written both ghazîls and mathnawis, and he was the grandfather of Anîs [q.v.], the famous Urdu elegist. But it is for his mathnawis that he is chiefly remembered.

Yet of the eleven with which he is credited, only

commentary of the fragments of al-Hasan's refuta-
tion of the Kadariyya, and collection of the biogra-
phical material (with further references).

**HASAN, B. NÛH b. Yûsuf b. MUHAMMAD b. ADâm al-BHARUCI AL-HINÔD, Mustâlî-Tâyûbî Ismîlî savant.**

According to Ibn-i Shahîd, the first author to

bring up in Kambhâl (Cambay) in India, and received his early education there. It is not known when and by whom the surname "Bharucî", sc. from Bharâc or Broach, [see Bharoc], was given to him. Urged on by a thirst for knowledge, he states, he renounced family, left his country, travelled to Yaman, and became a student of Hasan b. Idris, the twentieth dârî malîk. The books read by him with his teacher in various branches of the 'âlim al-dawa are fully described in the introduction to his Kûbî al-Azhâr. He was also closely associated with 'Ali b. Husayn b. Idris and Muhammad b. Idris, who later became the twenty-second and twenty-third dârî malîks. He was the mentor of Yusûf b. Sulaymân, the twenty-
ty-fourth dârî malîk, and died on 11 Dhâl "Kâ'da" 959/4 June 1333.

Claim to fame is rightly based on his volumi-

ous work Kûbî al-Azhâr wa-maajma al-anwâr al-maqlûla min barâdât al-wirâ. It is a chronology of Ismâîlî literature in seven volumes wherein many earlier works, otherwise lost, are preserved either in full or in part. It also contains extensive excerpts from Sunnî and Zaydi works, especially on the life and character of 'Ali b. Abî Tâlib [q.v.]. Volume one was edited by 'Adî al-Awwâ in Mantakhabat Imâmîyya, Damascus 1958, 181-250, whereas the remaining volumes are in manuscript. Major subjects of each volume are described in I. Poonawala, Bibliography of Ismâîlî literature, Malibu, Calif. 1977, 178-83.

**Bibliography:** The main biographical source is the author's own work Kûbî al-Azhâr, i, 186 ff; Ismâîl b. 'Abd al-Raşîl al-Maghâjin, Fânîrî, ed. 'Ali Naqî Munzawî, Tehran 1966, 77-88.

(I. Poonawala)
Sihr al-bayan is widely known, and it may justly be described as the original model of the Urdu narrative mathnawi, and one of the two or three greatest examples of the form. It runs to about 2,000 couplets in mudarrab metre, and tells, in some detail, a story of royal adventure and magic of the kind current in India. The central plot concerns the love between Prince Binażir and Princess Badr-e Munir. There is a subsidiary love plot involving Nāqīm al-Nisāʾ, the Wazīr’s daughter, and Firōz Shāh, son of the King of the Jinn. A magic flying horse plays an important part in the events of the story. But the supernatural elements in the story are no more important than in—say—Central European Zauberpoesie or Zauberpresse in the 18th and 19th centuries. The elements which raise an incredible story to the level of great literature are many and varied, but they include the characterisation, which relates the characters to ordinary human beings; the vivid and colourful description of people and places; the effective use of rhetorical devices such as word-play; the timeless less language, which seems remarkably up-to-date two centuries later; and the numerous examples of “gnomic” verse which embody simple philosophising and lend themselves to quotation in everyday life. In fact, few Urdu poets since have had his facility for saying more with less than Mir Hasan, who wrote his poem in the late 19th century. Nevertheless, the Sadr Sharaf al-Mulk. Impressed by his acquaintance with Mir Hasan, particularly Sīhr al-bayan, mention must first be made of R. Russell Mathnawi-yi-Mir Hasan, ed. Ḥamdī Allāh Aṣfar, Allahabad 1925, has a short introduction which discusses the poem’s good and bad qualities (11-14), and a glossary. Mir Hasan’s Taghīra-yi-thuwar-yi-Urdu was published at Allīgarh in 1922. For accounts of Mir Hasan, particularly Sīhr al-bayan, mention must first be made of R. Russell and Khurshidul Islam, Three Mughal poets: Mir, Sauda, Mir Hasan, London 1969, 69-94. This account is devoted chiefly to re-telling the story, but also includes a useful critical assessment. Saksena gives a devoted account of the poet in his History of Urdu literature, Allahabad 1927, 67-70; See also Mohammad Sadiq, History of Urdu literature, London 1964, 108-11; Urdu accounts of the poet include the following: Muhammad Husayn Azad, Ab-i-haydt, Lahore ed. 1950, 249-51; Ḥamdīn Fārūk, Mir Hasan aur khāndān kī dastūr shāhān, Lahore 1952; Wahid Kurayshī, Mir Hasan aur un kā zamānāna, Lahore 1959; For Mir Bahādur ‘All’s prose version, see Major Henry Court’s English tr., The naari Benāzīr, Calcutta 1871, 2nd ed. 1889.

HASAN BEDR AL-DIN, later PAHA (1851-1912), Ottoman Turkish soldier and playwright, chiefly famed as the collaborator during the years 1875-9 of his fellow-officer and friend, the author and dramatist Manastirli Mehmed Rif‘at [q.v.], in the writing of some 16 plays, some translations from the French and some original, which were produced at the Gedik Paşa Theatre in Istanbul (see MANASTIRLI MEHMED RIF‘AT for full details). He was born at Şniaw near Kütahya, the son of an army officer, was educated at the military school Fildišt in Damascus and then at the Istanbul War College (Horbey, where he graduated the first of his class and was the contemporary and classmate of his future collaborator Manastirli Mehmed. He served briefly in the Imperial Guards, but in the increasingly repressive atmosphere of Sultan ‘Abd al-Hamîd II’s reign he was soon banished from Istanbul to the eastern provinces, and served in Syria and Palestine with the rank of colonel. However, he was soon stripped of this rank, presumably as the result of a żurnal or defa‘ir report, and taught in Damascus schools for a living. After the restoration of the Constitution in 1908, he returned to Istanbul, was rehabilitated under the Young Turk regime, promoted to brigadier-general and then general of a division, and was finally appointed commander and governor of İskodra [q.v. in Suppl.] or Scutari (modern Shkoder in northern Albania). After a brief spell of service, he resigned on the grounds of ill-health, returned to Istanbul and died there in 1912.

**Bibliography:** See that for MANASTIRLI MEHMED RIF‘AT.

HASAN NIZĂMI, historian of the Dîhlî sultanate in Muslim India.

He was the son of Nizâmi Ārabî Samarkandî, the famous Persian literateur [q.v.], but left his hometown, Nišāpūr, sometime towards the close of the 6th/12th century because of political instability there. In Dîhlî he made friends with high officers of Sultan Kutb al-Dîn Aybak (602-7/1206-10 [q.v.], including the Sadr Şajraf al-Mulk, impressed by his learning, his friends advised him to produce a literary work so that he might get royal patronage; hence Hasan Nizâmi decided to compile the history of Aybak’s achievements in Arabic. But his friends persuaded him to write it in Persian, since there were in India few people literate in Arabic. In the meantime, the royal fornûn was proclaimed that Aybak’s conquests in India should be recorded by scholars,
HASNÁN NÍZÁMÍ — HASRÁT MÓHÁNÍ

along with those of his master, Sultan Mu’izz al-Din Muḥammad b. Sám [see gêrê dign]. Hence the compilation of the Tādž al-mu’dâther.

The part contains a description of Sultans Mu’izz al-Din Muḥammad and Ķuṭb al-Din Aybak. On Sultan Ķuṭb al-Din’s death, Hasan Nízámí continued his work under Iltutmish, and according to Sir Henry Elliot, brought it up to the year 626/1229; but the extant copies of the work end with the description of the occupation of Lahore by Iltutmish in 614/1217. Since Iltutmish was his last patron, the author is not impartial in his criticism of his master’s rivals, such as Tādž al-Din Yildız and Sultan Náisír al-Din Kúbača. He omits mention of Arám Sháh, the son of Ķuṭb al-Din Aybak, because Iltutmish has usurped the throne and killed him. Moreover, there is no space devoted to the description of the nobles of the early sultans of Díhlí, who had helped the sultans in stabilising Muslim rule in northern India at its very beginning. In fact, Hasan Nízámí fails to produce a history in the real sense of the word; his work reads like a mere Fath-náma.

It was, moreover, written in an ornate and florid style, full of verbosity and rhetorics. The historical details are interspersed with the Kur’anic verses and Arabic formulas. Half of the work comprises only verses. Despite these defects, the Tādž al-mu’dâther enjoyed fame because of its bravura style, much to contemporary literary taste, and much imitated subsequently.

Bibliography: Storey, i. 493-5, 1310; H.M. Elliot and J. Dowson, The history of India, as told by its own historians, ii, 204-43; Hasan 'Askari, Tāj al-Ma’dâther of Hasan Nízámí, in Patna University Journal, xvi/3 (1963).

HASRÁT MÓHÁNÍ, SAYYID Fárîd AL-HÁSÁN, prominent Indian journalist, poet and politician, was born most probably in 1297/1880 in the small town of Mohán in Dálah Prádesh. His family, which numbered many scholars, physicians and mystics, claimed descent from Sayyid Mahmúd who migrated from Najphasis in Iran and founded Mohán in 615/1218. One recent ancestor had been royal physician to the Kings of Awadh, another had been minister of religious affairs in the Hyderabad state. Hasrat was educated at government schools and privately in Arabic and Persian. In 1316/1899 he headed the provincial list in the matriculation examination and won a government scholarship to the Muhammadan Anglo-Oriental College at Aligarh.

From his student days Hasrat was a prominent figure in the political and cultural activities of North Indian Muslims. He fought for Islamic causes in India and abroad. In 1903 he started an Urdu weekly, Urdu-i mûlûm, which appeared intermittently until 1938; its pan-Islamist and virulently anti-British views strongly influenced young educated Muslims. In 1909 he was jailed for a year for publishing an article critical of British educational policy in Egypt, and he was prominent in the explosion of pan-Islamic protest which preceded World War One. In 1916 he was interned for the duration of the war after he was found to be connected with ‘Ubayd Allah Súndhi’s [q.v.] plan, the Sîk Leuter Konspirasy, to raise the Frontier tribes against the British. During the Kahlîfát movement he associated increasingly with the ‘ulámâ, coming to be called our “madmullá” by Muhammad and Sháwkat ‘Ali [q.v.], and tried continually to drive the agitation more extreme: striving to make non-co-operation with government the policy of the Kahlîfát movement at its conference of November 1919, declaring his support for an Afghan invasion of India at the Congress-Kahlîfát meetings of June 1920, and attempting to make complete independence for India the aim of the Congress and the Muslim League at their sessions in 1921. Hasrat continued his work under Iltutmish until 1922. On his release he startled many by declaring himself a Communist as well as a Muslim, and he chaired the reception committee of the first Indian Communist Conference at Kanpur in 1925. From this point Hasrat’s influence in Indian politics declined. He remained notable but could no longer find support amongst many. From 1937 he was active in the Muslim League, of which he had been a member from its foundation and President in 1921, but he was out of harmony with the direction it was taking. He opposed the League’s demand for Pakistan and devoted much of his time from 1942 to 1947 to promoting his own plan for a three-tiered Indian confederation to solve the communal problem. In 1946 he was elected as a Muslim League candidate to the UP Legislative Council and to the Indian Constituent Assembly. He died in Lucknow in 1951.

Although vigorously engaged in politics, Hasrat maintained a considerable literary output. His most important work was a responsive commentary on the 13th/19th century poet Ghílán, Sháh-i Ghílán, and his discussion of the conventions of Urdu poetry, Nákí-t-i sukhán. Primarily, however, he was a poet. He contributed much to the refinement of the Urdu ghazal and was the only ghazal writer of modern times to become a “classic” while still alive. Djamáil Miýán Farangí Mahmúl had edited the most complete edition of his works, Jâliyâvat, 2nd. ed., Lahore 1959.

Evidently, several somewhat contradictory themes mingle in Hasrat’s life. There is his faith, as evident in his private life as in his public actions. A punitious observer of prayer and fasting, he also performed the Hadj at least eleven times between 1932 and his death. He was, moreover, in the tradition of his ancestors, a mystic and a follower of the Farangí Mahall; has edited the most complete edition of his master, Sultan Mu’izz al-Din Muhammad b. Sam [see GHURIDS]. Hence the coming to be associated increasingly with the ‘ulámâ, and being made a khalifa in both Kadin-Razzâf and Cishtf-Nizâmí groupings by Mawlana ‘Abd al-Barr [q.v.], which is unimportant or in both Kadin-Razzâf and Cishtf-Nizâmí groupings by Mawlana ‘Abd al-Barr [q.v.], which is unimportant.

HASSAN TAYLI “the oilman”, a religious devo-
tee of Muslim India, was born at an unknown date,
some time in the 10th/16th century, at Makkibal, on
the bank of the Chenab, in the Pandjab.
A critical change in Hassū’s life came when he
was twelve. He met one of the living “nine naths
of Muslim India, was born at an unknown date,
sixty-first and premier disciple, who had spent 82
years in severe austerities before his birth. Hassū
now embarked on his career as a saint. He went
to Lahore where he worked as a porter, but sub-
sequently became a grain merchant and opened a
grain store at Lahori Mandi. A devout admirer of
his, Sūrat Singh, paints him as a merchant of a curi-
ous type—knowing everything about the future prices,
he bought dear and sold cheap! He died at Lahore
in 1104/1603. His tomb still survives, an object of
veneration; the spot is also remembered where
he used to sell grain.

To his death, Hassū Taylī appears to have remained
formally a Muslim, though he did not follow the five
pillars of Gorakhnāth. The latter recognised in him his
chief disciple, Shaykh Kamal, used to sell grain.

Yākūṭ breaks his fast? Why should he have gone on
the time, so why should he have prayed in public?

HAWKING — HAYDAR-I AMULI

HAWKING [see BAYZARA].

HAWSAM, the earlier Arabic name of the modern town of Rūdisar in eastern Gīlān on the coast of the Caspian Sea. It is an Arabisation of the local name, which appears to have been Khosham or Khasham. Thus the name is given by al-Mukaddasī (51, 355, 360) and probably by Abū Dulāb b. Muhālihib (ed. M. al-Dawla al-Sulṭān al-Uṭubī, Tawārisīn, v, Cairo 1955, 25) as Kh-sh-m; by al-Bīrūnī (al-Ḥāriding 1954-5, 569) as Khawṣam; and by Abū al-Dīn Zawānī (ed. H. L. Rabin, in JF (1950), 327, 330) as Hawṣam. The rendering of the initial ḥ as h in Arabic corresponded to the pronunciation of Arabic bāʾ by the Gil as bāʾ and the shift of Persian gīn to Arabic ṣīn occurred frequently. The identity of al-Mukaddasī's Kh-sh-m with Hawsam, rejected by Muhammad Kazzwīnī and Minorsky, is ascertained by his reference to it (360) as "the town of the dār." The itinerary given by him elsewhere (372), which places a Kh-sh-m at a two days' trip west of the Sāḥīf-rūd, appears to refer to a different town also mentioned by Abū al-Dīn Zawānī (332).

Hawsam is generally described as the easternmost town of Gīlān, located at the border between the Gil and the Daylam, whose territories extended west to it to the coast. It is first mentioned as a residence of Hawsam ibn al-Ṭūrshigh [q.v.] by al-Nasir b. al-Ḥākam, who was active in the region during the last decade of the 3rd century/903-13 converting the Gil and Daylam to Islam. After the collapse of the Zaydī Alīd reign in Tabaristan in 316/928, it became the chief seat of the Alīd rule in the Caspian region and the centre of scholarship of the Nasirīyya branch of the Bawandīs. Thereafter, Hawsam was preserved from the former town, and several royal personages were buried there in the 9th/15th and 10th/16th centuries.

HAYDAR-I AMULĪ, BĀHĀʾ AL-DĪN HAYDAR B. ALI B. HAYDAR AL-ʿUMBAYĪ (719/1319 or 720/1320-817/1413), early representative of Persian theosophy and commentator on Ibn ʿArabī. Our knowledge about his life is based on two autobiographical passages written in 777/1375-6 and 782/1380 respectively. He originated from a family of Ḥusaynī sayyids in Amul, Mazandarān, whose population had been known for its Shiʿī leanings for a long time. During his studies he left his hometown for Āstārābdī and Isfahān. But in his late twenties he returned and became a confidant, and afterwards a minister of Fakhr al-Dawla Ḥasan b. Shāh Kavdār (r. 791-816). Haydār succeeded the last ruler of Āstarābdī belonging to the Kinawārīya branch of the Bawandī dynasty [q.v.]. This period seems to have been rather short, because in 748/1347 he was still in Khurāsān, as is attested by a vision which he had
there and which he reports in his works, whereas two years later, in 750/1349, shortly before Fakhr al-Din al-Khaḍrī's assassination by members of his own family, he experienced a religious crisis which made him give up his worldly life, in spite of his reverence for his master, and perform the badā'ī. For the rest of his life he lived as a hermit, and in the summer of 749/1348, he stayed in Iraḳ. In Baghdad he studied with Naṣr al-Dīn al-Khaḍrī al-Hillī (d. 755/1354) and Fakhr al-Dīn Muḥammad b. Ḥasan, the son of the famous 'Allāma al-Hillī, two Ǧāḥiṣ scholars who enjoyed the patronage of the Ǧalā'irīds [q.v.]. With the latter one he exchanged a theological and juridical correspondence which is preserved in an autograph (al-Maṣā'id al-ʿĀlamīyya, dated 762/1361; ms. Tehran University no. 1022, fols. 71b-76b). He also wrote for him his Risālat Rāʾif fī al-khāliṭ an ṣawwī ṣuḥbī Amīr al-Muʿāminīn, an apology for 'Allī's passive attitude towards the first caliphs.

The number of Haydar-i Amuli's works which are known to us, by title at least, amounts to 34. The earliest book preserved is his

(1) Qāmīṭ al-ʿasrār wa-mambūṭ al-anwār, an exposition of the deeper meaning of the ḥiṣār with the help of tale-āt (ed. Osman Yahya and Henrî Corbin, in Sayyed Haydar Amuli. La philosophie shiite, Bibl. Iran., vol. 16, Tehran-Paris 1969, 2 ff.; for an analysis of its contents, cf. Corbin in Eranos-Jahrh., xxx. (1961), 90 ff. and xxxi (1963), 80 ff., also in En Islam iranien, Paris 1972, iii, 149 ff.; P. Antes, Zur Theologie der Schītā. Eine Untersuchung des Qāmīṭ al-ʿasrār... Freiburg 1971). It was finished about 732/1331; in the introduction, eight other works, obviously of smaller size, are mentioned, some of which may date back to the time before Amuli settled in Iraḳ. In one of them, his Risālat al-arkān, he had treated the same subject as in his Qāmīṭ, restricted only to the five "pillars" of Islam.—After 760/1359 he wrote his

(2) Risālat al-Wujūḍ fī maʿrifat al-maʿbūṭ in itself has not been rediscovered yet, but a summary of which, finished at Naḍīm in 760/1367 under the title Risālat Naṭā al-muṣṭafat fī maʿrifat al-wujūḍ, has been edited by Yahya and Corbin (ibid., 620 ff.). The problem of being is treated under the aspects of its title itself has not been rediscovered yet, but a summary of Islam.—After 760/1359 he wrote his

(3) al-Mubīt al-ṣaʿīm, a huge commentary on Ibn ʿArabī's Fāṣīṣ al-ʿamūl to which he added, after the model set by earlier commentators like Dāwūd b. Muḥammad al-Kaysārī (d. 751/1350), voluminous prolegomena (ed. Yahya and Corbin, in Bibl. Iran., vol. 22, Tehran-Paris 1975). In them, he proved the iniquability of Muḥammad among the prophets and of Ibn ʿArabī among the mystics. Muḥammad and Ibn ʿArabī are connected historically by the revelatio continuata through the Ṣḥīfī imāms and phenomenologically by the manda imagina (ʿilm al-mūṭaf), the world of spiritual being from which emanated the vision in which Ibn ʿArabī claimed to have received the Fāṣīṣ from the Prophet himself during his stay in Damascus in 627/1230. In spite of all reverence, however, Amuli deviates from Ibn ʿArabī in the question of the khīṭam al-waṣīṭa, the "seal of saintliness". Whereas Ibn ʿArabī saw this ideal realised in an absolute sense in Jesus (= waṣīṭa mutlak), and whereas many of his adherents believed that, in momentaneous limitation, it had been represented by Ibn ʿArabī himself (= waṣīṭa muṣṭafāyun), Haydar-i Amuli puts ʿAllī and the twelfth imām in their place, his originality thus merging with his Ǧāḥiṣ conviction. He criticises at length the almost inanitiary character of AN after his death and had lived in Sunnī Egypt, for his unclear, i.e. non-Ǧāḥiṣ, attitude in this problem (which came closer to Ibn ʿArabī's intention). Two other commentators, both of them of Iranian origin, Muʿāyyad al-Ǧalānī (d. 690/1291) and Kamāl al-Ǧalānī (Abd al-Razzāk al-Khaḍrī, d. 730/1330) are mentioned with respect. Complicated numerical speculations concerning the imāms and the prophets are clarified through diagrams (treated by Corbin in Eranos-Jb., xlii (1975), 79 ff.).—Amuli's latest attested work is his (5)

Risālat al-Ulām al-ṣiṣṭaṣa which he composed in 787/1385 at the age of 65. The autograph is preserved in Naḍīm.—A full list of Amuli's works is found in La philosophie shiite, French introd. 37 ff. (H. Corbin, Arabic introd. 19 ff. (O. Yahya).

Haydar-i Amuli combined Ǧāḥiṣ convictions hereditarily in his family with an ʿIrākī and Persian Shīʿī tradition strongly imbued with the ideas of Ibn ʿArabī [q.v.]. In this high degree the ʿIrākī akbar he followed, especially the mystic traditions like Saʿd al-Ǧalānī's Haģhammiyya (537-650/1191-1252) and Naḍīm al-Ǧalānī's Dīya (d. 654/1256), both of whom he quotes quite frequently. Like them, he was a speculative type; in contrast to two other famous Iranian Shīʿīs who were in his exact contemporaries, ʿAllī al-Haḡhammānī (714-86/1318-89), equally originating from a family of sayyids, and the Sunnī Bahāʾ al-Ǧalānī (717/1918-89), he did not found a separate tariqa nor did he adhere to any of them. More strongly than anybody else before him, he insisted on the common origin of Shīʿīsm and Ṣūfīsm, thus laying the ground for a dogma held by Iranian mystical orders until today. This is why he pleaded for a transcending of the normal juridical approach to Islam by a union of ḡiṣār, taʾrīḵ, and haḵīḵa, the Muslim who combines these three aspects not only a believer (muʾāmin), but a believer put to test (muʾāmin muṭanāṭān), equally remote from literalistic Shīʿīsm as from antinomian Sūfīsm. Ṣūfīsm is thus understood as the esoteric side of Islam, but not in an extremist sense. It may be noted, in this connection, that the term muʾāmin muṭanāṭān was also used by extremists like the Naṣṣāyris; Haydar Amuli may have reinterpreted it in opposition to radical tendencies in popular Islam.

All knowledge (maʿṣūfa) is derived from the imāms; they represent the Ǧāḥiṣ nār Muhammad as well as Ibn ʿArabī's haḵīḵa Muḥammadīyya, this latter entity being understood by Amuli as consisting of 14 light arons which correspond to the metaphysical persons of the 14 "sinless ones" (moṣūmān): Muḥammad, Fāṭima, and the 12 Imāms. The 12 Imāms and the 7 Prophets are summed up in the mystical number 19 which pervades revelation and universe (the Basmula has 19 letters; the universe consists of the Universal Intellect + the Universal Soul + 9 spheres + 4 elements + 3 realms of nature + man; more about numerical speculations of this kind in the article Corbin in Eranos-Jb., xlii (1975), 79 ff.). God as the mūṭaf of the universe is unrecognisable. God can only be recognised in His epiphanies. This leads to a metaphysics of the divine names and attributes; the normal monotheism propagated by Muḥammad is differentiated, as taḵtīd ulīhī, from the taḵtīd
Ugūlī administrated by the imāms, i.e. the insight that God alone is in the real sense of the word. In combining these elements, Haydar-i Amūlī’s thinking represents an “open” system which is based on meditation and pneumatic exegesis more than an discursive reasoning.

In 1902, at the invitation of the Persian government, Haydar went to Magḥhad to supervise the Power Station installed for the Shrine of Ḫūrūs Ḳīdār, where he however stayed for only ten months, seeing it as unprofitable ground for political activism and finding both the governor of Khūrūs Ḳīdār and the custodian of the Shrine oppressive. During his short stay, nevertheless, Haydar played a part in an uprising against the Shrine custodian, Siḥām al-Mulk, who was believed to have been a grain hoarder. He then left Magḥhad for Tehran in 1903.

While working for the railway and later on for the Amin al-Darb Power Station in Tehran, Haydar propagated constitutionalism, and when there was widespread opposition to the Belgian financial adviser, M. Naüs, Haydar encouraged the clerical students of the Sipahsālār Mosque to take refuge in the British Legation at Tehran by giving each of them a certain amount of money.

After the first parliamentary election in Tehran, Haydar established the first branch there of the Social Democratic Party, the aim of which was declared to be “uprooting the existing despotism”. Since the Party believed in armed struggle, Haydar planned a number of bomb explosions. In June 1907 he hired and exploded a bomb at the house of Mīrzā Aḥmad Khān ‘Alī al-Dawrkhānī, a prominent member of the anjamān-i khidmat, and the party also threatened ‘Alī Aṣghar Khān Aṭābak, the Grand Vizier. Thus in September 1907 Aṭābak was killed by ‘Abbās Āḵa Ṣarrāf, a party comrade of Haydar. Towards the end of 1907 Haydar planned the assassination of Muḥammad ‘Alī Shāhī, who was then attempting to extinguish the Persian constitutional system established in 1906. This plan, however, miscarried, the Shāh himself remained safe, and Haydar was arrested, though released subsequently.

Upon Muḥammad ‘Alī Shāhī’s bombardment of the Persian Parliament in 1908 and his repudiation of the constitutionalists, Haydar fled to Baku. While in Russia, he continued his campaign by publishing articles in the Georgian press against the Shāh’s regime. He also recruited some 700 Georgian volunteers for the constitutionalists’ camp in Tahrīrī, and later he himself joined the Tahrīrī movement led by Ṣattār Khān. Haydar took an active part in the constitutionalists’ victorious actions in Marand and Khūy, and he also helped to establish a school and a newspaper in Khūy, where he appeared as a hero in the poetry produced at that time.

When he heard about the rise of the constitutionalists in Gilān and Ḳashān he went to the later city and closely co-operated with the anti-Shāh forces. In 1909, together with Shāyḵ Muḥammad Khīyānī and others, he established the Democrat Party in Tehran. He also founded a branch of the same Party in Ṭabāzī in 1910. In the meantime, however, Haydar was accused of the assassination on 15 July 1910 of Sayyid ‘Abd Allāh Bihbāhānī, a clerical leader of the Persian Constitutional Revolution, who was believed to have turned against the revolutionary factions; Haydar was interrogated but released later. In retaliation for Bihbāhānī’s murder, some members of the Tādāšīnī Party made an attempt on Haydar’s life (Mahdī Māḥk-Ẓāda, Tarīḵ-i Inṣālāt-i madārsīyatī, vi, Tehran 1953, 219).

In 1910 Ṣattār Khān and his fellow muḍḥāḥidīn moved to Tehran. The various revolutionary factions now fell into confused, internecine struggles; there ensued several assassinations among the muḍḥāḥidīn and other revolutionary groups, and finally the government forces defeated Ṣattār Khān. In this bloody warfare, Haydar, at one time a good friend of Ṣattār Khān, is said to have fought against him.

Meanwhile, Haydar undertook a secret mission among the Bakhṭyarīs, but no longer feeling safe in Iran, fled the country and joined Lenin, the Russian Bolshevik leader, in Europe in 1911. On his way to Europe, Haydar, through his friend, Sadekov, received a sizable amount of money from Muḥammad ‘Alī, the ex-Shāh of Iran, having falsely promised him help to regain his throne. Later, Haydar excused himself by saying that he took the money in order to reduce the source of the ex-Shāh’s power and corruption (‘Abd al-Ḥusayn Nawāʾī, Haydar Amū Uğulī va Muḥammad Amin Karīl-Ẓāda, in Yıldız, v/1-2 (1949), 43–67). While in Europe with Lenin, Haydar was also in touch with the Iranian exiles in Paris and Berlin. In 1915, he joined the anti-Ally Committee organised by Sayyid Ḥasan Takt-Ẓāda and others, and was commissioned by the committee to go to ‘Irāq and organise an armed force against the British; this mission was not however successful. He then returned to Berlin, and shortly afterwards went to Moscow where he took part in the 1917 Soviet Revolution. In September 1920, Haydar participated in the Congress of the People of the East held in Baku and, together with Avestis Sulak-Ẓāda, represented Iran in the Publicity Council of the Congress.

Aiming at profound structural changes in Iran, Haydar wrote an essay analysing the political and social situation of Iran and proposing certain revolutionary measures to be carried out by the newly-
born Communist Party of Iran; this essay, which was written in January–March 1921, is known as “Haydar Khan ‘Amu Ughli’s theses” (Mazdad, Anand-i tareekhi-yi janabat-i kargari, isiylay dovdukisi va kumunisti-yi Iran, iii, Florence 1972, 45-53). He then was invited by Kucak Khan and other officials in Adharbaydjan, and by Khiya-Mudjhid-i buzurg Haydar; in the Persian Constitutional Revolution of 1906-11 and subsequent political developments in Iran, all the works concerned with the period provide extensive information and ample references about Haydar; see especially the articles: yam'iyat; mut'is; hukuma; khurbar, Shaykh Muhammad; khurassan, Mullâ Muhammad Kazim; kooykh itan; mirza; (in Suppl.) eka nadjafi, Hefidji, Shaykh Muhammad Taqti Isfahani, xazan; haqiri, Shaykh ‘Abd al-Karim Yazdi; See also ‘Abd al-Husayn Nawâlî, inkilâb-i gilan âgâhâz shadîd; in Tadgar, iv, no. 3 (1947), 19-55; idem, Sattar Khan Sardar-i mili Shahjahan, who had in 1036/1627 sent Yusuf Khan with Kutb al-Din, governor of Bengal, to suppress Shîr Afsân, who held a dâgar in Burdwan, for being in league with the Afghan rebels, and Shîr Afsân was killed, Haydar Malik gave protection to his widow, Mihr al-Nisâ', the future Nûrdî, and sent her safely to Agrâ. On Yûsuf Khan’s death, Haydar Malik entered the service of Djamângîr, who conferred upon him the titles of Caghaîyâ and Rifâ’î al-mulk. Haydar Malik was versatile, being not only a soldier but also a historian, an architect and an engineer. His Tâ’rikhi-yi kargari, written in simple, lucid Persian in 1031/1620-1, describes the history of Kazagmîr from the earliest times to 1027/1617, the twelfth year of Djamângîr’s reign. Although a Shî, he wrote objectively, and his work is an important source for the history of the Sultanate in Kazagmîr. When the Djamâ Mas‘jîd of Sirnagar was destroyed by fire, Haydar Malik’s father was accused of having set fire to it. Djamâ Mas‘jîd was rebuilt by Haydar Malik, which he did at his own expense. He also rebuilt the tomb of Shams al-Dîn ‘Irâfî, the Nûrbakhtejiyya saint, which had been destroyed by the Sunnis for a reprisal for the destruction of the Djamâ Mas‘jîd. Later, Haydar Malik constructed by order of Djamângîr a canal from the river Sind to irrigate the Nur Afza garden. He was also entrusted with the supervision of the construction of the waterfall at Vernag. He died in Kazagmîr at a ripe old age in the reign of Shîhjâhân, who had in 1066/1657 appointed him as superintendent of buildings to be built around Vernag.

**HAYDAR MALIK,** Kâmîrî soljed, scholar and engineer. He was the son of Hasan Malik of Câdûra, a village about 10 miles south of Sirnagar, and descended from Râmçandra, the commander-in-chief of Radja Suhâdeva (1301-20). His family seemed to have gone into eclipse during the early period of the Sultanate, but with its conversion to Shi’ism early in the 16th/16th century, it became active in the social and political life of Kazagmîr. Haydar Malik’s grandfather, Malik Muhammad Nâdîjî, played an important role in bringing about the overthrow of Mirzâ Haydar Dughlat in 958/1551; and his father, Hasan Malik fought against the Mughal army sent by Emperor Akbar to conquer Kazagmîr. Haydar Malik also took up arms against the Mughals. He served Yûsuf Khan Çak, son of Sulhân Husayn Shâh (970-8-1563-70), for 24 years, and accompanied him in exile to Hindustan. He fought side-by-side with Yûsuf Khan, who was sent by Akbar to suppress the rebellious cizares and cizaret; when Shîr Afsân was sent Yûsuf Khan with Kuhsi al-Dîn, governor of Bengal, to suppress Shîr Afsân, who held a dâgar in Burdwan, for being in league with the Afghan rebels, and Shîr Afsân was killed, Haydar Malik gave protection to his widow, Mihr al-Nisâ', the future Nûrdî, and sent her safely to Agrâ. On Yûsuf Khan’s death, Haydar Malik entered the service of Djamângîr, who conferred upon him the titles of Caghaîyâ and Rifâ’î al-mulk. Furthermore, the idea of a mixture or melange contained in the root led to the word being used in a pejorative sense. Indeed, there was a saying that the word hāyās or hāyās was "this is a wretched affair", and a proverb, ðada ða-yāyas "the hay has been remixed", that is to say, "it was already bad, but has now become worse", uttered when someone criticises a second person who has performed his task badly, but himself fails to do it any better (al-Maydanl, al-amthdl, i, 484).

**HAZĀRAĐĀT, a region of central Afghanistan spanning the modern (post-1964 reorganisation) provinces of Bāmīyān, Wardak, Ghāzni, Ghōr and Uruzgān. The region is almost wholly mountainous, its northern backbone being formed by the Kūh-i Bābā range [q.v.] and its outliers. There are consequently very few towns and these tend to lie in the river valleys, e.g. Dāwatāyr on the upper Ĥer Ĥi Rūd and Pāndžāb or Pāndjāb on the Pandjāb tributary of the upper Helmand. The sedentary agriculturist Hazāras [q.v. below] are the main ethnic element of the region, but there are also Pāšghān or Afghān nomads, e.g. Ghālzays [q.v.], who have moved in from the east and who have clearly-defined grazing grounds.

the Hazaras rebelled against the authority of 'Abd al-Rahmân Khân [q.v.], and in 1891 the Khân organised the suppression of Hazâra unrest as a qâhilât by Sunnî fighters for the faith or ghâzîs against Shi‘î political enemies. It was after this fierce fighting that many Hazaras emigrated to Persian Balûcistan, and many Hazaras were also resettled in Afghan Turkistan. Already Elphinstone noted that there were many Hazaras in Kâbul, including 500 in the royal guard, and in the early 20th century, Hâbîb Allâh Khân recruited a labour force of several thousand Hazaras for his road-building and public works policies. Today, there are Hazâra immigrant colonies in all the main towns of Afghanistân, sending remittances back to their families; in Kâbul, they are, in particular, building and general labourers and wood sellers.

zal), which was found not only on hubās but also on mulk properties. In Morocco, the prevalent system of perpetual lease by the hubās of dilapidated shops and workshops was the ḗqlas (qu'elsit), also called "ānda" or zinā (cf. Dözy, Suppl., i, 207). The tenant makes the necessary repairs, pays an annual rent and thus acquires the perpetual usufruct of the property. Nāsha in Tunis and geḏā in Egypt were similar arrangements involving, in addition to perpetual lease, the ownership and use of tools and installations of shops and workshops. However, there was a major difference between all the Māḥkī—North African systems and those which were prevalent in Egypt, Syria, and Turkey, according to Ḥanafī law: in the Maghrib the lessee paid a fixed annual rent, while the yearly rents paid in the East were supposed to vary according to market fluctuations (ṣafī al-miḥābī). (For these and various other systems, see Pröbstel, 153 ff.; Milliot, 55 ff., 126-6; Abū Zahra, 107 ff.)

In Egypt, ḥikr has existed at least since the 12th century (cf. S.D. Goitein, Cairo: an Islamic city in the light of the Geniza documents, in I.M. Lapidus, Middle Eastern cities, Berkeley and Los Angeles 1969, 92; Hassanein Rābi, Some financial aspects of the waqf system in medieval Egypt, in al-Maqallah al-Tūhākīyya al-Masriyya, xxvii [1971], 1-24). Ḥikr and similar practices of perpetual lease flourished after periods of decline in the power of the central government which involved deterioration of waqf. This is what happened in various parts of Cairo after the decline of the Fātimids (Mubārak, Ḵhitīt, ii, 2, 102), and in the Maghrib with the decline of the Marinid dynasty and the disorders under the Shārālim which brought about the dilapidation of the waqf (Milliot, 43). The recurring fires in Manfūl and other Anatolian towns have been considered as a primary reason for the spread of ḥikr by the dishonesty of the local Kadis and Usurpers even claimed the rent, and after some time the estate became the lessee's property. Usurpers even claimed the rent, and after some time the estate became the lessee's property. Frequently administrators neglected to collect the rent, and after some time the estate became the lessee's property. Apparently these laws were not effective, and in 1960 a new law had been made to abolish ḥikr. Attempts made to do this during the first years of the century had failed. Ḥikr on ṣafī al-wakf was abolished together with such ṣafī in Egypt in 1932 by art. 7 of Law no. 180 of that year, or, in Israel, Law no. 469 of 1953 and no. 295 of 1954 provided for the voluntary sale and termination of ṣafī on ṣafī al-wakf. The owner of the rakaba (the ṣafī) was to receive three-fifths of the price paid and the holder of the ḥikr the rest. Apparently these laws were not effective, and in 1960 a new law
tendencies and desires and to conform to the obligations of Islam. This poem enjoyed a very great vogue in Morocco.

**HINN**, an inferior species of *djīm* [q.v.]. Mas'ūdī (*Mīrāgy, iv = § 1340) states that many people believe that the Hinn are a sub-species of the *djīm* who are of a weaker and lower kind, but condemn the belief in them as a delusion. Belief in the Hinn, is, however, accepted by the Druzes [see H. Guits, *Théogonie des Druses*, Paris 1863, n. 78, p. 106; Tākīm Qābāl Lyūnt (Leeds Arab. Ms. 179, fol. 14b); C.F. Seybold, *H. Guys, Paris 1863, n. 78, p. Theogonie des Druses*, cfrinn position of supreme leadership had passed to his *iyya* Mahmudiyya (Buhayra province) led by Ahmad al-...in Egypt. (F. De Jong)

**HIYAL** (A.), with the basic meaning of "devices, subterfuges", has had its sense considerably extended, and in particular, denotes in Classical Arabic ingenio...n machinery, and finally, the science of mechanisms. Since the article *Hiyal* in Vol. III deals mainly with legal fictions and ruses and with casuistic processes, the present article is especially concerned with automata, with the Arabic works describing them and with the tradition of which they are the most remarkable expression.

The medical Arabic books on machines are often called "automata treatises" by modern writers, but the designation is somewhat misleading. The books deal with *hiyal* [q.v.], which in one of its senses denotes mechanical contrivances and covers a much wider field than that of automata. The descriptions in the treatises, supplemented by references in histories and by archaeological evidence, enables us to list the following constructions: water-clocks and candle-clocks; trick vessels and liquid dispensers, measuring devices; fountains, lamps; water-raising machines; musical automata; locks. According to Abu Abd Allah Aḥmad ibn Muhammad al-Khārazmī, who compiled his scientific encyclopedia *Maqāmāt al-ṣālim towards the end of the 4th/10th century, trebuchets (mangani) are also *hiyal* (ed. van Vloten, Leiden 1895, 247). The word therefore means virtually any mechanical contrivance from small toys to large machines. *Hiyal* may indeed be automata, as in the case of trick vessels; they may display a variety of automata, for instance on the monumental water-clocks; or the automatic element may be completely lacking. The closest Arabic word for automaton is in fact simply "movement" (harakāt), which is used frequently by the writers, e.g. al-Dījarī, [q.v. above] and Ibn al-Nadīm (*Fihrist*, 307). Often a variety of *harakāt* is described for the more complex devices, and the craftsman is instructed to select those that suit his tastes and purposes. The concern of this article is mainly with the contrivances that incorporated automatic effect.

Several treatises composed in Arabic are known to us, including: *kišāb al-Hiyal* by the Banu Mūsa, written in BaghdaS, ca. 236/850 (Hausen; Wiedemann and Hauser - W.H. 1); *kišāb al-ṣālīt wa 'l-ṣalam biḥāl* by Ridwān, written in 600/1203, describing the repairs of a monumental water-clock built by his father Muhammad al-Sā'īf in Damascus ca.
The clocks in the Ottoman Empire in the sixteenth century... an examination of photographs of... it cannot be established with certainty, may prove to be... Apart is from the treatises themselves, there are other attestations to support the existence of a thriving tradition of machine technology in medieval Islam. Al-Dżazari mentions a candle-clock built by a certain Yûnûs al-Asîrî (Hill 1, 87) and a musical automaton constructed by Hibat Allah b. al-Husayn (Hill 1, 170), otherwise known to us as an astrologist (Suter, 117). There are also references to be found in the works of geographers and historians concerning mechanical devices which they had seen: for instance, the striking water-clock with automata presented to Charlemagne by vassals of Harûn al-Rašîd (Eginhard, Annales Francorum in Monmenta German. Script. i, 194), and the silver tree... it now seems certain that there was a tradition of mechanical engineering, more practical than that represented by the known works of Philo and Hero, had spread throughout the eastern Mediterranean and western Asia. Monumental water-clocks, for instance, had been built in Syria in Byzantine times (H. Diels, Über die von Prokop beschriebene Uhr von Gaza, in 4th, Philos. Akad. Wiss. Phil.-Hist. Klasse [1917], No. 7). According to Ridwân (W.H. 2, 179-80), this tradition was continued in Damascus in the Umayyad period and remained unbroken up to the time of his father. Ridwân, in the same passage, also mentions a two-way transmission of ideas between Byzantium and Sâsânîd Iran. It is indeed highly probable that mechanism technology developed in Iran in the Sâsânîd period and continued into Islamic times from the Banû Mûsâ onwards many of the techniques that had been used were of Persian origin. Nor can a similar interchange between Iran and India be left out of account.

Activity also continued in Byzantium. A treatise on a complicated musical automaton, probably written in Byzantium in the 1st/7th or 2nd/8th century, was described by al-Dżazari (Hill 1-170), see E. Wiedemann, Aufsätze zur arabischen Wissenschaftsgeschichte, Hildesheim 1970, ii, 50. Three Arabic versions of this treatise, ascribed to a certain Apollonius, are extant. A most important work, attributed to Archimedes, and describing the construction of a water-clock, exists in several Arabic ms. Both Ridwân and al-Dżazari acknowledge that the basic water-machinery of their monumental clocks was derived from the "Archimedes" treatise (Hill 2, W.H. 3). The origins of this work are still somewhat obscure. It may have contained basic ideas from Archimedes, developed by Philo, with later accretions from Byzantine and Islamic writers. Indeed, this treatise exemplifies the problems that arise when we try to identify the various cultural elements in the Arabic "translations". The "Philonic" corpus, to cite another example, has been transmitted in Latin versions, a Greek fragment, and a late Arabic version. The last-named certainly includes later Hellenistic and Islamic additions, and it is difficult to isolate Philo's own contributions.

For the present, we can make the following hypotheses for the origins and development of Islamic mechanical technology: (1) At the time of the Islamic conquests, there was an established tradition for the manufacture of water-clocks and other mechanical devices in an area that stretched from the eastern Mediterranean to India. Chinese influence cannot be excluded. This tradition was recorded not only in documentary form, but in the experience of craftsmen, and in the existence of earlier constructions. (2) This tradition was continued in Islam, but no results were committed to writing before the Banû Mûsâ in the 3rd/9th century. The Banû Mûsâ drew upon translations from Greek treatises, and from the experience of craftsmen, adding many refinements of their own. (3) Later writers, such as al-Dżazari, were able to exercise an eclectic judgement, using elements from Greek works and from the established Islamic corpus as they saw fit. Because al-Dżazari in...
particular was a fine engineer, he made significant improvements on the work of his predecessors. It was essentially practical engineering, and the Islamic writers derived much of their knowledge from the works of other craftsmen—astro-labists, millwrights, irrigation specialists, metalworkers, jewelers, and the makers of articles for domestic use and ornament.

Islamic mechanical engineering was based upon a sophisticated, if empirical, use of the principles of aero-nautics, hydrostatics and mechanics. Their materials included timber, sheet brass and copper, cast bronze, iron (for small components, nails and axles), iron and copper wire, rope and string. From these they fashioned the devices and mechanisms to produce the desired effects: vessels of various shapes, figures of men and animals, tanks, air-vessels, bent-tube and concentric siphons, pulleys, tipping-buckets, axles and bearings, pipes, conical valves, taps with multiple borings, gears, and special mechanisms designed for individual machines. Orifices, graduated for a given flow, were made from pieces of onyx.

Eighty-five of the Banu Musa's one hundred devices, and about twenty of al-Dżazarî's fifty, are trick vessels of various kinds. They demonstrate a bewildering variety of effects. For example, wine and water were poured into a jar and issued in succession from the same tap; a pitcher would not accept any more liquid once inpouring was interrupted; several liquids could be withdrawn separately from the same tap; when tilted, a pitcher could be allowed to discharge or not, according to the wish of the pourer (to prevent discharge he covered a concealed air-hole with his finger). These effects were obtained by using a repertoire of about ten basic motifs, together with components designed for individual machines. These components were assembled inside the main container, often with great ingenuity. In all the cases, the vessel itself was the automaton, and the visible effect was the discharge of liquid. The fountains described by the Banu Musa and al-Dżazarî, in which the discharge changes shape at regular intervals, are essentially large versions of the trick vessels, but with a much greater aesthetic content.

Undoubtedly, the large water-clocks are the most important constructions of the Islamic engineers, for the engineering skills that went into their manufacture, for their beauty, and for their relevance to the history of mechanical engineering. Two of al-Dżazarî's clocks (category I, 3, 4) are operated by a submersible float, the tarғgiḥār, a bowl with a graduated orifice in its underside that submerges in a given period. The tarғgiḥār is an ancient device for measuring time, but these clocks are the only instance we know of in which the tarғgiḥār is incorporated in working machinery. They have the additional feature in that some of the automata are not simply for display, but also form an essential part of the operational cycle. The standard type of monumental clock, however, is exemplified by the first two described by al-Dżazarî, and by the clock constructed by Muhammad al-Sāūṭî. Apart from its use of masonry for its casing, al-Sāūṭî's clock is very similar to al-Dżazarî's monumental clock (category I, ch. 1), which may be taken to exemplify this type of timepiece. This clock was reconstructed in the Science Museum, London, for the 1976 World of Islam Festival; it is quite beautiful, and works perfectly. The display screen is about 3.50 metres by 1.60 metres in width. At the bottom of the machine are the figures of five musicians—two trumpeters, two drummers and a cymbalist—who perform at the sixth, ninth and twelfth hours. Above these figures is a semicircle of glass roundels, at the side of which are the figures of brass falcons. Above the apex of the semicircle are two rows of twelve doors each, in front of which a small representation of the moon moves at a steady speed. The clock operates on "solar" or "temporal" hours, obtained by dividing the hours of daylight by twelve. Every hour one upper door opens to reveal a standing figure, one lower door revolves to show a different colour, each of the falcons drops a bronze ball from its beak on to a cymbal, and one of the glass roundels becomes fully illuminated. The clock is crowned with a Zodiac circle, painted with the appropriate signs, and having glass discs representing the sun and moon set to their correct positions in the Zodiac. The circle rotates at a constant speed throughout the day. All the automata, except the musicians, are operated by the steady sinking of a heavy float in a cylindrical reservoir—a string from the top of the float passes through a pulley system to the actuating mechanisms. The outflow from the reservoir is kept constant by a sophisticated system of feed-back control and flow-regulation. The musicians are made to perform by the sudden release of the outlet water, which is collected in a special tank.

T domastic device for measuring time, but these clocks are the only instance we know of in which the tarğgiḥār is incorporated in working machinery. They have the additional feature in that some of the automata are not simply for display, but also form an essential part of the operational cycle. The standard type of monumental clock, however, is exemplified by the first two described by al-Dżazarî, and by the clock constructed by Muhammad al-Sāūṭî. Apart from its use of masonry for its casing, al-Sāūṭî's clock is very similar to al-Dżazarî's monumental clock (category I, ch. 1), which may be taken to exemplify this type of timepiece. This clock was reconstructed in the Science Museum, London, for the 1976 World of Islam Festival; it is quite beautiful, and works perfectly. The display screen is about 3.50 metres by 1.60 metres in width. At the bottom of the machine are the figures of five musicians—two trumpeters, two drummers and a cymbalist—who perform at the sixth, ninth and twelfth hours. Above these figures is a semicircle of glass roundels, at the side of which are the figures of brass falcons. Above the apex of the semicircle are two rows of twelve doors each, in front of which a small representation of the moon moves at a steady speed. The clock operates on "solar" or "temporal" hours, obtained by dividing the hours of daylight by twelve. Every hour one upper door opens to reveal a standing figure, one lower door revolves to show a different colour, each of the falcons drops a bronze ball from its beak on to a cymbal, and one of the glass roundels becomes fully illuminated. The clock is crowned with a Zodiac circle, painted with the appropriate signs, and having glass discs representing the sun and moon set to their correct positions in the Zodiac. The circle rotates at a constant speed throughout the day. All the automata, except the musicians, are operated by the steady sinking of a heavy float in a cylindrical reservoir—a string from the top of the float passes through a pulley system to the actuating mechanisms. The outflow from the reservoir is kept constant by a sophisticated system of feed-back control and flow-regulation. The musicians are made to perform by the sudden release of the outlet water, which is collected in a special tank. Taken as a whole, one may distinguish the work of the Islamic engineers from that of their predecessors by their greater pre-occupation with automatic control. For example, their confident use of conical valves in flow systems, the use of a crank in a machine, segmental gears, etc. They also used manufacturing techniques that were unknown in earlier times, notably the use of closed mould-boxes with green sand for casting metals. Many of the components and techniques of this identifiably Islamic engineering were later incorporated into European machine technology, but we have as yet little certain knowledge of how and when the transmission took place. As far as we know, none of the Arabic machine treatises was translated into a European language before modern times, but the dissemination of engineering ideas and practices has always been fairly rapid and, until recently, without documentary assistance. Traveller's reports, contacts between craftsmen, and inspection by craftsmen of machines built by their predecessors, were the usual means for the transmission of mechanical knowledge. Al-Dżazarî, for instance, mentions several gadgets that he had inspected machines made by earlier craftsmen, or that their constructions had been described to him (Hill 1-83, 170, 199). It seems likely that the passage of information occurred at different times and places, although the designs may not have been put to immediate use, but have lain dormant until their usefulness became apparent to later generations of engineers. It seems probable, however, that the most important transmission took place in the Iberian peninsula towards the close of the 6th/12th century, with the adoption by Christian Spain of Islamic ideas, particularly the monumental water-clock, which itself incorporated most of the techniques and components used by Islamic engineers. The large clocks of al-Sāūṭî and al-Dżazarî do not incorporate gears in their main operating mechanisms, but the "Archimedes" clock and the clocks in the "Ibn Mu'āḍî" treatise do so. These clocks are the direct ancestors of the mechanical clock; if one replaces the steadily descending float with an escapement-controlled weight, then the mechanical clock, with its driving mechanisms, and automata, does not differ essentially from its predecessor. The mechanical clock exercised a potent influence upon the development of machine
technology, and the waterclock is therefore directly relevant to this development. Islamic components and techniques were also incorporated into European engineering from the 7th/13th century onwards and were an important element in the establishment of modern machine design, particularly in the fields of del-
cicate mechanisms and control systems.

There were less tangible influences of the Islamic automata tradition. Culturally, they are related to the “live” puppets of western literature and folklore, such as Pinocchio and the doll Olympia in one of the Tales of Hoffman. The cultivation of aesthetic delight, exemplified by the fountains of the Banū Mūsā and al-Dījāzārī, was continued in Europe by men such as Tomaso da Siena, who created the water gardens at the Villa d’Este and Bagnaia. More importantly, the representation of cosmological and biological phe-
nomena was one of the factors that led men to adopt a rationalistic, mechanistic view of the universe, an attitude that has been immensely fruitful in the develop-
ment of modern science.

Bibliography: (in addition to works mentioned in
the text): There are as yet no Arabic editions of any
of the ḥiyāl treatises and one must therefore have recourse to translations. (An edition of al-Dījāzārī’s treatises is however being
heded by A.Y. Hasan and will be published by Aleppo University.) (In the works cited the location of the Arabic ms. is given.) Descriptions of thirteen of the Banū Mūsā devices, with illustrations and notes are given by E. Wiedemann and F. Hauser in Über Trinkgärten und Tafelhäuser, in Ist., viii (1918), 268-91 (W.H. 1); the remainder are dealt with by Hauser in Über das Ḥiyāl—das Werk über die sinnsamen Anordnungen der Banū Mūsā, in Akademie der Künste (Zur, 1915), 274-92 (W.H. 2). Two translations of the pseudo-Archimedes are available, both with notes and illustrations: Wiedemann and Hauser, Uhr des Archimedes and zwei andere Vorrichtungen, in Novi Acta, cxxviii, No. 2, 374-202 (W.H. 3); D.R. Hill, On the construction of water-
clocks, London 1976 (Hill 2). For the Arabic version of Hero’s Mechanica and Philo’s Pneumatics, there are edited Arabic texts with French translations, both by Carra de Vaux: Les mécaniques ou l’élévateur
de Hero d’Alexandrie sur la version arabe de Qustā ibn Lūqā, in Jf., 9e Série, (1939), i, 366-472; ii, 152-92, 193-269, 420-514; and Le livre des appareils
pneumatiques et des machines hydrauliques par Philon de Byzance, in Académie des Sciences et Belles Lettres, xxxviii (1903), Pt. 1. A recent work on Philo is F.D. Prager, Philo of Byzantium, in Pneumatica, Wiesbaden 1974; there is useful dis-
cussion of the Latin and Greek versions, but the Arabic section is inadequate, and inferior in every way to Carra de Vaux’s edition. For Hero’s pneu-
anism and mechanistic philosophy, in Technology and Culture, v/1 (1964), 9-23. On the influence of the Greek tradition, there is a valuable survey by Price in Gears from the Greeks, Science History Publications, New York 1973, 51-62. The Indian tradition of mechanical devices and its connections with Greek and Islamic ideas is described by V. Raghaven in V tantras or mechanical contrivances in Ancient India, in The Indian Institute of Culture, Basavangudi, Bangalore, Transaction No. 10 (1952) 1-31. The index to J. Needham’s Science and civilisation in China, iv/1, Cambridge 1965, should be consulted for transmission from and into China, particularly the entries under “Automata”, “Clocks”, “Clock-work” and “Water-power”. (D.R. Hill)

HOESEIN DJAJADININGRAT. Pangeran Aria, Muslim scholar and Indonesian statesman, historian and linguist (1886-1960).

Born at Kramat Watu, the chief town of a sub-
district in the residence Bantam (Banten) in West Java, where his father was a government official, he sprang from an old prominent family which was related to the former Sultans of Bantam [see indones-
ia, iv]. In his early youth, Hoesein’s historical inter-
est must have been evoked by reminiscences of the period of its conversion to Islam. Back in
the village there are people who have performed the pilgrimage to Mecca at least once. At an early stage Hoesein was destined for a European education and academic career by his progressive father, who had been promoted to be Regent of Serang. After previ-
ous training in Batavia and at the gymnasium in
Leiden, Hoesein was matriculated into Leiden Uni-
versity in 1905 as the first Indonesian student of
the section “Languages and Literatures of the
East-Indian Archipelago”. He read Sanskrit with J.S. Speyer, and Arabic, first with M.J. de Goeje and, from 1906 onwards, with the latter’s successor C. Snouck Hurgronje. When a prize was offered for the best essay on data preserved in Malay works concerning the history of the sultanate of Atjeh, he was distinguished with a golden medal of honour. In 1913 he received his Ph.D. degree for the thesis Crítica beschrijving van de Sagahant Banten (“Critical exam-
ination of the Sajarah Banten”), a Javanese chronicle dealing with the history of Banten, but containing also traditions concerning the earlier history of Java and the period of its conversion to Islam. Back in
Indonesia, Hoesein was appointed to the academic function of “official for the study of Indian (i.e. Indonesian) languages” and commissioned to devote himself to the Arabic language. At the beginning of 1914 he went to Atjeh and, after his return to
Batavia by mid-1915, continued his studies with the aid of the material collected, the extensive Achinese literature preserved in manuscript, and with the assistance of Achinese informants. His Afgedr.-Neders.-Nederlandst. Woordenboek ("Achinese-Dutch Dictionary") was published in two volumes in 1934.

Being the only Indonesian Ph.D., he several times had to sit on various official committees, and in 1916 he was appointed as assistant to the then governmental commissioner for Native Affairs, G.A.J. Hazeu, and as such he was mainly in charge of Islamic affairs. From 1920 till 1924 he was Assistant-Adviser for Native Affairs to the Government, and then received an appointment as a professor at the University of Law, newly-erected in Batavia, where he taught Muslim Law and Indonesian languages. From this period date a number of articles on Indonesian languages and literature, Islamic and Indonesian history; as monographs were published: De Mohammediantsche wet en het geestesleven der Indonesische Mohammedanen ("Muslim law and spiritual life of the Indonesian Muslims") (1925), and: De magische achtergrond van de Malese pootsm ("The magical background of the Malay pantun") (1933).

Henceforward he turned his attention to statesmanship; when, in 1935, he became a member of the Council of Dutch East India, the highest government committee. As such, he had a great part in the reform of religious Muslim judicial administration in Java, which led to such institutions as the panghulu-courts (religious courts) and in 1938, to the Court of Islamic Affairs (the higher religious court) at Batavia. While Hoesein was holding for one year the office of Director of the Department of Education and Worship, the first Indonesian Faculty of Letters was opened (4 December 1940). During the war (1942-5) and the first disturbed years afterwards, he mostly remained inactive, reading and studying (his membership of the Council of Dutch East India ended in 1946). When in 1948 the provisional Federal Government was formed, he became Secretary of State for Education, Arts and Sciences. As such, he was present at the Round Table-Conference at the Hague in 1949. When the Republic of Indonesia became independent on 27 December 1949, Hoesein lost his office, but his scholarly qualities were recognised in 1951, when he was invited to take the Chair of Arabic and Islamology at the University of Indonesia in Jakarta (formerly Batavia). Now over seventy, he was free to teach the subject of his preference; he chose the history of Indonesia’s conversion to Islam. He published some more articles and wrote the chapter on “Islam in Indonesia” in Kenneth W. Morgan, Islam—the Straight Path. Islam interpreted by Muslims (New York 1958), in which are treated the origin of Islam in Indonesia, religious education, the actual situation of Islam in Indonesia, arranged according to the concepts dhari’a, dogma, Sufism and reform, and finally a characterisation of Indonesian Islam.

He died in 1960.

A Javanese aristocrat by origin and through his marriage to a daughter of the Javanese royal house of Mangkunagara, and the first Indonesian to devote himself to the study of Islam after a Western academic education. Hoesein Djadjadiningrat remained a devout Muslim throughout his life and as such enjoyed the confidence of his co-religionists. Through his uprightness and justice he was held in reverence by Indonesians, Arabs and Dutch alike.

**Bibliography:** given in the article. A list of Hoesein’s writings, compiled by Atja, has been published in Batasab dan Budaya, vii/5-6 (1960).

**HUBAYSH** b. AL-HASAN AL-DIMASHKI, sur-named al-‘Asym “the one with the withered limbs”, translator of Greek medicinal writings into Arabic. He was a Christian and a nephew of the master-translator Hunayn ibn Isāḥak [q.v.], who esteemed him highly as a collaborator and considered him very talented but not particularly assiduous. The quality of his translations was so high that they were held often for Hunayn’s work; because of the similarity of the consonant dactyls, uncritical users are even said to have been of the opinion that the name Hubaysh— the real translator—should be changed into Hunayn. His dates are not known; he may have lived at the ‘Abbasid court towards the end of the 3rd/9th century, He belonged to those prominent translators who had been awarded by the Ba`rû-‘Allamidjîdam a fixed monthly salary of ca. 500 dinars (Filast, ed. Flügel, 213, 18-20).

Hubaysh had only a very scant knowledge of Greek, or none at all; with the exception of the Hippocratic oath and the herb-book of Dioscorides, he translated Galen’s works exclusively, 35 of them from Arabic into Syriac, and three from Syriac into Arabic (cf. Hunain ibn Isâḥak über die syrischen und arabischen Galen-Ubersetzungen, ed. and tr. G. Bergsträsser, AkAd, xvii/2, Leipzig 1925, index, 45). His language is that “of a scholar who aims only at clearness, who is little trained linguistically and does not care much for linguistic beauty, but on the other hand sets himself to some kind of correctness” (G. Bergsträsser, Hunain ibn Isâḥak und seine Schule, Leiden 1913, 41). On the basis of the then known translations, Bergsträsser (ibid., 20-46) classified the linguistic peculiarities of Hubaysh; additions are given by M. Meyerhoef and J. Schacht, Galen über die medizinischen Namens, in Abb. Preuss. Akad. Wiss., Phil.-hist. Kl., Berlin 1931, 4-7. In view of the tight relation between teacher and pupil, the many similarities in language of Hunayn and Hubaysh are not surprising.

Besides the translated works, Hubaysh is also the author of original writings. They are completely based on his knowledge of Greek medicine, but, as far as pharmacology is concerned, they often reach further back and prove that already in those days other sources were used or that personal observations were introduced. Mention should be made firstly of his additions (zīyā‘at) to Hunayn’s Kitāb al-Masā’il ‘alīl-‘ibhîyya; which became extraordinarily widely diffused, cf. A. Dietrich, Medicinalia arabica, Gottingen 1966, 39-44; this enlarged edition became a standard work which was to occupy quite a number of commentators and epistemologists. Other works of Hubaysh preserved in manuscript are: (1) Kitāb al-Masā’il ‘alīl-‘ibhîyya (3: K. fi ‘l-‘Inda); and (4) Makhtu’il-‘ibhîyya, Only from quotations are known: (5) K. al-Adaw’iyah al-mu‘afifah (often cited by Ibn al-Baytr); (6) Ta’ârif awmâd al-‘ayn, quoted in Khulafa’s al-kâfî fi ‘l-khul (see J. Hirschberg, etc. in Anhang der Abb. Preuss. Akad.
Wiss., Berlin 1905, 13, 20 f., and idem, Der arabischen Augenärzte, ii, Leipzig 1905, 158; and (7) a dispensatorium (akūrādābhīn), possibly composed not by Hushaybī but by Hunayn.

(A. Dietrich)

**HUDAYFA** b. 'AΔBD b. FURAYM b. 'ADĪ b. SC' AL-KALAMAKI

**HUDDĪD AL-ʿALĀM**, “The limits of the world”, the title of a concise but very important anonymous Persian geography of the world, Islamic and non-Islamic, composed towards the end of the 4th/10th century in Guzgān [guzgangan] in what is now northern Afghanistan. The work exists in a unique manuscript of the 7th/13th century (the “Toumansi manuscript”) which came to light in Būkhārā in 1892. The Persian text was first edited and published by W. Barthold at Leningrad in 1930 as Ḥudūd al-ʿalām, rubābūt Ṭaμamšūj, with an important preface (this last reprinted in his Šemārīn, vii, 504-46; an English tr. of this was included by Minorsky in his translation—A. DIETRICH

... and prospered, even during the long cAbd al-Wadids-

... of Ibn Khurradadhbih [q.v] and, apparently, ‘Abd Allāh Muḥammad al-Ḍiyāḥīn [see al-ḌAYHĀN], above, except for the immediate region of his home in northern Afghanistan. Its archaic language and style are interesting pieces of evidence for early Persian prose, cf. G. Lazard, La langue des plus anciens monuments de la prose persane, Paris 1963, 53-4. Original features of the author’s approach are his concern for exact enumeration of physical features (the seven seas, rivers, lakes, islands, etc.) of the inhabited world; his division of this last into three main parts, Asia, Europe and “Lībya” (= Africa); his enumeration of 45 distinct countries (nāḥyāt) lying to the north of the equator; and the unusually large proportion of space allotted to the non-Islamic lands, even though the Muslim ones, surveyed roughly from east to west, naturally occupy the greater part of the work. The information on the local topography of Afghanistan is probably first-hand, with special emphasis on Guzgān, Gharḵistan, Ghūr, etc.; the material on the Eurasian and Turkish steppes and their peoples is likewise very significant. Finally, the author furnishes useful details about local products and trade movements.

Miquel, La géographie humaine du monde musulman jusqu’au milieu du XIe siècle, Paris 1967, xxxiii, 398-9; see also ĪKHRĀYĪ, iv, c, i.

(C.E. Bosworth)

**HUNAYN**, site of a mediaeval seaport in western Algeria, not far west of Beni-Saf (B. Sīf) and, as the crow flies, about 45 km. N. W. of Tlemcen. Within a walled area (4,100 sq. m.) are ruins of a kasba and traces of a mosque’s, and possibly also a hammām’s, foundations. On dry land below the kasba lie the remains of a rectangular interior dock (4,250 sq. m.), once protected by rampart and towers and entered, seemingly via a channel, by a large arch of carved stone of the kind characteristic of certain parts of Muslim Spain. Most of what remains is in the Marinid architectural tradition and thought attributable to the sultan Abu l-Ḥasan.

Words like Ibn Abī Zarr, Rased al-kirts must not be taken as implying the existence of Hunayn as the port of Tlemcen in 237/851-2. Hunayn finds no place in Ibn Hawkāls 4th/10th century description of the Oran-Melila coast, but it was known to al-Bakrī in the 5th/11th century as a fortress (ḥiṣn) with a good and busy anchorage. Inhabited by Kūmūyā Berbers, it had more orchards and varieties of fruit than any neighbouring coastal hill. A century later al-Idrīsī’s description is “a charming and prosperous small town with solid wall, market and truce.” Extra maris, large tracts of land were farmed. Under the Almohads its importance grew, for not only was ‘Abd al-Muʿmin [q.v] from the Kūmūya, but he also championed the ḏjihād in Spain. And so he made Hunayn—only two days’ sailing away from Alberia—a naval shipyard. Thereafter it gradually emerged as the new port of Tlemcen, wholly ousting Arghālī, the old. In the 7th/13th century Tlemcen became the capital of the ʿAbd al-Wādīds [q.v] and a great commercial metropolis. As the northern terminal of the major trans-Saharan trade axis running from sub-Saharan Africa, it was ideally placed for exchanges with Mediterranean Europe. In its brisk trade with Christian and Muslim Spain and elsewhere, Hunayn played a major role and prospered, even during the long ʿAbd al-Wādīd-
Marinid struggle. In 698/1298 it wisely submitted to the Marinid Abu Ya’kub and emerged unscathed when his eight-year siege of Temcen ended with his death in 1307. In 736/1335-6 it again fell into Marinid hands, this time for ten years under Abu l-Hasan, and then to a Kumiyya rebel from whom the ‘Abd al-Malik Abu Tahf recovered it in 1349. It was at Hunayn that Ibn Khaldūn was arrested by Marinids in 1370 and to Hunayn that he was deported from Spain in 1374.

After the Spanish seizure of Oran in 1509, Venetian trade was diverted thence to Hunayn. Around the same time the port became a haven for corsairs, a fact which eventually led to its seizure in 1531 by the Spaniards, who chose, however, to abandon it in 1534, presumably after rendering the port unserviceable. Hunayn never regained its old prosperity.

(J.D. Latham)

**AL-HUSAYMA**

AL-HUSAYMA is the name which, since the independence of Morocco in 1956, has been given to a bay and small archipelago on the coast of the Rif between the Cape of Quilates on the East and the More headland to the West. It is known also by the Arabised form of the Hispano-Arabic word. Others, like the author of the voluminous encyclopaedia *Espasa-Calpe*, say that the name Alhucema is a corruption of al-Mazimma, but this suggestion needs further discussion, see below.

The largest islet of the archipelago, which is 170 m. long and 75 m. broad, is about 1300 m. from the coast; it was ceded with the others to Spain in about 1554 by the Sa’did Mawlay ‘Abd Allāh [q.v.]. This was to prevent the Turks, who had temporarily taken the Peñón de Velez from Spain, from seizing the islets which Spain did not consider it necessary to follow up this action by even a symbolic occupation of these strategic islands. The affair was conducted so well that France was not aware of the cession, and in 1665, a French commercial company, which was intent on exploiting the possibilities of the coast of the Rif, decided to set up an establishment in the bay of Nukūr under the name of the Compagnie d’Alhouszeme. In contemporary sources sometimes the term “Alhouszeme” is used, but otherwise it is “Les Alhouszeme*, or variants. The first term denotes the earlier town (called in Arabic al-Mazimma) which the ‘Alawi sultan Mawlay Rashid [q.v.] was to destroy. The second term denotes the town together with its port and its islands, but the words are often interchanged. There are frequent references to the name al-Mazimma in ancient and modern texts, especially in the Description of Africa of Leo Africanus, who devotes an interesting chapter to it.

But when was the town founded? Al-Badisi, writing at the end of the 19th century, in his *Magdad*, speaks of ramparts with gates overshadowed by a rock. At the beginning of the 20th century, René Leclerc noted the existence of a village on the side of a hill amongst several ruins; this was probably Nukūr, and al-Mazimma seems to have been the port associated with it. Wherever the town and the port may have been exactly, it was Cardinal Mazarin who first planned to set up a commercial establishment “on the islands of Alhouszeme”. He went as far as appointing a consul for it, but when the cardinal died, the project was abandoned. However, the plan was not forgotten and on 4 November 1664 a decree from the French Conseil d’État authorised the creation of a company to be conducted by two brothers from Marseilles, Michel and Roland Frejus. Roland did not reach Morocco until 1666 and, although his journey across the Rif delighted him, one made in order to see Mawlay Rashid at Tāzá, it did not produce the expected results and he returned to France. The company was declared bankrupt, and was replaced by the Compagnie du Levant (on all this episode, see J. Guille, *Répertoire diplomatique*, 31).

It was not until 1673 that Spain occupied these islands (*peñones*); on one of them, the largest, she set up a *presidio* (penitentiary) and a cemetery on another one nearby. Concerning life on this waterless archipelago, see J. Cazeneuve, *Presides españoles*, 457-507. The Peñón d’Alhucemas, like Melilla and the Peñón de Velez, was besieged by the troops of Muhammad the Great in December 1774. The Spanish resisted the bombardments bravely, and on 19 March 1775, the siege was lifted. It was also in the bay of Alhucemas that Spanish troops disembarked on 8 September 1925 to end the violent revolt of ‘Abd al-Karim [q.v.] whose headquarters were at Aadjdir, 8 kms. away.

The archipelago, like the rest of the Spanish zone of the protectorate, was returned to the Moroccan authorities after Morocco regained her independence. The new provincial capital, al-Husayma (pop. 5,000) is a young modern city, aiming at becoming a prosperous tourist centre and seaside resort.

(H. DEVERDUN)

**HUSBAYN B. 'ALÎ B. HANZALA** [see 'ALî B. HANZALA, above].

**HUSBAYN DIJADININGRAD** [see HOSEIN DIAJADININGRAD, above].

**HUSBAYN, ŞADR AL-DIN ABU 'L-HASAN 'ALÎ B. NASR B. 'ALÎ, author of the late Saldûks period and early decades of the 7th/13th century, whose work is known to us through its incorporation within an anonymous history of the Saldûks and succeeding Atabegs of Adîbarbâyjân, the Akhbar al-Dawla al-saldûkiyya (ed. Muhammad Iqbal, Lahore 1933; Tksh. tr. Necati Lugal, Ankara 1943; cf. Brockelmann, F. 392, Suppl. i, 535-3). Al-Husayn apparently composed the *Zubdat al-tawârikh, akhba al-unmarî* ya 'l-mulûk at-saldûkiyya, which forms the first part of the longer, anonymous work. The *Zubdat* was in turn based on the history of the Saldûks by *Imâm al-Dîn al-Kâdhî al-Ifshâhî* [q.v.], continued up to 590/1193-4, the date of the death of the last Great Saldûk sultan, Toghrîl III. The author of the *Akhbâr al-dawla al-saldûkiyya* then continued his own work with the history of the Atabegs of Adîbarbâyjân, either up to 620/1223-4 or 622/1225-6, the latter being the date of the deaths of the caliph al-Nâsîr [q.v.] and of Özbez b. Pahlâwân [see IDENÎZ].

It seems that al-Husaynî's name became attached to the *Akhbâr* through a copyist's mistake, the real author being, in Hartmann's view, an official in the administration at Baghdad. As for al-Husaynî, he remains an enigmatic figure; he was apparently an 'Alîid, and may conceivably be identical with the "al-Şadr al-Âgâlî, Şadr al-Mîlâ 'l-Dîn" of Nîghăpîr, historian and poet, whom 'Awfî [q.v.] mentions and knew personally in the early 7th/13th century, see his *Lubâb al-âhâb*, ed. Sa'id Naftî, Tehran 1335/1956, 125-7.

**HUT** [see SUKNA].

**HYDROMANCY** [see ISTINÇAL].

---

**IATROMANCY** [see FİRAŞA, İSTEBHARA]

**IBDÂD KHÂNA**, literally "House of Worship", the name of the chamber or building where religious discussions among theologians were held under the patronage of the Mughal Emperor Akbar. It was constructed by Akbar at Fâthpîr Sikrî [q.v.] the seat of his court, in 983/1575. He was then interested in finding a common interpretation of Muslim law, and invited Muslim jurists and theologians to hold discussions with a view to resolving their disputes; he was himself present at many of these. It was discovered, during the course of discussions, that Muslim orthodoxy was divided not only on the fine points of law but also on basic principles. Akbar's subsequent disenchantment with Muslim orthodoxy was ascribed by Badà'ûnî to the effects of the open and bitter theological disputes of the *Ibâdat Khâna*. Akbar then enlarged the scope of the debate by inviting non-Muslim divines to discussions in the *Ibâdat Khâna*, and Hindus, Christians and Parsees could now explain articles of their faith and engage in controversy with Muslim divines. The *Dabûsîn-i nadjîhâb* contains an interesting record of these discussions among representatives of various religions.

With the mahdâr of 987/1579, when Muslim theologians set forth high claims for Akbar as an interpreter and enforcer of Muslim law, the *Ibâdat Khâna* sessions seem to have ended. The *mahdâr* did not win much support among Muslims; and Akbar himself began to hold larger religious views. Moreover, he left Fâthpîr Sikrî soon afterwards, and his sessions with such religious divines as appeared at his court were held elsewhere.

The actual building of the *Ibâdat Khâna* at Fâthpîr Sikrî has not been properly identified.

(M.ATHAR ALI)

IBDÂDIYYA or ABJâDIYYA (pl. abâ'dî’d) was the term used in 19th century Egypt for land surveyed in 1813 under Muhammad `Alî, but not included in the cadaster and not taxed because it was uncultivated. These lands extended over an area of 0.75 to 1.0 million fedâns (a fedân amounted, at the end of Muhammad `Alî’s rule, to 4,416.5 square metres). To increase the country’s wealth it made free grants of ibdâdiyya to high officials and notables, exempting them from taxes on condition that they improved the land and prepared it for cultivation. The first relevant decree was issued on 1 December 1829, after which grants rapidly increased. At first recipients only enjoyed usufructuary rights, but in order to encourage investment, Muhammad `Alî was compelled in 1836 to decree these lands as being inheritable by eldest sons and, on 16 January 1842, to grant almost complete property rights to these lands. Clause 25 of his 1858 Land Law explicitly stated that they were “the full property owner”.

To settle (mustâ’man) law did not allow strangers (musta’tib), who needed money to implement the experiment did not always meet with success, and many Bedouins farmed the land out to wâ’il or to bequeath them in their wills. A major expansion in grants of ibâdiyya land after Muhammad `Alî’s rule occurred under Ismâ’il, from 1863 to 1876, mainly in the northern part of the Delta. After that grants of ibdâdiyya discontinued. Cultivation on ibdâdiyya lands were exempted from the cove’s, i.e. forced labour for public works, such as strengthening dikes and for fighting locusts. This attracted the fellahs of neighbouring lands, thus enriching even more the notables owning ibdâdiyyas and encouraging differentiation in landownership.

In Fayûm, ibdâdiyya lands were granted to Western Desert Bedouin tribes in order to encourage their settlement. In contrast to other abâ’dî’d, the tribes did not receive legal title to their land, but gained exemption from taxes, forced labour, and conscription, by cultivating it. The experiment did not always meet with success, and many Bedouins farmed the land out to fellahs for half the yield. Decrees issued in 1837, 1846, and 1851 outlawing this practice, and many threats issued to the tribes that they would lose their ibdâdiyya, were not implemented. Sa’dî turned Bedouin abâ’dî’d into khandâjiyya (not ‘abjâdiyya) land and thus refrained from granting the Bedouin full private ownership. Full ownership was achieved by Bedouin owners of abâ’dî’d together with other owners of khandâjiyya land, at the end of the century.

Ibdâdiyyas were also freely granted by Muhammad `Alî to foreign subjects, although Muslim law did not allow strangers (musta’tib) to settle permanently in a Muslim country and thus debarred them from acquiring landed property without becoming dhimmis. Problems arising from foreigners owning land under the Capitulations [see IMTIYAZAR] were solved by Ta’âzîmat legislation and the establishment of the Mixed Courts in Egypt in 1876.

According to a statement of the Syro-Arab physician `Abd Allah b. Ubayd Allah b. Bahâshîn, given by Ibn Abî Uṣâybi’a, Ibn Abî l-ÅSÂTH originated from Fars. Having been originally an administrative official, he hurriedly left the country after his income had incurred maṣâdara, and reached Mosul in a wretched condition. There he treated with success a son of the Hamdânî Nâṣîr al-Dawla, who had been taken ill. Having thus risen to distinction, he stayed in Mosul where he had many pupils and where he died at a very advanced age, shortly after 360/970. He was considered to be an excellent specialist on Galen [see galân]; like him he had presented his knowledge in a logical and systematic way, rather than on the basis of personal observations; the statement, e.g., according to which he tested repeatedly the results of medicines, is a rather informal topos which is often found in the introductions to pharmacopoeias.

Apart from a theological work, finished in 355/966 and only known by its title (Kâfî fî ‘ilâm al-‘ibdîh), and apart from the explanation of unnamed Aristotelian works, Ibn Abî Uṣâybi’a wrote books on medicine, zoology and veterinary science, some of which have been preserved in manuscript but none of which has been published so far. There are in the first place revisions of some of Galen’s works: (1) Perî tawîn kadîm (Kâfî fî ‘ilm al-‘ibdîh), a treatise work written in Armenia in 348/960; (2) Perî nûmîm (Kâfî fî ‘ilm al-‘ibdîh), has an instructive arrangement and also of an explanation of the results of medicines, is a rather informal topos which is often found in the introductions to pharmacopoeias.

Ibn Abî Uṣâybi’a, ‘Uṣaybî, i, 245-7; Brockelmann, C., 272, S IV 422; A. Dietrich, Medicina in arabico, Göttingen 1966, 143-5;

IBN ABI DJUMA' [see KUTAYBA].

IBN ABI DJUMHUR AL-AHSÄI. Muhammad b. 'Ali b. Ibrahim b. Hasan b. Ibrahim b. Hasan al-Hagari, Imami scholar, was born in al-Ahsa ca. 837/1433-4 into a family with a scholarly tradition. He studied first in al-Ahsa with his father and later in al-Nadjaf with various scholars, among them al-Hasan b. 'Abd al-Karim al-Fattal. In 877/1472-3 he visited Karak Nuh in Syria in order to hear traditions from 'Ali b. Huwal al-Djaza'ri. After a pilgrimage to Mecca, a visit to his home country and to the shrines of the Imams in Baghdad, he travelled to Mashhad in 878/1473-4 where he stayed in the house of the Sayyid Muhsin b. Muhammad al-R vaginal al-Kummi and engaged in debates with a Sunni scholar from Harat described in an extant *Risála*. During the next two decades, he seems to have mostly been teaching in Baghdad, al-Nadjaf and al-Ahsa. He is known to have been in Mashhad in 888/1483 and, for a third visit, in 896-7/1490-2. In 893/1488 he was in al-Ahsa and, after a visit to Mecca, he taught in al-Nadjaf in 894-5/1493-4 where he completed his *K. al-Mudjli*. A commentary on al-Imam al-Kasim, known to have been in Mashhad in 888/1483 and, for a third visit, in 896-7/1490-2. In 893/1488 he was in al-Ahsa and, after a visit to Mecca, he taught in al-Nadjaf in 894-5/1493-4 where he completed his *K. al-Mudjli*. In 898-9/1493-4 he stayed in the region of Astarabad and dedicated one of his works to the Imam 'Imad al-Din. A commentary on al-Allama al-Hilli's creed *Kitab al-bah' al-sab 'al-bah' inqajar* was completed by him on 25 Dhul 1-Ka'da 904/July 1499 in Medina. The date and place of his death are unknown.

Ibn Abi Djumhur's numerous extant writings, mostly still unpublished, include treatises and books on ritual, law, legal methodology, tradition, theology, and controversy about the imamate. His fame rests, however, on his *K. al-Mudjli* or *Mudjli mir 'al-nur al-mudjli* (lith. eds. Tehran 1324 and 1329). Formally a supercommentary on his own *al-kulam* work *K. Moalok (masala) al-qafi fi 'ilm al-kalum*, it offers a theosophic synthesis of Imami scholastic theology, philosophy of the school of Ibn Siná, illuminationist thought of al-Suhrawardi and Sufism, chiefly of Ibn al-Arabi and his school. He worked his own arguments for the philosophical school of Ishaqain the Sa'wi id age to synthesise the thought of the same school traditions, though it seems to have had little direct influence on them. Later Imami opinion about Ibn Abi Djumhur was generally favourable, though some criticised his *K. al-Mudjli* as excessively Sufi in tone.

IBN AL-ADJDABI. Abu 'abd Allâh b. 'Isâ' b. Isâ'îl b. Imam al-Târâbulusi, Arab philologist from a family originally stemming from Adjdabiya (Libya); he himself lived at Tripoli, where he died at an uncertain date, probably in the first half of the 7th/11th century. Hardly anything further is known about his life, and the biographers limit themselves to emphasising the breadth of his knowledge and his contribution to the technical literature of scholars of his time. They attribute to him some eight works, whose titles show that he was interested in lexicography, metaphysics, the *awâd* [q.v.] and genealogies (he is, in particular, the author of an abridgement of the *Nasab Kunug* of Mu'âwiya al-Zubayo (q.v.). Amongst his works, *Yâkin* (*Uzâba*), i, 130, and *Baldun*, s.v. *Adjdabiya* and *al-Suyûtì* (*Burjya*, 178) preserve the titles of only two, the *Kifayat al-mutâlaffîf wa-nihayat al-mutâlaffîf* fi 'l-hujja al-arabyya and the *Kifayat al-amrâ*, and it may be that these are the only ones to have survived. The first one, a lexicographical compendium, seems to have enjoyed wide success, to judge by the number of surviving manuscripts (cf. Broekelman, i, 308, S I, 541); it was even put into verse and several editions of it have appeared (in particular, Cairo 1285/1868 and Beirut 1305/1887).

The second work was apparently lost until 'Izzat Hasan discovered, in Ankara University Library, a manuscript which he published in 1964 at Damascus (in the collection *Ibn al-aman wa-l-anam*, ed. Ibn Kutayba, 220, 464-6; ibid., *'Uyun al-adhkar*, i, 44; *Dhahhabiyar*, *Wac'at*, 20, 54-5; Khatib Baghdad!, *Tariqat*, x, 228; Nawawi, 718-19; Ibn Hadjar, *Tabthth al-Talbidth*, vi, 170-2; Bustanî, *DM*, ii, Zirikli, *'Alam*, iv, 85. (Ed.)

traditional in nature, as are its maxims and sayings, though these are sometimes different, it is true, from those which the present author of this article has gathered together. One peculiarity worth mentioning is the indicating of the star or asterism which passed together. One peculiarity worth mentioning, errors, has a very honourable place in the series of

Bibliography: In addition to the sources mentioned in the article, see ‘Izzat Hasan’s introd. to his edition; Hāḍīdīt Kāhlīfāt, v, 54; Zirīkhī, Alā’ām, i, 25; Bustānī, DM, ii, 328.

CH. PELLAT

IBN AL-‘AKFĀNĪ (a nīha referring to the seller of shrubs, alqīf), cf. al-Samā’īnī, K. al-Aṣāhī, f. 47b). Several persons were known by this name, amongst which three deserve some mention.

1. AL-KĀDĪ ABū MUHAMMAD ‘ABD ALLĀH B. MUHAMMAD B. ‘Abd Allāh b. Ibrāhīm b. ‘Abd Allāh b. al-Husayn b. ‘Abī b. Dharīr b. ‘Amīr b. al-Aṣāhī al-‘Ashāfī, jurist. Born in 316/928, and dying in 325/936, he was employed in al-Bimaristan in Baghdad, He was weak in relating traditions, but a liberal patron to traditionists (cf. al-Samā’īnī, al-Maknūzī, ms. Leiden Or. 1366a, ff. 38b-40a; al-Shawkānī, al-Bādi‘ al-tābi‘, ii, 79-80; al-Zirīkhī, Al-Alā’ām, vi, 189) are all, directly or indirectly, derived from al-Ṣafādi’s account.

2. HĪBĀT ALLĀH B. AHMAD b. Muhammad al-Anṣārī al-Dīmāshqī, Abū Muhammad al-Aṣāhī, historian, who died in 524/1129 as an ascetic in Damascus and was the author of biographical works: Dāmān al-‘asfāfīt (now lost), and Tatimmat Ta’rīkh Dāmān wa-khawmiyyat man hadāthu ma‘ān añîhā (cf. S. al-Munājdīdī, Ma‘āram al-mu‘arrīkitīn al-Dīmāshqīyyin..., Beirut 1978, 31-2, and the sources quoted there, especially Ibn al-‘Imād, Shāhārūt, iv, 73, and also Ma‘ākhīr, Nāfi‘ al-tīh, ed. Dozy et alī, i, 562).

3. MUHAMMAD B. IBRĀHĪM b. Shāhīd, Shams al-Dīn Abū ‘Abd Allāh al-Anṣārī, known as Ibn al-Aṣāhī, physician and encyclopaedist. Born in Singār, he died in 745/1340 in Cairo of the plague. A scholar of many talents, he was employed in al-Bimaristan al-Mansūrī (see BIMARISTAN) in Cairo in an influential position, and wrote many books and treatises. A contemporary account on him is given by al-Ṣāfādī in al-Wāfi bi ‘l-wāfayat, i, 25-7, and in his Ayyān al-‘anjār (ms. Atif Efendi 1809, s.v., a very exaggerated biography full of laudatory remarks); and letters by Sayyid Khān, cf. al-Samā’īnī, al-Maknūzī, fihris al-fahdris, and a diwān, par excellence, the author piles up rare words of the type that one can often describe as hāfiz [see HĀFIŻ] and resorts to rhetorical devices in order to arrive at a eulogy of the Prophet who, according to tradition, had supposedly cured him of

IBN ‘AMR AL-RIBĀTĪ, Abū ‘Abd Allāh Muḥammad b. Muhammad b. ‘Amr al-Anṣārī, Moroccan poet and ḥakīm, of Andalusian origin, who was born at Rabat, fulfilled the office of kādī for some time, and from 1224/1809 taught at Marrākhīs. Whilst making the Pilgrimage, he stopped at Tunis, and received there some taqāżas; he died in the Hijāz on 10 Rāhī 1/1243/1 October 1827. Ibn ‘Amr was neither a great ḥakīm nor a great poet. His works, which include in particular a diwān, a sāhira and a rikha, have not been preserved in toto, and his fame rests essentially on an imitation of the Shānakakāmīyya of Ibn al-Wannān [q.v.], a küfīya known by the name of al-Amīrīya which enjoyed a celebrity mainly because of the religious sentiments expressed in the last verses. In the chapter on music, Ibn ‘Amr published and translated to Rampur. Editions: A. Sprenger, Calcutta 1849; and al-Māhdi Maknūzī, ibn al-‘Imād, Shāhārūt, iv, 103-11, and bibliography cited. (Eo.)

IBN ‘ASKAR, Muḥammad b. ‘Aṭī b. Khādir b. Ḥārūn al-Ghassānī, an Andalusian fākīh, philologist, poet and man of letters, who wrote a history of Málaga. Born in a village near this important sea-port ca. 584/1118-9, he was later to hold high judicial office there. Between 626/1229 and 631/1234 he served as deputy of Ibn Hūd’s [see HūDA], the historian of Arabic science, cf. his Dāmān al-asfāfīt, now lost, and al-Ṣāfādī, Ibn al-‘Imād, Shāhārūt, iv, 77-80; al-Zirīkhī, Al-Alā’īm, vi, 189) are all, directly or indirectly, derived from al-Ṣafādi’s account.

Some 22 books or treatises by Ibn al-Aṣāhī are known to have existed, more than half of these being concerned with medicine and related sciences. Other treatises of logic, tafsīr, ḥudūdīya (see AḤAMMĀ), astronomy, the arba‘ān, mathematics and gemmology. None of these is remarkable for great originality. Ibn al-Aṣāhī’s fame rests mainly on his encyclopaedia Irshād al-kāsīd ilā aswāl al-muṣākīd. This he deals with 60 sciences, along the lines of al-Fārābī’s Ḥīṣab al-ulūm. After two introductory chapters on education in general and the division of the sciences, Ibn al-Aṣāhī treats of al-‘adāb (10 subdivisions), al-muṣāmī (9 subdivisions), al-‘irāq (9 subdivisions, with heresiology), al-tābī‘ī (10 subdivisions), al-hanā‘a (10 subdivisions), al-‘ayyā‘ (5 subdivisions), al-‘adār (7 subdivisions, the last of which is al-muṣākīd). Added to these are al-siyāsā, al-niṣābūrī, and tadrīṣ al-marṣūlī, comprising the practical sciences (al-ulūm al-ma‘ṣūlīyya). All sections have a bibliography. The book concludes with a short list of philosophical terms and their definitions. The Irshād al-kāsīd stood as a model for the Muṣāfah al-salā‘a by Tāş-kopruţa [q.v.], as can be seen easily from the table of contents of both works and from the arrangement of the material in the sections.

Bibliography: in addition to references given in the article, note that there are some 40 ms. of the Irshād al-kāsīd, dispersed in libraries from Rabat to Rampur. Editions: A. Sprenger, Calcutta 1849, and al-Māhdi Maknūzī, ibn al-‘Imād, Shāhārūt, iv, 103-11, and bibliography cited. (Eo.)
devoted the well-known study El “Abecedario” de Yusuf Benaxeij (Madrid 1932). His own pupils included his nephew, biographer and continuator, Abu Bakr b. al-Khamis, and the celebrated Ibn al-Abbá (q.v.).

Ibn ‘Askar’s history of Málaga is frequently mentioned and quoted by Andalusian authors of the 7th/13th and 8th/14th centuries. Its title is al-ilm al-šif wa-l-šif bi-māhāzin al-šif min al-Mālik al-kirām, suggesting that it is a continuation of the Flám of the Málagan scholar Asbagh b. al-Ḥamad (d. 592/1196). By Ibn al-Khatb (q.v.), however, for whom the work was a main source of the Ḳulna, it is called Maṭla’ al-āṣar wa-‘azhārat al-ʿāmar, etc. There are other variants, including the simple and commonly used title Tārīkh Málaka. At the time of the author’s death the work was unfinished, and the task of completing it fell to Ibn Khamis (see above), who seems to have finished somewhere around the middle of the first half of the 7th/13th century. The one extant manuscript which we have of the Iltm (in private hands) is incomplete, but a large part has fortunately survived, and from this an assessment can be made of its literary and historical value. The biographies of Málagan notables included in it have a distinct literary value in that they offer, in addition to biographical data, worthwhile specimens of biographers’ poetry (unfortunately, no account is taken of muqâṣṣahāt and the zafājī). On the historical side it contains material that can be utilised to supplement, complement and control our existing accounts from the 8th to the 13th centuries A.D.

Ibn ‘Askar was the author of a number of other works, namely (i) al-Maghda al-nuḥ, a supplement to al-Harawi’s works on unusual terms in the Kurān and supplement to a work by al-Suhayll of Fuengirola in al-ḥadīth; (ii) Nashat al-nāsır fi manākhī Amānār b. Ṭūf, a work dedicated to the Banū Sa’d of Alcalá la Real and devoted to the life of the first member of the family to come to Spain (Ibn ‘Askar was a close friend of the family); (iii) al-Dīnāz al-mukhtajašaš = an ḥāshāh al-ḥāṣar, a work on blindness written to console a blind friend; (iv) Ishābikhār al-ṣubr, an ascetic work; (v) al-Abīn al-ḥadīth; and (vi) al-Tahmiw u ʿl-imāmān bi-Kūdah al-Tafṣīl wa-l-ṣif, a commentary on and supplement to a work by al-Suhayli of Fuengirola (1078/1113-85) on proper names not occurring in the Kurān.

Bibliography: All important references are given in J. Vallvé Bermejo, Una fuente importante de la historia de al-Andalus: la ”Historia” de Ibn ‘Askar, in Al-Andalus, xxxi (1966), 237-80 (includes translations of some of the most notable historical passages).

[Ed.] Latham

IBN ‘AZZŪZ, called SĪDĪ BALLĀ, Abū Muḥammad ‘Abd Allah al-Kurāshī al-Siyālī al-Marrakshī, a cobbler of Marrakesh to whom many magical gifts were attributed and who died in an odour of sanctity in 1204/1789. His tomb, situated in his own residence at Báb Ayūn, has been continuously visited because of its reputation of curing the sick. Although he had not received a very advanced education, Ibn ‘Azzūz nevertheless succeeded in leaving behind an abundant body of works, dealing mainly with mysticism and the occult sciences, but also with medicine. However, his works display hardly any originality, and none of them has interested a publisher, despite the success in Morocco of his Dhakht al-kāsīf wa-nuḥal al-zalumāt bi-lim al-tābī wa-l-Tohabī wa-l-Ḥikmah, a popular collection of therapeutic formulae (see L. Leclerc, La chirurgie d’Abulcasis, Paris 1861, ii, 307-8; H.P.J. Renaud, in Initiation au Maroc, Paris 1945, 183-4; his Kašf al-nūmūz concerning medicinal plants is equally well-known. Out of his three works on mysticism, the Tanbih al-taštīdī al-muḥādāt is perhaps the most original, since it endeavours to reconcile the ṣiḥā to the ḩakkā (q.v.). Finally, in the field of the occult sciences, his Lāḥb al-kāsī al-im al-taštīdī al-dāhyā, of which at least one manuscript survives, is a treatise on practical magic and divinatory magic.

Bibliography: On the manuscripts of Sīdī Ballā’s works, see Brockelmann, S II, 704, 713; M. Lakhdir, Vie littéraire, 253-6; see also Ibn Sūda, Dallī ma’arrīḫ al-Maghrīb al-ʿAskārī, Casablanca, 1960, ii, 446, 449; A. Gannūn, al-Nabūgād al-Maghrībī, Beirut 1961, i, 304-5, 310.

IBN BABĀ AL-KĀSHĀNĪ [see al-Kāšānī].

IBN AL-BALKHĪ, Persian author of the Ṣadgū period who wrote a local history and topographical account of his native province Fārs, the Fārs-nāma. Nothing is known of him save what can be gleaned from his book, nor is the exact form of his name known, but his ancestors came from Balkh. His grandfather was musawta or accountant for Fārs under Berk-yarûk b. Malik Shāh’s governor there, the Atabeg Rukn al-Dawla or Naḏmī al-Dawla Ḳhurānī, and Ibn al-Balkhī acquired his extensive local knowledge of Fārs through accompanying his grandfather in his work. He was accordingly asked by Sultan Muhammad b. Malik Shāh to compose a historical and geographical account of the province; since he mentions the Atabeg of Fārs Fakhr al-Dīn Cawdī as being still alive, the composition of the Fārs-nāma must be placed between Muhammad’s accession in 498/1105 and Cawdī’s death in 510/1116. The first two-thirds of the Fārs-nāma on the pre-Islamic history of Persia and the Arab conquest of Fārs are entirely derivative, being based on Hamza Ḳishānī, but the remainder is a very important account of the province’s topography and notabilia, concluding with a section on the Shāhānsāhār Kūrds and containing details of contemporary happenings. This last third of the book was much used in the 8th/14th century by Ḥamd Allāh Mustawfi (q.v.) for the geographical part of his Nuzhāt al-kulūb.

Bibliography: G. Le Strange and R.A. Nicholson edited the last third of the Persian text, Te Fārsnāma of Ibn’s Balḵī, GMS, N.S. i, London 1921; Le Strange had previously translated this in JRAS (1912), also as a separate monograph, Description of the province of Fārs in Persia, London 1912. See also Storey, i, 350-1, and Storey-Bregel, ii, 1027-8.

(C.E. Bosworth)

IBN AL-BAZZĀZ AL-ARDABILLĪ, TAWAKKULI (Tükūl) b. ISMĀ’IIL, marid of Shafy Shadr al-Dīn al-Ardabīlī (d. 794/1391-2), son and first successor of Shafy Sa’d al-Dīn al-Ardabīlī (d. 735/1334), the founder of the Sufi order of the Sa’fawīya and, as ancestor of Shāh Ismā’īl II (d. 930/1524 [q.v.]); the eponym of the Sa’fawīns [q.v.; see also ARDABILL]. The exact dates of Ibn al-Bazzāz are unknown. At the stimulus of Shaykh Sa’d al-Dīn, he composed a biography of Shaykh Sa’d al-Dīn, with the title Sa’fawī al-sufā or Mawīkh al-sanaṭa fi manākhī al-safawīna. Written in a simple style without rhetorical ballast, this voluminous work gives first of all information on the miracles (kārāmāt) and Sufi doctrine of the Shaykh, but describes also in a vivid way daily life in the sanctuary of the order.
and gives an account of the relations of the Shaykh with the secular rulers in the period of the Ilkhans [q.v.].

From the colophon of the manuscript India Office no. 1842 (Ethê, Cat. of Pers. mss., i, col. 1008), probably erroneously described as an autograph, it follows that Ibn al-Bazzâz finished his work in 759/July-August 1358. The numerous manuscripts of the Sajwat al-safa', among which there exist also Turkish translations, prove the popularity of this important hagiographic work. A critical edition is not yet available; a lithograph was published by Ahmad b. Karîm Tabrizî in Bombay in 1329/1911.

In the 10th/16th century, the chronicles of the Safawid dynasty used the Sajwat al-safa' as their main source for the early period of the Safawiyay order and for the genealogy of the Safawids, who claimed descent from the seventh Imâm Músâ al-Kâzîm. This genealogy is, however, very much disputed. The numerous manuscripts of the Safawids, at least in its complete form, was apparently inserted into the work only by Abû 'l-Fath al-Husaynî, who revised the Sajwat al-safa' (Storey, i/1, 13 ff. and i/2, 1196 ff.) in the order of the Safawî Shâh Tâhmasp I (d. 984/1576).

(A. Dietrich)
various officials were ranged against the great vizier
Nizām al-Mulk [q.v.], his sons and his partisans,
the so-called Nizāmiyya; in this Ibn Dārūst placed
himself on the side of the vizier's enemies. Hence when
Nizām al-Mulk was assassinated in Ramadān

that the real instigators of the murder, in which the
Isma'īlīs' Fikī was a mere tool, were Ibn Dārūst and
especially the vizier Yārūk, Malik Shah's son by another
wife and, at Nizāmiyya as their driving-force, at the battle of
managed to seize Isfahan, their forces were defeated
adulthood. Although Ibn Dārūst and Terken Khatun
Nizām al-Mulk was assassinated in Ramadan
485/October 1092, many contemporaries assumed
that the real instigators of the murder, in which the
so-called Nizāmiyya; in this Ibn Dārūst placed himself
[q.v.], expertise, was inclined to take him as his own vizier,
when Ibn Dārūst and Terken Khātūn
managed to seize Isfahan, even though Khātūn
was only a small child, and on grounds of experi-
ence and potential, was obviously inferior to Berk-
yarūk, Malik Shāh's son by another wife and, at
twelve or thirteen years old, on the threshold of
Muharram 486/February 1093. Ibn Dārūst was the
master of various Saldjuk poets
like Mu'tizī, and he was also one of several great
men in the Saldjuk state, both civilian and military,
who were active in founding colleges and other char-
itable and educational works; his Tājīniyya should be
began in 480/1098 in Baghdad at the Bāb Al'Abraz as
a Shāhī school, rivalling Nizām al-Mulk's own more
famous foundation; the celebrated scholars Abu Bakr
al-Shāhī and Abū Hāmid al-Ghazālī's brother Abū
I'l-Futūh taught there.

Bibliography: There are very brief biographies
in Ibn al-Ḍawārī's Manṣūmān, ix, 74, and Sayf al-
Dīn Faḍlī 'Ukaylī's Abār al-sawā'ad, ed. Umayyāh,
Tehran 1337/1959, but for the rest, see scattered
references in the historical sources for the Saldjuk
period (Sadr al-Dīn Ḥasanī, Rāwāndī, Bundarī, Ibn al-
Ḍawārī, Sībit Ibn al-Ḍawārī, Ibn al-Ashīrī,
utilised in Bosworth, Cambridge history of Iran, v, 74
ff., 82, 93, 102-5, 216; M.F. Ṣana'ulla, The decline
of the Saljuq empire, Calcutta 1938, 9, 40-1, 83; I. Kafesoglu, Sultan Melikşah devrinde Bayrak Selçuklu

(C.E. Bosworth)

IBN DIRHAM
seldom-used patronym of an emi-
nent family of Mälkī jurists and kādīs,
originally of Baṣra, who bear the ethnic name Al-
Azīzī in some sources; but since the members of
this family are most often cited under their personal
name or simply by their kunya, and since the line of
parentage which connects them there consequently
difficult to determine, it has been judged expedient
to assemble them here under this somewhat artifi-
cial appellation, following the example of F. al-
Bustānī who, in the Dārāzī al-mu'ārif (iī, 61), adopted
it for one of them, the tenth of those listed below.
These kādīs, who for the most part held office in
Baghdād in the 3rd and 4th centuries, are cited by L. Massinon (Codex et naqīs baghdadī-
en, in WZKM, li-1-2 [1948], 108, where Ismā'īl b.
Ishaq should be read in place of b. Hammād),
following the articles devoted to them by al-Khādib
al-Baghdādī (Ta'īrīkh Baghdādī), after Wākī' (Abūbār al-khādīj) and especially al-Tanūkhi, who gives them
considerable space in al-Fora'ī bīd al-khādād and par-
ticularly in the Nishwār al-muhābdata.
The following table, which cannot be regarded as
exhaustive, contains the names mentioned in the prin-
cipal sources for the period until the mid-4th/10th
century; it is unlikely that the family ceased to exist
at this time, but it does not seem to have given any
more eminent practitioners to the legal profession.

I. — Abū Ismā'īl Hāmād b. Zayd b. Dirham
(98-179/717-95) is the first member of the family to
have made a mark on history. A blind slave of
Hāzim b. Zayd al-Dhālamī (Adz), he was al-
franchised by his two sons, Da'nīr and Ya'qūb (see Ibn
Kutayba, sayf, 51, 81, 93, 102-5). He devoted himself to
the study of hadīth and passed on his knowledge to a
number of traditionists, including Biqīr al-Hāfīz
[q.v.]. He is to a certain extent regarded as the founder
of an independent madhhab and accorded the same
status as al-Thawrī in Kūf, Mālik in the Ḥijāz,
and al-Awza'i in Damascus; he thus represented Baṣra
his home-town, but in spite of the respect
with which he was treated he does not seem to have
founded a school, since his descendants were them-
selves Mālikīs.

Bibliography: Ibn Sa'd, Taḥkāt, vii/2, 42;
Baladī, Futūh, 283; Ibn Kutayba, Ma'sāfī,
502-3, 525; Tabārī, index; Mas'ūdī, Mar'ādī, vi,
294 = § 2500; Ibn Baṭṭa-Laoust, index; Ibn al-
Ḍawūrī, Kurra', i, 258; Māksidi, Création, ii, 52,
145; Abū Nu'aym, Hikayat al-ausya', vi, 257-67;
Ya'qūb, Tabātib 'al-asmā', 217-8; Dāhābī, Tabātib al-
hads, i, 212-2; Ibn al-Imād, Nāṣib al-usmā', 147; Massinon, Lexique technique, 168,
197, 243.

II. — Abū Ya'qūb Ismā'īl b. Ismā'īl b. Hāmād
(176-230/792-845), grandson of the preceding, was
responsible for mazām in Egypt under the caliphate
of al-Ma'mūn in (215/830), then in Baṣra under that
of al-Mu'taṣim (Ya'qūb, Madārī, ii, 558-9; Ibn
Taghrībī Īd, Naḍīm, ii, 212).

III. — Abū Yusuf Ya'qūb b. Ismā'īl b. Hāmād
(al. 240/856), brother of Ismā'īl, was, it seems, the first
kādī of the family; having served in this office at
Medina, he made his way to Baghdad where he fre-
quently the court of al-Mu'taṣim and transmitted
hadīth. Subsequently, al-Mutawakkil appointed him for
the second time kādī of Medina, then of Fārs, where
he resided until his death (al-Tanūkhi, Niswādi, vii, 16-18;
Ya'qūb, Madārī, ii, 560-9).

IV. — Abū Ismā'īl Hāmād b. Ismā'īl b. Ismā'īl
(199-267/815-88) was described in a general sense as
being kādī of Baghdad (Khaṭīb Baghdādī, viii, 159),
but there can be no doubt that the area in question
was the Round City of al-Mu'āṣir in 251/865,
according to Massinon, Codex, 108. He is mentioned
among the companions of al-Muważafl, and to him
are attributed a Samā'ī al-Muḥādāna and a Radd 'alā
Ibn Dirham
After having first of all become interested in gathering together traditions of philological, literary and historical interest, he brought together hadiths from the mouths of 'Ata b. Abi Rabah, al-Zuhri, Muddajjih, 'Ikrima and other famous persons, and passed them on, notably to Waki', Ibn al-Mubarak and 'Uyuyu. His condition was such that he was considered as the imam of the Hijaz.

Little is known of his life, except that he accompanied Ma'n b. Zaid'a to the Yemen, soon returned from there and towards the end of his life made his way to 'Irak and al-Mansur's court. His name is connected, on one hand, with the question of the legality of the transmission of hadiths by letter and not by sam'a, and on the other, with the writing down of traditions. Like Sa'id b. Abi 'Araba [q.v.] in 'Irak, he was regarded as having been the first in the Hijaz, and even in the whole Islamic empire, to gather together hadiths into a work fi 'l-'ahtar waharáf al-tafsir, these two scholars are often cited together, especially by al-Dhahabi in Ibn Taghribirdi, Nadjam, i, 351, year 1431, who enumerates with some regret the authors of the oldest collections. Goldziher, in Muh. Studien, i, 211-12, Eng. tr. ii, 196-7, has shown that the priority accorded to Ibn Durayd was unmerited, and has remarked that collections of hadith under the same title, even if several hadiths are in common, are often the work of several hands. If this is the case with all events, his work was a selection of legal traditions in classified form, as the Fihrist, ed. Cairo 316, notes, grouped by chapters on legal purity, the prayer, the zakat, etc.

Bibliography: Qadhi, Bayan, iii, 283; idem, Hayawan, index; Ibn Kutayba, Mawrid, 488-9, 519; Ibn Khallifan, Wafayat, no. 348, ed.; Ihsan 'Abbas, iii, 163-4; Khattab Baghdadi, Tarikh, x, 400-7; Ibn Taghribirdi, Nadjam, i, 351; Ibn al-'Imad, Shaward, ii, 226-7; Nawawi, Tahdhik, 787; Ibn Hadjar, Tahdhib al-Tahdhib, vi, 402-6; Dhahab, TadhkIrat al-Huffaz, i, 160; Goldziher, Muh. Studien, index; Brockelman, S. 255, and bibl. given there; Bustani, Della tit al-mawrid, ii, 404-5; Zirikli, iv, 305.

(Ch. Pellat)
IBN FARIGHUN — IBN HATIM

**Qusaym** resembles the slightly later Maṣḥūth al-Ṣālim of Abū `Abd Allāh al-Khārazmī [q.v.] in that it is divided in the first place into two mukāthās, one on the Arabic sciences and one on the non-Arabic ones, but it is not so clearly arranged as the Maṣḥūth. A full evaluation of the work must await publication of the text, for which several mss. exist.

**Bibliography:** In addition to references given above, see H. Ritter, *Philostrata XIII*, in *Oriens*, iii (1950), 83-5; F. Rosenthal, *A history of Muslim historiography*, Leiden 1968, 34-6; Brockelmann, S i, 435; Sezgin, *GAS*, i, 384, 388 (reading the author of the Qusaymī’s name as “Mutaghābī (?Mubtaghaḥ b. Furayʿūn”).

(C.E. Bosworth)

As the jālīḥ appointed to the Moroccan sultan, he filled the office of muḥtasib of Fāṣ, then of kāʾid of the Ghirāb, before devoting a great part of his activities to literature. He is the author of several commentaries and glosses, of epistles of a religious character and of an account of the pilgrimage which he made, but also the author of a mukaddas [q.v.], of a poetic version of the Ḥikām of Ibn `Aṭī Allāh ʿIskandār [q.v.], of a poem of nearly 4,000 verses in praise of the Prophet (with a commentary in 5 volumes) and a series of eulogies of the sultan. Some of his writings have been preserved in manuscript at Rabat (see Lévi-Provençal, *Les manuscrits arabes de Rabat*, Paris 1921, nos. 292 (5), 305, 337, 338, 434, 497 (11-12), and part of his poetic output (mss. 337 and 338 above; now K 90 and K 2707) later gathered together into a Dīwān lithographed at Fas and containing notably a certain number of muwashshahāt. This verisimilitude, who still enjoys a certain celebrity, sometimes gave himself up to some curious pyrotechnics. M. Lakhdar (in *Littérature*, 283-4) sets forth a poem in 26 verses rhyming in ṣīn and in the metre basti, of which each hemistich is divided into four sections written successively in red, black, blue and black; if the blue column is removed, the metre munsarh results, if the red and the muktādab, and if the red alone, mūsīlākāb.” This genealogy and the mamlūkī [q.v.] of Hamdūn Ibn al-Hadjīdī were the subject of a monograph by his son Muhammad al-Tālib (see Lévi-Provençal, *Chorfa*, 342-5) called the Ruyaʿ al-awz (ms. Rabat 396).

**IBN HĀTIM, BADR AL-DIĪN MUḤAMMAD AL-ḤAMĀNĪ, state official and historian under the second Rūsūlīd sultan of the Yemen, al-Muẓaffar Yūsuf (1647-1694/1250-1297).**

IBN Hātim’s name appears nowhere in the biographical literature of mediaeval Yemen, and neither the date of his birth nor that of his death is known. The last reference to him falls under the year 702/1302-3. However, from his history of the Asyūbīd and early Rūsūlīd in the Yemen, the Siṃi al-ṣīḥālī al-Tulmiyyan fi ʿalāhīr al-mulāk min al-Qāwqaʾ bin Yūsuf (ed. G. R. Smith, *The Asyūbīd and early Rūsūlīd*, etc., GMS, N.S. xxvi/1, *The Arabic text*, London 1974), it is possible to cull some information concerning the man and his official life. He belonged to the Banū Hātim of Yām of Hamdūn, who at the time of the Asyūbīd conquest of the Yemen in 569/1173 controlled the area of Ṣaḥrā’ī, the country's
chief town. He was thus an Ismā‘īlī, though this proved no handicap to his rise to a high position in the staunchly Sunnī Rasūlid state under al-Muẓaffar Yūsūf. He was a member of the small cadre of some four or five officials employed by the sultan in the capacity of roving ambassador, personally representing him wherever in the country he was needed, now negotiating with recalcitrant tribes, now conveying a personal message from the sultan, at times even participating in military operations.

His official state position, however, did not restrict or hamper his historical writing in any way. His account of the Ayūbid and first two Rasūlid sultans is a refreshingly impartial one, perhaps slightly biased towards his own family, the Banū Ḥatīm, but containing much otherwise unknown information on this crucial period of Yemeni history, when the country was beginning to form a political unit after centuries of rule by numerous petty dynasties. He writes in the Simt of al-Muẓaffar Yūsūf’s reign as a dispasionate eye-witness. We know too that he wrote al-ʿlād al-γαιμīn fi ʾṣghār mušāl al-Yaman al-muṭāʾalākhšārin, though this remains undiscovered. It was clearly a more general history of the Yemen, covering a longer time-span than the Simt.

(G.R. Smith)
Ibn Kabar — Ibn Kayşān 389

rary and co-religionist, and this view is shared by Abu 'l-Maḥāsin Ibn Taghīrābī.

Moreover, it is certain that Ibn Kabar made a résumé of Baybars al-Mansūr’s history, the Mukkāt al-Abbârī, the ms. of which is preserved in the Ambrosiana collection of Milan (Ms C 45 Inf.). The section of the Fātimids, together with part of the reign of al-Mansūr Khârim, is lacking in this manuscript, and the text stops abruptly in the year 702/1302.

Ibn Kabar’s main work is a book on the ecclesiastical sciences of the Copts, Kitāb Miṣbāh al-zúmana wa-tābīb al-khâbān. This has been edited and translated by Dom Louis Villecourt, with the collaboration of Mgr. E. Tisserant and Gaston Wiet, in Patrologia Orientalis, xxiv, Paris 1928. Ibn Kabar also left behind a Copto-Arabic dictionary, published by Athanasius Kircher under the title Scala magna. A few others of his works remain unpublished.

(ABEL, HAMID SALEH)

IBN AL-KATTĀN, a name well-known to historians of the medieval Muslim West and, as such, long thought to have been borne by only one person. There is, however, no doubt that it was the name of two different people who, in all probability, were father and son. Since nothing further can be said of this putative relationship, it seems prudent to speak of the two persons as the “Elder” and the “Younger.”

1. IBN AL-KATTÂN THE ELDER. This person is to be identified with one Abū ‘l-Ḥasan ‘Abd allâh b. Muḥammad b. ‘Abd al-Malik b. Yahyā al-Kutamm al-Fasf, a religious scholar and jurist from Fas, for whom we have only the date of his death, viz. 1 Rabī‘ I 628/7 January 1231. As all his biographers agree that he died in A.H. 628, he can hardly have been the author (as supposed by Lēvi-Provençal and others after him) of the K. Naẓr al-ṣaḥīḥa (see below), since the author of this work served the Almohad caliph al-Murtadā (reg. 646–65/1249–66). Of the early background of this Ibn al-Kattān, all we know is that he was of Cordovan origin. We can only assume that either he or his father and family had emigrated from Andalusia to Fas. In later life his importance seems to have lain in the prominence of his position in the Almohad hierarchy, for we are told that he was head of the talāba in Marrakesh and that he enjoyed great prosperity in the service of the ruler (on the talāba as a high-ranking class of Almohad dignitaries, and on Ibn al-Kattān in particular, see Hopkins, Medieval Muslim government in Barbary, London 1958, 104 f. respectively). After the death of the caliph Abū Ya‘qūb Yūnus al-Mustāṣirīn, Ibn al-Kattān the Elder fell victim to the Almohad power struggle which ended in the victory of Muhammad ‘Abd Allâh (al-‘Abbād) over the caliph Abū al-Walîd after only eight months’ rule. Leaving Marrakesh in 621/1224, Ibn al-Kattān was able to return later, but in fact he seems never again to have been able to make a secure and permanent home there or indeed to lead a settled life. When he died, he was kādlī of Sidjīlmāsâ, a city then in rebellion against the reigning caliph. Among writings attributed to this Ibn al-Kattān are a commentary on the K. al-‘Abbâm of ‘Abd al-Hâjj al-Ighâfī (confused with the K. al-‘Abbâm of Ibn al-Kattān the Younger), a Makâkā fi l-a‘zaqān and al-Nazar fi ḥākîm al-nazar.

2. IBN AL-KATTÂN THE YOUNGER, otherwise Abū ‘Allī (and/or Abū Muhammad) al-Husayn (or al-Husayn b. Abī ‘l-Kattān, a chief of genealogy and co-religionist, and this view is shared by Abu ‘l-Maḥāsin Ibn Taghīrābī. by Ibn Tādhrī to have written a history entitled K. Naẓr al-ṣaḥīḥa wa-tâbīb al-khâbān min akhâr al-ṣiṣn (there are variants of the title) as well as a number of other works, viz. K. Shīḥī al-ghūl fi ‘l-ṣaḥīḥa wa ‘l-ṣīḥā, K. al-‘Abbâm bi-bayān ṣīḥâtihi al-ṣīḥā (on hadīth), K. al-Mansūṭī, and K. al-Masmūṭī. Of all these writings, only a part of the Naẓr seems to have survived. Until this part was discovered, the work was only known through the use which other Maghāribi writers had made of it, notably Ibn ‘Idhârī. The complete Naẓr was, so far as can be gleaned, a large encyclopaedic work covering the history, and to some extent the geography, of North Africa and Spain from the Arab conquest to the author’s own time. The extant portion, dealing with the period 500–33/1106–7 to 1138–9, bespeaks a tendentious “palace” chronicle, but it is valuable as it not only reproduces original official documents and quotes authors whose works are no longer known to us, but it also reports on the Fātimids in Egypt, giving information not to be found elsewhere.

Bibliography: J.F.P. Hopkins, Medieval Muslim government in Barbary, London 1958, loc. cit.; Mahīdūrī, ‘Abduh al-Muḥammad b. Ahmad b. İbrahim, Bagdādī philologist who according to all the known sources, died in 299/311–12; this date is nevertheless challenged by Yâkūt who, believing that al-Khâṭīb al-Bagdādī is in error, opts for 320/932.

He was the pupil of al-Mubarrad and Thālūb al-Qāwī, and is said to have brought together the doctrines of the grammatical schools of both Basra and Kūfah, though his own preference was for the former; he was moreover the author of a work, no longer surviving, a K. al-Marʾa’il ‘alā maqābghī al-nahwīyya mimma ḥalafqa, a K. al-Maṣjīd wa ṭṣāʾīb ḥalafqa wa l-Basriyya, Abū Ḥayyān al-Tawḥīdī relates in his Inīţā (iii, 6) that he had written over his door “enter
and eat". In another, unspecified work, the same author (cited in particular by Yākūt and al-Suyūṭī) describes the programme of his lecture courses and describes the crowd which surrounded him, leaving about a hundred mounts in front of the gate of the mosque where he was teaching, but Yākūt does not seem to take Abu Hayyan's account at its face value. In addition to the **K. al-‘Afaqātī**, Ibn al-Nadīm attributes the following works to Ibn Kāsīm: *Ma‘ṣūm wa al-ma‘ṣūmat*; *Ma‘ṣūm wa al-ma‘ṣūmat*; *Mudhakkar wa al-mu‘annath*; *Mudhakkar wa al-mu‘annath*; *Chester Realty*.

The *Kitāb Masābih al-kitāb* which is doubtfully authentic. The *Ma‘ṣūm wa al-ma‘ṣūmat* contains in particular model letters and official documents. An incomplete manuscript of this work has recently been identified in the Suleymaniye Library in Istanbul (Fatih 4128).

Ibn Kāfāl was also the author of two works which he cites in his *Mawsīd*, the *Abl al-kitāb* (fols. 162b and 166a) and a *Kitāb al-ṣaḥīḥ* (fols. 16a and 25b), but these have not come to light. The date of his death is uncertain. Al-Habbāl al-Māṣrī records, in his *Subh*, which he cites in his *Wafaydt al-Misrīyln fi ‘l-‘Arabī*, that he died in Shawwal 533 (1137-1138/1725-1726) after serving on two occasions: firstly, for two days in the year 302/914-915 and for twenty days in the year 303/915-916. Despite some recent attempts at this identification, the name of a family, of whom the best-known two members are:

1. **Abū Ǧalīl Muḥammad b. ‘Alī b. Kāfāl**, called Fārādž al-Mulk, vizier of the Buyids, born at Fās. He received a traditional education from the local Muslims and litterateur of Mughrib, and killed by Sultan al-Dawla Abu Shudja al-Maghribī [see AL-MAGHRIBI]; to Ibn Kaysan seems to be in fact by an author (cited in particular by Yakut and al-Suyūṭī) and attributes the following works to Ibn Kaysan: *al-‘Azīm b. Ǧumhūr*. In another, unspecified work, the same author (cited in particular by Yakut and al-Suyūṭī) dedicates his *Mawsīd* to him.

2. **Abū Shudja b. ‘Alī b. Kāfāl**, Muḥammad b. ‘Alī b. Kāfāl, son of the preceding, whose date of birth is unknown, but he was killed in 466/1073-4 by Badr al-Din al-Manṣūrī (q.v.), at the time when this later arrived in Egypt at the summons of the Fāṭimid caliph al-Muṣṭāfan. Abū Shudja was this caliph’s minister on two occasions: firstly, for two days only, in Muharram 457/December 1064-January 1065, and secondly, at the end of the same month in the same year, and this tenure of office lasted till mid-Rabī‘ I of the same year/February 1065.

It seems that this minister should not be confused with ‘Abū b. Kāfāl al-Kātib [see the following article], despite some recent attempts at this identification which are conjectural and unjustifiable.

iii, 484; M. Lakhdir, *Vie littéraire*, 275-7 and bibl. given there.  

**IBN AL-KUUFF**, **AMIN AL-DAWLA ABU 1-FARAJI B. MUWAFALK AL-DIN YA'KUB B. ISHAQ**, known as **AL-MALIKI AL-MASHI** (the Melkite Christian) **AL-KARAKI**, in Arabic philology, literature, calligraphy, poetry and history. Ibn Abi Usaybi'a, in his *'Uyun al-anbā* and *history*. Ibn Abf Usaybi'a, in his *al-Usul fi Shark al-jusul*, *on Hippocrates' art*, *and* *Dj_dmi* — *Function* of *God's speech is eternal according to Ibn Kullab, likewise His kindness (karam) and His generosity (qayraw), His friendship (wakāya) and His enmity (hadīya, wakāya)*. The formula was also applied to the *siyāf* *kkhabirya*, attributes which are only accepted because they form part of revelation, i.e., the anthropomorphisms: God's face, His hands, His eye, etc., are "neither identical with Him nor not identical with Him". They share common features, but they are not interchangeable. The same must therefore be said with regard to their relationship with God's essence; *lā bāna wasa-wa lā ba la ṣakeyraha*. They are not entirely different from Him, but also not completely identical with Him, i.e., no mere "names" in the sense of *'Abdāb b. Sulaymān* [g.e.], the Mu'tazilis with whom Ibn Kullab held frequent discussions. There was no necessity, in this context, for a distinction between *siyāf al-dīdāt* and *siyāf al-fāh*: God's will, which was considered a "factual quality" and as such temporal by the Mu'tazilis, is eternal according to Ibn Kullab, likewise His kindness (karam) and His generosity (qayraw), His friendship (wakāya) and His enmity (hadīya, wakāya). The formula was also applied to the *siyāf* *kkhabirya*, attributes which are only accepted because they form part of revelation, i.e., the anthropomorphisms: God's face, His hands, His eye, etc., are "neither identical with Him nor not identical with Him". We do not know what this meant exactly, but we hear that God is "sitting on His throne" with His essence, not as a body and not in a definite place. Ibn Kullab did not restrict God's attributes to those mentioned in the *kurān*. An attribute may be inferred from any description (nasb) given about God. But there are some of them which do not fit into the "formula". God is eternal and thus possesses eternity (*kidam*), which does not belong to the **IBN KULLÄB, 'ABBĀD ALLĀH B. SA'ID B. MUHAMMAD AL-ΚATTÂN AL-BAŠRĪ** (died 241/855?), foremost representative of a compromising theology during the time of the *mahdi* [g.e.]. Nothing is known about his life. He contradicted the Mu'tazili doctrine of *khalq al-kurān* by introducing a distinction between the speech of God (ka'lam Allāh) and its realisation: God is eternally speaking (*mutakallim*), but he can only be *makah* (*mukallam*), addressing himself to somebody, if this addressee exists. Speech is a permanent and unchangeable attribute (*siān or ma'nā*) which subsists in God; but when, in revelation, it becomes speech to somebody, it is subject to alteration: it may be represented in various languages and must adapt itself to various situations by taking the form of an order, a statement etc. The expression *khalq al-kurān* is thus misleading; it is true insofar as the "trace" (*nasr*) of God's speech is concerned, its reproduction (*khālīya*) in historical reality, especially in a Holy Scripture, and its subsequent recitation (*kurān = kānā*), which is a meritorious action (*kāsh*) performed by man; but it does not allow for the conclusion drawn by the Mu'tazilis that God is only speaking through temporal speech and not *per se*. That there is uncreated speech is proved by the word *kwāf*, by which God created everything else and which can therefore not be created itself. This uncreated speech does not yet consist of letters and sounds; it can therefore not be heard by anybody (in contradiction to sūra IX, 6 which had to be interpreted metaphorically). The only exception was Moses, to whom God said: "I have chosen thee, so listen to what is suggested" (XX, 13); he heard God speak to him directly. But we do not have any information about how Ibn Kullab explained this kind of perception. God's speech is eternal not by itself (which would mean that one attribute or "accident", namely eternity, were to subsist in another one, namely speech), but by the eternity of God's essence. God's attributes are related to each other in a most intimate way: they are "neither identical nor not identical". They share common features, but they are not interchangeable. The same must therefore be said with regard to their relationship with God's essence; *lā bāna wasa-wa lā ba la ṣakeyraha*. They are not entirely different from Him, but also not completely identical with Him, i.e., no mere "names" in the sense of *'Abdāb b. Sulaymān* [g.e.], the Mu'tazilis with whom Ibn Kullab held frequent discussions. There was no necessity, in this context, for a distinction between *siyāf al-dīdāt* and *siyāf al-fāh*: God's will, which was considered a "factual quality" and as such temporal by the Mu'tazilis, is eternal according to Ibn Kullab, likewise His kindness (karam) and His generosity (qayraw), His friendship (wakāya) and His enmity (hadīya, wakāya)
Kūrānic vocabulary), but this eternity must be directly identical with Him because nothing eternal exists besides Him. Similarly, His being can in no way be “not identical” with Him. The character of God’s divinity was discussed among Ibn Kullāb’s followers.

In other theological problems, Ibn Kullāb supported the view of the aṣḥāb al-ḥadīth. He believed in the ru’ya bi‘l-ābād, in the final salvation of all Muslims in spite of their sins, and in a moderate form of predestination. Man has no immanent capacity of acting (kudurā); he only receives it in the moment of the performance. He may use it for the contrary of his action, i.e. for sin as well as for obedience, but this freedom of choice does not influence the salvational status determined by God from the beginning.

Ibn Kullāb’s sījāt theory was prepared by earlier speculations inside and outside the Mu’tazila, especially by discussions between Abu ʾl-Ḥusayn b. Ḥishām b. al-Ḥakam and several books, among them a compendium of the sūrah fi al-ṣūrah (ibn Ḥabīb, 61 ff.). He was, however, the first to elaborate them into a coherent system which corresponded to the high rank of his ideas. He also apparently put them on a broader basis by adding, e.g., a theory of human speech which worked with the differentiation between speech as such and its reproduction through letters and sounds. He wrote several books, among them a K. al-sījāt and a refutation of the Mu’tazila. Only a small fragment of one of them has been found up to now (cf. Orosius, xvii–xix [1965–6], 92 ff.). Among his adherents in Baghdad was the mystic al-Harith al-Muḥasibī (died around 985) who was supported by al-Husayn b. al-Fadl al-Bādawī, a contemporary who was mainly known as a commentator of the Kūrān. The orthodox reaction under al-Mutawakkil and Hishām b. al-Hakam (q.v.) and by the ideas of al-Mukaddasī notes already in 733/1332–3 that “sons of the people of high rank”, which allowed him to become a member of the sultan’s guard of honour. After having undergone the wide-ranging military education of the “youths of good family”, he ended his long career as a military man, in this same elite corps, with the high rank of muṣāker (= colonel or brigadier?), earning him comfort of life and respect. To his cultural interests, Ibn Manglī added a deep religious sense, almost asceticism; at the end of his treatise on hunting, he thanks God for allowing him not to take a wife, the source of unhappiness. It is unknown whether his own death preceded or followed the ignominious end of his master, strangulated to death.

Ibn Manglī’s works on the art of war and on military and naval tactics are only known to us through titles and citations, but his treatise on hunting, put together in 773/1371–2, is preserved in a unique manuscript (Paris, B.N., Ar. 2832, ff. 53) called Uns al-mulāt bi-waḥsh al-falād “The sociable contact of the elite people with the wild beast of the open desert”. The author did not intend to compile an original work, but, so he says, conceived the idea of it as an abridgement (mukhtasar) of the great encyclopaedia on venery al-Dzhambāla fi ʾulām al-bayyana (Compromises in the art of hunting, Escurial, Ar. 905; Istanbul, Aya Sofya 3813; Calcutta, Asiatic Soc., Ar. 865 M9) written in 638/1240 by the Baghdādī author Abu ʾl-Ruḥ ʾIsbā b. ʾĀli b. Ḥassān al-Asādī. To the basic fabric of al-Asādī’s work Ibn Manglī was able to add, in addition to the fruits of his own long experience on the subject, references to the best authors, such as al-Dāmirī, al-Dāhibī, Ibn Kuttaṣa, Ibn Waḥshīya, Ibn Zuhr, al-Rāzī and many others. One is grateful to him for not having conceived of it as an adab (q.v.) work; his clear, precise and curt style reflects the military man, whilst certain dialectical expressions show the contemporary language.

In 1880 one Florian Pharaon, a person of Levantine origin, brought out an edition and translation, under the title Traité de venerie (Paris, pp. 154 text, 143 tr.), of Ibn Manglī’s work; but the manuscript which he used, very lacking and defective, is not the Paris one. As a result, one wonders whether this Pharaon knew Arabic and anything about hunting at all, since the work of the Mamlūk author is so manifold.

As well as the great interest which Ibn Manglī’s treatise holds for the devotee of the chase and the specialist on animals, the historian can glean from it a host of details on the horses, the style of riding and the handling of weapons as known amongst
the Mamluks of the 8th/14th century, for whom
hunting served as a school for... and cUmar, 
but did not however fall into sin; on the other hand, 
cUthman was to be rejected (takfir). For his part,
Abd al-Djabbar, whose 
environment was... and said that he abided by his read-
ing... a year later to Ibn Shanabudh (d. 329/939 [q.v.]). 
Yakit mentions the titles of eighteen books attributed 
to Ibn Miskam, mainly dealing with Kur'ān and the 
Arabic language, but also including a refutation of 
the Mu'tazilite hypothesis of the origin of the Qur'ān, 
and a work in two volumes on the nature of 
success (cf. al-Khayyat, Fihrist, 2569) the presence there of Hisham b. al-Hakam 
[ q.v.]. Ibn al-Djazarf, the editor of the great 
Mu'tazilite scholar of the time, especially Abu 
'l-Hudhlayh and al-Nazzām [q.e.], with whom he 
engaged in controversy, but apparently without great 
success (cf. al-Khayyat, Intisar, index, who states that 
he was under the influence of the young (ahdhāth 
Mo'tazilis). Al-Mas'ūdī, in Murūj, vi, 369 = § 2566, 
mentions him at the head of the theologians who took 
part in a colloquium organised by Yahyā b. Khālid 
b. Barmak on 'ākif [q.e.], and records (vi, 371 = § 
2565) the presence there of Hīlamān b. al-Hakam [q.e.]. 
The latter, who died in 179/795, is considered as the 
main representative of Imāmī theology in his time, and 
Ibn Mitham did not enjoy a parallel fame; but it is 
probable that Ibn Mitham was his elder, since he 
cited before him by Ibn al-Nadīm, Fihrist, ed. 
Cairo, 249, who states that he was the first to 
formulate the doctrine of the imāmate, and attributes to 
him a Kātb al-imāma (called al-Kāmil) and a K. 
al-Iṣhkhāk. If al-Nawbakhshī (Fīsāk al-Ṣafi'a, 9) is believed, 
this political doctrine may be summed up in the 
following manner: 'Allī was the most meritori-
ous (wafī) after the Prophet, and the community 
committed an error in choosing Abī Bakr and 'Umar, 
but did not however fall into sin; on the other hand, 
Uthmān was to be rejected (takfīr). For his part,
al-ÁÁhrir, makáal, 42, 54, 516, delineates the main outlines of his theological doctrine: the Divine Will is, for him, as for Ḥishám, a moving force (haraka), but for him, a moving force external to God, which moves Him. In regard to faith, this consists essentially in respect for the divine obligations; whoever infringes them loses the quality of mu'min and becomes a ḥákīf, without however being wholly excluded from the community, since he can marry within it and inherit.

** Ibn al-Mubáraakah al-Látámí** [see al-Látámí].

Ibn Múbílik, Abú Ká'b (Abú '1-Hurra in Ibn Duráyid's aligmatic, 12) Tamín b. Ḫaráy b. Múray, b. al-ÁÁdíllán al-ÁÁmir (i.e. the ÁÁmir b. șa'á'á, see al-Káblí b. ṭabkál, Tab. 101), Bedúin poet of the muğádam, who is said, like many other poets of his age, to have lived 120 years (although al-Sidjástání does not cite him in his K. al-Anfus al-ÁÁmir). Ibn al-Múbílik was already made known to the compilers of geographical dictionaries (Yáykí cíte him 142 times in the Muqádám al-bulbán). Ibn al-Múbílik seemed to have led the rather monoto-

nous life of the Bedúin of his time, and his biog-

raphery, who was born and who died at al-Kayrawán, (ca. 762-837 or 839/1240-1304). He was approached basically because he had written too much the pre-Islamic times and found himself ill at ease (Ibn Salláám, ṭabkál, 125; see Diwán, 129-

41), and it may be because of this that the judg-

ments of the critics on him differ considerably. Ibn Salláám, 119, places him in the fifth class of the Ḥáníyya poets with Khádís b. ẓabíy, al-ÁÁswád b. Yá'ír, and al-Múbílik b. ẓabíy, who are not remarkable as poets. Most curiously, al-ÁÁqthál, whom he had in fact attacked (Diwán, 109-12, 312-14), is said to have delivered a very favourable verdict on him (Thaláb, Muqádám, 481; Ibn Rájíyí, ṭuma, i, 80, whilst al-ÁÁsmaí [q.v.] did not consider him as all as one of the jubál (al-Marzbání, Muqádám, 80); this severe judgment did not however prevent this same scholar from collecting together his Diwán, of which other recensions were made by Abú 'Ámir al-Sháyábání, al-ÁÁrúsí, Ibn al-Sikkit and al-Súkkárí (Fihrist, ed. Cairo, 224) and a commentary written by Múhámmad b. al-ÁÁlaá-ÁÁzdi (Yáykí, Umdá, s.v.; al-Mubarrad, Al-agdílís, ii, 37-8; al-Husayn, al-Marzubání, i, 30-4, 516; cf. PELLAT)...

One at least of these recensions was known in Iríkíyá, as the ṭuma of Ibn Rájíyí and the Masálál al-intikák of Ibn Súráfí (who adjudged Ibn Múbílik's poetry as archaic and solidly constructed) attest in particular, and also in al-ÁÁndalús (see Ibn Kháyí, Fihrist, 397), but it is only recently that there has been discovered at Córum (see Córum) the manu-

script of an unidentified recension. A very careful edition of the Diwán has been done by Izzát Ḥasan (Damascus 1381/1962), to which he has appended a Dhagi and various highly useful indices; another ed. by ÁÁhmet Í. Túrí, Ankara 1965.

**bibliography:** The main sources have been given in the article; Izzát Ḥasan's introduction to the Diwán contains the sparse biographical details which are known and a study of Ibn Múbílik's works. See further Zírálí, ÁÁmí, s.v.; Wahhábí, Muqádám, i, 123-5; where some new references may be found. (Ch. PELLAT)

**Ibn Nádíji.** Anó 'l-ÁÁqthál/Abú '1-Fádel b. Ḫaráy b. Nádíji al-Tásqántí, kádtí, preacher and biog-

rapher, who was born and who died at al-Kayrawán (as, 762-837 or 839/c. 1361-1433 or 1435). He studied in his natal town and in Tunis, and then filled various posts as kádtí and as káhtib in (Djibra, Beja, Lorbeus, Souss, Gabés, Tebessa and al-Kayra-

He had previously expressed pro-Umayyad senti-

ments in an elegy inspired by the murder of 'Uýámán (Diwán, no. 3), but apart from his polemics with al-Nádíji, he seems to have been uninter-

ested in political affairs and to have held aloof from addressing elegies to high-placed per-

sonages. Hence if mudáth [q.v.] is little represented in his Diwán, boasting poetry (fakhr), personal or tribal, abroad on the other hand. As a Bedúin poet, he defends naturally the Bedúin qualities such as generosity, contempt for riches, courage and en-durance; the main characteristic of his work is indeed description (ṣafá'), of the desert, atmospheric phenomena, the camel, wild animals, and especially, the arrows (kádhá) used in the gambling game called mayyir [q.v.], to such a point that he became proverbial for them and one spoke of the kádtí Ibn Múbílik (Ibn Kutábýa, Shir, 427). His work was exploited by the philologists (Sibawayh cítes him ten times; see also, e.g., al-Múbarrad, Kámíl, 498; al-Baghdádí, Khádzíb, Bálík, i, 111-13 = Cairo, i, 211-15, şáhíd 32, etc.), and because of the number of place names in his poetry, he was a source for the compilers of geographical dictionaries (Yáykí cítes him 142 times in the Muqádám al-bulbán). Ibn Múbílik was reproached basically because he had written too much the pre-Islamic times and found himself ill at ease (Ibn Salláám, Tabkál, 125; see Diwán, 129-

41), and it may be because of this that the judg-

ments of the critics on him differ considerably. Ibn Salláám, 119, places him in the fifth class of the Ḥáníyya poets with Khádís b. ẓabíy, al-ÁÁswád b. Yá'ír, and al-Múbílik b. ẓabíy, who are not remarkable as poets. Most curiously, al-ÁÁqthál, whom he had in fact attacked (Diwán, 109-12, 312-14), is said to have delivered a very favourable verdict on him (Thaláb, Muqádám, 481; Ibn Rájíyí, ṭuma, i, 80, whilst al-ÁÁsmaí [q.v.] did not consider him as all as one of the jubál (al-Marzbání, Muqádám, 80); this severe judgment did not however prevent this same scholar from collecting together his Diwán, of which other recensions were made by Abú 'Ámir al-Sháyábání, al-ÁÁrúsí, Ibn al-Sikkit and al-Súkkárí (Fihrist, ed. Cairo, 224) and a commentary written by Múhámmad b. al-ÁÁlaá-ÁÁzdi (Yáykí, Umdá, s.v.; al-Mubarrad, Al-agdílís, ii, 37-8; al-Husayn, al-Marzubání, i, 30-4, 516; cf. PELLAT)...

One at least of these recensions was known in Iríkíyá, as the ṭuma of Ibn Rájíyí and the Masálál al-intikák of Ibn Súráfí (who adjudged Ibn Múbílik's poetry as archaic and solidly constructed) attest in particular, and also in al-ÁÁndalús (see Ibn Kháyí, Fihrist, 397), but it is only recently that there has been discovered at Córum (see Córum) the manu-

script of an unidentified recension. A very careful edition of the Diwán has been done by Izzát Ḥasan (Damascus 1381/1962), to which he has appended a Dhagi and various highly useful indices; another ed. by ÁÁhmet Í. Túrí, Ankara 1965.

**Ibn Nádíji.** Anó 'l-ÁÁqthál/Abú '1-Fádel b. Ḫaráy b. Nádíji al-Tásqántí, kádtí, preacher and biog-

rapher, who was born and who died at al-Kayrawán (as, 762-837 or 839/c. 1361-1433 or 1435). He studied in his natal town and in Tunis, and then filled various posts as kádtí and as káhtib in (Djibra, Beja, Lorbeus, Souss, Gabés, Tebessa and al-Kayra-
wân), and put together commentaries on fiqh works, in particular, on the Risdâ of Ibn 'Abî Zayd al-Kayrawânî (this Ïgarî was printed at Cairo 1914, 2 vols.). However, his fame stemmed especially from a collection of biographies of religious scholars of his native town from its origins till the 9th/15th century, the Ma'alîm al-imâm fi marrâtah ahl al-Kayrawân, only the part with the notices on the 8th/14th century being completely from his own pen; all the opening is in reality a borrowing from a collection by a predecessor, al-Dabbagh [q.v. above].

Bibliography: Ahmad Bîhûh, Qalqashandî, No. 1330; Introd. to Ibrahim Shabbuh's ed. of the Ma'alîm; see also the Bibli. to al-Dabbagh.

IBN NÂSîR, the name, nowadays replaced by Nâsîrî, of a Moroccan family who founded the branch of the Shadhîlîyya order [q.v.] known as Nâsîrîyya and founded its headquarters at the zîdwiya of Tamgrût [q.v.] in southern Morocco. The numerous biographical sources, published and unedited, as well as a monograph on the family, the Ta'rifat al-nasirîyya (Fâs 1309) by A'mâd al-Nâsîrî al-Sâlîwî, allows its history to be traced easily and allow a genealogical tree to be constructed; the reader will find information on this in the article AL-NASIRIYYA, and there will merely be given here some information on those members of the Bâni Nâsîr who took part in a conspicuous fashion in literary and intellectual life over the last four centuries.

1. al-Husayn b. Muḥammad b. Ahmad b. Muḥammad b. Husayn b. Nâsîr b. 'Amr b. Uthmân al-Darî (d. 1091/1680) succeeded his father (d. 1071-72) as head of the zîdwiya of Ighlan (a few miles south of Zagora). This zîdwiya was, however, definitively abandoned after an outbreak of plague which broke out in 1091/1680, of which al-Husayn was himself a victim; he had made three journeys to the East and had composed a Fihrasa extant at Rabat (ms. 506K).

2. His elder brother, Abû 'Abîl Aḥâlî Muḥammad b. Muḥammad (1005-1006/1665-66) had left the Ighlan zîdwiya in 1040/1631 in order to settle in the one at Tamgrût, which he now headed; according to the later biographies, it was he who founded the Nâsîrîyya order. He wrote several works of fiqh, some poetry, letters and adhûnû on points of law.

3. Muhammad's son Aḥâm (1057-1129/1647-71) succeeded his father as head of the order. He made the pilgrimage four times, and utilised these occasions to establish branches of the order in various parts of North Africa, as far as Egypt, and composed concerning his pilgrimage of 1121/1709-10 a voluminous Rûhî (lith. Fâs 1320; partial tr. A. Berbrugger, in Exploration scientifique de l'Algérie, ix, 1846, 165 ff.); this travel account has a certain interest because the author adds his personal observations on the regions which he passed through and records events of some importance, in addition to his mention of his itineraries and the religious personages whom he met en route. Since Aḥâm left behind no children, the headship of the zîdwiya passed to the descendants of his brother Muhammad al-Kâbir.

ceded his father, who died in 1142/1729. The task of inspecting the order's branches in the various towns of Morocco led him to write a travel narrative, al-Rayâhih al-wardiya fi 'l-rîhla al-Marrokâshgirya (ms. Rabat 88 G, 1-83), but he also left behind some poetry and several biographical works, amongst which may be noted the Faṭîh al-nasîrî al-Nâṣîr fi ifḍâzâtî marwânîyya Bani Nâṣîr (ms. Rabat 323 K) on the ifḍâzât received by his forebears, and above all, al-Durâr al-manassîyya fi al-gharb âyân Darâ or the Kadî al-rasûlî fi 'l-teyîf bi-suluhî Darâ (ms. Rabat K, 265 and 88 G, 84-116), finished in 1152/1739, which traces the history of the Nâṣîrîyya order. He died after 1170/1756.

5. Abû 'Abîl Aḥâlî Muḥammad b. ABD al-Sâlîm b. 'Abîl Aḥâlî Muḥammad (al-Kâbir), who died in 1239/1823. He made the pilgrimage to Mecca twice and wrote two accounts of these. The autograph ms. of the first, al-Rûhî al-kâbir, is extant in the Royal Library at Rabat (no. 5650); the author adds his own personal observations and is not afraid to contradict his predecessors (notably al-AYâshî and al-'Abdârî [q.v.]). He furthermore left behind al-Ma'âshî fi-muḥaddathâtih ud'bîyya min al-bîd'û bi-Umm al-Zâziwârî, a Fihrasa (ms. Rabat 3289 K), a commentary on the 40 hadîthîs of Muḥammad al-Djâshwî (ms. Rabat 137 Q) and some responsa on some cases in point, the Kadî al-watîf min al-makîk fi'll-dîn (ms. Rabat 1079 D, fols. 107-15).

6. It is convenient, finally, to note that the famous author of the Shadhîlîyya, Ahmad Nâsîrî [see al-Salâwî] was a direct descendant of Ibn Nâsîr.

Bibliography: To the works by the members of the family cited above, one should add the great biographical collections of Moroccan authors like Ibn 'Abîd al-Munir, Safwat min inshârahî, Fâs n.d.; Kâdirî, Naṣîr al-maṭhûbât, Fâs 1310/1892; Muḥammad al-Katûnî, Safwat al-unjûf, Fâs 1316; 'Abîd al-Hâsy al-Katûnî, Faḥris al-fâhâmîs, Fâs 1346/1927-9; the manuals of Moroccan literature: Ibn Sûdâ, Dannâshûh, al-Maghrîb al-Akâ, Casablanca 1960-5; Lévi-Provençal, Chorja, index s.v. Ibn Nâṣîr; M. Lakhdar, La vie littéraire au Maroc sous la dynastie 'ouïdîde, Rabat 1971, index s.v. Ibn Nâṣîr and the bibli. cited there. (Ed.)

IBN NÂSÎR AL-DJAYSH. TA'RÎH 'L-DIN 'ABD AL-RAHMÂN, kâhidî, official and author of the Mamlûk period in Egypt. His precise dates are unknown, but he was apparently the son of another kâhidî who had been controller of the army in the time of Sultan al-Nâṣîr al-Din Muḥammad b. Kalâwûn, and he himself served in the Diwân al-Iḫlîsî under such rulers as al-Manṣûr Salâh al-Dîn Muhammad (762-6/1361-3) and his successor al-Ṭâhir al-Nâṣîr al-Dîn Shaṭîb (764-76/1363-76). His correspondence was apparently collected into a mawdu'dî, for al-Kâlqâshândî [q.v.] quotes four letters from it, to external rulers, in his Shub al-dâgh, Ibn Naṣîr al-Djâshî was also, in a well-established Mamlûk tradition, the author of a manual for channey secretaries, the Ta'rifî al-Târifî, an improved version of the well-known guide of Shihâb al-Dîn Ibn Fâlîd al-lâlî al-Umârî [see Fâlîd al-lâlî], al-Târifî bi 'l-mustalah al-qâtîfî; the Ta'rifî has survived in at least four manuscripts (not however recorded in Brockelmann) and is again quoted several times by al-Kâlqâshândî.

Bibliography: M. Gaudefroy-Demombynes, La Syrie à l'époque des Mamelouks d'après les auteurs arabes, Paris 1923, pp. XII-XIII; W. Björkman, Beitrag zur Geschichte der Staatskunde im islamischen Ägypten, Hamburg 1928, 69, 75, 129; C.E. Bosworth, Christian and Jewish religious dignitaries in Mamlûk Egypt and Syria. IBN AL-RĀḤĪB, Coptic polygraph, born between 1200-10 and died between 1290-5. Known principally as a historiographer on account of the Chronicon orientale, which has been falsely attributed to him since the 17th century, Nushū al-Khilafa (or simply al-Nushū) Abū Shakīr b. al-Sanāʿah (abberation of Sanāʿah al-Dawla) al-Rāḥīb Abu l-Karam (alias Abu l-Madjd) Butrus b. al-Muhādhib in fact represents, with Abū Ishāk b. al-Āṣāl [q.v.] and Abu l-Barakāt Ibn Kabar [q.v.], the leading encyclopaedist of the golden age of Christian Arabic literature, in the 7th/13th century. He wrote about all the disciplines of human knowledge which an Arab Christian of the period was in a position to cultivate: chronology and astronomy, history, philology and hermeneutics, philosophy, and theology (in the full spectrum of their ramifications). But it is not this fact alone which confines upon his work an encyclopaedic character; such versatility was not unusual in his milieu. The decisive factor is most of all his method of working, the very dimensions of his studies and finally, the abundant wealth of textual sources, Greek and patristic, Muslim Arab and Christian, which he quotes or incorporates to a large extent in his own works. It is in this work of compilation, besides, even more than in original thought, that the value of his writings seems to reside.

He wrote about all the disciplines of human knowledge which he virtually played a role in the administration, apparently in the capacity of a historiographer on account of the extent in his own works. It is in this work of compilation, besides, even more than in original thought, that the value of his writings seems to reside. It is particularly to be noted that the theodicy of the K. al-Barhūn (chs. 28-40) hinges entirely on that of the K. al-ʿArbuʿa of the great Persian theologian Fakhr al-Dīn al-Rażī [q.v.], which are dotted throughout the work, make it an interesting Arabic florilegium of Biblical commentaries relating to the person of Christ.

(a) K. al-Taṣawwīrāt. Recently identified in three manuscripts, this is the work on which, in reality, Ibn al-Rāḥīb's renown is based. It comprises three distinct parts, unequally divided into fifty-one chapters: a study of astronomy and chronology (chs. 1-47); a history of the world (ch. 48), of Islam (ch. 49) and of the Church (in the form of a history of the patriarchs of Alexandria—ch. 50); and finally, a brief account of the Seven Ecumenical Councils of the Orient (ch. 51). The celebrated Chronicon orientale represents, in fact, only a mediocre abstract of the long chronological section (chs. 48-50). The K. al-Taṣawwīrāt was, in addition, exploited to a large extent by the Christian historiographer, al-Makfī b. al-ʿĀmid [q.v.] and—through the latter, apparently constantly mentioned by al-Makfī and Ibn Khalidūn [q.v.]. In the first half of the 16th century it was translated into classical Ethiopic (Ge'ez) by no less a person than the Etcheguier Ebaqom, which acquired for it a position of considerable eminence in Ethiopian literature. For this the manual of ecclesiastical year and of universal chronology, entitled Abūyakhrūk, is not the least of the evidence.

(b) The study of Coptic philology, completed in 1263, includes a rhymed vocabulary (sullam nakujūf) according to the method used by the Arab lexicographers, preceded by a grammar (makhdūmana [q.v.]), which, through its originality, is distinguished from the series of Coptic prefaces of the Middle Ages. Although the vocabulary itself hitherto seems to be lost, an attentive reading of the prologue—which is available to us along with the grammar and in which the author sets out his project in detail enables us to see there a work of lexicography far superior to the Scala rinata of his contemporary Ibn al-Āṣāl [see sullam].

(c) K. al-Sīḏīf (1267-8). A work of Biblical Christology, of an exclusively exegetical character. Conceived according to massive proportions, it was originally structured on the basis of the image of the Tree of Life, consisting of a triple trunk (adil), each part bearing three branches (fīrat) loaded with innumerable fruits (qamāna). The abundance and the variety of patristic and other commentaries (especially the Firdaws al-nasrāniyya of the Nestorian Ibn al-Taybih [q.v.]).

IBN AL-RŪMĪYYA. ABU 'L-'ARBĀʾ (sporadically: Abu Dja'far) AHMAD B. ABI 'ABD ALLĀH MUḤAMMAD B. MUḤARRIR B. ABI 'L-KHĀLĪF. 'ABD ALLĀH MUḤAMMAD AL-ḤAMMĀZ AL-ẒAIḤIR AL-NABATI AL-ʿΑΣΗΜΗ, Spanish Arabic pharmacobotanist. He was born in Seville in 561/1166 (according to others, 567/1172) and died there in 637/1240. His allegedly Byzantine origin on the maternal side may have procured him the nickname by which he became known, but which he did not like hearing. In any case, he was a freedman of the Umayyads. He was educated as a Mālikī traditionist and jurist, but then joined the Zāhirīyah and became an ardent adherent of Ibn Hazm [q.v.]. None of his writings bearing upon this activity seems to have survived; some nāgīl-works may be mentioned here: al-Muṣlim bi-ḥaḍrah 'ud (or: bi-mā zādahu, al-Bukhārī 'ālama Muḥammad, Rihāṣir Qarāʾib hadith al-Mālikī [l-Darā responseType], Nauz al-danaʾīr fi-mā tafṣarāna bihi Muḥammad 'an al-Bukhārī, further an abstract from Ibn al-Kaṭājin (d. 360/971) K. al-Kāmil fi l-dalaʾīl wa l-maṭālāt, and a supplement to this work under the title al-Hāṣī fi taddīl al-kāmil, finally legal investigations on the performance of the prayer, like Ḥakīm al-dīl fi ṣadaqāt al-yalamlāt and Kanfiyyat al-adlān yawm al-dījām. The knowledge related to these subjects he acquired during an
IBN AL-RUMIYYA — IBN RUSHD

extensive study-tour, made in connection with the pilgrimage which he undertook in 613/1216, and which led him through North Africa, Egypt, al-Hūdāj, Syria and ʿIraq. His extraordinary long biography in Marrakushi’s Rihla, explained by the fact that this author cites most, if not all, of the traditionists and jurists whose lectures Ibn al-Rumiyya attended and who were his authorities in hadith.

His real renown, however, is based on his achievements as a pharmacobotanist. As he himself relates, Ibn al-Rumiyya attended and who were his author-

(1) the materia medica of Dioscorides; (2) the work by Ibn Djuljul [q.v.] in which the latter explains the simple medicines named by Dioscorides (Tafsir asmaʿ al-adwiya al-munāfda min kitāb Diwāyī-kārīds); and (3) the brief treatise of the same author on medicines not mentioned by Dioscorides (Makāla fi dhikr al-adwiya allatī lam yadhkurī Dinuskuridis ilkh). Seventeen years later (600/1204), Ibn al-Rumiyya in his turn taught the works mentioned, also in Marrakush. The shortcomings and inaccuracies which meanwhile had struck him in the works of Ibn Djuljul induced him now to write a corresponding book by himself, namely Tafsir asmaʿ al-adwiya al-munāfda min kitāb Diwāyī-kārīds (the title thus being identical with that of Ibn Djuljul). In all probability, bordering on certainty, it is this work which exists in an anonymous text of the magāfiʿa Nūrūsmānīy ʿi 3589; the present writer is preparing a text-edition together with an annotated German translation. Ibn al-Rumiyya shortened considerably the contents of Dioscorides’ work, to the extent that he left out almost completely the therapeutic uses of the medicinal herbs; instead, he did, however, give much space to their botanical description. The nomenclature of the herbs is also particularly important: it offers significant material for the knowledge of Mozarab [see ALJAMA] and of the Berber dialects in Morocco at that time. Above all, it is noteworthy that the author makes a sharp distinction between the certain and the uncertain, especially between what was transmitted and what he had seen himself. If one bears in mind that ancient natural science already at an early stage abandoned personal investigation in favour of compilation and came to rely more and more on written sources, the endeavour, recognisable here, to gain a solid basis, particularly by examining nature itself, has to be rated highly.

It is reasonable to assume that Ibn al-Rumiyya wrote down the Tafsir before he started on the journey to the Orient mentioned above. The second botanical work, however, al-Rihla al-muṣṭārikīya, more comprehensive but only known to us through numerous extracts by Ibn al-Baytār, turns out to be the richly scientific result of this journey which lasted about two years. Of particular interest for the history of civilisation is the description of the manufacture of papirus, the oldest one since Piny (for this and the other Arabic accounts, see A. Grohmann, Allgemeine Einführung in die arabischen Papiers, Vienna 1924, 53 f.). The Rihla is of high quality and has led both L. Leclerc (Histoire de la médecine arabe, ii 244) and M. Meyerhof (Maimonide, xxxii) to the judgement that Ibn al-Rumiyya is the botanist par excellence among the Arabs and that he can only be compared with al-Ghafikī [q.v. above] as far as independence of scientific method is concerned.

With the latter, Ibn al-Rumiyya found moreover many faults; his work al-Tanbīḥ al-adāʾi ṣghāṭ al-Ghafikī

If adnayyītqa (quoted by Makkari, Najh al-tib, 1/2, 513) has been unfortunately lost, as is also a treatise on compound drugs (Makāla fi tahrīk al-adwiya), mentioned by Ibn Abī Ṣaʿyībā.
